EDRS PRICE MF-\$0.50 HC-\$2.96 74P.

DESCRIPTORS- *OFFICE OCCUPATIONS EDUCATION, *OFFICE MACHINES, BUSINESS, *EDUCATIONAL NEEDS, *CURRICULUM PLANNING, QUESTIONNAIRES, SURVEYS, CONNECTICUT, NEW BRITAIN, HARTFORD

WITH THE ULTIMATE OBJECTIVE OF UPGRADING VOCATIONAL PROGRAMS OF OFFICE EDUCATION, A STUDY WAS MADE TO DETERMINE THE TYPES OF OFFICE MACHINES USED IN SELECTED BUSINESSES OF CONNECTICUT, THE NUMBER OF EMPLOYEES USING THEM, AND THE BUSINESS EDUCATION CURRICULUM IMPLICATIONS OF THE INCREASING OR DECREASING USE OF ANY TYPE OF OFFICE MACHINES. QUESTIONNAIRE RESPONSES WERE OBTAINED FROM 3,168 CONNECTICUT BUSINESSES, REPRESENTING 59 DIFFERENT TYPES LOCATED IN THE 17 LABOR MARKET AREAS, AND FROM 124 HIGH SCHOOLS, REPRESENTING 95 PERCENT OF THE 131 CONNECTICUT PUBLIC HIGH SCHOOLS OFFERING INSTRUCTION ON THE USE OF OFFICE MACHINES. FINDINGS FROM THE SURVEY OF BUSINESSES SHOWED--(1) AN ALMOST 2 TO 1 USE OF THE 10-KEY ADDING MACHINE OVER THE FULL-KEY BOARD, (2) WIDESPREAD USE OF THE ROTARY AND PRINTING CALCULATOR, (3) USE OF BOOKKEEPING AND ACCOUNTING MACHINES BY ALMOST 24.5 PERCENT OF THE BUSINESSES, (4) USE OF THE OFFSET TYPE OF DUPLICATOR BY 35 PERCENT OF THE 1,434 BUSINESSES WHICH USED A TYPE OF OFFICE DUPLICATOR, (5) A DECREASED USE OF THE KEY-DRIVEN CALCULATORS, AND (6) MANY FULL-TIME JOB OPPORTUNITIES FOR CARD PUNCH, VERIFIER, AND TRANSCRIBING MACHINE OPERATORS. BUSINESS EDUCATION CURRICULUM IMPLICATIONS INCLUDED--(1) THE NECESSITY TO PROVIDE ADEQUATE INSTRUCTION IN USING THE 10-KEY LISTING MACHINE, CARD PUNCH MACHINE, OFFSET PROCESS OF COPY REPRODUCTION, AND PRINTING CALCULATOR, AND (2) THE NEED FOR INCREASED TRAINING IN MACHINE TRANSCRIBING ACTIVITIES. (PS)

INTRODUCTION

Under the Vocational Education Act of 1963, provision was made for upgrading the vocational programs of office education. Until this Federal aid became available, many schools were unable, because of limited funds for vocational education, to expand their program in the office occupations. Under the provisions of the Connecticut State Plan for Vocational Education, a substantial portion of the monies provided by the Vocational Education Act of 1963 will be requested by local school authorities for the purchase of office machines for instructional purposes at the high school level.

At the present time very little, if any, information is available to the educator relative to the types of office machines being used by the businesses of Connecticut. A survey of the literature revealed that no research report or professional literature provided this type of information.

STATEMENT OF THE PROBLEM

The purpose of this study was to ascertain the types of office machines used in selected businesses of Connecticut, the number of employees using this equipment, and the business education curriculum implications of the increasing or decreasing use of any type or types of office machine. More specifically the purposes of this study were:

1. To determine the types of office machines used in select businesses throughout the State of Connecticut.
2. To determine the types of office machines used for instructional purposes in the Business Education Departments of the public high schools of Connecticut.
3. To determine if the use of certain types of office machines in business offices is diminishing or becoming obsolete.
4. To determine if a trend toward the increased use of any type or types of office machine is apparent in the businesses of Connecticut.
5. To provide a source of information for local school systems use when making decisions as to the type of office machine to be purchased for instructional use.
6. To provide a source of information for Connecticut State Education Department officials who evaluate the request from local school systems for funds provided by the provisions of the Vocational Education Act.
7. To provide data which may be used as the basis for high school business education curriculum revision.
8. To gather data which would provide essential background information for possible future studies relative to the vocational competency attained by high school students who have received instruction on the use of office machines.

