DESCRIPTORS- \*TEACHER EDUCATION, \*AGRICULTURAL EDUCATION,  
\*COLLEGE STUDENTS, TEACHER SUPPLY AND DEMAND, \*STUDENT  
ENROLLMENT, BACKGROUND, TRANSFER STUDENTS, \*OCCUPATIONAL  
CHOICE, TEACHER RECRUITMENT, VOCATIONAL AGRICULTURE, RALEIGH

IN THE FACE OF DECREASING NUMBERS OF STUDENTS PREPARING  
TO TEACH VOCATIONAL AGRICULTURE IN THE LAND-GRANT  
INSTITUTIONS AND THE INCREASING DEMAND FOR VOCATIONAL  
AGRICULTURE TEACHERS, A STUDY WAS UNDERTAKEN TO DETERMINE THE  
SOURCE OF PAST AND PRESENT AGRICULTURAL EDUCATION STUDENTS IN  
NORTH CAROLINA. DATA WERE GATHERED FROM STUDENT FILES ON 554  
AGRICULTURAL EDUCATION STUDENTS WHO GRADUATED BETWEEN 1954  
AND 1961 AND ALL UNDERGRADUATES IN THE PROGRAM FROM 1962  
THROUGH SPRING 1966. IT WAS FOUND THAT 49.7 PERCENT OF THE  
STUDENTS CAME FROM 18 PERCENT OF THE COUNTIES, THOSE COUNTIES  
WHICH HAD MORE VOCATIONAL AGRICULTURE PROGRAMS. DISTANCE FROM  
THE STATE UNIVERSITY DID NOT SEEM TO BE AN INFLUENCE, BUT  
ECONOMIC OR OCCUPATIONAL FACTORS MAY HAVE BEEN. THE NUMBER OF  
YEARS A TEACHER HAD BEEN AT A PARTICULAR SCHOOL DID NOT  
APPEAR TO BE RELATED TO THE NUMBER OF STUDENTS ENTERING  
AGRICULTURAL EDUCATION. TRANSFER STUDENTS FROM OTHER  
CURRICULUMS WITHIN NORTH CAROLINA STATE UNIVERSITY AND FROM  
OTHER COLLEGES AND UNIVERSITIES ACCOUNTED FOR 47 PERCENT OF  
THE AGRICULTURAL EDUCATION STUDENTS. (JM)

## FOREWORD

The North Carolina Research Coordinating Unit in Occupational Education is pleased to have the opportunity of disseminating this report of a study recently completed in the Agricultural Education Department, School of Education, North Carolina State University, Raleigh, North Carolina.

This publication and others to follow are a result of the partial fulfillment of the commitment of the North Carolina Research Coordinating Unit to:

- (a) Stimulate research in occupational education.
- (b) Identify problems for research.
- (c) Develop a system by which national, state, and local data may be organized and made available.
- (d) Maintain communication between people who are working in occupational education and research workers.
- (e) Assist in conducting training programs on activities involved in the research-action continuum.
- (f) Provide consultant services in state, local and area research developmental activities.

Joe R. Clary  
Director

## Preface

For some time it has been noted that students in Agricultural Education come from several parts of the state. This varies from one group of students to another. However, in spite of some changes some areas seem to always be represented while other areas rarely ever "produce" Ag Ed students. It was known that certain teachers were found in areas from which a number of students came year after year.

A shortage of teachers of vocational agriculture occurring at the same time that the Ag Ed enrollment reached the lowest numbers since World War II caused us to want to clarify the source of the student population, the major reason being that such an analysis might be helpful in understanding the recruiting problem and the role of the teacher of vocational agriculture in helping keep an adequate supply of teachers for the profession.

Henry Pasour, Graduate Assistant, Agricultural Education, gathered the data necessary for this analysis. Professor T. R. Miller assisted in arranging the data for analysis and writing the report. It is hoped that this report will serve to clarify the source of the student population by identifying some of the factors in the situation. Further study in depth may be needed.

C. C. Scarborough  
Head of Department

## INTRODUCTION

The land-grant institutions have had the responsibility for the training of Teachers of Vocational Agriculture since the Nelson Amendment of 1907 and the Smith-Hughes Act of 1917.<sup>1</sup> These acts made available to these institutions funds to be used in the training of Vo Ag teachers. As a result, the land-grant colleges have been the primary source of Vo Ag teachers.<sup>2</sup> North Carolina State University, as a land-grant institution, has accepted the responsibility for training Vo Ag teachers and has been the major source of teachers of vocational agriculture for North Carolina.

