CONTRACT OEC-5-1017

EDRS PRICE MF-\$0.18 HC-\$4.36

109P.

DESCRIPTORS- *TEST CONSTRUCTION, *PRETESTING, *SPANISH, *ENGLISH, *READING COMPREHENSION, INTER AMERICAN TESTS, AUSTIN, TEXAS

TWO NEW TESTS WERE DEVELOPED IN THE INTER-AMERICAN TEST SERIES IN PARALLEL ENGLISH AND SPANISH EDITIONS. A PRESCHOOL TEST WAS ADDED TO THE TESTS OF GENERAL ABILITY AND A LEVEL 1 TEST ADDED TO THE TESTS OF READING. ALSO THE SPANISH EDITIONS OF SOME EARLIER TESTS WERE REVISED AND ADDITIONAL INTERPRETATIVE MATERIALS DEVELOPED. THE AUTHOR BELIEVED THAT THE NORMS OF THE TESTS ALREADY CONSTRUCTED SHOULD BE STRENGTHENED BY ADDITIONAL TESTING OF REFERENCE GROUPS. RELATED REPORTS ARE ED 001 702 AND ED 003 857. (TC)

ACKNOWLEDGMENTS

From its beginning in Puerto Rico many years ago the preparation of the interlanguage test materials, now known as the Inter-American Series, has been a thoroughly cooperative project. The list of participants who could be mentioned by name is too long for this report, and many others whose names are not known (administrators, supervisors, and the children and students to whom the tests were administered) would run into the thousands. I am deeply grateful for the assistance so generously given, and I regret that I cannot give adequate individual credit. A few can be mentioned here.

Though I am forbidden by the directions given by the Office of Education for preparation of this report to refer to its personnel by name, I do want to register an expression of appreciation of the research grant and of the personal attention which the supervisor of the project has given.

I am grateful, too, for the support which the administrative staff of the University of Texas has given to the project. Suitable quarters have been available with the assistance of W. Byron Shipp, Registrar, and Frances H. Hudspeth, Executive Director of the Humanities Research Centerbecause of the scarcity of space, a considerable achievement, especially after a fire drove the project from its initial location. Dr. Gordon V. Anderson, Director of the Testing and Counseling Center, placed the facilities of the Center at our disposal for test scoring and related work. Joyce E. Cope and James P. Buchanan III of the Center staff were especially helpful.

The Puerto Rico Department of Education, cooperating from the first work in 1940, has been an essential part of the program through the years. Its invaluable assistance has continued through the present project under the Secretary of Public Instruction, Dr. Angel G. Quintare Alfaro. Dr. Miguelina Hernández and later Dr. Charles O. Hamill, of the Division of Evaluation, have represented the Department in its relation to the study. Continued cooperation has been given also by the University of Puerto Rico under the direction of Dr. Ismael Rodríguez Bou, former Permanent Secretary of the Superior Educational Council. As stated later in the report, Mr. Adolfo Fortier and Dr. Jorge Dieppa represented the Puerto Rico office of the College Entrance Examination Board in the joint study of Inter-American, College Board, and Department of Education Tests.

The administration of tests in Mexico has continued to have the able direction of Professor Ethel Sutton, of the Saltillo Normal School. Mexican educators who contributed to the revision of the Spanish edition are mentioned later in the report. Professors Matfas López Chaparro and Gutiérrez Figueros, of the Escuela Normal Superior de México, are cited here for special recognition because of the meticulous care which they gave to the revision; and the Director, Professor Arquímedes Caballero C., for his loyal support.

I am profoundly grateful to the members of the central staff for their faithful and effective assistance. Among those who have made major contributions are William J. Bamberger, Yvonne Buchanan, Linda Sue Craig, Evelyn R. Crawford, Kenneth L. Jensen, Terry Jeannette Martínez, Dorothy L. Menke, Mary Patricia Morrison, and José Luis Soto Padín.

To all who have assisted I extend my most hearty thanks.

Herschel T. Manuel

INTRODUCTION

The problem of this research is the construction of educational tests having the same content in English and Spanish and to develop interpretive materials for their effective use. The project deals specifically with the tests of General Ability and Tests of Reading of the Inter-American Series.

The Inter-American Series of parallel tests in English and Spanish grew out of a study of the teaching of English in Puerto Rico some 25 years ago (1), a study conducted by the Committee on Modern Languages of the American Council on Education. The native language of the Fuerto Rican child was and is Spanish but a determined effort had been made under varying programs to develop a mastery of English as well as Spanish. Although the study of the committee was directed primarily toward the teaching of English, an evaluation of the situation as a whole required attention to both languages. Ideally there should be some way of comparing achievement in the two. Tests offered one possibility, but the committee found no suitable tests available and undertook to construct a limited series of its own. Rejecting the possibility of translating existing tests (which had been prepared for a specific language and culture), it assembled a staff of native Spanish-speaking and English-speaking persons and constructed new tests having the same content except for the language in which verbal content was expressed - that is, of the same content as nearly as it could be made by the staff. The objective was to select test items common to the two cultures and of similar difficulty.

The tests developed in the Puerto Rico study were published after some revision by the Educational Testing Service in 1950 under the title Cooperative Inter-American Tests. The series included Forms A and B in English and Spanish for Tests of General Ability (Primary, Intermediate, and Advanced), Tests of Reading (Primary, Intermediate, and Advanced), Tests of Language Usage, Vocabulary and Interpretation of Reading Materials in the Natural Sciences, and Vocabulary and Interpretation of Reading Materials in the Social Studies.

In 1959 the Educational Testing Service discontinued publication of the Inter-American Tests and gave the remaining stock to Guidance Testing Associates (Austin, Texas), a non-profit educational corporation organized specifically to assume responsibility for the tests. In the same year with the support of the Office of Education a research devoted to the further development of the tests was initiated at The University of Texas (Project No. 681 of the Cooperative Research Program of the Office of Education). Its purpose was stated in part in these words (2:1)

The problem is to study and revise existing educational testing materials (specifically the Cooperative Inter-American Tests) and to create new materials in parallel English and Spanish editions for use in Spanish-speaking and English-speaking countries of the Americas. The end product will be a series of tests which will yield comparable results

when administered in the Spanish edition to Spanishspeaking pupils and in the English edition to Englishspeaking pupils. The purpose is to provide means now
lacking or imperfectly developed for comparing the
abilities and educational achievements of pupils of
different languages and cultures
To achieve the greatest usefulness for the tests
and to make the publication of the tests self-supporting after their publication, the tests and accessory materials will be so constructed that they
will give useful results when used in one language
alone without any thought of comparing English and
Spanish.