RESEARCH PROCEDURE

Development of the Instruments. Questionnaires were prepared to obtain data from a sample of Connecticut businesses and the public high schools of Connecticut with business education departments using office machines for instructional purposes.

Representatives from twenty different types of businesses, located in six different labor market areas were asked by the principal investigator to evaluate the questionnaire designed for collecting data from Connecticut businesses. This pilot group was comprised of businesses ranging in size from a small two-employee office to a major employer of office personnel. The pilot group's consensus was that the questionnaire was satisfactory and would be favorably received. This questionnaire is in Appendix A.

Selection of Sample. The 1966 Directory of Connecticut Manufacturing and Mechanical Establishments published by the Connecticut Labor Department was used to obtain twenty-four different types of businesses located within the seventeen labor market areas of Connecticut. From this Directory a sample was selected which consisted of every business employing more than fifty people and a system of random numbers was used to select 30 per cent of those businesses, located in each of the seventeen labor market areas, employing fewer than fifty people.

The yellow pages of every Connecticut telephone directory were used as a source to obtain twenty-five additional types of businesses located within the seventeen labor market areas of Connecticut. A system of random numbers was used to select a sample consisting of 30 per cent of each of the twenty-five additional types of businesses located in each of the seventeen labor market areas.

A total of 5232 Connecticut businesses, representing 59 different types of businesses located in the 17 labor market areas of Connecticut, were selected as the sample for this investigation. A master file of this total sample was compiled with each business coded as to type and labor market area.

The 1965-1966 Directory of Connecticut Business Education Teacher Personnel issued by the Connecticut State Department of Education was used to determine the high schools offering instruction on the use of office machines. A file was compiled of the 131 Connecticut public high schools offering instruction on the use of office machines. Each of these schools was classified as to labor market area. The questionnaire used to gather data from this sample is presented in Appendix B.

Collection of Data. Useable data was returned from 2189 businesses in the Connecticut business sample in response to the first mailing of the questionnaire. These 2189 returns represented 42 per cent of the businesses in the sample. A follow-up was made of the remainder of the sample which didn't return completed questionnaires. Nine hundred seventy nine returns were made in response to the follow-up. A total of 3168 useable responses were obtained. The 3168 responses represented 61 per cent of the 5232 businesses in the sample.

One hundred two useable responses were returned from the public high schools of Connecticut as a result of the first mailing of the questionnaire. These 102 returns represented 78 per cent of the public high schools using office machines for instructional purposes. Twenty-two additional responses were obtained from the remainder of this sample in response to a follow-up request for data. A total of 124 useable responses were obtained. The 124 responses represented 95 per cent of the 131 public high schools in the sample.

MAJOR FINDINGS

Office Machines currently used by Connecticut Businesses. The data with regard to the types of office machines used by the office personnel of selected Connecticut businesses are presented in Table I, page 4.

A study of this data reveals:

1. An almost 2 to 1 use of the ten-key adding machine over the full-key board adding machine.
2. The wide-spread use of the rotary and printing calculator.
3. Seven hundred seventy nine (24.5 per cent of the respondees) businesses use bookkeeping and accounting machines in their offices.
4. Of the 1434 businesses who use a type of office duplicator, 503 (35 per cent) use the offset type of office duplicator.
5. Many full-time job opportunities are available for card punch machine and verifier machine operators.
6. Many full- and part-time job opportunities exist for transcribing machine operators.

A complete breakdown of the use of office machines by each of the 59 different types of businesses in the 17 labor market areas of Connecticut is presented in Appendix C.

The number of employees using these office machines on a full- or part-time basis is reported by type of office machine and labor market area in Appendix D.

The number of employees using office machines in each of the 59 different types of business in the sample is presented in Appendix E.

