A detailed outline of the Fundamental Electrical Course follows.

Unit I - Fundamental Theory of Electricity

R.S.A.	1	Care and Use of Hand Tools and Equipment
Job	1	Identify Hand Tools in Your Shop
R.S.A.	2	Hack Saws, Hack Saw Blades, Vise, and Ruler
Job	2	Cut Conduit and Wire to Specified Length
R.S.A.	3	Electron Theory and Static Charges
Job	3	Prove Laws of Electrical Charges and Effects of Static Charges
R.S.A.	4	Electric Current and Electron Flow
Job	4	Produce Electron Movement and Current Flow

Unit I - Fundamental Theory of Electricity (Continued)

R.S.A.	5	Voltage, Current, Resistance and Conductance
R.S.A.	6	Properties of Magnets and Magnetic Fields
Job	6	Determine the Polarity of Magnets and the Existence of Magnetic Field
R.S.A.	7	Electromagnetism and Electromagnets
Job	7A	Perform Oersted's Experiment of Magnetic Effects of an Electric Current
Job	7B	Make an Electromagnet and Study its Characteristic
R.S.A.	8	Means of Developing Electromotive Forces
Job	8	Produce E.M.F. by Three Different Methods
R.S.A.	9	Primary Cells
Job	9	Testing Voltage and Amperage of a Dry Cell, and Methods of Connecting Dry Cells
R.S.A.	10	Secondary Cells
Job	10	Construct and Test Secondary or Storage Cells

Unit II - Principles of Direct Current

R.S.A.	1A	Care and Use of Power Operated Tools
Job	1A	Installing Fasteners in Masonry Construction
R.S.A.	1B	Types of Fasteners
Job	1B	Installing Fasteners in Masonry Construction
R.S.A.	2	Tap Drill Figures
Job	2	Lay Out Plate For Drilling
Job	3	Figure Tap Drill Sizes
Job	4	Drilling
Job	5	Taps and Tapping
R.S.A.	3	Types of Wire and Cable and The Use of The American Wire Gauge and Micrometer
R.S.A.	4	Wire Connections and Soldering
Job	6	Make a Rat-tail Splice, a Tap Splice and a Fixture Splice
Job	7	Make a Western-Union Splice and a Cable Splice
Job	8	Soldering Wires in Terminal Lugs
R.S.A.	5	Mathematics - Ohm's Law--Series Circuits
Job	9	Construct a Series Circuit and Take Voltage and Ammeter Readings
R.S.A.	6	Mathematics - Ohm's Law--Parallel Circuits
Job	10	Construct a Parallel Circuit and Take Voltage and Ammeter Readings
R.S.A.	7	Mathematics - Ohm's Law--Series Parallel Circuits
Job	11	Construct a Series Parallel Circuit and Take Voltage and Ammeter Readings
R.S.A.	8	Circuit Sketching, Cells in Series, Parallel and Series-Parallel
Job	12	Connect Cells in Series, Parallel and Series and Parallel and Take Voltage Reading

333

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

Unit II - Principles of Direct Current (Continued)

- R.S.A. 9 Low Voltage Signal Circuits
Job 13A Connect 2 Vibrating Bells in Parallel, Using 1
Push Button and 2 Cells in Series
Job 13B Wire a Department Return-Call Bell Circuit, Using
Single-Contact Push Buttons
Job 13C Connect and Install a Department Return-Call System
Using Four Department Bells and One Master Bell With
Eight Single-Contact Push Buttons
Job 13D Connect a Six-Point Manual-Reset Annunciator to be
Controlled from Six Single-Contact Push Buttons
R.S.A. 10 Fuses and Circuit Breakers
Job 14 Test for Blown Fuses in Fuse Panel, Using a Test
Socket and a Lamp Bulb
R.S.A. 11 Power in Direct Current Circuits
Job 15 Determine the Power in a D.C. Circuit
R.S.A. 12 Principles of Dynamo-Electric Machines
Job 16 Construct a Direct Current Generator
R.S.A. 13 Problems Concerning Conductors
Job 17A Learn How Electrical Resistance Varies With the
Kind of Material Used
Job 17B Learn How the Resistance of a Conductor Varies With
Its Length
Job 17C Measure Voltage Drop in a Circuit
R.S.A. 14 Direct Current Meters
Job 18 Construct an Experimental Ammeter

Unit III - Principles of Alternating Current

- Math 1 Introduction to Trigonometry
Math 2 Trigonometric Functions
Math 3 Tables of Functions
Math 4 Solution of Right Triangles
Math 5 Periodic Functions
Math 6 Elementary Plane Vectors
R.S.A. 1A Alternating Currents and Voltages
R.S.A. 1B Care and Use of Portable Meters and Indicating
Devices
Job 1 Assemble, Connect and Test Run a Single Phase
Alternator
R.S.A. 2 Alternating Current Meters
Job 2 Convert a D'Arsonval Meter Movement to Measure
Alternating Current Voltage
R.S.A. 3A Study the Oscilloscope
Job 3A Operation of the Oscilloscope
R.S.A. 3B Study Voltage Calibrator
Job 3B Use of the Voltage Calibrator
R.S.A. 4 Resistance and Power in AC Circuits
Job 4 Watts and Power Factor Resistor Circuits
R.S.A. 5A Inductance
R.S.A. 5B Inductance in AC Circuits

Unit III - Principles of Alternating Current (Continued)

- Job 5 Watts and Power Factor of Inductor Circuits
- R.S.A. 6A Capacitance
- R.S.A. 6B Capacitance in AC Circuits
- Job 6 Watts and Power Factor of Capacitors
- R.S.A. 7A Impedance in AC Series Circuits
- Job 7A Watts and Power Factor of Series Inductance, Capacitance Circuit
- R.S.A. 7B Resistance, Inductance and Capacitance in AC Parallel Circuits
- Job 7B Watts and Power Factors of Parallel Inductance, Capacitance Circuit
- R.S.A. 7C Series-Parallel AC Circuits
- R.S.A. 8 Study the Capacitance or Condenser Tester
- Job 8 Capacitor Testing
- Job 9A Inductor-Resistor Phase Shift Circuit
- Job 9B Capacitor-Resistor Phase Shift Circuit
- R.S.A. 10A Power Factor
- R.S.A. 10B Power in Single Phase Circuits
- Job 10A Check Power Factor of a Single Phase Load (Leading and Lagging)
- Job 10B Check Power Factor of Single Phase Motor Full Load
- R.S.A. 11 Principles of Alternating Current
- Job 11A Connect and Meter the Current and Voltage in a 3-Phase Star Connected Circuit
- Job 11B Connect and Meter the Current and Voltage in a 3-Phase Delta Connected Circuit
- R.S.A. 12 Power Transformers
- Job 12 Assemble, Connect and Test Input and Output of Single Phase Transformer
- R.S.A. 13 Instrument Transformers
- Job 13A Connect Potential Transformers for Metering
- Job 13B Connect Current Transformers for Metering

Unit IV - Lighting

- R.S.A. 1 Facts About Lighting
- Job 1 Measure Light With Light Meter
- R.S.A. 2 Types of Lamps
- Job 2 Construct Single-Lamp Fluorescent Light
- R.S.A. 3 Computing Electric Light and Power Bills
- Job 3 Read Meter and Calculate Bill

Unit V - Motors and Generators

- R.S.A. 1 Direct Current Generators
- Job 1 Construct a Separately-Excited D.C. Generator
- R.S.A. 2 Direct Current Motors
- Job 2 Construct a Series-Wound D.C. Generator and Motor

Unit V - Motors and Generators (Continued)

- | | | |
|--------|----|--|
| Job | 3 | Construct a Shunt Wound D.C. Generator and Motor |
| Job | 4 | Disassemble and Clean Commercial Type Shunt Motor or Generator |
| Job | 5 | Construct a Compound Wound Generator and Motor |
| Job | 6 | Disassemble and Clean Commercial Type Compound Wound Generator or Motor |
| R.S.A. | 3 | The Growler |
| Job | 7 | Armature Testing With a Growler |
| R.S.A. | 3A | Generators |
| Job | 8 | Test a Compound Motor for Grounds and Open Circuit |
| Job | 9 | Experiment on Resistance Testing of a D.C. Compound Motor |
| Job | 10 | Determine the horsepower of A.C. and D.C. Electric Motors |
| R.S.A. | 4 | Principles of Alternating Current Motors |
| Job | 11 | Construct an A.C. Induction Motor--Four Pole--Split Phase--Starting Winding |
| Job | 12 | Construct an A.C. Split Phase Motor-Capacitor Start, Also Capacitor Start, Capacitor Run |
| Job | 13 | Construct an A.C. Shaded Pole Motor |
| Job | 14 | Construct a 3-Phase Induction Motor, 6-Pole, 12-Coil Field |
| R.S.A. | 5 | Automotive Generator Service |
| Job | 15 | Disassemble and Repair Automotive Generator |

Unit VI - Wiring Methods

- | | | |
|--------|---|--|
| R.S.A. | 1 | General Provisions of the National Electrical Code |
| Job | 1 | Connect a Light Controlled by a Single Pole Toggle Switch |
| R.S.A. | 2 | General Requirements for Wiring Methods |
| Job | 2 | Connect Two Lights in Series Controlled by a Single Pole Toggle Switch. Exposed Knob Method |
| R.S.A. | 3 | Types of Boxes, Box Covers, Box Extensions and Methods of Installation |
| Job | 3 | Connect Two Lights in Parallel Controlled by a Single Pole Toggle Switch. Exposed Knob Method. |
| R.S.A. | 4 | Polarity Identification of Systems and Circuits |
| Job | 4 | Connect a Ceiling Light Controlled by a Single Pole Toggle Switch. Concealed Knob and Tube. |
| R.S.A. | 5 | Types of Cables and Fittings |
| Job | 5 | Connect One Ceiling Light and One Receptacle, Each Controlled by a Single Pole Toggle Switch, Concealed Knob and Tube |
| R.S.A. | 6 | Branch Circuits and Service Entrance |
| Job | 6 | Install a Two Wire Service Entrance Using Two Wire Entrance Cable, a Socket Type Meter Base, and a Six Circuit-Breaker Panel |

Unit VI - Wiring Methods (Continued)

R.S.A.	7	Non-Metallic Cable or Romex Wiring
Job	7	Install Two Circuits Using Non-Metallic Cable (Romex)
R.S.A.	8	Armored Cable Wiring
Job	8A	Install a 3-Wire Service Entrance, Use 3-Wire Entrance Cable, Socket Type Meter Base and a Six-Circuit Breaker Panel
Job	8B	Install 3 Circuits Using Armored Cable (BX)
R.S.A.	9	Schematic Diagraming and Wiring Plans
Job	9	Install Two Circuits Using Romex Cable
R.S.A.	10	Installing Surface Metal Raceway
Job	10A	Installing Surface Metal Raceway Install No. 200 Wiremold From Existing Baseboard Receptacle, to Single Pole Toggle on Wall to Control Ceiling Light
Job	10B	Installing Surface Metal Raceway Install No. 1900 Wiremold From Existing Baseboard Receptacle to an Extension of 5 Receptacles
R.S.A.	11	Bending Conduit and Tubing with Hand Benders
Job	11	Bend Conduit and Electrical Metallic Tubing
R.S.A.	12	Installing Conduit
Job	12A	Install a 3-Wire Service Entrance Using 1" Conduit and a Six-Circuit Breaker Panel
Job	12B	Installing Conduit Install 2 Circuits Using 1/2" Conduit
R.S.A.	13	Methods of Pulling Conductors in Raceways
Job	13	Pull Wires into Conduit and Connect
R.S.A.	14	Use of N.E.C. Tables for Calculating the Number of Conductors in Conduit or Tubing
Job	14	Install a Ceiling Light Controlled by Two 3-Way Switches. Install Two 120-Volt Receptacles. Install a Three Wire 240-Volt Circuit
R.S.A.	15	Building Structures and Architectural Symbols
Job	15	Install 1/2" E.M.T. and Wire
R.S.A.	16	Wiring in Hazardous Locations
Job	16	Hazardous and Non-hazardous Installation
R.S.A.	17	Installing Wireways, Busways, Auxiliary Gutters, and Cellular Metal Raceways
Job	17	Installing Square-Duct and Wiring Using a Square-Duct Wiring Trough. Install From a Main Switch 3 Motors of Different Sizes Each Controlled by a Separate Switch
R.S.A.	18	Garages, Service Stations, and Bulk Storage Plants
Job	18	Wiring in Inflammable Areas
R.S.A.	19	Installation Practice of Lighting Fixtures
Job	19	Wire With Romex
R.S.A.	20	Practical Blueprint Reading
Job	20	Submit Bid on Single-Family Dwelling
R.S.A.	21	Application of Home Heating
Job	21	Electric Bathroom Heater Installation

Unit VI - Wiring Methods (Continued)

- R.S.A. 22 Remote Control Switching
Job 22 Wiring Remote Controlled Lighting Low Voltage Switching
- R.S.A. 23 Cooking Appliances
Job 23 Install Electric Range Circuit, Energize and Trouble Shoot
- R.S.A. 24 Electric Hot Water Heaters and Gas Furnace Controls
Job 24 Install Low-Voltage-Control Circuit for Gas Furnace
- R.S.A. 25 Metering Polyphase Circuits With and Without Instrument Transformers
Job 25A Connect Voltmeter and Ammeter With the Voltmeter Reading Line Voltage Only
Job 25B Connect Wattmeter in a Single-Phase Circuit
- R.S.A. 26 Illumination Design Data for Interiors
Job 26 Measure Length and Width of Wiring Booth and Figure the Number and Size of Fixtures Needed to Produce Approximately 60 Foot Candles of Lighting, 4-Feet From the Floor
- R.S.A. 27 Calculations for Illuminating an Industrial Shop
Job 27 Plan and Lay Out Lighting in Shop Building by the "Lumen Method of Calculation."
- R.S.A. 28 Calculating Wiring for an Industrial Shop
Job 28 Submit Bid for Complete Wiring of the Two School Shops
- R.S.A. 29 Calculating, Wiring, and Illumination for Paint Shop and Finishing Room
Job 29 Submit Bid for Complete Wiring of Paint Shop and Finishing Room
- R.S.A. 30 Characteristics and Working Principles of Fluorescent Lamps
Job 30 Reconnect a Two-Lamp (40 Watts Each) Fluorescent Pre-heat Type Fixture
- R.S.A. 31 Circuit Sketching - Fluorescent Lamps
Job 31 Reconnect a Two-Lamp (40 Watts Each) Instant Start Fluorescent Type Fixture
- R.S.A. 32 N.E.C. Requirements for Lighting Fixtures, Signs and Outline Lighting
Job 32 Calculate Wiring for Light and Power for Grocery Store
- R.S.A. 33 Estimating Material for Roughing-in a Single Family Dwelling
Job 33 Estimate Cost of Material and Labor for Family Dwelling

Unit VII - Direct Current Motor Control

- R.S.A. 1 Manual Starting Rheostats for Direct Current Motors
Job 1 To Study the Connections and Operation of a Three-Terminal Starting Rheostat

Unit VII - Direct Current Motor Control (Continued)

- Job 2 Install and Connect Shunt Motor, Safety Switch and Three-Terminal Starting Box. All Wiring to be Done in Rigid Conduit
- Job 3 Wire and Connect a Compound D.C. Motor to a Three-Terminal Starting Box and Safety Switch. All Wiring is to be in Rigid Conduit According to Your Own Layout
- Job 4 Wire and Connect a Compound D.C. Motor to a Four-Terminal Starting Box and Safety Switch. All Wiring is to be in E.M.T. According to Your Own Layout
- R.S.A. 2 Manual Speed Controllers for Direct Current Motors
- Job 5 Manual Speed Controller Connections and Operation
- Job 6 Load - Speed Test of a Shunt Motor
- Job 7 Load - Speed Test of a Compound Motor
- Job 8 Efficiency of a D.C. Motor
- R.S.A. 3 Drum Controllers
- Job 9 Connect a Shunt Motor to a Three-Terminal Starting Rheostat and Reversing Switch
- Job 10 Connect a Compound Motor to a Four-Terminal Starting Rheostat and Reversing Switch
- Job 11 Connect a Shunt Motor to a Drum Reversing Switch
- Job 12 Connect a Start-Stop Station to a D.C. Full Voltage Starter and Shunt Motor
- Job 13 Connect Two Start-Stop Stations to a D.C. Full Voltage Starter and Shunt Motor
- Job 14 Connect Three Start-Stop Stations to a D.C. Full Voltage Starter and a Compound Motor
- Job 15 Automatic Acceleration of D.C. Motors
- Job 16 Definite Time Method of Acceleration of a D.C. Motor
- Job 17 Connect a Start-Stop Station to a Reduced Voltage Magnetic Starter and Compound Motor
- Job 18 Connect a Reduced Voltage Magnetic Starter Equipped With Dynamic Braking to a Compound Motor
- Job 19 Automatic Acceleration With Dynamic Braking and Reversing
- R.S.A. 4 Automatic Motor Control

Unit VIII - Alternating Current Motors Controllers and Alternators

- R.S.A. 1 Insulating Materials and Wire
- Job 1 Measure Thickness of Slot Insulation Paper and Wire Size Before and After Insulation has Been Removed
- R.S.A. 2 Split Phase Motors
- Job 2 Rewind and Test a Split-Phase Motor
- R.S.A. 3 Capacitor Motors
- Job 3 Rewind and Test a Capacitor-Start Motor

Unit VIII - Alternating Current Motors Controllers and Alternators
(Continued)

- | | | |
|--------|----|---|
| R.S.A. | 4 | Current Relays |
| Job | 4 | Install and Connect a Current Relay |
| R.S.A. | 5 | Voltage Relay |
| Job | 5 | Install and Connect a Voltage Relay |
| R.S.A. | 6 | Repulsion Induction Motor |
| Job | 6 | Repair Repulsion-Induction Motors |
| R.S.A. | 7 | Three-Phase Motors |
| Job | 7 | Rewind and Connect a Three-Phase Fractional Horsepower Motor |
| R.S.A. | 8 | N.E.C. Specifications for Motors and Controllers |
| Job | 8 | Calculate Wiring for Three-Phase Motor and Controller |
| R.S.A. | 9 | Wiring for Motors |
| Job | 9 | Installation of Magnetic Starter and Raceway for a 3 H.P. Three-Phase Motor |
| R.S.A. | 10 | Across-the-Line Magnetic Starters |
| Job | 10 | Wire and Connect Control for Installed Magnetic Starter and Motor |
| R.S.A. | 11 | Reversing Magnetic Starter |
| Job | 11 | Install Wires and Connect Reversing Magnetic Starter |
| R.S.A. | 12 | Reduced Voltage Starter |
| Job | 12 | Wire and Connect Starting Compensator to Motor |
| R.S.A. | 13 | Drum, Two Speed and Quick Stop Controller |
| Job | 13 | Connect Wiring of Two Speed Controller to Motor |
| R.S.A. | 14 | Synchronous Drive and Indicating Systems |
| Job | 14 | Connect a Synchro Generator and Motor |
| R.S.A. | 15 | Alternators |
| Job | 15 | Connect and Test a Three-Phase Alternator |
| R.S.A. | 16 | Synchronizing and Phasing Alternators |
| Job | 16 | Phasing out and Connect Two Alternators in Parallel |
| R.S.A. | 17 | Calculating Necessary Data for Wiring Wound Rotor Motors |
| Job | 17 | Connect Wiring of Wound Rotor |

Unit IX - Transformer Principles and Practices

- | | | |
|--------|----|--|
| R.S.A. | 1 | Power Transformers |
| Job | 1 | Build a Simple Transformer |
| R.S.A. | 2 | Checking Polarity of Transformers |
| Job | 2 | Connect a Single Phase Transformer With Series-Parallel Secondary for Polarity Check |
| R.S.A. | 3 | Single Phase Transformer Connections |
| Job | 3A | Connect a Single Phase Transformer With Series-Parallel Secondary for Series Operation and Take Voltage Readings |
| Job | 3B | Connect a Single Phase Transformer With Series-Parallel Secondary for Parallel Operation and take Voltage Readings |

Unit IX - Transformer Principles and Practices (Continued)

- R.S.A. 4 Special Application of Transformers
Job 4 Connect Two Single Phase Transformers in Parallel and Take Voltage Readings
- Job 5 Make a Sketch of a Common Type Single-Phase Distribution Transformer Used as a Booster
- R.S.A. 5 Three Phase Transformer Connections
Job 6 Connect Three Single Phase Transformers for 3-Phase, Four Wire, Wye-Wye Operation, and Take Voltage Readings
- Job 7 Connect 3 Single Phase Transformers for 3 Phase, Four Wire, Wye-Delta Operation and Take Voltage Readings
- Job 8 Connect 3 Single-Phase Transformers For 3-Phase, Four Wire, Delta-Delta Operation and Take Voltage Readings
- Job 9 Connect 3 Single-Phase Transformers for 3 Phase, Four Wire, Delta-Wye Operation and Take Voltage Readings.
- Job 10 Connect Two Single-Phase Transformers for 3-Phase Open Delta Operation and Take Voltage Readings
- R.S.A. 6 Metering Single Phase Circuits Without Instrument Transformers
Job 11 Make a Neat Sketch of a Type S, 3-Wire, Single Phase, Self-Contained Meter Connected to a Load Center. Identify the current and potential coils and their connections. Explain in writing the functions of the meter parts.
- R.S.A. 7 Instrument Transformers
Job 12 Make a Sketch of a Potential Transformer Connected to a Voltmeter. Show a 20 to 1 Voltage Ratio and Explain all Parts on Your Sketch.
- R.S.A. 8 Metering Single Phase Circuits With Instrument Transformers
Job 13 Make a Neat Sketch of a Single Unit Current Transformer Connected to a Type S Meter Socket Metering a 3 Wire Line. Name All Parts on Your Sketch.
- Job 14 Make a Sketch of a Three-Wire Single-Phase Service Being Metered Using Instrument Current Transformer For Both Type A and S Meters
- Job 15 Make a Sketch of a Three Wire Line Using a 2 Wire Transformer
- R.S.A. 9 Metering Polyphase Circuits With and Without Instrument Transformers
Job 16 Make a Sketch of a Type S Meter Self-Contained, Measuring Energy in a Three Phase Delta Circuit. Show all Connections and Name All Coils

Unit IX - Transformer Principles and Practices (Continued)

- Job 17 Make a Sketch and Show the Connections for a Polyphase Watt Hour Meter on a 3-Phase, 3-Wire Circuit, Using Both Instrument Current and Potential Transformers. Show Potential Instrument Transformers Connected Open Delta
- Job 18 Make a Sketch of Metering a 4-Wire Wye Circuit With a 3 Phase, 3 Element Meter. Show Potential Transformers Connected Wye-Wye. Name all Coils on Your Sketch.

Unit X - Fundamental Electronics

- R.S.A. 1 Vacuum Tubes as Rectifiers
Job 1 Build and Study a Vacuum Tube Rectifier
- R.S.A. 2 Solid State Rectifiers
Job 2 Construct a Selenium Rectifier Circuit
- R.S.A. 3 Rectifier Filters
Job 3 Construct Filter for Rectifier
- R.S.A. 4 Triode Tube
Job 4 Study Characteristics of Triode Tube
- R.S.A. 5 Operation Gas Filled Tube
Job 5 Connect and Test a Three Phase Rectifier
- R.S.A. 6 Thyatron Tube
Job 6 Test an Automatic Battery Charger
- R.S.A. 7 Photo-Cells and Controls
Job 7 Connect and Test a Phototube Relay
- R.S.A. 8 Electronic Motor Controls
Job 8 Connect and test an Electronic Control for D.C. Shunt Motor
- R.S.A. 9 Magnetic Amplifier Control in D.C.
Job 9 Connect and Test Magnetic Motor Control for D.C. Shunt Motor
- R.S.A. 10 Magnetic Amplifier Control A.C.
Job 10 Connect and Test Magnetic Amplifier for 3-Phase Motor Control
- R.S.A. 11 Amplidyne Drive System
Job 11 Assemble an Amplidyne Drive System, Test and Operate

Unit XI - Welding and Cutting

- R.S.A. 1 Functions and Operating Principles of Oxy-acetylene, Regulators, Blowpipes, and Accessories
Job 1 To Set Up Oxy-Acetylene Cutting Equipment
- R.S.A. 2 Setting Up Oxy-Acetylene Equipment
Job 2 To Cut Steel Plate With Oxy-Acetylene Cutting Torch
- R.S.A. 3 Oxy-Acetylene Cutting
Job 3 To Make Beads on Flat Plate Without Using Filler Rod
- R.S.A. 4 Oxy-Acetylene Welding
Job 4 To Deposit Beads on Flat Plate Using Filler Rod

Unit XI - Welding and Cutting (Continued)

- | | | |
|--------|----|--|
| Job | 5 | To Make a Butt Weld on Mild Steel Strips in Flat Position |
| Job | 6 | To Bronze Weld Lap Joint of Mild Steel Strips |
| Job | 7 | To Silver Solder a Lap Joint of Copper |
| Job | 8 | To Strike an Arc and Deposit Beads on Flat Plate With Shielded-Arc Electrodes |
| R.S.A. | 5 | Characteristics of Arc Welding |
| Job | 9 | To Deposit Weave Bead on Flat Plate Between Stringer Bead Using Straight Polarity Electrodes |
| R.S.A. | 6 | Types of Electrodes |
| R.S.A. | 7 | Characteristics of Inert Gas Welding |
| Job | 10 | To Make a Tee Joint in Flat Position Using Straight Polarity Electrodes |
| Job | 11 | To Start The Arc and Run Stringer Bead on Aluminum Plate |
| Job | 12 | To Deposit Stringer Beads on Flat Aluminum Plate Using Filler Metal |

Drafting is a study of the fundamental science or language of graphic expression. The exact thinking necessary to visualize or form mental pictures of intricate shapes, and describe them with lines, requires concentrated mental effort and application.

The course in Industrial Drafting herein outlined is designed for beginners, with aims to develop the ability of the student in the language and operations of drafting as well as present the latest developments in industry. The outline is offered in the form of instructional material and problems, for full understanding and ability in drafting comes only through application of principles in a variety of progressively difficult experiences.

The course as outlined covers thirty-one units with one hundred forty problems, to be completed in approximately 1560 clock hours of instruction. The outline has fifteen units with eighty problems in the first part, and sixteen units with sixty problems in the second part.

It is anticipated that the necessary mathematics which the student will require in the various assignments and problems will be incorporated in and taught concurrently with the practical exercises of each lesson.

The references for the Industrial Drafting are the following:

Title	Source
French and Svenson MECHANICAL DRAWING	McGraw-Hill Book Company 330 West 42nd Street New York 36, New York
Giesecke, Mitchell & Spencer TECHNICAL DRAWING	Macmillan Book Co. 60 5th Avenue New York 11, New York
French and Vierich ENGINEERING DRAWING	McGraw-Hill Book Co. 330 West 42nd Street New York 36, New York

A detailed outline of Industrial Drafting follows.

PART I - Instructional Material

- A. Basic Operations
 - 1. Select grade of pencil
 - 2. Sharpen a drawing pencil
 - 3. Make erasures
 - 4. Keep drawing clean
 - 5. Fasten paper to board
- B. Use of instruments
 - 1. Mark off measurements from scale
 - 2. Draw horizontal lines
 - 3. Draw vertical lines
 - 4. Lay out drawing sheet
 - 5. Draw to scale
 - 6. Draw inclined lines at standard angles
 - 7. Draw lines parallel to any given line
 - 8. Draw circles and arc
 - 9. Set off equal distances on a line with dividers
 - 10. Mark off angles from a protractor
- C. Lettering
- D. Geometric Construction
 - 1. Bisect a line
 - 2. Divide a line into any number of equal parts
 - 3. Bisect an angle
 - 4. Draw an arc tangent to non-parallel lines
 - 5. Draw an arc tangent to a straight line and an arc
 - 6. Draw an arc tangent to two arcs
 - 7. Draw a tangent to two unequal circles
- E. Freehand Sketching
 - 1. Sketch straight lines freehand
 - 2. Sketch circles and arcs
 - 3. Make a planning sketch
- F. Conventional Lines
 - 1. Represent visible outlines
 - 2. Represent hidden lines
 - 3. Show centers and axes by center lines
 - 4. Draw extension and dimension lines
 - 5. Make arrowheads
 - 6. Draw and identify line of section by cutting plane line
 - 7. Draw section lines
 - 8. Draw break lines
- G. Dimensioning and Notes
 - 1. Dimensioning a prism, hexagon, octagon, pyramid
 - 2. Dimension a circle
 - 3. Dimension a cylindrical part
 - 4. Dimension arcs
 - 5. Dimension a conical part
 - 6. Dimension round end shapes, round holes
 - 7. Dimension angles

- G. Dimensioning and Notes (Continued)
 - 8. Dimension an irregular curve, irregular part
 - 9. Dimension details of a part
 - 10. Dimension over-all size
 - 11. Dimension and specify tapers
 - 12. How to place notes
- H. Graphic Representation
 - 1. Determine the required views
 - 2. Center views on the sheet
 - 3. Draw the required views of a two-view drawing
 - 4. Develop a third view from two views
- I. Orthographic Projection
 - 1. Project the principal view of a prismatic solid
 - 2. Draw an auxiliary view
- J. Sectional Views
 - 1. Draw a full sectional view
 - 2. Draw a half sectional view
 - 3. Draw a partially broken out sectional view
- K. Detail and Assembly Drawings
 - 1. Make detail drawing
 - 2. Make assembly drawing from detail drawing
- L. Pattern Drawings
 - 1. Laying out square or rectangular pattern
 - 2. Laying out cylindrical pattern
 - 3. Laying out radial-shaped patterns
 - 4. Intersection of a cylinder with a flat plane
 - 5. Intersection of cylinders with like diameters
 - 6. Intersection of cylinders with unlike diameters
 - 7. Angle intersection of cylinders of like diameters
 - 8. Angle intersection of cylinders of unlike diameters
 - 9. Square and rectangular intersection
 - 10. Rectangular 90° duct elbow
 - 11. Transition of rectangular to round section
- M. Gears
 - 1. Make conventional working drawing of gears
- N. Fasteners
 - 1. American Standard 60° V-thread
 - 2. Bolt
 - 3. Stud
 - 4. Set screws
 - 5. Carriage bolts
 - 6. Machine bolts
 - 7. Stove bolts
 - 8. Wood screws
 - 9. Self-tapping screws
- O. Pictorial Drawings
 - 1. Isometric drawings
 - 2. Oblique drawings
 - 3. Cabinet drawing
 - 4. Parallel perspective drawings
 - 5. Angular perspective drawings

Part I - Problems

- A. Basic Operations
 - Plate 1. Fasten paper to board
- B. Use of instruments
 - Plate 1. Lay out drawing sheet
 - Plate 2. Horizontal lines, vertical lines, inclined lines at standard angles, lines parallel to any given line
 - Plate 3. Circles and arcs, set off equal distances on line with dividers, mark angles from protractor
- C. Lettering
 - Plate 4. Lettering
- D. Geometric Construction
 - Plate 5. Geometric Construction
- E. Freehand sketching
 - Plate 6. Sketch straight lines, sketch circles and arcs
 - Plates 7, 8, 9. Make a planning sketch
- F. Conventional lines
 - Plate 10. Conventional lines
- G. Dimensioning and Notes
 - Plate 11. Dimensioning
- H. Graphic Representation
 - Plates 12, 13, 14. Two view drawings
 - Plates 15, 16, 17, 18, 19. Develop third view from two views
- I. Orthographic Projection
 - Plates 20, 21, 22, 23. Project principal view of prismatic solid
 - Plates 24, 25, 26. Auxiliary view
- J. Sectional Views
 - Plates 27, 28, 29, 30, 31, 32. Sectional Views
- K. Detail and Assembly Drawings
 - Plates 33, 34, 35, 36, 37. Assembly drawings
 - Plates 38, 39. Make detail drawing
- L. Pattern Drawings
 - Plates 40, 41, 42. Laying out rectangular pattern
 - Plates 43, 44, 45. Intersection of cylinder with like diameter
 - Plates 46, 47. Rectangular 90° duct elbow
 - Plate 48. Transition of rectangular to round section
- M. Gears
 - Plates 49, 50. Spur gears
 - Plates 51, 52. Bevel gears
- N. Fasteners
 - Plate 53. American Standard 60° V-thread
 - Plate 54. Thread symbols
 - Plate 55. Machine bolt
 - Plate 56. Thread symbols

Part I - Problems (Continued)

- O. Pictorial Drawings
 - Plates 57, 58, 59, 60, 61, 62. Isometric drawings
 - Plates 63, 64, 65, 66, 67, 68. Oblique drawings
 - Plates 69, 70, 71, 72, 73, 74. Cabinet drawings
 - Plates 75, 76, 77, 78, 79. Parallel perspective drawings
 - Plates 80, 81, 82, 83, 84. Angular perspective drawings

Part II - Instructional Material

- A. Lettering
 - 1. Form single stroke letters and numerals
 - 2. Letter titles and notes
- B. Blueprint Reading
 - 1. Three-view drawings
 - a. Horizontal and vertical surfaces
 - b. Slanting surfaces
 - c. Hidden lines
 - d. Scales
 - 2. Two-view drawings
 - a. Curved surfaces
 - b. Fractional tolerance
 - c. Decimal tolerance
 - d. Angular tolerance
- C. Sectional Drawings
 - 1. Special types of sections
- D. Assembly Drawings
 - 1. Detail drawings
 - 2. Assembly drawings
 - 3. Bills of material
 - 4. Inking of drawings
- E. Orthographic Projection
 - 1. Auxiliary views
 - 2. Revolutions
- F. Intersections and Developments
 - 1. Intersection of a cylinder with a flat plane
 - 2. Angle intersection of cylinders of like diameters
 - 3. Square and rectangular intersection
 - 4. Intersection and development of two prisms
- G. Pipe, Fittings, and Valves
 - 1. Steel and wrought-iron pipe
 - 2. Cast-iron pipe
 - 3. Seamless brass and copper pipe
 - 4. Aluminum pipe
 - 5. Copper water tubes

- G. Pipe, Fittings, and Valves
 - 6. Pipe joints
 - 7. Globe valve
 - 8. Check valves
 - 9. Gate valves
 - 10. Piping drawings
 - 11. Dimensioning
- H. Pictorial Drawings
 - 1. Axonometric projection
 - a. Isometric
 - b. Dimetric
 - c. Trimetric
 - 2. Oblique projection
 - a. Oblique drawings
 - b. Reduction of length of receding axis
 - c. Four-center ellipse
 - d. Oblique sections
 - 3. Perspective
 - a. Simple perspective
 - b. Multiview perspective
 - c. Angular perspective
 - d. One-point perspective
 - e. Two-point perspective
 - f. Three-point perspective
- I. Shading
- J. Graphs
 - 1. Rectangular
 - 2. Composite
 - 3. Bar
 - 4. Area
 - 5. Circular
 - 6. Polar
 - 7. Organization
 - 8. Alignment
- K. Architectural Design
 - 1. General drawings
 - 2. Dimensioning
 - 3. Detail drawings
 - 4. Brick and tile construction
- M. Topographic Drawings
 - 1. Scale
 - 2. Conventional symbols
 - 3. Profiles
 - 4. Contours
 - 5. Maps from field notes
- N. Reproduction Process

- O. Optional Drawings and Blueprint Reading
 - 1. Aeronautical drafting and blueprint reading
 - 2. Mechanical drafting and blueprint reading
 - 3. Electrical drafting and blueprint reading
 - 4. Welding drawings and blueprint reading
 - 5. To be selected by instructor

Part II - Problems

- A. Lettering
 - Plate 1. Inclined lettering; letter titles and notes
- B. Blueprint Reading
 - 1. Three-view drawings
 - Plate 2. Horizontal and vertical surfaces
 - Plate 3. Slanting surfaces
 - Plate 4. Hidden lines; scales
 - 2. Two-view drawings
 - Plates 5, 6, 7, 8. Curved surfaces
 - Fractional tolerances
 - Decimal tolerances
 - Angular tolerances
 - 3. One-view drawings
 - Plates 9, 10. One-view drawings
- C. Sectional Drawings
 - Plate 11. Removed sections
 - Plate 12. Offset sections
 - Plate 13. Conventional violations
- D. Assembly Drawings
 - Plate 14. Detail drawing
 - Plate 15, 16. Assembly drawings, bills of material, inking of drawing
- E. Orthographic Projection
 - Plates 17, 18. Auxiliary views
 - Plates 19, 20. Revolutions
- F. Intersections and Developments
 - Plate 21. Intersection of cylinder with a flat plane
 - Plate 22. Angle intersection of cylinders of like diameters
 - Plate 23. Square and rectangular intersections
 - Plate 24. Intersection and development of two prisms
- G. Pipes, Fittings, and Valves
 - Plate 25. Single-line drawing of piping layout and system
 - Plate 26. Double-line drawing of piping layout and system
 - Plate 27. Single-line isometric drawing of piping layout
- H. Pictorial Drawing
 - 1. Axonometric projection
 - Plates 28, 29. Isometric
 - Plates 30, 31. Dimetric
 - Plates 32, 33. Trimetric

2. Oblique projection
 - Plate 34. Oblique
 - Plate 35. Reduction of length of receding axis
 - Plate 36. Oblique with four-center ellipse
 - Plate 37. Oblique sections
3. Perspective
 - Plate 38. Simple perspective
 - Plate 39. One-point perspective
 - Plate 40. Two-point perspective
 - Plate 41. Three-point perspective
- I. Shading
 - Plates 42, 43. Shade lines
 - Plates 44. Surface shading
- J. Graphs
 - Plate 45. Rectangular graph
 - Plate 46. Circular graph
 - Plate 47. Organization chart
- K. Architectural Design
 - Plate 48. General plans and elevations
 - Plate 49. Detail drawings
- L. Structural Drawings
 - Plate 50. Wood construction
 - Plate 51. Steel and iron construction
 - Plate 52. Reinforced concrete, brick and tile construction
- M. Topographic Drawings
 - Plate 53. Profiles
 - Plate 54. Contours
 - Plate 55. Maps from field notes
- N. Reproduction Processes
(Film and field trip)
- O. Optional Drawings and Blueprint Reading
 - Plates 56, 57. Select two of the following:
 1. Aeronautical drafting and blueprint reading
 2. Electrical drafting and blueprint reading
 3. Mechanical drafting and blueprint reading
 4. Welding drawing and blueprint reading
 5. To be selected by instructor

INDUSTRIAL ENGINES
Trade Preparatory

C Page 1 of 7

The Industrial Engines Course was published in 1957 and revised in 1963-1964. It is available in the following forms:

Related Study Assignments and Job Sheets

Book I

- Unit I - Benchwork
- Unit II - Overhaul, Cleaning and Inspection
- Unit III - Auxiliary Equipment

Book II

- Unit IV - Diesel Fuel Systems
- Unit V - Welding

Test Book

- Book I - Units I - V

Answer Book

- Book I - Units I - V

A detailed outline of the Industrial Engines Course follows:

Unit I - Benchwork

R.S.A.	1	Hand Tools (General)
Job	1	Hand Tools (General)
R.S.A.	2	Measuring Devices
Job	2	Measure Crankshaft and Cylinder with Micrometers
R.S.A.	3	Fastening Devices
Job	3	Identify Bolt, Nuts, and Locks
R.S.A.	4	Abrasives
Job	4	Using Abrasives (Garnet Cloth, Emery or Sandpaper)
Job	4A	Dressing Bench Grinder Wheel
Job	4B	Reshape Screw Driver, Chisel, and Center Punch, Using Bench Grinder
R.S.A.	5	Files, Hacksaws, and Bench Vise
Job	5	Using the File, Hacksaw, and Bench Vise

Course Outline (Continued)

Unit I (Continued)

- R.S.A. 6 Twist Drills
Job 6 Sharpen a Twist Drill and Make An Internal Thread Block With Studs
- R.S.A. 7 Threading Dies
R.S.A. 7A Taps
R.S.A. 7B Screw Extractors
R.S.A. 7C "Sewing" a Cracked Casting
Job 7 Threading with Dies
Job 7A Taps and Tapping
Job 7B Removing Broken Stud
Job 7C "Sewing" a Cracked Casting
- R.S.A. 8 Pipe Threads and Tubing
Job 8 Tubing: Cutting, Flaring, Bending and Identifying Brass Fittings
- R.S.A. 9 Metal Shears
R.S.A. 9A The Blow Torch
R.S.A. 9B Soldering
Job 9 Metal Shear
Job 9A Filling and Lighting the Blow Torch
Job 9B Splice Insulated Wire and Make a Solder Joint

Unit II - Overhaul, Cleaning and Inspection

- R.S.A. 1 Nomenclature and Terminology of Engine
Job 1 Identify Engine Parts, Determine the Events in a Four and Two Stroke Cycle Engine
- R.S.A. 2 Piston Rings and Cylinder Honing
Job 2 Piston Rings and Cylinder Honing
- R.S.A. 3 Crankshaft--Connecting Rod Main Bearings and Connecting Rod Bearings
Job 3 Crankshaft Connecting Rod
- R.S.A. 4 Camshaft and Valve Train
Job 4 Check Camshaft Bearings and Train
- R.S.A. 5 Part I Valve Timing - Gears and Gear Pullers
Job 5 Part I Remove and Replace Timing Gears
- R.S.A. 5 Part II Valve Timing Diagrams 2 S.C. and 4 S.C.
Job 5 Part II Making Valve Timing Diagrams
- R.S.A. 6 Cylinder Head Rebuilding
Job 6 Cylinder Head Rebuilding
- R.S.A. 7 Flywheels
Job 7 Flywheel
- R.S.A. 8 Lubricating Systems and Lube Oil Filter
Job 8 Lubricating System

Course Outline (Continued)

Unit III - Auxiliary Equipment

- | | | |
|--------|----|--|
| R.S.A. | 1 | Basic Principles of Electricity, Storage Battery, Battery Charger, and Volt Meter |
| Job | 1 | Servicing Battery |
| R.S.A. | 2 | D-C Generators |
| Job | 2 | Disassemble and Reassemble Generator |
| R.S.A. | 3 | Relays and Regulators for DC Generators |
| Job | 3 | Testing and Adjusting Regulators |
| R.S.A. | 4 | Alternator Generators and Regulator Control |
| Job | 4 | Repair and Test Alternator Generator and Regulator Control |
| R.S.A. | 5 | Electric Cranking Motors Magnetic and Solenoid Switches and Series Parallel Switches |
| Job | 5 | Cranking Motor Magnetic and Solenoid Switches and Series Parallel Switches |
| R.S.A. | 6 | Ignition System |
| Job | 6 | Check and Test All Points in Ignition System |
| R.S.A. | 7 | Carburetion and Fuel Pumps |
| Job | 7 | Clean and Rebuild Carburetor and Fuel Pump |
| R.S.A. | 8 | Air Cleaners |
| Job | 8 | Servicing the Air Cleaner and Distribution System--Inspect Air Ducts |
| R.S.A. | 9 | Engine Cooling Systems |
| Job | 9 | Checking and Servicing Cooling Systems |
| R.S.A. | 10 | Clutches |
| Job | 10 | Remove, Repair, Adjust, and Replace Clutch |

Unit IV - Diesel Fuel Systems

- | | | |
|--------|---|---|
| R.S.A. | 1 | Governors |
| Job | 1 | Disassemble and Reassemble Governor |
| R.S.A. | 2 | General Motors Fuel Systems |
| Job | 2 | Tune up General Motor Engine |
| R.S.A. | 3 | American Bosch Fuel System |
| Job | 3 | Tune up Engine With Bosch Fuel System |
| R.S.A. | 4 | The Roosa-Master Fuel Pump |
| Job | 4 | Tune up Engine With Roosa-Master Fuel Pump |
| R.S.A. | 5 | Cummins (PT) Fuel System |
| Job | 5 | Tune Cummins Engine With (PT) Fuel System |
| R.S.A. | 6 | International Harvester Fuel System |
| Job | 6 | Tune International Harvester Engine |
| R.S.A. | 7 | Caterpillar Fuel System |
| Job | 7 | Check Fuel Injection System (Caterpillar, all models) |
| R.S.A. | 8 | Rebuilding the Fuel Injection System for General Motors Diesel Engine |
| Job | 8 | Rebuild and Test General Motors Fuel System |
| R.S.A. | 9 | Part I Bosch Fuel Systems |

Course Outline (Continued)

Unit IV - Diesel Fuel Systems

- | | | |
|--------|----|--|
| Job | 9 | Part I Rebuild, Test and Calibrate an American Bosch Fuel System |
| R.S.A. | 9 | Part II Supply Pump |
| Job | 9 | Part II Rebuild, Test, and Calibrate an American Bosch Fuel System |
| R.S.A. | 9 | Part III The Bosch Fuel Nozzle |
| Job | 9 | Part III Servicing, Adjusting, and Testing the Bosch Nozzle |
| R.S.A. | 9 | Part IV Bosch, PSB Pump |
| Job | 9 | Part IV Rebuild, Test, and Calibrate American Bosch Fuel System |
| R.S.A. | 10 | Rebuilding the Roosa Master Fuel Pump |
| Job | 10 | Rebuild and Test a Roosa Master Fuel Pump |
| R.S.A. | 11 | Rebuilding the Cummins (PT) Fuel System |
| Job | 11 | Rebuild and Test a Cummins Fuel System |
| R.S.A. | 12 | Rebuilding International Harvester Fuel System |
| Job | 12 | International Harvester Fuel System |
| R.S.A. | 13 | Trouble Shooting |
| Job | 13 | Trouble Shooting and Repair of Engine |

Unit V - Welding

- | | | |
|--------|----|--|
| R.S.A. | 1 | Functions and Operating Principles of Oxy-Acetylene, Regulators, Blowpipes, and Accessories |
| Job | 1 | To Set Up Oxy-Acetylene Cutting Equipment |
| R.S.A. | 2 | Setting Up Oxy-Acetylene Equipment |
| Job | 2 | To Cut Steel Plate With Oxy-acetylene Cutting Torch |
| R.S.A. | 3 | Oxy-Acetylene Cutting |
| Job | 3 | To Make Beads on Flat Plate Without Using Filler Rod |
| R.S.A. | 4 | Oxy-Acetylene Welding |
| Job | 4 | To Deposit Beads on Flat Plate Using Filler Rod |
| Job | 5 | To Make a Butt Weld on Mild Steel Strips in Flat Position |
| Job | 6 | To Bronze Weld Lap Joint of Mild Steel Strips |
| Job | 7 | To Silver Solder a Lap Joint of Copper |
| Job | 8 | To Strike an Arc and Deposit Beads on Flat Plate With Shielded-Arc Electrodes |
| R.S.A. | 5 | Characteristics of Arc Welding |
| Job | 9 | To Deposit Weave Bead on Flat Plate Between Stringer Bead Using Straight Polarity Electrodes |
| R.S.A. | 6 | Types of Electrodes |
| R.S.A. | 7 | Characteristics of Inert Gas Welding |
| Job | 10 | To Make a Tee Joint in Flat Position Using Straight Polarity Electrodes |

Course Outline (Continued)

Unit V (Continued)

- | | | |
|-----|----|---|
| Job | 11 | To Start the Arc and Run Stringer Bead on Aluminum Plate |
| Job | 12 | To Deposit Stringer Beads on Flat Aluminum Plate Using Filler Metal |

INDUSTRIAL INSTRUMENTS
TECHNOLOGY
Trade Preparatory

C Page 1 of 1

The Industrial Instruments Technology Course was published in 1966 and is composed of 5 books--Instructor's Guide, Student Workbook, Reference Book 1, Reference Book 2, and Reference Book 3.

A detailed outline of the Industrial Instruments Technology Course follows:

UNIT I - INDUSTRIAL INSTRUMENT TECHNOLOGY

- Section 1 Pressure-Measuring and Transmitting Instruments
- Section 2 Differential Pressure-Measuring
- Section 3 Velocity and Volumetric Measuring
- Section 4 Liquid-Level-Measuring Instruments
- Section 5 Temperature-Measuring Instruments
- Section 6 Viscosity and Specific-Gravity
- Section 7 pH and Redox Measuring Instruments
- Section 8 Gas Analyzers
- Section 9 Control Valves and Valve Positioners
- Section 10 Speed Measurement and Control
- Section 11 Repairing and Calibrating Controllers
- Section 12 Organization of Instrument Department for Processing Plants
- Section 13 Industrial Psychology and Personal Adjustment

UNIT II - PROCESS CONTROL TECHNOLOGY

- Section 1 Control Valves
- Section 2 Piston-Operated Control Valves
- Section 3 Differential Pressure Measurement
- Section 4 Temperature-Measuring Instruments
- Section 5 Pressure-Measuring Instruments
- Section 6 Flow-Measuring Instruments
- Section 7 Details of Flow-Measuring Instruments
- Section 8 pH and Oxidation Reduction Potential Measurement
- Section 9 Distillation and Fractionation Column Control
- Section 10 Various Control Techniques
- Section 11 Control of Various Processes
- Section 12 Reactors

The Machine Shop Course was published in 1955 and revised in 1962. It is available in the following forms:

A detailed outline of the Machine Shop Course follows:

Unit I - Bench and Floor

R.S.A.	1	Hand Hack Saw
Job	1	Make Two Screen Spacers
R.S.A.	2	Laying Out
Job	2	Make Lever Guides
R.S.A.	3	Files and Their Uses
Job	3	Make Two Templates
R.S.A.	4	Power Driven Saws
Job	4	Tool Post Wedge
R.S.A.	5	Abrasives
Job	5	Make a Cross Feed Pawl
R.S.A.	6	Offhand Grinding
Job	6	Make a Drill Gauge

Unit I - Bench and Floor (Continued)

R.S.A.	7	Cutting and Shearing
Job	7	Make Die Block Shims
R.S.A.	8	Drill Presses and Their Uses
Job	8	Make an Oil Hole Cover
R.S.A.	9	Cutting Internal Openings
Job	9	Transmission End Plate
R.S.A.	10	Finishing Metal Surfaces
Job	10	Make a Tool Post Wrench
R.S.A.	11	Metal Fasteners
Job	11	Make a Steel Square
R.S.A.	12	Bending and Shaping
Job	12	Make Inside Calipers
R.S.A.	13	Calipers
Job	13	Make Outside Calipers
R.S.A.	14	Taps and Tapping
Job	14	Make Tap Gauge
R.S.A.	15	Dies and Threading
Job	15	Make a Block With Studs
R.S.A.	16	How to Remove Broken Studs or Screws
Job	16	Drill Out Broken Studs
R.S.A.	17	Hand Forging
Job	17	Make an Adjustment Rod
R.S.A.	18	Soldering
Job	18	Make an Oil Pan
R.S.A.	19	Nonferrous Metals and Alloys
Job	19	Make an Oil Manifold
R.S.A.	20	Hand Reamers
Job	20	Install Bushings and Ream to Fit Shaft
R.S.A.	21	Producing and Processing Iron
Job	21	Make U Bolt and Strap
R.S.A.	22	Making Steel
Job	22	Make Motor Mount
R.S.A.	23	Rolling Mill
Job	23	Make an Eye Bolt
R.S.A.	24	Identification of Metals
Job	24	Make End Wrench
R.S.A.	25	Chisels
Job	25	Make A Cold Chisel
R.S.A.	26	Heat Treatment of Steel
Job	26	Make a Center Punch
R.S.A.	27	Screwdrivers
Job	27	Make an Offset Screw Driver Case Harden Wrench, Job 24
R.S.A.	28	Chipping
Job	28	Cam Lock Block
R.S.A.	29	Babbitting
Job	29	Babbitt Split Bearings

Unit II - Drill Press

R.S.A.	1	Use of the Drill Press
Job	1	Make a Spacer
R.S.A.	2	Work Holding Devices
Job	2	Guide Post Clamp
R.S.A.	3	Twist Drills and Drill Sizes
Job	3	Drill Stand, Letter Size
R.S.A.	4	Twist Drill--Terminology and Definitions
Job	4	Drill Stand Fractional Sizes
R.S.A.	5	Drill Chucks and Sleeves
Job	5	Drill and Wire Gage
Job	5B	Make a Drill Gauge
R.S.A.	6	Speeds and Feeds of a Drill Press
Job	6	Make a "C" Clamp
R.S.A.	7	Laying Out for Drilling
Job	7	Drawbar Extension
R.S.A.	8	Drill Grinding
Job	8	Machine Strap Clamp
R.S.A.	9	Other Drill Press Operations
Job	9	Spacer
R.S.A.	10	Laying Out and Drilling
Job	10	Mounting Plates
R.S.A.	11	Reamers
Job	11	Make Cross Head Pin and Lock
R.S.A.	12	Tapers
Job	12	Drill and Ream For Standard Taper Pins in Two Couplings and Shafts
R.S.A.	13	Laying Out Work
Job	13	Baffle Plate
R.S.A.	14	Boring
Job	14	Bore Large Hole
Job	15	Column Base

Unit III - Shaper

R.S.A.	1	Construction of the Shaper
Job	1	Machine a Block Square
R.S.A.	2	Operation of the Shaper
Job	2	Make an Offset Key
R.S.A.	3	Shaper Cutting Tools
Job	3	Make Two T-Slot Nuts
R.S.A.	4	Holding the Work
Job	4	Make a Chock Wedge
R.S.A.	5	Cutting Slots and Keyseats
Job	5	Cut an Open End Keyseat
Job	5A	Cut a Closed End Keyseat
Job	5B	Cut an Internal Keyseat
R.S.A.	6	Cutting Off
Job	6	Make Two Drill Press Vise Jaws

Unit III - Shaper (Continued)

R.S.A.	7	Speeds and Feeds
Job	7	Make a Spanner Wrench
R.S.A.	8	Shaping Horizontal Surfaces
Job	8	Make a Parallel Bar
R.S.A.	9	Angular Shaping
Job	9	Make a Drill Drift
R.S.A.	10	Vertical Shaping
Job	10	Make an Angle Plate
R.S.A.	11	Contour Shaping
Job	11	Make a Cam
R.S.A.	12	Shaping a Tongue and Groove
Job	12	Tongue and Groove Blocks
R.S.A.	13	Block Squaring
Job	13	"V" Blocks
R.S.A.	14	Machining Dovetails
Job	14	Dovetail Block and Slide
R.S.A.	15	Hydraulic Shapers
Job	15	T-Slot Block
R.S.A.	16	Indexing--Simple and Direct
Job	16	Make a Spline
Job	16A	Make a Spline Hub
R.S.A.	17	Gear Tooth Parts
Job	17	Make a Rack Gear
Job	17A	Make a Gear Rack (Alternate)
R.S.A.	18	Making a Gear Segment
Job	18	Make a Gear Segment
Job	18A	Make a Gear Segment (Alternate)
R.S.A.	19	Making a Drill Press Vise
Job	19	Make a Drill Press Vise
R.S.A.	20	Cutting Serrations
Job	20	Make Two Jaws For Drill Press Vise

Unit IV - Lathe

R.S.A.	1	Cutting Tools
Job	1	Grind Lathe Tool Bits
R.S.A.	2	Types of Lathes and Identification of Parts
Job	2	Make 2 Stud Blanks
R.S.A.	3	Principle of the Lathe - Care and Use of the Lathe
Job	3	Make 2 Bushing Drive Bars
R.S.A.	4	Drilling
Job	4	Caliper Parts and Six Washers
R.S.A.	5	Description of the Compound Rest
Job	5	Make a Chucking Center
R.S.A.	6	Filing and Polishing
Job	6	Make a Pump Shaft
R.S.A.	7	Drilling and Reaming
Job	7	Make a Brass Bushing and Steel Roller
R.S.A.	8	Knurling
Job	8	Knurled Shaft

Unit IV - Lathe (Continued)

R.S.A.	9	Turning Tapers - Tailstock Offset Method
Job	9	Make an Arbor
R.S.A.	10	Turning Angles With the Compound Rest
Job	10	Make a Wheel
R.S.A.	11	Cutting V-Threads
Job	11	Thread Two Studs
R.S.A.	12	Screw Threads
Job	12	Thread 2 Shafts
R.S.A.	13	Taper Turning - Taper Attachment - Compound Rest Methods
Job	13	Hoist Traverse Truck Roller Shaft
R.S.A.	14	Tapping
Job	14	Make Shift Rod Spool
R.S.A.	15	Boring
Job	15	Make Drive Shaft Bushing Housing
R.S.A.	16	Interchangeable Manufacture - Mass Production - Fits and Tolerances
Job	16	Make a Drive Shaft Bushing
R.S.A.	17	Taper Boring
Job	17	Make Hoist Traverse Truck Roller and Thrust Washer
R.S.A.	18	Internal Threading
Job	18	Pipe Puller and Nut
R.S.A.	19	Cutting a Left Hand Thread
Job	19	Pipe Puller Screw and Nut
R.S.A.	20	Counterboring--Threading to a Shoulder
Job	20	Make Piston Rod Connecting Spool
R.S.A.	21	Acme Screw Thread
Job	21	External and Internal Acme Thread
R.S.A.	22	Square Threads
Job	22	Cutting a Square Thread
R.S.A.	23	Acme Threading, Single and Multiple
Job	23	Double Lead Acme Thread Left-Hand
R.S.A.	24	Dial Indicator Method
Job	24	Live Center
R.S.A.	25	Pipe Threads
Job	25	Cut and Fit External and Internal Pipe Threads
R.S.A.	26	Social Security Act
Job	26	Tap Handle
R.S.A.	27	Radius Tools
Job	27	Machinist Hammer Kit
Job	28	Milling Machine Jack
R.S.A.	29	Shears
Job	29	Emery-wheel Stand
R.S.A.	30	Faceplate Work, Angle-Plate
Job	30	Machine Cast Elbow
R.S.A.	31	Steady Rest and Follow Rest
Job	31	Turn a Long Shaft
R.S.A.	32	Turning a Crankshaft or an Eccentric

Unit IV - Lathe (Continued)

Job	32	Turn an Eccentric
Job	33	Box and Pin
Job	34	Tap Wrench
Job	35	Marine Propeller Shaft

Unit V - Milling Machine

R.S.A.	1	The Milling Machine
Job	1	To Oil the Milling Machine
R.S.A.	2	Operation of the Milling Machine
Job	2	Machine a Steel Block
R.S.A.	3	Milling Cutters
Job	3	Make 2 Mild Steel Brackets
R.S.A.	4	Mounting the Milling Cutter
Job	4	Machine a Cast Iron Bracket
R.S.A.	5	Work Holding Devices
Job	5	Machine a Spacer
R.S.A.	6	Speeds and Feeds
Job	6	Cut Keyways on a Shaft
R.S.A.	7	Slotting and Sawing
Job	7	Adjustable Parallel Bar
R.S.A.	8	End Mills and Woodruff Keyseat Cutters
Job	8	Keyslot Cut With End Mill
R.S.A.	9	Coolants and Their Uses
Job	9	Cut a Woodruff Keyseat
R.S.A.	10	Straddle Milling
Job	10	Make a Nut
R.S.A.	11	Climb Milling
Job	11	Make and Graduate a Keyseat Rule
R.S.A.	12	Special Attachments
Job	12	Gear Case Cover
R.S.A.	13	Fixtures
Job	13	Fixture For Slotting Screws
R.S.A.	14	The Index Head
Job	14	Steel Index Pin
R.S.A.	15	Using the Index Head
Job	15	Graduate a Machine Tool Feed Dial--125 Divisions
R.S.A.	16	Spur Gearing
Job	16	Machine a Pair of Spur Gears
R.S.A.	17	Spline Cutting and Fly Cutters
Job	17	Cut a Spline Shaft (A. Using 2 Cutters) (B. Using Fly Cutters)
R.S.A.	18	Clutches and Couplings
Job	18	Machine a Straight-Toothed Clutch
Job	19	Machine Saw-Toothed Clutch
R.S.A.	20	Bevel Gears
Job	20	Bevel Gears Right Angle Shafts
R.S.A.	21	Cam Milling
Job	21	Mill a Cam

Unit V - Milling Machine

R.S.A. 22 Helical or Spiral Milling
Job 22 Steel Pull Pin
R.S.A. 23 Spiral Milling
Job 23 Spiral Milling Cutter
R.S.A. 24 Spiral Gear
Job 24 Spiral Gear

Supplementary Jobs

Sup. Job 25 Make a Tap
Sup. Job 26 Machine a Reamer
Sup. Job 27 Make a Worm and Worm Gear
Sup. Job 28 Make a Step Block

The Accounting Course was written in 1955, revised in 1958 and again in 1963. It is available in book form. This material consists of 60 jobs.