A nationwide shortage of Vo Ag teachers has been the picture in the past and is the outlook for the present and the foreseeable future. John Russell in his staff study prepared for the Advisory Committee on Education in 1938 recognized a shortage of Vo Ag teachers at that time.<sup>3</sup> In 1965, a study at Ohio State University, which included every state, revealed that 1003 persons entered Vo Ag positions that year, with 120 positions unfilled when school began.<sup>4</sup> Figures from the U. S. Office of Education indicate that a decline in the enrollment of Agricultural Education majors preparing

<sup>4</sup> Woodin, Ralph J., "Teachers Key Men in Recruitment Drive", The Agricultural Education Magazine, Vol. 38, No. 12, June, 1966, p. 272.

for teaching has occurred every year from 1961 to 1965 - decreasing by almost 9%. At the same time, supervisors have predicted that the number of positions opening annually will increase by 47% from the 1965-66 to the 1968-69 school year. N. C. State University, as a primary source of Vo Ag teachers in the state is directly concerned with an under-supply of teachers in North Carolina.

With a national shortage of Vo Ag teachers, the land-grant institutions of other states cannot be depended upon to provide North Carolina with enough teachers to overcome a shortage in this state. It seems reasonable to suggest that more graduates must be provided by the North Carolina State University Department of Agricultural Education, which means that more students must be recruited. This study took a look at the sources of students for the Agricultural Education Curriculum at North Carolina State University for the purpose of providing a better understanding of the recruiting situation in the state.

### Hypothesis

The following hypothesis was formed as a basis for making this study:

"The homes of present or former Agricultural Education students have not been evenly distributed across the state, either by county or by individual high schools."

### Scope of the Study

This study included 554 Agricultural Education students. These 554 students included the graduating seniors from 1954 through 1961, and all undergraduate Ag Ed students from 1962 through the Spring

of 1966. It is important to note that there were many students in the curriculum during the years 1954-1961 who did not graduate in Agricultural Education, and these are not included in this study.

### Design of the Report

This report was primarily concerned with three major areas:

1. The distribution of student sources by counties.
2. The distribution of student sources by individual schools.
3. The distribution of sources of transfer students by curriculum and by colleges.

### Method of Analysis

The data in this study was obtained from the files of each of these 554 students. A filing system was made consisting of one 3" x 5" card for each high school in North Carolina operating a department of vocational agriculture. Each card contains the following information:

1. The names of each of these 554 Ag Ed students that graduated from that high school.
2. The years which that student was enrolled in Agricultural Education at N. C. State University.
3. For each student which transferred into Ag Ed, the name of the curriculum or college from which he transferred.

The data on the cards was arranged to facilitate keeping it up-to-date and to note the individual's progress in school.

This report is a summary of the data found in the file described above.

## PRESENTATION OF FINDINGS

### Distribution of Ag Ed Students' Homes by Counties

The homes of Agricultural Education students at North Carolina State University have not been evenly distributed in the counties over the state. Instead, as illustrated in Figure 1, 49.7% of the 554 Agricultural Education students included in this study were from 18, or 18% of the counties. The uneven distribution across the state is also illustrated in Figure 2. There is a larger number of counties included in the 0-4 category than in the other 4 categories combined. A complete listing of individual counties in North Carolina along with the number of Ag Ed students from each is included in Appendix A of this study.

The top counties in North Carolina were those from which 12 or more of these 554 Agricultural Education students came. Columbus County is recognized as the leading county, having sent 37 of these students. These leading ten counties along with the number of Ag Ed students representing each are listed in Table 1.

Table 1. Comparison of the leading ten counties by number of Agricultural Education students from each, 1954-66.

Figure 1: The distribution of 18 counties which provided 49.7% of the Agricultural Education students, 1954-66.

# NORTH CAROLINA

Figure 2: The relative position of each county in the state, in terms of number of AED students from that county, 1954-66.

# NORTH CAROLINA

However, all counties have not been as successful in encouraging boys to enter the Agricultural Education Curriculum. Of the 554 boys represented in this study, none were representatives of ten of the 100 counties of North Carolina. Those ten counties are: Yancey, Scotland, Transylvania, Mitchell, Madison, Davie, Hertford, Polk, Dare, and New Hanover. (Dare and New Hanover have no Vo Ag Programs.)