Contemplated changes in types of office machines now in use in businesses comprising this sample. An analysis of the data gathered reveals the following contemplated changes in the types of office machines now in use in the Connecticut businesses comprising the sample for this study:

1. Bookkeeping and Accounting Machines. Eleven (forty-four full- and part-time machine operators) of the seven hundred seventy nine businesses using bookkeeping and accounting machines contemplate the discontinued use of these machines and the utilization of the services of a data processing service bureau. However, it is important to note that the great majority of businesses using bookkeeping and accounting machines indicated no contemplated discontinuance of their use at the present time.
2. Unit Record Installations--Accounting Machines. Fifteen (fifty full- and part-time accounting machine operators) of the one hundred fifty four firms using accounting machines as a part of unit record installations contemplate replacing these machines by either the installation of a computer or the utilization of the services of a data processing service bureau. This change is contemplated by approximately 9 per cent of the firms using this type of unit record equipment.

TABLE I

OFFICE MACHINES USED BY CONNECTICUT BUSINESSES
AND THE NUMBER OF FULL-TIME AND PART-TIME
OPERATORS OF THESE OFFICE MACHINES

Type of Machine	Number of Businesses Using	Machine Operators	
		Full-time	Part-time
Adding Machines			
Full key	1257	594	6743
Ten key	2442	1107	10306
Calculators			
Rotary	589	1918	4876
Key driven	338	329	893
Printing	537	616	2209
Electronic	197	139	509
Bookkeeping and Accounting Machines			
Bookkeeping	428	633	411
Accounting	351	488	395
Office Duplicators			
Spirit	561	23	2336
Stencil	370	19	1100
Offset	503	439	754
Unit Record Equipment			
Card Punch	291	1624	436
Sorter	242	47	799
Reproducer	205	69	577

Accounting Machine	154	196	461
Calculating Punch	66	28	215
Collators	183	51	505
Computers			
Small	71	274	141
Medium	34	164	110
Large	9	150	57
Miscellaneous			
Transcribing Machines	550	2229	2012
Proportional Space Typewriters	580	1223	919
Punched Tape Machines	165	272	225

3. Key-Driven Calculators. Thirty-four (10 per cent) of the three hundred thirty eight firms using key-driven calculators indicated the contemplated discontinuance of their use. This change would affect 775, or 64.5 per cent, of the total of 1200 full-time and part-time key-driven calculator operators. The printing calculator was designated as the replacement for the key-driven calculator.
4. Rotary Calculators. A total of 85 firms, or 15 per cent of the 589 firms using rotary calculators, contemplate the discontinuance of the use of this type of office machine. This would involve approximately 700 full-time and part-time rotary calculator operators. The printing calculator was indicated as the type of office machine to replace the rotary calculator.
5. Office Duplicators--Offset Process Printing. A total of 66 firms, or 7 per cent of the 931 firms using office duplicators, contemplate changing from the stencil process or spirit process to the use of on-premise offset process duplication. This contemplated change affects 510 part-time stencil process and spirit process duplicating machine operators.

Business machines used for instructional purposes in Connecticut public high schools. A study of the data in Table II, page 6, reveals:

1. The number of key-driven calculators used for instructional purposes is almost 2 1/2 times as large as the number of printing calculators used for instructional purposes.
2. Very few accounting machines are available for instructional use.
3. Very few business education departments of Connecticut public high schools have offset equipment available for instructional use.
4. Instruction on the use of unit record equipment is offered in a limited number of high schools.
5. No "hands-on" computer training is offered in any Connecticut public high school.
6. The number of rotary calculators used for instructional purposes is twice as large as the number of printing calculators used for instructional purposes.

The number of office machines available for instructional use in Connecticut public high schools is presented in Appendix F.

SUMMARY

The purpose of this study was to ascertain the types of office machines used in selected businesses of Connecticut, the number of employees using this equipment, and the business education curriculum implications of the increasing or decreasing use of any type or types of office machine.

A total of 5232 Connecticut businesses, representing 59 different types of businesses located in the 17 labor market area of Connecticut, were selected as the sample for this investigation. A total of 3168 useable responses were obtained. The 3168 responses represented 61 per cent of the 5232 businesses in the sample.

One hundred thirty one public high schools in Connecticut were contacted. These high schools offered instruction on the use of office machines. A total of 124 useable responses were obtained. The 124 responses represented 95 per cent of 131 public high schools in the sample.

