EMPLOYMENT STATISTICS, *OCCUPATIONAL SURVEYS, *EMPLOYMENT
TRENDS, STATISTICAL DATA, NEWARK

THE OBJECTIVES OF THIS STUDY WERE TO (1) IDENTIFY
PRESENT AND EMERGING AGRICULTURAL OCCUPATIONS OTHER THAN
FARMING FOR WHICH VOCATIONAL AGRICULTURAL EDUCATION IS NEEDED
AND (2) DETERMINE THE NUMBER OF PERSONS PRESENTLY EMPLOYED
AND NEEDED IN THE FUTURE. BUSINESSES IN THE STATE IN WHICH
EMPLOYEES WOULD FIND A KNOWLEDGE OF AGRICULTURE USEFUL OR
NECESSARY WERE SELECTED AND STRATIFIED INTO 55 OCCUPATIONAL
SUBFAMILIES ACCORDING TO THE TYPE OF BUSINESS AND
GEOGRAPHICAL SUBDIVISION, THEN INTO EIGHT OCCUPATIONAL
FAMILIES. THE DISPROPORTIONATE RANDOM SAMPLE METHOD WAS USED
IN DRAWING THE SAMPLE. DATA WERE OBTAINED THROUGH INTERVIEWS
WITH RESPONSIBLE PERSONS REPRESENTING 267 OF THE 2,053
BUSINESSES EMPLOYING 32,776 PERSONS. IT WAS ESTIMATED THAT
5,050 PERSONS WERE EMPLOYED WHO WOULD FIND THE KNOWLEDGE OF
AGRICULTURE USEFUL OR NECESSARY IN THEIR OCCUPATION, AND THAT
2,154 ADDITIONAL AND REPLACEMENT EMPLOYEES WOULD BE NEEDED
DURING THE NEXT 5 YEARS. TABLES EXPLAIN THE NEEDS OR LACK OF
NEEDS OF VARIOUS OCCUPATIONAL FAMILIES. OF THE 5,050 PERSONS
NEEDING AGRICULTURAL COMPETENCIES, 2,610 OR 51.7 PERCENT WERE
EMPLOYED AT PROFESSIONAL, MANAGERIAL, AND SUPERVISORY LEVELS
OF EMPLOYMENT. TO MEET EMPLOYMENT NEEDS, EACH OF DELAWARE'S
16 HIGH SCHOOLS WITH DEPARTMENTS OF VOCATIONAL AGRICULTURE
SHOULD HAVE 34 GRADUATES EACH YEAR. (PA)

INTRODUCTION

The full title of this study, "Identification of Agricultural Occupations Other Than Farming and the Scientific and Technical Education Needed for Employment and Advancement in These Occupations in Delaware," is descriptive of the major objectives of the investigation. It is jointly sponsored by the Department of Agricultural Education, School of Agriculture, University of Delaware and the Agricultural Education Section, Division of Vocational-Technical Education and Extended Services, State Department of Public Instruction.

Project leader for the study is Ralph P. Barwick, Assistant Professor of Agricultural Education, School of Agriculture, University of Delaware, and project advisors are Dr. William E. McDaniel, Director of Resident Instruction, School of Agriculture, University of Delaware and Daniel E. Koble, Jr., State Supervisor of Agricultural Education, State Department of Public Instruction. A grant was obtained through the Division of Vocational-Technical Education and Extended Services, State Department of Public Instruction, to help finance the project.

This report is preliminary in nature and is primarily an enumeration of occupations by title and/or occupational family. A complete report will be published at a later date.

OBJECTIVES AND PURPOSE OF THE STUDY

The complete study has as its objectives the following:

1. To identify present and emerging agricultural occupations, other than farming, by job title, for which scientific, technical, and vocational agricultural education is needed in Delaware.
2. To determine the number of employees presently employed in these occupations and the numbers to be employed in the future.
3. To estimate the entry opportunities in present agricultural occupations due to turnover.
4. To determine the competencies needed for entry and satisfactory performance in these occupations.

5. To determine common competencies needed for employment and advancement in each of several groups of agricultural occupations.
6. To determine other characteristics of these occupations such as salary, minimum age of entry, union restrictions, labor laws, licensing, certification, experience, and formal education.
7. To determine the continuing educational needs of those employed in these occupations.