However, the fact that some counties have sent more students does not necessarily mean that these counties are putting forth more effort than the others. As illustrated in Table 2 there tends to be a direct relationship between the leading counties and the number of schools per county. In other words, the counties which have sent the most boys would be expected to do so because they tend to have more Vo Ag Programs than the other counties.

**Table 2: The relationship between the number of schools per county and the counties which send the most or fewest students to N. C. State University to study Agricultural Education.**

<b>Position of county in state by no. of students sent</b>	<b>Average no. of Vo Ag programs per county</b>
Top ten counties	6.60
Following 8 counties	5.00
Total state average	3.59
Lower ten counties	1.80

The problem of recruiting students in Agricultural Education does not seem to be one of distance. As illustrated in Figure 3, instead of being clustered around Raleigh, the leading counties tend

Figure 3: Counties which have sent the most or the fewest Agricultural Education students to North Carolina State University.

to be clustered south of Raleigh. Also, of the top ten counties the leading county is one of the two most distant from Wake County, the county within which N. C. State University is located; whereas, two counties adjacent to Wake are included in the 0-4 students category. It is interesting to note that the area south of Raleigh is the major tobacco producing area of the state, which suggests that occupational or economic factors of a particular area may be an influencing factor in getting boys to enter the Agricultural Education Curriculum.

\*A continuation of this list down to 1 student per school is given in Appendix B.

Distribution of Ag Ed Students' Homes By Schools

To recognize only the county effort would be an injustice to many schools. Thirty-one schools in North Carolina are recognized for their individual efforts, having sent 4-10 boys to study Agricultural Education at N. C. State University during the time period included in this study. These schools, their county, and the number of students from each school during this period, are given in Table 3 (page 10).

Other recognition due to the leading 8 schools can be seen in Table 4. The table shows the percentage of the total number of students from the counties represented by these 8 schools that each of the 8 schools provided. In each case, these schools provided a larger percentage of the county's representatives than would normally be expected. This however, again does not necessarily indicate

Table 4: Comparison of eight schools by percentage of county's representatives in the Agricultural Education Curriculum at N. C. State University, 1954-1966.

Name of School	No. of Vo Ag Depts. in county in which school is located	% of the county's representatives provided by this school
Dallas	3	91.0
Grantham	11	50.0
Tabor City	10	21.6
Fair Bluff	10	16.0
Williams	10	16.0
Wallace-Rose Hill	12	37.0
Benson	12	25.0
Burgaw	4	50.0

that these schools are working harder than others in the county. Other factors could have an influence on the number of students from a particular school, such as size of the school, or the population characteristics (per cent rural, urban, etc.) of the particular area.