The reference for this Course is listed below:

Title	Source
Sherwood, Boling, Carson, COLLEGE ACCOUNTING 7th Edition, 1962	South-Western Publishing Co., 5101 Madison Road Cincinnati 27, Ohio

A detailed outline of the Accounting Course follows:

Unit One, ELEMENTS OF ACCOUNTING
Report One, ASSETS, LIABILITIES, AND PROPRIETORSHIP

Job No. 1 - Perform Practical Problems Involving Accounting
Equation

Unit One, ELEMENTS OF ACCOUNTING
Report Two, THE DOUBLE ENTRY PROCESS

Job No. 2 - Record Transactions in "T" Accounts; Take Balance
of Accounts; Prepare Trial Balance.

Unit Two, ACCOUNTING PROCEDURE
Report Three, JOURNALIZING TRANSACTIONS

Job No. 3 - Analyze Transactions; Make General Journal Entries

Unit Two, ACCOUNTING PROCEDURE
Report Four, POSTING AND THE TRIAL BALANCE

Job No. 4 - Make Journal Entries; Post Entries; Take Trial
Balance.

Unit Two, ACCOUNTING PROCEDURE
Report Five, THE FINANCIAL STATEMENTS

Job No. 5 - Prepare Income Statement; Prepare Balance Sheet.

Unit Three, ACCOUNTING FOR MERCHANDISE
Report Six, PURCHASES AND THE PURCHASES JOURNAL

Job No. 6 - Make Journal Entries of Transactions Stressing
Purchases Journal; Posting to Ledger and Taking
Trial Balance

Course Outline (Continued)

Unit Three, ACCOUNTING FOR MERCHANDISE
Report Seven, SALES AND THE SALES JOURNAL

Job No. 7 - Make Journal Entries of Transactions Stressing
Sales Journal; Posting to Ledger and Taking Trial
Balance

Unit Three, ACCOUNTING FOR MERCHANDISE
Report Eight, ACCOUNTING PROCEDURE

Job No. 8 - Make Journal Entries Using the General Journal,
Purchases Journal, and Sales Journal, Posting to
Ledger and Taking Trial Balance.

Unit Four, ACCOUNTING FOR CASH
Report Nine, RECORD OF CASH RECEIPTS AND DISBURSEMENTS: PETTY
CASH

Job No. 9 - Record Transactions in the Cashbook, the Combined
Cash-Journal, Petty Cash Disbursements Record, and
Other Special Journals: Prove, Post, and Take a
Trial Balance.

Unit Four, ACCOUNTING FOR CASH
Report Ten, BANKING PROCEDURE

Job No. 10 - Perform Operations in Transactions Affecting Banking;
Reconcile Bank Balance; Record Transactions in the
Combined Cash-Journal and Other Special Journals:
Post and Take a Trial Balance.

Unit Five, PAYROLL ACCOUNTING
Report Eleven, EARNINGS AND DEDUCTIONS

Job No. 11 - Complete Payroll Records; Compute Employee Wages and
Deductions.

Unit Five, PAYROLL ACCOUNTING
Report Twelve, PAYROLL TAXES IMPOSED ON THE EMPLOYER

Job No. 12 - Journalize Transactions Concerning the Accounting
for Payrolls and Payroll Deductions; Post and
Enter Account Balances.

Unit Six, ACCOUNTING FOR A RETAIL STORE
Report Thirteen, PRINCIPLES AND PROCEDURES

Job No. 13 - Classify Accounts and Analyze Procedures Relating to
Retail Accounting; Journalize Transactions.

Course Outline (Continued)

Unit Six, ACCOUNTING FOR A RETAIL STORE
Report Fourteen, APPLICATION OF ACCOUNTING PRINCIPLES

Job No. 14 - Answering Questions Taken From the Books of a
Retail Merchant

Unit Seven, THE PERIODIC SUMMARY
Report Fifteen, END-OF-PERIOD WORK SHEET

Job No. 15 - Complete a Work Sheet for a Mercantile Enterprise

Unit Seven, THE PERIODIC SUMMARY
Report Sixteen, THE FINANCIAL STATEMENTS

Job No. 16 - Check Work Sheet Procedures; Prepare an Income
Statement and Balance Sheet; Compute Ratios

Unit Eight, ADJUSTING AND CLOSING ACCOUNTS AT END OF ACCOUNTING
PERIOD

Report Seventeen, ADJUSTING ENTRIES

Job No. 17 - Made Adjusting Entries in Journal Form; Post and
Prepare Cost of Goods Sold Schedule

Unit Eight, ADJUSTING AND CLOSING ACCOUNTS AT END OF ACCOUNTING
PERIOD

Report Eighteen, CLOSING PROCEDURE

Job No. 18 - Draft Entries to Close Temporary Proprietorship
Accounts; Post and Rule Accounts in Balance; Take
Post-Closing Trial Balance; Draft Reversing Entries
and Post

Unit Nine, ACCOUNTING FOR INVESTMENTS
Report Nineteen, ACCOUNTING PROCEDURE

Job No. 19 - Journalize Transactions Dealing with Investments;
Post Entries; Close Temporary Accounts

Unit Ten, THE PERSONAL SERVICE ENTERPRISE
Report Twenty, ACCOUNTING METHODS

Job No. 20 - Journalizing Transactions Dealing with Personal
Service Enterprises; Complete Work Sheet; Draft
Adjusting and Closing Entries; Prepare Financial
Statements

OFFICE OCCUPATIONS
ACCOUNTING
Trade Preparatory

C Page 4 of 9

Course Outline (Continued)

Unit Eleven, ACCOUNTING FOR OWNERS' EQUITY
Report Twenty-One, THE SOLE PROPRIETORSHIP

Job No. 21 - Make Opening Entries, and Record Necessary Changes
at End of Accounting Period

Unit Eleven, ACCOUNTING FOR OWNERS' EQUITY
Report Twenty-Three, THE CORPORATION

Job No. 23 - Answer Questions and Record Transactions Regarding
Corporations

Unit Twelve, ACCOUNTING FOR NOTES AND DRAFTS
Report Twenty-Four, NOTES

Job No. 24 - Draft Entries Concerning Notes; Record Entries in
Notes Receivable and Notes Payable Registers

Unit Twelve, ACCOUNTING FOR NOTES AND DRAFTS
Report Twenty-Five, DRAFTS AND TRADE ACCEPTANCES

Job No. 25 - Draft Entries Regarding Drafts and Trade Acceptances;
Complete Partial Posting

Unit Thirteen, ACCOUNTING FOR PURCHASES
Report Twenty-Six, PURCHASING PROCEDURE

Job No. 26 - Complete Statements and Fill in Forms That are Used
in the Purchasing Procedure

Unit Thirteen, ACCOUNTING FOR PURCHASES
Report Twenty-Seven, ACCOUNTING PRACTICE

Job No. 27 - Verify Invoices; Enter Invoices in Invoice Record;
Complete Individual and Summary Posting; Prepare
Schedule of Accounts Payable.

Unit Fourteen, ACCOUNTING FOR SALES
Report Twenty-Eight, CASH SALES AND CREDIT SALES

Job No. 28 - Complete Statements; Prepare Sales Invoices; Enter
Sales in Sales Record; Complete Individual and
Summary Posting; Prepare Schedule of Accounts
Receivable

Course Outline (Continued)

Unit Fifteen, INSTALLMENT SALES AND CONSIGNMENT SALES
Report Twenty-Nine, INSTALLMENT SALES

Job No. 29 - Answer Questions and Work Problems Concerning
Installment Sales

Unit Fifteen, INSTALLMENT SALES AND CONSIGNMENT SALES
Report Thirty, CONSIGNMENT SALES

Job No. 30 - Answer Questions and Draft Entries Concerning
Consignment Sales

Unit Sixteen, ACCOUNTING FOR INVENTORY AND PREPAID EXPENSES
Report Thirty-One, MERCHANDISE INVENTORY

Job No. 31 - Analyze Merchandise Accounting Procedures; Complete
Inventory Extensions; Prepare Revised Income
Statement

Unit Sixteen, ACCOUNTING FOR INVENTORY AND PREPAID EXPENSES
Report Thirty-Two, PREPAID EXPENSES

Job No. 32 - Analyze Transactions and Work Problems Concerning
Prepaid Expenses

Unit Seventeen, ACCOUNTING FOR TANGIBLE FIXED ASSETS
Report Thirty-Three, LAND, BUILDINGS, AND EQUIPMENT

Job No. 33 - Answer Questions and Work Problems Concerning
Depreciation of Fixed Assets

Unit Seventeen, ACCOUNTING FOR TANGIBLE FIXED ASSETS
Report Thirty-Four, ACCOUNTING PROCEDURE

Job No. 34 - Record the Purchasing, Depreciation, and Disposition
of Fixed Assets

Unit Eighteen, ACCOUNTING FOR A WHOLESALE BUSINESS
Report Thirty-Five, APPLICATION OF ACCOUNTING PRINCIPLES

Job No. 35 - Complete Analysis Test Based on Books of Account
in Reference

Unit Nineteen, ACCOUNTING PROCEDURE AT END OF MONTH
Report Thirty-Six, MONTHLY ADJUSTMENT OF THE OPERATING EXPENSE
ACCOUNTS

Job No. 36 - Draft Adjusting Entries; Complete Posting Procedures;
Prepare Schedule of Operating Expenses

Course Outline (Continued)

Unit Nineteen, ACCOUNTING PROCEDURE AT END OF MONTH
Report Thirty-Seven, END-OF-PERIOD WORK SHEET

Job No. 37 - Prepare Work Sheets

Unit Twenty, MONTHLY FINANCIAL STATEMENTS AND PROCEDURE AT END
OF YEAR
Report Thirty-Eight, THE INCOME STATEMENT

Job No. 38 - Prepare Income Statement, Schedule of Cost of
Goods Sold, and Percentage Analysis

Unit Twenty, MONTHLY FINANCIAL STATEMENTS AND PROCEDURE AT END
OF YEAR
Report Thirty-Nine, THE BALANCE SHEET

Job No. 39 - Prepare Balance Sheet; Compute Ratio Analysis

Unit Twenty, MONTHLY FINANCIAL STATEMENTS AND PROCEDURE AT END
OF YEAR
Report Forty, PROCEDURE AT END OF YEAR

Job No. 40 - Prepare Work Sheet, Income Statement, Balance
Sheet, and Schedule of Cost of Goods Sold; Draft
and Post Adjusting and Closing Entries; Rule
Accounts and Take Post-Closing Trial Balance

Unit Twenty-One, THE CORPORATE ORGANIZATION
Report Forty-One, ORGANIZATION AND MANAGEMENT

Job No. 41 - Analyze Statements and Answer Questions Concerning
the Corporate Organization and the Certificate of
Incorporation

Unit Twenty-One, THE CORPORATE ORGANIZATION
Report Forty-Two, CORPORATE RECORDS

Job No. 42 - Answer Questions and Make Entries in Stock Records

Unit Twenty-Two, ACCOUNTING FOR CAPITAL STOCK
Report Forty-Three, TYPES AND VALUES OF CAPITAL STOCK

Job No. 43 - Analyze Statements and Work Problems Concerning
Capital Stock

Course Outline (Continued)

Unit Twenty-Two, ACCOUNTING FOR CAPITAL STOCK
Report Forty-Four, RECORDING CAPITAL STOCK TRANSACTIONS

Job No. 44 - Analyze Corporate Accounts and Stock Transactions;
Record Capital Stock Transactions in Journal Form;
Post; Take Trial Balance.

Unit Twenty-Three, ACCOUNTING FOR CORPORATION EARNINGS
Report Forty-Five, EARNINGS RETAINED IN THE BUSINESS

Job No. 45 - Analyze Statements and Journalize Transactions
Concerning Corporation Earnings; Prepare Statement
of Retained Earnings.

Unit Twenty-Three, ACCOUNTING FOR CORPORATION EARNINGS
Report Forty-Six, EARNINGS DISTRIBUTED TO STOCKHOLDERS

Job No. 46 - Analyze Statements and Record Transactions in
Journal Form Concerning the Distribution of
Corporate Earnings

Unit Twenty-Four, ACCOUNTING FOR CORPORATION BONDS
Report Forty-Seven, ACCOUNTING FOR BONDS SOLD

Job No. 47 - Answer Questions and Journalize Transactions
Concerning Bond Sales and Bond Interest

Unit Twenty-Four, ACCOUNTING FOR CORPORATION BONDS
Report Forty-Eight, ACCOUNTING FOR BOND INTEREST EXPENSE AND
FOR BONDS RETIRED

Job No. 48 - Answer Questions and Draft Entries Concerning Bond
Interest, Amortization, and Sinking Fund

Unit Twenty-Five, ACCOUNTING FOR INTANGIBLE AND WASTING ASSETS
Report Forty-Nine, ACCOUNTING PROCEDURE

Job No. 49 - Answer Questions and Draft Adjusting Entries Con-
cerning Intangible and Wasting Assets; Prepare
Schedule of Intangible Assets

Unit Twenty-Six, THE VOUCHER SYSTEM OF ACCOUNTING
Report Fifty, PRINCIPLES OF VOUCHER ACCOUNTING

Job No. 50 - Prepare Vouchers; Record Voucher Register; Record
Payment of Vouchers

Course Outline (Continued)

Unit Twenty-Seven, ACCOUNTING FOR A MANUFACTURING BUSINESS
Report Fifty-One, MANUFACTURING COST; INVENTORIES OF A
MANUFACTURING BUSINESS

Job No. 51 - Answer Questions and Work Problems Concerning
Manufacturing Cost

Unit Twenty-Seven, ACCOUNTING FOR A MANUFACTURING BUSINESS
Report Fifty-Two, THE CHART OF ACCOUNTS AND RECORDS OF A
MANUFACTURING BUSINESS

Job No. 52 - Answer Questions and Number Accounts Based on
Chart of Accounts in Reference

Unit Twenty-Eight, ACCOUNTING FOR A MANUFACTURING BUSINESS
(CONCLUDED)
Report Fifty-Three, THE WORK SHEET OF A MANUFACTURING BUSINESS

Job No. 53 - Prepare a Work Sheet for a Manufacturing Enterprise

Unit Twenty-Eight, ACCOUNTING FOR A MANUFACTURING BUSINESS
(CONCLUDED)
Report Fifty-Four, THE ANNUAL REPORT OF A MANUFACTURING BUSINESS

Job No. 54 - Prepare and Analyze Financial Statements

Unit Twenty-Eight, ACCOUNTING FOR A MANUFACTURING BUSINESS
(CONCLUDED)
Report Fifty-Five, CLOSING THE BOOKS OF A MANUFACTURING BUSINESS

Job No. 55 - Draft and Post Adjusting, Closing, and Reversing
Entries; Take Post-Closing Trial Balance

Unit Twenty-Nine, ACCOUNTING FOR BRANCH OPERATION
Report Fifty-Six, RECIPROCAL ACCOUNTS AND RECORDING PROCEDURE

Job No. 56 - Analyze Transactions; Journalize Transactions, Post,
and Take Trial Balance for the Home Office and the
Branch

Unit Twenty-Nine, ACCOUNTING FOR BRANCH OPERATIONS
Report Fifty-Seven, PROCEDURE AT CLOSE OF FISCAL YEAR

Job No. 57 - Analyze Statements; Complete the Work at the End
of the Accounting Period for Both the Home Office
and the Branch

Course Outline (Continued)

Unit Twenty-Nine, ACCOUNTING FOR BRANCH OPERATIONS
Report Fifty-Eight, COMBINED FINANCIAL STATEMENTS OF HOME OFFICE
AND BRANCH

Job No. 58 - Prepare Combined Income Statement and Balance
Sheet; Complete Analysis Test

Unit Thirty, ANALYSIS OF FINANCIAL STATEMENTS
Report Fifty-Nine, COMPARATIVE ANALYSIS: RATIOS

Job No. 59 - Comparative Analysis of the Financial Statements;
Compute Ratios

Unit Thirty, ANALYSIS OF FINANCIAL STATEMENTS
Report Sixty, THE STATEMENT OF SOURCE AND APPLICATION OF FUNDS

Job No. 60 - Complete Work Sheet; Prepare a Statement of Source
and Application of Funds, A Schedule of Current
Assets and Current Liabilities

A detailed outline of the Practical Nurse Education Course follows:

BOOK I

Job 1

P.S. - Pretest in
Arithmetic

- R.S.A. 1 - History of Practical Nursing
- R.S.A. 2 - Orientation - Co-workers and Community
- R.S.A. 3 - Classifications and Organization of Hospitals
- R.S.A. 4 - Orientation - School and Hospital
- R.S.A. 5 - Orientation - How to Study
- R.S.A. 6 - Mathematics - Table of Whole Numbers

Job 2 - Set Up a Patient Unit

P.S. 1 - How to Clean and Care for Supplies and Equipment

P.S. 2 - How to Strip a Bed, Dispose of Soiled Linen and Care for Equipment

P.S. 3 - How to Care for Cleaning Equipment and Dispose of Waste

P.S. 4 - How to Arrange Equipment and Restock Patient's Unit

P.S. 5 - How to Make a Closed and Open Bed

- R.S.A. 1 - Introduction to Health and the Importance of Cleanliness
- R.S.A. 2 - Selection of Bedmaking Supplies
- R.S.A. 3 - Principles of Heat, Light and Ventilation
- R.S.A. 4 - Working Relations - The Nurse in the Home
- R.S.A. 5 - Introduction to Charting - Letters and Rules of Punctuation
- R.S.A. 6 - Mathematics: Addition of Whole Numbers
- R.S.A. 7 - Mathematics: Subtraction of Whole Numbers
- R.S.A. 8 - Mathematics: Multiplication of Whole Numbers
- R.S.A. 9 - Mathematics: Division of Whole Numbers
- R.S.A. 10 - How to Regulate Heat, Light and Ventilation

Job 3 - Care and Maintenance of Linen and Utility Rooms and Medicine Cabinets

P.S. 1 - How to Maintain Orderly Linen and Utility Rooms

- R.S.A. 1 - Introduction to Charting Numerals

Course Outline (Continued)

BOOK I (Continued)

Job 3 (Continued)

- | | |
|--|---|
| P.S. 2 - How to Clean Linen and Utility Rooms, Check and Obtain Linen Supply | R.S.A. 2 - Mathematics: Fractions |
| P.S. 3 - How to Clean, Arrange and Maintain Medicine Cabinet | R.S.A. 3 - Care and Storage of Medicines in Hospital and Home |
| | R.S.A. 4 - Mathematics: Addition of Fractions |
| | R.S.A. 5 - Subtraction of Fractions |
| | R.S.A. 6 - Multiplication and Division of Fractions |

Job 4 - Admit the Patient

- | | |
|--|--|
| P.S. 1 - How to Assemble and fill out a clinical chart | R.S.A. 1 - Introduction to Body Structure and Function |
| P.S. 2 - How to Get the Patient into Bed | R.S.A. 2 - Working Relationships |
| P.S. 3 - How to Place the Patient upon Stretcher and remove Patient From Stretcher | R.S.A. 3 - Mathematics - Decimals |
| | R.S.A. 4 - Mathematics - Addition and Subtraction of Decimals |
| P.S. 4 - How to Undress the Patient | R.S.A. 5 - Mathematics - Multiplication and Division of Decimals |
| P.S. 5 - How to Put on a Gown or Pajamas | R.S.A. 6 - Admission of Patient to Hospital |
| P.S. 6 - How to Care for Clothing and Valuables | R.S.A. 7 - Temperature, Pulse and Respiration |
| P.S. 7 - How to Get Patient Out of Bed | |
| P.S. 8 - How to Take Temperatures | |
| P.S. 9 - How To Clean and Disinfect Clinical Thermometers | |
| P.S. 10 - How to Take a Rectal Temperature | |
| P.S. 11 - How to Count the Pulse | |
| P.S. 12 - How to Count Respiration | |
| P.S. 13 - How to Give and Remove a Bedpan | |

Course Outline (Continued)

BOOK I (Continued)

Job 4 (Continued)

- P.S. 14 - How To Give and Remove a Urinal
- P.S. 15 - How to Collect a Voided Specimen of Urine From an Adult
- P.S. 16 - How to Measure Fluid Intake and Output
- P.S. 17 - How to Weigh and Measure an Adult Patient

Job 5 - Make a Patient Comfortable

- | | |
|--|---|
| P.S. 1 - How to Maintain Good Body Alignment | R.S.A. 1 - The Skeletal System |
| P.S. 2 - How to Give Oral Hygiene and Care of Dentures | R.S.A. 2 - The Muscular System |
| P.S. 3 - How to Prepare a Patient for a Meal, Serve a Tray, and Feed the Patient | R.S.A. 3 - The Skin |
| P.S. 4 - How to Remove Gown or Pajamas | R.S.A. 4 - The Digestive System |
| P.S. 5 - How to Give A.M. Care | R.S.A. 5 - Personal Hygiene in Relation to Skin, Hair, Nails, Posture, Feet, Mouth and Food |
| P.S. 6 - How to Give a Bed Bath | |
| P.S. 7 - How to Give a Partial Bath | |
| P.S. 8 - How to Give a Tub Bath | |
| P.S. 9 - How to Give Shower Bath | |
| P.S. 10 - How to Give Back Rub | |
| P.S. 11 - How to Care for Fingernails and Toenails | |
| P.S. 12 - How to Brush and Comb Hair | |
| P.S. 13 - How to Give Treatment for Pediculi | |

Course Outline (Continued)

BOOK I (Continued)

Job 5 (Continued)

- P.S. 14 - How to Make an Occupied Bed
- P.S. 15 - How to Make an Occupied Bed From Head to Foot
- P.S. 16 - How to Give Shampoos
- P.S. 17 - How to Care for Flowers
- P.S. 18 - How to Use Bedside Rails
- P.S. 19 - How to Fill and Apply an Ice Cap
- P.S. 20 - How to Fill Hot Water Bottle and Apply Heating Pad
- P.S. 21 - How to Give Evening Care
- P.S. 22 - How to Apply Supporting Measures

Job 6 - Transfer the Patient

- P.S. 1 - How to Put Patient into a Wheel Chair
- P.S. 2 - How to Transfer a Patient
- R.S.A. 1 - Mathematics--Percentage

Job 7 - Discharge a Patient

- P.S. 1 - How to Return Valuables, Dress, and Discharge a Patient
- R.S.A. 1 - Discharging a Patient
- R.S.A. 2 - Mathematics--The Metric System

Job 8 - Physical Examination of Adult

- P.S. 1 - How to Assemble Supplies, Prepare a Patient and Assist Physician with an Examination
- P.S. 2 - How to Care for the Clean Instruments
- P.S. 3 - How to Handle Sterile Supplies
- P.S. 4 - How to Take Blood Pressure
- R.S.A. 1 - Discovering Health Assets and Liabilities
- R.S.A. 2 - The Care and Cleaning of Instruments
- R.S.A. 3 - Sterilization
- R.S.A. 4 - Working Relationships

Course Outline (Continued)

BOOK I (Continued)

Job 9 - Care of Pre-operative and Post-operative Patients

- | | |
|--|--|
| P.S. 1 - How to "Prepare" a Patient for Surgery | R.S.A. 1 - Principles of Surgical Nursing |
| P.S. 2 - How to Dress a Patient for Surgery | R.S.A. 2 - Regulations for the Use of Narcotics |
| P.S. 3 - How to Prepare and Give a Hypodermic | R.S.A. 3 - Anesthetics |
| P.S. 4 - How to Make a Recovery Bed | R.S.A. 4 - Treatment of Shock (Medical and Surgical) |
| P.S. 5 - How to Set Up a Surgical Dressing Tray and Change Dressings | R.S.A. 5 - Cancer |
| P.S. 6 - How to Assist with an Intravenous Infusion-Hypodermoclysis and Cut Down | R.S.A. 6 - Allergy |
| P.S. 7 - How to Care for Selected Patients Reacting from an Anesthetic | R.S.A. 7 - Burns |
| P.S. 8 - How to Set Up and Care for Suction Drainage Apparatus | R.S.A. 8 - The Use and Care of Syringes and Needles |
| P.S. 9 - How to Insert a Rectal Tube | |
| P.S. 10 - How to Give Intramuscular Injections | |
| P.S. 11 - How to Care for a Patient in Shock | |
| P.S. 12 - How to Use the Davis Patient Roller | |
| P.S. 13 - How to Apply Breast, Abdominal, and T-Binders | |

Job 10 - Care of a Patient in an Isolated Unit

- | | |
|--|--|
| P.S. 1 - How to Set Up a Unit for Isolated Patient | R.S.A. 1 - Principles of Communicable Disease Nursing |
| P.S. 2 - How to Put on Gown and Mask | R.S.A. 2 - Communicable Disease Control |
| P.S. 3 - How to Care for Valuables and Clothing | R.S.A. 3 - Working with Patients, Families, and Community Agencies |

Course Outline (Continued)

BOOK I (Continued)

Job 10 (Continued)

- P.S. 4 - How to Care for
Body Excreta
- P.S. 5 - How to Care for
Bed Linens
- P.S. 6 - How to Care for
Dishes
- P.S. 7 - How to Care for
Mattresses, Pillows,
and Floors

Job 11 - Care of a Patient With Disease or Condition of the
Reproductive System

- | | |
|--|--|
| P.S. 1 - How to Give a
Vaginal
Irrigation | R.S.A. 1 - Structure and Function
of the Male and Female
Reproductive System |
| P.S. 2 - How to Insert a
Vaginal Suppository
or Instill Vaginal
Cream | R.S.A. 2 - Some diseases of the
Reproductive System |

Job 12 - Care of the Patient with Kidney and Bladder Disorder

- | | |
|--|--|
| P.S. 1 - How to Do a
Catheterization | R.S.A. 1 - Structure and Function
of the Urinary System |
| P.S. 2 - How to Do a
Bladder Irrigation | R.S.A. 2 - Some Disorders of the
Urinary System |
| P.S. 3 - How to Do a Bladder
Instillation | R.S.A. 3 - Review Metric System |
| P.S. 4 - How to Assist with
a P.S.P. Test | |
| P.S. 5 - How to Test Urine for
Albumin | |

Job 13 - Care of the Male Patient With Prostatic Resection

- | | |
|---|--|
| P.S. 1 - How to Care for a
Patient with a
Prostatic Resection | R.S.A. 1 - Structure and Function
of the Male Genito-
Urinary System |
|---|--|

Course Outline (Continued)

BOOK I (Continued)

Job 14 - Care of Patient with Disease or Condition of the Digestive System

- | | |
|---|--|
| P.S. 1 - How to Give a Sitz Bath | R.S.A. 1 - Structure and Function of the Digestive System |
| P.S. 2 - How to Give Oral Medications | R.S.A. 2 - Some of the Diseases and Conditions of the Digestive System |
| P.S. 3 - How to Collect a Specimen of Feces | R.S.A. 3 - Collecting a Specimen of Feces for an Adult or Child |
| P.S. 4 - a. How to Give Enemas (Cleansing) | R.S.A. 4 - Administration of Drugs by Mouth |
| b. How to Give Enemas (Retention) | R.S.A. 5 - Preparation of a Patient For X-ray and Fluoroscopic Examination |
| c. How to Give Enemas (Proctoclysis) | R.S.A. 6 - Community Health in Relation of Disease of Digestive System |
| P.S. 5 - How to Insert a Rectal Suppository | R.S.A. 7 - Mathematics - The Apothecary System |
| P.S. 6 - How to Remove a Fecal Impaction | |
| P.S. 7 - How to Give a Colonic Flush | |
| P.S. 8 - How to Collect a Specimen of Vomitus | |
| P.S. 9 - How to Give Liquid Feedings Through Indwelling Tube | |
| P.S. 10 - How to Assist with a Gastric Analysis | |
| P.S. 11 - How to Assist with the Removal of Fluid from the Abdominal Cavity | |
| P.S. 12 - How to Care for a Colostomy | |
| P.S. 13 - How to Prepare a Patient for X-Ray and Fluoroscopic Examinations | |

Job 15 - Care of the Patient with Disease or Condition of the Endocrine System

- | | |
|---|---|
| P.S. 1 - How to Prepare Patient for Basal Metabolism Rate (BMR) | R.S.A. 1 - Structure and Function of the Endocrine Glands and Their Relationship to Other Body Structures and Functions |
|---|---|

PRACTICAL NURSE EDUCATION
Trade Preparatory

C Page 11 of 21

Course Outline (Continued)

BOOK I (Continued)

Job 15 (Continued)

- | | |
|--|---|
| P.S. 2 - How to Test Urine for Sugar and Acetone | R.S.A. 2 - Some Conditions and Diseases of the Endocrine System- medical and Surgical Aspects |
| P.S. 3 - How to Measure and Give Insulin by Hypodermic | R.S.A. 3 - Types of Tests |
| P.S. 4 - How to Collect a 24 Hour Specimen of Urine | |

Job 16 - Care of Patient with Circulatory Condition

- | | |
|---|---|
| P.S. 1 - How to Assist in Obtaining a Blood Specimen | R.S.A. 1 - Structure and Function of the Circulatory System |
| P.S. 2 - How to Shave a Male Patient | R.S.A. 2 - Some of the Diseases of the Circulatory System |
| P.S. 3 - How to Assist in the Administration of Oxygen and Carbon Dioxide | R.S.A. 3 - Blood Pressure |
| P.S. 4 - How to Give a Temperature Bath | R.S.A. 4 - Temperature, Pulse and Respiration |
| | R.S.A. 5 - Legal Responsibilities of the Practical Nurse |
| | R.S.A. 6 - Effects of Heat and Cold on Body |

Job 17 - Care of Patient with a Respiratory Disease or Condition

- | | |
|--|--|
| P.S. 1 - How to Collect Sputum Specimen | R.S.A. 1 - Structure and Function of the Respiratory System |
| P.S. 2 - How to Assist in Obtaining a Nose and Throat Specimen | R.S.A. 2 - Some Diseases of the Respiratory System |
| P.S. 3 - How to Administer Throat Gargle | R.S.A. 3 - Collecting Specimens from Respiratory Structures |
| P.S. 4 - How to Administer a Nasal or throat Spray | R.S.A. 4 - Counterirritants |
| P.S. 5 - How to Give a Steam Inhalation | R.S.A. 5 - Community Health Problems in Relation to Respiratory Diseases |
| P.S. 6 - How to Assist with Aspiration of the Chest Cavity | R.S.A. 6 - Mathematics--Equivalents |
| P.S. 7 - How to Administer Medication by Nebulizer | R.S.A. 7 - Tuberculosis |

Course Outline (Continued)

BOOK I (Continued)

Job 18 - Care of Patient with Skin Disease

- | | |
|--|---|
| P.S. 1 - How to Apply Liquid
or Ointment | R.S.A. 1 - Structure and
Function of the Skin |
| P.S. 2 - How to Apply Hot and
Cold Compresses | R.S.A. 2 - Diseases and Conditions
of the Skin |
| P.S. 3 - How to Give Foot or
Arm Bath | R.S.A. 3 - Individual and
Community Health in
Relation to Diseases
of the Skin |

Job 19 - Care of Patient with Diseases or Conditions of the
Bones and Joints

- | | |
|---|---|
| P.S. 1 - How to Assist
Patient with use
of Crutches | R.S.A. 1 - Care of Patients with
Diseases or Conditions
of the Bones and Joints |
| P.S. 2 - How to Care for the
Orthopedic Patient | |

Job 20 - Care of a Patient with Conditions and Diseases
Affecting Muscles

- P.S. 8 - How to Restrain an Infant or Child
- P.S. 9 - How to Assist with Physical Examination of an Infant
- P.S. 10 - How to Assist with Breast Feeding
- P.S. 11 - How to Prepare and Give Formula Feedings
- P.S. 12 - How to Collect a Urine Specimen from Infants

Job 23 - Care of Children

- P.S. 1 - How to Prepare and Give Foods Other Than Milk
- R.S.A. 1 - The Infant - Its Growth and Development
- R.S.A. 2 - How a Child Grows and Develops
- R.S.A. 3 - Immunization
- R.S.A. 4 - An Approach to Understanding Children
- R.S.A. 5 - Childhood Diseases

Job 24 - Care of the Patient with Disease or Conditions of the Nervous System

- P.S. 1 - How to Assist with a Lumbar Puncture
- R.S.A. 1 - The Structure and Function of the Nervous System
- R.S.A. 2 - Mental Health
- R.S.A. 3 - Conditions and Diseases of the Nervous System

Course Outline (Continued)

BOOK I (Continued)

Job 24 (Continued)

R.S.A. 4 - Techniques of Caring
for Patient with
Mental and Emotional
Conditions

R.S.A. 5 - Special Therapies

Job 25 - Care of Patient with Disease or Condition of the Eye

P.S. 1 - How to Give Eye
Drops

R.S.A. 1 - Structure and Function
of the Eye

P.S. 2 - How to Give an
Eye Irrigation

R.S.A. 2 - Some Diseases and
Conditions of the Eye

P.S. 3 - How to Apply an
Ointment to the
Eye

P.S. 4 - How to Remove
Non-embedded
Foreign Body
from Eye

P.S. 5 - How to Care for the
Prosthetic Eye of
a Patient

Job 26 - Care of Patient with Ear, Nose, or Throat Disease
or Condition

P.S. 1 - How to Administer
Nose Drops

R.S.A. 1 - Structure and Function
of the Ear, Nose, and
Throat

P.S. 2 - How to Administer
Ear Drops

R.S.A. 2 - Diseases of Ear, Nose,
and Throat

P.S. 3 - How to Assist with
the Care of a
Patient with a
Tracheotomy Tube

P.S. 4 - How to Care for a
Patient with a
Hearing Aid

Job 27 - Care of the aging and Old Patients

R.S.A. 1 - The Aging Process

R.S.A. 2 - Some Diseases and
Conditions Common
to the Later Years

PRACTICAL NURSE EDUCATION
Trade Preparatory

C Page 15 of 21

Course Outline (Continued)

BOOK I (Continued)

Job 28 - Care for the Dying Patient

R.S.A. 1 - Care for the Dying Patient

Job 29 - Care for the Body After Death

P.S. 1 - How to Care for the Body After Death

R.S.A. 1 - Care for the Body After Death

Job 30 - Relationships with Co-workers

R.S.A. 1 - Applying for Employment

R.S.A. 2 - Resigning and Leaves of Absence

R.S.A. 3 - Community Relationships

R.S.A. 4 - Evening and Night Nursing

BOOK II

Job 1 - Orientation

P.S. 1 - How to Get Acquainted With the Foods and Cookery Laboratory

P.S. 2 - Food Handling Techniques

P.S. 3 - How to Sterilize Dishes

P.S. 4 - How to Measure Food

R.S.A. 1 - Introduction to the Homemaking Course Designed to Meet the Needs of the Practical Nurse

R.S.A. 2 - Storage and Use of Equipment in the Foods and Cookery Laboratory

R.S.A. 3 - Introduction to Foods and Cookery Designed to Meet the Needs of the Practical Nurse

R.S.A. 4 - Food and Health

R.S.A. 5 - Adequate and Safe Storage of Food

Job 2 - Working Efficiently

P.S. 1 - How to Apply Work Simplification

R.S.A. 1 - Application to Work Simplification - Efficiency in Cleaning

Course Outline (Continued)

BOOK II (Continued)

Job 3 - Evaluate Dietary

P.S. 1 - How to Use Seven
Basic Food Groups
to Evaluate a
Dietary Record

P.S. 2 - How to Use the Basic
Four in Everyday
Diet

R.S.A. 1 - Essentials of a Good
Diet

R.S.A. 2 - The Nutrients -
Carbohydrates, Proteins,
and Fats

R.S.A. 3 - Minerals, Liquids,
Vitamins, and Roughage
in the Diet

R.S.A. 4 - Misinformation Con-
cerning Food

R.S.A. 5 - The Nutrients - What
foods are made of

Job 4 - Plan, Prepare and Serve a Simple Breakfast

P.S. 1 - How to Plan a
Breakfast Menu

P.S. 2 - How to Buy Breakfast
Foods

P.S. 3 - How to prepare Break-
fast Trays

P.S. 4 - How to Prepare and Serve
Fruit

P.S. 5 - How to Prepare and Serve
Cereal

P.S. 6 - How to Prepare Beverages

P.S. 7 - How to Prepare and Serve
Toast

P.S. 8 - How to Prepare and Serve
Eggs

P.S. 9 - How to Arrange and Serve
a Breakfast Tray

R.S.A. 1 - Breakfast Foods

R.S.A. 2 - Breakfast, an
Important Meal

Job 5 - How to Plan, Buy and Serve

P.S. 1 - How to Plan Daily
Menus

P.S. 2 - How to Buy Food

P.S. 3 - How to Make a Study
of The Comparative
Cost of Food - Field
Trip (Optional)

P.S. 4 - How to Serve Meals -
Family Style

R.S.A. 1 - Principles of Planning
Menus

R.S.A. 2 - Managing the Budget

R.S.A. 3 - Principles of Good
Table Service

Course Outline (Continued)

BOOK II (Continued)

Job 6 - Plan, Prepare and Serve a Lunch

- | | |
|--|--|
| P.S. 1 - How to Plan Lunch | R.S.A. 1 - Lunch Planning |
| P.S. 2 - How to Prepare Salads | R.S.A. 2 - Salads, Their Value and Preparation |
| P.S. 3 - How to Prepare and Serve Quick Breads | R.S.A. 3 - Principles of Preparing and Serving Quick Bread |
| P.S. 4 - How to Prepare Cheese Dishes | R.S.A. 4 - Principles of Cheese Cookery |
| P.S. 5 - How to Prepare Nutritious Desserts | R.S.A. 5 - Nutritious Desserts |
| P.S. 6 - How to Serve Lunch Family Style | R.S.A. 6 - Inexpensive Meats and Meat Substitutes |

Job 7 - Plan, Prepare and Serve Dinner Dishes

- | | |
|---|---|
| P.S. 1 - How to Plan, Prepare and Serve Dinner Dishes | R.S.A. 1 - Planning and Serving Dinner Dishes |
| P.S. 2 - How to Broil Meat | R.S.A. 2 - Principles of Selecting and Cooking Meat |
| P.S. 3 - How to Prepare Vegetables | R.S.A. 3 - Principles of Vegetable Cookery |
| P.S. 4 - How to Prepare White Sauce | R.S.A. 4 - Types of Cakes |
| P.S. 5 - How to Prepare a Sponge Cake | |

Job 8 - The Selection of Full, Light, Soft and Liquid Diets

- R.S.A. 1 - The Selection in Full, Light, Soft, and Liquid Diets

Job 9 - Prepare Foods Included in Liquid Diets

- | | |
|--|--|
| P.S. 1 - How to Prepare Cream Soup--Tomato | R.S.A. 1 - Foods Included in Liquid Diet |
| P.S. 2 - How to Prepare Beef Tea | |
| P.S. 3 - How to Use Dried Milk | |
| P.S. 4 - How to Prepare High Protein Beverages | |
| P.S. 5 - How to Prepare High Caloric Beverages | |

PRACTICAL NURSE EDUCATION

C Page 18 of 21

Course Outline (Continued)

BOOK II (Continued)

Job 10 - Diets in Diseases of the Digestive System

- | | |
|--|---|
| P.S. 1 - How to Plan Menus-
and Prepare Foods
for Bland Diets | R.S.A. 1 - Diet in the Diseases
of the Digestive
System |
| P.S. 2 - How to Plan Menus and
Prepare Foods for a
Low Residue Diet | |
| P.S. 3 - How to Plan Menus and
Prepare Foods for Low
Fat Diets | |
| P.S. 4 - How to Plan Menus for
Different Types of
Constipation - Atonic
- Spastic - Obstructive | |
| P.S. 5 - How to Plan Food For
the Patient with
Diarrhea or Colitis | |

Job 11 - Diets for Metabolism Disturbances

- | | |
|--|---|
| P.S. 1 - How to Use the
Food Exchange List
in Preparing a
Diabetic Diet | R.S.A. 1 - Principles of Diabetic
Treatment by Diet |
| P.S. 2 - How to Make Menus
From a Given Diet
Pattern | R.S.A. 2 - Principles of Diet in
Other Metabolic
Disturbances |
| | 1. Hyperthyroidism
(a) Hypothyroidism |
| | 2. Gout |
| | 3. Hypoglycemia
(a) Hyperinsulinism
(b) Fasting
hypoglycemia
Addisons
Diseases |
| | 4. Tetany |

Job 12 - Discuss the Problems of Weight

- | | |
|--|--|
| P.S. 1 - How to Plan, Prepare
and Serve Menus for
the Obese | R.S.A. 1 - The Relation of
Obesity to Health
and Disease |
| P.S. 2 - How to Plan, Prepare
and Serve Menu's for
the Underweight | R.S.A. 2 - The Relation of
Underweight to
Health and Disease |

Course Outline (Continued)

BOOK II (Continued)

Job 13 - Diets for Circulatory Diseases

- | | |
|---|----------------------------------|
| P.S. 1 - How to Select and Plan Diets Low in Sodium | R.S.A. 1 - Low Sodium Diets |
| P.S. 2 - Plan and Prepare Diets in Anemia | R.S.A. 2 - Diet in Anemia |
| P.S. 3 - Plan and Prepare Low Cholesterol Diet | R.S.A. 3 - Low Cholesterol Diets |

Job 14 - Select and Plan Diets for Some Acute and Chronic Diseases

- | | |
|--|--|
| P.S. 1 - How to Plan a Day's Intake for Tuberculosis Patient | R.S.A. 1 - Special Feeding Problems Due to Physiological and Psychological Changes |
| P.S. 2 - How to Plan a Days Intake for Patient With Cancer | R.S.A. 2 - Special Dietary Needs in Cancer |
| P.S. 3 - How to Plan a Days Intake for a Patient with Febrile Diseases | R.S.A. 3 - Special Dietary Needs in Febrile Diseases |
| | R.S.A. 4 - Special Dietary Needs in Tuberculosis |

Job 15 - Meeting the Food Needs During Pregnancy and Lactation

- | | |
|--|--|
| P.S. 1 - How to Select a Day's Diet for Pregnant Woman | R.S.A. 1 - Food Needs During Pregnancy |
| P.S. 2 - How to Select a Days Food for Lactating Women | R.S.A. 2 - The Food Needs During Lactation |

Job 16 - Meeting the Food Needs of the Infant

- | | |
|--|---|
| P.S. 1 - How to Make a Table for the Introduction of New Foods. Make a Table Showing the Increasing Quantity of Food as Baby Grows | R.S.A. 1 - Meeting the Food Needs of the Infant |
|--|---|

Job 17 - Meeting the Food Needs of Children of Various Age Groups

- | | |
|---|--|
| P.S. 1 - How to Plan a Day's Meals for a 2 Year Old Boy, 6 year old Boy, and a 14 year old Girl (Mother and Father) | R.S.A. 1 - Food Need of Pre-School and School Age Children and Adolescents |
|---|--|

Course Outline (Continued)

BOOK II (Continued)

Job 18 - Meeting Food Needs During the Golden Years

P.S. 1 - How to Plan Good
Nutrition for the
Geriatric Patient

R.S.A. 1 - The Food and Social
Needs for the Golden
Years

Job 19 - How to Plan Menus for A Patient with an Allergy

P.S. 1 - How to Plan Menus
for a Patient with
an Allergy

R.S.A. 1 - Allergies and Skin
Disturbances

Job 20 - Food Habits for Various Religious and Racial Groups

R.S.A. 1 - Food Habits of
Various Religious
and Racial Groups

BOOK III

Suggested Content for Classes During Clinical Experience

Introduction

Suggested Outline for Planned Clinical Instruction

Medical and Surgical Nursing

The Respiratory System
The Endocrine System
The Digestive System
The Circulatory System
The Eyes
The Ears

Geriatric Nursing

Communicable Disease Nursing

Poliomyelitis Nursing

Orthopedic Nursing

Urological Nursing

Gynecological Nursing

Course Outline (Continued)

BOOK III (Continued)

Introduction to Psychiatric Nursing

Obstetrical Nursing and Care of the Newborn

Pediatric Nursing

Course Plan for Hospital Dietary Training for Student
Practical Nurses

RELATED SCIENCE OF PRACTICAL
PHYSICS
Trade Preparatory

C Page 1 of 2

The Related Science of Practical Physics Course was published in 1960 and is available in bound form. It is composed of twenty-nine experiments and study units. The reference for the Related Science of Practical Physics Course is listed below.

Title	Source
Dull, Metcalfe, and Brooks MODERN PHYSICS	Holt, Rinehart and Winston, Inc. 383 Madison Ave. New York 17, New York

A detailed outline of the Related Science of Practical Physics Course follows:

EXPERIMENTS IN PHYSICS FOR INDUSTRIAL TECHNICIANS

Experiment No.

- I. Weights and Measures
- II. Simple Machines: Levers and Pulleys
- III. Work, Power, and Friction
- IV. Pressure in Liquids
- V. Pressure of Air
- *VI. Liquids and Gases in Motion
- VII. Elasticity and Strength of Materials
Surface Tension
- VIII. Forces Acting Through a Point
- IX. Accelerated Motion
- X. The Laws of Motion
- XI. Potential and Kinetic Energy
- XII. Heat and Expansion
- XIII. Transmission of Heat
- XIV. Steam and Gas Engines

*Denotes Study Unit.

Course Outline (Continued)

- XV. Magnetism
- XVI. Electricity at Rest
(Static Electricity)
- XVII. Electric Currents
- XVIII. Electric Circuits
- XIX. Magnetic and Chemical Effects of Electric Current
- *XX. Electric Power, Heating and Lighting
- XXI. Electric Generators and Motors
- XXII. Induction Coils and Transformers
- XXIII. Alternating Current

Study Unit No.

- XXIV. Modern Physics
- XXV. Sound Waves
- XXVI. Musical Sounds
- XXVII. Lenses and Optical Instruments
- XXVIII. Spectra and Color
- XXIX. Cathode and X-Rays, Radioactivity

*Denotes Study Unit

RADIO-TELEVISION-ELECTRONICS

C Page 4 of 15

A detailed outline of the Radio-Television-Electronics Course follows.