Three major objectives of the research were listed in the report (2:1,2):

- (1) "the improvement of international cooperation and communication in educational research and in the educative process";
- (2) provision of "comparable measures of ability and achievement in the bilingual situation for example, when a school is educating children of different home languages or when the ability of the same person in two languages needs to be estimated";
- (3) an increase of "the supply of useful measuring instruments in each of the languages. The need for additional measuring instruments in English in the United States is less than the need for additional measuring instruments in Spanish in the Latin American countries, where psychological and educational testing is less advanced. But the use of the tests for communication across linguistic barriers and for comparison of ability in different languages will be greatly limited unless the Spanish tests are generally useful and widely used with Spanish-speaking children and the English tests with English-speaking children."

The major outcome of Project No. 681 was a new series of Inter-American tests, in part a revision and extension of the 1950 series, with limited evaluative and interpretative data — a series made available for general use through Guidance Testing Associates (3). The following outline lists the tests produced in this project: (GA, General Ability; HG, Habilidad General; R, Reading; L, Lectura; CE and DE, English forms; CEs and DEs, Spanish forms).

General Ability

Level 1, end of kindergarten and beginning of grade 1:

- (a) Pretest and Pre-Prueba
- (b) GA-1-CE, GA-1-DE; HG-1-CEs, HG-1-DEs
- (c) GA-1-CE-A, GA-1-DE-A; HG-1-CEs-A, HG-1-DEs-A (Abbreviated form of Level 1 Tests. Directions were prepared for the Spanish edition, but only the English booklets were printed.)

Level 2, grades 2 and 3: GA-2-CE, GA-2-DE; HG-2-CES, HG-2-DES Level 3, grades 4, 5, and 6: GA-3-CE, GA-3-DE; HG-3-CES, HG-3-DES Level 4, grades 7, 8, and 9: GA-4-CE, GA-4-DE; HG-4-CES, HG-4-DES Level 5, grades 10, 11, 12, and beginning college: GA-5-CE, GA-5-DE; HG-5-CES, HG-5-DES

Reading

Level 2, grades 2 and 3: R-2-CE, R-2-DE; L-2-CEs, L-2-DEs
Level 3, grades 4, 5, and 6: R-3-CE, R-3-DE; L-3-CEs, L-3-DEs
Level 4, grades 7, 8, and 9: R-4-CE, R-4-DE; L-4-CEs, L-4-DEs
Level 5: grades 10, 11, 12, and beginning college: R-5-CE, R-5-DE;
L-5-CEs, L-5-DEs

The current project (Office of Education No. 2621) was initiated in 1964 to extend and improve the Inter-American Series and to provide additional interpretative materials. Among the specific objectives were these:

- (1) Minor revision of some of the materials.
- (2) Reexamination of the verbal portions of the tests for parallelism of English and Spanish content and for standard language structure, especially of the Spanish edition.
- (3) Extension of the Tests of Reading downward to include a Level 1 test in English and Spanish.
- (4) Improvement of the equation of scores of Forms C and D of the same test.
- (5) Improvement of the equation of scores at successive levels 2 to 5, and improvement of the lineal scale for the conversion of raw scores to common values.
 - (6) Further development of norms and other interpretative materials.
 - (7) Construction of a "technical manual" for the tosts.

METHOD

In general outline the procedures in the study were as follows:

- (1) English-speaking and Spanish-speaking personnel cooperated to produce test items judged to be suitable in both English and Spanish.
- (2) The items constructed in this way were tried out, and from this pool of items a selection of items was made for the final test.
- (3) To determine equivalent scores of different forms of the same test at one level, of the same form at different levels, and of different tests, the tests to be compared were administered to the same pupils or to alternate pupils in the same group. The equipercentile method was

then used to determine equivalence. The term "equivalent" is used in this study in the limited sense of being equally difficult to attain. Thus a score of 20 on one test is said to be equivalent to a score of 30 on another test if they both lie at the same percentile of the same group or of comparable groups.

- (4) For norms at levels 3, 4, and 5 the Inter-American Tests were administered with tests for which "national" norms were available the Tests of General Ability with the School And College Ability Tests (SCAT) and the Tests of Reading with the Reading Tests of the Sequential Tests of Educational Development (STEP), both published by the Educational Testing Service. Percentile norms were estimated from equivalent scores (4, 5, 6).
- (5) In the major part of the study the tests were administered by local examiners in school systems widely distributed geographically. No effort was made to secure random or systematic samples representative of the national population. Local school systems from different geographical areas were invited to participate in the project, and the tests to be administered were sent with the testing designs to the schools which agreed to participate. Local supervisors or examiners were offered a modest honorarium for their services. Scoring was done at the University and reports of the results were sent to participating school systems. As will appear later, a different procedure was employed in some of the experimentation.
- (6) The test scoring was done in part by the University Testing and Counseling Center, and most of the primary statistics (percentiles and correlations) were computed by use of the equipment of the University Computing Center.
- (7) The Spanish of the tests developed in Project No. 681 was reviewed by educators in Mexico, and new materials in the series were prepared with the assistance of competent Spanish-speaking advisers.

RESULTS

The Inter-American Series

Two new tests were constructed in Spanish and English: (1) Reading, Level 1, in two forms; (2) General Ability, Preschool Level, an extension downward of Forms DE and DEs of Level 1. The revised Inter-American Series now includes the following tests:

General Atility, Preschool Level, GA-P-DE, HG-P-DEs.

An extension downward of GA-1-DE and DEs. Individually administered in two periods with stimulus cards of drangs. Requires no oral response. Verbal-Numerical 40 items; Nonverbal 40 items.

General Ability, Level 1. GA-1-CE, GA-1-DE; HG-1-CEs, HG-1-DEs.