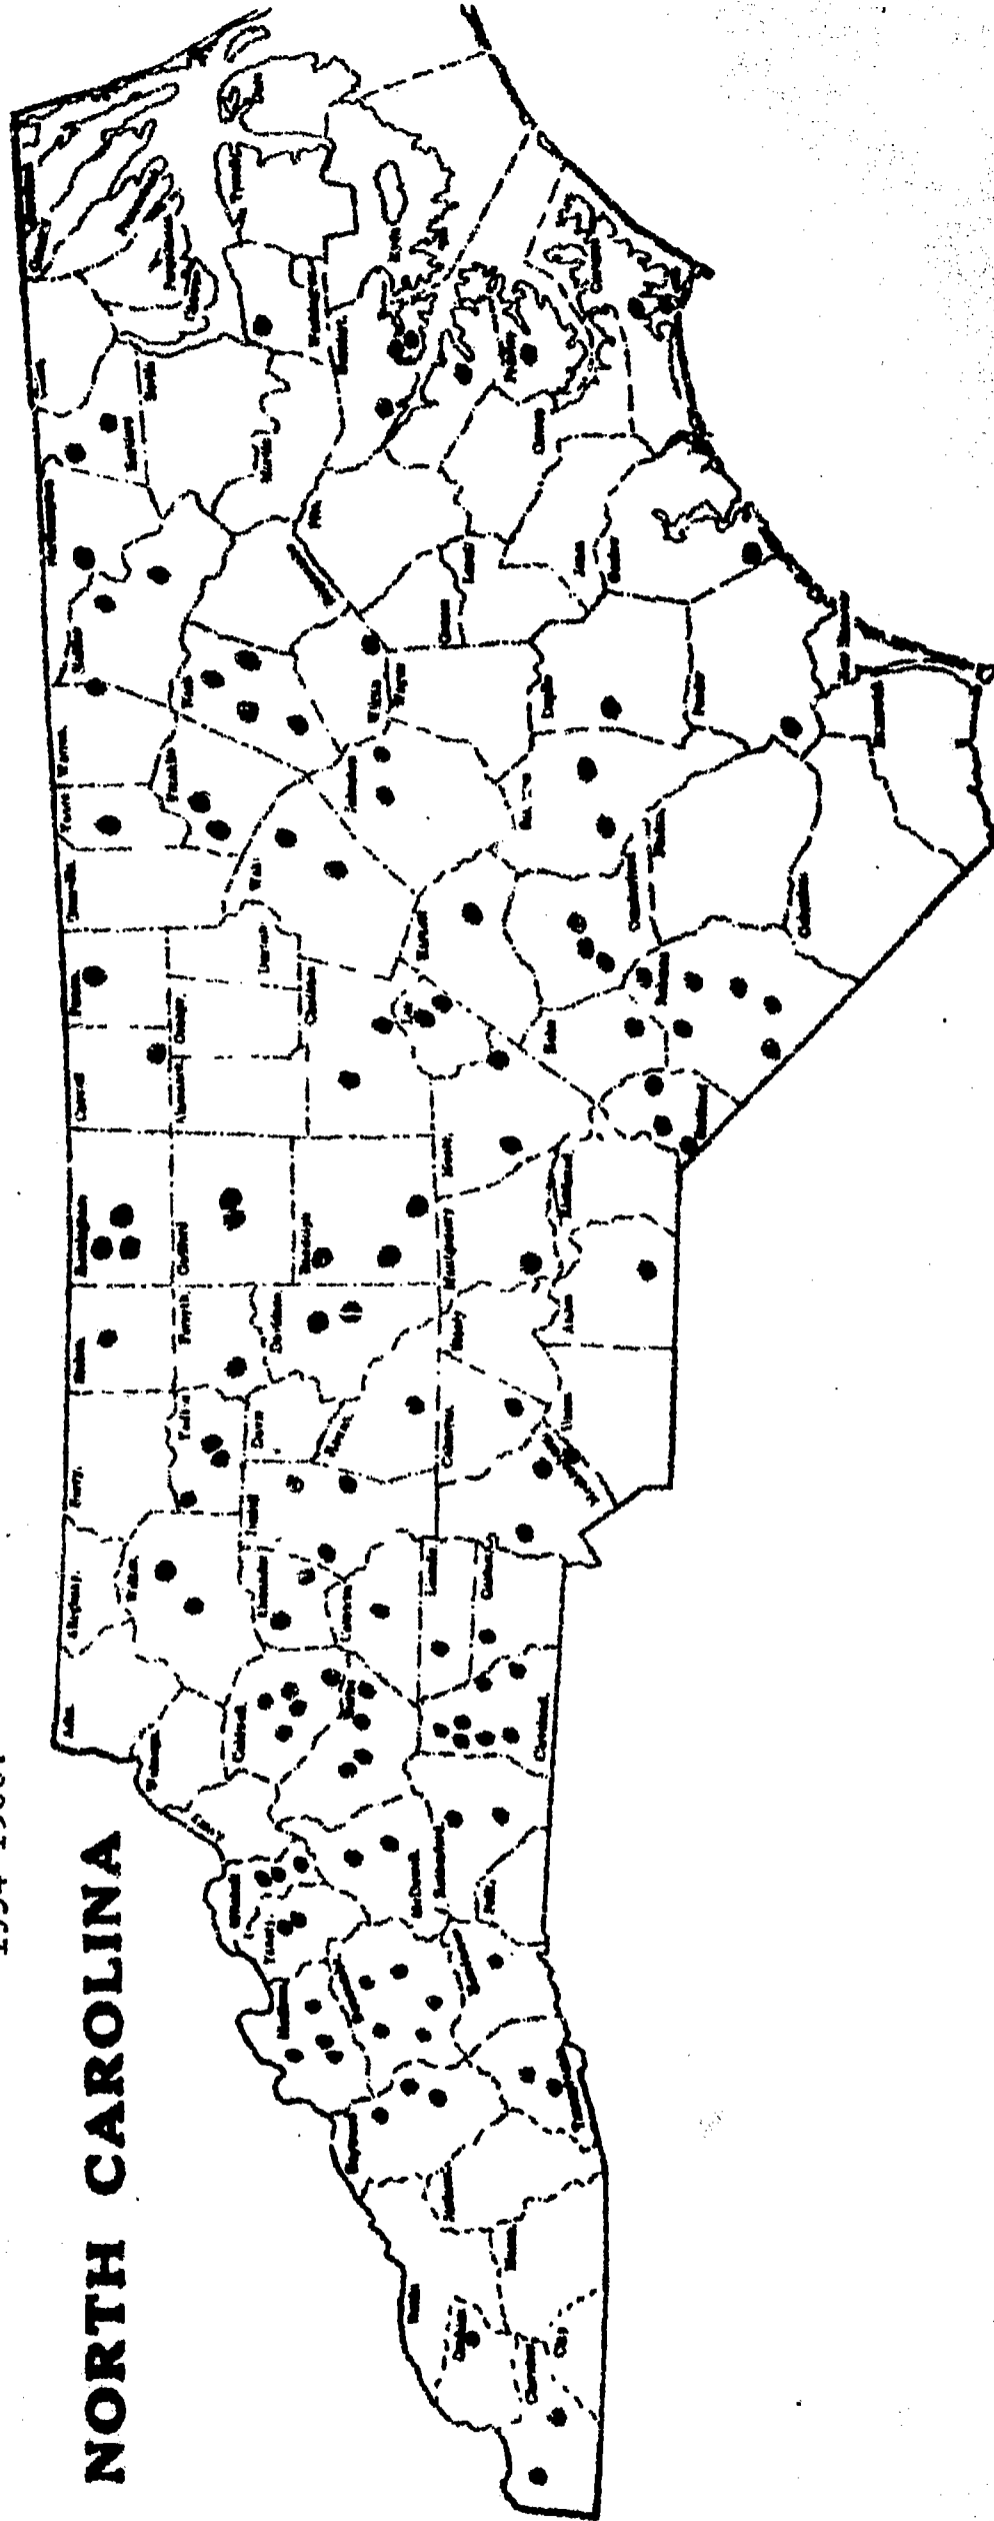

Just as with the distribution by counties, we do not have an equal distribution of students by high schools over the state. Of the 358 white Vocational Agricultural Departments operating in North Carolina in 1966, 128 of these, or 35.8% were not represented by any of the 554 Ag Ed students.

Why were there no representatives from these 128 Vocational Agriculture Departments during this time period? One may try to answer this question by asking another -- "Has there been a frequent teacher change in these schools?" If a department changes teachers rapidly, the particular teacher may not have as much influence on the boys as a long-term teacher who has been established in, and is accepted as a part of the community.

However, this factor does not seem to be the main reason why these 128 departments have not been represented. At least one of the Vocational Agriculture teachers at each of 64 of these schools have been at that school during the entire period of this study. An additional 24 of these schools have had the same Vo Ag teacher for 10-15 years during this period.

Again, the reason why these departments were not represented during this period does not seem to be one of "distance" from N. C.

Figure 4: The distribution of 128 Vo Ag Departments that were not represented by AED students, 1954-1966.