Unit I - Construction Fundamentals

- R.S.A. 1 - Soldering and Splicing
- Job 1A - Solder Connections and Splice Wire
- Job 1B - Disconnect Soldered Connections
- R.S.A. 2 - Learn Use and Care of Hand Tools
- Job 2A - Learn Use and Care of Hand Tools
- Job 2B - Use Tools

Unit II - Magnetism

- R.S.A. 1 - Study Permanent Magnets and Magnetic Fields
- Job 1 - Study and Plot Magnetic Lines of Force
- R.S.A. 2 - Study of Electromagnetism
- Job 2 - Produce and Study Electromagnetism
- R.S.A. 3 - Study Characteristics of an Electromagnet
- Job 3 - Make an Electromagnet and Study its Characteristics

Unit III - Principles of Electricity

- R.S.A. 1 - Learn Use of Radio Symbols
- Job 1 - Learn Use of Radio Symbols
- R.S.A. 2 - Identification of Electronic Components
- Job 2 - Identification of Electronic Components
- R.S.A. 3 - Resistor Color Code
- Job 3 - Resistor Color Code
- R.S.A. 4 - Learn How Electrical Energy is Produced
- R.S.A. 5 - Learn How Electrical Energy is Measured
- Job 5 - Learn How to Measure Electrical Energy
- R.S.A. 6 - Study the Laws of Electrical Charges
- Job 6 - Study and Prove Laws of Electrical Charges
- R.S.A. 7 - Study Electron Movement

Unit IV - Ohm's Law

- R.S.A. 1 - Use Ohm's Law in Series Circuit
- Job 1 - Use Ohm's Law in Series Circuit
- R.S.A. 2 - Use Ohm's Law in Parallel Circuit
- Job 2 - Use Ohm's Law in Parallel Circuit
- R.S.A. 3 - Use Ohm's Law in Series-Parallel Circuit
- Job 3 - Use Ohm's Law in Series-Parallel Circuit
- R.S.A. 4 - Construct a Multirange Voltmeter
- Job 4 - Construct a Multirange Voltmeter
- R.S.A. 5A - Study Milliammeters
- R.S.A. 5B - Construct an Ohmmeter
- Job 5 - Construct an Ohmmeter
- Job 5A - How to Test Resistors

Course Outline (Continued)

Unit V - Inductance

- R.S.A. 1A - Study Induced Voltages
- R.S.A. 1B - Alternating and Direct Currents
- Job 1 - Produce and Study Induced Voltages
- R.S.A. 2 - Phase Relationship of Voltage and Current in an Inductor or Coil
- Job 2 - Show Phase Relationship of Voltage and Current in an Inductor or Coil
- R.S.A. 3 - Study A. C. Measuring Instruments
- Job 3 - Determine Impedance and Inductance of a Coil

Unit VI - Capacitance

- R.S.A. 1 - Study Color Code as Applied to Capacitors
- Job 1 - Identify Capacitors by Color Code
- R.S.A. 2 - Study the Capacitance or Condenser Tester
- Job 2 - Use Capacitor Tester
- R.S.A. 3 - Study of Capacitance
- Job 3 - Measure and Calculate Condenser Values
- R.S.A. 4 - Capacitance in A. C.
- Job 4 - Study Effect of A.C. and D.C. on Condensers

Unit VII - Time Constant and Resonance

- R.S.A. 1 - Capacitors and Time Constants
- Job 1 - Determine the Time Constant of RC Circuit
- R.S.A. 2A - Time Constants of LR Circuits
- R.S.A. 2B - Resonance
- Job 2A - Determine Resonant Frequency of RCL Series Circuit
- Job 2B - Determine Resonant Frequency of RCL Parallel Circuit

Unit VIII - Vacuum Tubes

- R.S.A. 1 - Study Electron Emission in Vacuum Tubes
- Job 1 - Study Electron Emission in Diode Vacuum Tube
- R.S.A. 2 - Study Electrons in Cathode Ray Tube
- Job 2 - Study Electrons in Cathode Ray Tube
- R.S.A. 3A - Study Electron Action in Diode Tube
- R.S.A. 3B - Study Diode Tube Rectifier
- Job 3 - Build and Study a Vacuum Tube Rectifier
- R.S.A. 4 - Study Rectifier Filters
- Job 4 - Construct Filter for Rectifier
- R.S.A. 5 - A.C. Power Supply for AC-DC Portable
- Job 5 - Build an A.C. Power Supply for a 3-Way Portable Radio
- R.S.A. 6 - Study the Diode Tube as a Detector
- Job 6 - Diode Detector
- R.S.A. 7 - Study the Triode Tube
- Job 7 - Induced Voltage by the Current Change in a Vacuum Tube

Course Outline (Continued)

Unit VIII -Vacuum Tubes (Cont'd)

- R.S.A. 8 - Study A.C. Triode Tube
- Job 8 - Study Characteristics of Triode Tube
- R.S.A. 9 - Methods of Obtaining Grid Bias
- R.S.A. 10 - Study the Tetrode and Pentode Tubes
- Job 10 - Determine Characteristics of Pentode Tube
- R.S.A. 11 - Study the Vacuum Tube Voltmeter
- Job 11 - Compare Voltmeter and Vacuum Tube Voltmeter
- R.S.A. 12 - Tube Testers
- Job 12 - Test Tubes

Unit IX - Amplification

- R.S.A. 1 - Class A Amplifier
- Job 1 - Build and Study a Triode Amplifier
- R.S.A. 2 - Class B Amplifier
- Job 2 - Build or Study a Class B Amplifier
- R.S.A. 3 - Class C Amplifier
- Job 3 - Class C Amplifier
- R.S.A. 4 - Coupling to the Push-Pull Amplifier Grids
- Job 4 - Coupling to Push-Pull Amplifier Grids
- R.S.A. 5 - Direct Coupled Amplifiers
- Job 5 - Direct Coupled Amplifiers

Unit X - Transistor

- R.S.A. 1 - Semiconductor Theory
- Job 1 - Testing Diodes in Transistors
- R.S.A. 2 - Junction Transistors NPN
- Job 2 - Test for Reverse Current in Collector to Base Circuit
- R.S.A. 3 - Junction Transistors PNP
- Job 3 - Transistor Dynamic Gain
- R.S.A. 4 - Point Contact Transistor
- Job 4 - Voltage Relationship Between Elements
- R.S.A. 5 - Types of Transistors
- Job 5 - Voltage Distribution With Open Base Circuit
- R.S.A. 6 - Transistor Amplifiers
- Job 6 - Transistor Static Gain
- R.S.A. 7 - Servicing Transistor Circuits
- Job 7 - Transistor Amplifier
- R.S.A. 8 - Test Equipment for Transistor Circuits
- Job 8 - Test Equipment
- Job 8A - How to Test Transistors

Unit XI - Oscillation

- R.S.A. 1 - Study Oscillation
- Job 1 - Build a Hartley Oscillator
- R.S.A. 2 - Study Vacuum Tube Oscillators
- Job 2A - Build a Crystal Oscillator

Course Outline (Continued)

Unit XI - Oscillation (Cont'd)

- Job 2B - Study and Build a Modified Colpitts (Clapp) Oscillator Circuit
- R.S.A. 3 - Study UHF Oscillators
- Job 3 - Build a UHF Oscillator With Linear Tank
- R.S.A. 4 - Study Multivibrators
- Job 4 - Build and Study Multivibrator Circuit
- R.S.A. 5 - Transistor Oscillators
- Job 5 - Transistor Oscillator

Unit XII - Radio Receivers

- R.S.A. 1 - Study R. F. Detectors
- Job 1 - Build and Study R.F. Detector Circuits
- R.S.A. 2 - Study R.F. Amplifiers
- Job 2 - Build and Operate a R.F. Amplifier
- R.S.A. 3 - Study the Superheterodyne Receiver
- Job 3 - Build and Study a 5 Tube Superheterodyne Receiver
- R.S.A. 4 - Study Automatic Volume Control
- Job 4 - Determine Values and Use of A.V.C. Voltage
- R.S.A. 5A - Study Frequency Modulation
- R.S.A. 5B - Study Receiver Alignment
- Job 5A - Align a Superheterodyne Receiver
- Job 5B - Align a Superheterodyne Receiver Using an Output Meter
- Job 5C - Align a Superheterodyne Receiver Using a V.T.V.M. as an Output Indicator
- R.S.A. 6 - Study a Three-Way Portable Radio Receiver
- Job 6 - Install a Replacement Oscillator Coil and Align Receiver
- R.S.A. 7 - Transistor Circuits in Radio
- Job 7 - Signal Tracing and Gain Measurement
- R.S.A. 8 - Troubleshooting Transistor Radios
- Job 8 - Troubleshooting in Transistor Receivers
- R.S.A. 9 - Servicing Transistor Radios
- Job 9 - Signal Tracing Using Tuned Probe
- R.S.A. 10 - Alignment of Transistor Radios
- Job 10 - Alignment of Transistor Radio

Unit XIII - Radio Troubleshooting

- R.S.A. 1 - Study Methods of Signal Tracing
- Job 1 - Use Signal Generator, Signal Tracer and the Oscilloscope in Signal Tracing
- R.S.A. 2 - Printed Circuits and Etched Wiring
- Job 2 - Power Supply
- Job 3 - The I. F. Stage
- Job 4 - The Local Oscillator
- Job 5 - The Radio Frequency Amplifier Stage
- Job 6 - How to Replace an Oscillator Coil in a Receiver With a General Replacement Type

Course Outline (Continued)

Unit XIV - Radio Transmitters and Transmission

- R.S.A. 1 - Study R. F. Power Amplifier
- Job 1 - Build Oscillator and R. F. Amplifier
- R.S.A. 2A - Study Neutralization of Triode R. F. Amplifier
- R.S.A. 2B - Study the Frequency Doubler
- Job 2 - Operate a Frequency Doubler
- R.S.A. 3A - Study Push-Pull R. F. Amplifiers
- R.S.A. 3B - Study Modulation Methods
- Job 3 - Build and Operate a Plate Modulator
- R.S.A. 4A - Study F. M. Transmission
- R.S.A. 4B - Study Antennas
- R.S.A. 4C - Theory of Wave Propagation
- Job 4 - Parasitic Elements
- R.S.A. 5 - Antennas for UHF and VHF
- Job 5 - Demonstrate Standing Waves on Transmission Lines
- Job 6 - Line of Sight Theory Demonstration
- Job 7 - Plot Field Strength of a Vertical Antenna

Unit XV - Hi-Fidelity

- R.S.A. 1 - High Fidelity Systems
- Job 1 - Impedance Matching
- R.S.A. 2A - Loud Speakers
- R.S.A. 2B - High Fidelity Speaker Enclosures
- R.S.A. 2C - Electrical Cross-over Net Works
- Job 2 - Calculation and Design of Negative Feedback Network
- R.S.A. 3A - Records and Record Players
- R.S.A. 3B - Tape Recording and Playback
- Job 3 - Tape Recording
- R.S.A. 4A - The Photo Electric Cell
- R.S.A. 4B - Sound Information on Film
- R.S.A. 4C - Methods of Obtaining Power of the Exciter Lamp in Sound-on-film Reproduction
- Job 4 - Motion Picture Sound

Unit XVI - Advanced Test Equipment

- R.S.A. 1 - Study the Oscilloscope
- Job 1 - Learn Use of the Oscilloscope
- R.S.A. 2 - Study Sweep and Marker Generators
- Job 2 - Learn Use of Sweep and Marker Generators
- R.S.A. 3 - Study the Cross Hatch Generator
- Job 3 - Learn Use of the Cross Hatch Generator
- R.S.A. 4 - Study Voltage Calibrator
- Job 4 - Learn Use of Voltage Calibrator
- R.S.A. 5 - Frequency Standards and Sub-Standards
- Job 5 - Learn Use of Frequency Standard
- R.S.A. 6 - General Application of Test Equipment
- Job 6 - Test Probes

Course Outline (Continued)

Unit XVII - Black and White Television

- R.S.A. 1 - Study the Television System
- Job 1 - Receiver Familiarization
- R.S.A. 2 - Study Picture Tubes
- Job 2 - Observe the Television Signal
- R.S.A. 3 - Study TV Receiver Block Diagrams
- Job 3 - Receiver Block Diagrams
- R.S.A. 4 - Study Sound I.F. Stages and Detector Types
- Job 4A - Align TV Sound I.F. Stages
- Job 4B - Troubleshooting Sound Section Circuits
- R.S.A. 5 - Study Video I.F. Amplifiers
- Job 5 - Build and Align a Video I.F. Strip
- R.S.A. 6 - Study Video I.F. Alignment
- Job 6 - Troubleshooting Video Section Circuits
- R.S.A. 7 - Study TV RF Tuners
- Job 7A - Check Front End Response of TV Set
- Job 7B - Front End Familiarization
- R.S.A. 8 - Study TV Tuner Alignment
- Job 8 - Align a TV Tuner
- R.S.A. 9 - Study Second Detectors and Video Amplifiers
- Job 9 - Build and Test a Video Amplifier
- R.S.A. 10 - Study TV Synchronizing Circuits
- Job 10 - Build and Test a TV Sync Circuit
- R.S.A. 11A - Study a Noise Immune Sync Separator
- R.S.A. 11B - Study TV Sweep Circuits
- Job 11A - Build and Test a TV Blocking Oscillator
- Job 11B - Troubleshooting Horizontal Sweep Circuits
- Job 11C - Troubleshooting Vertical Sweep Circuits
- R.S.A. 12 - Study TV Power Supplies
- Job 12 - Horizontal Deflection Circuit
- R.S.A. 13 - Study AFC-Sync Circuits
- Job 13A - Observe AFC Sync Circuit Characteristics
- Job 13B - Troubleshooting Sync Circuits
- R.S.A. 14 - Study AGC Circuits
- Job 14 - Troubleshooting AGC Circuits
- R.S.A. 15 - How to Install a Replacement Flyback Transformer
- Job 15 - Install and Test a Flyback Transformer
- R.S.A. 16 - Study TV Troubleshooting
- Job 16 - Troubleshoot a TV Receiver
- R.S.A. 17 - Transistor Circuits in Television
- Job 17 - Checking Video Amplifier
- R.S.A. 18 - Servicing Transistor Television
- Job 18 - Troubleshooting Transistor Television
- Job 19 - Trouble Shoot a TV Receiver
- Job 20 - Trouble Shoot a TV Receiver
- Job 21 - Trouble Shoot a TV Receiver
- Job 22 - Trouble Shoot a TV Receiver
- Job 23 - Trouble Shoot a TV Receiver
- Job 24 - Trouble Shoot a TV Receiver
- Job 25 - Trouble Shoot a TV Receiver

Course Outline (Continued)

Unit XVIII - Color Television

Part I

- R.S.A. 1 - Compatible Color TV System
- R.S.A. 2 - An Introduction to the Basic Color TV System
- R.S.A. 3 - Color Standards
- R.S.A. 4 - The Color Spectrum
- R.S.A. 5 - Wave Lengths of Different Hues
- R.S.A. 6 - Color Mixing to Produce a Desired Hue
- R.S.A. 7 - Some Characteristics of Vision
- R.S.A. 8 - The Standard Color Chart

Part II

- R.S.A. 1 - A General Discussion of the Color Standards
- R.S.A. 2 - Vectors Applied to Analysis of Two-Phase Modulation
- R.S.A. 3 - The Color Sub-Carrier
- R.S.A. 4 - Spectrum Analysis of a Conventional Television Signal
- R.S.A. 5 - Frequency Interleaving
- R.S.A. 6 - I and Q Signals
- R.S.A. 7 - Circuitry Added to a Television Receiver to Produce Color
- R.S.A. 8 - Block Diagrams of a Color Receiver

Part III

- R.S.A. 1 - The Tuner of Front-End Circuits
- R.S.A. 2 - The Video Intermediate Frequency Stages
- R.S.A. 3 - The Video Amplifier
- Job 1 - Video 4.5 mc. Trap Adjustment
- R.S.A. 4 - The Audio System
- R.S.A. 5 - The Chroma Amplifier or Band-Pass Amplifier
- R.S.A. 6 - Phase Detectors
- R.S.A. 7 - Color Killer Circuits
- R.S.A. 8 - I and Q Demodulators or Synchronous Detectors
- R.S.A. 9 - The 3.58 mc. Reference Oscillator
- R.S.A. 10 - Color Synchronization
- R.S.A. 11 - Sound Intermediate Frequency and Quadrature Detector
- Job 2 - Sound I. F. Alignment
- R.S.A. 12 - Color Matrixing
- R.S.A. 13 - Reproduction of Color

Part IV

- R.S.A. 1 - Principles
- R.S.A. 2 - Adjustments
- R.S.A. 3 - Handling
- R.S.A. 4 - Purity
- R.S.A. 5 - Static Convergence
- R.S.A. 6 - Dynamic Convergence
- R.S.A. 7 - Convergence Circuitry
- Job 1 - Dynamic Convergence Adjustments Horizontal Convergence

Course Outline (Continued)

Unit XVIII - Color Television

Part IV (Cont'd)

- Job 2 - Dynamic Convergence Adjustments Vertical Convergence
- R.S.A. 8 - Receiver Adjustments
- Job 3 - Shop Project
- Job 4 - AGC Control and Noise Threshold Adjustment

Part V

- R.S.A. 1 - Burst Amplifier and Crystal Oscillator Alignment
- R.S.A. 2 - Quadrature and Demodulator Alignment
- R.S.A. 3 - Chroma Channel Alignment
- Job 1 - First Video Amplifier and Band Pass Amplifier Alignment
- R.S.A. 4 - Video Intermediate Frequency Alignment
- Job 2 - Picture I.F. Transformer Adjustments
- Job 3 - Sweep Alignment of Picture I.F.
- R.S.A. 5 - Sound Intermediate Frequency Alignment
- R.S.A. 6 - Tuner Alignment
- Job 4 - Antenna Matching Unit Alignment
- Job 5 - Tuner Alignment
- Job 6 - UHF Alignment
- R.S.A. 7 - Test Equipment

Part VI

- R.S.A. 1 - Voltage Regulation
- Job 1 - Horizontal Oscillator Alignment
- Job 2 - High Voltage Adjustment
- R.S.A. 2 - Obtaining the Voltage for the Convergence Section
- R.S.A. 3 - The Deflection Yoke
- R.S.A. 4 - The Convergence Yoke
- Job 3 - Preliminary Convergence and Color Purity Adjustments

Part VII

- R.S.A. 1 - Color Control
- R.S.A. 2 - Hue Control
- Job 1 - Color AFC Alignment
- R.S.A. 3 - The Contrast Control--The Brightness Control
- R.S.A. 4 - The Fine Tuning Control

Part VIII

- R.S.A. 1 - Phase and Matrix
- R.S.A. 2 - Purity
- R.S.A. 3 - Convergence
- Job 1 - Convergence Coils
- R.S.A. 4 - Black and White Adjustments
- Job 2 - Black and White Adjustments

RADIO-TELEVISION-ELECTRONICS
Trade Preparatory

C Page 12 of 15

Course Outline (Continued)

Unit XVIII - Color Television

Part IX

- R.S.A. 1 - Checking Tuner, Video IF and Video Amplifier
- R.S.A. 2 - Signal Tracing in the Chroma Section
- Job 1 - Oscilloscope Waveforms

Part X

- R.S.A. 1 - Dot-Bar Generator
- R.S.A. 2 - Color Bar Generator
- R.S.A. 3 - The Color Stripe Signals for Testing Receivers
- R.S.A. 4 - R.F. - I.F. Alignment Equipment
- R.S.A. 5 - Video Alignment Equipment
- R.S.A. 6 - R.F., Demodulator, Low Capacity and High Voltage Probes
- R.S.A. 7 - Oscilloscopes

Part XI

- R.S.A. 1 - Antennas
- R.S.A. 2 - Transmission Lines
- R.S.A. 3 - Receiver Installation
- R.S.A. 4 - Antenna System Installation

Part XII

- R.S.A. 1 - Servicing Hints
- Job 1 - Field Adjustment of Demodulator Phasing
- R.S.A. 2 - Signal Tracing

Unit XIX - Communications

- R.S.A. 1 Modulation Systems
 - Question and Answer Sheet No. 1
 - Question and Answer Sheet No. 2
 - Question and Answer Sheet No. 3
- Job 1 Receiver Familiarization
- R.S.A. 2 Frequency Modulation
 - Question and Answer Sheet No. 4
 - Question and Answer Sheet No. 5
 - Question and Answer Sheet No. 6
 - Question and Answer Sheet No. 7
- Job 2 Receiver Voltage and Resistance
- R.S.A. 3 FM Receiver
 - Question and Answer Sheet No. 8
 - Question and Answer Sheet No. 9
 - Question and Answer Sheet No. 10
 - Question and Answer Sheet No. 11
- Job 3 FM Receiver
- R.S.A. 4 R-F Amplifier

Course Outline (Continued)

C Page 6 of 12

A detailed outline of the Refrigeration and Air Conditioning Course follows.

Unit I

- Math 1 - Linear Measurement
- R.S.A. 1 - Hand Tools and How to Use
- Job 1 - Identify Assigned Tools
- Math 2 - Rule Practice
- R.S.A. 2 - Working Copper Tubing
- Job 2 - Cut and Bend Copper Tubing
- Math 3 - Addition of Rule Measurements
- R.S.A. 3 - Fittings
- Job 3 - Check Sizes of Flare, Sweat, and Pipe Fittings
- R.S.A. 4 - Simplified Principles of Refrigeration
- Job 4 - Flare and Connect Copper Tubing
- R.S.A. 5 - How to Solder Connections and Use Halide Leak Detector
- Job 5 - Swedge and Solder Copper Tubing
- Math 4 - Subtraction of Rule Measurements
- Math 5 - Addition of Whole Numbers
- Math 6 - Subtraction of Whole Numbers
- R.S.A. 6 - Service Valves
- Job 6 - Disassemble and Reassemble Service Valves
- R.S.A. 7 - Refrigeration Gauges
- Job 7 - Install and Remove High and Low Pressure Gauges
- R.S.A. 8 - Principles of Refrigeration
- Job 8 - Identify Screws, Bolts, and Nuts
- Math 7 - Reducing Fractions to Lowest Terms
- R.S.A. 9 - Screw, Bolt, and Nut Sizes
- Math 8 - Changing Improper Fractions to Mixed Numbers
- Math 9 - The Micrometer
- R.S.A. 10 - The Lathe
- R.S.A. 11 - Compressors and Compressor Parts
- Job 9 - Disassemble, Clean and Check Compressor
- R.S.A. 12 - Compressor Repairing Precision Work
- Job 10 - Repair Compressor Parts
- Job 11 - Reassemble Compressor
- R.S.A. 13 - Refrigerant Oils
- Job 12 - Service and Test Compressor
- Math 10 - Changing Mixed Numbers to Improper Fractions
- Math 11 - Changing Fractions to Higher Terms
- R.S.A. 14 - Serviceable Hermetic Compressor Part
- Job 13 - Disassemble, Repair and Reassemble A Serviceable Hermetic Compressor
- Math 12 - Least Common Denominators
- Job 14 - Service A Rotary Compressor
- Math 13 - Addition of Fractions
- R.S.A. 15 - Shop Sketching

Course Outline (Continued)

Unit I (Continued)

- R.S.A. 16 - Condensers and Receivers
- Job 15 - Clean A Condenser and A Receiver
- R.S.A. 17 - Shop Sketching, Forming Figures
- Job 16 - Check a Low Side and A High Side Float
- Math 14 - Subtraction of Fractions
- R.S.A. 18 - Expansion Valve Refrigerator System
- Job 17 - Check and Adjust Automatic Expansion Valve
- Math 15 - Multiplication of Fractions
- Job 18 - Check and Adjust Thermostatic Expansion Valve
- R.S.A. 19 - Capillary Tube
- Math 16 - Division of Fractions
- Job 19 - Check Capillary Tube System
- R.S.A. 20 - Evaporators
- Job 20 - Test and Repair Evaporators
- Math 17 - The Decimal System

Unit II

- R.S.A. 1 - Magnetism
- Job 1 - Determine the Polarity of Magnets and the Existence of Magnetic Fields
- R.S.A. 2 - Current Electricity and Electro-Magnetism
- Job 2 - Make an Electromagnet and Study its Characteristics
- R.S.A. 3 - Electric Circuits, Series and Parallel
- Job 3 - Series and Parallel Circuits
- R.S.A. 4 - Operation and Care of Volt, Ampere, Ohm, and Watt Meters
- Job 4 - Taking Meter Readings
- R.S.A. 5 - Ohm's Law
- Job 5 - Ohm's Law
- R.S.A. 6 - Types of Refrigeration and Air Conditioning Controls
- Job 6A - Connect a Combination High Pressure and Low Pressure Control
- Job 6B - Connect a Temperature Control
- Job 6C - Connect 3-Phase Motor Controlled by a Remote Start-Stop Pushbutton
- R.S.A. 7 - Types of Relays
- Job 7 - Connecting Relays
- R.S.A. 8 - Insulation and Current Capacity of Conductors
- Job 8 - Measure Sizes of Wire
- R.S.A. 9 - Electric Motors
- Job 9A - Disassemble, Check, and Reassemble A Split-Phase Motor and A Capacitor Start Motor
- Job 9B - Disassemble, Check, and Reassemble a Three Phase Motor
- Job 9C - Disassemble, Check, and Reassemble R. I. Motor

Course Outline (Continued)

Unit II (Continued)

- R.S.A. 10 - Universal Motors
- Job 10 - Disassemble, Check and Reassemble Universal Motor
- R.S.A. 11 - Construction, Operation and Connections of Capacitors
- Job 11 - Testing Capacitors
- R.S.A. 12 - Capacitor Motors
- Job 12 - Disassemble, Repair and Reassemble A Capacitor-Start Motor

Unit III

- Math 1 - Square and Cubic Measurements and Multiplication of Whole Numbers
- R.S.A. 1 - Practical Theory of Refrigeration
- Math 2 - Division of Whole Numbers
- R.S.A. 2 - Moisture, Air and Foreign Matter
- Job 1 - Refill Small Refrigerant Cylinder
- R.S.A. 3 - Refrigerants
- Job 2 - Check Refrigerant Cylinder Pressure
- R.S.A. 4 - Sealed Unit Refrigerators
- Job 3 - Check Electrical System on Sealed Units
- Job 4 - Make Trouble Shooter Chart Using Manufacturer's Manual
- Job 5 - Check Sealed Unit, Using Chart, and Determine Trouble in A Written Diagnosis
- Job 6 - Check A Sealed Unit System
- Job 7 - Check And Replace Thermostatic Motor Control in Electrical System. Explain Functions and Give Reason For Replacing
- Job 8 - Replace a Defective Cabinet Light Switch in Electrical Circuit and Make Free Hand Sketch of Entire Electrical System
- Job 9 - Check a Sealed Unit For a "Grounded Unit" - "To Housing" - "Between Windings"
- Job 10 - Identify Motor Terminals and Run Sealed Unit With A Starting Cord
- R.S.A. 5 - Absorption Type Refrigerator
- Job 11 - Reverse Rotation on A Sealed Unit
- Job 12 - Open A Sealed Unit and Check Whether or Not It Is Repairable
- Job 13 - Repair A Leaking Motor Terminal On A Sealed Unit
- Job 14 - Check Sealed Unit For Refrigerant Leak, Repair and Recharge Unit - Make Written Diagnosis of Leak and Method of Repair

Course Outline (Continued)

Unit III (Continued)

- Job 15 - Replace A Major Component of a Sealed Unit -
Give Type Solder and Flux Used
- Job 16 - Dehydrate, Charge and Operate Unit Repaired
In Job 15
- R.S.A. 6 - Expansion Valve
- Job 17 - Rewire Sealed Unit System
- Math 3 - Making and Reading Line Graphs
- Job 18 - Assemble Unit With A.E.V., Using Reciprocating
Compressor
- Job 19 - Assemble Unit With A Thermostatic Expansion Valve
- R.S.A. 7 - Capillary Tube Refrigerator Systems
- Job 20 - Assemble Unit With Capillary Tube
- R.S.A. 8 - Domestic Refrigeration Servicing
- R.S.A. 9 - Dual Temperature Refrigerator
- Job 21 - Check and Repair A Combination Home Freezer-
Refrigerator
- R.S.A. 10 - Personal and Social Problems - Getting and
Holding a Job
- Job 22 - Check and Repair A Capillary Tube, Open Type
Refrigerator
- R.S.A. 11 - Home Freezer
- Job 23 - Check and Repair A Home Freezer With Capillary
Tube Control
- R.S.A. 12 - Cabinets, Cabinet Repairing and Refinishing
- Job 24 - Replace Door Gasket
- Job 25 - Repair or Replace Cabinet Hardware
- Job 26 - Refinish Refrigerator Cabinet

Unit IV

- R.S.A. 1 - Motor Controls
- Job 1 - Adjust Low Pressure Motor Control
- Math 1 - Simple Percentage
- Job 2 - Check and Adjust Thermostatic Motor Control
- Job 3 - Adjust High Pressure Control and A Combination
Control
- Math 2 - Discount
- R.S.A. 2 - Advanced Refrigeration Fundamentals and
Commercial Evaporators
- Job 4 - Install Gravity Coil In Reach-In Box Using
Air-Cooled Condensing Unit
- Job 5 - Replace The Gravity Coil With a Blower-Coil on
Job No. 4
- Math 3 - Evaporator Capacity
- R.S.A. 3 - Commercial Refrigeration Valves and Controls
- Job 6 - Service Water Regulating Valves

Course Outline (Continued)

Unit IV (Continued)

- R.S.A. 4 - American Standard Safety Code for Mechanical Refrigeration
- Job 7 - Clean (Small) Water Cooled Condenser
- R.S.A. 5 - Pipe Sizes
- Job 8 - Thread and Connect Pipe
- R.S.A. 6 - Condensing Units and Refrigerant Pipes
- Job 9 - Install Gravity Coil in Walk-In Box Using Water-Cooled Condensing Unit
- Math 4 - Compressor Capacity
- Job 10 - Replace the Gravity Coil With a Blower Coil on Job No. 9
- R.S.A. 7 - Multiple Systems
- Job 11 - Install A Complete Multiple Unit (Same temperature)
- Job 12 - Install A Solenoid Valve and Thermostatic Control on Job No. 10.
- R.S.A. 8 - Commercial Refrigeration Systems
- Job 13 - Install A Two-Temperature Valve Job
- Job 14 - Install and/or Operate Hot Gas Defrost on Job
- R.S.A. 9 - Commercial Refrigeration Installation
- Job 15 - Install and Operate Water Defrost
- R.S.A. 9A - Wet and Dry Type Beverage Coolers
- Job 16 - Install or Service a Wet Beverage Cooler
- Job 17 - Install or Service a Dry Beverage Cooler
- Math 5 - Refrigerant Pipe Capacity
- Job 18 - Service a Water Cooler
- Job 19 - Construct and/or Install or Service Small Ice Maker
- R.S.A. 10 - Miscellaneous Refrigeration Equipment
- Job 20 - Construct and/or Install Counter-Flow Condenser
- Job 21 - Install Oil Separator on Unit
- Math 6 - Service Orders
- Job 22 - Construct and/or Install Heat Interchanger
- R.S.A. 11 - Cooling Water
- Job 23 - Construct and/or Install Evaporative Condensers
- Job 24 - Check a Forced Draft Water Tower
- R.S.A. 12 - Evaporative Condensers
- R.S.A. 13 - Commercial Refrigeration - Electrical
- Job 25 - Install and/or Connect Single Phase Motor Using Magnetic Switch
- Job 26 - Install and/or Connect Three Phase Motor Using Magnetic Switch
- Job 27 - Install and/or Connect Three Phase Motor Using Magnetic Switch and Pilot Relay
- R.S.A. 14 - Low Temperature and R-22
- Job 28 - Check Operation of Ice Cream Cabinet
- Job 29 - Construct and/or Check Low Temperature Unit
- Math 7 - Parts and Supply Orders

Course Outline (Continued)

Unit IV (Continued)

- Job 30 - Install and Check a Plate Coil
- R.S.A. 15 - Heat Pumps
- Job 31 - Construct and Operate a Heat Pump
- R.S.A. 16 - Ammonia System
- Job 32 - Design and Sketch An Ammonia System
- R.S.A. 17 - Factors That Affect Commercial Refrigeration
- R.S.A. 18 - Commercial Refrigeration Calculations and Heat Load
- Job 33 - Survey and Calculate a Heat Load
- Math 8 - Job Costs
- R.S.A. 19 - Safety and First Aid for the Refrigeration Service Engineer

Unit V

- R.S.A. 1 - Air Conditioning Equipment
- Job 1 - Install and/or Check Portable Air Conditioning Unit
- R.S.A. 2 - Heat Temperature and Comfort
- Job 2 - Check Installation of Window Unit
- Job 3 - Remove Cabinet From Window Unit Identifying Component Parts and Make a Trouble Shooters Chart on a Room Unit Using Mfgs. Service Manual
- Job 4 - Check and Repair Electrical System on a Room Unit-- Make Repairs if Necessary
- Job 5 - Check Sealed Unit For "Grounded Out" Motor-to-Housing--Between Windings and Identify Motor Terminals as Running, Starting, Common--Give Method Used
- Job 6 - Open a Defective Sealed Unit to Find Cause of Failure--Give Method Used for Repair
- Job 7 - Check and Clean Filter--Replace if Necessary
- Job 8 - Check Condensate and Explain What Use is Made of it By the Condenser and Condenser Fan
- Job 9 - Replace a Major Component Part of a Room A/C Unit--Make Complete Service Report
- Job 10 - Check Air Flow With Anemometer or Velometer
- Job 11 - Install and/or Check Self-Contained Unit
- R.S.A. 3 - Heat Gains, Part I and Part II
- Job 12 - Check Relative Humidity
- R.S.A. 4 - Residential Winter Air Conditioning
- Job 13 - Install or Check Residential Forced Air Heating System
- R.S.A. 5 - Properties of Air
- Job 14 - Install a Complete Remote Air Conditioning Unit
- R.S.A. 6 - The Psychrometric Chart
- Job 15 - Check and Oil Motors on Air Conditioning System

Course Outline (Continued)

Unit V (Continued)

- R.S.A. 7 - Air Conditioning Calculation: , Part I
- Math 1 - Measurement of Angles
- Job 16 - Check or Install and Operate Duct-type Heater
Coil in Air Conditioning System. Install
Necessary Controls
- R.S.A. 8 - Ducts and Fans
- Job 17 - Install Modulating Motor System
- Job 18 - Check the Efficiency of Atmospheric Tower as
Compared to Forced Draft Tower
- Job 19 - Balance a Duct System
- R.S.A. 9 - Air Conditioning Calculations, Part II
- Job 20 - Survey and Calculate a Cooling Load
- R.S.A. 10 - Automotive Air Conditioning and Controls
- Job 21 - Servicing Automotive Air Conditioning Unit

SMALL CRAFT OPERATION
AND NAVIGATION
Trade Preparatory

C Page 1 of 1

The Small Craft Operation and Navigation Course was published in 1960. It is available in book form.

A detailed outline of the Small Craft Operation and Navigation Course follows:

Introduction

Part I - Rules and Regulations

Lesson 1 - Equipment Required by Regulations

Lesson 2 - Classes of Vessels

Lessons 3 & 4 - Rules of the Road

Lesson 5 - Recommended Equipment to be Carried on
Small Craft

Part II - Aids to Navigation

Lesson 6 - Buoys and Markers

Lesson 7 - Lights

Lesson 8 - Charts

Lesson 9 - The Use of Charts in Piloting

Lesson 10 - Navigation in Fog and Other Conditions or
Reduced Visibility

Part III - The Marine Compass and Piloting

Lesson 11 - Historical Background and Construction

Lesson 12 - Magnetism

Lesson 13 - Compass Error

Appendix A - Common Nautical Terms

Appendix B - Equipment Required on Motor Boats

Appendix C - How Safe a Skipper are You?

Appendix D - Introduction to First Aid - For Lessons 1, 2,
and 3

A detailed outline of the Small Engines Mechanics Course follows:

Introduction

Unit I - Basic Repair Skills

R.S.A.	1	Hand Tools and How to Use
Math	1	Linear Measurement
Math	2	Rule Practice
Job	1	Disassemble and Reassemble Used Engine
Job	2	Identify Hand Tools
Math	3	Addition of Rule Measurements
Job	3	Reshape screwdriver, Chisel, and Center Punch, Using Bench Grinder
Math	4	Subtraction of Rule Measurements
R.S.A.	2	Measuring Devices
R.S.A.	2A	The Micrometer
Job	4	Measure Crankshaft and Cylinder With Micrometers

SMALL ENGINES MECHANICS
Trade Preparatory

C Page 5 of 9

Course Outline (Continued)

R.S.A.	3	Fastening Devices and Related Items (Part I)
Job	5	Identify Bolts and Nuts
R.S.A.	3	Fastening Devices and Related Items (Part II)
Job	6	Identify Retaining Rings
R.S.A.	4	Drills, Taps, and Dies
R.S.A.	4A	Tools
Job	7	Make a Drill Gauge
Job	8	Make Internal Thread Block and Studs
R.S.A.	5	Installing Studs and Removing Broken Studs
Job	9	Remove a Broken Stud
R.S.A.	5A	Internal Thread Repairs
Job	10	Repair Internal Threads with Inserts
R.S.A.	6	Tubing and Fittings
Job	11	Make Up Replacement Fuel Line, Using Assorted Fittings
Job	12	Repair Internal Pipe Threads With Repair Insert
R.S.A.	7	Soldering
Job	13	Splice Insulated Wire
Job	14	Make a Solder Joint
Job	15	Sweat a Tank Fitting
R.S.A.	8	Bushings and Reamers
Job	16	Remove, Replace, and Ream a Bushing

Unit II- Engine Fundamentals

Introduction

R.S.A.	1	Theory of Operation - 2-Stroke Cycle Engines
Job	1	Disassemble and Reassemble 2-Cycle Engine
Math	5	The Decimal System
Math	6	Addition and Subtraction of Decimals
Job	2	Identify Engine Parts By Proper Name, Using Manufacturer's Parts Catalog (2-Cycle Engine)
R.S.A.	2	Theory of Operation - 4-Stroke Cycle Engines
Job	3	Disassemble and Reassemble Engine, 4-Stroke Cycle
Math	7	Multiplication and Division of Decimals
Job	4	Identify Parts by Name, 4-Cycle Engine, Using Manufacturer's Parts Catalog
Job	5	Start, Stop, and Store 2-Cycle Engine
Job	6	Start, Stop, and Store 4-Cycle Engine
R.S.A.	3	Principles and Operations of Small Gasoline Engines

Unit III - Fuel Systems

R.S.A.	1	Fuel Supply Systems
Job	1	Remove, Repair, and Replace Carburetor, Briggs and Stratton (Updraft)

SMALL ENGINES MECHANICS
Trade Preparatory

C Page 6 of 9

Course Outline (Continued)

- R.S.A. 2 Float Carburetors
Job 2 Remove, Repair, and Replace Carburetor (Briggs and Stratton Float Type, Sidedraft)
- R.S.A. 3 Governors
Job 3 Repair and Adjust Carburetor and Governor, Clinton Vertical Shaft Engine (Carter Carburetor)
- R.S.A. 4 Diaphragm Carburetors
Job 4 Repair and Adjust Carburetor and Governor, Clinton Vertical Shaft Engine (Clinton or Walbro Carburetor)
- Job 5 Repair and Adjust Carburetor and Governor, Lauson Series, Walbro Carburetor
- Job 6 Repair and Adjust Carburetor and Governor, Power Products, (Tillotson Carburetor) AV Series
- Job 7 Repair Carburetor, Double Diaphragm, Carter Model "ND"
- Job 8 Repair Single Diaphragm Carburetor, (Lauson V Series Lightweight Engine) or Power Products Engine (Tecumseh Carburetor)
- R.S.A. 5 Air Cleaners
Job 9 Repair and Adjust Carburetor and Governor Lawn Boy "C" Series Engine
- R.S.A. 6 Remote Control System
Job 10 Repair and Adjust Remote Control System (Craftsman Lawn Mower With Handle Mounted Dial Control)
- Job 11 Install a Bowden Wire Remote Control System

Unit IV - Magneto Ignition

- R.S.A. 1 Magnetism and Electricity
Job 1 Repair Ignition System, Briggs & Stratton Aluminum Horizontal Series Engine
- R.S.A. 2 Flywheel Magnetos
Job 2 Repair Ignition System, Briggs and Stratton Small Cast Iron Series
- Job 3 Repair Ignition System, Briggs & Stratton "Magnematic Ignition System"
- R.S.A. 3 Trouble Shooting Information
Job 4 Repair Ignition System, Clinton Vertical Shaft Aluminum Engine Series
- Job 5 Repair Ignition System Clinton Vertical Shaft, Two Cycle
- Job 6 Repair Ignition System, Lauson V-Series, Wico Magneto
- R.S.A. 4 High Tension Magnetos
Job 7 Repair High Tension Magneto (Wico Model XH-1) (as used on Wisconsin AE, AEH, AEN Series)

SMALL ENGINES MECHANICS
Trade Preparatory

C Page 7 of 9

Course Outline (Continued)

- Job 8 Repair High Tension Magneto (Multi-Cylinder Model as used on Wisconsin 4-Cylinder Engine) (Fairbanks Morse Type FM-X4A7B)
R.S.A. 5 Spark Plugs

Unit V - Starting Systems

- R.S.A. 1 Manual Starters
Job 1 Repair Rewind Starter, Briggs and Stratton
Job 2 Disassemble and Repair Rewind, Clinton Engine (Fairbanks Morse Starter)
Job 3 Repair Recoil Starter (Clinton Starter)
Job 4 Repair Rewind Starter, Clinton Engine (Schnake Starter)
Job 5 Repair Rewind Starter, Lawn Boy C Series Engine
Job 6 Repair Rewind Starter, Tecumseh Engine (Eaton Starter)
Job 7 Repair Wind-Up Starter, Briggs and Stratton, Vertical Shaft Engine
Job 8 Repair Wind-Up Starter, Tecumseh Engine, "Self Starter"
R.S.A. 2 Wind-Up Starters
Job 9 Repair Wind-Up Starter, Clinton "Impulse Starter"

Unit VI - Engine Overhaul

Introduction:

- R.S.A. 1 Cooling
Job 1 Clean and Inspect Air-Cooling System (Any Make)
R.S.A. 2 Valve Systems
Job 2 Reface Valves
Job 3 Remove, Replace, and Reseat Valve Seats
Job 4 Perform Valve and Seat Reconditioning Job (Briggs and Stratton Engine, Small Series, Lightweight)
Job 5 Perform Valve and Seat Reconditioning Job (Clinton Engine, Lightweight Series)
Job 6 Recondition Valve System, Tecumseh Engine (4-Cycle)
Job 7 Recondition Valve System, Wisconsin 2 or 4-Cylinder Engine
R.S.A. 3 Cylinders
Job 8 Hone Aluminum Cylinder for Oversize Piston
Job 9 Hone Cylinder For Oversize Piston (Cast Iron)
R.S.A. 4 Pistons, Rings, Pins, and Connecting Rods
Job 10 Bore Cylinder For Oversize Piston
Job 11 Remove and Replace Connecting Rod, Piston, and Piston Rings. (Briggs & Stratton Lightweight Series, Vertical Shaft Engine)

SMALL ENGINES MECHANICS
Trade Preparatory

C Page 8 of 9

Course Outline (Continued)

- Job 12 Remove and Replace Connecting Rod and Piston Assembly, Clinton Lightweight VS Series
- Job 13 Remove and Replace Connecting Rod and Piston Assembly, Tecumseh 2-Cycle, Vertical-Shaft Engine
- R.S.A. 5 Camshafts, Crankshafts, Bearings and Seals
- Job 14 Remove and Replace Crankshaft and Main Bearings, Tecumseh "V" Series, 4 Cycles
- Job 15 Remove and Replace Crankshaft and Main Bearings, Tecumseh 2-Cycle Engine
- R.S.A. 6 Oil Pumps
- Job 16 Complete Engine Overhaul, Briggs and Stratton Model 8 Engine
- Job 17 Complete Engine Overhaul, Clinton "V" Series Lightweight 4 Cycle
- Job 18 Complete Engine Overhaul, Lawn Boy C Series
- Job 19 Complete Engine Overhaul, Briggs and Stratton (Cast Iron Series, 3 HP or above)
- Job 20 Complete Engine Overhaul (Wisconsin 2 or 4 Cylinder Engine)

Unit VII - Clutches and Drive Mechanisms

- R.S.A. 1 Centrifugal Clutches
- Job 1 Repair Centrifugal Clutch, Drum Type
- Job 2 Repair Centrifugal Clutch, Disc Type (Cushman Scooter)
- R.S.A. 2 Manual Clutches
- R.S.A. 3 Belt and Chain Drives
- Job 3 Repair and Adjust Belt Drive Assembly
- Job 4 Repair and Adjust Chain Drive Assembly
- R.S.A. 4 Transmissions
- Job 5 Repair Transmission
- R.S.A. 5 Differentials
- Job 6 Repair Differential

Unit VIII - Grass Cutting Equipment

Introduction:

- R.S.A. 1 Rotary Lawn Mowers
- Job 1 Remove, Repair, and Replace Rotary Mower Blade
- Job 2 Overhaul Self-Propelled Rotary Mower, Complete
- R.S.A. 2 Reel Type Lawn Mowers
- Job 3 Adjust Bed-Knife Clearance and Lubricate Mower
- Job 4 Grind a Bed Knife and Reel
- Job 5 Complete Overhaul, Reel Type Power Mower

Course Outline (Continued)

Unit IX - Refinishing

- R.S.A. 1 Painting, Refinishing, and Preparations
- Job 1 Prepare a Lawn Mower for Refinishing
- R.S.A. 2 Paints, Lacquers, and Thinners
- Job 2 Paint a Lawn Mower with Spray Gun

Unit X - Chain Saws

- R.S.A. 1 Chain Saw Operation
- Job 1 File and Adjust Chain, Any Make
- Job 2 Repair Chain Saw Oiling System
- Job 3 Repair Clutch
- Job 4 Repair Chain Saw Transmission
- Job 5 Overhaul Chain Saw, Complete

Unit XI - Pumps

- R.S.A. 1 Centrifugal and Diaphragm Pumps
- Job 1 Overhaul a Centrifugal Pump
- Job 2 Overhaul a Diaphragm Pump

Unit XII - Outboard Engine Fuel Systems

- R.S.A. 1 Remote Fuel-Supply Systems
- Job 1 Repair Outboard Remote Fuel System
- R.S.A. 2 Outboard Engine Carburetion
- Job 2 Repair Carburetor, Johnson or Evinrude, 2 Cylinder (with electric choke)
- Job 3 Repair and Adjust Dual Carburetors, Mercury 4 Cylinder
- Job 4 Repair Two-Barrel Carburetor, Johnson or Evinrude 4 Cylinder (with automatic choke)

Unit XIII - Outboard Engine Ignition

- R.S.A. 1 Outboard Magnetos
- Job 1 Repair and Synchronize Outboard Magneto, 2 Cylinder Engine
- Job 2 Repair and Synchronize Outboard Magneto 4 Cylinder Engine
- R.S.A. 2 Battery Ignition
- Job 3 Repair Outboard Engine Battery Ignition System

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 1 of 11

Units I - VII of the Tractor Maintenance and Repair Course was published in 1953-1954, Units VIII - XIV in 1958. It is available in the following forms:

Math, Related Study Assignments, Jobs and Job Information Sheets are all in Packages for students. Book forms are available for the Instructors. Book I - Units I and II
Book II - Units III and IV
Book III - Units V, VI and VII
Book IV - Units VIII through XIV

Test Book

Includes all test for Units I - XIV

Answer Book

Complete for Units I - XIV

The following instructor's aids are available:

Permanent Record Folders
Wall Progress Charts

BORING BAR MANUFACTURERS MANUAL	
Kuns, AUTO MECHANICS Book One	American Technical Society 848 East 58th Street Chicago 37, Illinois
A.B.C.'S OF HAND TOOLS	General Motors Corporation General Motors Building 3044 West Grand Boulevard Detroit 2, Michigan
Morrison, Ivan, Gregg, FARM TRACTOR MAINTENANCE, 1946	The Interstate Printers and Publishers, Inc. Jackson at Van Buren Danville, Illinois

A detailed outline of the Tractor Maintenance and Repair Course follows:

UNIT I: PREVENTIVE MAINTENANCE FUNDAMENTALS

PACKAGE #1

Math	1	The Steel Rule
R.S.A.	1	Fastening Devices, Calipers, and Thread Gages
Job	1	Identify Bolts and Nuts

PACKAGE #2

R.S.A.	2	Drills, Taps, and Dies
Job	2	Make Internal Thread Block and Studs
J.I.S.	1	Tools (For use with Job 2)

PACKAGE #3

R.S.A.	3	Installing Studs and Removing Broken Studs
Job	3	Remove a Broken Stud
Math	2	Addition and Subtraction of Scale Measurements

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 3 of 11

Course Outline (Continued)

UNIT I (Continued)

PACKAGE #4

R.S.A. 4 Soldering
Job 4 Make a Solder Joint

PACKAGE #5

Job 5 Start, Operate and Stop Tractor

PACKAGE #6

R.S.A. 5 Hand Tools and How to Use
Job 6 Identify Hand Tools

PACKAGE #7

R.S.A. 6 Tire Service
Job 7 Remove, Repair, and Replace Tire and Tube

PACKAGE #8

Math 3 Addition and Subtraction of Whole Numbers
R.S.A. 7 Lubrication
Job 8 Lubricate Tractor

PACKAGE #9

R.S.A. 8 Lubricating Oils and Oil Filters
Job 9 Drain, Flush, Refill Crankcase and Service Oil Filter

PACKAGE #10

R.S.A. 9 Battery Service
Job 10 Service a Battery

PACKAGE #11

R.S.A. 10 Cooling Systems
Job 11 Flush Cooling System

UNIT II: FRONT AXLE AND STEERING GEAR

PACKAGE #12

R.S.A. 11 Front Wheel Service
Job 12 Remove, Repack, and Adjust Front Wheel Bearings
Math 4 Multiplication of Whole Numbers

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 4 of 11

Course Outline (Continued)

UNIT II (Continued)

PACKAGE #13

R.S.A. 12 Front Axles
Job 13-B Set Toe-In (Ford, 8N)
Job 13-C & E Set Toe-In (Farmall, Super-A and Case, LA)
Math 5 Division of Whole Numbers

PACKAGE #14

R.S.A. 13 Reamers and Reaming
Job 14-B Renew Spindle Bushings (Ford, 8N)
Job 14-C Rebush Steering Knuckles (Farmall, Super-A)
Job 14-E Renew Kingpin Bushings (Case, LA)
Job 15-B Renew Axle Pin Bushing (Ford, 8N)
Job 15-C Renew Axle Pivot Shaft Bushings (Farmall Super-A)
Job 15-E Renew Axle Pivot Shaft Bushing (Case L.A.)
Math 6 Changing Fractions

PACKAGE #15

Job 16-A Renew Vertical Spindle Bushing (John Deere-B)
Job 17-A Repair Roll-O-Matic (John Deere-B)
Job 18-D Renew Front Wheel Felt Washers (Allis-Chalmer,
W.C.)
R.S.A. 14 Steering Gears and Adjustment
Job 19-A Adjust Steering Gear (John Deere-B)

PACKAGE #16

Job 19-B Adjust Steering Gear (Ford, 8N)
Job 19-D Adjust Steering Gear (Allis-Chalmers, W.C.)
Job 19-E Adjust Steering Gear (Case, LA)
R.S.A. 15 Tie Rod Ends and Universal Joints
Job 20-B Overhaul Steering Gear (Ford, 8N)
Job 20-C Overhaul Steering Gear (Farmall, Super-A)
Job 20-E Overhaul Steering Gear (Case, LA)

Unit III: Cooling System

PACKAGE #17

R.S.A. 16 Radiators and Radiator Service
Math 7 Addition and Subtraction of Fractions
Job 21 Remove and Repair Radiator

PACKAGE #18

R.S.A. 17 Fans and Fan Drives
Math 8 Multiplication of Fractions
Job 22-A Repair Fan Assembly (John Deere-B)
(Hood and Radiator Removed)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 5 of 11

Course Outline (Continued)

UNIT III (Continued)

PACKAGE #18 (Continued)

- Job 22-C Repair Fan Assembly (Farmall Super-A)
- Job 23-A Check and Repair Ventilator Pump (John Deere-B)
(Fan Assembly Removed)

PACKAGE #19

- Math 9 Division of Fractions
- R.S.A. 18 Water Pumps
- Job 24-B Remove, Repair, and Replace Water Pump (Ford 8N)
- Job 24-D Remove, Repair, and Replace Water Pump
(Allis-Chalmer WC)
- Job 24-E Remove, Repair, and Replace Water Pump
(Case LA)

PACKAGE #20

- R.S.A. 19 Thermostats, Shutters, and Temperature Gages
- Job 25 Remove, Check, and Replace Thermostat
(Radiator Drained)

UNIT IV: ATTACHMENTS

PACKAGE #21

- R.S.A. 20 Power Take-offs and Drawbars
- Job 26-C Remove, Repair, and Replace Power Take-Off
(Farmall, Super-A) (To be performed with
Job No. 27-C)
- Job 26-D Remove, Repair, and Replace Power Take-Off
(Allis-Chalmers W.C.)
- Job 26-E Remove, Repair, and Replace Power Take-Off
(Case LA)

PACKAGE #22

- Math 10 Pulley Speeds and Sizes
- R.S.A. 21 Belt Pulleys and Pulley Speeds
- Job 27-B Remove, Repair, and Replace Belt Pulley (Ford 8N)
- Job 27-C Remove, Repair, and Replace Belt Pulley (Farmall,
Super-A) (To be performed with Job No. 26-C)
- Job 27-D Remove, Repair, and Replace Belt Pulley (Allis-
Chalmers W.C.)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 6 of 11

Course Outline (Continued)

UNIT IV: (Continued)

PACKAGE #23

Math 11 The Decimal System
R.S.A. 22 Lighting Systems, Lights and Light Switches
Job 28-A Install Lighting Attachment (John Deere-B)
Job 28-B Install Lighting System (Ford 8N)
Job 28-C Install Lighting System (Farmall, Super-A)
Job 28-D Install Lighting System (Allis-Chalmers, W.C.)
Job 28-E Install Lighting System (Case, LA)

PACKAGE #24

Math 12 Addition and Subtraction of Decimal Fractions
R.S.A. 23 Basic Hydraulic Principles and General Power
Lift Operation
R.S.A. 23-A Powr-Trol and Power Lift (John Deere, B)*
R.S.A. 23-B Hydraulic Control (Ford 8N)
R.S.A. 23-C Touch-Control (Ford 8N)
R.S.A. 23-E Hydraulic Control Unit (Case L.A.)
Job 26-B Remove and Repair Power Take-Off Shaft (Ford 8N)
Job 29-A Repair Powr-Trol (John Deere-B)
Job 29-B Remove, Repair, and Replace Hydraulic Control
(Ford, 8N)
Job 29-C Remove, Repair, and Replace Touch Control
(Farmall, Super-A)
Job 29-D Remove, Repair, and Replace Mechanical Lift
(Allis-Chalmers, W.C.)
Job 29-E Remove, Repair, and Replace Hydraulic Control
Unit (Case, LA)

UNIT V: REAR AXLE, FINAL DRIVE, AND BRAKES

PACKAGE #25

Math 13 Multiplication of Decimal Fractions
R.S.A. 24 Bearings, Seals and Closures
Job 30-C Remove, Repair and Reassemble Final Drive
(Farmall, Super-A)
Job 30-D Disassemble, Repair, and Reassemble Final Drive
(Allis-Chalmers, WC)
R.S.A. 25 Tractor Final Drives
Job 33-D Remove, Repair, and Replace Brakes (Allis
Chalmers W.C.) (Final Drive Disassembled)

PACKAGE #26

R.S.A. 26 Types of Rear Axles and Their Adjustments
Job 31-A Remove and Renew Rear Axle Bearings or Seals
(John Deere-B)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 7 of 11

Course Outline (Continued)

UNIT V (Continued)

PACKAGE #26 (Continued)

- Job 31-B Remove and Renew Rear Axle Bearings or Seals
(Ford 8N)
- Job 31-E Remove and Renew Rear Axle Bearings or Seals
(Case, LA)

PACKAGE #27

- Math 14 Division of Decimals
- R.S.A. 27 Brakes
- Job 32-A Adjust Brakes (John Deere-B)
- Job 32-B Adjust Brakes (Ford 8N)
- Job 32-C Adjust Brakes (Farmall, Super-A)
- Job 32-D Adjust Brakes (Allis Chalmers, WC)
- Job 32-E Adjust Brakes (Case, LA) (Mechanical-Internal
Expanding)
- Job 32-E Adjust Hydraulic Brakes (Case, LA) (Minor Adjustment)
- Job 32-E Adjust Hydraulic Brakes (Case, LA) (Major Adjustment)
- Job 32-X Adjust Disc Type Brakes (All Models)
- Job 33-A Remove, Repair, and Replace Brakes (John Deere-B)
- Job 33-B Disassemble, Repair and Reassemble Brakes
(Ford 8N) (Wheel and Brake Drum Removed)
- Job 33-E Remove, Repair, and Replace Brakes (Case, LA)
- Job 33-E Disassemble, Repair, and Reassemble Brakes (Case, LA)
(Hydraulic Brakes)
- Job 33-X Remove, Repair, and Replace Disc Brakes (All Models)

UNIT VI: DIFFERENTIAL

PACKAGE #28

- Math 15 Changing Common Fractions to Decimals
- Math 16 The Micrometer
- R.S.A. 28 Ring Gear and Pinion Adjustments
- Job 34-C Adjust Ring Gear and Pinion (Farmall, Super-A)
(Final Drive Removed)
- Job 34-D Adjust Ring Gear Backlash (Allis-Chalmers, WC)
- R.S.A. 29 Differential Construction and Operation
- Job 35-A Remove, Repair, and Reassemble Differential
(John Deere-B)
- Job 35-B Remove, Repair, and Reassemble Differential
(Ford, 8-N)
- Job 35-C Remove, Repair, and Reassemble Differential
(Farmall, Super-A)
- Job 35-D Remove, Repair and Reassemble Differential (Allis
Chalmers, WC.)
- Job 35-E Remove, Repair, and Reassemble Differential (Case,
LA.) (To be performed with Jobs 37-E and 38-E)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 8 of 11

Course Outline (Continued)

UNIT VI (Continued)

PACKAGE #28 (Continued)

- Job 36-D Disassemble, Repair, and Reassemble Torque Tube
(Allis-Chalmers, WC.)
R.S.A. 30 Getting and Holding a Job

UNIT VII: TRANSMISSIONS

PACKAGE #29

- R.S.A. 31 Transmission Shifter Mechanism
Job 37-A1 Disassemble, Repair, and Reassemble Shifter
Mechanism (John Deere-B) (Differential Removed)
(Serial No. B-9600 to B-201000)
Job 37-A2 Disassemble, Repair, and Reassemble Shifter
Mechanism (John Deere-B) (Differential Removed)
(Serial No. B-201000 and Up)
Job 37-B Disassemble, Repair, and Reassemble Shifter
Mechanism (Ford, 8-N) (Differential Removed)
Job 37-C Remove, Repair, and Replace Shifter Mechanism
(Farmall, Super-A)
Job 37-D Remove, Repair, and Replace Shifter Mechanism
(Allis-Chalmers, WC.)
Job 37-E Repair and Replace Shifter Mechanism (Case, LA.)
(Differential Removed)

PACKAGE #30

- Math 17 Gear Ratios
R.S.A. 32 Transmissions
R.S.A. 32-A1 Transmission Construction and Operation
(John Deere-B, Serial No. B-96000 to B-201000)
Job 38-A1 Disassemble, Repair, and Reassemble Transmission
(John Deere-B) (Differential and Shifter
Mechanism Removed) (Serial No. B-96000 to B-201000)
R.S.A. 32-A2 Transmission Construction and Operation (John
Deere-B, Serial No. B-201000 and up)
Job 38-A2 Disassemble, Repair, and Reassemble Transmission
(John Deere-B Serial No. B-201000 and up)
(Differential and Shifter Mechanism)
R.S.A. 32-B Transmission Construction and Operation (Ford, 8-N)
Job 38-B Disassemble, Repair, and Reassemble Transmission
(Ford, 8-N) (To be Performed with Job No. 37-B)
Job 38-C Disassemble, Repair, and Reassemble Transmission
(Farmall, Super A.) (Differential Removed)
Job 38-D Remove, Repair, and Replace Transmission
(Allis-Chalmers, W.C.) (Differential and Torque
Tube Removed)
Job 38-E Disassemble, Repair, and Reassemble Transmission
(Case, LA) (Differential and Shifter Mechanism
Removed)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 9 of 11

Course Outline (Continued)

UNIT VIII: CLUTCHES

PACKAGE #31

R.S.A. 33 Types of Clutches; Care and Operation
Math 18 Simple Percentage
Job 39-A Repair and Adjust Clutch, Farmall A, B, or C
Job 39-B Repair and Adjust Clutch, Allis-Chalmers WD
Job 39-C Repair and Adjust Clutch, Ford 8N
Job 39-D Repair and Adjust Clutch, John Deere B

UNIT IX: FUEL SYSTEMS

PACKAGE #32

R.S.A. 34 Fuel Supply and Carburetion Systems
Job 40-A Remove, Repair, and Replace Carburetor, Farmall
A, B, or C
Job 40-B Remove, Repair, and Replace Carburetor, Allis-
Chalmers WD.
Job 40-C Remove, Repair, and Replace Carburetor, Ford 8N
Job 40-D Remove, Repair, and Replace Carburetor, John
Deere B

PACKAGE #33

R.S.A. 35 Governors, Types and Operation
Math 19 Discount
Job 41-A Remove, Repair, and Replace Governor, Farmall
A, B, or C
Job 41-B Remove, Repair, and Replace Governor, Allis-
Chalmers WD
Job 41-C Remove, Repair, and Replace Governor, Ford 8N
Job 41-D Remove, Repair, and Replace Governor, John Deere B

UNIT X: MAGNETO IGNITION

PACKAGE #34

R.S.A. 36 Magnetism and Electricity
R.S.A. 37 Magneto Construction and Operation
Job 42-A Disassemble, Repair and Reassemble Magneto,
Farmall A, B, or C

PACKAGE #35

R.S.A. 38 Impulse-Starter Couplings; Timing and Care of
the High-Tension Magneto
Math 20 Personal Checks and Drafts
Job 42-B Disassemble, Repair and Reassemble Magneto,
Allis-Chalmers WD
Job 42-C Disassemble, Repair and Reassemble Magneto,
(John Deere B)

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 10 of 11

Course Outline (Continued)

UNIT XI: BATTERY IGNITION

PACKAGE #36

- R.S.A. 39 Types and Requirements of Battery Ignition Systems
Job 43-A Disassemble, Repair, and Reassemble Distributor,
Farmall A, B, or C.
Job 43-B Disassemble, Repair, and Reassemble Distributor,
Allis-Chalmers WD

PACKAGE #37

- R.S.A. 40 Coils, Condensers, Contact Points, Distributor,
and Spark Plugs
Job 43-C Disassemble, Repair and Reassemble Face Mounted
Distributor, Ford 8N
Job 43-D Disassemble, Repair, and Reassemble Angle Mounted
Distributor, Ford 8N
Job 43-E Remove, Clean, Adjust and Replace Spark Plugs

UNIT XII: CRANKING MOTORS

PACKAGE #38

- R.S.A. 41 Operating Principles of Cranking Motors and Drivers
Math 21 Work Orders and Bills
Job 44 Remove, Overhaul, and Replace Cranking Motor

UNIT XIII:

PACKAGE #39

- R.S.A. 42 Generator Construction and Operation
Job 45 Remove, Disassemble, Repair and Replace a Generator

PACKAGE #40

- R.S.A. 43 Cutout Relays and Step-voltage Controls
Math 22 Keeping Accounts
Job 46 Remove, Check, and Adjust Step-voltage Control

UNIT XIV: ENGINES

PACKAGE #41

- R.S.A. 44 Engine Fundamentals
Job 47 Clean Engine With Cold or Hot Degreasing Solution
Job 48 Remove and Replace Expansion Plug

TRACTOR MAINTENANCE AND REPAIR
Trade Preparatory

C Page 11 of 11

Course Outline (Continued)

PACKAGE #42

R.S.A. 45 Valve Types and Construction
R.S.A. 46 Valve Mechanisms
Job 49 Reface Rocker Arms

PACKAGE #43

R.S.A. 47 Valve Service
Job 50 Remove, Clean, and Replace Rocker Arms
Job 51 Grind Valves on I-Head Engine
Job 52 Grind Valves on L-Head Engine

PACKAGE #44

R.S.A. 48 Pistons, Piston Rings, Cylinders and Sleeves
Job 58 Remove Old and Install New Piston Rings
Job 59 Remove Old and Install New Cylinder Sleeves, Dry
Type
Job 60 Remove and Install Cylinder Sleeve, Wet Type
Job 61 Rebore Cylinder
Job 62 Hone Cylinder and Fit Piston

PACKAGE #45

R.S.A. 49 Piston Pins and Bushings, Connecting Rods,
Crankshaft and Main Bearings
Job 53 Remove Old and Fit New Piston Pins and Bushings
Job 54 Install New Ring Gear on Flywheel
Job 55 Adjust Connecting Rod Bearings with Engine in
Tractor, John Deere (Shim Type)
Job 56 Install New Connecting Rod Bearings With Engine
in Tractor (Insert Type)
Job 57 Adjust Main Bearings, John Deere B

PACKAGE #46

R.S.A. 50 Engine Lubrication Systems
Job 63 Remove, Inspect, and Replace Oil Pump

PACKAGE #47

Job 64 Overhaul Engine Completely (Except John Deere)

PACKAGE #48

Job 65 Overhaul Engine Completely, John Deere B

VOCATIONAL-TECHNICAL DRAWING
Trade Preparatory

C Page 1 of 12

The Vocational-Technical Drawing Course was written in 1964-65. It is available in book form for the instructors and in loose form for distribution to students. There are twenty-two units of Related Study Assignments and Jobs with accompanying tests and answers.