A complex of agricultural businesses and services has evolved to aid and facilitate the efforts of the producer on the farm. As a result, those concerned with agricultural education are aware that farming is only a portion of the broad agricultural industry. Farmers are customers for six million workers. These workers supply farmers each year with production supplies valued at 28 billion dollars. Also, ten million workers transport, process, manufacture, and sell farm products.

Broadened and extended programs in agricultural education need to be developed to meet the educational needs of certain workers in these off-farm agricultural occupations. This requires additional information over that which is currently available in order to make these adjustments and extensions in an intelligent manner.

The vocational agriculture program under federal reimbursement, came into being with the passage of the Smith-Hughes Act in 1917. One of the controlling purposes of the Act was that "such education be designed, to meet the needs of persons over fourteen years of age who have entered upon or who are preparing to enter upon the work of the farm or of the farm home." When the fact became more and more recognized that agriculture was more than farming and an expanded program of vocational agriculture was needed, a movement was initiated to establish new legislation.

The "Vocational Education Act of 1963," P.L. 88-210, is now law. This Act provides that "any amounts allotted (or apportioned) under such titles, Act, or Acts for agriculture may be used for vocational education in any occupation involving knowledge and skills in agricultural subjects, whether or not such occupation involves work of the farm or of the farm home, and such education may be provided without directed or supervised practice on a farm." The passage of this legislation makes the identification of off-farm agricultural occupations with specific job titles imperative.

There is also a need to identify the agricultural occupations

that require post-high school technical and scientific education in agriculture, the formal education or training needed and the levels at which the education and training should be offered.

PROCEDURE

In order to implement this study a list of the businesses in the state that were listed with the Delaware Employment Security Commission was secured. From this list, businesses were selected whose employees, we believed, would find a knowledge of agriculture useful or necessary in their occupation.

For this study agricultural occupations will be defined as those in which the worker needs competencies in one or more of the primary areas of plant and soil science, animal science, agricultural business management, marketing, and agricultural mechanization.

In order to make certain that all of the various types of businesses and services in the state would be included in the study, the firms were stratified into 55 occupational sub-families according to the type of business. Stratification was also made by geographic subdivision in case there would be any differences due to geographic location. The "disproportionate random sample" method was used in drawing the sample.

The data were obtained by having the teacher educator or one of three trained assistants interview a responsible person representing the business or service included in the random sample. The businesses or services included in the 55 occupational sub-families are grouped into eight occupational families. The per cent of businesses interviewed varied according to the number of businesses within a category.

The occupational families and the per cent sample follows:

Occupational Family	Number of Businesses and Services in Delaware	Number of Businesses and Services Interviewed	Per Cent of Businesses and Services Interviewed
Farm Machinery Sales and Service	29	6	20.7
Farm Supplies and Equipment	239	33	13.8
Livestock and Poultry Industries	205	35	17.0

Crops, Forestry and Soil Conservation	204	32	15.7
Ornamental Horticulture	176	26	14.8
Wildlife and Recreation	1	1	100.0
Agricultural and Farm Service	744	83	11.2
Food Marketing and Distribution	455	51	11.2
Totals and Average	2053	267	13.0

PRESENTATION OF DATA

The data obtained from the interviews by the teacher educator and assistants are presented in Tables 1 through 8! Eventhough this is a preliminary report, and further analysis of these data will be made at a later date, there are some observations that should be made at this time.

1. Approximately 20 per cent, or 32,776 (Table 2), of the total number of employees in the State of Delaware, which equals 165,008 excluding farming (Table 1), are employed in businesses and services other than farming in which it was believed the employees would find a knowledge of agriculture useful or necessary in their occupation.
2. Approximately 15 per cent, or 5,050 (Table 2), of the 32,776 that are employed in these businesses and services were found to need agricultural competencies.
3. During the next five years 2,154 additional and replacement employees having agricultural competencies will need to be hired in these businesses and services, Table 1.
4. Table 1 shows 7,352 persons employed in "Farming" and a need for 551 replacements during the next five years. Eventhough this report primarily concerns off-farm agricultural occupations, "Farming" is included in Table 1 for the purpose of making comparisons. The figure of 551 replacements was determined by assuming a one and one-half per cent replacement rate per year. This percentage is the result of research done in Iowa which considered both the age of present farm workers and the decline in number of farms.
5. Delaware has approximately 5 persons employed in off-farm occupations requiring agricultural competencies for every 7 persons engaged in farming.