The data gathered as to the types of office machines used by Connecticut business firms indicated:

1. An almost 2 to 1 use of the ten-key adding machine over the full-key board adding machine.
2. The wide-spread use of the rotary and printing calculator.
3. Seven hundred seventy nine (24.5 per cent of the respondees) businesses use bookkeeping and accounting machines in their offices.
4. Of the 1434 businesses who use a type of office duplicator, 503 (35 per cent) use the offset type of office duplicator.
5. Many full-time job opportunities are available for card punch machine and verifier machine operators.
6. Many full- and part-time job opportunities exist for transcribing machine operators.

The most significant trends relative to the future use of certain types of office machines were:

1. The continued growth of the use of the printing calculator.
2. The increased use of on-premise offset duplication.
3. The great majority of firms using bookkeeping and accounting machines indicated no discontinuance of their use at the present time.
4. The decreased use of key-driven calculators in the businesses comprising the sample of this investigation.
5. The increasing use of the ten-key type of keyboard.

RECOMMENDATIONS

The high school business education curriculum implications of this study, with consideration accorded to the local labor market area needs, are:

1. The necessity to provide adequate instruction using the ten-key listing machine which is preferred by business 2 to 1 over the full-keyboard type.
2. Since the need for key-driven calculator operators is decreasing, the continued instructional use of the key-driven calculator is questioned.
3. There is a need for increased card punch machine training to meet the increasing demand for this type of skill.
4. Because of the increased use of on-premise offset duplicating in the offices of Connecticut businesses, instruction should be provided on the use of the offset process of copy reproduction.
5. Due to the many job opportunities available to people possessing this skill, increased training should be given in the area of machine transcribing activities.
6. Due to the increasing use of the printing calculator in the offices of Connecticut businesses, increased instruction should be provided on the use of the printing calculator.

IMPLICATIONS FOR FUTURE RESEARCH

The data collected in this study indicates the wide-spread use of different types of office machines by many different types of businesses located in Connecticut. Many full-time and part-time positions exist for office machine operators. What is the role of the business education departments of the high school in preparing students to fill these positions? Research is needed to answer:

1. What is a marketable skill in the area of office machines?
2. What should be the expected level of competency attained by high school students in the area of office machines--acquaintanceship or vocational competency?
3. What are the on-the-job applications of the use of various office machines?
4. How can these on-the-job applications of the use of office machines be best presented within the framework of the high school business education curriculum?

(b) administration offices _____

5.4. Card punch verifier Yes _____ No _____

5.41. Number of students who received instruction on these machines during the 1965-66 school year _____

5.42. Number of these machines available for instructional use in (a) business education class rooms _____
(b) administration offices _____

5. UNIT RECORD EQUIPMENT (Con't.)

5.5. Accounting machines Yes _____ No _____

5.51. Number of students who received instruction on these machines during the 1965-66 school year _____

5.52. Number of these machines available for instructional use in (a) business education class rooms _____
(b) administration offices _____

5.6. Calculating punch Yes _____ No _____

5.61. Number of students who received instruction on these machines during the 1965-66 school year _____

5.62. Number of these machines available for instructional use in (a) business education class rooms _____
(b) administration offices _____

5.7. Collators Yes _____ No _____

5.71. Number of students who received instruction on these machines during the 1965-66 school year _____

5.72. Number of these machines available for instructional use in (a) business education class rooms _____
(b) administration offices _____

6. COMPUTERS

Do the business education students of your school receive instruction on the use of

6.1. Computers Yes _____ No _____

6.11. Number of students who received instruction on these machines during the 1965-66 school year _____

6.12. Number of these machines available for instructional use in (a) business education class rooms _____
(b) administration offices _____

7. MISCELLANEOUS OFFICE MACHINES

Do the business education students of your school receive instruction on the use of

7.1. Transcribing machines Yes _____ No _____

7.11. Number of students who received instruction on these machines during the 1965-66 school year _____

7.12. Number of these machines available for instructional use _____

7. MISCELLANEOUS OFFICE MACHINES (Con't.)

7.2. Proportional space typewriters Yes _____ No _____

7.21. Number of students who received instruction on these machines during the 1965-66 school year _____

7.22. Number of these machines available for instructional use _____

7.3. Punched tape producing machines Yes _____ No _____

7.31. Number of students who received instruction on these machines during the 1965-66 school year _____

7.32. Number of these machines available for instructional use _____

8. Are you contemplating adding any type of new office machine not discussed in this questionnaire? Yes _____ No _____

If your answer is Yes, what type of office machine/machines are being considered as additions?