Unit	I	Introduction and Orientation
RSA	1	History of the Occupation
RSA	2	The Draftsman and Specialization
RSA	3	Drafting Instruments and Materials
RSA	4	Nature of the Work and Employment Outlook
RSA	5	How to Use Instructional Material
Unit	II	Lettering
RSA	1	Sheet Layout
Math	1	Common Fractions
Job	1	Draw Horizontal and Vertical Lines
RSA	2	Lettering - Vertical Caps - The Straight Line Group
Math	2	Partitive Fractions
Job	2	Practice Free-Hand Lettering - The Straight Line Group
RSA	3	The Circle Group
Math	3	Equivalent Fractions and the Golden Rule
Job	3	Practice Free-Hand Lettering, The Circle Group
RSA	4	Lettering - Numerals and Fractions
Math	4	Reduction of Common Fractions
Job	4	Practice Lettering Numerals and Fractions
RSA	5	Lower Case Letters
Math	5	Reduction of Improper Fractions
Job	5	Practice Lower Case Letters
RSA	6	Inclined Lettering
Math	6	Writing a Mixed Number as a Fraction
Job	6	Practice Inclined Lettering
RSA	7	Lettering - Proportion, Stability, Size and Spacing
Math	7	Like and Unlike Fractions
Job	7	Lettering - Practice Proportion, Size and Spacing
RSA	8	Compression and Extension
Math	8	Addition of Fractions
Job	8	Practice Compression and Extension
RSA	9	Lettering - Notes and Titles
Math	9	Subtraction of Fractions
Job	9	Letter Notes and Titles
RSA	10	Lettering Styles for Architectural Draftsmen
Math	10	Multiplication of Fractions
Job	10	Practice Letter Styles
RSA	11	Review of Unit II
Math	11	Division of Fractions
Job	11	Review Lettering

VOCATIONAL-TECHNICAL DRAWING
Trade Preparatory

C Page 2 of 12

Course Outline (Continued)

Unit III		Geometric Construction
RSA	1	Geometric Construction - Straight Lines
Math	1	Circle Circumference
Job	1	Geometric Construction
RSA	2	The Circle
Math	2	Circle Diameters and Radii
Job	2	Construct Circles and Center Lines
RSA	3	Geometric Construction - Circles
Math	3	Area of Circles, Sectors and Segments
Job	3	Geometric Construction - Circles
RSA	4	Geometric Construction - Arcs
Math	4	Square Areas
Job	4	Geometric Construction - Fillets and Rounds
RSA	5	Geometric Construction - Arcs Tangent to Arcs and Circles
Math	5	Areas
Job	5	Geometric Construction - An exterior Arc Tangent to a Circle and a Straight Line
RSA	6	Geometric Construction - The Reverse or Ogee Curve
Math	6	Areas - Area of Transportation
Job	6	Geometric Construction - Construct a Reverse or Ogee Curve
RSA	7	Geometric Construction - Plane Figures
Math	7	Area of Triangles
Job	7	Geometric Construction - Plane Figures
RSA	8	Geometric Construction - Plane Figures, the Hexagon and Octagon
Math	8	Area of Polygons
Job	8	Geometric Construction - Hexagons
RSA	9	Geometric Construction - The Ellipse and its Straight Line Tangents
Math	9	Areas - Area of Ellipses
Job	9	Geometric Construction - Construct a Parabola
RSA	10	Geometric Construction - Parabolas
Math	10	Areas - Area of a Parabola
Job	10	Geometric Construction - Construct a Parabola
Unit IV		Dimensioning
RSA	1	Dimensioning - Line Conventions
Math	1	Decimal Fractions - Using Conversion Table
Job	1	Dimensioning - Line Conventions
RSA	2	Dimensioning - Rectangles
Math	2	Decimal Fractions - Meaning of Decimal Fractions
Job	2	Dimensioning - Rectangles
RSA	3	Dimensioning - Size and Location
Math	3	Decimals - Reduction to Lower Terms
RSA	4	Dimensioning - Circles, Arcs and Curves - Size and Location Dimensions

Unit IV Dimensioning
(Continued)

Math	4	Decimal Fractions - Addition
Job	4	Dimensioning - Circles, Arcs and Curves
RSA	5	Dimensioning - Angles
Math	5	Decimal Fractions - Subtraction
Job	5	Dimensioning - Angles
RSA	6	Dimensioning - Counterbored and Countersunk Holes, Chamfers and Keyways
Math	6	Decimal Fractions - Multiplication
Job	6	Dimensioning - Holes, Chamfers and Keyways
RSA	7	Dimensioning - Conical Tapers, Flat Tapers and Machine Tapers
Math	7	Decimal Fractions - Division of Decimals by Whole Numbers
Job	7	Dimensioning Tapers
RSA	8	Dimensioning - Tolerances
Math	8	Decimal Fractions - Division by a Decimal
Job	8	Dimensioning - Tolerances

Unit V Single View Drawings

RSA	1	Single View Drawings
Job	1	Single View Drawing - Rectangular Combinations
RSA	2	Single View Drawings - Laying out the Drawing
Job	2	Single View Drawings - Angular Surfaces
RSA	3	Single View Drawings - Order of Pencilling
Job	3	Single View Drawings - Circles and Arcs
RSA	4	Single View Drawings - Finished Drawings
Job	4	Single View Drawings - Construct a Finished Drawing
Job	5	Single View Drawings - Reverse Curves and Circles Tangent
Job	6	Single View Drawings - Elliptical Shapes
Job	7	Single View Drawings - Parabolic Curves

Unit VI Multi-View Drawings

RSA	1	Theory of Visualization of the Three Principal Views
Job	1-15	Multi-View Drawings - Surface Identification
RSA	2	Multi-View Drawings - Laying Out the Front and Top Views
Job	16	Multi-View Drawings - Lay Out and Draw Front and Top Views
RSA	3	Multi-View Drawings - Laying Out The Right-Side View
Job	17	Multi-View Drawings - Laying Out the Right-Side View Using 45° Miter Method
Job	18	Multi-View Drawings - Laying Out the Right-Side View, Using Radial Point Method
RSA	4	Multi-View Drawings - Invisible Surfaces - Technique of Hidden Lines

Unit VI Multi-View Drawings
(Continued)

- Job 19 Multi-View Drawings - Hidden-Line Technique
- RSA 5 Multi-View Drawings - Tangent Surfaces
- Job 20 Multi-View Drawings - Tangent Surfaces
- RSA 6 Multi-View Drawings - Fillets, Rounds and Runouts
- Job 21 Multi-View Drawings - Fillets, Rounds and Runouts
- RSA 7 Multi-View Drawings - Projection of Inclined Surfaces and Oblique Surfaces
- Job 22-30 Multi-View Drawing - Projection of Inclined Surfaces and Oblique Surfaces
- RSA 8 Multi-View Drawing - Left Side, Back and Bottom Views
- Job 31 Multi-View Drawings - Projecting the Left-Side View
- Job 32-35 Orthographic Views From Pictorials

Unit VII Auxiliary Views

- RSA 1 Auxiliary Views - Use of Arcs for Projecting Auxiliaries
- Job 1 Construct Auxiliary by Using Arcs
- RSA 2 Auxiliary Views - The Reference Plane Against the Front Surface
- Job 2 Construct an Auxiliary by Use of a Reference Line
- RSA 3 Auxiliary Views - The Reference Plane Against an Inner Surface
- Job 3 Reference Line on Inner Surface
- RSA 4 Auxiliary Views - The Reference Plane as a Center Line
- Job 4 The Reference Plane and the Center Line
- RSA 5 Auxiliary Views - Circular and Curved Inclined Surfaces
- Job 5 Auxiliary Views - Completion of Principal Views by Auxiliary--Circles and Curves
- RSA 6 Auxiliary Views - Oblique Surfaces
- Job 6 Auxiliary Views - Completion of Principal Views by Auxiliary--Circles and Curves
- Job 7-8 Auxiliary Views - Oblique Surfaces
- Job 9-12 Auxiliary Views - Additional Problems

Unit VIII Sectional Views

- RSA 1 Sectional Views - Usage and Symbols
- Job 1 Sectional Views - Usage and Symbols
- RSA 2 The Cutting Plane and Full Sections
- Job 2 Sectional Views - The Cutting Plane
- RSA 3 Sectional Views - Half Sections
- Job 3 Sectional Views - Half Sections

Unit VIII Sectional Views
(Continued)

RSA	4	Sectional Views - Offset Sections, Location and Lines Behind the Cutting Plane
Job	4	Sectional Views - Offset
RSA	5	Sectional Views - Broken-Out and Revolved Sections
Job	5	Sectional Views - Broken-Out Sections
Job	6	Sectional Views - Revolved Sections
RSA	6	Removed, Auxiliary and Thin Sections
Job	7	Sectional Views - Removed Sections
Job	8	Sectional Views - Auxiliary Sections
Job	9	Sectional Drawings - Thin Sections
RSA	7	Miscellaneous Section Rules
Job	10	Sectional Views - Web or Rib Sections
Job	11	Sectional Views - Sections Through Shafts, Bolts, Bearings, etc.
Job	12-14	Sectional Views - Additional Jobs

Unit	IX	Precision Dimensioning and Tolerancing
RSA	1	Precision Dimensioning and Tolerancing - Decimal Dimensioning System
Job	1	Precision Dimensioning and Tolerancing - Decimal Dimensioning
Job	2	Precision Dimensioning and Tolerancing - Conversion Tables
RSA	2	Precision Dimensioning and Tolerancing - Basic Rules Governing Decimal Dimensioning
Job	3	Precision Dimensioning and Tolerancing - Basic Rules Governing Decimal Dimensioning
RSA	3	Precision Dimensioning and Tolerancing - Limits
Job	4	Precision Dimensioning and Tolerances
RSA	4	Precision Dimensioning and Tolerancing - Form Tolerances
Job	5	Precision Dimensioning and Tolerancing - Form Tolerances
RSA	5	Precision Dimensioning and Tolerancing - Position Tolerancing
Job	6	Precision and Limit Dimensioning - Position Tolerancing
RSA	6	Precision Dimensioning and Tolerancing - Surface Finishes

Unit	X	Screw Threads and Fasteners
RSA	1	Terminology
Job	1	Screw Threads and Fasteners - Terminology
RSA	2	Detailed Representation of American Standard V-Thread
Job	2	Screw Threads and Fasteners - Detailed Representation, American Standard V-Thread

VOCATIONAL-TECHNICAL DRAWING
Trade Preparatory

C Page 6 of 12

Unit X Screw Threads and Fasteners
(Continued)

RSA 3 Detailed Representation of Miscellaneous Threads
Square and Acme Threads
Job 3 Screw Threads and Fasteners - Square Threads
Job 4 Screw Threads and Fasteners - The Acme Thread
RSA 4 Thread Symbols - Schematic and Simplified
Job 5 Screw Threads and Fasteners - Schematic and
Simplified Representation
RSA 5 Thread Series and Classes
Job 6 Screw Threads and Fasteners - Use Screw Thread
Tables
RSA 6 Specifying and Dimensioning
Job 7-8 Screw Threads and Fasteners - Specifying and
Dimensioning
RSA 7 Bolts, Screws, Rivets and Miscellaneous

Unit XI Gears and Cams

RSA 1 Gears and Cams - Machines Force and Motion
Math 1 Ratio
RSA 2 Gears and Cams - Gear Terminology
Math 2 Proportion
Job 1 Gears and Cams - Gear Terminology
Job 2 Gears and Cams - Construct a Spur Gear by
Circular Arc Methods
RSA 3 Gears and Cams - Spur Gears
Math 3 Calculating Gear Dimensions
Job 3 Gears and Cams - Construct a Spur Gear by
Circular Arc Methods
RSA 4 Gears and Cams - Rack Gear
Math 4 Calculating Gear Dimensions
Job 4 Gears and Cams - Construct a Rack Gear
RSA 5 Gears and Cams - Internal, Bevel, Worm and
Helical Gears
RSA 6 Gears and Cams - Cam Layout
Job 5 Gears and Cams - Lay Out A Cam

Unit XII Pictorial Drawings

RSA 1 Pictorial Drawings - Types and Usage
RSA 2 Pictorial Drawings - Isometric Projection
Job 1-10 Pictorial Drawing - Construct an Isometric
Drawing
RSA 3 Pictorial Drawing - Dimetric Drawing
Job 11-15 Pictorial Drawing - Construct A Dimetric
Drawing
RSA 4 Pictorial Drawing - Cavalier Drawings
Job 16 Pictorial Drawings - Construct a Cavalier
Drawing
RSA 5 Pictorial Drawings - Cabinet Drawings

Unit XII Pictorial Drawings
(Continued)

- Job 17 Pictorial Drawing - Construct a Cabinet Drawing
- Job 18 Pictorial Drawings - Construct a General Oblique Drawing
- RSA 6 Pictorial Drawings - General Oblique
- RSA 7 Pictorial Drawing - Perspective Drawing
- Job 19 Pictorial Drawing - Construct a One-Point Perspective
- Job 20 Pictorial Drawing - Construct a Two-Point Perspective

Unit XIII Technical Sketching

- RSA 1 Technical Sketching - Application and Technique
- Job 1-4 Technical Sketching - Sketch Straight Lines
- RSA 2 Technical Sketching - Circles and Arcs
- Job 5-6 Technical Sketching - Sketching Circles and Arcs
- Job 7 Technical Sketching - Sketch Elliptical Shapes
- Job 8 Technical Sketching - Sketch an Irregular Curve
- RSA 3 Technical Sketching - Pictorial Sketching
- Job 9-11 Technical Sketching - Isometric Sketching
- Job 12 Technical Sketching - Oblique Sketching
- Job 13 Technical Sketching - Cabinet Sketching
- Job 14 Technical Sketching - Sketch a One-Point Perspective
- Job 15 Technical Sketching - Sketch a Two Point Perspective

Unit XIV Welding Drawings

- RSA 1 Welding Drawings - Welding Processes - Arc Welding
- Job 1 Welding Drawings
- RSA 2 Welding Drawings - Resistance Welding
- Job 2 Welding Drawings - Resistance Projection Weld Symbols
- Job 3-4 Welding Drawings - Resistance Projection Weld Symbols
- Job 5 Welding Drawings - Resistance - Seam Welding Symbols
- Job 6 Welding Drawings - Flash and Upset Welding Symbols
- RSA 3 Welding Drawings - Welding Applications
- Job 7 Welding Drawings - Symbols for Built up Surfaces
- Job 8 Welding Drawings - Fillet Welding Symbols
- Job 9 Welding Drawings - Intermittent Welding Symbols
- Job 10 Welding Drawings - Location and Extent of Fillet Welds
- Job 11 Welding Drawings - Groove Welds
- Job 12 Welding Drawings - Size and Root Penetration of Welds

VOCATIONAL-TECHNICAL DRAWINGS
Trade Preparatory

C Page 8 of 12

Unit XV	Architectural Drawings
RSA	1 Architectural Drawings - Reading Architectural Drawings
RSA	2 Architectural Drawings - Elements of Construction Drawings - Preliminary Planning
Job	1 Architectural Drawing - Preliminary Planning
RSA	3 Architectural Drawing - Wood Frame Floor Plans and Symbols
Job	2 Architectural Drawing - Wood Frame Floor Plans and Symbols
RSA	4 Architectural Drawing - Foundation Plans
Job	3 Architectural Drawing - Foundation Plans
RSA	5 Architectural Drawing - Brick Veneer Floor Plans and Architectural Symbols
Job	4 Architectural Drawing - Brick Veneer Floor Plans
RSA	6 Architectural Drawing - Wall and Roof Sections
Job	5 Architectural Drawing - Wall and Roof Sections
RSA	7 Architectural Drawing - Window and Door Details and Schedules
Job	6 Architectural Drawing - Detail a Double Hung Window in Wood Frame
Job	7 Architectural Drawing - Detail a D. H. Window in Brick Veneer
Job	8 Architectural Drawing - Detail a Door in a Wood Frame
Job	9 Architectural Drawing - Detail a Door in Brick Veneer
RSA	8 Architectural Drawing - Elevations
Job	10 Architectural Drawing - Elevations
RSA	9 Architectural Drawing - Roof and Cornice Details
Job	11 Architectural Drawing - Gable Roof
Job	12 Architectural Drawing - Cornice Details
Job	13 Architectural Drawing - Hip Roof
Job	14 Architectural Drawing - Cornice Details
RSA	10 Architectural Drawing - Stair Details
Job	15 Architectural Drawing - Stair Section
Job	16 Architectural Drawing - Plan View of Stairs
Unit XVI	Plumbing and Piping Drawings
RSA	1 Plumbing and Piping Drawings - Drainage and Waste Systems and Pipe Symbols
Job	1 Plumbing and Piping Drawings - Use Piping Symbols
RSA	2 Plumbing and Piping Drawings - Preparing the Drawings
Job	2 Plumbing and Piping Drawings - Construct an Isometric Piping Diagram
Unit XVII	Heating, Ventilating and Air Conditioning
RSA	1 Heating, Ventilating and Air Conditioning - Heating Systems

Unit XVII Heating, Ventilating and Air Conditioning
(Continued)

- Job 1 Heating, Ventilating and Air Conditioning -
Prepare a Ductwork Layout
- RSA 2 Heating, Ventilating and Air Conditioning -
Ventilating and Air Conditioning Systems
- Job 2 Heating, Ventilating and Air Conditioning

Unit XVIII Topographical Drawing

- RSA 1 Topographical Drawing - Maps
- RSA 2 Topographical Drawing - Surveying
- Job 1 Topographical Drawing
- RSA 3 Topographical Drawing - Use and Interpretation
of Title Certificates
- Job 2 Topographical Drawing - Plotting from Title
Certificate
- RSA 4 Topographical Drawing - Interpretation of
Field Notes
- Job 3-8 Topographical Drawing - Plotting from Field
Notes
- RSA 5 Topographical Drawing - Profiles and Cross
Sections
- Job 9 Topographical Drawing - Plotting a Profile
from Field Notes
- RSA 6 Topographical Drawing - Contour Lines
- Math 1 Using Decimal Equivalents of One Foot
- Job 10 Topographical Drawing - Prepare a Contour Map
from Field Notes
- RSA 7 Topographical Drawing - Interpretation of Aerial
Photographs
- RSA 8 Topographical Drawing - Property Plats,
Coordinates and Acreage Calculations
- RSA 9 Topographical Drawing - Permit Drawings
- Math 2A Trigonometry - Right-Angled Triangles
- Math 2B Trigonometry
- Math 2C Trigonometry
- Math 2D Trigonometry
- Math 2E Trigonometry
- Math 2F Trigonometry - Oblique Triangles
- Math 2G Trigonometry - Oblique Triangles
- Math 2H Trigonometry - Oblique Triangles
- Math 2I Trigonometry - Oblique Triangles
- Math 2J Trigonometry - Oblique Triangles
- RSA 10 Topographical Drawing - Land Survey Drawings

Unit XIX Structural Steel (Tentative)

- RSA 1 The Structural Steel Frame - Present and
illustrate the steel framing system, structural
steel shapes, and the relationship between
design drawings and shop fabrication details
- Math 1 Calculate weights of steel shapes given

VOCATIONAL-TECHNICAL DRAWING
Trade Preparatory

C Page 10 of 12

Unit XIX Structural Steel (Tentative)
(Continued)

- | | | |
|------|---|--|
| Job | 1 | Indicate all dimensions of sectional structural steel shapes presented; given - pictorial sections with size and detailed dimensions in table form |
| RSA | 2 | Erection and Shipping Marks - Present and illustrate |
| Math | 2 | Calculate weights of steel shapes given |
| Job | 2 | Provide shipping and erection marks for the steel members shown; given - plan and elevation of design and drawings for a multi-story building |
| RSA | 3 | Dimensioning Structural Steel Details - Present and illustrate how these dimensions vary from architectural practice |
| Math | 3 | Practice common scales used; calculate dimensions; calculate total tonnage |
| Job | 3 | Provide the missing dimensions on the shop details provided; given - shop details; structural steel tables |
| RSA | 4 | Beam Connections - Present and illustrate the types of connections and the standardization into six series |
| Math | 4 | Prepare an itemized bill of material for Job 3 this unit |
| Job | 4 | Detail 18 beams for the second floor; given - set of design drawings; structural steel tables |
| RSA | 5 | Column Detailing - Present and illustrate the components necessary for complete column detailing |
| Math | 5 | Calculate the individual weights of the beams detailed in Job 5 |
| Job | 5 | Detail 36 columns for two tiers given - set of design drawings used for previous jobs; structural steel tables |
| RSA | 6 | Detailing Members of the Bracing Unit - Present and illustrate |
| Math | 6 | Calculate angles and legs of triangles; review of basic trigonometry; use of tables; calculate weights of columns in Job 5 |
| Job | 6 | Detail all bracing; given - set of design drawings used in previous jobs; structural steel tables |
| RSA | 7 | Detailing Trusses - Present and illustrate the various types of trusses and relationship between design and shop details |
| Math | 7 | Calculate weights of the structural steel used in Job 6; review trigonometry |
| Job | 7 | Detail all trusses; given - set of design drawings used in previous jobs; structural steel tables |
| RSA | 8 | Miscellaneous Iron Details - Present and illustrate the difference between structural steel frames and miscellaneous iron |

Unit XIX Structural Steel (Tentative)
(Continued)

Math	8	Calculate weights of trusses in Job 7
Job	8	Detail all miscellaneous iron indicated given - design drawings used in previous jobs; structural steel tables; architectural details required
Unit	XX	Intersections and Developments
RSA	1	Intersections and Developments - Truncated Prisms
Job	1	Intersections and Developments - Develop a Truncated Prism
RSA	2	Intersections and Developments - Right Cylinders
Job	2	Intersections and Developments - Develop a Right Cylinder
RSA	3	Intersections and Developments - Right Pyramids
Job	3	Intersections and Developments - Develop a Right Pyramid
RSA	4	Intersections and Developments - True-Length Diagrams
Job	4	Intersections and Developments - Develop an Oblique Cone
RSA	5	Intersections and Developments - Truncated Cones
Job	5	Intersections and Developments - Truncated Cone
RSA	6	Intersections and Developments - Transition Pieces
Job	6	Intersections and Developments - Develop a Transition Piece
RSA	7	Intersections and Developments - Surfaces of Spheres
Job	7	Intersections and Developments - Develop the Surface of a Sphere
RSA	8	Intersections and Developments - Elbow on Development
Job	8	Intersections and Development - Develop a Three-Piece Elbow
RSA	9	Intersections and Developments - Intersection of Prisms
Job	9	Intersections and Developments - Develop Intersecting Prisms
RSA	10	Intersections and Developments - Cylindrical Intersection
Job	10	Intersections and Developments - Develop Intersecting Cylinders
RSA	11	Intersections and Developments
Job	11	Intersections and Developments - Develop an Intersecting Prism and Cylinder
RSA	12	Intersections and Developments - Intersection of a Cylinder and a Cone

C Page 12 of 12

Unit XX Structural Steel (Tentative)
(Continued)

Job 12 Intersections and Developments - Develop an
Intersecting Cylinder and Cone

Unit XXI Engineering Charts and Graphs

RSA 1 Engineering Charts and Graphs - Rectangular
Grid Systems

Job 1 Engineering Charts and Graphs

Job 2 Engineering Charts and Graphs - Construct a
Profile Graph

Job 3 Engineering Charts and Graphs - Construct a
Multiple-Curve Graph

RSA 2 Engineering Charts and Graphs - Rectilinear
and Logarithmic Charts

Job 4 Engineering Charts and Graphs - Construct a
Rectilinear Chart - Time Series

RSA 3 Engineering Charts and Graphs - Display
Charts - Bar Charts

Job 5 Engineering Charts and Graphs - Construct a
Bar Chart

Job 6 Engineering Charts and Graphs - Construct a
Bar Chart

Job 7 Engineering Charts and Graphs - Construct a
Bar Chart

RSA 4 Engineering Charts and Graphs - Circle Graphs

Job 8 Engineering Charts and Graphs - Construct a
Pie Chart

Job 9 Engineering Charts and Graphs - Construct a
Pie Chart

RSA 5 Engineering Charts and Graphs - Pictorial Charts

Job 10 Engineering Charts and Graphs - Construct a
Pictorial Chart

RSA 6 Engineering Charts and Graphs - Organization and
Flow Charts

Job 11 Engineering Charts and Graphs - Construct an
Organization Chart

Job 12 Engineering Charts and Graphs - Construct a
Flow Chart

RSA 7 Engineering Charts and Graphs

Job 13 Engineering Charts and Graphs - Use a Graph to
Change Feet Per Second To Miles Per Hour

Job 14 Engineering Charts and Graphs - Use Graphs to
Determine Horsepower

Job 15 Engineering Charts and Graphs - Use Graphs to
Determine Time Elements and Contour Lines

Unit XXII Reproduction Processes

RSA 1 Reproduction Processes

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 1 of 9

The Watchmaking Technology Course was published in 1964-65 and is available in book form for the instructors and in loose form for students. It is composed of thirty-three units.

The references for the Watchmaking Technology Course are listed below.

Title	Source
Fried, Henry B. THE WATCH REPAIRER'S MANUAL 2nd Edition	D. Van Nostrand Co., Inc. 120 Alexander Street Princeton, New Jersey
ABC'S OF HAND TOOLS	General Motors Corporation Detroit, Michigan
BULOVA WATCH REPAIR MANUAL 3rd Edition	Bulova School of Watchmaking Bulova Park Flushing 70, New York
Olivo, Thomas C. and Payne, Albert V. BASIC BLUEPRINT AND SKETCHING	Delmar Publishers Inc. Mountainview Avenue Albany 5, New York
Hood, Grant MODERN METHODS IN HOROLOGY	Bradley Polytechnic Institute Peoria, Illinois
DeCarle, Donald WITH THE WATCHMAKER AT THE BENCH	Sir Isaac Pitman & Sons, Ltd. London
Goodrich, Ward THE WATCHMAKER'S LATHE	North American Watch Tool and Supply Co. Chicago, Illinois
Levin, Louis, and Levin, Samuel PRACTICAL BENCHWORK FOR HOROLOGISTS 6th Edition	Louis Levin & Son Los Angeles, California
Milham, Willis TIME AND TIMEKEEPERS	The Macmillan Company Sixty Fifth Avenue New York 44, New York

A detailed outline of the Watchmaking Technology Course follows.

Unit I Rules and Regulations (Tentative)

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 2 of 9

Course Outline (Continued)

Unit II Prepare Hand Tools

- RSA 1
- Job 1 Make a Regular 3/16 Graver
- Job 2 Make a Lorenge 3/16 Graver
- Job 3 Make a Regular 1/8 Graver
- Job 4 Make a Lorenze 1/8 Graver
- Job 5 Make a Round-End Graver (Small rounding)
- Job 6 Make a Squaring Graver
- Job 7 Make a Parting Tool
- Job 8 Make a Round-End Graver (Large rounding)
- Job 9 Make a Pivot Burnisher
- Job 10 Make a General Purpose Burnisher

Unit III Heat Treatment of Steel (Hardening and Tempering)

- RSA 1
- Job 1 Harden Six Pieces of Steel Rod, Different Sizes
- Job 2 Harden Gravers
- Job 3 Harden Burnishers
- RSA 2
- Job 4 Temper the Six Pieces of Drill Rod, Hardened in Job 1
- Job 5 Temper Gravers

Unit IV Finish Hand Tools

- RSA 1
- Job 1 Make Handles for Tools Made in Unit II
- Job 2 Sharpen and Polish Hand Tools Made in Unit II

Unit V Sawing and Filing

- RSA 1
- Job 1 File a Tapered Pin
- Job 2 Make a Spatula
- Job 3 Make a Pallet Warmer
- Job 4 Make Two Beat Tools
- Job 5 Make Two Beat Tools
- Job 6 Make a Polishing Shovel

Unit VI Lathe Turning

- RSA 1
- Job 1 Disassemble, Clean, and Reassemble Lathe
- Job 2 Make a Stepped Section
- Job 3 Make Two Single Tapers
- Job 4 Make Connecting Tapers
- Job 5 Make Divided Sections
- Job 6 Make Three Connected Balls

Unit VII Lathe Turning and Drilling

- RSA 1
- Job 1 Make a Flat-Nose Punch

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 3 of 9

Unit VII Lathe Turning and Drilling (Continued)

- Job 2 Make a Round-Nosed Punch
- Job 3 Make a Centering Punch
- Job 4 Make a Center Punch
- Job 5 Make a Screw Extracting Punch
- Job 6 Make a Taper Mouth Punch
- Job 7 Cut Eight Perfect Centers
- Job 8 Make Two Double-End Jewel Pushers
- Job 9 Make a Conical Pivot
- Job 10 Make a Large Balance Staff (Brass)
- Job 11 Make a Large Balance Staff (Steel)
- Job 12 Make a Large Stem
- Job 13 Make a Small Stem
- Job 14 Make a Bushing
- Job 15 Make a Case Screw
- Job 16 Make a Balance-Cock Screw
- Job 17 Make a Small Plate Screw
- Job 18 Make a 16 Size Balance Staff
- Job 19 Make a 12 Size Balance Staff
- Job 20 Make a Screw Plate
- Job 21 Make Four Screws for the Screw Plate
- Job 22 Make a Balance Tack

Unit VIII Drills and Taps

- RSA 1
- Job 1 Make a Flat Drill 1.80mm
- Job 1 Make a Flat Drill 1.60mm
- Job 3 Make a Flat Drill 1.50mm
- Job 4 Make a Flat Drill 1.30mm
- Job 5 Make a Flat Drill 1.10mm
- Job 6 Make a Flat Drill 1.00mm
- RSA 2
- Job 7 Make a Tap 3.00mm
- Job 8 Make a Tap 1.60mm
- Job 9 Make a Tap 2.30mm
- Job 10 Make a Tap 2.00mm
- Job 11 Make a Tap 1.70mm

Unit IX Alarm Clocks (Tentative)

- RSA 1
- Job 1 Remove Clock Movements From Cases
- Job 2 Remove and Replace Clock Hands
- Job 3 Remove and Replace Balance Assembly
- Job 4 Center and Level Hairspring
- Job 5 Adjust Alarm Mechanism
- Job 6 Remove and Replace Main Spring
- Job 7 Disassemble and Reassemble Clock
- Job 8 Clean a Clock
- Job 9 Polish Clock Pivots
- Job 10 Make and Replace Balance Bushing

Unit IX Alarm Clocks (Tentative)
(Continued)

- Job 11 Make and Replace Balance Staff
- Job 12 Close Pivot Holes
- Job 13 Rebush Pivot Holes
- Job 14 Replace Pallet Pins
- Job 15 Replace Cannon Pinion
- Job 16 Check Depthing of Wheels
- Job 17 Straighten and Level Bent Wheels
- Job 18 Adjust and Rate Three Clocks

Unit X Pendulum Clocks

- RSA 1
- Job 1 Adjust Striking Mechanism
- Job 2 Replace Pendulum Spring
- Job 3 Adjust Lock and Slide
- Job 4 Disassemble and Assemble Pendulum Clock
- Job 5 Replace Mainspring
- Job 6 Adjust and Rate a Pendulum Clock

Unit XI Preparation for Pivoting

- RSA 1
- Job 1 Make Ten Pivot Drills
- Job 2 Harden and Temper Pivot Drills
- Job 3 Sharpen Pivot Drills

Unit XII Pivoting

- RSA 1
- Job 1 Make a Square-Shouldered Pivot
- Job 2 Pivot Steel Stock
- Job 3 Repivot Two Clock Wheels
- Job 4 Repivot 16 Size Center Wheel
- Job 5 Repivot 16 Size Third Wheel
- Job 6 Repivot 16 Size Fourth Wheel

Unit XIII Hairsprings

- RSA 1
- Job 1 Pin Ten Hairsprings into Studs
- Job 2 Pin Ten Hairsprings into Collets
- Job 3 True Hairsprings in Round
- Job 4 True Hairsprings in Flat
- Job 5 Vibrate Hairspring to Wheel

Unit XIV Jeweling Tools and Jewel Setting

- RSA 1
- Job 1 Make a Jewel Graver
- Job 2 Make a Jewel Burnisher
- Job 3 Make a Jewel Stripper
- Job 4 Set Five Burnished in Cap Jewels
- Job 5 Set Five Burnished in Balance Hole Jewels
- Job 6 Set Six Burnished in Jewels into Brass Plate

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 5 of 9

Unit XIV Jeweling Tools and Jewel Setting
(Continued)

- Job 7 Set Three Friction Cap Jewels into Bushings
- Job 8 Set Three Friction Balance Hole Jewels into Bushings
- Job 9 Set Six Friction Jewels into Brass Plate
- Job 10 Remove and Replace Jewels in Watch Plates

Unit XV Staffing

- RSA 1
- Job 1 Staff Six Balance Wheels, With Rivet Type Staff
- Job 2 Staff Two Balance Wheels, Friction Type Staff
- Job 3 Remove Two Standard Riveted Staffs From Wheels
- Job 4 Remove Friction Staffs From Wheels
- Job 5 Remove Side and Top Groove Staffs

Unit XVI Truing and Poising

- RSA 1
- Job 1 True Six Balance Wheels
- Job 2 Poise Six Balance Wheels
- Job 3 Make a Staff for 16 Size Balance Wheel, True and Poise

Unit XVII Pocket Watches

- RSA 1
- Job 1 Remove and Replace Hands
- Job 2 Remove and Replace Dial
- Job 3 Remove and Replace Elgin Balance Assembly
- Job 4 Remove and Replace Hamilton Balance Assembly
- Job 5 Remove and Replace Waltham Balance Assembly
- Job 6 Disassemble and Reassemble 16 Size Watch Movements
- Job 7 Make a Hairspring-Collet Removing Tool
- Job 8 Remove and Replace Hamilton, Elgin, and Waltham Hairsprings.
- Job 9 Remove and Replace all Types of Roller Tables
- Job 10 Replace Roller Jewels
- RSA 2
- Job 11 Replace Balance Cock Jewels
- Job 12 Measuring, Selecting, and Fitting Balance Staff
- Job 13 Restaff Hamilton Balance Wheel
- Job 14 Restaff Elgin Balance Wheel
- Job 15 Restaff Waltham Balance Wheel
- Job 16 Replace Elgin Mainspring
- Job 17 Replace Hamilton Mainspring
- Job 18 Replace Waltham Mainspring
- Job 19 Check and Adjust End and Side Shake in Time Train
- Job 20 Straighten bent Wheels
- Job 21 Install Two Jewels on Escape Wheel

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 6 of 9

Unit XVII Pocket Watches
(Continued)

- Job 22 Replace Center Hole Jewel
- Job 23 Check Depthing
- Job 24 Close Holes on Time Train
- Job 25 Replace Minute Wheel Post
- Job 26 Tighten Elgin Cannon Pinion
- Job 27 True Bent Center Posts
- Job 28 Replace Wheel in Hamilton Dial Train
- Job 29 Alter Screws from an Assortment, to Fit into Watch
- Job 30 Make and Replace Three Click Springs
- Job 31 Make and Replace Winding Arbor (using sample)
- Job 32 Make and Replace Winding Arbor (without sample)
- Job 33 Replace Broken Regulator Pins
- Job 34 Remove Rusty Screws
- Job 35 Remove Broken Screws
- Job 36 Straighten Bent Pivots
- Job 37 Make and Replace Broken Detent Screw
- Job 38 Make Hamilton Pallet Arbor
- Job 39 Replace Broken Pallet Arbors
- Job 40 Fit New Pair or Hands to Watch
- Job 41 Convert Seven Jewel Watch to Fifteen Jewel Watch
- Job 42 Disassemble, Clean, Oil and Reassemble Pocket Watch
- Job 43 Repair Test Watch and Enter into Log
- Job 44 Estimate Work on Test Watches

Unit XVIII Escapement

- RSA 1
- Job 1 Manipulate Model Escapement
- Job 2 Remove and Replace Pallet Stones
- Job 3 Make Escapement Checks on 16 Size Hamilton
- Job 4 Match Escapement on 16 Size Hamilton
- Job 5 Match Escapement on 16 Size Elgin

Unit XIX Electric Clocks

- RSA 1
- Job 1 Adjust Alarm Mechanism
- Job 2 Disassemble and Reassemble Clock
- Job 3 Replace Motor
- Job 4 Check and Replace Coil
- Job 5 Clean and Oil Electric Clock

Unit XX Crystal Fitting

- RSA 1
- Job 1 Fit Crystal to 16 Size Watch
- Job 2 Fit Crystal to 12 Size Watch
- Job 3 Fit Crystal to 6/0 Size Watch

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 7 of 9

Unit XX Crystal Fitting
(Continued)

- Job 4 Fit Crystal to 10/0 Size Watch
- Job 5 Fit Crystal to 10 1/2 Ligne Watch
- Job 6 Fit Fancy Crystal to 10 1/2 Ligne Watch
- Job 7 Fit Fancy Crystal to 8 3/4 Ligne Watch
- Job 8 Fit Fancy Crystal to 6 3/4 Ligne Watch
- Job 9 Fit Fancy Crystal to 5 Ligne Watch
- Job 10 Replace Round, Waterproof Crystals, With
Crystal Inserter
- Job 11 Replace Crystals in Elgin, Wyler, Gruin With
the Use of the Number System
- Job 12 Grind "Near Fit" Crystals to Fit Bezels

Unit XXI Shaping Overcoils

- RSA 1
- Job 1 Form Four Overcoils, Using Gradual Bend Method
- Job 2 Form Four Overcoils, Using Knee Bend Method
- Job 3 Vibrate Hairspring and Form Overcoils for Two
Pocket Watches

Unit XXII Polishing Machine

- RSA 1
- Job 1 Polish 16 Size Silver Case
- Job 2 Polish 16 Size White Gold Case
- Job 3 Polish 16 Size Yellow Gold Case
- Job 4 Polish 16 Size Yellow Gold Filled Case
- Job 5 Polish 10 Ligne Stainless Steel Case
- Job 6 Polish 6 3/4 Ligne Gold Filled Case
- Job 7 Polish Plastic Watch Crystals
- Job 8 Polish Pocket Watch Chain

Unit XXIII Chronometer Watches and Marine Chronometers

- RSA 1
- Job 1 Disassemble, Clean, Oil, and Reassemble 22 Size
Hamilton Chronometer Watch
- Job 2 Disassemble, Clean, Oil and Reassemble 36 Size
Waltham Chronometer Watch
- Job 3 Disassemble, Clean, Oil, and Reassemble 18 Size
Elgin Chronometer Watch
- Job 4 Adjust and Rate Elgin, Hamilton, and Waltham
Chronometer Watches
- RSA 2
- Job 5 Disassemble, Clean, Oil, and Reassemble a
Marine Chronometer
- Job 6 Adjust and Rate a Marine Chronometer

Unit XXIV Material Cabinets and Systems

- RSA 1
- Job 1 Fingerprint a Swiss Watch
- Job 2 Identify and Obtain Replacement Parts for
Practice Movements

WATCHMAKING TECHNOLOGY
Trade Preparatory

C Page 8 of 9

Unit XXV Wrist Watches

- Job 1 Disassemble, Clean, Oil and Reassemble 10 1/2 Ligne Wrist Watch
- Job 2 Replace Mainspring in Wrist Watch
- Job 3 Tighten Cannon Pinion
- Job 4 Replace Stem
- Job 5 Make and Install Click and Clutch Spring
- Job 6 Replace Balance Hole Jewels
- Job 7 Replace Pallet Bridge Jewel
- Job 8 Make and Install Pallet Arbor
- Job 9 Replace Six Pallet Arbors in Swiss and American Watch Movements
- Job 10 Replace Pallet Stones and Adjust Lock
- Job 11 Install Four Roller Jewels
- Job 12 Staff 10 1/2 Ligne Watch
- Job 13 Staff 8 3/4 Ligne Watch
- Job 14 Staff 6 3/4 Ligne Watch
- Job 15 Staff 5 Ligne Watch
- Job 16 Make a Stem to Fit a 10 1/2 Ligne Watch Without the Use of a Sample
- Job 17 Replace Banking Pins
- Job 18 Overhaul Rusty Movement
- Job 19 Polish Pivots in 6 3/4 Ligne Watch
- Job 20 Replace Regulator Pins and Boots
- Job 21 Replace Broken Guard Finger
- Job 22 Repair Test Watch and Enter into Log Book

Unit XXVI Self-Winding Watches

- RSA 1
- Job 1 Dismantle and Reassemble a Self-Winding Watch
- Job 2 Replace Broken Oscillating Weight Axle
- Job 3 Replace Driving Gear Arbor
- Job 4 Replace Oscillating Weight Bushings and Jewels
- Job 5 Make and Replace Stop Click Spring
- Job 6 Replace Broken Mainspring
- Job 7 Replace Broken Slip Spring
- Job 8 Adjust Side Shake in Oscillating Weight Bushing
- Job 9 Clean, Oil, and Adjust Four Self-Winding Watches

Unit XXVII Complicated Watches

- RSA 1
- Job 1 Disassemble and Reassemble Two Calendar Watches
- Job 2 Disassemble, Clean, Oil, and Adjust Calendar Wrist Watch
- RSA 2
- Job 3 Disassemble and Reassemble a Wrist Alarm Watch
- Job 4 Disassemble, Clean, Oil, and Adjust Wrist Alarm
- RSA 3
- Job 5 Disassemble and Reassemble, in Stages, a Chronograph Wrist Watch
- Job 6 Adjust Meshing of Gears for the Sweep Second Hand

Unit XXVII Complicated Watches
(Continued)

- Job 7 Adjust Minute Counter
- Job 8 Adjust Rate With Timer Mechanism Engaged and
Timer Mechanism Disengaged
- Job 9 Adjust Fly-Back Mechanism

Unit XXVIII Waterproofing Watches

- RSA 1
- Job 1 Test Four Watches Using Air Pressure Principle
- Job 2 Replace Leaky Crystal and Secure it Airtight
- Job 3 Replace Four Case Pipes and Test for
Waterproofness
- Job 4 Replace Leaky Crowns on Practice Watches
- Job 5 Replace Case Back, Gaskets and Test
- Job 6 Waterproof Watch With One Piece Case

Unit XXIX Adjusting to Positions

- RSA 1
- Job 1 Adjust 16 Size Elgin to 3 Positions
- Job 2 Adjust 16 Size Hamilton to 3 Positions
- Job 3 Adjust American Wrist Watch to 3 Positions
- Job 4 Adjust Swiss Wrist Watch to 3 Positions
- Job 5 Adjust 16 Size Elgin (R.R.) to 5 Positions
- Job 6 Adjust 16 Size Hamilton R.R.) to 5 Positions

Unit XXX Electric Wrist Watches

- RSA 1
- Job 1 Disassemble and Reassemble Electric Watches
(three)
- Job 2 Clean 3 Electric Watches
- Job 3 Replace Energy Cells in Electric Watches
- Job 4 Check the Coil in a Electric Watch
- Job 5 Adjust Contact Points
- Job 6 Adjust Trip Spring
- Job 7 Adjust and Rate Three Electric Watches
- Job 8 Adjust Shake in Electric Watches

Unit XXXII. Electronic Wrist Watches

Unit XXXIII. General Watch Repair

FINAL TEST

- Written Test (Theory)
- Practical Test (Bench Work)

WELDING
Trade Preparatory

C Page 1 of 4

The Welding Jobs, Instructor's Guides and Tests were published in 1958 and revised in 1963. Each Job contains Related Study Assignments and when necessary, math and technical information. The Welding Course Mathematics was published in 1952. The Welding Course is available in the following forms:

Jobs and Tests are available in loose form for the students. Job and Test Books are available for the instructors.

Book I - Units I and II
Book II - Units III and IV
Mathematics (Welding Course Math)
Blueprint Reading and Sketching (From Oklahoma A and M College reprinted by the Lab.)

Test Book I - Units I, II, III and IV
Answer Book - Units I, II, III and IV

The following instructor's aids are available:

Permanent Record Folder
Wall Progress Chart

A detailed outline of the Welding Course follows:

UNIT I - WELDING - OXYACETYLENE CUTTING

Job	1	Set Up Oxyacetylene Equipment (Flat)
Job	2	To Cut Steel Plate (Flat)
Job	3	Cutting Odd Shapes (Flat)
Job	4	To Pierce Steel Plate (Flat)
Job	5	Manipulative Test (Flat)

Course Outline (Continued)

UNIT II - WELDING - OXYACETYLENE WELDING

- Job 1 Deposit Beads
- Job 2 Welding with Filler Rod
- Job 3 Corner Joint
- Job 4 Butt Weld Mild Steel
- Job 5 Lap Weld Mild Steel
- Job 6 Manipulative Test
- Job 7 Butt Weld
- Job 8 Lap Joint
- Job 9 Vee-Butt Joint
- Job 10 Butt Joint
- Job 11 Lap Joint
- Job 12 Manipulative Test
- Job 13 Bronze Weld Mild Steel
- Job 14 Braze-Weld Cast Iron
- Job 15 Silver Solder a Lap Joint of Copper
- Job 16 Manipulative Test
- Job 17 Butt Weld Pipe (Roll)
- Job 18 Butt Weld Pipe (Bell Hold)
- Job 19 Butt Weld Pipe
- Job 20 Manipulative Test

UNIT III - WELDING - ARC WELDING

- Job 1 Stringer Beads (Flat)
- Job 2 Weave Beads (Flat)
- Job 3 Edge Joint (Flat)
- Job 4 Tee Joint (Flat)
- Job 5 Outside Corner Joint (Flat)
- Job 6 V-Butt Joint - Back up Strip (Flat)
- Job 7 V-Butt Joint - Open (Flat)
- Job 8 Manipulative Test
- Job 9 Stringer Beads (Horizontal)
- Job 10 Lap Joint (Horizontal)
- Job 11 Tee Joint - Stringer Beads (Horizontal)
- Job 12 Tee Joint - Weave Beads (Horizontal)
- Job 13 V-Butt Joint - Back up Strip (Horizontal)
- Job 14 V-Butt (Open) (Horizontal)
- Job 15 Manipulative Test
- Job 16 Stringer Beads (Travel down) (Vertical)
- Job 17 Lap Joint (Travel down) (Vertical)
- Job 18 Stringer Beads (Travel up) (Vertical)
- Job 19 Weave Beads (Travel up) (Vertical)
- Job 20 Lap Joint (Travel up) (Vertical)
- Job 21 Tee Joint (Travel up) (Vertical)
- Job 22 Corner Joint (Travel up) (Vertical)

WELDING
Trade Preparatory

C Page 4 of 4

UNIT III - WELDING - ARC WELDING

- Job 23 V-Butt Joint (Back up strip, travel up) (Vertical)
- Job 24 V-Butt Joint (Open) (Vertical)
- Job 25 Manipulative Test
- Job 26 Stringer Bead (Overhead)
- Job 27 Weave Beads (Overhead)
- Job 28 Lap Joint (Overhead)
- Job 29 Tee Joint (Overhead)
- Job 30 V-Butt Joint (Back up strip) (Overhead)
- Job 31 V-Butt Joint (Open) (Overhead)
- Job 32 Manipulative Test
- Job 33 Roll Weld Pipe
- Job 34 Butt Weld Pipe
- Job 35 Butt Weld Pipe
- Job 36 Orange Peel
- Job 37 Lay Out 6" Branch for 6" Header
- Job 38 Reducing Lateral
- Job 39 Concentric Reducer
- Job 40 Fabricate Piping Offset
- Job 41 Weld Flange on Pipe

UNIT IV - INERT GAS WELDING

- Job 1 Stringer Beads without Filler Rod
- Job 2 Stringer Beads Using Filler Rod
- Job 3 Tee Joint on Aluminum
- Job 4 Butt Joint on Aluminum Plate
- Job 5 Butt Weld Pipe (Roll Weld)

CARPENTRY
Apprentice

C Page 1 of 6

This course was written in 1950 and revised in 1960. There are X units available in the following book form.

Book I - Unit I Related Study Assignments
Book II - Unit II Related Study Assignments
Book III - Unit III Related Study Assignments
Book IV - Unit IV Related Study Assignments
Book V - Units V & VI Related Study Assignments
Book VI - Units VII & VIII Related Study Assignments
Book VII - Units IX & X Related Study Assignments

Test Book I - Unit I
Test Book II - Unit II
Test Book III - Unit III
Test Book IV - Unit IV
Test Book V - Units V & VI
Test Book VI - Units VII & VIII
Test Book VII - Units IX & X
Answer Book - Units I-X

A detailed course outline is given below.

Unit I - Foundations

- R.S.A. A - Orientation for Carpentry Apprentice
(Information Sheet)
- R.S.A. B - How to Use This Course in Related Information for
Carpentry Apprentices (Information Sheet)
- R.S.A. 1 - Whole Numbers
- R.S.A. 2 - Fractions
- R.S.A. 3 - Measuring Tools and Their Uses
- R.S.A. 4 - Plumbing and Leveling Tools
- R.S.A. 5 - Cutting and Striking Tools
- R.S.A. 6 - Use and Care of the Hand Saw
- R.S.A. 7 - Form Lumber
- R.S.A. 8 - Form Ties
- R.S.A. 9 - Batter Boards (Information Sheet)
- R.S.A. 10 - Property Lines, Building Location, Excavation
Lines, Diagonals (Information Sheet)
- R.S.A. 11 - How to Lay Out Building Lines
- R.S.A. 12 - How to Use Materials in Form Construction
- R.S.A. 13 - Anchor Bolts
- R.S.A. 14 - Concrete Footings and Piers
- R.S.A. 15 - Pier and Footing Form Construction
- R.S.A. 16 - Foundation Wall Forms
- R.S.A. 17 - Foundation Wall Forms (Continued) (Information
Sheet)
- R.S.A. 18 - Openings in Concrete Walls

Unit II - Frame Construction

- R.S.A. A - Orientation for Carpenter Apprentice
(Information Sheet)
- R.S.A. B - How To Use This Course in Related Information
for Carpentry Apprentices (Information Sheet)
- R.S.A. 1 - The Present-Day Home and its Predecessor
(Information Sheet)
- R.S.A. 2 - Metal Fastenings
- R.S.A. 3 - Carpentry Tools of Wood (Information Sheet)
- R.S.A. 4 - Termites and Decay (Information Sheet)
- R.S.A. 5 - Types of Frame Construction
- R.S.A. 6 - Sills
- R.S.A. 7 - Girders
- R.S.A. 8 - The Lower Frame in Louisiana (Information Sheet)
- R.S.A. 9 - Floor Joists, Herringbone Bridging

Course Outline (Continued)

- R.S.A. 10 - Subflooring
- R.S.A. 11 - Horizontal Frame Layout (Information Sheet)
- R.S.A. 12 - Vertical Frame Layout, The "Story Pole"
(Information Sheet)
- R.S.A. 13 - Balloon Frame Layout, Corner Post, Walls, and
Second-floor Joists (Information Sheet)

Unit III - Roof Framing

- R.S.A. A - Orientation for Carpentry Apprentice
(Information Sheet)
- R.S.A. B - How to Use This Course in Related Information
for Carpentry Apprentices (Information Sheet)
- R.S.A. 1 - Roofs, Past and Present (Information Sheet)
- R.S.A. 2 - Roof Types and Terms
- R.S.A. 3 - Principles of Roof Framing
- R.S.A. 4 - The Common Rafter (Information Sheet)
- R.S.A. 5 - The Hip Rafter "Length"
- R.S.A. 6 - The Hip Rafter "Cuts"
- R.S.A. 7 - The Hip Jack Rafter
- R.S.A. 8 - The Hip Jack Rafter (Continued) (Information
Sheet)
- R.S.A. 9 - The Valley Rafter
- R.S.A. 10 - The Valley and Cripple Jacks
- R.S.A. 11 - Special Roof Framing Problems
- R.S.A. 12 - The Steel Square and Its Use
- R.S.A. 13 - Using the Tables on the Steel Square

Unit IV - Exterior Trim

- R.S.A. A - Orientation for Carpentry Apprentice
(Information Sheet)
- R.S.A. B - How to Use This Course (Information Sheet)
- R.S.A. 1 - Description of Common Types of Cornices
- R.S.A. 2 - Mouldings (Information Sheet)
- R.S.A. 3 - How to Build Common Cornices
- R.S.A. 4 - Wood Shingles
- R.S.A. 5 - How to Lay Wood Shingles
- R.S.A. 6 - Overroofing with Shingles (Information Sheet)
- R.S.A. 7 - Composition Roof Covering
- R.S.A. 8 - Composition, Iron and Aluminum Roof Covering
(Information Sheet)
- R.S.A. 9 - Safety (Information Sheet)
- R.S.A. 10 - Description of Window Frames
- R.S.A. 11 - How to Build and Install Window and Door
Frame
- R.S.A. 12 - Water Tables, Corner Boards, Belt Course Types,
and Installation
- R.S.A. 13 - Side Wall Coverings - Types, and Installation
- R.S.A. 14 - Side Wall Coverings (Continued) (Information
Sheet)
- R.S.A. 15 - Porch Trim - Types and Application
- R.S.A. 16 - Front Entrances

Course Outline (Continued)

Unit V - Interior Trim

- R.S.A. A - Orientation for Carpentry Apprentice
(Information Sheet)
- R.S.A. B - How to Use This Course (Information Sheet)
- R.S.A. I - Insulation
- R.S.A. 2 - Description of Wallboard (Information Sheet)
- R.S.A. 3 - Wallboard Application (Information Sheet)
- R.S.A. 4 - Lath
- R.S.A. 5 - Finishing Tools
- R.S.A. 6 - Finishing Tools (Continued)
- R.S.A. 7 - Finish Hardware
- R.S.A. 8 - How to fit Window Sash
- R.S.A. 9 - Window and Door Jambs and Trim
- R.S.A. 10 - Baseboards and Wall Panels
- R.S.A. 11 - Finish Hardwood Floors
- R.S.A. 12 - How to Apply Finish Hardware
- R.S.A. 13 - Millwork Installation (Information Sheet)
- R.S.A. 14 - Kitchen Cabinets, Clothes and Linen Closets,
and Miscellaneous Millwork
- R.S.A. 15 - Current Information (Information Sheet)

Unit VI - Stairs

- R.S.A. 1 - Forms for Concrete Steps
- R.S.A. 2 - Framing a Stair Well
- R.S.A. 3 - Stairway Framing
- R.S.A. 4 - Stair Platforms
- R.S.A. 5 - Finish Stairs on Carriages and Housed and
Open Stringers
- R.S.A. 6 - Newel Posts and Handrails
- R.S.A. 7 - The Proper Approach to Stair Stringer Layout

Unit VII - Floor Covering

- R.S.A. A - Orientation for Carpentry Apprentice
(Information Sheet)
- R.S.A. B - How to Use This Course (Information Sheet)
- R.S.A. I - The Resilient Floor-Covering Products
- R.S.A. 2 - Tools for Tile Mechanics
- R.S.A. 3 - Preparing the Job for Installation of Floor
Covering
- R.S.A. 4 - Preparing the Sub-floor
- R.S.A. 5 - Laying Sheet Goods Wall to Wall
- R.S.A. 6 - Pattern Layout
- R.S.A. 7 - Cutting, Fitting, and Laying Lining Felt and
Resilient Tile
- R.S.A. 8 - Cabinet and Backsplash Covering
- R.S.A. 9 - Maintenance of the Tile Floors
- R.S.A. 10 - Safety

Course Outline (Continued)

Unit VIII - Miscellaneous

- R.S.A. 1 - Temporary Building (Information Sheet)
- R.S.A. 2 - Window and Door Screens (Information Sheet)
- R.S.A. 3 - Anchor Bolts for Column Bases and Machines (Information Sheet)
- R.S.A. 4 - Roof and Bridge Trusses (Information Sheet)
- R.S.A. 5 - Dimensions (Information Sheet)
- R.S.A. 6 - Estimating Fundamentals
- R.S.A. 7 - Foundation Materials
- R.S.A. 8 - Framing
- R.S.A. 9 - Framing
- R.S.A. 10 - Exterior Finish
- R.S.A. 11 - Interior Finish
- R.S.A. 12 - Estimator's Tables
- R.S.A. 13 - Estimating Short Cuts
- R.S.A. 14 - Labor Hours Per Unit
- R.S.A. 15 - The Union

Unit IX - Advanced Related Information

- R.S.A. A - Orientation for Advanced Apprentice (Information Sheet)
- R.S.A. B - How to Use This Unit in Advanced Related Information for Carpenters (Information Sheet)
- R.S.A. 1 - Forms: Concrete Work
- R.S.A. 2 - Lumber Measuring and Selecting
- R.S.A. 3 - House Framing Methods
- R.S.A. 4 - Floor, Wall Framing
- R.S.A. 5 - Roof Types Framing
- R.S.A. 6 - Exterior Wall Construction
- R.S.A. 7 - Roofing Material Installation
- R.S.A. 8 - Thermal-Sound Insulation
- R.S.A. 9 - Windows and Doors
- R.S.A. 10 - Staircase Building
- R.S.A. 11 - Interior Walls and Finishes
- R.S.A. 12 - Planning a Home

Unit X - Advanced Blueprint Reading and Estimating

- R.S.A. 1 - Blueprint Reading and Estimating
- R.S.A. 2 - Rough Framing, Exterior Finish, and Roof Framing
- R.S.A. 3 - Interior Finish
- R.S.A. 4 - Plan Reading and Estimating for Plan B
- R.S.A. 5 - Plan Reading and Estimating for Plan B
- R.S.A. 6 - Plan Reading and Estimating for Plan B
- R.S.A. 7 - Plan Reading and Estimating for Plan B
- R.S.A. 8 - Plan Reading and Estimating for Plan B
- R.S.A. 9 - Plan Reading and Estimating for Plan C