Parts and Subtests	Number of Items	Time Exclusive of Directions					
1. Oral Vocabulary	25	(Each item dictated)					
2. Number Verbal-Numerica	15 1 (1+2) 40	(Each item dictated)					
3. Association	20	8 minutes					
4. Classification	20	8 minutes					
Nonverbal (3+4)	40	16 minutes					
Total Score	80						

In both Part I, Oral Vocabulary, and Part 2, Number, the task of the pupil is indicated orally. In Oral Vocabulary, the directions of the examiner may simply name an object, may describe a situation in a few words like "the boy who is running," or may ask the child to "find the picture which makes you think of....." The items in Number include numerical concepts and "problems" of computation. In the latter, the answer is usually indicated by marking a frame which has the number of pictured objects which the question calls for. In two questions the answer is a number inclosed in a circle. These two are the only items of the entire test requiring a knowledge of written language and are designed to increase the "readiness" score of children who already know the written symbols for numbers.

The task in Association is to find the picture that goes with or belongs to the sticulus picture in the frame. In Classification, on the other hand, the child finds the picture that is different, that does not go with the others.

General Ability, Level 1. Pretest (English) and Preprueba (Spanish).

A short 4-page practice test designed to prepare the child
for the test proper. Each item is represented by a row of
drawings. The task of the child is to mark across the
drawing suggested by directions given orally by the examiner.

General Ability, Level 1. GA-1-CE-A, GA-1-DE-A; HG-1-CEs-A, HG-1-DEs-A. An abbreviated edition of the Level 1 Tests. Subtests are in the same areas but are shorter with a total of 64 items.

General Ability, Level 2. GA-2-CE, GA-2-DE; HG-2-CEs, HG-2-DEs.

Par	ts and Subtests	Number	of Items	Time Exclusive of Directions
1.	Oral Vocabulary	30		(Each item dictated)
2.	Number Oral	10		(Each item dictated)
	Written	20		5 minutes
	Verbal-Numerical (1+2)		60	
3.	Classification	24		6 minutes
4.	A nalogies	16		5 minutes
	Nonverbal (3+4)		40	11 minutes
	Total Score		100	

At level 2 the examiner calls attention to an item by number, and the child indicates his response by placing a cross on a letter below the drawing which he chooses. The content of the level 2 tests is generally similar to that of level 1, but Number includes both oral and written items, and (picture) Analogies is substituted for Association.

General Ability, Level 3. GA-3-CE, GA-3-DE; HG-3-CEs, HG-3-DEs. Level 4. GA-4-CE, GA-4-DE; HG-4-CEs, HG-4-DEs. Level 5. GA-5-CE, GA-5-DE; HG-5-CEs, HG-5-DEs.

The Tests of General Ability at levels 3, 4, and 5 follow the same general pattern with materials for six parts, which combine to yield three subscores.

Part	s and Subtests	Number	of	Items	Time Exclusive of Directions
2. 3. 4. 5.	Sentence Completion (Figure) Analogies Computation Word Relations (Figure) Classification	25 24 26 25 on 26			10 minutes 8 minutes 8 minutes 8 minutes 8 minutes 10 minutes
·	Verbal (1+4) Nonverbal (2+5) Numerical (3+6) Total Score	24	1	50 50 50 50	18 minutes 16 minutes 18 minutes 52 minutes

A separate answer sheet is provided for recording responses to the tests. The same answer sheet (one in English and one in Spanish) is used for the three levels and for both Form C and Form D. The order of the responses in each test is such that one scoring key is used for all Form C tests and another for all Form D tests. The positions of the correct answers are entirely different in the two forms.

Reading, Level 1. R-1-CE, R-1-DE; L-1-CEs, L-1-DEs.

Parts	Number of Items	Time Exclusive of Directions
 Vocabulary Comprehension Total Score 	40 40 80	8 minutes 10 minutes 18 minutes

In this test the child chooses a picture suggested by a word, phrase, or paragraph.

Reading, Level 2. R-2-CE, R-2-DE; L-2-CEs, L-2-DEs.

Parts Nu	mber of Items	Time Exclusive of Directions
 Level of Comprehension Speed of Comprehension Vocabulary Total Score 		10 minutes 5 minutes 8 minutes 23 minutes

In this test drawings are used in Parts 1 and 2 as answers, and in Part III as the stimuli for the words to be chosen.

Reading, Level 3. R-3-CE, R-3-DE; L-3-CEs, L-3-DEs. Level 4. R-4-CE, R-4-DE; L-4-CEs, L-4-DEs. Level 5. R-5-CE, R-5-DE; L-5-CEs, L-5-DEs.

Par	ts	Number (of Items	Time Exclusive of Directions
1.	Vocabulary	45		10 minutes
2.	Speed of Comprehension	30		6 minutes
3.	Level of Comprehension	50		25 minutes
	Total Score		125	41 minutes

The Tests of Reading at levels 3, 4, and 5 have the same general form. The same answer sheets serve for the three levels, one with English headings, the other with Spanish, and the tests are so keyed that one scoring key serves for the C forms and another for the D forms.

In the Vocabulary test the stem is a defirition, a descriptive phrase, or a word suggesting the response. In Speed of Comprehension the task is to find a word omitted from the sentence in the stem. The items are arranged in cycles of similar difficulty, and the test is highly speeded. The Level of Comprehension is tested by questions based on paragraphs of generally increasing difficulty. All paragraphs were created for the earlier Inter-American Tests or for the new series.

Revision of Spanish

The language of the Spanish edition of the tests produced in Project No. 681 was carefully examined in relation to the English. With the assistance of native speakers the Spanish was revised, where it seemed advisable, to express as nearly as possible in standard Spanish the same content as in English and in language of similar difficulty. Consultants on the Spanish language in various parts of the current project have included Lilian Scheffler and Ofilia Jarquin de F. de la Reguera of the Instituto Nacional de Pedagogía of México; Matías López Chaparro and Gutiérrez Figueros of the Escuela Normal Superior of México; Arturo Souto A. of the University of the Américas, México City; and Francisca DeCarlo of the McCallum High School, Austin, Texas. The revisions have been included in the tests printed by the publisher, Guidance Testing Associates.