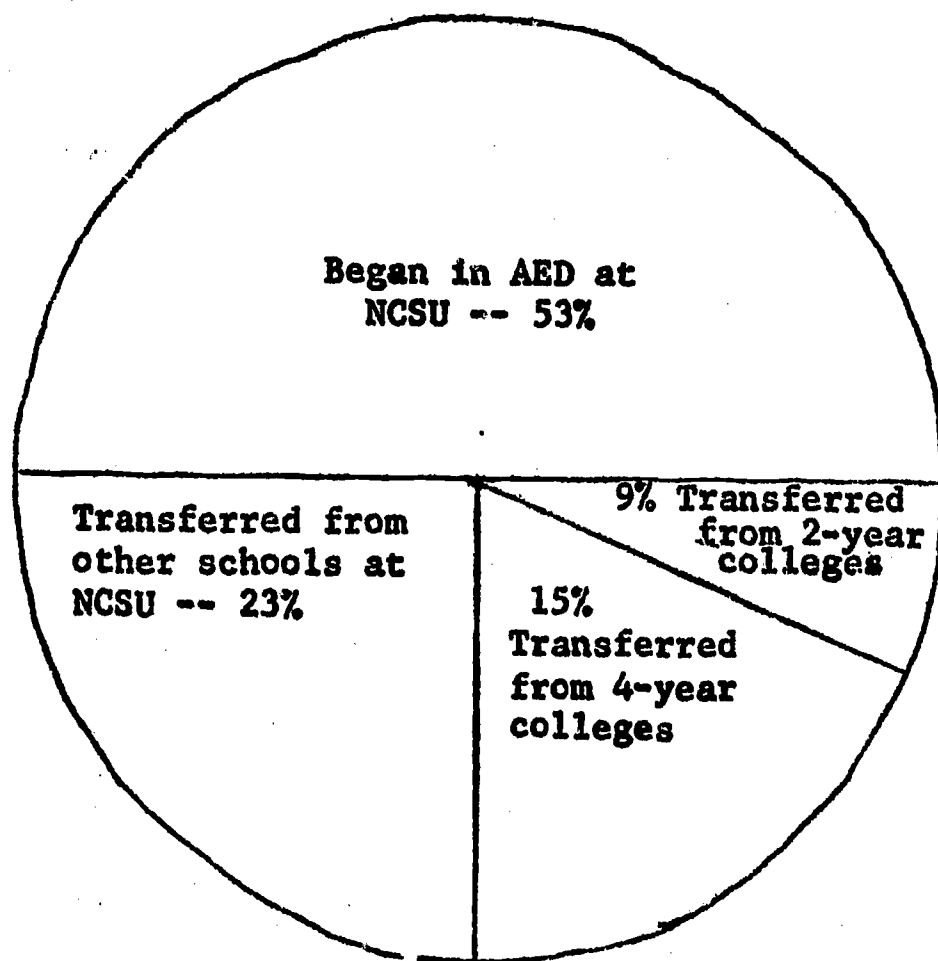

Note: Schools are concentrated near Wake County, as well as in the western portion of the state.

State University. As shown in Figure 4, these schools are distributed in the nearby counties as well as the more distant ones.

Distribution of Sources of Transfer Students

All Agricultural Education students do not come directly from their high schools; in fact, 47% do not. These students transfer from junior colleges and senior colleges, but mostly from other schools within N. C. State University. Figure 5 illustrates the percentage of transferring students and where they transfer from. Most of these transfer students from other schools of N. C. State University were from areas in General Agriculture; however, a sizeable number of students have transferred from areas of engineering, especially mechanical.

Figure 5. The percentage of Agricultural Education students that began in AED, and those that transferred into AED, by type of school from which transferred.

Transfer students from other colleges came from 12 junior colleges and 15 senior colleges. A listing of colleges represented along with the number of students from each is given in Table 5.

SUMMARY

This was a study of the source of students for the Agricultural Education Curriculum at North Carolina State University. The study included 554 students -- the graduating seniors from 1954 through 1961, and all undergraduate Ag Ed students from 1962 through the Spring of 1966, a total of 16 classes of Ag Ed students. The findings of this study are summarized in the following paragraphs.

Agricultural Education students' homes have not been distributed evenly across the state. Eighteen counties supplied 49.7% of the 554 students represented in this study. Also, there were 10 counties not represented by any of these 554 students.

There was also a variation in the number of students from high schools which have Vo Ag Departments. Numbers of students from individual schools ranged from a high of 10 from one school to a low of 0 from 128 schools. There does not seem to be a clear relationship between the number of students per school and the number of years a particular Vocational Agriculture teacher has been at that school. There have been very few boys in the Agricultural Education Curriculum in the past from high schools without Vo Ag programs. Only 10 of these schools were represented by the students in this study.

Transfer students have made up a large portion of the Agricultural Education students. Forty-seven per cent of the Agricultural Education students transferred into the curriculum, more than half of which came from other curriculums within N. C. State University.

It would be impossible to conclude that this study has answered all questions related to problems in recruiting Ag Ed students.

However, the data in this study does suggest that there are problems which have resulted in this uneven distribution of students over the state, and that the discovery of the nature and the correction of these problems would be an aid to the improvement of the recruiting process.