Course Outline (Continued)

Unit X (Continued)

- R.S.A. 10 - Plan Reading and Estimating for Plan C
- R.S.A. 11 - Plan Reading and Estimating for Plan C
- R.S.A. 12 - Plan Reading and Estimating for Plan C
- R.S.A. 13 - Plan Reading and Estimating for Plan C
- R.S.A. 14 - Plan Reading and Estimating for Plan C

ELECTRICAL
APPRENTICE

C Page 1 of 12

The Electrical Apprentice Course was published in 1952-53 and revised in 1961. It is available in the following forms:

Related Study Assignments

- Book 1 - Units 1, 2, and 3
- Book 2 - Units 4, 5, 6, 7, 8, and 9
- Book 3 - Units 10, 11, 12, and 13
- Book 4 - Units 14, 15, 16, 17, 18, 19, and 20
- Book 5 - Units 21, 22, 23, 24, 25, and Appendix

Test Books

- Book 1 - Units 1, 2, and 3
- Book 2 - Units 4, 5, 6, 7, 8, and 9
- Book 3 - Units 10, 11, 12, and 13
- Book 4 - Units 14, 15, 16, 17, 18, 19, and 20
- Book 5 - Units 21, 22, 23, 24, and 25

Answer Book

- Book 1 - Units 1 - 25

The following instructor's aids are available:

- Progress Charts
- Monthly Reports of Apprentice

A detailed outline of the Electrical Apprentice Course follows:

BOOK I - Electrical Apprentice

Unit I - Tools, Materials, and Their Uses

- R.S.A. 1 How to Use This Course of Study (Information Sheet) No Test
- R.S.A. 2 The Apprentice and His Job (Information Sheet)
- R.S.A. 3 American Red Cross Standard First Aid Course (Information Sheet)
- R.S.A. 4 Care and Use of Hand Tools and Equipment (Information Sheet)
- R.S.A. 5 Common Fractions (Mathematics)
- R.S.A. 6 Care and Use of Power Operated Tools (Information Sheet)
- R.S.A. 7 Types of Fasteners (Information Sheet)
- R.S.A. 8 Decimal Fractions (Mathematics)
- R.S.A. 9 Introduction to the National Electrical Code
- R.S.A. 10 Types of Wires and Cable

Course Outline (Continued)

- R.S.A. 11 Use of American Wire Gauge and the Micrometer
(Mathematics)
- R.S.A. 12 Raceways and Fittings
- R.S.A. 13 Measurements (Mathematics)
- R.S.A. 14 Wire Connections and Soldering
- R.S.A. 15 Using Letters as Numbers (Mathematics)
- R.S.A. 16 Employer and Employee Organization (Information
Sheet)

Unit II - Fundamental Theory of Electricity

- R.S.A. 1 Electron Theory
- R.S.A. 2 Literal Numbers, Addition and Subtraction
(Mathematics)
- R.S.A. 3 Static Electricity (Information Sheet)
- R.S.A. 4 Multiplication and Division (Mathematics)
- R.S.A. 5 Sketching and Blueprint; Electrical
Symbols #1 (Information Sheet)
- R.S.A. 6 Exponents, Square Root, and Units (Mathematics)
- R.S.A. 7 Electric Current and Electron Flow
- R.S.A. 8 Equations (Mathematics)
- R.S.A. 9 Voltage, Current, Resistance and Conductance
(Information Sheet)
- R.S.A. 10 Properties of Magnets and Magnetic Fields
- R.S.A. 11 Electromagnetism
- R.S.A. 12 Means of Developing Electromotive Forces
- R.S.A. 13 Primary Cells
- R.S.A. 14 Secondary Cells

Course Outline (Continued)

Unit II (Continued)

R.S.A. 15 Ratio and Proportion (Mathematics)

R.S.A. 16 Sketching and Blueprint; Electrical Symbols #2

Unit III - Principles of Direct Current

R.S.A. 1 Ohm's Law--Series Circuits (Mathematics)

R.S.A. 2 Ohm's Law--Parallel Circuits (Mathematics)

R.S.A. 3 Ohm's Law--Series-Parallel Circuits (Mathematics)

R.S.A. 4 Power in Direct Current Circuits

R.S.A. 5 Problems Concerning Cells (Mathematics)

R.S.A. 6 Circuit Sketching, Cells in Series-Parallel

R.S.A. 7 Low Voltage Signal Circuits

R.S.A. 8 Simple Bell Circuits (Circuit Sketching)

R.S.A. 9 Fuses and Circuit Breakers

R.S.A. 10 Principles of Dynamo-Electric Machines

R.S.A. 11 Problems Concerning Conductors

BOOK II - Electrical Apprentice

Unit IV - Principles of Alternating Current

R.S.A. 1 Introduction to Trigonometry (Mathematics)

R.S.A. 2 Trigonometric Functions (Mathematics)

R.S.A. 3 Tables of Functions (Mathematics)

R.S.A. 4 Solution of Right Triangles (Mathematics)

R.S.A. 5 Periodic Functions (Mathematics)

R.S.A. 6 Elementary Plane Vectors (Mathematics)

Course Outline (Continued)

Unit IV (Continued)

- R.S.A. 7 Alternating Currents and Voltages (Information Sheet)
- R.S.A. 8 Inductance (Information Sheet)
- R.S.A. 9 Capacitance (Information Sheet)

Unit V - Alternating-Current Circuits

- R.S.A. 1 Resistance and Power in AC Circuits (Information Sheet)
- R.S.A. 2 Inductance in AC Circuits (Information Sheet)
- R.S.A. 3 Capacitance in AC Circuits (Information Sheet)
- R.S.A. 4 Impedance in AC Series Circuits (Information Sheet)
- R.S.A. 5 Resistance, Inductance and Capacitance in AC Parallel Circuits (Information Sheet)
- R.S.A. 6 Series-Parallel AC Circuits (Information Sheet)
- R.S.A. 7 Polyphase Circuits (Information Sheet)

Unit VI - Motors and Generators

- R.S.A. 1 Principles of Dynamo-Electric Machine (Information Sheet)
- R.S.A. 2 Direct-Current Generators (Information Sheet)
- R.S.A. 3 Direct-Current Motors (Information Sheet)
- R.S.A. 4 Alternating-Current Motors (Information Sheet)

Unit VII - Transformers

- R.S.A. 1 Power Transformers (Information Sheet)
- R.S.A. 2 Instrument Transformers (Information Sheet)

Unit VIII - Fundamentals of Meters

- R.S.A. 1 Direct-Current Meters (Information Sheet)
- R.S.A. 2 Alternating-Current Meters (Information Sheet)

Course Outline (Continued)

Unit VIII (Continued)

- R.S.A. 3 Wattmeters and Watthour-meters (Information Sheet)
- R.S.A. 4 Care and Use of Portable Meters and Indicating Devices (Information Sheet)

Unit IX - Lighting

- R.S.A. 1 Facts About Lighting (Part 1) (Information Sheet)
- R.S.A. 2 Facts About Lighting (Part 2) (Information Sheet)
- R.S.A. 3 Types of Lamps (Information Sheet)
- R.S.A. 4 Computing Electric Light and Power Bills (Information Sheet)

BOOK III - Electrical Apprentice

Unit X - Wiring Methods

- R.S.A. 1 General Provisions of the National Electrical Code (Information Sheet)
- R.S.A. 2 General Requirements for Wiring Methods (Information Sheet)
- R.S.A. 3 Types of Boxes, Box Covers, Box Extensions and Methods of Installation (Information Sheet)
- R.S.A. 4 Polarity Identification of Systems and Circuits (Information Sheet)
- R.S.A. 5 Types of Cables and Fittings (Information Sheet)
- R.S.A. 6 Open Wiring on Insulators and Concealed Knob and Tube Work (Information Sheet)
- R.S.A. 7 Branch Circuits and Service Entrance (Information Sheet)
- R.S.A. 8 Non-metallic Cable Wiring (Information Sheet)
- R.S.A. 9 Armored Cable Wiring (Information Sheet)

Course Outline (Continued)

Unit X (Continued)

- R.S.A. 10 Diagramming and Wiring Plans (Information Sheet)
- R.S.A. 11 Installing Surface Metal Raceway (Information Sheet)
- R.S.A. 12 Installing Conduit (Information Sheet)
- R.S.A. 13 Methods of Pulling Conductors in Raceways (Information Sheet)
- R.S.A. 14 Use of NEC Tables for Calculating the Number of Conductors in Conduit or Tubing (Information Sheet)
- R.S.A. 15 Bending Conduit and Tubing with Hand Benders (Information Sheet)
- R.S.A. 16 Bending Conduit and Tubing on Hydraulic and Screw Jack Machines (Information Sheet)
- R.S.A. 17 Building Structures and Architectural Symbols (Information Sheet)
- R.S.A. 18 Wiring in Hazardous Locations (Information Sheet)
- R.S.A. 19 Installing Wireways, Busways, Auxiliary Gutters, and Cellular Metal Floor Raceways (Information Sheet)
- R.S.A. 20 Commercial Garages, Service Stations, and Bulk Storage Plants (Information Sheet)
- R.S.A. 21 Installation Practice of Lighting Fixtures (Information Sheet)

Unit XI - Low Voltage Circuits

- R.S.A. 1 Remote-Control, Low-Energy Power, Low-Voltage Power (Information Sheet)
- R.S.A. 2 Introduction to Annunciators (Information Sheet)
- R.S.A. 3 Design of Basic Relay Annunciators (Information Sheet)
- R.S.A. 4 Remote Control Switching (Information Sheet)
- R.S.A. 5 Intercommunicating Telephones (Information Sheet)

Course Outline (Continued)

Unit XII - Appliance-D.C. Motors

- R.S.A. 1 Cooking Appliances (Information Sheet)
- R.S.A. 2 Electric Hot Water Heaters and Gas Furnace Controls (Information Sheet)

Unit XIII- Direct-Current Motors and Controllers

- R.S.A. 1 Direct-Current Motors (Information Sheet)
- R.S.A. 2 Direct-Current Controllers (Information Sheet)

BOOK IV - Electrical Apprentice

Unit XIV - Alternating Current Motors and Controllers

- R.S.A. 1 Split-Phase Motors (Information Sheet)
- R.S.A. 2 Capacitor Motors (Information Sheet)
- R.S.A. 3 Repulsion Type Motors (Information Sheet)
- R.S.A. 4 Three Phase Motors (Information Sheet)
- R.S.A. 5 N.E.C. Specifications for Motors and Controllers (Information Sheet)
- R.S.A. 6 Wiring for Motors (Information Sheet)
- R.S.A. 7 Across-the-line Magnetic Starters (Information Sheet)
- R.S.A. 8 Reversing Magnetic Starters (Information Sheet)
- R.S.A. 9 Reduced Voltage Starters (Information Sheet)
- R.S.A. 10 Drum, Two-Speed and Quick-Stop Controllers (Information Sheet)
- R.S.A. 11 Synchronous Drive and Indicating Systems (Information Sheet)

Unit XV - Alternators and Distribution

- R.S.A. 1 Alternators (Information Sheet)
- R.S.A. 2 Synchronizing and Phase Alternators (Information Sheet)

Course Outline (Continued)

Unit XVI -Transformer Principles and Practices

- R.S.A. 1 Introduction to Transformers and Transformer Ratios (Information Sheet)
- R.S.A. 2 Checking Polarity of Transformers (Information Sheet)
- R.S.A. 3 Single Phase Transformer Connections (Information Sheet)
- R.S.A. 4 Three Phase Transformer Connections (Information Sheet)
- R.S.A. 5 Special Application of Transformers (Information Sheet)
- R.S.A. 6 Transformer Oil, and Oil Maintenance (Information Sheet)

Unit XVII - Meters and Metering

- R.S.A. 1 Metering Single Phase Circuits Without Instrument Transformers (Information Sheet)
- R.S.A. 2 Metering Single Phase Circuits With Instrument Transformers (Information Sheet)
- R.S.A. 3 Metering Polyphase Circuits With and Without Instrument Transformers (Information Sheet)

Unit XVIII - Fundamental Electronics

- R.S.A. 1 Vacuum Tubes as Rectifiers (Information Sheet)
- R.S.A. 2 Solid State Rectifiers (Information Sheet)
- R.S.A. 3 Rectifier Filters (Information Sheet)
- R.S.A. 4 Triode Tube (Information Sheet)
- R.S.A. 5 Operation Gas Filled Tubes (Information Sheet)
- R.S.A. 6 Thyatron Tube (Information Sheet)
- R.S.A. 7 Photo-Cells and Controls (Information Sheet)
- R.S.A. 8 Electronic Motor Controls (Information Sheet)

Course Outline (Continued)

Unit XVIII (Continued)

- R.S.A. 9 Magnetic Amplifier Control in D. C. (Information Sheet)
- R.S.A. 10 Magnetic Amplifier Control A.C. (Information Sheet)

Unit XIX - Welding and Cutting

- R.S.A. 1 Functions and Operating Principles of Oxy-Acetylene, Regulators, Blowpipes, and Accessories (Information Sheet)
- R.S.A. 2 Setting Up Oxy-Acetylene Equipment (Information Sheet)
- R.S.A. 3 Oxy-Acetylene Welding (Information Sheet)
- R.S.A. 4 Oxy-Acetylene Cutting (Information Sheet)
- R.S.A. 5 Characteristics of Arc Welding (Information Sheet)
- R.S.A. 6 Types of Electrodes (Information Sheet)
- R.S.A. 7 Characteristics of Inert Gas Welding (Information Sheet)

Unit XX - Protective Relaying Principles and Practices

- R.S.A. 1 General (Information Sheet)
- R.S.A. 2 Differential Protection (Information Sheet)
- R.S.A. 3 Line Protection (Information Sheet)
- R.S.A. 4 Definitions (Information Sheet)

BOOK V - Electrical Apprentice

Unit XXI - Illumination and Wiring Commercial and Industrial Buildings

- R.S.A. 1 Illumination Design Data for Interiors (Information Sheet)
- R.S.A. 2 Calculations for Illuminating an Industrial Shop (Information Sheet)

Course Outline (Continued)

Unit XXI (Continued)

- R.S.A. 3 Calculating Wiring for an Industrial Shop
(Information Sheet)
- R.S.A. 3A Calculating, Wiring, and Illumination for Paint
Shop and Finishing Room (Information Sheet)

Unit XXII - Fluorescent Lamps

- R.S.A. 1 Characteristics and Working Principles of
Fluorescent Lamps (Information Sheet)
- R.S.A. 2 Circuit Sketching; Fluorescent Lamps (Information
Sheet)
- R.S.A. 3 N.E.C. Requirements for Lighting Fixtures, Signs
and Outline Lighting (Information Sheet)

Unit XXIII - Substations

- R.S.A. 1 Types and Uses of Substations (Information Sheet)
- R.S.A. 2 Schematic and Pictorial Illustrations of Substations
(Information Sheet)
- R.S.A. 3 N.E.C. Requirements on Transformers and Circuits
and Conductors Operating at More Than 600 Volts
Between Conductors (Information Sheet)

Unit XXIV - Special Problems

- R.S.A. 1 Calculating Necessary Data for Wiring Wound
Rotor Motor (Information Sheet)
- R.S.A. 2 Estimating Material for Roughing-in A Single
Family Dwelling (Information Sheet)

Appendix Steps to Safety

GENERAL APPRENTICES
Apprentice

C Page 1 of 2

The General Apprentices Course was written in 1954. It is available in the following form:

Book

Unit I

Book

Unit II

Test Book

Book

Unit I

Book

Unit II

Answer Books

Book

Unit I

Book

Unit II

The following instructor's aids are available:

Progress Chart

A detailed outline of the General Apprentices Course follows:

R.S.A. 1 - Getting and Holding a Job (Information Sheet)

R.S.A. 2 - Qualities Essential to Success (Information Sheet)

R.S.A. 3 - Workmen's Compensation Law in Louisiana (Information Sheet)

R.S.A. 4 - Social Security Act

R.S.A. 5 - Capital, Labor, and Management

R.S.A. 6 - Employer and Employee Organizations (Information Sheet)

R.S.A. 7 - Everyday Safety (Information Sheet)

R.S.A. 8 - Skilled Training for Workmen (Information Sheet)

R.S.A. 9 - Keeping Up With Occupational Changes (Information Sheet)

R.S.A. 10 - Apprenticeship (Information Sheet)

R.S.A. 11 - Insurance (Information Sheet)

R.S.A. 12 - Business Letters (Information Sheet)

Course Outline (Continued)

R.S.A. 13 - Personal Checks and Drafts

R.S.A. 14 - Keeping Accounts

R.S.A. 15 - Making and Reading Line Graphs

Unit II - Work Habits

R.S.A. 1 - Work Habits (Information Sheet)

R.S.A. 2 - Dependability (Information Sheet)

R.S.A. 3 - Orderliness (Information Sheet)

R.S.A. 4 - Method (Information Sheet)

R.S.A. 5 - Organization (Information Sheet)

R.S.A. 6 - Accuracy (Information Sheet)

R.S.A. 7 - Neatness (Information Sheet)

R.S.A. 8 - Respect for Materials (Information Sheet)

R.S.A. 9 - Economical Use of Materials (Information Sheet)

R.S.A. 10 - Ability to Solve Problems (Information Sheet)

R.S.A. 11 - Part I - Safety (Information Sheet)
Part II - Safety (Information Sheet)

R.S.A. 12 - Cooperation (Information Sheet)

R.S.A. 13 - Miscellaneous Work Habits (Information Sheet)

Units I and II of Machinist Apprentice was published in 1949, Unit III 1950, and Units IV through X in 1952. It is available in the following forms:

Related Study Assignments, Mathematics and Blueprint

- Book 1 - Units I and II
- Book 2 - Unit III
- Book 3 - Units IV and V
- Book 4 - Units VI through X

Test Books

- Book 1 - Units I and II
Final Examination
- Book 2 - Unit III
Final Examination
- Book 3 - Units IV and V
- Book 4 - Units VI through IX - No Test on Unit X

Answer Books

- Book 1 - Units I and II
- Book 2 - Unit III
- Book 3 - Units IV and V
- Book 4 - Units VI through IX

The following instructor's aids are available:

- Progress Charts
- Monthly Report forms

A detailed outline of the Machinist Apprentice Course follows:

Unit I - Bench and Floor

- R.S.A. 1: Layout Tools and Their Uses
Math: The Machinist's Rule
Blueprint Reading: How to Understand Blueprints
- R.S.A. 2: Files and Filing
Math: Angular Measurement
Blueprint Reading: Three-View Drawings: Horizontal
and Vertical Surface
- R.S.A. 3: Chisels and Their Uses
Math: Cutting Stock
Blueprint Reading: Three-View Drawings: Slanting
Surfaces
- R.S.A. 4: Heat Treatment of Steel
Math: Expansion of Metals
Blueprint Reading: Three-View Drawings: Hidden
Lines
- R.S.A. 5: Hack Saws and Sawing
Math: Weight of Stock
Blueprint Reading: Three-View Drawing Scales

Course Outline (Continued)

Unit I - Bench and Floor (Continued)

- R.S.A. 6: Reamers and Reaming
Math: Tap Drill Sizes
Blueprint Reading: Two-View Drawings: Curved Surfaces
- R.S.A. 7: Die Threading and Tapping
Math: Tap Drill Sizes
Blueprint Reading: Two-View Drawings: Curved Surface
- R.S.A. 8: Scrapers and Scraping
Math: Solution of Formulas
Blueprint Reading: Two-View Drawings: Decimal Tolerance
- R.S.A. 9: Babbitting
Math: The Circle
Blueprint Reading: Two-View Drawings: Angular Tolerances
- R.S.A. 10: Types of Drills
Math: Geometric Construction
Blueprint Reading: One-View Drawings
- R.S.A. 11: Fits, Limits, and Tolerance
Math: The Rectangle
Blueprint Reading: Bracket Blueprint
- R.S.A. 12: Care and Use of Grinders
Math: Speed of Pulleys
Blueprint Reading: Sectional Drawings: Full Section
- R.S.A. 13: The Power Hack Saw
Math: The Right Triangle
Blueprint Reading: Sectional Drawings: Half Section
- R.S.A. 14: Color Code of Steel
Blueprint Reading: Sectional Drawings: Detail View
- R.S.A. 15: Soldering
Math: Belting

Course Outline (Continued)

Unit I - Bench and Floor (Continued)

- R.S.A. 16: Abrasives and Grinding Wheels
Math: Power of Belting
- R.S.A. 17: Producing, Processing, and Identifying Iron and Steel
Math: Review Problems on Belting

Unit II - Drill Press

- R.S.A. 1: Types of Drill Presses and Their Operation
Blueprint Reading: Sectional Drawings: Special Types of Sections
- R.S.A. 2: Speed and Feeds of a Drill Press
Math: Speed of Drills
Blueprint Reading: Screw Fastening: External Threads
- R.S.A. 3: Sharpening Drills
Math: Drill Press Feed
Blueprint Reading: Screw Fastenings: Internal Threads
- R.S.A. 4: Drill Chucks and Sleeves
Blueprint Reading: Screw Fastenings: Detail Thread Problems
- R.S.A. 5: Holding the Work
Blueprint Reading: Auxiliary View Drawings
- R.S.A. 6: Coolants
Math: Liquid Measure
Blueprint Reading: T-Slide Bracket
- R.S.A. 7: Drilling
Blueprint Reading: Assembly Drawing
- R.S.A. 8: Reamers and Reaming
Math: Principles of Micrometer
Blueprint Reading: Drill Jig
- R.S.A. 9: Counterboring, Countersinking, Boring, and Tapping
Math: Mechanical Work and Power
Blueprint Reading: Milling Fixture for T-Slot Nut

Bibliography: Required Textbooks

Course Outline (Continued)

Unit III - Lathe

- R.S.A. 1: Types of Lathes and Identification of Parts
Blueprint Reading: Introduction
- R.S.A. 2: Principles of Lathe
Math: Shop Arithmetic
- R.S.A. 3: Care and Use of the Lathe
Math: Cutting Speed
- R.S.A. 4: Lathe Holding Devices
Math: Cutting Time
Blueprint Reading: Introduction
- R.S.A. 5: Center Drilling and Care of Lathe Centers
Math: Review Problems on Feeds and Speeds
- R.S.A. 6: Cutting Tools and Their Holding Devices
Math: Cutting Stock
Blueprint Reading: Isometric and Three View
Sketching
- R.S.A. 7: Straight Turning
Math: Simple Gearing
Blueprint Reading: Rectangular Objects
- R.S.A. 8: Shoulder Turning, Facing and Necking
Math: Compound Gearing
Blueprint Reading: The Rectangular Object
- R.S.A. 9: Knurling
Math: The Vernier Caliper
- R.S.A. 10: Math: Shop Trigonometry (Right Triangle)
- R.S.A. 11: Turning Tapers and Angles with the Compound
Rest
Math: Cutting Tapers Using the Compound Rest
- R.S.A. 12: Turning Tapers: Tailstock Offset Method
Math: Calculation of Tapers and Tailstock Offset
- R.S.A. 13: Turning Tapers: Taper Attachment
Math: Cutting Tapers by Use of Taper Attachment
- R.S.A. 14: Drilling and Reaming
Blueprint Reading: Rectangular Objects

Course Outline (Continued)

Unit III - Lathe (Continued)

- R.S.A. 15: Filing and Polishing
Blueprint Reading: Invisible Surfaces
- R.S.A. 16: Boring and Counterboring
Blueprint Reading: Invisible Surfaces
- R.S.A. 17: Undercutting and Back-facing
Blueprint Reading: Start Surfaces
- R.S.A. 18: Tapping
Math: The American Standard Screw Thread System
Blueprint Reading: Round Objects
- R.S.A. 19: Taper Boring
Blueprint Reading: Round Objects
- R.S.A. 20: Screw Thread Standards
Blueprint Reading: Auxiliary Views
- R.S.A. 21: Thread Cutting (V-Shape)
Math: Simple Lathe Gearing for Thread Cutting
- R.S.A. 22: Threading (Acme and Square) Single and Multiple
Math: Square and Acme Thread Calculations
- R.S.A. 23: Internal Threading
Math: Tap Drill Sizes for Square and Acme Threads
Blueprint Reading: Chuck - Working Drawing
- R.S.A. 24: Spring Winding in a Lathe
Math: Shop Trigonometry (Equilateral Triangle)
Blueprint Reading: Automatic Oiler - Working Drawing
- R.S.A. 25: Interchangeable Manufacturer and Classes of Fits
for Assembled Machine Parts
Math: Shop Trigonometry (Isosceles Triangle)
Blueprint Reading: Steering Sector Arm No. 1 -
Working Drawing
- R.S.A. 26: Cutting Off Bar Stock in a Lathe
Math: Cutting Threads by Compound Gearing
Blueprint Reading: Bar - Working Drawing
- R.S.A. 27: Crankshaft Turning
Math: Time Measurement (Wages)
- Bibliography: Books Required For Each Apprentice

Course Outline (Continued)

Unit IV - Shaper

- R.S.A. 1: Name of Parts
- R.S.A. 2: Shaper Construction
Math: Cutting Speeds of Planers and Shapers
Blueprint Reading: Drilling Fixture
- R.S.A. 3: Planer Construction
Math: Strokes Per Minute and Cutting Speed
- R.S.A. 4: Shaper and Planer Cutting Tools
Math: Planer and Shaper Feed
- R.S.A. 5: Shaper and Planer Work Holding Devices
Math: Practical Measurements (Parallelogram)
Blueprint Reading: Shift Fork
- R.S.A. 6: Causes of Inaccurate Work
Math: Practical Measurements (Scalene Triangle)
Blueprint Reading: Die
- R.S.A. 7: Machining Flat and Horizontal Surfaces
Math: Review Problems
- R.S.A. 8: Vertical, Angular, Contour, and Form Planing
Math: Shop Trigonometry (Review Problems)
- R.S.A. 9: Slotting and Keyseating
Math: Shop Trigonometry (The Sine and Cosine Law)
- R.S.A. 10: How to Cut Serrations
Math: Shop Trigonometry (General Review Problems)

Unit V - Milling Machine

- R.S.A. 1: Types, Sizes, and Uses of Milling Machines
Math: Milling Machine Cutting Speeds
- R.S.A. 2: Care and Maintenance of the Milling Machine
Math: Milling Machine Feed
- R.S.A. 3: Types of Cutter and Work Holding Devices
- R.S.A. 4: Proper Care and Use of Cutter and Work Holding Devices
- R.S.A. 5: Types of Cutters for the Milling Machine

Course Outline (Continued)

Unit V - Milling Machine (Continued)

- R.S.A. 6: Milling Machine Attachments
- R.S.A. 7: Coolants and Their Use
- R.S.A. 8: Milling Flat Surfaces
Math: Milling Round Stock Into Rectangular Bars
- R.S.A. 9: Milling Ends and Faces
- R.S.A. 10: Sawing, Slotting, and Keyway Milling
- R.S.A. 11: Form Milling
- R.S.A. 12: Angular Milling
- R.S.A. 13: Gang Milling
- R.S.A. 14: Dividing Head and Foot Stock
Math: Direct and Simple Indexing
- R.S.A. 15: Spur Gear Rules and Formulas
Blueprint Reading: Spur Gear
- R.S.A. 16: Milling Spur Gears
Math: Calculations for Spur Gears
Blueprint Reading: Spur Gear
- R.S.A. 17: Bevel Gears
Math: Calculations for Bevel Gears
Blueprint Reading: Bevel Gear
- R.S.A. 18: Worm and Gear
Math: Calculations for Worm Gears
- R.S.A. 19: Helical Milling
- R.S.A. 20: Graduating
Math: Graduating
- R.S.A. 21: Milling Helical Gears
- Bibliography: Required Textbooks for Shaper and Milling
Machine

Course Outline (Continued)

Unit VI - Grinding

- R.S.A. 1: Grinding Machine Construction
Math: Dimensions, Areas and Volumes of Geometrical Figures
- R.S.A. 2: Grinding Wheels
- R.S.A. 3: Principles of Grinding
- R.S.A. 4: Cylindrical Grinding
Math: Figuring Tapers
- R.S.A. 5: Surface Grinding
- R.S.A. 6: Internal Grinding
- R.S.A. 7: Grinding Milling Cutters and Reamers

Unit VII - Turret Lathe

- R.S.A. 1: Machine Construction and Work Methods
Math: Standard Screw Threads

Unit VIII - Welding

- R.S.A. 1: Functions and Operating Principles of Oxy-Acetylene Regulators, Blowpipes, and Accessories
- R.S.A. 2: Setting Up Oxy-Acetylene Equipment
- R.S.A. 3: Oxy-Acetylene Cutting
- R.S.A. 4: Oxy-Acetylene Welding
- R.S.A. 5: Characteristics of Arc Welding
- R.S.A. 6: Types of Electrodes

Unit IX - General Information

- R.S.A. 1: Principles of Bearings
- R.S.A. 2: Belts and Pulleys
- R.S.A. 3: Cutting Oils and Compounds
- R.S.A. 4: Allowance and Tolerances for Fits
Math: Gear Problems

Course Outline (Continued)

Unit IX - General Information (Continued)

- R.S.A. 5: Rigging
- R.S.A. 6: Band Sawing Machines
- R.S.A. 7: Aligning Machine
- R.S.A. 8: Metal Spraying
- R.S.A. 9: Machine Tools Today
- R.S.A. 10: Personal and Social Problems

Unit X - Horizontal Boring, Drilling & Milling Machine

- R.S.A. 1: Machine Fundamentals
- R.S.A. 2: Basic Operations
- R.S.A. 3: Work Methods

PIPE FITTER
Apprentice

C Page 1 of 3

The Pipe Fitter Apprentice Course was published in 1952. It is available in the following forms:

Book 1
Units I - VII
Book 2
Unit VIII
Book 4
Units X - XIII

Test Book
Book 1
Units I - VII

The following instructor's aids are available:
Wall Progress Chart

The references for Pipe Fitter Apprentice Course are the following:

Title	Source
Heisler, W. Fred, ELEMENTARY SCIENCE APPLIED TO PETROLEUM PRODUCTION AND REFINING	Oklahoma A & M Book Store Oklahoma A & M College Oklahoma
Castle, Drew W., PROBLEMS IN BLUEPRINT READING	Chas. A. Bennett Co., Inc. Peoria, Illinois
Wolfe and Phelps, PRACTICAL SHOP MATHEMATICS 3rd Ed.	McGraw-Hill Book Co. 330 West 42nd Street New York 36, New York

A detailed outline of the Pipe Fitter Apprentice Course follows:

Book 1: Unit 1 - First Aid

To be taught using Bureau of Mines 10 hr. First Aid Course.

Unit 2: Human Relations

R.S.A. 1: Capital, Labor, and Management
R.S.A. 2: Social Security Act
R.S.A. 3: Workmen's Compensation
R.S.A. 4: Attitudes and Behavior
R.S.A. 5: Skilled Training for Workers
R.S.A. 6: Interdependence of Employers and Employees

Course Outline (Continued)

Book 1: Unit 3 - Everyday Safety

R.S.A. 1: General Safety

Unit 4: Plant operation, History and organization

To be taught by Plant Officials

Unit 5: Physics

- R.S.A. 1: Matter and Properties of Matter
- R.S.A. 2: Weights, Measures, and Strength of Materials
- R.S.A. 3: Motion, Force, Work, and Leverage
- R.S.A. 4: Mechanical Devices, Power and Friction
- R.S.A. 5: Liquids and Gases
- R.S.A. 6: Heat and Transmission of Heat
- R.S.A. 7: Expansion, Contraction, Melting, Freezing, Vaporization, and Condensation
- R.S.A. 8: Magnetism and Electricity

Unit 6: Chemistry

- R.S.A. 1: Principles of Chemistry and Common Elements
- R.S.A. 2: Compounds
- R.S.A. 3: Acids, Bases, and Salts
- R.S.A. 4: Combustion, Safety, and terms

Unit 7: Refinery Metals

R.S.A. 1: Types of Metals

Book 2: Unit 8 - Mechanical Drawing

- R.S.A. 1: Beginning Drawing
- R.S.A. 2: Methods of Drawing
- R.S.A. 3: Three View Drawing
- R.S.A. 4: Three View Problems
- R.S.A. 5: Sections
- R.S.A. 6: Dimensions and Notes
- R.S.A. 7: Lettering and Missing Lines
- R.S.A. 8: Drawing Exercises
- R.S.A. 9: Drawing Exercises and Auxiliary Views
- R.S.A. 10: Geometrical Construction
- R.S.A. 11: Projection Study
- R.S.A. 12: Pictorial Drawing
- R.S.A. 13: Layout
- R.S.A. 14: Layout (Continued)
- R.S.A. 15: Layout (Continued)

Course Outline (Continued)

Book 2: Unit 8 (Continued)

- R.S.A. 16: Layout for Eccentric Reducer
- R.S.A. 17: Pipe Sketching
- R.S.A. 18: Pipe Drawing
- R.S.A. 19: Pipe Bends and Assemblies

Book 4: Unit 10 - Arithmetic

- R.S.A. 1: Common Fractions
- R.S.A. 2: Decimals
- R.S.A. 3: Percentage
- R.S.A. 4: Interest and Taxes

Unit 11 - Algebra

- R.S.A. 1: Positive and Negative Numbers and Grouping Symbols
- R.S.A. 2: Addition, Subtraction, Simple Equations
- R.S.A. 3: Ratio and Proportion
- R.S.A. 4: Square Root
- R.S.A. 5: Formulas and Equations

Unit 12 - Beginning Geometry

- R.S.A. 1: Beginning Geometry
- R.S.A. 2: Geometry
- R.S.A. 3: The Right Triangle
- R.S.A. 4: The Right Triangle (Cont'd)
- R.S.A. 5: The Circle

Unit 13 - Trigonometry

- R.S.A. 1: Beginning Trigonometry
- R.S.A. 2: Pipe Layout

The Plumbing and Pipe Fitting Industry was published in 1953-1954. It is available in the following forms:

Related Study Assignments

A detailed outline of The Plumbing and Pipe Fitting Industry follows.

Unit I

- R.S.A. A - Background of the Plumbing Industry
- R.S.A. E - Development of Steam
- R.S.A. C - History of Refrigeration and Air Conditioning
- R.S.A. I - Introduction to Plumbing and Pipe Fitting Industry
 - Mathematics: Linear Measurement
 - Blueprint Reading: Shapes of Surfaces and Solids
- R.S.A. 2 - Measuring and Layout Tools
 - Mathematics: Rule Practice
 - Blueprint Reading: Elevation Views
- R.S.A. 3 - Wood Boring Tools
 - Mathematics: Rule Practice
 - Blueprint Reading: Elevations
- R.S.A. 4 - Wrenches and Utility Tools
 - Mathematics: Addition of Rule Graduations
 - Blueprint Reading: Elevations
- R.S.A. 5 - Metal Cutting Tools
 - Mathematics: Subtraction of Scale Measurements
 - Blueprint Reading: Elevations
- R.S.A. 6 - Driving Tools
 - Mathematics: Addition of Whole Numbers
 - Blueprint Reading: Plan Views
- R.S.A. 7 - Drilling Holes in Metal
 - Mathematics: Subtraction of Whole Numbers
 - Blueprint Reading: Symbols for Elevations
- R.S.A. 8 - Punching Holes in Metal
 - Mathematics: Multiplication of Whole Numbers
 - Blueprint Reading: Symbols for Elevations

Outline (Continued)

Unit I (Continued)

- R.S.A. 9 - Cutting, Reaming, and Threading Tools
Mathematics: Division of Whole Numbers
Blueprint Reading: Symbols for Elevations
- R.S.A. 10- Tubing Tools
Mathematics: Reducing Fractions to Lowest Terms
Blueprint Reading: Plan Views
- R.S.A. 11- Brazing Copper Pipe
Mathematics: Changing Improper Fractions to
Mixed Numbers
Blueprint Reading: Plan Views
- R.S.A. 12- Soldering and Brazing Copper Pipe and Tubing
Mathematics: Changing Mixed Numbers to Improper
Fractions
Blueprint Reading: Plan Views
- R.S.A. 13- Soldering, Tools, and Procedures
Mathematics: Changing Fractions to Higher Terms
Blueprint Reading: Plan Views
- R.S.A. 14- Welding
Mathematics: Least Common Denominators
Blueprint Reading: Plan Terms
- R.S.A. 15- Mitered Bends
Mathematics: Addition of Fractions
Blueprint Reading: Symbols and Conventions
for Plan Views
- R.S.A. 16- Branch Layout
Mathematics: Subtraction of Fractions
Blueprint Reading: Symbols and Conventions for
Plan Views
- R.S.A. 17- Pipe Bend Developing
Mathematics: Multiplication of Fractions
Blueprint Reading: Symbols and Conventions for
Plan Views
- R.S.A. 18- Pipe Bending
Mathematics: Review Problems
Blueprint Reading: Scaling and Dimensions
- R.S.A. 19- Hot Bending
Mathematics: Review Problems
Blueprint Reading: Scaling and Dimensions
- R.S.A. 20- Rigging
Mathematics: The Decimal System
Blueprint Reading: Scaling and Dimensions
- R.S.A. 21- Valves and Cocks
Mathematics: Addition and Subtraction of
Decimals
Blueprint Reading: Scaling and Dimensions

Outline (Continued)

Unit I (Continued)

- R.S.A. 22- Gaskets and Gasket Materials
Mathematics: Multiplication of Decimals
Blueprint Reading: Structural Details
- R.S.A. 23- Identification of Bolts and Screws
Mathematics: Changing Common Fractions to Decimals
Blueprint Reading: Structural Details
- R.S.A. 24- Pipe Supports and Hangers
Mathematics: Changing Common Fractions to Decimals
Blueprint Reading: Structural Details
- R.S.A. 25- Insulating Materials
Mathematics: Simple Percentage
Blueprint Reading: Structural Details
- R.S.A. 26- Graphical Symbols for Piping
Mathematics: Discount
Blueprint Reading: Structural Details
- R.S.A. 27- Functions and Operating Principles of Oxy-
Acetylene, Regulators, Blowpipes, and Accessories
Mathematics: Profit and Loss
Blueprint Reading: Structural Details
- R.S.A. 28- Oxy-acetylene Welding
Mathematics: Powers and Roots
Blueprint Reading: Structural Details
- R.S.A. 29- Arc Welding
Mathematics: Measurement of Angles
Blueprint Reading: Second Floors for One-and-
a-half-story Houses
- R.S.A. 30- Everyday Safety
Mathematics: Review
Blueprint Reading

Unit II - Sewage Disposal

- R.S.A. 1 - Municipal Sewage Treatment
Mathematics: Review of Rectangular Areas
Blueprint Reading
Sketching Problem #1: Sketching Graphic Symbols
- R.S.A. 2 - Municipal Sewer Systems
Mathematics: Review of Triangular Areas and
Formulas
Blueprint Reading
Sketching Problem #2: Sketching Graphical Symbols (Contd.)
- R.S.A. 3 - Private Sewage Treatment
Mathematics: Review of Circles
Blueprint Reading
Sketching Problem #3: Sketching Graphic Symbols

Outline (Continued)

Unit III - Pipes and Fittings

R.S.A. No. 1: Principal Types of Pipes and Fittings
Mathematics: Piping Measurements; Pipe
Layouts; Tables
Blueprint Reading

Sketching Problem #1: Sketching Graphic Symbols

R.S.A. No. 2: Joining Vitrified
Mathematics: Square Root
Blueprint Reading

Sketching Problem #2: Sketching Symbols for a Screw-Joint
Installation

R.S.A. No. 3: Joining Cast Iron Pipe
Mathematics: Volume
Blueprint Reading

Sketching Problem #3: Sketching Symbols for a Flanged
Installation

Unit IV - The House Drainage System

R.S.A. No. 1: The House Sewer
Mathematics: Cylinders
Blueprint Reading

Sketching Problem #1: Hot and Cold Water Piping--Screw Joints

R.S.A. No. 2: The House Drain
Mathematics: Volumes of Cylinders
Blueprint Reading

Sketching Problem #2: Sketching Symbols for a Bell and Spigot
Installation

R.S.A. No. 3: House Drain Appliances
Mathematics: Volumes of Cylinders
Blueprint Reading

Sketching Problem #3: Sketching Symbols for a Welded-Joint
Installation

Outline (Continued)

Unit IV (Continued)

R.S.A. No. 4: House Drain Appliances (Continued)
Mathematics: Frustrums of Pyramids and
Cones
Blueprint Reading

Sketching Problem #4: Sketching Symbols for a Solder-Joint
Installation

R.S.A. No. 5: Storm Drainage
Mathematics: Fractions and Decimals
Blueprint Reading

Sketching Problem #5: Sketching Symbols for a Bell and
Spigot and Screw-Joint

R.S.A. No. 7: The Waste Pipe
Mathematics: Solution of Formulas
Blueprint Reading

Sketching Problem #7: Sketching Symbols for a Soldered-
Joint Installation

Unit V - Traps and Ventilation

R.S.A. No. 1: Traps Used on Plumbing Systems
Mathematics: 45 Degree Elbow Offsets
Blueprint Reading

Sketching Problem #1: Sketching Symbols for a Solder and
Screw-Joint Installation

R.S.A. No. 2: Ventilation
Mathematics: To find the Length of an Offset
Blueprint Reading

Sketching Problem #2: Identifying Symbols of a Bell and
Spigot Installation

R.S.A. No. 3: Ventilation (Continued)
Mathematics: Calculation of Rolling Offsets
Blueprint Reading

Sketching Problem #3: Identifying Symbols of a Bell and
Spigot Installation

Outline (Continued)

Unit V (Continued)

R.S.A. No. 4: Soil, Waste, and Vent Pipe Principles
Mathematics: Radiator Stub Calculations
Blueprint Reading

Sketching Problem #4: Identifying Symbols of a Flange and
Screw-Joint Installation

R.S.A. No. 5: Inspection and Test
Mathematics: Piping Measurements
Blueprint Reading

Sketching Problem #5: Identifying Symbols of a Solder and
Screw-Joint Installation

Unit VI - Plumbing Water Supply

R.S.A. No. 1: Properties of Water and Its Sources
Mathematics: Oblique Triangles
Problem No. 1: Blueprint Reading
R.S.A. No. 2: Materials Used for Water Distribution
Mathematics: Oblique Triangles - The Law
of Cosines
Problem No. 2: Materials Used for Water Distribution
R.S.A. No. 3: Joints on Water Supply Systems
Mathematics: Oblique Triangles
Problem No. 3: Blueprint Questions and Scale Rule Measurement
R.S.A. No. 4: Transite Pressure Pipe
Mathematics: Oblique Triangles
Problem No. 4: Symbols for Blueprints
R.S.A. No. 5: The House Water Supply
Mathematics: Residence Heat-Loss Calculations
Problem No. 5: Graphical Symbols for Plumbing
R.S.A. No. 6: Cold Water Distribution System
Mathematics: Special Pipe Bends
Problem No. 6: Letters and Figures
R.S.A. No. 7: Pumps and Lifts
Mathematics: Special Pipe Bends
Problem No. 7: Drawing the Plan
R.S.A. No. 8: Cold-Water Distribution Systems in Tall
Buildings
Mathematics: Subject Matter-Solving by Formulas
Problem No. 8: Drawing for Plumbers

Outline (Continued)

Unit VII - Lead Work

- R.S.A. No. 1: The History and Manufacture of Lead
Mathematics: Heat Transmission - Coefficients
of Transmission
- Problem No. 1: Three Dimensions on One Drawing
- R.S.A. No. 2: Lead Working Tools
Mathematics: Coefficients of Transmissions
- Problem No. 2: Isometric Drawing
- R.S.A. No. 3: Soldering with Irons
Mathematics: Coefficients of Transmission
- Problem No. 3: Oblique Drawing
- R.S.A. No. 4: Bending Lead Pipe
Mathematics: Calculation of U Factors
- Problem No. 4: Pipes in Three Dimension Drawing
- R.S.A. No. 5: Care and Cleaning of Wiping Solder--Flange
Joints
Mathematics: Calculation of U Factors
- Problem No. 5: Pipe Fittings
- R.S.A. No. 6: Preparing and Wiping Horizontal Round Joints
Mathematics: Heat-Loss Calculations
- Problem No. 6: Pipe Measurement
- R.S.A. No. 7: Preparing an' wiping Vertical Round Joints--
Branch Joint.
Mathematics: Heat-Loss Calculations
- Problem No. 7: Waste and Vent
- R.S.A. No. 8: Wiping Branch Joints and Wiping Lead to Brass
Mathematics: Heat-Loss Calculations
- Problem No. 8: Hot and Cold Water
- R.S.A. No. 9: Capping Lead Pipe--Making Sheet Lead Pans and
Linings
Mathematics: Graphic Representation--Pressure
and Head Curves
- R.S.A. No. 10: Lead Welding
Mathematics: Trigonometric Ratios--Capacity
of Tanks
- Problem No. 10: Layout of Unit Dwellings

Unit VIII - Hot-Water Systems

- R.S.A. No. 1: Domestic Hot-Water Supply
- Mathematics 1: Review; Linear Measurements and Rule
Graduations
- R.S.A. No. 2: Hot-Water Distribution Systems
- Mathematics 2: Addition, Subtraction, Multiplication, and
Division of Whole Numbers

Outline (Continued)

Unit IX - Special Piping

R.S.A. No.	1:	Domestic Hot-Water Supply
Mathematics	1:	Working With Fractions
R.S.A. No.	2:	Cross-Connection
Mathematics	2:	Working with Decimals
R.S.A. No.	3:	Fire Line Installation
Mathematics	3:	Simple Percentage, Discount, and Profit and Loss

Unit X - Plumbing Fixtures

R.S.A. No.	1:	Water Closets
Mathematics	1:	Powers and Roots
R.S.A. No.	2:	The Lavatory
Mathematics	2:	Review of Areas
R.S.A. No.	3:	The Bathtub
Mathematics	3:	Review of Areas of Triangles and Circles
R.S.A. No.	4:	Sinks
Mathematics	4:	Piping Offset Calculations
R.S.A. No.	5:	Special Plumbing Fixtures
Mathematics	5:	Volumes

Unit XI - Radiant Heating

R.S.A. No.	1:	Radiant Heating
Mathematics	1:	Frustums of Pyramids and Cones
R.S.A. No.	2:	Radiant Heating (Continued)
Mathematics	2:	Calculation Rolling Offsets
R.S.A. No.	3:	Radiant Heating (Continued)
Mathematics	3:	Heat-Loss Calculations
R.S.A. No.	4:	Radiant Heating (Continued)
Mathematics	4:	Final Test
R.S.A. No.	5:	Radiant Heating (Concluded)
Mathematics	5:	Final Test

Unit XII - Household Appliances

R.S.A. No.	1:	The Food-Waste Disposal Unit and the Automatic Dishwasher
R.S.A. No.	2:	The Automatic Washing Machine

Unit XIII - Domestic Heating

R.S.A. No.	1:	Gas Piping
------------	----	------------

Outline (Continued)

Unit XIII (Continued)

- R.S.A. No. 2: Venting Gas Appliances -- Clearance
- R.S.A. No. 3: Space Heaters
- R.S.A. No. 4: Gas Floor Furnace Installation

Unit XIV - Fire Protection

- R.S.A. No. 1: Development of Sprinkler Protection
- R.S.A. No. 2: Automatic Sprinkler Installations
- R.S.A. No. 3: Special Types of Sprinkler Systems
- R.S.A. No. 4: Water-Flow Sprinkler Alarms--Sprinkler
Inspection and Supervision

Unit XV - Planning and Estimating

- R.S.A. No. 1: Raised Cottage Construction
- R.S.A. No. 2: Concrete Slab on Ground Construction
- R.S.A. No. 3: Low Priced Raised Cottage Construction
- R.S.A. No. 4: Concrete Slab on Ground Construction

Unit XVI - Personal and Social Problems

- R.S.A. No. 1: Workmen's Compensation Law in Louisiana
- R.S.A. No. 2: Social Security Act

Course Outline

UNIT I - General Course

- R.S.A. No. A: Part I: Background of the Plumbing Industry
R.S.A. No. B: Part 2: Development of Steam
R.S.A. No. C: Part 3: History of Refrigeration and Air
Conditioning
- R.S.A. No. 1: Introduction to Plumbing and Pipe Fitting
Industry
Mathematics: Linear Measurement
Blueprint Reading: Shapes of Surfaces and
Solids
- R.S.A. No. 2: Measuring and Layout Tools
Mathematics: Rule Practice
Blueprint Reading: Elevation Views
- R.S.A. No. 3: Wood Boring Tools
Mathematics: Rule Practice
Blueprint Reading: Elevations
- R.S.A. No. 4: Wrenches and Utility Tools
Mathematics: Addition of Rule Graduations
Blueprint Reading: Elevations
- R.S.A. No. 5: Metal Cutting Tools
Mathematics: Subtraction of Scale Measurements
Blueprint Reading: Elevations
- R.S.A. No. 6: Driving Tools
Mathematics: Addition of Whole Numbers
Blueprint Reading: Plan Views
- R.S.A. No. 7: Drilling Holes in Metal
Mathematics: Subtraction of Whole Numbers
Blueprint Reading: Symbols for Elevations
- R.S.A. No. 8: Punching Holes in Metal
Mathematics: Multiplication of Whole Numbers
Blueprint Reading: Symbols for Elevations
- R.S.A. No. 9: Cutting, Reaming, and Threading Tools
Mathematics: Division of Whole Numbers
Blueprint Reading: Symbols of Elevations
- R.S.A. No. 10: Tubing Tools
Mathematics: Reducing Fractions to Lowest Terms
Blueprint Reading: Plan Views

A detailed outline of the Electrical Utility Workers Training Program follows:

Unit I - BASIC MATHEMATICS

- Lesson Plan 1 - Review of Addition and Subtraction
- Lesson Plan 2 - Review of Multiplication and Division
- Lesson Plan 3 - Common Fractions - Addition and Subtraction
- Lesson Plan 4 - Common Fractions - Multiplication and Division
- Lesson Plan 5 - Mixed Numbers
- Lesson Plan 6 - Decimal Fractions and Conversions
- Lesson Plan 7 - Percentage, Ratio and Proportion
- Lesson Plan 8 - Square Root
- Lesson Plan 9 - Introduction to Algebra
- Lesson Plan 10 - General Numbers
- Lesson Plan 11 - Solving Problems by Equations
- Lesson Plan 12 - Literal Equations with One Unknown

Unit II - SIMPLIFIED ELECTRICITY

- Lesson Plan 1 - Magnetism
- Lesson Plan 2 - Methods of Producing Electricity
- Lesson Plan 3 - Current Electricity
- Lesson Plan 4 - Measuring Voltage, Current and Resistance
- Lesson Plan 5 - Ohm's Law--Series Circuits
- Lesson Plan 6 - Electric Power
- Lesson Plan 7 - Ohm's Law--Parallel Circuits
- Lesson Plan 8 - Alternating Current
- Lesson Plan 9 - Inductance and Inductive Reactance
- Lesson Plan 10 - Capacitance and Capacitive Reactance
- Lesson Plan 11 - Impedance in A.C. Series Circuits

Unit III - TRANSFORMERS

- Lesson Plan 1 - Basic Theories and Principles
- Lesson Plan 2 - Transformer Parts, Construction and Assembly
- Lesson Plan 3 - Transformer Protection
- Lesson Plan 4 - Transformer Connections (Part I)
- Lesson Plan 5 - Transformer Connections (Part II)
- Lesson Plan 6 - Transformer Maintenance

ELECTRICAL UTILITY WORKERS
TRAINING PROGRAM
Trade Extension

C Page 4 of 4

Course Outline (Continued)

Unit IV - POWER DISTRIBUTION AND TRANSMISSION

- Lesson Plan 1 - Distribution Systems
- Lesson Plan 2 - A Study of Primary Distribution Systems
- Lesson Plan 3 - Power Factor
- Lesson Plan 4 - Power Factor (Continued)
- Lesson Plan 5 - Distribution Transformers
- Lesson Plan 6 - The Secondary Distribution System and
Primary System Protection
- Lesson Plan 7 - Methods of Increasing the Capacity,
Improving Voltage Regulation and Grounding
the Distribution System
- Lesson Plan 8 - Electrical Measuring Instruments
- Lesson Plan 9 - Electrical Measurement Instruments (Continued)
- Lesson Plan 10 - Street Lighting
- Lesson Plan 11 - Distribution Line Construction

Slides to be used with this course are also available.
There are 277 slides in a set at \$1.00 per slide.