The New Tests

The Level 1 Test of General Ability, constructed in Project No. 681 is designed for administration at the end of the kindergarten or at the beginning of grade 1 to small groups of children. Although the test has been administered to many children at these levels with apparent success, it requires an adjustment to a group situation which is difficult for the less mature and for many children who have had little experience with activities not individually controlled. To overcome this difficulty a Pretest was constructed as a device for teaching the test procedure. The Pretest appears to help some children, but the brief experience which it provides seems inadequate for others. The difficulties of group testing are well stated by Bringelman and Manning, who administered the Spanish edition of the test to kindergarten children individually and in groups (7):

It appears that test results obtained by group procedures early in the kindergarten year should be accepted with caution, if not with doubt. The statistically significant differences favoring individual administration indicates a need for improving the existing measurement instrumentation. Without question, attention and persistence abilities and the ability to follow directions significantly affect group scores in kindergarten test procedures for atypical populations.

To meet the need for a test of general ability adapted to children who find the group situation too difficult, Forms DE and DEs of the Level 1 test were extended downward and adapted to individual administration. Although the test was completed so late in the program that only limited evaluative data can be reported, results from its use have been very encouraging. The preliminary edition of the test was administered in a "Head Start" Program to obtain data for item selection. The Preschool Test scores (on the items selected for the final test), Goodenough-Harris Draw-A-Man Test scores, and teachers' ratings of "readiness for the work of grade 1" were available for 20 children. The correlation of the two tests was .58 and the orrelation of the Preschool Test with the teachers' ratings was .68.

The completed Preschool test (English edition) has been administered successfully to uisadvantaged four-year-old and five-year-old children in day care centers and to kindergarten children of a wide range of abilities (Table 85-A). Teachers' ratings were available for 43 kindergarten children. The ratings were made before the test administration and probably represent various factors of adjustment and achievement. The correlation of the Preschool Test with the teachers' ratings was .64.

The Preschool Test materials are arranged in two sections for administration on different days. Each section has the same subtests with different items. The correlation of these two halves in each of the two groups was .73, a correlation sufficiently low to suggest the desirability of using the test as a whole rather than one part alone. With the application of the Spearman-Brown formula the reliability coefficient for the entire test becomes .84 (Table A-9).

The Level 1 Tests of Reading were first constructed with 60 items, but a clustering of scores near the top suggested the need of additional items. To meet this reed the number of items was increased to 40 in each part, making a total of 80. The mean scores on the lengthened Spanish edition administered to first-grade children outside the States were approximately 19, 14, and 33 (Form CEs, n = 225; Form DEs, n = 236). The mean scores on the English edition, Form CE, administered to 1049 first-grade children in different states were approximately 27, 23, and 49 with standard deviations of 9, 9, and 18. Form DE, administered to a smaller group (191) yielded similar means of 28, 24, and 52 with standard deviations of 7, 8, and 15.

San Antonio Study

A special study of the Tests of General Ability, Level 1, and the Tests of Reading, Level 1, was made in the San Antonio Public Schools with the cooperation of Thomas D. Horn, Professor of Curriculum, University of Texas, and Raymond W. Arnold, Assistant Superintendent for the Elementary Schools of San Antonio. The Tests of General Ability and the Goodenough Draw-A-Man Test were administered in September, and the Tests of Reading in the following spring, to selected class groups from 12 schools. The testing program was carefully planned to provide "control" data for Dr. Horn's Cooperative

Research Project on "Reading Readiness in Grade One" (8). The correlation of the Test of General Ability, Form CE, with the Goodenough-Harris raw score was .50 (n = 226 from 11 schools).

Colorado Study

Roy McCanne used both the Test of General Ability (Spanish HG-1-CEs) and the Test of Reading (R-1-CE Short Form) in his Office of Education Cooperative Research Project No. 2734 (9). The Test of General Ability was administered by tape recording. A letter from the investigator (final report not yet published) lists a correlation of .55 between General Ability and Reading. The correlations between the Test of Reading and the Stanford Achievement Test were "quite high," but the staff felt that on the whole the Inter-American Test of Reading was the most valid achievement test of those that were used.

Puerto Rico Study of Inter-American and College Board Tests

The Puerto Rico Office of the College Entrance Examination Board (represented by Adolfo Fortier, Executive Director of Latin American Programs, and Jorge Dieppa, Director of the Puerto Rico Office) and the Puerto Rico Department of Education (represented by Charles O. Hamill, Director of the Division of Evaluation, Miguelina N. de Hernández, former Director of the Office of Evaluation, and Julia A. González, former General Supervisor), cooperated in a study of the relation of the Inter-American Tests to a Department of Education Test of General Ability and to College Board Tests prepared for use with Spanish-speaking students. The tests included the Inter-American Tests of General Ability, Level 5, Spanish edition, the Test of Reading, Level 5, Spanish edition, and the Test of Reading, Level 4, English edition; (2) the Puerto Rico Prueba de Habilidad, Nivel 4; (3) the College Entrance Examination Board Prueba de Aptitud Académica, Verbal y Matemática, and Prueba de Inglés (English as a second language). More than 1,000 high school seniors were carefully selected from public and private schools to represent the entire population of seniors. The average high school grade and a rating of socioeconomic status were recorded for each student. Intercorrelations and "equivalent" Inter-American and College Board scores are presented in Tables A-1 to A-6 of the Appendix.

The correlations of the Inter-American Tests with other measures of achievement were remarkably high. The following are examples:

Inter-American Verbal with College Board Verbal .83
Inter-American Numerical with College Board Mathematical .75
Inter-American General Ability Total with High School Average .64
Inter-American Reading (Spanish) Total with High School Average .65
Inter-American Reading (English) Total with High School Average .59
Inter-American Test of Reading (English) with College Board English .85
Inter-American Test of General Ability (Total) with Puerto Rico Test

Intercorrelation of Subscores

Intercorrelations of subscores of Inter-American Tests of General Ability are presented in Table A-7 and of Tests of Reading in Table A-8. The coefficients vary over a wide range with median coefficients as follows:

General Ability - Level 1, .66; Level 2, .48; Level 3, .64; Level 4, .59; Level 5, .57

Reading — Level 1, .84; Level 2, .61; Level 3, .80; Level 4, .76; Level 5, .70

The coefficients are higher for the Reading subtests than for the General Ability subtests. In each group the coefficients are lowest at Level 2 and highest at Levels 1 and 3.