6. The occupational families requiring the greater percentages of employees needing agricultural competencies are "Farm Machinery Sales and Service" and "Ornamental Horticulture," 64.5 and 45.4 respectively, Table 2. "Livestock and Poultry Industries" and "Agricultural and Farm Service" had the lowest percentages of employees needing agricultural competencies, both indicating 6.3. Also, the "Crops, Forestry and Soil Conservation" occupational family was low with 8.0.
7. Table 3, listing occupational sub-families, aids in understanding the three low percentages in the occupational families previously presented. The "Livestock and Poultry Industries" occupational family includes the "Poultry Processing" sub-family. This sub-family employs 2,810 persons, but the employers indicated that only 66, or 2.3 per cent, needed agricultural competencies.
- The "Canned Fruits and Vegetables" sub-family is included in the "Crops, Forestry, and Soil Conservation" family. The "Canned Fruits and Vegetables" sub-family employs 3,836 persons, but again employers indicated a small percentage needing agricultural competencies. In this case, 269, or 7.0 per cent. In both the "Poultry Processing" and "Canned Fruits and Vegetables" sub-families employers indicated that they did not believe the persons working on the processing lines needed agricultural competencies.
- The "Agricultural and Farm Service" occupational family includes several occupational sub-families in which it was suspected that the number of persons needing agricultural competencies would be low, but the study would not have been complete without their inclusion. For example, "General Building Contractors," 2.3 per cent; "Trucking," 1.6 per cent; "Utilities," 0.4 per cent; "Fuel Oil and Gasoline Dealers," 0.0 per cent; and "Real Estate Agencies," 0.8 per cent.
8. There are three occupational families in which more than 30 per cent of the businesses were established in the last 10 years, Table 4. These are "Farm Machinery Sales and Service," "Ornamental Horticulture," and "Food Marketing and Distribution." "Food Marketing and Distribution" is outstanding in this respect with 52 per cent of the businesses established in the last 10 years.
9. Table 5 shows there are three occupational families in which 50 per cent or more of the businesses indicated that 100 per cent of their gross income is agriculturally oriented. These are "Farm Machinery Sales and Service,"

"Livestock and Poultry Industries," and "Crops, Forestry, and Soil Conservation."

10. The occupational family having the greatest number of "Employees to be Hired During Next 5 Years" is "Food Marketing and Distribution" with 1,067 needed, Table 6. "Ornamental Horticulture" is next, needing 385.
11. Of the 5,050 persons employed needing agricultural competencies, 2,610, or 51.7 per cent, are employed at the professional, managerial, and supervisory levels of employment; Table 7. The supervisory level has the greatest number, 1,385.
12. Tables 8-1 through 8-8 list the occupational titles by level of employment and occupational family. These tables indicate the large number of occupational titles in the managerial and supervisory levels of employment. A large number of the occupational titles at the professional level of employment is found in Table 8-7.
13. Delaware has 16 departments of vocational agriculture. Table 1 indicates the number of persons needed in the next five years to enter farming and to enter other businesses and services needing employees with agricultural competencies, both full-time and part-time. From these data the number of persons needed per vocational agriculture department per year can be determined. This information is presented as follows:

Classification of Workers	To Be Hired Next 5 Years		To Be Hired For One Year		Number Needed Per H. S. Ag. Dept. Per Year	
	Full- time	Part- time	Full- time	Part- time	Full- time	Part- time
Farm Worker	392	159	78	32	4.9	2.0
Agricultural Businesses and Services (Excluding Farming)	1496	658	298	132	18.6	8.2
Totals	1888	817	376	164	23.5	10.2

14. Each vocational agriculture department in the State of Delaware will need to graduate approximately 34 persons per year to fill the employment opportunities in each of several groups of agricultural occupations.