HIGHWAY ENGINEERING AIDE
TRAINING PROGRAM

A detailed outline of the Highway Engineering Aide Training Program material follows:

Unit I - Arithmetic

Lesson #1

- I. Introduction
- II. Whole Numbers
 - A. Reading and Writing Numbers
 - B. Addition and Checking Addition
 - C. Subtraction
 - D. Multiplication

Lesson #2

- II. Whole Numbers (Continued)
 - E. Division
- III. Common Fractions
 - A. Addition
 - B. Subtraction

Lesson #3

- III. Common Fractions (Continued)
 - C. Multiplication
 - D. Division
- IV. Mixed Numbers
 - A. Addition

Lesson #4

- IV. Mixed Numbers (Continued)
 - B. Subtraction
 - C. Multiplication
 - D. Division

Lesson #5

- V. Decimal Fractions
 - A. Reading and Writing Decimals
 - B. Addition of Decimals
 - C. Subtraction of Decimals

Course Outline (Continued)

Unit I - Arithmetic (Continued)

Lesson #6

- V. Decimal Fractions (Continued)
 - D. Multiplication
 - E. Division

Lesson #7

- VI. Conversions
 - A. Common Fractions to Decimal Fractions
 - B. Decimal Fractions to Common Fractions
 - C. Review

Lesson #8

- VII. Examination

Lesson #9

- VIII. Percentage
 - A. Definitions
 - B. Equivalents
- IX. Ratio and Proportion
 - A. Ratio
 - B. Proportion
 - C. Inverse Proportion

Lesson #10

- X. Square Root
 - A. Examination Critique
 - B. Definition
 - C. Extracting the Square Root

Lesson #11

- XI. Measurements
 - A. Feet and Inches
 - B. Time
 - C. Weight
 - D. Temperatures

Lesson #12

- XI. Measurements (Continued)
 - E. Density and Specific Gravity

Lesson #13

- XI. Measurements (Continued)
 - F. Absorption and Surface Moisture
 - G. Board Measure
 - H. Review

Lesson #14

- XI. Measurements (Continued)
 - I. Land Measure

Lesson #15

- XII. Plane Figures
 - A. Areas and Perimeters of Rectangles
 - B. Areas and Perimeters of Parallelograms
 - C. Areas and Perimeters of Trapezoids
 - D. Areas and Perimeters of Triangles
 - E. Areas and Perimeters of Circles
 - F. Areas and Perimeters of Ellipses

Course Outline (Continued)

Unit I - Arithmetic (Continued)

Lesson #16

XIII. Solid Figures

- A. Volumes of Rectangular Shaped Solids
- B. Volumes of Cylinders
- C. Volumes of Cones
- D. Volumes of Frustrums of Pyramids and Cones
- E. Volumes of Spheres

Lesson #17

XIV. Examination

Pass out the examination. Be sure that the students return all question sheets

Unit II - Algebra

Lesson #1

I. Introduction

- A. Comparison
- B. Definition
- C. Signs or Symbols of Operation
- D. General Application of Signs and Symbols

Lesson #2

II. General Numbers

- A. Addition and Subtraction of Literal Numbers
- B. Multiplication and Division of Literal Numbers
- C. Exponents and Powers in Formulas
- D. Developing Formulas

Lesson #3

III. Solving Problems by Equations

- A. Axiom I - Division
- B. Axiom II - Multiplication
- C. Axiom III - Subtraction
- D. Axiom IV - Addition
- E. Consecutive Integers
- F. Changing the Subject of a Formula

Lesson #4

IV. Signed Numbers

- A. Definition
- B. Number Scales
- C. Use in Graphs
- D. Addition of Signed Numbers
- E. Subtracting Signed Numbers
- F. Multiplication of Signed Numbers
- G. Signs of Powers
- H. Division of Signed Numbers
- I. Division Written as a Fraction
- J. Algebraic Terms

Course Outline (Continued)

Lesson #4 (Continued)

- K. Addition of Polynomials
- L. Subtraction of Polynomials
- M. Multiplication of a Polynomial by a Signed Number
- N. Use of Parentheses
- O. Translation of statements into symbols

Lesson #5

V. Graphs

- A. Bar Graphs
- B. Circle Graphs
- C. Line Graphs
- D. Line Graph of Formulas
- E. Line Graphs to Solve Problems
- F. Location of Points on a Graph
- G. Graphs of Equations with two Unknowns
- H. Solving a pair of Linear Equations by Graphs
- I. Formula for a Linear Equation

Lesson #6

VI. Equations with two Unknowns

- A. Solving by Addition
- B. Solving by Substitution
- C. Problems involving two Unknowns

Lesson #7

VII. Product and Quotient of Literal Numbers

- A. Product of Two Monomials
- B. Product of more than Two Monomials
- C. Product of a Polynomial by a Monomial
- D. Product of Two Binomials
- E. Quotient of Two Monomials
- F. Quotient of a Polynomial by a Monomial

Lesson #8

VIII. Special Products and Factors

- A. How to find Monomial Factors
- B. Factoring of a Trinomial
- C. Square of a Binomial
- D. Product of the Sum and Difference of Two Quantities
- E. Factoring the Difference of Two Squares
- F. Finding all the prime Factors
- G. Squaring a Binomial like $ab + cd$
- H. Factoring a Perfect Square
- I. Factoring a Quadratic Trinomial
- J. Shortcuts in Computation

Course Outline (Continued)

Unit II - Algebra (Continued)

Lesson #9

- IX. Using Algebraic Fractions in Formulas and Equations
 - A. Reduction of a Fraction
 - B. Changing an Improper Fraction to an Integer or Mixed Expression
 - C. Multiplication of Fractions
 - D. Division of Fractions
 - E. Addition of Fractions with Monomial Denominators
 - F. Addition of Fractions with Binomial Denominators
 - G. Signs of a Fraction
 - H. Changing a Mixed Expression to a Fraction
 - I. Complex Fractions in Algebra

Lesson #10

- X. Ratio and Proportion
 - A. Using Ratios
 - B. Constants, Variables, and Functions
 - C. Similar Figures and Proportion

Lesson #11

- XI. Square Root and Radicals
 - A. Definitions
 - B. Approximate
 - C. Exact Computation
 - D. The Square Root of a Product
 - E. Multiplication of Radicals
 - F. Addition and Subtraction of Radicals
 - G. Value of Mixed Expressions
 - H. Finding the Square Root of a Fraction
 - I. Rationalization of the Denominator of a Fraction
 - J. Use of Fractional Exponents
 - K. Division of a Radical

Lesson #12

- XII. Quadratic Equations
 - A. Definition
 - B. Perfect Square Trinomials
 - C. Solving by Completion of the Square
 - D. Quadratic Equations with Irrational Roots
 - E. A Formula for Solving Quadratic Equations
 - F. Graphs of Quadratic Equations

Lesson #13

- XIII. Quadratic Systems
 - A. Equation of a Circle
 - B. The Equation of a Parabola
 - C. The Equation of an Ellipse
 - D. One equation of a Hyperbola
 - E. Second Equation of a Hyperbola
 - F. Graphical Solution of a Linear Equation and a Quadratic Equation
 - G. Algebraic Solution of a Linear and Quadratic Equation
 - H. Graphical Solution of Two Quadratic Equations

Course Outline (Continued)

Unit II - Algebra (Continued)

Lesson #14

XIV. Logarithms

- A. Meaning of Logarithms
- B. Logarithms to the Base 10
- C. Determination of Complete Logarithms
- D. Finding N When Log N is Given
- E. Finding the Logarithms of numbers not given in the Tables
- F. Multiplying with Logarithms
- G. Dividing with Logarithms
- H. Finding Powers with Logarithms
- I. Finding Roots With Logarithms

Lesson #15

XV. Progressions and the Binomial Theorem

- A. Sequences
- B. Arithmetic Progressions
- C. Last Term of An Arithmetic Progression
- D. Finding Arithmetic Means
- E. Sum of An Arithmetic Progression
- F. Geometric Progressions
- G. The Last Term of a Geometric Progression
- H. Finding Geometric Means
- I. Sum of a Geometric Progression
- J. Expanding a Binomial
- K. Factorial Notation
- L. Finding a Particular Term of $(a + b)^n$
- M. Expansions with Negative and Fractional Exponents
- N. Finding a Root by the Binomial Theorem

Unit III - Geometry and Trigonometry

Lesson #1

- I. Introduction of Mensuration
- II. Squares and Rectangles
 - A. Angles, right angles, squares and units of area
 - B. Area of rectangles and related problems
 - C. Square roots of various types of numbers

Lesson #2

III. Triangles

- A. Definitions of right triangle, base, altitude and hypotenuse
- B. Pythagorean Theorem
- C. Area of a right triangle
- D. Definition of isosceles triangle, base angle, base and vertex

Course Outline (Continued)

Unit III - Geometry and Trigonometry (Continued)

Lesson #2 (Continued)

- E. Area of an Isosceles Triangle
- F. Definition of an Equilateral Triangle
- G. Area of an Equilateral Triangle
- H. Define Scalene or Oblique Triangle and Find the Areas
- I. Angle Measurement and Sum of Angles in a Triangle

Lesson #3

- IV. Use of constants, area of quadrilaterals and scale Drawing
 - A. Hexagon, Octagon and the Use of Constants
 - B. Quadrilaterals
 - C. Use of Scale Drawings

Lesson #4

- V. The Circle and Ellipse
 - A. Radius, Diameter, Circumference and Area of a Circle
 - B. Arc, Sectors and Central Angles
 - C. Area of a Sector and Length of an Arc
 - D. Circumscribed and Inscribed Figures and Relationships
 - E. Segment of a Circle and its Area
 - F. Area of an Ellipse
 - G. Practical Application Problems and Formulas

Lesson #5

- VI. Solid Figures and Volumes
 - A. Volume and Surface Areas of Prisms, Cylinders, and Cones
 - B. Volumes and Surface Areas of a Frustum of a Cone or Pyramid
 - C. Volume and Surface Area of a Sphere
 - D. Volumes of Composite Figures

Lesson #6

- VII. Basic Geometric Construction Including Lines
 - A. Construction of Bisectors of Lines, Angles, and Arcs
 - B. Construction of Perpendiculars of Various Types to a Given Line
 - C. Construction of Parallel Lines to a Given Line
 - D. Division of a Line Into Any Number of Equal Parts
 - E. Construction of an Equilateral Triangle and Angles of any Size

Lesson #7

- VIII. Construction Involving Circles
 - A. Determination of Center of Circle or Circular Area

Course Outline (Continued)

Unit III - Geometry and Trigonometry (Continued)

Lesson #7 (Continued)

- B. Inscription of Various Types of Plane Figures in a Circle
- C. Construction of Circles Equal in Area to the Sum or Difference of the areas of two given circles
- D. Construction of Tangents of Various Types to a Given Circle or Circles

Lesson #8

IX. Miscellaneous Constructions

- A. Construction of a Square Equal in Area to the Sum or Difference of the Areas of Two Given Squares
- B. Construction of a Square of a Given Area
- C. Construction of a Hexagon With Sides of a Given Length and With One Side on a Given Line
- D. Construction of an Octagon, an Ellipse, and a Pentagon

Lesson #9

X. Introduction to Trigonometry

Lesson #10

XI. The Oblique Triangle

- A. Use of the Law of Sines in Solving an Oblique Triangle (2 Cases)
- B. Use of the Law of Cosines to Solve an Oblique Triangle (2 Cases)
- C. Use of Formulas Involving Trigonometric Functions to Find the Area of Triangle
- D. Summary of Methods of Solving a Triangle of any Type.

Unit IV - Drawing

- Lesson #1 Beginning Drawing
- Lesson #2 Geometrical Construction
- Lesson #3 Lettering
- Lesson #4 Methods of Drawing
- Lesson #5 Three View Drawing
- Lesson #6 Three View Problems
- Lesson #7 Sections
- Lesson #8 Dimensions and Notes
- Lesson #9 Drawing Exercises
- Lesson #10 Drawing Exercises and Auxiliary Views
- Lesson #11 Projection Study
- Lesson #12 Topographical Drawing
- Lesson #13 Reproduction of Drawings

Course Outline (Continued)

Unit V - Surveying

Lesson #1

I. Field and Office Work

A. Description

- (a) Field work
- (b) Office work
- (c) Errors
 - 1. Sources of errors
 - 2. Kind of error
 - 3. Theory of Probability
 - 4. Probable Value
 - 5. Probable Error

Lesson #2

II. Measurement of Distances

A. Methods

B. Equipment for Chaining

C. Chaining on Level Ground

D. Horizontal Measurements over Uneven or Sloping Ground

E. Measurements on Slopes

- (a) Corrections for Slopes
- (b) Errors in Chaining; Corrections for Changes in Temperature
- (c) Mistakes in Chaining

Lesson #3

III. Measurements of Difference in Elevation

A. Curvature of the Earth; Refraction

B. Methods

- (a) Direct or Differential Leveling
- (b) Indirect or Trigonometric Leveling
- (c) Profile Leveling

C. Direct Leveling

- (a) General Applications
- (b) Instruments
- (c) Leveling Rods
- (d) Reading the Rod

Lesson #4

IV. Differential and Profile Leveling

A. Definitions

B. Procedure

C. Common Mistakes in Leveling

D. Errors in Ordinary Leveling

- (a) Imperfect Adjustment of Instruments
- (b) Earth's Curvature and Atmospheric Refraction
- (c) Rod not Standard Length
- (d) Rod not Held Plumb
- (e) Faulty Turning Points
- (f) Bubble not Exactly Centered at Time of Reading

Course Outline (Continued)

Unit V - Surveying (Continued)

Lesson #4 (Continued)

- E. Profile Leveling
- F. Vertical Curves
 - (a) Plotting Profiles
 - (b) Fixing Grades
 - (c) Borrow Pit Cross-sections
 - (d) Cut and Fill Stakes
 - (e) Cross Sections of Roadway
 - (f) Plotting and Computing Earthwork

Lesson #5

- V. Measurements of Angles and Direction
 - A. General Discussion
 - B. Magnetic Meridian
 - C. Magnetic Declination
 - D. Angles and Direction
 - E. Bearings
 - F. Azimuths
 - G. Deflection Angles
 - H. Traverses
 - I. Triangulation
 - J. Surveyor's Compass

Lesson #6

- VI. The Engineer's Transit
 - A. General Description
 - (a) Telescope
 - (b) Verniers
 - (c) Graduated Circles
 - B. Use of Transit
 - (a) Setting up the Transit
 - (b) Measuring a Horizontal Angle
 - (c) Common Mistakes
 - (d) Measuring an Angle by Repetition
 - (e) Measuring a Vertical Angle
 - (f) Prolonging a Straight Line

Lesson #7

- VII. Transit Tape Surveys
 - A. General Description
 - B. Transit Surveys
 - C. Radiation
 - D. Intersection
 - E. Traversing
 - (a) Deflection-angle Traverse
 - (b) Azimuth Traverse
 - (c) Traverse Computations
 - (d) Checking Traverses
 - (e) Referencing Transit Stations

Course Outline (Continued)

Unit V - Surveying (Continued)

Lesson #8

- VIII. Stadia Surveying
 - A. Principle of the Stadia
 - B. Inclined Sights

Lesson #9

- IX. Map Drafting
 - A. Drawings of Surveying
 - a. Vicinity Map
 - b. Typical Sections
 - c. Standards

Lesson #10

- X. Calculation of Areas of Land
 - A. Methods of Determining Area
 - B. Determining Plane Areas by Use of Coordinates

Lesson #11

- XI. Topographic Surveying
 - A. General Field Methods (Definition)
 - B. Control
 - (a) Horizontal Control
 - (b) Vertical Control
 - C. Site and Construction Surveys
 - (a) Alignment and Grade
 - D. State Systems of Plane Coordinates

Lesson #12

- XII. Route Surveying
 - A. General (Definition)
 - B. Preliminary Survey
 - (a) Transit-tape-level Method
 - (b) Transit-stadia Method
 - C. Preliminary Profile and Map
 - D. Location Survey: (Paper Location)
 - E. Field Location and Office Work

Lesson #13

- XIII. Construction Surveys
 - A. General (Definition)
 - B. Highways
 - C. Bridges

Lesson #14

- XIV. Curves
 - A. Circular Curves
 - B. Curve Formulas
 - C. Laying Out Curve by Deflection Angles
 - D. Transit Set-ups on Curves
 - E. Transition Curves

Course Outline (Continued)

Lesson #15

XV. Cross-Sections

- A. Form of Cross-Sections
- B. Original Cross-Sections
- C. Final Cross-Section
- D. Cuts and Fills
- E. Setting Slope Stakes
- F. Plotting Cross-Sections
- G. Computations of Cross-Sections
 - (a) Volumes of Earth Work in General
 - (b) Volumes of Borrow Pits
 - (c) Volumes by Average End Areas

Lesson #16

XVI. Land Surveying

- A. Instruments and Methods
- B. Corners and Monuments
- C. Meander Lines
- D. Liability of a Surveyor
- E. Standard Lines
- F. Townships
- G. Sections
- H. Subdivision of Sections

Instructor's Lesson Plans

Unit I - Arithmetic

- Lesson Plan 1 - Whole Numbers
- Lesson Plan 2 - Common Fractions
- Lesson Plan 3 - Mixed Numbers
- Lesson Plan 4 - Decimal Fractions and Conversions
- Lesson Plan 5 - Percentage, Ratio and Proportion, and Square Roots
- Lesson Plan 6 - Measurements
- Lesson Plan 7 - Plane Figures
- Lesson Plan 8 - Solid Figures

- Class Problem #1 - Whole Numbers and Common Fractions
- Class Problem #2 - Percentages, Ratio and Proportion, Square Root and Measurements
- Class Problem #3 - Land Measures, Plane Figures, and Solid Figures

- Examination #1
- Examination #2

Answer Sheet

HIGHWAY ENGINEERING AIDE
TRAINING PROGRAM
Trade Extension

C Page 14 of 15

Course Outline (Continued)

Unit II - Algebra

- Lesson Plan 1 - Introduction to Algebra
- Lesson Plan 2 - General Numbers
- Lesson Plan 3 - Solving Problems by Equations
- Lesson Plan 4 - Signed Numbers
- Lesson Plan 5 - Graphs
- Lesson Plan 6 - Equations with two Unknowns
- Lesson Plan 7 - Product and Quotient of Literal Numbers
- Lesson Plan 8 - Special Products and Factors
- Lesson Plan 9 - Using Algebraic Fractions in Formulas and Equations
- Lesson Plan 10 - Ratio and Proportion
- Lesson Plan 11 - Square Roots and Radicals
- Lesson Plan 12 - Quadratic Equations
- Lesson Plan 13 - Quadratic Systems
- Lesson Plan 14 - Logarithms
- Lesson Plan 15 - Progressions and the Binomial Theorem

Unit III - Geometry and Trigonometry

- Lesson Plan 1 - Introduction to Mensuration
- Lesson Plan 2 - Triangles
- Lesson Plan 3 - Use of Constants, Area of Quadrilaterals, and Scale Drawing
- Lesson Plan 4 - The Circle and Ellipse
- Lesson Plan 5 - Solid Figures and Volumes
- Lesson Plan 6 - Basic Geometric Constructions Involving Lines
- Lesson Plan 7 - Constructions Involving Circles
- Lesson Plan 8 - Miscellaneous Constructions
- Lesson Plan 9 - Introduction of Trigonometry
- Lesson Plan 10 - The Oblique Triangle

- Test on Unit 3 Lesson Plans 1, 2, and 3
- Test on Unit 3 Lesson Plans 4 and 5
- Test on Unit 3 Lesson Plans 6, 7, and 8
- Test on Unit 3 Lesson Plans 9 and 10

Answer Sheet

Unit V - Surveying

- Lesson #1 - Field and Office Work
- Lesson #2 - Measurement of Distances
- Lesson #3 - Measurements of Difference in Elevation

Course Outline (Continued)

Unit V - Surveying (Surveying)

- Lesson #4 - Differential and Profile Leveling
- Lesson #5 - Measurements of Angles and Directions
- Lesson #6 - The Engineer's Transit
- Lesson #7 - Transit Tape Surveys
- Lesson #8 - Stadia Surveying
- Lesson #9 - Map Drafting
- Lesson #10 - Calculation of Areas of Land
- Lesson #11 - Topographic Surveying
- Lesson #12 - Route Surveying
- Lesson #13 - Construction Surveys
- Lesson #14 - Curves

BUSINESS LETTER WRITING
FOR INDUSTRIAL SUPERVISORS
Supervisory Personnel
Development

C Page 1 of 3

The Business Letter Writing For Industrial Supervisors Course was written in 1959. It is available in book form. This book consists of 13 Lessons. An Instructor's Guide is also available.

The references for this course are listed below.

Title	Source
Hagar, Stewart, and Hutchinson BUSINESS ENGLISH AND LETTER WRITING	McGraw-Hill Book Company, Inc. 330 West 42nd Street New York 36, New York
Robertson and Carmichael, BUSINESS LETTER ENGLISH, 2nd Edition	McGraw-Hill Book Company, Inc. 330 West 42nd Street New York 36, New York
Gavin and Hutchinson, REFERENCE MANUAL FOR STENOGRAPHERS AND TYPISTS, Second Edition	McGraw-Hill Book Company, Inc. 330 West 42nd Street New York 36, New York
Lucy Graves Mayo, COMMUNICATIONS HANDBOOK FOR SECRETARIES	McGraw-Hill Book Company, Inc. 330 West 42nd Street New York 36, New York

A detailed outline of the Business Letter Writing For Industrial Supervisors Course follows:

- Lesson I: Business Letter Writing
- A. Past
 - B. Present
 - C. Future
- Lesson II: Why We Write Business Letters
- A. Four Basic "musts" of business correspondence
 - 1. Clearness
 - 2. Completeness
 - 3. Conciseness
 - 4. Courtesy
- Lesson III: Overhead and the Business Letter
- The Words We Use
- A. Master-Bailiff words and phrases
 - B. Overworked words and phrases
 - C. Unnecessary repetitions
 - D. Negative Words
- Lesson IV: Business Letter Format
- A. The Parts of a Business Letter
 - 1. The heading
 - 2. The date line
 - 3. The inside address
 - 4. The attention line

Course Outline (Continued)

5. The salutation
 6. The subject line
 7. The body of the letter
 8. The complimentary closing
 9. The signature lines
 10. Identification initials
 11. Enclosure reference
- Lesson V: Styles in Business Letters
- A. Style accessories
 - B. Eight styles for study
 1. Blocked
 2. Semiblocked
 3. Indented
 4. Full blocked
 5. Two-page Modified Block
 6. Hanging-indented
 7. Square-blocked
 8. The Simplified Letter
- Lesson VI: Paragraphing and Business Letter
- A. The opening paragraph
 - B. Paragraph or paragraphs containing the message
 - C. The closing paragraph containing words of leave-taking
- Lesson VII: Writing the Letter
- A. Classification of business letters
 - B. A specimen formula
- Lesson VIII: Credit and Collection Letters
- A. The three credit "C's"
 - B. Letters granting credit
 - C. Letters refusing credit
 - D. Classification of credit risks
 - E. Four collection letters
- Lesson IX: Order Letters
- A. A formula for order letters
 - B. Acknowledgments of routine orders
 1. Faulty orders
 2. Unavoidable delays in shipment
 3. Welcome to new customers
- Lesson X: Inquiries and Requests
- A. Solicited inquiries
 - B. Unsolicited inquiries
 - C. Mutual-inquiry requests
- Lesson XI: Claim and Adjustment Letters
- A. Formula for a claim letter
 - B. Formula for granting an adjustment
 - C. Formula for refusing a claim
 - D. Formula for a compromise settlement offer

BUSINESS LETTER WRITING
FOR INDUSTRIAL SUPERVISORS
Supervisory Personnel
Development

C Page 3 of 3

Course Outline (Continued)

Lesson XII: Sales Letters

- A. The relation between sales and human behavior
- B. The general principles applicable to sales letters
- C. The letter plan designed especially for sales letters
 - 1. Arouse interest
 - 2. Create desire
 - 3. Convince the prospect
 - 4. Get action

Lesson XIII: Form Letters

CONFERENCE LEADERSHIP
Supervisory Personnel
Development

C Page 1 of 5

The Conference Leadership material was written in 1958. The material is complete and bound in one book. The Hand Outs can be ordered separately if needed.

There are no references. A detailed course outline follows.

Introduction

I. The Conference

1. Kinds of conferences
2. The training conference - definitions
 - a. What it is not
 - b. A typical sequence of events
3. Conference training and vocational education
4. Comparison of conference methods
5. The "J" programs
 - a. Canned vs. tailored programs
6. Executive development programs
7. Definition of terms
8. Public relation values to schools
 - a. Supervisor role in hiring
 - b. A definite useful service to industry
 - c. Entree to other programs

II. The Conference Leader

A. The leader

1. A social skill
2. Personal values
3. Duties of the leader
4. Techniques
5. Need for continuous study, practice and self evaluation
6. Not to expert

B. The Conferee

1. Line and staff
2. Experience and its effect on the conference
3. Typical characters and how to handle
4. Seating
5. Scheduling of conference
6. One or more companies
7. Size of the groups

III. Preparing for a Conference

A. The Outline

1. How to go about making it - forms
2. Formulation question and objectives
3. Notes in margin
4. Plan what is to be charted
 - a. Chart headings
5. Plan the visual aids

Course Outline (Continued)

III. Preparing for a Conference (Continued)

6. Techniques in planning group participation
 - a. Role playing
 - b. Buzz sessions
 - c. Quiz sheets
 - d. Evaluate by rating
 - e. Hand out
 - f. Film case
7. Your source material
 - a. Current magazines
 - b. Other reports
 - c. Basic reading library (hand out list)
 - d. Files - by block and by subject (helpful sources)
8. Learn your outline
9. Samples of conference outlines
- B. Aids and Devices
 1. The chart of blackboard
 2. Projector equipment and films
 3. Charts, graphs, etc.
 4. Flannel Board
 5. Balancing ring
- C. Physical Arrangements
 1. The room
 - a. Free of distraction
 - b. Near comfort facilities
 2. Tables
 - a. Destroy classroom atmosphere
 - b. Ways of arranging table
 - c. Who arranges the room
 3. Name cards - in advance
 - a. How to insert names
 - b. Do not move around
 - c. Used for enrollment purpose.
 4. Projector, extension cord, etc.
 5. Charts, paper, etc.
 6. Leaders position, rostrum - affect on seating
 7. Time needed to make arrangements
 8. Plant pass

IV. Conducting a Conference

- A. First Conference - getting started
 1. Introduction - yourself by a Company or School Official - information about yourself and others
 2. Graphic demonstration (3 ring)
 3. Swapping dollars

Course Outline (Continued)

- IV. Conducting a Conference (Continued)
4. Outline responsibility - yours and theirs - cards
 5. Place cards - do not switch
 6. Hand out session titles
 7. Conference mood
 - B. Keeping on the track
 - C. Chart objectives and first question
 - D. Pacing the conference
 - E. Conference situations
 - F. Key probing words
 - G. To initiate, stimulate, and control discussion
 - H. Draw all into discussion
 - I. Start and stop on time
 - J. Deal with principles not personalities
 - K. Gain and hold confidence of group
 - L. Remember minority groups
 - M. Do not expert
 - N. Presents information or cases in the third person
 - O. Do not let conference become too academic
 - P. Gestures and movements - redirect thinking
 - Q. Humor and its use
 - R. Evaluates by order of preference not voting
 - S. Side tracking a subject for future consideration
 - T. Avoid the feeling that all you're trying to do is develop a list
 - U. Hints on overcoming "stage fright"
 - V. Rate instead of voting
 - W. Mother Hubbard terms
 - X. Evaluation
 1. Self
 2. Rating sheets
 3. Participation charts
 4. Group reaction
 5. For the company
 6. Any repeats?
 7. Value to your school
 8. Work shop and other evaluators
 9. The conference report
 - Y. Visitors
 - Z. Break after one hour
 - AA. Common weakness of inexperienced conference leaders
 1. Spends too much time getting definition
 2. Votes on importance of contribution
 3. Opposite or reverse charting contribution
 4. Does not reach conclusion
 5. Becomes a slave to rapid contributions
 6. Starts with an excessive group
 7. Drives too hard
 8. Looses control - fails to plan closing of session
 9. Participants freeze
 10. Thrown by Mother Hubbard

Course Outline (Continued)

V. The Conference Report

1. What it is and why write it
2. What information to and not to include
3. Mechanics of writing and binding
4. Copies to print
5. Piece meal type of report
6. What the bound volume should include

VI. Scope of Supervisory Personnel Development

1. Interest makes it broad
2. Functions of local school and State Department of Education
3. Canned vs. tailored
4. Methods
 - a. Conference series
 - b. Workshop
 - c. Panels
 - d. Symposiums
 - e. Question and answer method
 - f. Case study
 - g. Brainstorming
 - h. Lecture
5. Typical content of programs
 - a. Now and expected needs
 - b. Skill development - heavy participation
6. Typical prospects for supervisory personnel development programs
7. Approaching industry
8. Local and national organizations that are helpful
9. "Call Staff" and its use
10. The "Executive Development" idea

VII. The Forty-hour Workshop

1. How material is presented
 - a. Hand outs and binders
2. Topics for practice conferences
3. Time schedule
4. Evaluation
5. Practice report writing
6. Use of outside help
7. Displace aids and references
8. The film "All I Need is a Conference"
9. Demonstrate techniques
10. State specific objectives for the workshop
11. Use variety of techniques
12. Surplus stock of material
13. Prompt on first practice session

Course Outline (Continued)

Unit VII (Continued)

14. Round-robin idea
15. Selection of participants
16. Reversing the procedure
17. Participants reach a level of experting

Appendix

Slides to be used with this course are also available.
There are 54 slides in a set at \$1.00 per slide.

ECONOMICS FOR INDUSTRIAL
SUPERVISORS
Supervisory Personnel
Development

C Page 1 of 1

Industrial Economics was written in 1964. It is available in bound form in one book.

The reference for the Industrial Economics Course is the following:

Title	Source
INDUSTRY AND THE AMERICAN ECONOMY (11 booklets)	National Association of Manufacturers Education Department 2 East 48th Street New York 17, New York

A detailed outline of the Industrial Economics Course follows:

Session I - Introduction to Free Competitive Enterprise

Session II - What Makes an Economy Grow

Session III - The Role of Competition

Session IV - The Role of Marketing

Session V - Incentive and its Results

Session VI - The Role of Organization in our Economy

Session VII - Government's Role in our Economy

THE EXTEMPORANEOUS TALK
FOR INDUSTRIAL SUPERVISORS
Supervisory Personnel
Development

C Page 1 of 2

The Extemporaneous Talk for Industrial Supervisors was published in 1959. It is available in book form.

A detailed outline of the Highway Economics Course follows:

Preface

Session I - Introducing the Economic System

- 1 - Business and People
- 2 - Money's Place in the System
- 3 - Prices and Their Function Under Capitalism
- 4 - Government
- 5 - Other Business (Capital Goods)
- 6 - Summary

Session II - The Performance of the Economy

- A - Introduction
- B - Recessions and Depressions
 - 1 - Cures for Recession
 - 2 - Inflation
 - 3 - Cures for Inflation
- Appendix A - The Special Role of Money and Banks
 - 1 - Money Supply
 - 2 - The Role of Banks
 - 3 - The Control of Banks and the Money Supply

Session III - The Role of Government

- A - Introduction
- B - Government Spending
 - 1 - The "Comparative Benefit" Principle
 - 2 - Expanding Government's Service
 - 3 - Is Government Spending Mere Waste?
- C - Taxes
 - 1 - The "Benefit" Principle
 - 2 - The "Ability-to-pay" Principle
- D - Government Debts and Borrowing
 - 1 - Why Borrow?
 - 2 - The Real Dangers and Limits of Debt

Session IV - The Highway Dollar--Source

- A - Introduction
- B - Sources of Tax Income
 - 1 - The Gasoline Tax and Its Use
 - 2 - Motor Vehicle Tax
 - 3 - Other Taxes
 - 4 - Other Tax Idea
- C - Dedication and Limitations
 - 1 - Economic Limitations
 - 2 - The Nature of Dedicated Revenues

Course Outline (Continued)

Session IV - (Continued)

- D - Other Sources of Income
 - 1 - Mineral Lands
 - 2 - General Fund Appropriations
 - 3 - Federal Grants-in-aid
 - 4 - The Interstate System
- E - Borrowing for Highways
 - 1 - The Reason for Borrowing
 - 2 - To borrow or not to borrow
- Appendix B - Bonds and the Bond Market
 - 1 - The Borrowing Process
 - 2 - Interest, the Cost of Borrowing
- F - Summary
 - 1 - A Recent History
 - 2 - The Long Range Highway Program
 - 3 - Highway and the Economy

Session V - The Highway Dollar, Expenditures

- A - Introduction
- B - Construction
 - 1 - Paying for Construction
 - 2 - Contracting and Construction Work
- C - Maintenance
- D - Debt
 - 1 - Who Pays for the Debt
- E - Other Costs and Expenditure
 - 1 - State Aid to Parishes and Cities
 - 2 - Employees and Spending
- F - Collecting from Highways

Table 1 - Detail of Resources and Expenditures, Highway Department

Table 2 - Encumbered Funds, by Purpose

Table 3 - Estimates of Highway User Taxes Dedicated To Highway Department (In Thousands)

Table 4 - State Aid to Parishes

INDUSTRIAL HOUSEKEEPING
Supervisory Personnel
Development

C Page 1 of 1

Industrial Housekeeping was written in 1962. It is available in bound form in one book.

A detailed outline of Industrial Housekeeping follows:

- Session I - Indoctrination and Overview of Program
Definitions - Policies - Practices - Results
- Session II - Housekeeping and You
- Session III - Housekeeping and The Company
- Session IV - Fire Protection and Good Housekeeping
- Session V - What Can We (The Company and The Employee)
Do To Improve and Maintain a Good Housekeeping
Program?

INDUSTRIAL RELATIONS FOR
SUPERVISORY PERSONNEL
Supervisory Personnel
Development

C Page 1 of 1

Industrial Relations for Supervisory Personnel was written in 1965 and is available in bound form in one book. It is composed of eight sessions.

A detailed outline of Industrial Relations for Supervisory Personnel follows:

- The First Session - History and Principles of Industrial Relations
- The Second Session - Personnel Management
- The Third Session - Employee Training
- The Fourth Session - Joint Relations and Collective Bargaining
- The Fifth Session - Union Security, Management Rights, and Arbitration
- The Sixth Session - The Labor Union in the Plant
- The Seventh Session - Wage and Salary Administration
- The Eighth Session - Seniority, Job Evaluation, and Merit Rating

INTERVIEWING FOR
SUPERVISORY PERSONNEL
Supervisory Personnel
Development

C Page 1 of 1

Interviewing for Supervisory Personnel was written in 1963.
It is available in bound form in one book.

A detailed outline of Interviewing For Supervisory Personnel follows:

- The First Session - Interviewing Responsibilities of Supervisors
- The Second Session - Counseling Interview
- The Third Session - The Employment Interview (Background and Planning)
- The Fourth Session - The Employment Interview (Conducting and Evaluating)
- The Fifth Session - The Performance Interview
- The Sixth Session - The Corrective Interview
- The Seventh Session - Other Interviews (The Exit Interview, The Stress Interview, The Group Interview, The Board Interview, and the Grievance Interview)
- The Eighth Session - Practice Interviewing

INTRODUCTION TO MANAGEMENT
FOR INDUSTRIAL SUPERVISORS
Supervisory Personnel
Development

C Page 1 of 2

The Introduction to Management for Industrial Supervisors Course was written in 1964 and is available in bound books.

A detailed course outline follows.

Session I History of Management

Session II Organizational Structure

Session III Major Responsibilities of Management

Session IV Organized Labor

Session V Leadership

Bibliography

Handout Material

Handout 1 Course Contents

Handout 2 Objectives of Management

Handout 3 Principles of Scientific Management

Handout 4 Summarization of the Hawthorne Experiment

Handout 5 Characteristics of the Corporation

Handout 6 Corporate Form of Organization

Handout 7 Authority, Responsibility, and Delegation

Handout 8 Line-Type Organization

Handout 9 Line and Staff Organizational Structure

Handout 10 Planning--A Function of Management

Handout 11 Organizing--A Function of Management

REPORT WRITING
Supervisory Personnel
Development

C Page 1 of 1

Report Writing was written in 1963. It is available in bound form in one book.

A detailed outline of Report Writing follows:

- The First Session - The Importance of Report Writing
- The Second Session - The Characteristics of a Good Report
- The Third Session - Organization and Form in Report Writing
- The Fourth Session - The Style of the Report
- The Fifth Session - How to Outline a Report
- The Sixth Session - Writing the Report
- The Seventh Session - The Use of Illustrations and Tables
- The Eighth Session - Problems in Preparing and Writing Reports
- The Ninth Session - The Oral Presentation of a Report
- The Tenth Session - Security Requirements

UNDERSTANDING HUMAN NATURE
Supervisory Personnel
Development

C Page 1 of 4

Understanding Human Nature was written in 1959. It is available in book form. There are eight sessions, each session is bound separately. The ninth book will be the Handouts, Self-tests and Student Summary.

The references for the Understanding Human Nature Course are the following:

UNDERSTANDING HUMAN NATURE
Supervisory Personnel
Development

C Page 2 of 4

A detailed outline of Understanding Human Nature follows:

First Session - People are All alike in Different Ways

- I. People are all the Same
 - A. Popular Generalizations
 - B. Useful Generalizations
 - 1. All Behavior Is Caused
 - 2. All Behavior Is Motivated
 - 3. All Behavior Is Goal-Seeking
 - 4. Self-Actualizing Urge
 - 5. Same Basic Needs
 - 6. Products of Heredity and Environment
- II. People Are All Different
 - 1. Different Bases of Behavior
 - 2. Different Need-Behavior

Second Session - Human Needs - Origin of Behavior

- I. Blueprint and Behavior
- II. Levels of Needs

Third Session - What Makes People The Way They Are?

- I. What Determines Personality?
 - 1. Receptors
 - 2. Connectors
 - 3. Effectors
 - 4. Endocrine Glands

 - 1. Sources of Satisfaction
 - 2. Care in Infancy
 - 3. Examples Set by Parents
 - 4. Treatment by Intimates
 - 5. Demands vs Capacities
 - 6. Success vs Failure
- II. Psychoanalytic Interpretations

Fourth Session - What Makes People the Way They Are (Continued)

- I. Frustration
- II. Significant Traits
- III. Habits--Curse or Blessings?

Fifth Session - Nature and Uses of Motivation

- I. The Nature of Motives
- II. Universal Motives
- III. Applying Motivation

Sixth Session - Attitudes and Morale

- I. Checking Attitudes
- II. How Attitudes Work
 - 1. Imitation
 - 2. Emotional Experiences
 - 3. Informative Experiences
 - 4. Self-Cultivation
- III. Job Aspects Important to Workers
- IV. Team Spirit on the Job
 - 1. Supervisory Relationships
 - 2. Decision Making
 - 3. Clean Communications

Seventh Session - How Working Conditions Affect Human Behavior

- I. The Human Nature of Accidents
 - 1. Vision
 - 2. Age or Length of Service
 - 3. Emotions
 - 4. Mental Ability
 - 5. Impulsiveness
 - 6. Popularity
- II. Working Conditions and Efficiency
 - 1. Visual Conditions
 - 2. Noise Conditions
 - 3. Temperature Conditions
 - 4. Work Hours
 - 5. Rest Pauses
 - 6. Boredom
- III. Human Engineering
 - 1. Information-Receiving
 - 2. Decision-Making
 - 3. Action-Taking

Eighth Session - How Co-Workers Affect Behavior of Each Other

- I. Person-to-Person Behavior

by
Oklahoma State University
1965

FOREWORD

Electrical appliance repair has become important to the American householder and to the American economy as the number of electric motors has multiplied and as automatic controls have become more commonplace. Work performed by the electrical appliance serviceman involves locating trouble, installing new parts, testing the appliance, and making minor adjustments to insure proper functioning of the unit. The serviceman needs a general understanding of the functions of all appliances, although he may develop special competency in one type or "line" of equipment.

The appliance serviceman should have an understanding of good business practices and should know how to get along well with customers. He must be tactful and courteous and should present a neat, clean appearance.

The increase in marriages and population growth will continue to make the demand for appliances high. The complexity of many modern appliances places heavy emphasis upon the need for skilled servicemen to handle problems of malfunction. Capable servicemen with a working knowledge of electricity, electronics, and mechanical devices will find many job opportunities open to them. Preparation for employment through vocational courses should open the way for many job opportunities within the occupation.

The hours allocated in the guide to the various units are merely a suggestion. Active advisory committees should be called upon by the school administrator when arranging courses to meet local conditions in the industry. The course content should be considered flexible enough to meet local appliance shop conditions and the level of the group to be trained.

Pertinent references are given at the end of each Course Unit in this publication. A complete list of references, with the names of authors, titles, publishers, and addresses is given in the Suggested List of Textbooks and References.

Prepared under contractual arrangement with the Oklahoma State University, the material has been reviewed by competent advisory groups. Recognition is given to Maurice W. Roney, Director, School of Industrial Education, for having supervised the development of the content, and to L. Carl Love, Oregon State University, Corvallis, for his assistance as a consultant during the preparation of the guide.

Walter M. Arnold
Assistant Commissioner for
Vocational and Technical Education

TRAINING COURSE FOR ELECTRICAL APPLIANCE SERVICEMAN

Purpose of the Guide

This training guide has been prepared to assist in planning and developing the course of training for workers who expect to find employment in the field of household appliance maintenance and repair. The guide has been organized in a manner to be of maximum value to school administration personnel who are not themselves specialists in the occupation. Sufficient details have been included, however, to provide an outline of instruction for the instructor who will be expected to develop and operate an efficient training program.

No attempt has been made to cover every detail of instruction, but rather to suggest a basic approach to the training of electrical appliance servicemen. The suggested course outline may require modification to meet special needs. The sequence of presentation as well as the final selection of topics for special emphasis should be determined by instructional specialists and will vary, depending upon the needs and background of the trainee group. Supplemental material may be found in the suggested textbooks, references, manufacturers' bulletins and catalogs, and films.

Although this training guide has been developed primarily for use by the Manpower Development and Training Program, it includes instructional material that will help those people involved to develop and advance beyond the basic skill requirements for job application. Much of the related material included in the course outline has been added specifically for the purpose of assisting the trainee to meet the public and to progress beyond the entry level classification.

Job Description

The work of the electrical appliance serviceman requires a knowledge of mechanical and electrical devices such as those used in homes. In the larger cities, the appliance repairman may specialize in certain types of appliance work. However, many small dealers require employees who are competent in the range of jobs normally found in the field of appliance repair. There are many distinctly different types of jobs in this industry; the repairman needs to have some broad understanding of the function of all appliances, although he may develop a special competency in one type of equipment.

The serviceman in this field of work may have a great deal more contact with the public than either the salesman or the management; consequently, the appliance serviceman needs to have some of the abilities of the salesman and some understanding of good business practices. Good public relations are important. Much of the minor repair work of an appliance repairman will be carried on at the customer's home. Good personal habits of cleanliness, promptness, honesty, and courtesy are mandatory.

The demand for trained workers far outweighs the supply; yet there is considerable competition for the good jobs. The average worker can expect earnings of about \$5,700 per year.

Length of Course and Course Units

The training course as outlined covers a period of 28 weeks with a total of 840 hours of class instruction and laboratory practice. Instruction is planned for 6 hours per day and 5 days per week.

<u>Unit</u>	<u>Title</u>	<u>Suggested class hours</u>	<u>Suggested laboratory hours</u>
I.	Related Instruction	110	0
II.	Fundamentals of Electricity	40	110
III.	Basic Controls and Electronic Components	50	140
IV.	Resistance Heating Appliances	10	40
V.	Motors for Electric Appliances	15	60
VI.	Motor Driven Appliances	10	100
VII.	Refrigeration	25	100
VIII.	Miscellaneous Operations	8	22
	Sub-total	268	572
			<u>268</u>
		Total	840

Qualifications of Trainees

Generally, the equivalent of a high school education is expected of candidates prior to training. This is important because the serviceman is actually representing his organization to the public. Since public relations are so important, the trainee is expected to have the ability to greet customers on a friendly, yet business-like basis. Being a good listener, while not mandatory, may be exceedingly helpful in providing clues for diagnosing existing appliance problems.

Trainees are expected to possess enough initiative to work out the specific servicing problems. Workers in this field, which is becoming more technical each year, are expected to possess a continuing desire to learn about new products, new installations, new tools, and new testing equipment.

Teacher Qualifications

A teacher for this program must have experience in electrical appliance repair and preferably, should have business experience as an owner or operator of an appliance repair service.

If the person selected for this teaching assignment has no teaching experience, he should be given teacher education including fundamental principles of lesson planning and presentation.

Suggestions for the Organization of Instruction

The total program in this guide is intended to develop a skill-level which will qualify individuals for employment. While this is the major objective, the program is also designed to provide the trainee with a background of related material that will help him develop versatility and enable him to meet the changing requirements in the appliance service field.

Laboratory experiences, as well as classroom instruction, should be carefully selected to give the trainee as many varied experiences as possible. When the training program is being organized the instructor should evaluate the total experiences listed in view of loca' requirements.

The allocation of hours to each unit of instruction serves to indicate the relative emphasis to be placed on the units. However, this program was designed to represent a typical situation, and changes in the distribution of time may be necessary to adapt the program to local conditions and to the background of the group in training. The sequence of instructional units shown in the outline may be varied in any way. For example: the unit on Related Instruction may be spread throughout the course in one or two weekly sessions. Further, the ratio of classroom time to actual shop practice should be left to the discretion of the instructor.

This training guide was designed for a class of 20 persons, but the optimum trainee-teacher ratio in the laboratory would be about 10 to 1.

Course Unit I

RELATED INSTRUCTION

Training Time

Classroom, 110 hrs; laboratory, 0 hours

Objectives

To orient trainees to the nature and scope of the electrical appliance serviceman's work and to provide certain specialized skills trainees will need for successful employment.

To provide selected skills in mathematics, business English, and business practices.

Unit Outline

- A. Orientation
 - 1. Class procedure
 - 2. Methods of evaluating progress
 - 3. Safety in industry
 - 4. How to use parts and service manuals
- B. Basic Mathematics
 - 1. Definition of terms
 - 2. Using fractions and decimals
 - 3. Shop computations involving measurement and conversion factors
- C. Business English
 - 1. Spelling
 - 2. Use of words
 - 3. Sentence structure
 - 4. Composition
- D. Business Practices
 - 1. Public relations
 - 2. Salesmanship

Parkhurst, Charles Chandler. English for Business, 4th Edition.

See SUGGESTED LIST OF TEXTBOOKS AND REFERENCES for complete details on ordering books

Course Unit II

FUNDAMENTALS OF ELECTRICITY

Training Time

Classroom, 40 hrs; laboratory, 110 hours

Objectives

To develop an understanding of basic electrical theory, use of testing equipment, and safety relating thereto.

Unit Outline

- A. Introduction to electricity
- B. Definitions and explanations of terms
- C. Discussion of atomic structure
- D. Discussion of the flow of electricity
- E. Explanation of electrical symbols
- F. A discussion of the electrical circuit and Ohm's Law
- G. Introduction to Kirchhoff's Law
- H. Explanation of testing equipment
- I. Use, care, and safety of tools and testing instruments
- J. Introduction to future appliances
 1. Dielectric heating
 2. High frequency heating
 3. Electric devices

Suggested Laboratory Exercises

1. Exercises in reading electrical symbols
2. Problems in electrical circuitry involving Ohm's Law
3. Exercises in drawing involving the use of electrical symbols
4. Analysis of electrical devices involving the use of test equipment

References

Graham, Frank Duncan. Audel's New Electric Library.
Suffern, M. G. Basic Electrical Principles.

Course Unit III

BASIC CONTROLS AND COMPONENTS

Training Time

Classroom, 50 hrs; laboratory, 140 hours

Objectives

To provide understanding of principles and practices in the repair and replacement of electro-mechanical sensing devices and controllers.

Unit Outline

- A. Introduction to theory of electronics
- B. Definition and explanation of terms
- C. Electronic symbols
- D. Identification of schematic drawings
- E. Manual switching
- F. Electro-mechanical switching devices
- G. Electric timers
- H. Use of thermostats
- I. Methods of speed control

Suggested Laboratory Exercises

- 1. Locating basic controls from a schematic drawing
- 2. Troubleshooting controls with power off
- 3. Testing controls while in operation
- 4. Analysis of machine controls while operating with full load or overload
- 5. Precautions to be taken during removal and replacement of controls
- 6. Analysis of whether to repair or replace specific controls

References

Graham, Frank Duncan. Audel's New Electric Library.
Schweitzer, Gerald. Basis of Fractional Horsepower Motors & Repair.
Westinghouse. Factory Testing of Electrical Apparatus.

Course Unit IV

RESISTANCE HEATING APPLIANCES

Training Time

Classroom, 10 hrs; laboratory, 40 hours

Objectives

To provide students with the necessary knowledge and skills in the operation and repair of resistance heating appliances.

Unit Outline

- A. Visual examination while in operation
- B. Theory of resistance heating
- C. Discussion of preventive maintenance
- D. Use of precision instruments for calculating proper operation
- E. Importance of visualizing electrical circuits for troubleshooting
- F. Aspects of installation
- G. Preparing work orders for repair
- H. Discussion of nomenclature of parts

Suggested Laboratory Exercises

1. Construct schematic diagrams for tracing complete electrical circuit
2. Remove and replace heating assembly
3. Analyze power requirements and check rated wattage against manufacturer's rating
4. Calculate size of wire needed to furnish power
5. Study wire sizes required by the electrical code
6. Become familiar with local requirements concerning a disconnect beyond main power panel
7. Ground appliances and use instruments to analyze whether or not connections are adequate
8. Make sketch for each different type of machine, showing theory of operation

References

Brockwell, P. T. How to Repair Household Appliances.
Brockwell, P. T. Major Appliance Service.
Gabbert, William. Electrical Appliance Service Manual.
Tricomi, Ernest. How to Repair Major Appliances.

Course Unit V

MOTORS FOR ELECTRIC APPLIANCES

Training Time

Classroom, 15 hrs; laboratory, 60 hours

Objectives

To teach the students the theory, operation, and repair of motors for electrical appliances.

Unit Outline

- A. Advantages and disadvantages of specific types of motors
- B. Details of construction
- C. Theory of operation
- D. Care during disassembly and assembly
- E. Preventive maintenance to extend the life time of specific types of operation
- F. General points of attention during troubleshooting
- G. When to repair or to replace electric motor parts or complete units
- H. Discussion of nomenclature of parts

Suggested Laboratory Exercises

1. Complete a schematic diagram of specific types of motors showing complete electrical circuit
2. Study faulty motors of specific types and locate source of trouble
3. Conduct tests of faulty motors with power off
4. Isolate trouble in specific motors with power on
5. Remove and clean complete motor units
6. Explain procedures for examining and correcting end-play
7. Study theory of controlling rotation of specific motors
8. Make safety analysis of electrical motors.

Graham, Frank Duncan. Audel's New Automobile Guide for Mechanic Operations and Servicemen.
Green, Phillip T. Electrical Testing & Troubleshooting.
McCullough, William Wallace. Electric Motor Maintenance.
Schweitzer, Gerald. Basis of Fractional Horsepower Motors & Repair.

Course Unit VI

MOTOR DRIVEN APPLIANCES

Training Time

Classroom, 10 hrs; laboratory, 100 hours

Objectives

To provide the students with the knowledge and skills needed in troubleshooting and repairing specific fractional-horsepower electric units.

Unit Outline

- A. Theory of operation of specific units
- B. Symptoms preceding trouble
- C. Efficiency in methods of troubleshooting
- D. Advantages and disadvantages in repair or replacement
- E. Introduction to power transfer assemblies
- F. Discussion of nomenclature of parts

Suggested Laboratory Exercises

- 1. Make a list and name main parts of specific units
- 2. Analyze vee belt for replacement
- 3. Replace specific transmission gears
- 4. Analyze and troubleshooting driving mechanism
- 5. Replace accessories
- 6. Study unit in operation for optimum service
- 7. Make approved installations of specific units

References

Tricomi, Ernest. How To Repair Major Appliances.

Course Unit VII

REFRIGERATION

Training Time

Classroom, 25 hrs; laboratory, 100 hours

Objectives

To acquaint the students with the basic theory of refrigeration and the approved methods of diagnosing trouble and replacing components.

Unit Outline

- A. Basic theory of refrigeration
- B. Definition of the components and their function in a refrigeration system
- C. Explanation and importance of making a diagnosis
- D. Discussion of the tools and instruments used in making a diagnosis
- E. Procedures in changing components

Suggested Laboratory Exercises

1. Make a schematic diagram showing theory of operation
2. Analyze the problem when motor-compressor will not run
3. Study a defective unit which runs continuously
4. Diagnose the problems on a unit with high cabinet temperature
5. Discharge a system preliminary to component replacement
6. Disconnect and prepare the new motor compressor for installation
7. Replace the condenser
8. Install a precooler
9. Repair and replace a freezer coil
10. Install the molecular sieve drier
11. Sweep the system to eliminate moisture
12. Conduct a check for restrictions
13. Test for leaks
14. Charge the system

Course Unit VIII

MISCELLANEOUS OPERATIONS

Training Time

Classroom, 8 hrs; laboratory, 22 hours

Objectives

To develop within the students the ability to lay out sheet metal work and to use tools and equipment associated with sheet metal operations.

Unit Outline

- A. Introduction to sheet metal work
- B. Discussion of metal finishing
- C. Introduction to metal fastening and joining
- D. Use of the soldering iron, propane torch, and oxyacetylene torch
- E. Discussion of the installation survey

Suggested Laboratory Exercises

- 1. Exercises in simple sheet metal operations
- 2. Assignments using the oxyacetylene torch
- 3. Brazing and soldering exercises
- 4. Exercises in refinishing scratches and complete panels
- 5. Complete installation surveys related to customer convenience of operation

References

Ruden, Edward M. and Juan R. Griffin. Basic Oxyacetylene Welding.

TEACHING THE COURSE

Planning the Lesson

The best guide or lesson plan is, of course, one that has been prepared by the individual teacher, based on personal experience and manner of teaching. Although teachers differ in their ways of organizing and coordinating important parts of their presentations, they agree that the purpose of a lesson is effective and meaningful class room instruction.

Written plans may be brief, but the good teacher will know before the class starts:

1. The goals or objectives of the lesson - the kind of learning desired
2. The outline and suggested time schedule for the lesson, including:
 - a. An interest approach - a way to introduce the lesson, to capture the interest of the trainees and to direct their attention to the lesson's goals or objectives
 - b. Activities which will involve the trainees in discovering new facts and principles, solving realistic problems, or practicing skills
 - c. A way to summarize the lesson - to help trainees arrive at some valid conclusions and/or to evaluate the extent to which lesson goals have been achieved
3. The subject matter content - the facts and principles or main ideas to be brought out in the lesson
4. The teaching materials and references to be used

Training Facility Considerations

It is the purpose of this guide to describe a typical training facility, see Appendix D, that may be adapted to meet local requirements. The physical layout, space, machines, equipment, and tool lists, contained as Appendixes A, B, and C, should be considered minimum requirements for an optimum program; however, the specialists responsible for particular programs may wish to make some substitutions, deletions, or additions to suit individual needs. In the list of equipment, estimated prices have been included to indicate quality requirements. Should it be advisable to order from the equipment list, more detailed specifications will be required for purchase orders.

The laboratory should contain the necessary electrical, hot water, cold water, sewer, and gas outlets. Glare-free lighting with an illumination of approximately 50-foot candles at work table height is recommended. An attempt has been made to arrange the work stations to permit at least three men to work together in repairing or analyzing each large appliance.

The spray booth and the welding area should be connected to exhaust fans capable of providing good ventilation. It is advisable to check with the local building code for specifications.

The training facility and items related thereto, which are included as Appendixes A through E, are designed for a class of 20 trainees.

Criteria for Evaluating Trainee Readiness for Employment

The criteria which serve as guides in determining whether the trainee is ready for employment as an electrical appliance serviceman may be more stringent than in some other occupations. However, some understanding and insight into how to provide various services are of such importance that every attempt should be made to evaluate trainee progress.

The use of various evaluative devices is necessary for the teacher and the trainee to accumulate objective information about the growth of the trainee. The following kinds of competencies are important to develop or to strengthen during the training program:

A. Personal qualities

1. Courtesy, friendliness, and tact in dealing with supervisors, fellow workers, and the general public
2. Acceptable appearance - good grooming, cleanliness and neatness in dress, and sensible choice of clothing
3. Good personal habits in speech, mannerisms, cleanliness, and method of work
4. Acceptable attitudes - calmness in disorganized situations, positive attitude toward work, cooperativeness, willingness to work with others
5. Understanding the role of the electrical appliance repairman

B. Activities showing knowledge, understanding, and skill

1. Demonstrates knowledge of basic electrical appliance repair
2. Understands and conforms to instructions or directions
3. Demonstrates ability to work with minimum immediate supervision
4. Demonstrates the ability to keep repair facilities clean and orderly
5. Demonstrates the ability to maintain hand tools and test equipment used in electrical appliance repair
6. Demonstrates the ability to order electrical appliance repair materials and to keep records on electrical supplies
7. Demonstrates the ability to develop and follow a work plan or schedule
8. Demonstrates understanding of basic safety precautions

SUGGESTED LIST OF FILMS

BALSAM WOOL RESEARCH HOUSE

16 mm, sound, color, 15 minutes

Depicts the results of intricate measurements of heat loss and heat gain in two identical houses built for this experiment. It includes effect of solar energy, basement heating, insulation, efficiency, triple versus double glazing of windows, room temperature studies, calculated heat loss versus actual heat loss, etc.

Wood Conversion Company
Director of Advertising
W-1800 First National Bank Building
St. Paul 1, Minnesota

BASIC ELECTRICITY--THE ELECTRON THEORY

16 mm, sound, 5 minutes

Encyclopedia Britannica Films
65 E. South Water Street
Chicago 1, Illinois

ELECTROMAGNETS

16 mm, sound, black and white, 10 minutes

McGraw-Hill Book Co., Inc.
330 West 42nd Street
New York, N. Y. 10036

ELEMENTS OF ELECTRIC CIRCUITS

16 mm, sound, black and white, 11 minutes

Note: Send directly to appliance manufacturers for training films that will cover specific equipment.