Reliability

Reliability Defficients are listed in Tables A-9 to A-12. Most of the correlations were based upon Forms CE and DE administered to the same persons after a brief interval, but in some cases the split-half method (with application of the Spearman-Brown formula) was used. The CE-DE coefficients for General Ability Total Scores with one exception vary from .81 to .84 at Levels 1 and 2. At Levels 3, 4, and 5 the split-half correlations are much higher, .92 to .95. The CE-DE coefficients for Reading are in general higher than the corresponding coefficients for General Ability, .83 to .95.

Correlation of Abbreviated and Regular Editions of General Ability

The abbreviated edition of the Test of General Ability, Level 1, is correlated with the regular edition (Table A-14) only a little less closely than it is correlated with itself. The four available coefficients for the abbreviated form range from .67 to .82.

Correlation of Tests at Adjacent Levels

The correlation of the scores on the Tests of General Ability at the adjacent levels 2-3 and 3-4 are listed in Table A-13. Similar coefficients for the Tests of Reading at adjacent levels 2-3, 3-4, and 4-5 are listed in Table A-15. The coefficients for General Ability totals vary from .75 to .89; and for Reading totals, from .77 to .93. The lowest coefficients for the Tests of Reading are found between Levels 2 and 3, probably a result in part of basing these correlations on an administration of the tests in grade 4, where the pupils are likely to find the Level 2 tests rather easy.

Changes of Scores on Retest

Reliability coefficients which are based on the administration of two forms of a test at different times reflect the changes which occur in scores, but they represent only a summation and do not reveal the changes in the scores of individuals. To illustrate the magnitude of the changes which occur in individual scores, Table A-16 has been prepared. This table lists for tests of the first two levels the differences between first and second

scores. To find the difference the percentile of a score in the first administration of the test was subtracted from the corresponding percentile in the second. Thus a plus difference indicates a gain and a minus difference a loss. In the Tests of General Ability, from 16 to 19 per cent of the pupils had differences of 25 or more between the percentiles of the first and second tests. In the Tests of Reading the changes of 25 or more were fewer, from 1 to 18 per cent of the cases. But in both General Ability and Reading a few changes were as high as 50 from the first to the second test. The median gains and losses were almost equal.

Correlation of Tests of General Ability and Reading, Level 1

Table A-17 presents coefficients showing the relation of the Inter-American Tests of General Ability and the Metropolitan Readiness Test to the Inter-American Tests of Reading in grade 1. The ability tests were administered in the fall and may be regarded as instruments for predicting the spring achievement in reading. The coefficients of correlation of total General Ability scores with total Reading scores vary from .53 to .60. The corresponding coefficients for Metropolitan Total Readiness range from .43 to .67. The correlation of the total General Ability score with the Metropolitan Total Readiness score (Table A-18) varies from .65 to .83.

Correlation of Tests of General Ability with Other Tests of Ability

Additional evidence of the moderately high correlation of the Test of General Ability, Level 1, with the Metropolitan Readiness Test is found in the correlation coefficients recorded in Table A-19. The two coefficients of relationship between Total Score and Total Readiness are .80 and .85. The table shows a lower correlation (.50) between the General Ability Total and the Goodenough-Harris Draw-a-Man raw score. The correlation with the standard score is .41.

The Test of General Ability, Level 2, and the Otis Quick Scoring Mental Ability Test, Alpha, were administered in varying order to several groups (Table A-20). The median coefficients of correlation range from .52 to .62 between the part scores and are .68 and .70 between the total scores.

The correlation of the Inter-American Tests of General Ability, Levels 3 to 5, with the School and College Ability Tests is shown in Table A-21. The coefficients for Total Score with Total Score vary from .73 to .88 with a median of .82. The Nonverbal subscore of the Inter-American Test has no corresponding section in SCAT. The coefficients expressing the correlation of the Inter-American Nonverbal subscore with the Total SCAT score range from .33 to .75 with a median of .55. Other Inter-American subscores have higher correlations with their corresponding SCAT subscores: Verbal—Verbal range from .73 to .91 with a median of .83; Numerical—Quantitative range from .68 to .84 with a median of .74. In several groups the Verbal and Numerical scores were combined to yield a score more nearly comparable to the SCAT Total. The median coefficient of correlation between this combined score and the SCAT Total was slightly higher than the median coefficient between Total and Total (.84 and .82, respectively).

Table A-22 shows a moderately high correlation of the Tests of General Ability, Levels 4 and 5, Form CE, with the Verbal Reasoning, Numerical Ability, and Abstract Reasoning Tests of the Differential Aptitude Series — two coefficients in each comparison: Verbal with Verbal .79 and .73; Nonverbal with Abstract Reasoning .61 and .64; Numerical with Numerical .82 and .76.

Correlation of Inter-American Tests of Reading with Other Tests

The Inter-American Tests of Reading, Level 2, and the Stanford Achievement Test, Primary II, Word Meaning and Paragraph Meaning, were administered in grades 2 and 3. The coefficients of correlation of the corresponding sections were relatively high — Vocabulary with Word Meaning, from .66 to .88 with a median of .78; Level of Comprehension with Paragraph Meaning, from .52 to .79 with a median of .74 (Table A-23).

The correlation of the Inter-American Tests of Reading, Levels 3 to 5, with the Reading Tests of the Sequential Tests of Educational Progress (STEP) is shown for the several levels in Table A-24. Since STEP is primarily a test of comprehension with no subscores, the STEP score corresponds more closely to the Inter-American Level of Comprehension score than to either the total or another part score. The coefficients of correlation of Level with STEP vary from .61 to .88 with a median of .78.

Correlation of Inter-American Tests with Teachers' Marks and Other Measures of Achievement

Correlations of the Inter-American Tests of General Ability with teachers' marks and other measures of achievement are presented in Tables A-25 to A-44. In some tables correlations between other measures of ability and achievement are presented for comparison.

Correlations of the Inter-American Test of General Ability, Level 2, and the Otis Quick Scoring Test, Alpha, with teachers' marks are reported in Tables A-25 and A-26. The coefficients for the Inter-American totals vary from .24 to .49, with a median of .48, and the two correlations between the Otis Alpha totals and teachers' marks in the same groups are .41 and .57. In Tables A-27 and A-28 coefficients of .58 and .72 are reported for the Inter-American totals in grade 4. In general the Verbal-Numerical scores are more closely related to teachers' marks than are the Nonverbal.