During what fiscal year/years do you plan to order this additional equipment?

OFFICE MACHINES USED BY FIFTY-NINE DIFFERENT TYPES OF
BUSINESSES IN CONNECTICUT'S SEVENTEEN LABOR MARKET AREAS

CONNECTICUT LABOR MARKET AREAS

1. ANSONIA -- The Ansonia labor market area is comprised of the four towns of Ansonia, Derby, Oxford, and Seymour.
2. BRIDGEPORT--The Bridgeport labor market area comprises the city of Bridgeport and the towns of Trumbull, Easton, Shelton, Stratford, Fairfield, Monroe and Milford.
3. BRISTOL--The Bristol labor market area is comprised of the towns of Bristol and Plymouth.
4. DANBURY--The Danbury labor market area includes the city of Danbury and the towns of Bethel, Brookfield, New Fairfield, Newton, Redding, Ridgefield and Sherman in Fairfield County, and Bridgewater, Kent, New Milford, Roxbury, Warren and Washington in Litchfield County.
5. DANIELSON--The Danielson labor market area is comprised of the towns of Brooklyn, Canterbury, Eastford, Plainfield, Pomfret, Putnam, Sterling, Thompson, Woodstock and Killingly, which includes Danielson.
6. HARTFORD--The Hartford labor market area comprises the city of Hartford and the towns of Avon, Bloomfield, Bolton, Canton, East Granby, East Hartford, East Windsor, Ellington, Enfield, Farmington, Glastonbury, Granby, Manchester, Newington, Rocky Hill, Simsbury, Somers, South Windsor, Stafford, Suffield, Tolland, Vernon, West Hartford, Wethersfield, Windsor and Windsor Locks.
7. MERIDEN--The Meriden labor market area includes the city of Meriden and the adjoining towns of Southington and Wallingford.
8. MIDDLETOWN--The Middletown labor market area includes the towns of Chester, Clinton, Cromwell, Deep River, Durham, East Haddam, East Hampton, Essex, Haddam, Killingworth, Marlborough, Middlefield, Middletown, Old Saybrook, Portland and Westbrook.
9. NEW BRITAIN--The New Britain labor market area is comprised of the city of New Britain and the adjacent towns of Berlin and Plainville.
10. NEW HAVEN--The New Haven labor market area, comprising the city of New Haven and the towns of Bethan, Branford, East Haven, Guilford, Hamden, Madison, North Branford, North Haven, Orange, West Haven, and Woodbridge.
11. NEW LONDON--The New London labor market area includes the towns of East Lyme, Groton, Ledyard, Lyme, Montville, New London, North Stonington, Old Lyme, Salem, Stonington and Waterford.
12. NORWALK--The Norwalk labor market area includes the city of Norwalk and the towns of Westport, Wilton and Weston.

CONNECTICUT LABOR MARKET AREAS (Con't.)

13. NORWICH--The Norwich labor market area consists of the city of Noawich and the eight surrounding towns of Bozrah, Colchester, Franklin, Griswold, Lisbon, Preston, Sprague and Voluntown.
14. STAMFORD--The Stamford labor market area includes the city of Stamford and the towns of Darien, Greenwich and New Canaan.
15. TORRINGTON--The Torrington area incorporates the fifteen towns of Barkhamsted, Canaan, Colebrook, Cornwall, Goshen, Harwinton, Litchfield, Morris, New Hartford, Norfolk, North Canaan, Salisbury, Sharon, Torrington, and Winchester in Litchfield County and the two towns of Burlington and Hartland in Hartford County.
16. WATERBURY--The Waterbury labor market area covers 280 square miles and includes, in addition to the city of Waterbury, the surrounding towns of Beacon Falls, Bethlehem, Cheshire, Middlebury, Naugatuck, Prospect, Southbury, Thomaston, Watertown, Wolcott and Woodbury.
17. WILLIMANTIC--The Willimantic labor market area consists of the towns of Andover, Ashford, Chaplin, Columbia, Coventry, Hampton, Hebron, Lebanon, Mansfield, Scotland, Union, Willington and Windham, containing the city of Willimantic.