APPENDIX A. SUGGESTED LIST OF MACHINES

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total Price</u>
1	Bench grinder, $\frac{1}{2}$ hp., double arbor, equipped with flexible abrasive belt attachment	\$ 140.00
1	Drill press, $\frac{1}{2}$ inch chuck capacity	300.00
1	Metal lathe & armature under cut	300.00
1	Arc welder, type: transformer, 250 amp. capacity	225.00
1	Spot welder, 220 volt, 60 cycle, 1.5 KVA	175.00
1	Arbor press, 3 ton capacity	115.00
1	Air compressor complete, air delivery @ 175 psi - 4 cu. ft. per min.	500.00
	Total	\$1,755.00

APPENDIX B. SUGGESTED LIST OF TOOLS

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total Price</u>
2	Portable electric drills $\frac{1}{4}$ inch	\$ 60.00
1	Portable electric drill, $\frac{1}{2}$ inch	50.00
1	Bearing puller	7.75
4	Machinist's vise, $3\frac{1}{2}$ inch jaw, $5\frac{1}{2}$ inch max. opening	160.00
1	External growler	40.00
1	Internal growler	35.00
10	Machinist's vises, $2\frac{1}{2}$ inch jaw, $2\frac{1}{2}$ inch max. opening	50.00
20	Soldering guns, 150 watt	116.00
5	Vise grip pliers, 4 inch	8.75
5	Vise grip pliers, 6 inch	12.50
5	Needle nose pliers, 6 inch, curved nose	13.75
2	Pliers, $6\frac{1}{2}$ inch	2.60
2	Pliers, 8 inch	4.00
2	Wire hose-clamp pliers, 7 inch	4.00
2	Sheet metal shears, combination pattern, length of cut, 3 inches	13.00
4	Terminal crimpers	8.00
1	Pipe wrench, 6 inch	2.30
1	Pipe wrench, 8 inch	2.75
1	Pipe wrench, 12 inch	4.00
3	Allen wrench sets, sizes $\frac{5}{64}$ to $\frac{1}{2}$ inch, 7 pieces	3.00
3	Socket sets, $\frac{1}{2}$ " drive, $\frac{7}{16}$ " to $1\frac{1}{4}$ ", 17 pieces	57.00
3	Socket sets, $\frac{1}{4}$ " drive, $\frac{7}{32}$ " to $\frac{7}{16}$ ", 17 pieces	27.00
1	Ball peen hammer, 8 oz.	2.45
1	Ball peen hammer, 12 oz.	2.75
2	Rawhide mallets	4.00
5	Soldering guns, 250 w.	55.00
1	Soldering copper, $\frac{1}{2}$ lb. size	1.25
1	Wire gauge	4.50
1	Micrometer, 0-1 inch	15.00
10	Feeler gauges, .003 to .025	10.00
1	Tap and die set, NC - $\frac{1}{4}$ x 20 to $\frac{3}{4}$ x 10, NF - $\frac{1}{4}$ x 28 to $\frac{3}{4}$ x 16	10.00

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total Price</u>
1	Screw extractor set, for bolts, 3/16 to 1", 6 pieces	\$ 10.00
2	Hacksaws, tubular frame	6.00
20	Individual toolboxes consisting of:	1,770.00
	a. 4 oz. ball peen hammer	
	b. Punch & chisel set, 12 pieces	
	c. Pin punch set, sizes 1/16" to 1/4", 7 pieces	
	d. Set of 3 crescent wrenches, 4, 6, 8, inches	
	e. Set of box-end-open-end wrenches, 1/4" to 1" by 1/16" steps, 13 pieces	
	f. Chain nose plier	
	g. Diagonal plier	
	h. Lineman's plier	
	i. Combination plier, 6 inch	
	j. Water pump plier, 10" length	
	k. Stubby slot-head screwdriver	
	l. Set of screwdrivers, 4, 6, 8, 10 inch	
	m. Stubby phillips screwdriver, tip No. 1	
	n. Set of phillips screwdrivers sizes 0, 1, 2, 3, 4, 6, 8, 10 inch, tip	
	o. Offset screwdriver set, std. tip bit widths - 1/4", 5/16", 3/8", phillips tip 1 & 2, 3-4	
	p. Nutdriver set (7 sizes)	
	q. Test lamp	
	r. Electrician's knife	
	s. Point file	
	t. Hacksaw	
	u. Toolbox	
	Total	\$2,572.35

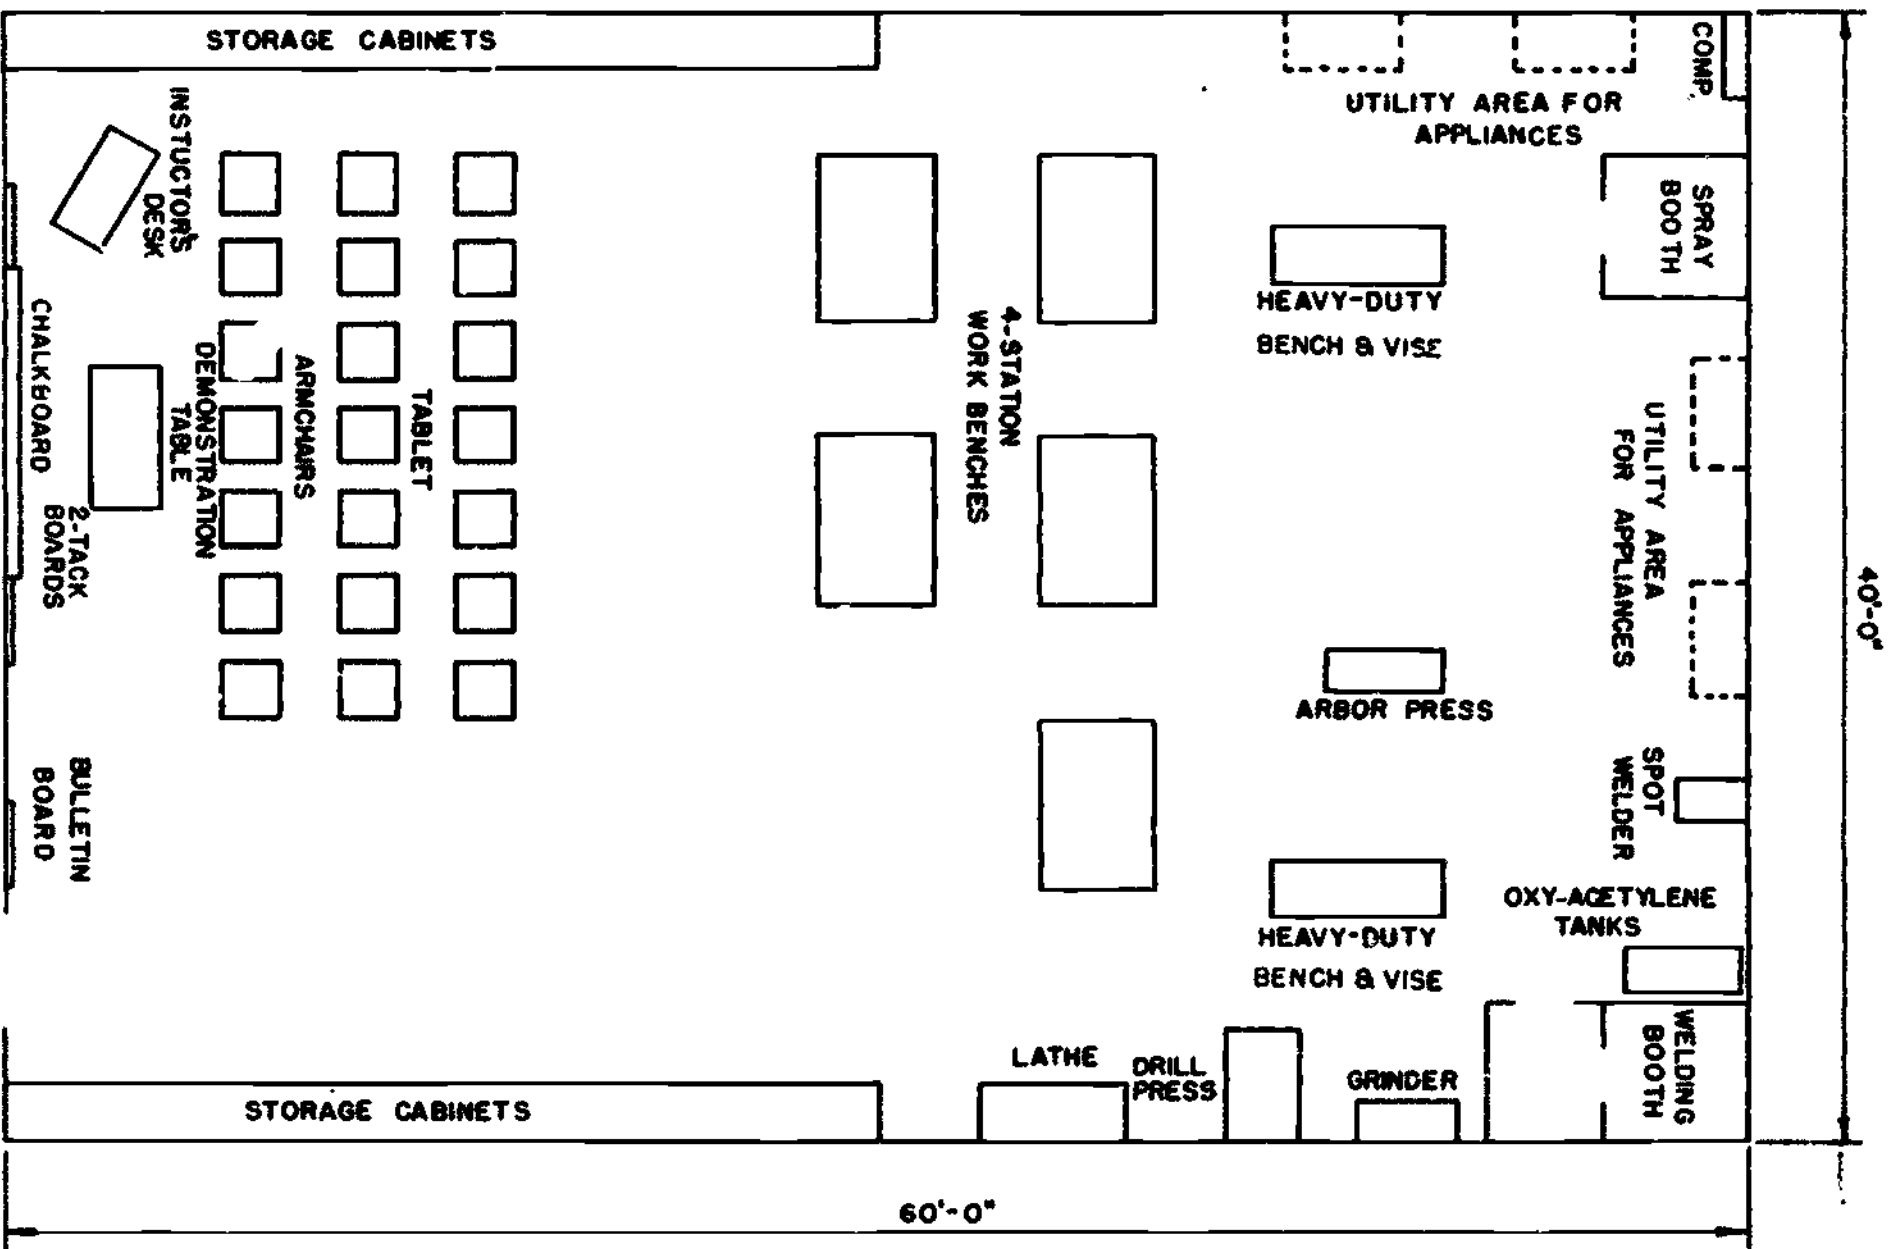

APPENDIX C. SUGGESTED LIST OF EQUIPMENT

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total Price</u>
1	Twist drill set, (big speed, 1/16" to 1/2") 32 drills	\$ 88.00
1	Gas welding and cutting torch complete	95.00
1	Welding booth	75.00
1	Spray booth and exhaust system	500.00
1	Solvent tank	35.00
1	Slop anvil, weight, 30 lbs	30.00
6	Thermometers, scale 100° - 350° Fahrenheit	24.00
2	Thermometers, scale 30° - 212° Fahrenheit	10.00
6	Thermocouples, complete, scale 50° - 1000° Fahrenheit	70.00
1	Recording watt meter, 2 scale	200.00
10	Ammeters, tong type, range: 0-5/15/40/100 A.C. and 0-150/600 V.A.C.	400.00
6	A.C. ammeters, 0 to 10 scale	72.00
6	A.C. volt meters, 0 to 150 scale panel meters	72.00
3	A.C. volt meters, 0 to 250 scale	36.00
10	Multi-meters	400.00
4	Ohm meters, ranges: .1 ohm, 1 ohm, 10 ohms	600.00
20	Test lamps, 100 watt	10.00
5	Electric workbenches, 4 station top 72" x 48"	940.00
20	Armchair desks	300.00
20	Lab stools, 26" high	200.00
1	Chalkboard and equipment	75.00
1	Teacher's desk and chair	139.00
1	Demonstration test bench Includes: 6 storage drawers, 1 file drawer, 8 15 amp. duplex outlets, 1 duplex outlet variable A.C. 0-120 volts @ 5 amps., variable A.C. 0-12 volts from 2 jacks @ 10 amps., variable A.C. 0-24 volts from 2 jacks @ 5 amps., variable D.C. 0-30 volts from 2 jacks @ 5 amps. Complete with panel pilot light, controls and breakers.	420.00

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total Price</u>
1	File cabinet, 3-drawer	\$ 75.00
1	Bulletin board	25.00
2	Storage cabinets, 10 compartment (metal) 30" x 24"	200.00
2	Heavy duty work benches (metal) 48" x 72" x 32"	180.00
1	Moving picture projector, 16 mm, sound	450.00
1	Slide projector, 35 mm	150.00
1	Overhead projector	150.00
	Miscellaneous; manufacturers specialty tools, training aids, films, transparencies, etc.	<u>1,000.00</u>
	Total	\$7,021.00

APPENDIX D

SUGGESTED TRAINING FACILITY

APPENDIX E. SUGGESTED LIST OF EXPENDABLE SUPPLIES

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total group Price</u>
1	Nut & bolt assortment	\$100.00
1	Sheet metal screw assortment	15.00
1 box	Stove bolts, 150 pieces per box, 3/16" x 1/2" and 1/4" x 2"	3.00
4 boxes	Hexagon nuts, 113 pieces per box, 1/4" to 9/16"	15.00
1 box	Cotter pins, 750 pieces per box, size from 1/16" x 1" to 1/8" x 2"	2.50
1 box	Lock washer assortment, 425 pieces per box, size from 3/16" to 9/16"	2.20
5 doz.	Hexagon socket set screws, size from 8-32 x 3/16" to 3/8-16 x 1/2"	7.50
5 lbs.	Steel washers	2.00
10 gal.	Synthetic enamel	60.00
2 gal.	Enamel undercoat	10.00
5 gal.	Paint reducer	4.00
2 gal.	Lacquer thinner	3.50
10 qts.	Lacquer, assorted colors	15.00
10	Assorted paint brushes	10.00
4 gal.	Rust inhibitive metal primer	21.00
10 rolls	Masking tape, 3/4" wide, latex adhesive binding with paper crepe backing	12.50
5 lbs.	Steel wool, grade N, 00 to 2	4.00
1 gal.	Rubbing compound, coarse grade	3.50
2 lbs.	Acid core solder, alloy 40/60, 1/8" diameter	2.50
4 lbs.	Rosin core solder, alloy 50/50, 1/8" diameter	2.50
2 lbs.	Aluminum flux-core solder	7.80
10 oz.	Silver solder, 1100° F. melting range	17.50
1	Silver solder flux, 10 oz. jar	1.20
200 lbs.	Arc welding electrodes. E6011-1/8" and E6018-1/8"	70.00
100 lbs.	Gas welding rods, 1/16" and 1/8"	35.00
20 lbs.	Cast iron rod, 3/16" x 18"	20.00
8 lbs.	Aluminum brazing rod, 1/16" diameter	22.00

<u>Quantity</u>	<u>Description</u>	<u>Estimated Total group Price</u>
16 lbs.	Maganese bronze rod, 3/32" and 1/8" diameter	\$ 25.60
2 lbs.	Cast iron brazing flux	3.00
1 lb.	Aluminum brazing flux	2.75
2 lbs.	All purpose brazing flux	3.00
2 lbs.	Cast iron welding flux	2.40
2 tanks	One of oxygen, one of acetylene	15.00
1	Supply of lubricating oils, greases and materials	30.00
4 doz.	Hacksaw blades, 12 inches long, 24 and 32 teeth per inch	30.00
4 doz.	Assorted files	57.00
4 doz.	Sheets of abrasive paper	4.25
1	Assortm nt of electrical wire	50.00
1	Allowance for used appliances to use for demonstration and training aids	200.00
	Total	\$892.20

DISCRIMINATION PROHIBITED - Title VI of the Civil Rights Act of 1964 states: "No person in the United States shall, on the ground of race, color or national origin, be excluded from participation in, be denied the benefits of, or be subject to discrimination under any program or activity receiving Federal financial assistance." Therefore the Vocational Education program, like every program or activity receiving financial assistance from the Department of Health, Education, and Welfare, must be operated in compliance with this law.

FOREWORD

Throughout American industry almost every product contains metal parts or is processed by machines made of metal. Many of these metal parts are made by machine operators. The largest group of workers in the metal-working trades is made up of machine operators and totals 570,000 persons.

Employment of machine tool operators is expected to rise moderately during the remainder of the 1960's and beyond. Most job opportunities, however, will arise from the need to replace experienced workers who transfer to other jobs, retire or die. Retirements and death (alone) may result in about 12,000 job openings each year.

Technological developments will affect both the number and skill requirements of machine tool operators. The continued development and use of faster and more versatile automatic machine tools will result in greater output per operator. Workers with thorough backgrounds in machine operations, mathematics, blueprint reading, and a good working knowledge of the properties of metals will be better able to adjust to future technological changes and to transfer to new jobs in the machining field.

The purpose of this guide is to assist administrators and teachers in organizing courses and developing course content for programs designed to prepare persons for employment in this occupation.

The guide was prepared for the Division of Vocational and Technical Education under contractual arrangements with Oklahoma State University. Recognition is given to Maurice W. Roney, Professor of Industrial Education, Oklahoma State University, for supervising the guide; to L. Carl Love, Oregon State University, for his assistance as consultant; and to Ollie B. Stone, Machine Shop Instructor, Oklahoma City Public Schools, for gathering the technical content.

This guide contains eleven major units covering 1080 hours of instruction in the classroom and shop. The sequence of instructional units and the hours assigned to each unit are flexible; therefore, both time and content may be adjusted to better meet local needs.

A suggested list of machines, tools, equipment, textbooks, films, and a floor plan of the training facility have been included to assist administrators and teachers in organizing the course. The assistance of local advisory groups should be sought for guidance in selecting equipment and developing content of courses which will best serve the local conditions.

Walter M. Arnold
Assistant Commissioner
for Vocational and
Technical Education

TRAINING COURSE FOR MACHINE TOOL OPERATOR--GENERAL, ENTRY

Purpose of the Guide

This guide has been prepared to assist in planning and developing a training course for machine tool operators. It has been organized in a manner to be of maximum value to school administration personnel who are not themselves specialists in the occupation. Sufficient detail has been included, however, to provide a basic outline of instruction to assist the instructor who will be responsible for the operation of the training program.

The suggestions outlined in the training guide are not intended to delineate instruction in every detail. Supplemental material can be found in the suggested textbooks, references, and films. In addition, the suggested course outline may require modification to meet special needs. The sequence of presentation, as well as the final selection of topics for special emphasis, should be determined by instructional specialists, and may vary according to the needs and background of the trainee group.

Although this training guide has been developed primarily for use in the Manpower Development and Training program, it includes instructional material that goes beyond the development of manipulative exercises to impart simple skills. Some of the related material included in the course outline has been added to assist the trainee to progress beyond the entry level job.

Job Description

Machine tool operators shape metal to precise dimensions by the use of machine tools. Although some operators can operate several tools, most can operate only one or two machine tools. Many operators are essentially machine tenders who perform simple, repetitive operations which can be learned quickly. Other machine tool operators, however, are much more skilled and can perform complex and varied machining operations.

Lathes, drill presses, boring machines, grinding machines, milling machines, and automatic screw machines are among the machine tools used by machine operators. Both skilled and semiskilled operators have job titles based upon the kind of machine they operate, such as engine lathe operator, milling machine operator, and drill press operator.

A typical job of the semiskilled operator is to place rough metal stock in a machine tool on which the speeds, feeds, and operation sequence have already been set by a skilled worker. The operator watches the machine and calls his supervisor when anything unusual happens. Special, easy-to-use gages help him to measure work quickly and accurately. The operator with limited training may make minor adjustments to keep his machine tool operating, but he depends on skilled machining workers for major adjustments. The majority of machine tool operators fit this category and are less skilled than the skilled operators described in the following paragraph.

The work of skilled machine tool operators is similar to that of all-round machinists, except that often it is limited to a single type of machine and involves little or no hand fitting or assembly work. (By contrast, all-round machinists can operate almost every machine tool.) The skilled machine tool operator plans and sets up the correct sequence of machining operations in accordance with blueprints, layouts, or other instructions. He adjusts speed, feed, and other controls and selects the proper cutting tools for each operation. Adjustments may be necessary during machine operations, and changes in setup also may be required. Therefore, the skilled operator must be able to use all the special attachments of his machine. Upon completing his work, he checks measurements with micrometers, gages, and other precision-measuring instruments to see whether they meet specifications. The skilled machine tool operator also may select cutting and lubricating oils used to cool metal and tools during machining operations.

The work of the machine tool operator requires knowledge and skill in the use of several different machines for the production of devices which may consist of a variety of metals. The skilled machine tool operator produces parts and assemblies that conform to certain specified tolerances; at the same time, he must meet certain requirements for quantity output.

Qualifications of Trainees

High school graduation, or its equivalent, is desirable for those who plan to enter the machine tool operator trade. Machining operations require planning with the aid of mathematics; some mathematical computations involving trigonometry will be encountered and trainees should have a background of mathematics. The trainee should be of average physical condition and health; good vision is especially important and should be at least correctable to 20/20.

The United States Employment Service General Aptitude Test Battery B-397 for machine operator, general, would be helpful in the selection of trainees.

Teacher Qualifications

A teacher for this program must have broad experience as a skilled machine tool operator and, preferably, should have experience as a supervisor of machine tool operators.

If the person selected for this teaching assignment does not have teaching experience, he should be given the necessary teacher education fundamentals such as: lesson planning, teaching methods, and course construction.

Suggestions for the Organization of Instruction

The field of machine tool operation has changed quite rapidly during the last few years. A recent publication by the American Society of Tool and Manufacturing Engineers carried a statement that our metal cutting capacity has been doubled every ten years since 1930. Because of the vast changes being made in machine processes, it is suggested that trainees be given an overview of industry in addition to a sound foundation in the fundamentals of basic operations.

In accordance with the job description, it is suggested that the trainees develop skills on one or more of the machine tools included in the course. In other situations the training may include all of the content covered in this guide thereby meeting the specific needs of industries in the community who require their operators to have a degree of skill on all machines. The instructor should be aware of the course organizational and operational problems which will arise if either one or a combination of these plans are followed. Whatever plan is finalized will affect the number of specific machines and supplies needed, and the scheduling of both shop and related instruction in order to conduct an effective course.

As indicated in the course outline, emphasis on theory, related shop mathematics, and sketching and blueprint reading reflects the need to provide the trainee with as much related theory as possible. It is because of this understanding of "why" that he can transfer from job to job and remain employable. While related theory is important, it is expected that the instructor will maintain a direct correlation between theory and actual shop practice. Assignments in mathematics, sketching, and related theory should be carried on concurrently with the development of skills in the shop.

The allocation of hours to each unit of instruction serves to indicate the relative emphasis to be placed on these units. Changes in this distribution of time may be necessary, depending on the ability and background of the trainees and the needs of industry. The administrator or instructor must keep in mind that this training course is designed for job entry.

At some appropriate point in the training program field trips to local industries will be helpful. Special equipment and processes such as: electrical discharge machining, free abrasive grinding, or numerical control, can best be introduced by visits to industry. Additional information covering modern methods of machining and related material will be found in the suggested list of textbooks and references.

Length of Course and Course Units

The training program, as outlined, covers a period of 27 weeks with a total of 1080 hours of class instruction and laboratory practice. The training is programmed for 8 hours per day and 5 days per week.

<u>Unit</u>	<u>Title</u>	<u>Suggested class hours</u>	<u>Suggested shop hours</u>
I.	Orientation	6	6
II.	Bench Work	10	30
III.	Shop Mathematics	50	0
IV.	Blueprint Reading and Sketching	40	0
V.	Power Saws	5	10
VI.	Drill Press	10	33
VII.	Engine Lathe	60	300
VIII.	Milling Machine	40	150
IX.	Surface and Cylindrical Grinders	25	100
X.	Shaper	15	70
XI.	Mass Production Methods	20	100
	Sub-total	281	799
			281
	Total		1080

Course Unit I

ORIENTATION

Training Time

Classroom, 6 hours; shop, 6 hours

Objectives

To orient trainees to the nature and scope of the training course and the machine tool operator's work.

To develop an understanding and appreciation of shop safety.

Unit Outline

- A. Departmental policies
- B. Overview of course
- C. Safety policies in the shop

Suggested Activities

- 1. Tour of shop facilities
- 2. Personal safety practices
- 3. Safety practices in using equipment, machines, and tools
- 4. Civil Defense procedures, fires, etc.

Working Industries and Automated Production Lines.
Shop Safety Education, The University of The State of New York.

Course Unit II

BENCH WORK

Training Time

Classroom, 10 hours, shop, 30 hours

Objectives

To develop knowledge and skills in the identification, use, care, maintenance and safety of hand tools, and to develop knowledge and skills in layout.

Unit Outline

- A. Identification, use, care, and maintenance of hand tools
- B. Laying out work
 - 1. Tools
 - 2. Measurements
 - 3. Procedures
- C. Hand-threading
 - 1. Taps
 - 2. Dies
- D. Filing and burring
- E. Holding devices
- F. Assembly procedures
- G. Safety

Suggested Activities

- 1. Hand hacksawing
- 2. Filing
- 3. Hand drilling, portable electric
- 4. Chipping and shearing with cold chisel
- 5. Hand-threading, taps and dies
- 6. Finishing with file and emery cloth

References

Morgan, Alfred P. How to Use Tools.
Machine Trades I, Learner's Manual. Instructional Materials Laboratory, Ohio State University.

Course Unit III

SHOP MATHEMATICS

Training Time

Classroom, 50 hours

Objectives

To provide the necessary knowledge and skills in shop mathematics relating to machine operations.

Unit Outline

- A. Arithmetic
 - 1. Definition of terms
 - 2. Fractions and decimals
 - 3. Ratio and proportion
 - 4. Areas and volumes
 - 5. Measurements and conversion factors
- B. Algebra
 - 1. Equations
 - 2. Shop formulas
- C. Geometry
 - 1. Geometrical constructions
 - 2. Areas and volumes
- D. Trigonometry
 - 1. Sines and co-sines
 - 2. Tangents and cotangents

Suggested Activities

- 1. Using measuring devices and calculations needed for precision measurement
- 2. Solving problems in measuring stock for layout
- 3. Using formulas for cutting speeds and feeds
- 4. Figuring angles
- 5. Solving problems in indexing
- 6. Solving problems on screw threads and tapers

References

Felker, C. A. Shop Mathematics.

McMackin, Frank J. and John H. Shaver. The Mathematics of the Shops.

Course Unit IV

BLUEPRINT READING AND SKETCHING

Training Time

Classroom, 40 hours

Objectives

To develop knowledge and skills in blueprint reading and freehand sketching.

Unit Outline

- A. Graphic language
- B. Working drawings
- C. Selection of views
- D. Orthographic drawings
- E. Dimensioning
- F. Isometric drawings
- G. Auxilliary views
- H. Sectional views
- I. Tolerances
- K. Sketching

Suggested Activities

1. Freehand sketching practice
2. Blueprint reading practice
3. Laying out jobs from blueprints

References

Elementary Blue Print Reading for Beginners in Machine Shop Practice. Delmar Publishers, Inc.

Course Unit V

POWER SAWS

Training Time

Classroom, 5 hours; shop, 10 hours

Objectives

To develop knowledge and skills in the operation, maintenance, and safety of power saws.

Unit Outline

- A. Layout for cutting operations
- B. Band saw
 - 1. Types of blades
 - 2. Welding blades
 - 3. Straight sawing
 - 4. Contour sawing
 - 5. Speeds
- C. Power hacksaw
 - 1. Types of blades
 - 2. Holding the work
- D. Coolants
- E. Safety and maintenance

Suggested Activities

- 1. Sawing to length
- 2. Angular sawing
- 3. Contour sawing
- 4. Removing and installing blade

Course Unit VI

DRILL PRESS

Training Time

Classroom, 10 hours; shop, 33 hours

Objectives

To develop knowledge and skills in the operation, maintenance, and safe use of the drill press.

Unit Outline

- A. Types of drilling machines
 - 1. Drill press
 - 2. Sensitive drill press
 - 3. Radial drill press
 - 4. Jig borer
- B. Work holding devices
 - 1. Drill vise
 - 2. V-Blocks
 - 3. Angle plates
 - 4. Jigs and fixtures
- C. Feeds and speeds
- D. Types of drills
 - 1. Sizes
 - 2. Sharpening
- E. Drilling operations
- F. Reaming operations
- G. Counterboring and countersinking operations
- H. Tapping operations
- I. Care, maintenance, and safety

Suggested Activities

- 1. Mounting tools
- 2. Drilling
- 3. Reaming
- 4. Tapping
- 5. Using jigs and fixtures
- 6. Counterboring and countersinking
- 7. Grinding drills
- 8. Holding work

References

Habicht, Frank H. Modern Machine Tools. Increased Production, Reduced Costs Through a Better Understanding of the Machining Process and Control of Materials, Tools, and Machines. Curtiss-Wright Corp.

Course Unit VII

ENGINE LATHE

Training Time

Classroom, 60 hours; shop, 300 hours

Objectives

To provide knowledge and skills in the operation, maintenance, and safe use of the engine lathe.

Unit Outline

- A. Types and sizes
- B. Tool holders and tool bits
 - 1. Sharpening tool bits
- C. Speeds and feeds
- D. Mounting work
 - 1. Between centers
 - 2. Chucking
- E. Types of operations
 - 1. Turning
 - 2. Facing
 - 3. Shouldering
 - 4. Chamfering
 - 5. Knurling
 - 6. Taper turning
 - 7. Thread cutting (external and internal)
 - 8. Drilling and reaming
 - 9. Boring
 - a. Straight and shoulder
 - b. Tapers
 - 10. Undercutting and necking
 - 11. Cutting off
 - 12. Tapping
- F. Planning job and sequence of operations
- G. Safety and maintenance

Suggested Activities

Performing repetitive operations listed in E above on practical jobs.

References

- DeGroat, George H. Metal Working Automation.
Hallett, F. H. Machine Shop Theory and Practice
How to Run a Lathe. South Bend Lathe Works.
Smith, Robert E. Machining of Metal.

Course Unit VIII

MILLING MACHINE

Training Time

Classroom, 25 hours; shop, 150 hours

Objective

To develop knowledge and skills in the operation, maintenance, and safe use of the milling machine.

Unit Outline

- A. Types and sizes
- B. Types of cutters
- C. Work holding devices and clamping methods
 - 1. Milling machine vise
 - 2. Angle plates
 - 3. Clamps
- D. Feeds and speeds
- E. Installing arbors and cutters
- F. Milling operations
 - 1. Plain milling
 - 2. Face milling
 - 3. Straddle milling
 - 4. Slotting
 - 5. End milling
 - 6. Gang milling
 - 7. Helical milling
 - 8. Gear cutting
- G. Indexing methods
- H. Coolants
- I. Care, maintenance, and safety

Suggested Activities

Performing the various milling operations listed in F above on practical jobs.

References

- Burghardt, Henry D. and Aaron Axelrod. Machine Tool Operation, Part II.
DeGroat, George H. Metal Working Automation.
Smith, Robert E. Machining of Metal.

Course Unit IX

SURFACE AND CYLINDRICAL GRINDERS

Training Time

Classroom, 25 hours; shop, 100 hours

Objectives

To develop knowledge and skills in the operation, maintenance, and safe use of surface cylindrical grinders.

Unit Outline

- A. Grinding wheels
 - 1. Types and sizes
 - 2. Grades
 - 3. Wheel selection
- B. Surface grinders
 - 1. Types
 - 2. Work holding devices
 - a. Magnetic chuck
 - b. Vise
 - 3. Mounting and dressing wheel
 - 4. Surface grinding operations
 - a. Grinding flat surfaces
 - b. Squaring stock
 - c. Grinding angles
 - 5. Care, maintenance, and safety
- C. Cylindrical grinders
 - 1. Types and accessories
 - 2. Mounting and dressing wheel
 - 3. Holding the work
 - 4. Cylindrical grinding operations
 - a. Straight grinding
 - b. Grinding to a shoulder
 - c. Taper grinding
 - 5. Care, maintenance, and safety

Suggested Activities

Performing the various grinding operations listed above in B.4 and C.4 on practical jobs.

References

- Burghardt, Henry D. and Aaron Axelrod. Machine Tool Operation, Part II.
Habicht, Frank H. Modern Machine Tools.
Smith, Robert E. Machining of Metal.

Course Unit X

SHAPER

Training Time

Classroom, 15 hours; shop, 70 hours

Objectives

To develop knowledge and skills in the operation, maintenance, and safe use of the shaper.

Unit Outline

- A. Types and sizes
- B. Feeds and speeds
- C. Work holding devices
 - 1. Vise
 - 2. Parallels
 - 3. Clamps
- D. Cutting tools
 - 1. Types and shapes
 - 2. Sharpening tools
- E. Shaper operations
 - 1. Horizontal shaping
 - 2. Angular shaping
 - 3. Vertical shaping
 - 4. Contour shaping
 - 5. Keyway and slot shaping
- F. Care, maintenance, and safety

Suggested Activities

Performing repetitive shaper operations listed above in E on practical jobs.

References

- Habicht, Frank H. Modern Machine Tools. Shop Theory. McGraw-Hill Book Co., Inc.
Smith, Robert E. Machining of Metal.

Course Unit XI

MASS PRODUCTION METHODS

Training Time

Classroom, 20 hours; shop, 100 hours

Objectives

To develop an understanding of mass production methods and knowledge and skills in the operation of certain specialized mass production machines.

Unit Outline

- A. Turret lathes
 - 1. Application to mass production
 - 2. Types and sizes
 - 3. Feeds and speeds
 - 4. Methods of holding work
 - a. Chucks
 - b. Collets
 - c. Special fixtures
 - 5. Tooling of turret
 - a. Number and kinds of operations
 - b. Progressive sequence of operations
 - c. Tooling for maximum efficiency
 - d. Types of cutting tools
 - 6. Coolants
 - 7. Turret lathe operations
 - 8. Care, maintenance, and safety
- B. Screw machines
 - 1. Application to mass production
 - 2. Types and sizes
 - 3. Methods of holding work
 - 4. Screw machine tooling
 - a. Number and kinds of operations
 - b. Sequence of operations
 - c. Actuating and controlling tools
 - 5. Speeds and feeds
 - 6. Cutting fluids
 - 7. Screw machine operations
 - 8. Care, maintenance, and safety

Suggested Activities

Performing the variety of turret lathe and screw machine operations on practical jobs.

TEACHING THE COURSE

Planning the Lesson

The best guide or lesson plan is, of course, one that has been prepared by the individual teacher, based on personal experience and manner of teaching. Although teachers differ in their ways of organizing and coordinating important parts of their presentation, they agree that the purpose of a lesson is effective and meaningful classroom instruction.

Written plans may be brief, but the good teacher will know before the class starts:

1. The goals or objectives of the lesson--the kind of learning desired
2. The outline and suggested time schedule for the lesson, including:
 - a. An interest approach--a way to introduce the lesson, to capture the interest of the trainees and to direct their attention to the lesson's goals or objectives
 - b. Activities which will involve the trainees in discovering new facts and principles, solving realistic problems, or practicing skills
 - c. A way to summarize the lesson--to help trainees arrive at some valid conclusions and/or to evaluate the extent to which lesson goals have been achieved
3. The subject matter content--the facts and principles or main ideas to be brought out in the lesson
4. The teaching materials and references to be used

Training Facility Considerations

The items of machines, tools, equipment and supplies included as appendixes in this guide indicate what is needed to prepare a group of twenty trainees to enter the machine tool operator occupation. The items listed represent an optimum program, however, the instructor responsible for a particular program may wish to make some substitutions, deletions, and additions to the lists shown depending on the particular industrial needs of the community. If the course is to be offered in an existing facility, the administrator should make a careful inventory of existing equipment in order to avoid costly duplications.

The laboratory floor plan indicates a typical arrangement that might be used in industry to give the greatest production schedule with the lowest overhead cost. The arrangement is planned for maximum safety. It is suggested that the safety lane be a full 36 inches wide, and that no machinery be located within one foot of this area. To make the safety lane especially effective, green anti-slip paint should be used with yellow 4-inch borders, also of anti-slip material. The use of a standard industrial color scheme on every machine throughout the working area is also recommended as a safety measure.

Prices shown on listed items are for the purpose of indicating the approximate quality of each item. No attempt has been made to list the complete specifications needed by a supplier for the purpose of completing a purchase order.

Criteria for Judging Trainee Readiness for Employment

The criteria which serve as guides for determining whether the trainee is ready for employment as a machine tool operator may be more stringent than in some other occupations. However, some understanding and insight into how to provide various services are of such importance that every attempt should be made to evaluate trainee progress.

The use of various evaluative devices is necessary for the teacher and the trainee to accumulate objective information about the growth of the trainee. The following kinds of competencies are important to develop or to strengthen during the training program.

A. Personal qualities:

1. Courtesy, friendliness, and tact in dealing with supervisors, and the general public
2. Acceptable appearance--good grooming
3. Mature judgment in a variety of typical situations
4. Good personal habits in speech, mannerisms, cleanliness, and methods of work
5. Acceptable attitudes--calmness in disorganized situations, positive attitude toward work, cooperativeness, willingness to work with others
6. Assumption of role appropriate for the machine tool operator

B. Activities showing knowledge, understanding, and skills:

1. Understands and carries out instructions or directions
2. Works effectively under supervision
3. Demonstrates knowledge of basic machine operation techniques
4. Understands need for safety--dangerous areas, basic precautions
5. Uses common machine tools and equipment carefully
6. Demonstrates ability to develop and follow a work plan or schedule

APPENDIX A. SUGGESTED LIST OF MACHINES

<u>Quantity</u>	<u>Description</u>	<u>Estimated total cost</u>
3	Sensitive drill presses, floor model, size 15"	\$ 840.00
1	Upright drill press	350.00
1	Radial drill press, 3 ft. arm	500.00
2	Grinders, bench or pedestal, 6-8" wheel dual arbor	300.00
1	Grinder, pedestal, 10-14" wheel, dual arbor	308.00
1	Disc sander, 15"	150.00
1	Belt sander, 4" x 60"	400.00
1	Upright metal cutting band saw	980.00
1	Power hacksaw	450.00
1	Tool grinder, with attachments	952.00
1	Surface grinder	1995.00
1	Cylindrical grinder - distance between centers 22", swing over table 8½", table travel 14".	2000.00
5	Engine lathes with motor, complete tooling 10" x 3'	6500.00
5	Engine lathes with motor, complete tooling 13" x 5'	9500.00
1	Engine lathe with motor, complete tooling 30" x 8'	2400.00
1	Milling machine, universal	4000.00
1	Milling machine, vertical	4000.00
1	Shaper, 20"	3000.00
1	Shaper, 30"	4000.00
1	Turret lathe with tooling, No. 3	6000.00
1	Jig boring machine for drilling, reaming and precision boring	1495.00
1	Screw machine, 10-inch swing, 40" bed, collet capacity -- 1"	1490.00
2	Hardness testing machines, complete with accessories for testing hard and soft materials	1300.00
1	Arbor press, hydraulic, 25 ton capacity	325.00

APPENDIX B. SUGGESTED LIST OF TOOLS

<u>Quantity</u>	<u>Description</u>	<u>Estimated total cost</u>
20 sets	Hand tools (hammers, punches, chisels, scales, try-squares, pliers, wrenches, screwdrivers, files, hacksaw, 20-drawer roller cabinet, etc.)	\$1980.00
20	Small micrometers, 0-1", 1-2", 2-3", and 3-4"	500.00
3	Dial-test indicators, complete, assorted fixed gages	75.00
1	Electric drill, portable, 1/4" capacity	45.00
1	Electric drill, portable, 1/2" capacity	70.00
3	Drill set, fractional, 1/64" to 2"	600.00
3	Drill set, numbered, 1 to 60	75.00
3	Drill set, letter, A to Z	75.00
3	Tap and die sets, N.C. and N.F. series, No. 4 screw to 1" bolt	100.00
3	Die sets, N.C. and N.F. Series, No. 4 screw to 1" bolt	300.00
	Clamps, "C" and parallel, assorted	85.00
	Center drills, countersinks, spot facer, assorted sizes	50.00
1	Tap wrenches, T handle, set	25.00
	Reamers, assorted sizes	200.00
1	Pipe tapes and dies, set, 1/8" to 2"	125.00
	Small specialty tools and gages and measuring instruments	400.00
6	Angle plates 2-4x4, 2-6x6, 2-10x10	360.00
1	Micrometer depth gage, range 0" to 6", 5" base	35.00
2	Micrometer calipers, inside, range 2" to 12"	60.00

APPENDIX C. SUGGESTED LIST OF EQUIPMENT

<u>Quantity</u>	<u>Description</u>	<u>Estimated total cost</u>
1	Indexing head	\$240.00
3	Tilting, indexing, and rotary tables	420.00
8	Drill press vises	120.00
2	Milling machine vises, graduated swivel	338.00
8	Bench vises, swivel base, 4" jaws	440.00
2	Work benches	146.00
	Lathe tools and attachments (boring bars, knurling tools, dogs, drill chucks, sleeves), assorted	500.00
1	Tapping attachment for high production tapping on drill press with chuck and lead screw	550.00
2	Bench plates, precision ground, 14" x 18"	224.00
2 sets	Mechanical drawing equipment, complete including: T-square, instruments, 31 x 42 board, triangles curves, drawing pencils, erasing shield, etc.	90.00
20	Personnel lockers, steel, double compartments 31" h x 24" d x 18" w	500.00
3	Laboratory work tables, 30" x 5' top	114.00
2	Drawing tables, adjustable, 30" x 36" top	
20	Tablet armchairs	300.00
2	Drafting stools	18.00
1	Instructor's chair and desk	150.00
1	File cabinet, 4-drawer	75.00
1	Projector, filmstrip or slide	75.00
1	Overhead projector	185.00
1	Projector, 16 mm, sound	500.00
	Allwance for slides and transparencies	300.00

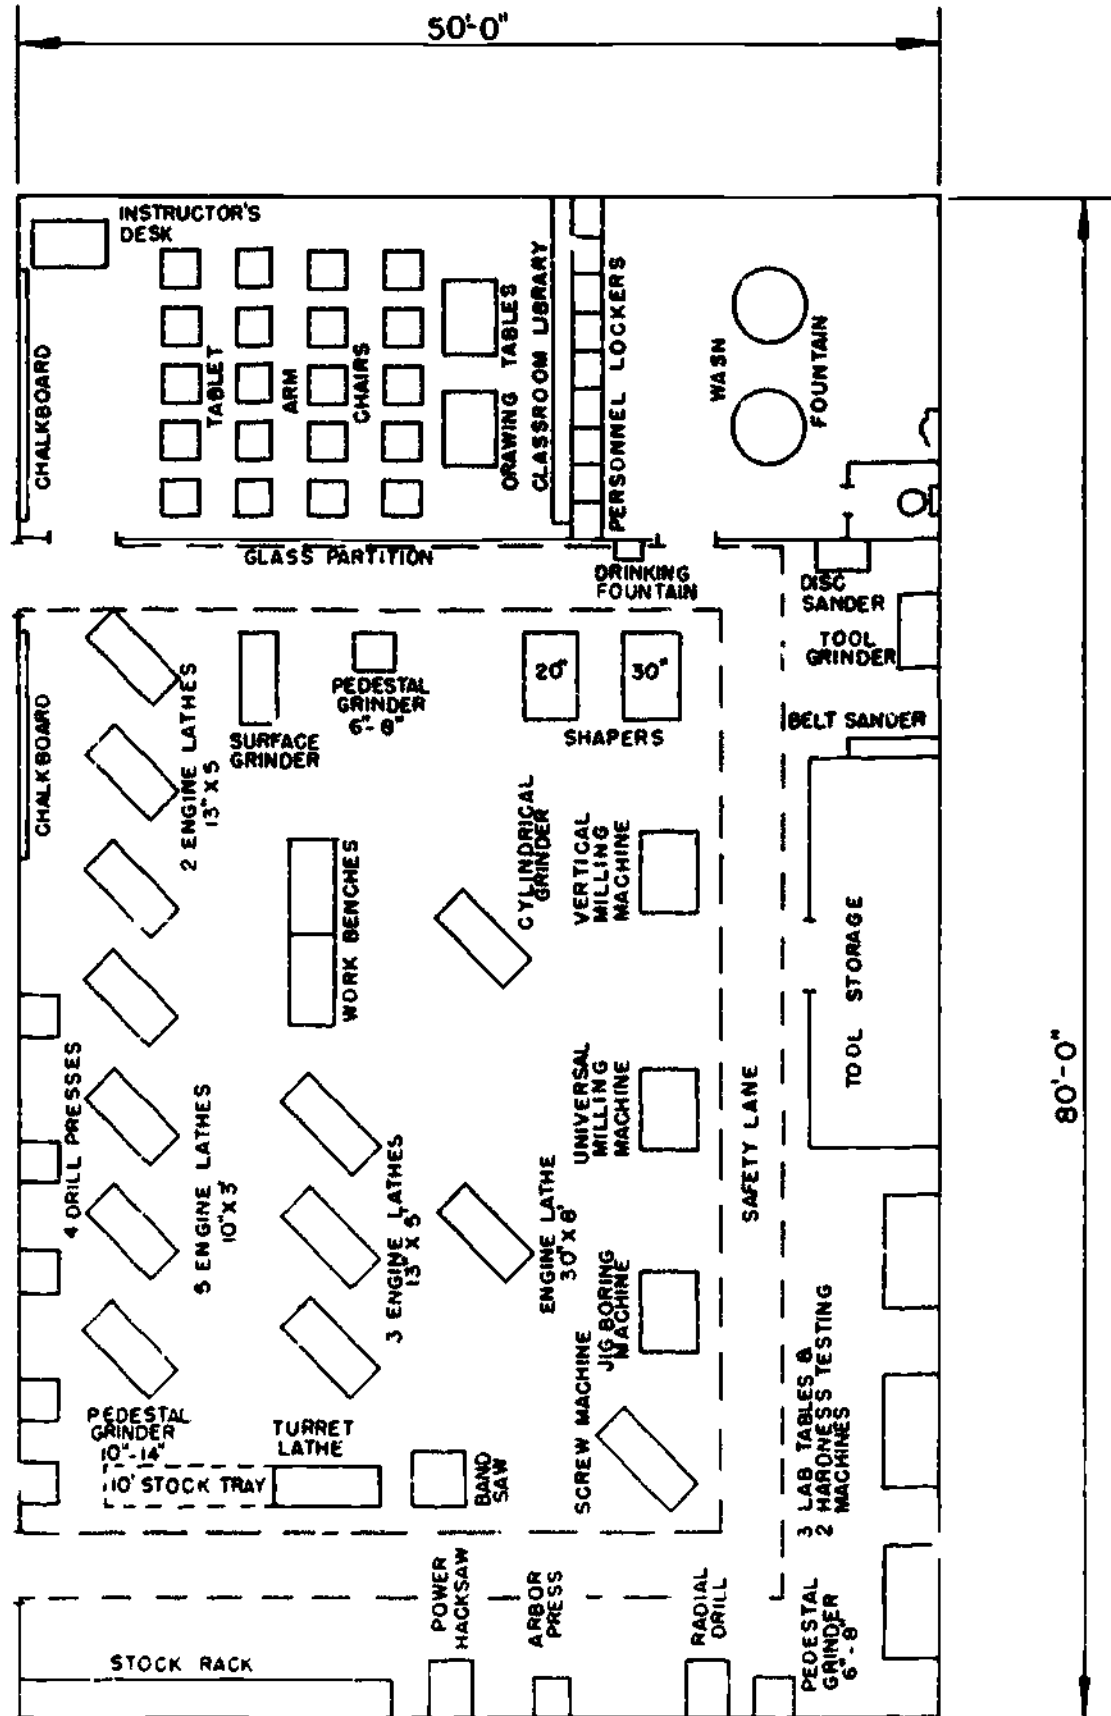

APPENDIX D. SUGGESTED LIST OF EXPENDABLE SUPPLIES

<u>Quantity</u>	<u>Description</u>	<u>Estimated total cost</u>
100 lbs.	Rags	\$ 10.00
60	Power hacksaw blades, 18 teeth by .932" by 14" long HSS	35.00
60	Hand hacksaw blades, 24 teeth by .025" by 10"	10.25
60	Hand hacksaw blades, 32 teeth by .025" by 10"	10.25
15 gal.	Machine oil	30.00
30 gal.	"Bestol" thread cutting oil	90.00
2 boxes	Rex AAA tool bits, 1/4"	40.00
2 boxes	Rex AAA tool bits, 5/16"	45.00
2 boxes	Rex AAA tool bits, 7/16"	55.00
2 boxes	Rex AAA tool bits, 3/8"	50.00
2 boxes	Rex AAA tool bits, 1/2"	75.00
500 sheets	Fine emery cloth	50.00
1 doz.	12" mill files	15.00
1 doz.	10" bastard files	13.00
100'	Cold rolled steel, 1/4" round	4.77
100'	Cold rolled steel, 3/8" round	11.30
100'	Cold rolled steel, 1/2" round	20.64
100'	Cold rolled steel, 5/8" round	31.30
100'	Cold rolled steel, 3/4" round	45.06
100'	Cold rolled steel, 1" round	70.10
100'	Cold rolled steel, 1 1/8", round	95.00
100'	Cold rolled steel, 1 1/4", round	102.50
100'	Cold rolled steel, 1 3/8", round	135.00
100'	Cold rolled steel, 1 1/2", round	146.00
100'	Cold rolled steel, 2", round	254.50
100'	Cold rolled steel, 1/2", square	29.85
100'	Cold rolled steel, 5/8", square	46.50
100'	Cold rolled steel, 3/4", square	64.90
100'	Cold rolled steel, 1", square	115.65

<u>Quantity</u>	<u>Description</u>	<u>Estimated total cost</u>
100'	Cold rolled steel, 1/2" hex	\$ 35.00
100'	Cold rolled steel, 5/8" hex	52.50
100'	Cold rolled steel, 3/4" hex	68.90
72'	Stainless steel, 1" diameter, type 303, machining quality	288.00
120'	Brass rod, 1" diameter, free cutting	367.20
36'	Brass rod, 2" diameter, free cutting	421.20
72'	Aluminum rod, 2" diameter, 2011-T3	324.00
72'	Aluminum rod, 1 1/2" square, 2024-T4	194.40
60 lbs.	Carbon vanadium tool steel, 1.0% carbon	60.00
20'	High speed tool, steel 1/2" bar stock	35.00
60'	Drill rod, carbon steel	780.00
500 lbs.	Grey iron castings	500.00
1	Refill kit first aid supplies	15.00

FOREWORD

THE TRADITIONAL APPROACH to training sheet metal workers has been through an organized apprenticeship program. Vocational educators have worked with organized labor and governmental agencies to provide the related instruction important in developing a skilled journeyman. The schools have offered courses in drafting, mathematics, science, physics, and the like, in either day or evening classes for apprentices in the trade. In addition, some skill development activity has been included in apprenticeship courses where the craft recognized the capability of the schools to provide activity in the advanced manipulative phases of the trade. Apprenticeship, with its on-the-job work experiences, coupled with sound related instruction, has proved to be a basic source of sheet metal craftsmen.

This publication, prepared as a guide for instructors in the field of sheet metal work, should be helpful in developing course content for conducting day-to-day shop and laboratory classes. The guide is intended for administrators who must have information about course content, equipment and supplies, training schedules, qualifications of trainees, and similar items. Arrangement of the contents may be modified to meet local conditions under which training is to be offered.

With the greater use of air-conditioning facilities and of metal coverings for many building construction features, the need for sheet metal workers should continue strong. Preparation of entry-level workers in this apprenticeable occupation should lead to an increase in enrollments in apprentice training courses.

The basic content of this course will provide a foundation from which workers may move into the more demanding areas of sheet metal work.

Prepared under contractual arrangement with Oklahoma State University, the material has been reviewed by competent advisory groups. Recognition is given to Maurice Roney, Director, School of Industrial Education, for having supervised the development of the content.

Walter M. Arnold
Assistant Commissioner for
Vocational and Technical Education

TRAINING COURSE FOR THE SHEET METAL WORKER

Purpose of the Guide

This training guide has been prepared to assist in planning and developing a course of training for workers in the sheet metal industry. It has been organized in a manner to be of maximum value to school administration personnel who are not themselves specialists in the occupation. Sufficient detail has been included, however, to provide an outline of instruction for the specialists who will be responsible for the operation of the training program.

The suggestions outlined in the training guide are not meant to delineate instruction in every detail. Supplemental material can be found in the suggested textbooks, references, and films. Further, the suggested course outline may not in all cases present topics in chronological order. The sequence of presentation, as well as the final selection of topics for special emphasis, should be determined by instructional specialists and will vary, depending on the needs and background of the trainee group.

Although this training guide has been developed primarily for planning Manpower Development and Training programs, it goes beyond the development of exercises to impart simple manipulative skills. By virtue of the related materials that are included, the trainee can be given a sound foundation in layout, a knowledge of efficient sequences of fabrication, and principles of simple product design. The materials included in the guide should be useful in technical high school programs, area vocational schools, and part-time apprenticeship programs.

Description of the Occupation

The sheet metal worker is involved in an industry that is centered around construction and manufacturing. Workers fabricate and install ducts which are used in ventilating, air conditioning, and other systems requiring movement of air. They also fabricate and install roofing, siding, flashing, venting, commercial stainless kitchen equipment, cabinets, partitions, store fronts, metal framework for advertising signs, and structures used for material movement and collection.

Generally, the sheet metal worker lays out and plans the job, taking the responsibility to determine the size and type of metal to be used. Many parts of a sheet metal assembly may be purchased in a prefabricated condition, effecting an overall saving if the sheet metal worker is aware of which parts to buy and which to fabricate locally. Beginning sheet metal workers should understand aspects of forming, cutting, bolting, riveting, cementing, punching, pressing, drilling, sawing, welding, brazing, and soldering. Workers also need to develop accuracy and speed in the layout process and master pattern construction.

The sheet metal worker uses galvanized sheet, cold rolled carbon steel, hot rolled carbon steel, copper, lead sheet, lead coated sheet, tin plate, nickel alloy, stainless steel, aluminum, and many other types of material of special formulas including several of the plastics.

Opportunities Within the Occupation

Within the next 5 years the sheet metal industry will require at least 25,000 workers to replace those who will leave the field through retirement, death, and inability to keep up with the increased demand for new and different skills. Also, the apprentice programs now in progress in the sheet metal field are not producing

the numbers of skilled tradesmen who will be needed as replacements. Some on-the-job training programs require four (4) years; however, this time may be materially reduced by attendance in a technical or vocational school.

Hourly wage rates for sheet metal apprentices generally start at 50 per cent of the journeyman rate and increase until the journeyman rate is reached. Union minimum hourly wage rates for sheet metal workers in July 1962 averaged \$4.17, compared with \$4.15 for all journeymen in the building trades, according to a national survey of building trades workers in 53 large cities. Among individual cities surveyed, the minimum ranged from \$3.30 to \$5.15.

Future opportunities for workers in the sheet metal industry look promising mainly because of the anticipated expansion in the new residential, commercial, and industrial construction. Despite the accelerated construction program in recent years, the industry has not been able to keep up with demand. Two factors which tend to keep the demand high are the population explosion, and the desire of the public to live in contemporary homes. It is quite probable that our cities and industries will require an ever-increasing program of construction and reconstruction.

Furthermore, the nature of the industry itself is changing, as are job requirements and job titles. "Warm air", as an identifying description, may disappear as tomorrow's industry achieves recognition of indoor environmental control. The day when environment control will be understood, accepted, and demanded is not far distant.

The activities of the small shop and local manufacturing are yielding to centralized manufacturing. The manufacturing industry is requiring more, faster and more complex services. This is not expected to reduce the total number of workers, but may place a different emphasis on their type of work.

Qualifications of Trainees

A high school education or its equivalent is desirable in order to progress rapidly in this occupation. Good physical condition and mechanical aptitude are important personal assets, since the sheet metal worker may be required to climb scaffolds or work in restricted enclosures. In general, the successful sheet metal worker must use, care for, and handle safely the tools, machines, equipment, and materials used in the trade.

Persons entering the training program should have completed at least one mathematics course of high school level. Persons with identified weaknesses in mechanical reasoning ability, manual dexterity, or other infirmities should be advised to consider other occupational training programs. A sense of spatial relations is necessary for successful progress in some of the more complex work in pattern development. Wherever possible in the selection of trainees, use of one of the standard tests of spatial relations may be helpful in selecting those persons with the best chance of success.

Suggestions for the Organization of Instruction

The total course presented in this training guide is intended to develop a marketable skill at the entry level, and at the same time to provide the trainee an orientation in the broad field of sheet metal work.

Shop practice, as well as the related classroom instruction, should be supplemented, where possible, by visual aids, models, and field trips; this is especially true where it is not possible to obtain certain special purpose machinery. Where this is the case, visits to industries may be required to provide the student

with at least an introduction to certain elements of the instruction which cannot be treated adequately in the training facilities.

Allocation of hours to each unit of instruction serves to indicate the relative emphasis on these units. Changes in the distribution of instruction time may be necessary, depending on the ability and background of the group in training. Also, the ratio of classroom time to actual shop manipulations may need to be revised in individual situations. While this training guide was designed for a class of 20 persons, the ideal student-teacher ratio of somewhat less students may provide for more effective teaching. A great amount of individual instruction is required to teach the skills of the trade.

Length of Course and Course Units

The training course as outlined covers a period of 26 weeks with a total of 780 hours of related instruction and shop practice. The training is scheduled for 6 hours per day and 5 days per week.

COURSE OUTLINE

Description

This training outline is designed to introduce to the trainee a background of fundamentals necessary for him to become a proficient entry level sheet metal worker. In order to provide trainees with salable skills, approximately three-fourths of the training time is devoted to shop practice.

Outline

The instructor, in opening the course, should orient the group to the occupational opportunities in the sheet metal field. Information contained in the opening pages of this guide may be used for this purpose. Topics to be covered should include a description of the work, employment opportunities, and information about the training as suggested by items contained in the course outline.

I. Mathematics and Blueprint Reading

- A. Class - 20 hours
 - 1. Geometry of sheet metal layout
 - 2. Bluepring reading
 - a. Symbols
 - b. Single, multiple, and sectional view drawing
 - c. Dimensioning practices
 - d. Specifications
- B. Laboratory - 20 hours
 - 1. Problems on geometric construction
 - 2. Problems involving bluepring reading

II. Drawing

- A. Class - 40 hours
 - 1. Development of freehand sketches, shading and perspective
 - 2. Proper dimensioning
 - 3. Use and care of drawing equipment
- B. Laboratory - 60 hours
 - 1. Freehand sketching
 - 2. Mechanical drawing assignments

III. Job Planning

- A. Class - 20 hours
 - 1. Selection of materials (Design factors in the use of the following)
 - a. Cold rolled steel
 - b. Galvanized steel
 - c. Copper
 - d. Aluminum
 - e. Stainless steel
 - f. Plastic sheet
 - 2. Procuring necessary measurements
 - 3. Procedure for job layout
 - 4. Design, safety rules, and regulations

B. Shop Laboratory - 60 hours

- 1. Complete drawings with an emphasis on efficiency of finished sheet metal products.