At Levels 3 to 5 the correlation between Inter-American General Ability Total Scores and Teachers' Marks vary from .30 to .85, with a median of .60. The Verbal correlations range from .38 to .81 with a median of .57; the Nonverbal from \cdot .13 to .66 with a median of .38; and the Numerical from .24 to .85 with a median of .59.

Norms

Tentative norms for the Tests of General Ability, Level 1 and Levels 3 to 5, are presented in Tables A-45 to A-58. Distributions of scores on the Preschool Test are given in Table A-85. Tentative norms for the Tests of Reading are presented in Tables A-59 to A-70. In the preparation of the

norms "smoothing" and extrapolation have been freely used.

At levels 3, 4, and 5 the norms are based on a comparison of Inter-American scores with scores on tests published by the Educational Testing Service — General Ability with SCAT and Reading with STEP. Scores of tests were equated by the equipercentile method, and then the published percentile values of the SCAT and STEP scores were assigned to the corresponding Inter-American scores (4, 5, 6). With limited population samples a great deal of approximation has been necessary.

Table A-45 lists percentile equivalents of scores on the Inter-American Tests of General Ability, Level 1, for ages 6 and 7. The percentiles were estimated by comparison with the Goodenough-Harris <u>Draw-a-Man Test</u>. First, Goodenough-Harris raw-score equivalents were found for the General Ability total scores. Then, by reference to Tables 32 and 33 of the G-H <u>Manual</u> (10) the raw scores were converted to standard scores. Finally, the standard scores were converted to their percentile equivalents in a normal distribution.

The percentile norms for the abbreviated edition of the Level 1 Tests of General Ability presented in Table A-46 are based on a limited administration of the tests to children of grade 1 in three cities.

Tables A-47 to A-49 list percentile equivalents of scores on the Tests of General Ability, Level 3, for grades 4, 5, and 6; Tables A-50 to A-55, Level 4, for grades 7, 8, and 9; and Tables A-56-58, Level 5, for grades 10, 11, and 12. The tests of Level 4 have two estimates for each grade, one based on a comparison with SCAT 4A and the other on a comparison with SCAT 3A.

Table A-59 lists percentiles for the Tests of Reading, Level 1, based on the administration of 1049 Form CE tests in 13 cities. The table contains approximate Form DE equivalents of the Form CE scores. Norms for the Spanish edition are based on a Puerto Rico sample of 225 children for Form CEs and 236 children for Form DEs (Table A-60).

Estimated grade equivalents of scores on the Tests of Reading, Level 2, were found by comparison with scores on the Stanford Achievement Tests, Primary Battery II (Table A-61). Inter-American Vocabulary was equated with Word Meaning, and Level of Comprehension with Paragraph Meaning.

Tables A-62 to A-64 present percentile norms for the Tests of Reading, Level 3, for grades 4, 5, and 6; Tables A-65 to A-67, Level 4, for grades 7, 8, and 9; and Tables A-68 to A-70, Level 5, for grades 10, 11 and 12.

Equivalent Scores

Equivalent scores (in the sense of equally difficult to attain by the population to which the tests were administered) are listed in Table A-71 for the full and abbreviated Tests of General Ability, Level 1.

Since the difficulty of tests at one level overlaps the difficulty of tests at an adjacent level, equivalent scores have been found for the different

levels. These are listed for General Ability, Levels 2 and 3 in Table A-72, Levels 3 and 4 in Table A-73, and Levels 4 and 5 in Table A-74; for Reading, Levels 2 and 3 in Table A-75, Levels 3 and 4 in Table A-76, and Levels 4 and 5 in Table A-77. A summary of equivalent total scores is presented in Table A-78.

The administration of the Inter-American Tests of General Ability, Level 2, with the Otis Quick Scoring Test Alpha made possible the equated scores listed in Table A-79. Equivalent scores are shown for the part scores — Verbal-Numerical with Verbal, Nonverbal with Nonverbal, and Total with Total.

Tables A-80 to A-84 give Form DE equivalents of Form CE scores for the Tests of General Ability, Levels 2 to 4, and the Tests of Reading, Level 2. In general, there is little difference in the scores of the two forms.

DISCUSSION

This project should be viewed as part of a continuing program of constructing parallel tests in English and Spanish and preparing interpretative materials for their effective use. The program began in the 1940's with the creation of tests in the Puerto Rico study of the teaching of English and will continue after the current project is completed. This project has contributed two new tests in the series and has added substantially to the interpretative materials.

Difficulties and Limitations

Though limited in its objectives, the task undertaken has been a huge one, and in some respects is incomplete as the time allotted to the project expires. The Inter-American Series includes English and Spanish tests in two forms for Tests of General Ability and Tests of Reading at five levels, an abbreviated edition of the Level 1 Tests of General Ability, a Pretest and Pre-Prueba for the Level 1 Tests of General Ability, and a Preschool Test of General Ability in one form (with directions in English and Spanish) — a total of 46 test booklets, a set of stimulus cards (for the Preschool Test), and accessory materials. The scores of tests at adjacent levels 2 to 5 have been tentatively equated, but the continuing scale for converting the scores to a common base is yet to be completed. Additional work must be done also on the norms and on the equation of the scores of the two test forms. Although materials are now available, the technical manual is yet to be prepared.

The project was plagued by a disastrous fire which destroyed some of the materials and delayed the work in progress. But the project itself has built-in difficulties. For the most part, the test administration is done voluntarily in widely scattered school systems on invitation by the director of the project. Although the project has had generous support, a large number of invitations for assistance are understandably declined or not even answered. While awaiting replies time goes on, and often the number of favorable replies is less then optimum. Moreover, the periods during the year when tests can or will be given are limited in number and duration, and, in many cases, unless the project is continued into the year following

the first requests, the staff finds itself with limited data. Projects which depend heavily on the voluntary cooperation of many different school systems need flexible time limits for completing the work and an easy extension of deadlines for filing a final report.

With a modest budget the test-maker encounters serious problems in developing norms for an extensive series such as the Inter-American Tests. Financial limitations rule out the possibility of a nation-wide independent sampling with close supervision. The alternative followed in constructing the Inter-American Tests is (1) to present scores of limited reference groups and (2) to approximate norms by comparison of Inter-American tests with standard tests for which national norms have been published. The limitations of such norms must be clearly recognized. But national norms which are independently prepared have their limitations; no method can produce more than an approximation of true nation-wide abilities and achievements. Besides, the most significant comparisons of scores are often those which can be made with norms prepared in the local school system.

Contributions of the Research

This study and experience with the tests outside of the study provide ample evidence that the Inter-American Tests are of high quality and can be extremely useful. Their coefficients of reliability compare favorably with those of other tests, and they have a moderately high correlation with tests measuring similar abilities and achievements. They cover a wide range so that measurements can be made with the same series from the preschool level through the high school. They provide a basis for a unique comparison of the results of tests administered in different languages. The current project has added new interpretative materials for more effective use of the tests, and the publishers may now prepare the "technical manual" expected when tests are offered for general use.

Outstanding, because of the cooperative nature of the program as well as the significance of the results, are the data produced in the comparison of tests of the Inter-American Series with tests of the College Entrance Examination Board prepared for use with Spanish-speaking students, and with the Puerto Rico Test of General Ability. The high correlation of the tests and the equated scores suggest the possibility of significant use of the Inter-American Tests in Spanish-speaking areas for guidance with respect to college enrollment.

At the other extreme the Preschool Test of General Ability offers a new instrument for use in adapting the educative process to four-year-old and five-year-old children. Education at this level is being greatly expanded, and the supply of appropriate measuring instruments is limited.

CONCLUSIONS

The new series of Inter-American Tests of General Ability and Tests of Reading is now a reality, and the tests are available from the publishers (Guidance Testing Associates, Austin, Texas 78752). The tests cover the range from the preschool level through the high school and are issued in parallel English and Spanish editions. This research is only a part of a

continuing process beginning with the creation of tests for a study of the teaching of English in Puerto Rico in the 1940's, continuing with the publication of a revised edition of the tests by the Educational Testing Service in 1950, carried forward by the Cooperative Research Project No. 681 completed in 1963, continued again by the current project, and hopefully to be continued in the future through appropriate research.

The current project has added two tests to the series, has revised the Spanish of many of the tests, and has contributed a wealth of interpretative materials. But it ends with the need for additional data, especially more results of tests of suitable reference groups, for the English edition from the Preschool Level through Level 4 and for the Spanish edition at all levels. The publishers are committed to a program of continuing research, but they are a small non-profit organization with only limited resources, and new outside support is urgently needed.

To extend the use of the tests a Portuguese edition should be prepared. This could probably be done with satisfactory results by a translation of the existing tests.

It is time also to extend the series into other areas — particularly by the development of an interest inventory and the creation of achievement tests in content areas. Mathematics, Natural Science, Social Studies, and World Literature are areas ready for the development of such measuring instruments. In each of these there is an enticing opportunity to stimulate progress in curriculum areas by building tests at least a little in advance of present practice.

SUMMARY

Cooperative Research Project No. 2621, the Development of Inter-American Test Materials, is a supplement to Project No. 681 completed in 1963. Both have been devoted to the development of a series of Tests of General Ability and Tests of Reading with parallel content in English and Spanish editions. The current project has added a Preschool Test to the Tests of General Ability and a Level 1 Test to the fests of Reading. It has revised the Spanish in some of the materials which were developed in the first project, and it has contributed a wealth of additional interpretative materials. The publishers (Guidance Testing Associates) can now proceed with the preparation of the customary "technical Manual."

The Inter-American Tests had their origin in a study of the teaching of English in Puerto Rico in the 1940's, a study under the auspices of the Committee on Modern Languages of the American Council on Education. The study committee sought tests in which the scores of the English and Spanish editions would have a unique comparability because of common content, similar language difficulty, and absence of cultural bias. A belief that the tests created for Puerto Rico would be useful in various parts of this hemisphere led to their publication in a revised edition in 1950 by the Educational Testing Service. The present series may be regarded as a revision and extension of the 1950 tests in the field of general ability (to do school work)

and achievement in reading, both in English and Spanish. The tests were developed simultaneously in English and Spanish by cooperation of English-speaking and Spanish-speaking personnel.

The Inter-American Series now includes a Preschool Test of General Ability for four-year-old and five-year-old children, a test administered individually with oral directions in English or Spanish and requiring no oral response; group Tests of General Ability and group Tests of Reading at five levels extending from grade 1 through the high school, each in two forms in both languages.

An approximation of "national norms" has been developed for the tests of Levels 3, 4, and 5 by comparison of Inter-American scores with the scores of standard tests for which tables of national norms have been published—
Tests of General Ability with the School and College Ability Tests (SCAT) and Tests of Reading with the Reading Test of the Sequential Tests of Educational Progress (STEP).

In a cooperative study with the Puerto Rico Office of the College Entrance Examination Board and the Puerto Rico Department of Education, the Inter-American Tests of General Ability (Spanish Edition, Level 5), Reading (Spanish Edition, Level 5), and Reading (English Edition, Level 4) were administered with the College Board Spanish Edition of the Scholastic Aptitude Test and the Test of English as a Foreign Language, and with the Puerto Rico Department of Education Test of General Ability (Spanish). Tables of comparable scores provide new data for use in the guidance of Spanish-speaking students with reference to college enrollment.

The preparation of parallel tests and interpretative materials in English and Spanish should be viewed as a continuing process, still far from complete. The present project has made a substantial contribution, but more is needed. The norms of the tests already constructed should be strengthened by additional testing of reference groups, and tests in new areas should be developed.

APPENDIX

Oral Vocabulary

In these four pictures, find the cat. Put your finger on the cat.

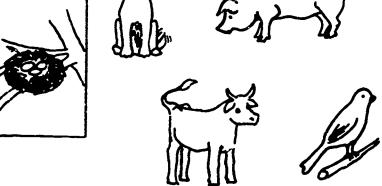

> En estos cuatro dibujos, busca el gato. Pon el dedo en el gato.

Association

(Point.) Put your finger on the picture that goes with this picture.

> (Señale.) Pon el dedo en el dibujo que va con este dibujo.

Classification

Put your finger on the picture that does not go with the other three.

Pon el dedo en el dibujo ue no va con los otros ces.

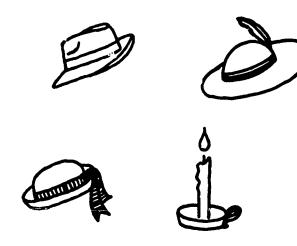

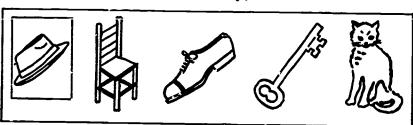

Figure 1A. Illustrations of Materials: Tests of General Ability, Preschool Level

Oral Vocabulary, Level 1

Put your finger on the hat.

(Pause.) In the same row
find the cat. Mark the cat.
Pongan el dedo en el sombrero.

(Pausa.) En la misma fila
busquen el gato. Marquen el
gato.

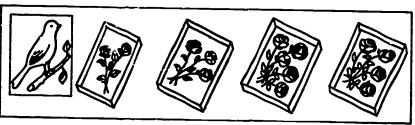

Now put your finger on the bird. (Pause.) In the same row find the box which has only two flowers.

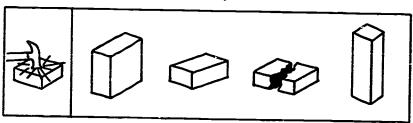

Ahora pongan el dedo en el pájaro. (Pausa.) En la misma fila busquen la caja que

tiene solamente dos flores.

Number, Level 1

Mark the picture that goes best with the first picture. Marquen el dibujo que va mejor con el primer dibujo. Association, Level 1

Mark only the one picture that is different, the one that does not go with the others.

Marquen sólo el dibujo que es diferente, el que no va con los otros.

Classification, Level 1

Number, Level 2, Written Exercises

Write the answer. Escriban la contestación.

4 -

3+2-1=

 $6 \div 2 =$

Analogies, Level 2

Find the picture that makes the second pair of pictures like the first pair. Busquen el dibujo que hace que el segundo par de dibujos se parezca el primer par.

Figure 2A. Illustrations of Materials: Tests of General Ability, Levels 1 and 2

PART I, SENTENCE COMPLETION

Find the word which has been left out.

The chain was so strong that it could not be **_?_.**

A sold B seen Cheard D broken E found

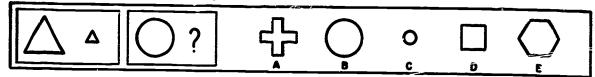

Busque la palabra que se ha omitido. La cadena era tan fuerte que no se podía _?_.

Avender Bver Coir Dromper E encontrar

PART II, ANALOGIES

In each row find the drawing which will make the second pair of drawings like the first pair.

En cada fila busque el dibujo que hará el segundo par de dibujos como el primer par.

PART III, COMPUTATION

In each problem find the right answer.

En cada problema busque la contestación correcta.

 $20 \div 5 = ?$

3 5

6

PART IV, WORD RELATIONS

In each question find the word which completes the second pair.

En cada pregunta busque la palabra que completa el segundo par.

ear hear - eye -?oreja oir — ojo -?-A pencil B nose C jump A lápiz B nariz C saltar D sleep E see Daormir Ever

PART V, CLASSIFICATION

In each group of drawings find the one which does not go with the others.

En cada grupo de dibujos busque el que no va con los otros.

PART VI, NUMBER SERIES

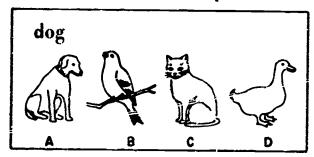

In each series of numbers find the number which comes next. En cada serie de números busque el número que sigue.

J14 L15 G8 1812

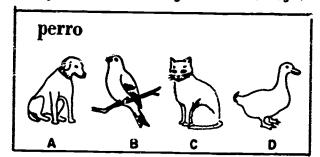

Figure 3A. Illustrations of Materials: Tests of General coility, Levels 3, 4, and 5

Vocabulary, Level 1

Find the picture that goes with the word. Mark the letter under this picture.

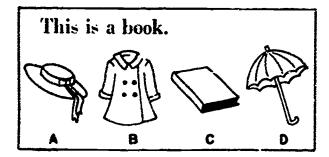

Busquen el dibujo que va con la palabra. Marquen la letra debajo de este dibujo.

Comprehension, Level 1

Mark the letter under the picture that shows what the words say.

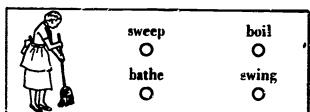

Marquen la letra debajo del dibujo que muestra lo que las palabras dicen.

Vocabulary, Level 2

Find the one word that goes with the picture. Mark the circle with a big X.

Busquen la palabra que va con el dibujo. Marquen con una X grande el círculo.

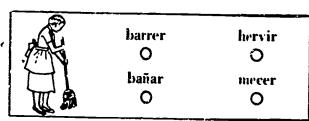

Figure 4A. Illustrations of Materials: Tests of Reading, Levels 1 and 2

PART I, VOCABULARY

In each question find the word which is defined or described.

En cada pregunta busque la palabra que se define o se describe.

To go fast:

Ir aprisa:

A run B stop C sew D wash E sleep

A correr B parar C coeer D lavar

E dormir

PART II, SPEED OF COMPREHENSION

In each sentence find the word which has been left out.

En cada oración busque la palabra que falta.

John found the book which he received for his birthday very interesting, and for that reason he --? -- it a second time.

A Juan le interesó mucho el libro que recibió para su cumpleaños y por esa razón lo -?- por segunda vez.

Foold Gsaw Hlost Jread Ltook

F vendió G vió H perdió J leyó

L llevó

PART III, LEVEL OF COMPREHENSION

Read the paragraph and then find the answers to the questions.

On last Monday I saw something which was larger than an automobile. It had wings, and it could fly faster than an eagle. It was carrying passengers. It was not afraid of land or water.

What was it?

What bird is named in the paragraph?

A boat B automobile C train D airplane E bird

A sparrow B owl C swallow D dove

E cagle

Lea el parrafo y luego busque las contestaciones a las preguntas.

El lunes pasado yo vi algo que era más grande que un automóvil. Tenía alas y podía volar más rápido que un águila. Llevaba pasajeros. No le tenfa miedo ni a la tierra ni al agua.

¿Qué era?

¿Qué ave se nombra en el párrafo?

A un hote B un automóvil C un tren

A un gorrién B un buho C una golondrina

D un aeroplano E un pájare

D una paloma E un águila