IV. Pattern Development

- A. Class - 20 hours
 - 1. Developing a layout from a bluepring
 - 2. Use of templates for layouts
 - 3. Procedures for the construction of:
 - a. Cylinders
 - b. Cones and frustums of a cone

3. Procedures for the construction of:
 - a. Cylinders
 - b. Cones and frustums of a cone
 - c. Pyramids and frustums of a pyramid
 - d. Intersections of cylinders, pyramids, cones, and irregular figures.
 - e. Square to round fittings
 - f. Square to rectangular and offset fittings
4. Calculations of allowances for laps, locks, and seams

B. Shop Laboratory - 80 hours

1. Construct a paper pattern of the following:
 - a. Cylinder with grooved seam
 - b. A cylinder fabricated by resistance spot welding which has 45° intersection of the same diameter.
 - c. A rectangular container with straight sides
 - d. A rectangular duct fabricated by the use of a Pittsburgh lock
 - e. A rectangular elbow fabricated by the use of a Pittsburgh lock
 - f. Change a square to a round
 - g. An offset section of a rectangular duct.
 - h. A standard funnel
 - i. An offset funnel
 - j. An irregular fitting requiring triangulation

V. Fabrication

A. Class - 15 hours

1. Procedures for cutting stock
 - a. Hand operations
 - b. Power operations
 - c. Others (sawing, pneumatic panel cutter, oxyacetylene, metal inert arc, plasma arc,

punching, and drilling)

2. Procedures for forming:

- a. Hand forming on stakes
- b. Slip roll forming
- c. Die forming (Acme, Pittsburgh, pressforming, drop forming, hydraulic forming explosive forming and magnetic pulse metal forming.
- d. Bar-folding operations
- e. Forming on the brake
- f. Crimping, grooving, beading, burring
- g. Wiring
- h. Flanging

B. Shop Practice - 80 hours

1. Assignment in cutting
 - *a. Cutting straight scribed lines with combination snips
 - *b. Cutting irregular lines with aviation snips
 - *c. Use ring and circle shear to cut a flange
 - *d. Use foot-operated squaring shear to cut rectangle
 - *e. Using power plate shear to duplicate rectangular parts
 - f. Punching a series of holes using the hollow punch, hand punch, etc.
 - g. Drilling a series of holes without burning drill bit
2. Assignments in forming
 - a. Hand forming on stakes
 - b. Using slip roll to form cylinders
 - c. Using lock forming machine to form Pittsburgh lock
 - d. Using the bar folder to form a grooved lock seam
 - e. Wiring the edge of a cylinder
 - f. Flanging operations

*Parts to be saved and used later during required fabrications

VI. Assembly

A. Class - - 30 hours

1. Riveting design and procedure
2. Soldering
3. Metal stitching
4. Acetylene welding and brazing
5. Resistance spot welding
6. Inert arc spot welding (consumable and nonconsumable)
7. Metal arc spot welding
8. Fastening (bolt, screws, adhesives, cold welding)

B. Shop Practice - 140 hours

1. Complete riveted joints using: flush rivets, round head rivets, pop rivets, and standard tinner's rivets
2. Solder lap seams on galvanized steel and copper
3. Solder lock seams and hems on aluminum and stainless steel.
4. Join sections of hot rolled steel sheet by the oxyacetylene process in both brazing and welding.
5. Join aluminum and stainless steel structures by oxyacetylene brazing and tungsten inert gas welding.
6. Join cold rolled carbon steel, stainless steel, and galvanized steel by the resistance spot welding method.
7. Join cold rolled carbon steel by the tungsten inert gas spot welding process.

VII. Sheet Metal Installation in Construction

A. Class - 15 hours

1. Roofing (use of seams, locks, lap joints)
2. Flashing and vent installation

3. Guttering

- a. Eave trough
- b. Moulded gutters
- c. Box gutters
- d. Roof gutters
- e. Conductor heads and pipe

4. Skylights

- a. Single pitch installation
- b. Double pitch installation

5. Ducts for heating and ventilating

- a. Design of size and shape

b. Sound deadening

c. Insulation

- d. Use of locks, clips, drives, and studs

6. Hotel and cafeteria equipment

a. Cabinets

b. Table tops

c. Drain boards

7. Sheet metal finishes

- a. Care of manufactured finishes

- b. Preparation and application of finishes

B. Shop Practice - 115 hours

1. Guttering

- a. Work from blueprint to complete single pitch 5-12 chimney flashing. Scale $\frac{1}{4}$ original size.

- b. Work from blueprint to complete double pitch 4-12 chimney flashing. Scale $\frac{1}{4}$ original size.

- c. Install a corner section of gutter complete with conductor heads and downspout.

- d. Install a roof gutter on a 4-12 pitch roof complete with conductor heads and downspouts.

2. Skylights
 - a. Make up corner section of a skylight to fit a flat, built-up roof
 - b. Examine methods to join glass to sheet metal construction
3. Ducts for heating and ventilating
 - a. Check air flow of various sizes and shapes of ducts.
 - b. Examine methods for controlling noise level of various types of ducts
 - c. Install various types of insulation on duct work
 - d. Install sections of duct, examining various methods of joining and hanging
4. Hotel and cafeteria equipment
 - a. Examine various methods of constructing cabinets
 - b. Build cabinet complete with drawers, hinge assembly, and fixture mountings.
 - c. Prepare a cabinet for priming and finish with a gloss enamel
 - d. Experiment with air dry and baked synthetic finishes.

VIII. Manufacturing (quantity production)

- A. Class - 15 hours
 1. Tubes and ducts
 2. Elbows
 3. Guttering
 4. Tanks and containers
 5. Residential and commercial fixtures
 6. Metal spinning
 7. Future trend in the manufacture of products by the sheet metal industry.

- B. Shop Practice - 25 hours
 1. Explore the use of jigs and fixtures to aid in quantity production
 2. Design and build a simple fixture for the mass production of an outside yard light.
 3. Use the metal spinning lathe to produce various shapes

IX. Maintenance and Safety Procedures

- A. Class - 10 hours
 1. Hand tools
 2. Power equipment
 - a. Brake
 - b. Punch press
 - c. Drill press
 - d. Nibbler and portable electric shear
 - e. Oxyacetylene welding equipment
 - f. Resistance welding equipment
 - g. Metal arc welding equipment
 - h. Inert gas welding equipment
 - i. Turning machines
 - j. Bar folder
 - k. Lock forming
 - l. Press brake
 - m. Squaring shear
- B. Shop Practice- 15 hours
 1. Examine and complete the sharpening of various cutting and pointed tools
 2. Examine various types of hacksaw blades for expected service, life, and use
 3. Regrind several different sizes of drill bits, noting angle of cutting edge and top clearance.
 4. Examine the difference between high speed and carbon steel twist drills (hardness, use and cost)

5. Examine the cleaning equipment and maintenance procedures for oxyacetylene cutting and welding torches.
6. Write lists of safety and maintenance procedures for power equipment frequently enough to establish automatic habits.

TRAINING FACILITY CONSIDERATIONS

An attempt has been made in the layout of the physical plant (see Appendix C) to arrange equipment in a manner suitable for production practices. Several factors have been considered in arriving at the shop arrangement--such as: Space requirements per man in each work area, handling and fabricating sequence related to flow of materials, considerations of safety precautions, and a due regard for traffic problems in the handling of materials.

In the suggested floor plan storage of raw materials is adjacent to layout areas. This makes it possible for work to move from the planning area to the shear area where the final layout is reduced to size. Here the layout pattern is broken, folded, or punched as needed, and sent to the area for joining or locking. If required, the final fabrication is then sent to the spray booth which is near the exit door for priming or finishing.

In the event it is necessary to reduce the expenditures for shop equipment, considerable savings may be effected by removing from the suggested list of tools and equipment, some of the items marked with an asterisk (see Appendix D). While the machines so marked represent the least priority items, they are required equipment for an optimum facility. For example, the list includes two resistance spot welding machines which differ quite radically. The large machine, a 50 K.V.A. model, contains electronic controls and multiple adjustments to control heat, squeeze and hold cycles. When this machine is properly adjusted, quality welds may be expected, regardless of the skill of the operator. The small machine, a 10 K.V.A. model, is a simple mechanical device which may produce welds that will vary widely in quality, depending on the operator's skill. The 50 K.V.A. resistance spot welder will handle 10-gage members of mild steel and aluminum up to .051 inches thick. This is well beyond the capacity of the 10 K.V.A. resistance spot welding machine. Other machines marked with an asterisk may be considered by industry as necessary for efficient production, while for this training program the smaller, less complex, and lower cost machinery may suffice.

The specifications shown for the suggested list of machines, tools, and equipment are necessarily simplified, and are intended to be used primarily for estimating the cost of instructional facilities. Additional and more complete specifications will be required for purchase orders. In any case, the final determination as to the number, kinds and quality of items to be purchased should be made by experienced sheet metal teachers.

APPENDIX B. FILMS

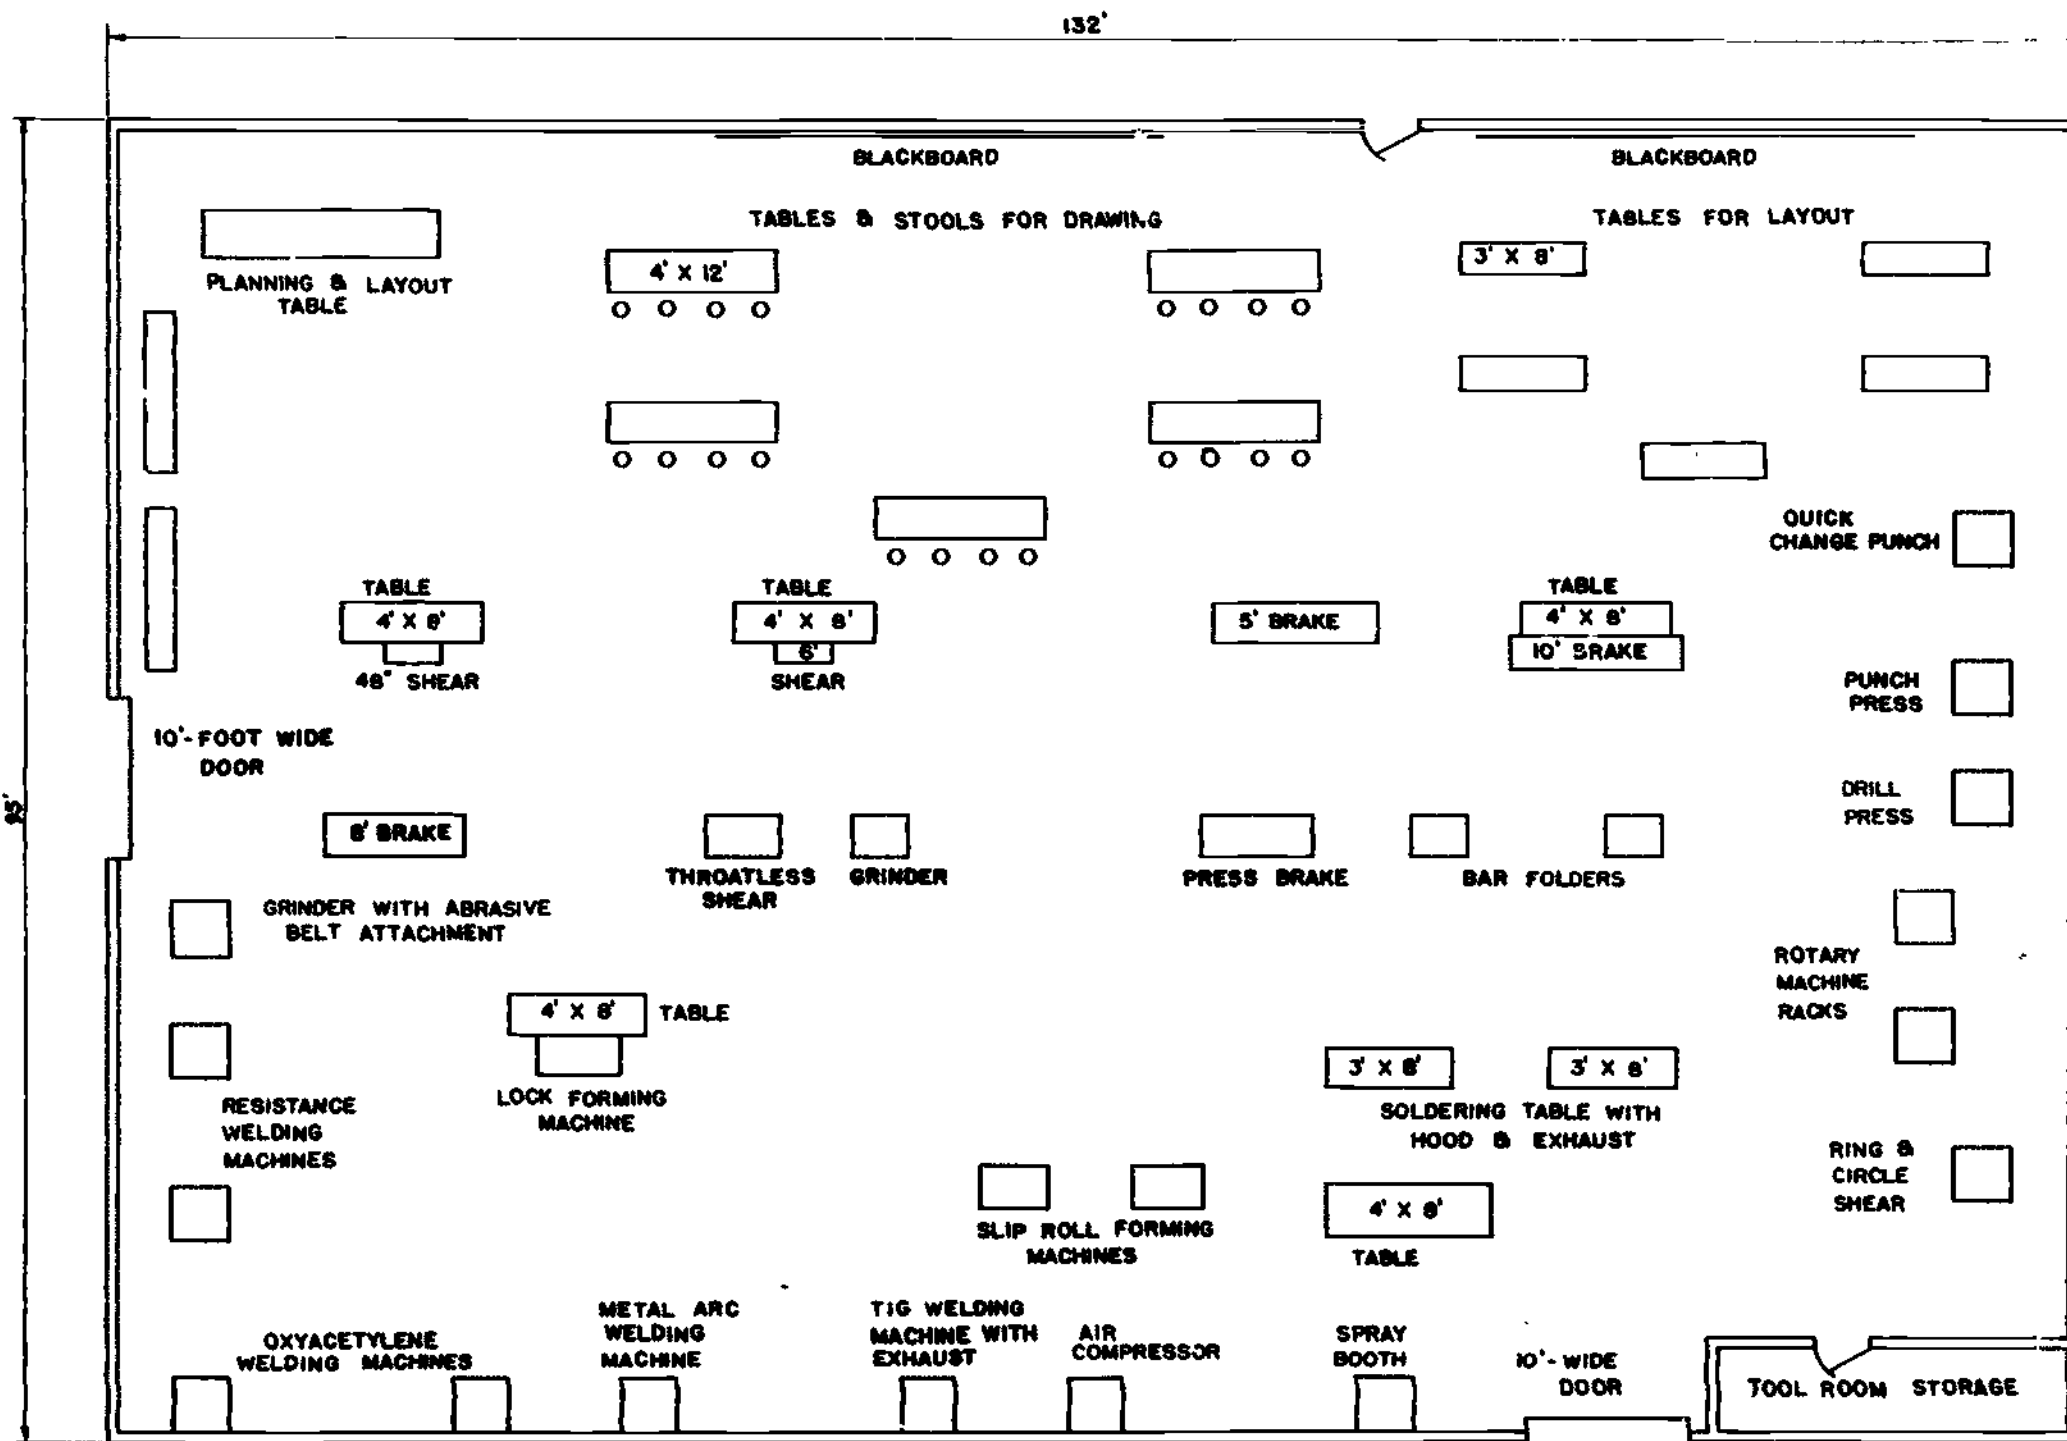

Forming and Bending of Stainless Steel. Republic Steel Corp. Made by Wild-
ing, 1962

Metal Shop Safety. McGraw-Hill Book Co. Made by Centron Corp., 1959
Shows shop students' common hazards found in metalworking, and describes
safe procedures to follow in a metal shop.

Metal Working Trades No. II: Sheet Metal Worker. Federal Department of
Labor, Ottawa, Canada. By National Film Board of Canada, 1958
Overall picture of the type of work performed by the sheet metal worker
in modern industries, the training required, and the future of the trades.

Pagent of Steel. Bethlehem Steel Co. Made by Mode-Art Pictures. Released
by Modern Talking Pictures Service, 1959

The Production of USS Steel Sheets. United States Steel Corp. Made by Jam
Handy Org., 1957

SHEET METAL SHOP FLOOR PLAN

APPENDIX D. SUGGESTED LIST OF MACHINES, TOOLS, AND EQUIPMENT
FOR A CLASS OF 20 PERSONS

Unit

1	Squaring shear, foot operated, bed width 48 inches, 18-gage capacity
*1	Squaring shear, power operated, bed width 6 ft., 14-gage capacity
*2	Unishear, motor driven, 16-gage capacity
*1	Ring and circle shear, 24-inch throat, 22-gage capacity
*1	Engel shopmaster or equal, bed size 36 X 120 inches, cutting capacity, 18-gage, notching capacity 22-gage
2	Throatless shear, 10-gage capacity
1	Brake, standard cornice, bed width 5 ft., 16-gage capacity
*1	Brake, standard cornice, bed width 8 ft., 16-gage capacity
*1	Brake, box and pan, bed width 10 ft., 16-gage capacity
*1	Punch, quick change, hand operated, 17 punches and dies, 5/32 to 2-inch capacity
1	Punch press, 10-ton capacity
1	Punch press, punch and die set, single and multiple units
*1	Nibbler, portable electric-powered, 14-gage capacity
1	Press brake, bed width 48 inches, 18-gage capacity
1	Drill press, 1/2-inch capacity chuck
4	Drill, electric hand, 1/4-inch capacity chuck
*2	Drill, electric hand, 1/2-inch capacity chuck
1	Air compressor, air delivery @ 100 psi - 15 cu. ft./ min.
2	Spray gun, external mix, 1-quart capacity
2	Air hose, 25-foot length, 1/4-inch internal diameter
2	Air moisture trap with pressure regulator, 0-150 psi
1	Spray booth with exhaust fan, minimum size, 4 X 4 X 8 ft.
20	Respirator for spray booth
2	Oxyacetylene, portable unit complete with welding and cutting tips
2	Oxyacetylene, face shields equipped with #3 lens
*2	Generator, motor-driven for metal arc welding, direct current, 250-ampere capacity
1	Power supply, AC-DC, gas and water controlled, 250-ampere capacity, complete with TIG spot-welding timer
1	Tungsten inert gas welding torch, 1/4" maximum electrode capacity
3	Arc welding helmets equipped with #10 lens
1	Inert arc spot-welding torch
1	Metal arc spot-welding torch, complete with power supply and timing device, maximum electrode size 3/32 inch
1	Resistance spot-welding machine, minimum throat depth 12 inches, minimum power 10 K.V.A.
*1	Resistance spot-welding machine, minimum throat depth 24 inches, minimum power 50 K.V.A.

* Items marked with an asterisk represent a certain grouping of machinery which may be deleted without destroying the usefulness of the training program. The complete list represents an optimum facility rather than either a minimum or an ideal facility.

Unit

- *1 Metal-stitching machine
- 1 Lock-forming machine, 22-gage capacity
- 2 Rotary racks, complete with the following:
 - 1. Turning machine
 - 2. Wiring machine
 - 3. Beading machine
 - 4. Crimping machine
 - 5. Burring machine
 - 6. Flanging machine
- 1 Grooving machine, 48-inch throat depth, 22-gage capacity
- 1 Double-seaming machine, 22-gage capacity
- 5 Tables, for drawing, 3X8 ft. top
- 5 Tables, for workbench and layout, 4 X.8 ft: top
- 5 Tables, for workbench and layout, 4 X.12 ft: top
- 2 Workbench, for soldering, 3 X 8 ft. top
- 2 Storage racks, vertical dividers to hold 10-foot-long sheets, 10 compartments
- *1 Grinder, 1-hp. capacity, grinding wheel width 2 inches, double arbor
- 1 Grinder, 1/2 hp. capacity, grinding wheel width 1 inch, double arbor to power 2" flexible abrasive belt
- 1 Lathe, metal spinning, 1-hp. motor, 12-inch swing
- 2 Bar folder, bed width 26 inches, 22-gage capacity
- 2 Slip roll forming machine, 2-inch diameter rolls, working length of rolls 36 inches, 22-gage capacity
- *1 Slip roll forming machine, 5-inch diameter rolls, 5-hp. motor, working length of rolls 72 inches, 11-gage capacity
- 4 Bench plate for assorted bench stakes
- 2 Bench stake set as follows:
 - 1. Double seaming
 - 2. Beakhorn
 - 3. Bevel-edge square
 - 4. Needle case
 - 5. Hatchet
- 3 Universal stake holders and Universal stakes: set, complete as follows:
 - 1. Double seaming
 - 2. Beakhorn
 - 3. Bevel-edged square
 - 4. Needle case
 - 5. Hatchet
 - 6. Blowhorn
 - 7. Bottom
- 4 Hollow mandrel stakes
- 5 Universal hand dolly
- 2 Punch set, solid, taper, 1/8, 1/4, 1/2, 3/4 inch
- 2 Punch set, hollow, 1/2, 3/4, 1 inch
- 10 Punch set (one prick, one center)
- 20 Needle-nose pliers, 2-inch nose
- 20 Flat-nose pliers
- 2 Shears, double-cutting hand-operated
- 20 Combination snips, 3-inch jaw

Unit

- 10 Standard straight snips, 3-inch jaw
- 5 Circle snips, 2 1/2-inch cutting edge
- 20 Aviation snips, 10-inch length, 2-inch cutting edge right-hand cutting
- 20 Aviation snips, 10-inch length, 2-inch cutting edge left-hand cutting
- 2 Trojan snips, 12-inch length, 2 1/2-inch cutting edge
- 20 Scratch awls
- 20 Wing dividers, 10-inch
- 2 Beam trammel points
- 10 Soldering coppers, set as follows:
 - 1. One-pound (one each, pointed and bottom)
 - 2. Three-pound (one each, pointed and bottom)
 - 3. Four-pound (one each, pointed and bottom)
 - 4. Six-pound (pointed)
- 5 Furnace, gas-fired, complete with 2 burners, 2 valves, and pilot light
- 5 Hand groover set with groove widths as follows:
 - 1. 1/8-inch
 - 2. 7/32-inch
 - 3. 5/16-inch
 - 4. 7/16-inch
- 5 Rivet set, containing numbers 680 to 689, inclusive
- 10 Mallet, leather-faced, 2-inch diameter face.
- 10 Mallet, leather-faced, 4-inch diameter face
- 10 Mallet, plastic-faced, 1 1/2-inch diameter face
- 10 Hammer, setting, sheet metal
- 10 Hammer, raising, sheet metal
- 10 Hammer, riveting, sheet metal
- 5 Hammer, 3-lb., sledge
- 10 Square, roof-framing
- 20 Square, combination
- 5 Rule, circumference
- 20 Rule, 24-inch
- 2 Micrometer, 0-1-inch opening
- 5 U. S. standard sheet-metal gage
- 5 Vise, solid base, 3 1/2-inch jaw, 4-inch opening
- 5 Vise, swivel base, 3 1/2-inch jaw, 4-inch opening
- 20 "C" clamps, 8-inch opening
- 20 Vise grips
- 5 Chisel set, 1/2, 3/4, 1-inch blade
- 10 Screwdriver set, standard blade as follows:

Blade		Tip	
Length	Diameter	Thick	Width
3"	7/32"	.032"	7/32"
4"	1/4"	.037"	1/4"
6"	5/16"	.041"	5/16"
10"	3/8"	.050"	3/8"

Unit

- 10 File, flat-bastard, 10-inch
- 10 File, smooth-mill, 10-inch
- 10 Screwdriver set, for Phillips head screws as follows:
 - 1. No. 4 and smaller
 - 2. No. 4 to 9, inclusive
 - 3. No. 10 to 16, inclusive
 - 4. No. 18 and larger
- 10 Tubular hacksaw frame, adjustable for 10-inch to 12-inch blades
- 1 Grinding wheel dresser
- 2 Abrasive bench stones, combination coarse, and fine grit
- Adjustable wrench set complete as follows:
 - 1. 6-inch
 - 2. 8-inch
 - 3. 10-inch
 - 4. 12-inch
- 4 Twist drill set, carbon steel, 1/16" to 1/4" by 1/64", 13 drills
- 4 Twist drill set, high-speed steel, 1/64" to 1/2", 32 drills
- Metal spinning tools, complete as follows:
 - 1. Flat tool
 - 2. Pointed tool
 - 3. Cut-off tool
 - 4. Beading tool
- 20 Drawing sets complete as follows:
 - 5 1/2" compass, 3" extension bar, interchangeable pen,
 - 4" combination spring bow pen and pencil, 4" spring
 - bow divider, 4 1/2" ruling pen
- 20 Drawing outfit complete as follows:
 - 48" T-square, triangular architect's scale, triangle
 - 30" X 60", acrylic 8-inch, triangle 45" X 45" acrylic
 - 6-inch, curve (irregular) 8-inch, pencil pointer,
 - drawing pencil H. drawing pencil 3 H, drawing pencil
 - 6 H, eraser, protractor (acrylic), drafting tape, drawing
 - board brush
- 20 Drawing boards, steel edge
- 20 Stools, steel frame construction with 13" diameter wood seat

APPENDIX E. SUGGESTED LIST OF EXPENDABLE SUPPLIES

<u>Quantity</u>	<u>Description</u>
10	Cold rolled steel sheet, 18-gage, 36" x 96"
10	Cold rolled steel sheet, 20-gage, 36" x 96"
60	Cold rolled steel sheet, 22-gage, 36" x 96"
10	Cold rolled steel sheet, 26-gage, 36" x 96"
60	Cold rolled steel sheet, 28-gage, 36" x 96"
2	Zinc sheets, 20-gage, 30" x 96"
60	Galvanized steel sheet, 22-gage, 36" x 96"
60	Galvanized steel sheet, 28-gage, 36" x 96"
20	Copper flat sheets, soft temper, 16-oz. (.022) 1.0 lbs per sq. ft. 24" x 48"
20	Copper flat sheets, cold rolled, 16-oz. (.022) 1.0 lbs per sq. ft. 24" x 48"
20	Aluminum flat sheets, 16-gage, (.051), 17.18 lbs per sheet, 36" x 96", half hard temper
20	Stainless steel sheet, type 304, polished one side, 36" x 96" sheets, 24-gage
40	Steel strip, hot rolled mild steel, 20 ft.-lengths 1/8" x 1/2", .213 lbs per ft.
40	Steel strip, hot rolled mild steel, 20 ft.-lengths 1/8" x 1", .425 lbs per ft.
1000 ft	Steel angle, hot rolled mild steel 1/8" x 1 1/4" x 1 1/4"
50	Tin plate, 20" x 28" sheets, 28-gage (D15)
100 lbs	Solder, 50% tin and 50% lead
500 ft	Galvanized wire, #8 gage
500 ft	Galvanized wire, #10 gage
5 gal	Machine oil, for general lubrication and rust prevention
50	Abrasive belts, 2" x 60", 100-grit
20 lbs	Solder, 60% tin and 40% lead
5 gal	Hydrochloric acid
20	1-pound blocks of Sal-Ammoniac
20	6-oz. tins of rosin paste
20 lbs	Soldering salts
5	Pint jars of aluminum soldering flux
5	Pint jars of aluminum brazing flux
10 lbs	Aluminum soldering rod
10 lbs	Aluminum brazing rod
10 lbs	Stainless steel solder
5	Flux for soldering stainless steel, (6 oz.)
1 gross	Flux and acid brushes
200	Steel stove bolts with square nuts, 3/16" diameter 1/2" long
8 lbs	Tinners' rivets, 8-oz.
8 lbs	Tinners' rivets, 1-lb.
8 lbs	Tinners' rivets, 2-lb.
4 gross	Pan head rivets, #6 size, 1/4-inch long
50 lbs	Arc welding electrodes, E-6024, 3/32"-diameter
50 lbs	Arc welding electrodes, E-6024, 1/8"-diameter
50 lbs	Mild steel, oxyacetylene welding rod, 1/16"-diameter
50 lbs	Mild steel, oxyacetylene welding rod, 1/8"-diameter
160 oz	Silver solder, 1150° melting temperature

QuantityDescription

4 lbs	Silver solder paste flux
20	Cartons epoxy glue, 8-oz. containers
5 gal.	Metal primer
10 gal.	Synthetic enamel
20 gal.	Lacquer thinner
2 gal.	Synthetic enamel reducer
5 gal.	Synthetic finish for galvanized metal, aluminum, or tern- plate surfaces
5 gal.	Wrinkle finish
20	Hacksaw blades, 18 teeth per inch, .025 thickness
20	Hacksaw blades, 24 teeth per inch, .025 thickness
20	Hacksaw blades, 32 teeth per inch, .025 thickness

Supplementary Information on Instructional Material

Provide information below which is not included in the publication. Mark N/A in each blank for which information is not available or not applicable. Mark P when information is included in the publication. See reverse side for further instructions.

(1) Source of Available Copies:

Agency Vocational Division - Curriculum Laboratory
 Address 10 Seminary Place, New Brunswick, N J 08903
 Limitation on Available Copies as available Price/Unit \$1.50
 (quantity prices) same

(2) Means Used to Develop Material:

Development Group Blanche E. Dornfield
 Level of Group Local - countywide
 Method of Design, Testing, and Trial Follows course of study approved
by Board of Education and tested in various interested classrooms

(3) Utilization of Material:

Appropriate School Setting Related math at vocational High School level
 Type of Program High School
 Occupational Focus Occupational cluster
 Geographic Adaptability No limits
 Uses of Material Students reading
 Users of Material Students

(4) Requirements for Using Material:

Teacher Competency Math specialist or commercial foods instructor
 Student Selection Criteria High School age - medium aptitude and
commercial food service goal
 Time Allotment Three periods per week for one year

MATHEMATICS I - FOR COMMERCIAL FOODS

Counting, computing and figuring were one of man's earliest accomplishments.

Even before you came to school your mother may have boasted to her neighbors that her child knew how to count.

When you came to school you were taught what is known as the four fundamental processes in mathematics -- addition, subtraction, multiplication, and division.

You learned how important it was to work carefully and thoughtfully because mathematics is known as an "exact science", which means that a problem is either right or wrong.

The first lessons of your mathematics course for Commercial Foods will be a review of these fundamental processes. Your work will also indicate whether you are careful and accurate.

Turn to the next page and start your "Pre-Test". This is not a speed test. Do your work carefully and try to make a good score.

The lessons that follow will show how the fundamental processes are used in all jobs of the foods trade.

UNIT I - WHOLE NUMBERS

Pre-Test No. 1

OBJECTIVE: To recall knowledge of whole numbers and to review the work with whole numbers.

RELATED INFORMATION:

In this lesson you will have an opportunity to review the fundamental processes of working with whole numbers. After you have successfully completed this lesson, you will be ready to proceed with the mathematics planned especially for Commercial Foods workers.

PROCEDURE:

1. Do all of the work on paper furnished by the instructor. Do not write on this sheet.
2. Copy all the problems onto your paper. Papers will be checked for legibility, neatness as well as accuracy.

Check your answers carefully. This is not a speed test.

Exercise 1. Addition

Add the following numbers mentally - just put the answers on your paper.

- | | |
|--------------------------|----------------------------|
| 1. $8 + 4 + 5 + 3 + 2 =$ | 4. $7 + 12 + 3 + 15 =$ |
| 2. $9 + 6 + 7 + 4 + 1 =$ | 5. $6 + 15 + 5 + 7 + 17 =$ |
| 3. $10 + 13 + 15 + 11 =$ | |

Exercise 2. Copy the following on your paper and add.

- | | | | | |
|-------------|-------------|--------------|---------------|---------------|
| 1. 3547 | 2. \$18.95 | 3. 42976 | 4. \$178.24 | 5. 475891 |
| 4365 | 15.16 | 72877 | 96.50 | 652322 |
| 6623 | 45.98 | 25734 | 57.95 | 698507 |
| 7832 | 6.50 | <u>86754</u> | 6.95 | 579243 |
| 8950 | <u>5.65</u> | | <u>101.98</u> | 126759 |
| <u>4268</u> | | | | <u>324576</u> |

Exercise 3. Subtraction

Subtract the following and put the answers on your paper.
Do not copy the problem.

1. $18 - 7 =$ 2. $14 - 9 =$ 3. $15 - 8 =$ 4. $12 - 8 =$
5. $17 - 5 =$

Exercise 4. Copy the following on your paper and subtract.

1. $\begin{array}{r} 239 \\ -128 \\ \hline \end{array}$ 2. $\begin{array}{r} 487 \\ -359 \\ \hline \end{array}$ 3. $\begin{array}{r} 842 \\ -456 \\ \hline \end{array}$ 4. $\begin{array}{r} 9457 \\ -7068 \\ \hline \end{array}$ 5. $\begin{array}{r} 2965 \\ -1372 \\ \hline \end{array}$

Exercise 5. Multiplication

Multiply the following mentally and put only the answer on your paper.

1. $7 \times 6 =$ 2. $3 \times 7 =$ 3. $9 \times 8 =$ 4. $5 \times 9 =$
5. $6 \times 8 =$

Exercise 6. Copy the following on your paper and multiply.

1. $\begin{array}{r} 488 \\ \times 307 \\ \hline \end{array}$ 2. $\begin{array}{r} 3566 \\ \times 224 \\ \hline \end{array}$ 3. $\begin{array}{r} 8495 \\ \times 637 \\ \hline \end{array}$ 4. $\begin{array}{r} 6294 \\ \times 176 \\ \hline \end{array}$ 5. $\begin{array}{r} 7384 \\ \times 4613 \\ \hline \end{array}$

Exercise 7. Division

Divide the following and put only the answers on your paper.

1. $15 \div 3$ 2. $8 \div 2$ 3. $45 \div 9$ 4. $81 \div 9$ 5. $16 \div 4$

Exercise 8. Copy the following on your paper and divide.

1. $14 \overline{)2366}$ 2. $71 \overline{)4615}$ 3. $86 \overline{)63640}$ 4. $92 \overline{)349671}$
5. $84 \overline{)354028}$

UNIT I - WHOLE NUMBERS

Checking Daily Bills

Lesson No. 1

OBJECTIVE: To understand the importance of checking daily food orders and bills.

RELATED INFORMATION:

What would you think of a shopper who neglected to check the articles that were in his order? Also, what would you think of a person who neglected to check the prices of the goods that he had purchased? Surely, you would say that he was a very careless person.

The food worker must be more cautious than the shopper because:

- a. he is purchasing food in much larger quantities.
- b. he is responsible for the receipt of the goods.

PROCEDURE:

Daily orders are written in the "day book" or order book.

Be sure that the count, weight, or size of the package is the same as has been ordered.

Record the prices in the day book.

Check the total.

If there should be any mistakes in prices or quantities, call the dealer for corrections.

ASSIGNMENT:

1. Why should all deliveries be checked carefully?
2. The order book indicates that 150 half pints of milk were ordered, but 148 were received. When would you report the shortage? Why?
3. The total grocery bill is \$17.66. After adding it several times, you find that your total is \$17.76. What will you do?
4. Twenty-four dozen rolls were ordered. You were charged for twenty-two dozen. What would you do about this situation? Why?
5. A good business person reports all mistakes, whether it affects the dealer or the customer. Explain why this is a good practice?
6. Total the packet of orders that you have received. Find the total of each bill. Add the totals of each to arrive at the total of all. Your teacher will supply the orders.

UNIT I - WHOLE NUMBERS

Issuing Stock

Lesson No. 2

OBJECTIVE: To learn how to keep accurate stock records.

RELATED INFORMATION:

The kitchen manager or the stock room clerk is responsible for issuing staples from the store room.

To keep the records uniform, a stock room form has been made.

PROCEDURE:

A.

1. Obtain a form from the file.
2. As each worker requests stock, record the material withdrawn from the stock room on the form.
3. Study the model form below and fill the form in with any supplies issued from the store room.

MODEL STOCK ROOM FORM

DATE	ARTICLE	SIZE	AMOUNT	TOTAL
Nov. 6	Tomatoes	#10	3	3
	Cornstarch	1 lb.	1 lb.	1 lb.
	Spaghetti	1-20 #	10 lb.	10 lb.

4. Fasten the form on a clip board and leave it there while you are acting as stock room clerk. Total all supplies issued before you pass the form on to another clerk. Sign your name to your record.
 5. Record each item that is taken from the store room.
 6. At the end of the day, total the quantities used.
 7. Put the record in the file.
- B. It is necessary to keep a special record of the ice cream sales. The store room clerk can prepare one of these before the lunch period.
1. Make out a form as follows.
 2. List the items for sale, and the quantities available.
 3. The person who sells the ice cream will keep the record.

Daily Ice Cream Record

Date	On Hand	Article	Sold	Total	Left
Nov. 6	84	Ice Cream Sandwich	+++ +++ +++ +++	20	64
	36	Dixie Cups	+++ +++ +++ +++ //	22	14
	60	Fudgcicles	+++ +++ +++ ///	18	42

ASSIGNMENT:

1. Total the stock room slips for one month according to the following directions:
 - a. List the various items used.
 - b. Record the quantity of each item that has been used for the month.
 - c. Total the quantity of each item that has been used.

Suggested Form

Monthly Store Room Record

DATE: Sept.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	Total
Peaches #10		4			1				8		3						6		1		2	25
Coffee		1		3					1		1				4			2	1	1	1	15
String Beans #10				5			1			6							4					16

NOTE: It is suggested that a form be made out to conform to the dates that school will be in session.

UNIT I - WHOLE NUMBERS

Food Service Records

Lesson No. 3

OBJECTIVE: To understand the application of addition in keeping food service records.

RELATED INFORMATION:

A progressive business must know the number of people that eat in their establishment every day.

Guest check pads provide one method of determining this record. Below is a sample of the check pad.

Guest Check

No. 15	Table 3	Server J.W.	Guests 4
--------	------------	----------------	-------------

EXPLANATION:

No. means number of the check -- this is usually printed on the pad and the numbers are consecutive.

Table means the table number at which the guest has been served.

Server - some means of identifying the person serving.

Guests - the number of people served at this time.

PROCEDURE:

A. Table Service

1. Each check is numbered. If you spoil a check, do not destroy it. The hostess or cashier will direct you as to the way to handle checks that are "void".
2. Table Each waitress or server is assigned a certain number of tables. The number of the table is placed in the box on the check.
3. Server The hostess or manager will instruct you as to the way you mark this box. Some places use the name; some, initials; others use different means of identification.
4. Guests The number of guests in each party should be put in the box provided for this information.

B. Counter Service

The method of counting counter customers varies. We will consider the method that we have found helpful.

1. Put forty half-pints of milk on each serving tray. Record the number of trays set up.
2. Check the various desserts that have been prepared. Record the number of each.
3. Check the number of salads, sandwiches, and all other foods prepared for the counter.
4. Pile the dinner plates or platters in piles of twenty.

C. Ice Cream

The kitchen manager or the stock room clerk will prepare the service record for this station. See directions for keeping this record in Lesson 3.

The server should check the items sold. The cashier will put the money collected from ice cream in a separate register. At the end of the lunch periods these accounts will be checked. The cash and the server's record should agree.

ASSIGNMENT:

1. Get a packet of sales checks from the cafeteria. Figure the number of guests served.
 - a. for one day
 - b. for one week
 - c. for one month

2. Get the register tape and count up the number of sales according to the letters that appear on the tape. "E" is used by the cashier to indicate the number of platters or Federal lunches sold. Count the "E's" and check them with the number of plates that were set up.

3. Consult the lunchroom records for two preceding years. Find the date that corresponds with the one that you are recording. Compare today's guest count with the previous records. Has business increased? decreased? Make a record of the information that you find.

4. Make a table like the sample. Observe - the days of the week that may be consistent with more business. Reasons?

Month	Monday	Tuesday	Wednesday	Thursday	Friday	Total

UNIT I - WHOLE NUMBERS

Cash Register Operation

Lesson No. 4

OBJECTIVE: To learn the method of checking lunchroom receipts.

RELATED INFORMATION:

You, of course, realize the importance of accuracy, if you are operating a cash register. Carelessness here can cost your employer his profit. Overcharges can make a customer angry. (You may even be asked to make up shortages out of your pay). It isn't difficult to see that you need pin-point accuracy in this operation. While 95% in math in school is a good mark, it is not good enough for the cash register operator. She must make a mark of 100%. Nothing else will do.

Some of the causes of overs and shorts are listed. Read these and see if you may not be able to add others to the list.

1. distractions -- conversation with workers or customers.
2. not paying attention to business.
3. insufficient amount of change to begin the day's work.

PROCEDURE:

To total the receipts for the day.

1. remove the money from the cash drawer.
2. take out the change that was in the register.
3. pile the remaining change as follows:

pennies in piles of tens
nickels in piles of tens
dimes in piles of tens
quarters in piles of fours
half dollars in piles of twos
bills -- clip together with a slip of paper on which the amount is written.

Note: If there is extra change of any denomination, keep it aside and add it in later. Some establishments put this change in envelopes marked with the amount and description of the contents.

4. Total the money.
5. Check the money with the total on the cash register tape - the amounts should agree.
6. fill out a register blank with the following headings

Register Reading Register Receipts Over Under

Cashier
Date

ASSIGNMENT:

1. How is the money to be piled?
2. Should the first and second column check? Why?
3. Jane's register report for one week was as follows:

<u>Register Reading</u>	<u>Register Receipts</u>
\$26.36	\$26.41
41.15	40.99
28.01	28.34
27.44	27.34
31.47	31.42

What was Jane's record for the five day period? Would you consider Jane an accurate cashier?

4. Explain how you would stack the following change:

7 half dollars	75 nickels
24 quarters	98 pennies
30 dimes	\$22 in bills.

 - a. What is the total amount of money in the above?
 - b. The register tape showed a total of \$39.35. Was the cashire over or under? How much?

5. If your register shows a tape for \$249.87 and you have \$250.16 in cash, how much over are you?
6. Monday's cash register receipts were \$170.02. The tape showed \$171.46. What was the shortage?
7. The receipts for one week amounted to \$426.46. There was \$75.00 in bills, \$25.50 in half dollars; \$220.75 in quarters, \$59.60 in dimes, \$45.00 in nickels, and the remainder in pennies.
 - a. How many pennies are there?
 - b. Make up the change in piles according to the directions for totaling the daily receipts.
8. If you were getting the money ready to deposit in the bank, it would be necessary to put the coins in wrappers, as follows:

half dollars	\$10.00 to each wrapper
quarters	\$10.00 to each wrapper
dimes	\$ 5.00 to each wrapper
nickels	\$ 2.00 to each wrapper
pennies	.50 to each wrapper

- a. How many rolls of each denomination would you have?
- b. Put any extra change in separate envelopes and mark with the coin and the amount.

Make out a slip like the model

	<u>Number</u>	<u>Amount</u>
Bills		
Halves		
Quarters		
Dimes		
Nickels		
Pennies		

Total -- should balance with the amount you started with -- \$426.46.

UNIT I - WHOLE NUMBERS

Production Report

Lesson No. 5

OBJECTIVE: To learn how to prepare a production report.

RELATED INFORMATION:

The record of food prepared as well as what is sold and returned to the kitchen, provides a kitchen manager with a great deal of information.

PROCEDURE:

1. Each cook prepares a record of the different dishes made at his station.
2. After the meal, he counts or measures what food remains. This figure should balance with the quantity of food sold.

ASSIGNMENT:

1. The following is a cook's production report. Complete the last column.

Prepared	Returned	Sold
100 portions soup	10	
65 baked pork chops	0	
40 chicken croquettes	0	
100 portions mashed potatoes	15	
3 quarts gravy	1 pint	
12 pies	2	
6 layer cakes	1	
50 fruit cups	15	
30 servings rice custard	5	

2. The cook ordered 25 porterhouse steaks. Five were left at the end of the day. There was a record of 19 sold. Does this record balance? What is the difference? What might be some reasons for the discrepancy?
3. The production record showed that 75 portions of spaghetti were prepared. The server was able to get 70 from the pan. What was the difference? How might it be accounted for?
4. Sixty-five baked custards were prepared. The counter server accidentally dropped four. How many were actually available for sale?
5. The sandwich cook received 45 slices ham, 20 slices cheese, 40 slices ham bologna, for sandwiches. At the end of the day there were 5 slices ham, 10 slices cheese, and 15 slices bologna left. How many sandwiches of each kind were made, if one slice of each was used for a sandwich?

UNIT I - WHOLE NUMBERS

Counter Report

Lesson No. 6

OBJECTIVE: To learn how to prepare a counter report.

RELATED INFORMATION:

A good counter worker is a sales person. Often he can increase sales by suggesting and encouraging customers to take extra items. This form of selling is very profitable to the management and such a worker is very valuable to any establishment.

With such variety of items at the cafeteria counter there is ample opportunity to make suggestions.

The counter report shows exactly how much has been sold at each station at a given interval of time.

PROCEDURE:

1. Obtain one of the counter report blanks.
2. List all of the food items on the menu.
3. Record the quantity of each as it is ready for the counter.
4. At the close of the serving period, record the quantity of left-overs in the column not sold.
5. Subtract from the number listed in the first column.
6. The result will be the quantity sold.
7. Multiply the number in column 3 by the unit selling price. Put the answer in column - total value.
8. Add all the numbers in column 5. This figure will be the total money value of the food sold.
9. The total money value of food sold should equal the cash receipts.

ASSIGNMENT: Complete the following Counter Report:

1.

Food Item	For Sale Servings	Not Sold	Sold	Unit Price	Total Value
Soup					
Tomato	60	10		.05	
Clam Chowder	50	5		.10	
Potato	30	10		.05	
Split Pea	60	10		.05	
Desserts					
Layer Cake	45	2		.15	
Tapioca Pud.	30	10		.10	
Apple Pie	50	30		.10	
Sandwiches					
Egg Salad	30	10		.20	
Ham	25	5		.20	
Cheese	20	10		.15	

2.

Complete the following counter report:

Article	Number Sold	Unit Price	Total
Steak Sandwich	50	.75	
Hamburger & Roll	70	.40	
Frankfurter & Roll	60	.20	
Pie			
Apple	48	.20	
Pumpkin	40	.20	
Custard	13	.20	
Cherry	32	.20	
Cake			
Chocolate Layer	25	.15	
Cup	40	.07	

3. The cashier had \$110.68. Was the register over or under?
How much?

**CAFETERIA
DAILY COUNTER REPORT**

UNIT I - WHOLE NUMBERS

Food Service Report

Lesson No. 7

OBJECTIVE: To learn how multiplication is used in preparing daily food service reports.

RELATED INFORMATION:

You will be very much surprised to learn the number of lunches served in our school over a period of one month.

Records show that in schools alone there are millions of lunches sold to school children every day.

Try to think of the thousands of meals that are served in restaurants, luncheonettes, and various other eating places, and you will begin to understand what a tremendous job this feeding business is.

The habit of "eating out" has grown to such an extent that our business must keep accurate records of the number of meals served every day.

PROCEDURE:

1. Prepare a form like the sample -

Date	E	Value of E	A	Value of A
------	---	---------------	---	---------------

2. Use the cash register tapes to prepare your record. Tapes for each month are in marked envelopes in the cafeteria.
3. Count up the number of "E's" and "A's" on each tape.
4. Record the number in the correct column of the form.
Explanation -- "E" represents the number of Federal lunches;
"A" indicates adult lunches.
5. Multiply each number in column "E" by 25 cents. Put the answers in the column - "Value of E".
6. Multiply each number in the column "A" by 30 cents and put the answers in the column "Value of A".
7. Total each column.

8. To prove your work -- total of column "E" x .25 = the total of column "Value of "E".
 "A" x .30 = the total of column "Value of "A".

Sample

Date	E	Value of E	A	Value of A
Oct. 1	30	\$ 7.50	22	\$ 6.60
Oct. 2	42	10.50	16	4.80
Oct. 3	57	14.25	30	9.00
Total	129	\$32.25	68	\$20.40

Proof: 129 x .25 = \$32.25
 68 x .30 = 20.40

ASSIGNMENT:

1. What would be the total receipts for 607 lunches at 25 cents each?
2. In January, 560 adults purchased lunches at 30 cents each. How much cash was received?
3. If the average luncheon check in a commercial cafeteria was 76 cents, how much would be received from 625 guests?
4. A commercial restaurant owner separated his meal checks for Thursday evening dinner. There were:
 - 41 checks @ \$2.50 each
 - 8 checks @ 3.75 each
 - 51 checks @ 1.25 each
 - 17 checks @ .75 each
 - 44 checks @ 1.50 each
 - a. How many people were served?
 - b. What was the total of the receipts for this meal?
 - c. What was the average check for this meal?

UNIT I - WHOLE NUMBERS

Costing Recipes

Lesson No. 8

OBJECTIVE: To learn how to compute the cost of recipes.

To recognize the importance of knowing the cost of materials used in food preparation.

RELATED INFORMATION:

What would you think of a carpenter who built a house and didn't keep a record of the cost of materials that were used?

What would you think of a dressmaker who made a dress and considered just the cost of the cloth used?

I am sure that you would say that these workers would not be successful business people. Every item that is used should be listed and priced so that there is a true picture of the cost of the production of the house or the dress.

The food worker must know the cost of recipes by computing the costs of all the materials used.

It is necessary to make frequent checks of costing recipes because prices change.

ASSIGNMENT:

1. For this lesson you will use current prices. Consult the cafeteria records for these. Copy the following recipes. Look up the unit price of each item used. Consult day book, or inventory cards. Compute the cost of each recipe. This is materials cost only.

A. Spanish Rice (50 servings)

3 lb. bacon
10 green peppers
4 lb. rice
2 lb. onions
1 #10 can tomatoes
1 oz. salt

B. Salmon and Macaroni Salad (50 servings)

3 1 lb. cans salmon
2 lb. green beans
2 qts. diced celery (weigh to determine the quantity
needed)
1/4 lb. onions
3 lb. elbow macaroni
1 pt. salad dressing

C. Cottage Pudding (50 servings)

1 1/2 lb. sugar
1 oz. baking powder
4 eggs
1 pt. milk
1 1/2 lb. flour
1/2 lb. vegetable shortening

D. Tapioca Pudding (50 servings)

6 qts. milk
1 1/2 doz. eggs
1 lb. sugar
1 1/2 c. quick tapioca (quick cooking)
1 T. vanilla

2. Find the cost per serving of each of the recipes.
3. Ground beef costs 52 cents per lb. What does 30 lbs. cost?
4. Eggs are 45 cents per dozen. What does a crate of 30 dozen cost?
5. A restaurant prepared 80 servings of chicken to be sold at \$1.25 per serving. 56 servings were sold. How much income was derived from this sale?
6. The chicken cost the restaurant operator 44 cents per serving, what was the value of the chicken that was not served?

UNIT I - WHOLE NUMBERS

Yield of Standard Recipes

Lesson No. 9

OBJECTIVE: To learn how to divide standard recipes.

To become familiar with the present trends in the use of smaller recipes.

RELATED INFORMATION:

Standard recipes are prepared to yield a definite quantity but there are times when a cook will need to change the yield of a recipe.

The newer trend in food preparation is for the cook to prepare food in smaller quantities. Every cook has his favorite recipes which have often been worked out in large quantities, so it will be a great help to know how to change these recipes and be able to break them down so that they will serve different numbers.

There also will be times when the recipe will need to be increased.

ASSIGNMENT: Change the following recipes to the quantities indicated in each column.

1. <u>Cake Batter</u>	<u>100 Portions</u>	<u>50 Portions</u>	<u>25 Portions</u>
molasses	8c.		
brown sugar	8c.		
buttermilk	8c.		
melted butter	16T.		
eggs	32		
flour	8lb.		
ginger	4T.		
cinnamon	4T.		
baking soda	4oz.		
2. <u>Baked French Toast</u>	<u>24 Portions</u>	<u>12 Portions</u>	<u>48 Portions</u>
bread	24 slices		
egg yolks	12		
granulated sugar	1 T.		
salt	1 T.		
milk	4 c.		

<u>3. Baked Egg Sandwich Roll with Cheese Sauce</u>	<u>36 Portions</u>	<u>24 Portions</u>	<u>6 Portions</u>
hamburger rolls	36		
eggs	36		
fresh tomatoes	9		
melted butter or oil	3/4 c.		
salt	1 1/2 T.		
pepper	3/4 t.		
 sauce			
milk	2 1/4 qts.		
butter	12 oz. oz.		
cheese	12 pz. pz.		

4. Select three recipes from one of the following:

Restaurant Management Magazine

Institutions Magazine

Woman's Day Magazine, Good Housekeeping and/or similar magazine

Copy the recipes and state the source.

Figure out each recipe to serve twelve, twenty-five

UNIT I - WHOLE NUMBERS

Use of Standard Serving Equipment

Lesson No. 10

OBJECTIVE:

1. To understand how standard measuring equipment is used to obtain uniform servings.
2. To understand how the use of standard measuring equipment provides business with a check on the production as well as the service of food.

RELATED INFORMATION:

Standard measuring equipment has taken the guess work out of food production.

The use of standard serving equipment also makes for satisfied customers. Would you feel that you were being treated fairly if you saw one person in the cafeteria line receive a large serving of food and then when you came along you received a much smaller portion?

Ladles, dippers, and ice cream scoops are some of the tools that are used to give the customer the quantity of food that he should receive for the money he is spending.

PROCEDURE:

1. Obtain several ladles from the kitchen. Fill each with water. Pour the measured water into a measuring cup. Record the amount that each dipper holds. Compare the amounts.
2. Look at the different sizes of ice cream scoops or dishers. On the spring inside the scoop, there is a number. The number indicates the number of servings per quart. Compare the size of the scoop with the number on the spring. Compare the number with the size of the scoop. What is your observation?
3. The slicing machine can be adjusted to yield thick or thin slices. Turn the gauge to the number that you would consider would give slices the desired thickness for a sandwich. A slice of meat or cheese should weigh about 1 - 1 1/2 oz. When you obtain this weight slice, make a note of the number on the machine dial that you should use. By using this number to slice the meat, every sandwich will be uniform.

4. For a salad plate, slightly thicker slices would be needed - the weight should be 2 - 3 oz. When you are able to obtain this weight, record the number so that your salad plate servings will be uniform.
5. Compare the two numbers used in 3 and 4.

ASSIGNMENT:

1. The salad girl prepared four quarts of egg salad mixture for sandwiches. She was instructed to use a #30 scoop of filling for each sandwich. How many sandwiches should she be able to obtain from the mixture?
2. How many quarts of cabbage salad should be made for 96 servings? A number 16 scoop will be used for each serving.
3. The sandwich girl is using a butter cutter that yields sixty cuts to the pound. How many pounds of butter will be needed for 300 servings?
4. The cook figured that each gallon of soup would yield 16- 1 cup ladles. How many gallons should be prepared for 80 servings?
5. One quart of gravy should yield 32 servings. How much gravy should the cook make for 128 servings?
6. A chef was directed to prepare 400 servings of hamburgers. Each was to weigh 4 ounces. How many pounds of meat should the chef order?
7. If you wanted to serve 120 guests, a number 12 scoop of potato salad, how many quarts of the salad would you prepare?

UNIT I - WHOLE NUMBERS

Yield of Standard Packs

Lesson No. 11

OBJECTIVE: To practice computing quantities from various standard packs.

RELATED INFORMATION:

Food purchased for quantity production is packed in what is known as "institutional packs".

If the yield of a standard pack is known, accurate orders can be prepared.

PROCEDURE:

1. Canned goods are packed in various sized cans with a definite number of each size can to a case. Each can has a definite weight of contents. Look at the exhibit of cans of standard sizes. Note the weight or yield which is on the label.
2. Many foods are packed in packages which have a definite number of uniform portions. Meats such as cutlets, steaks, etc., fish fillets, and sticks are examples of this type of packaging.
3. Fresh fruit such as oranges, apples, melons, pears are packed in crates or boxes with a definite count to the package. Other fruits and fresh vegetables are packed in baskets or crates that have standardized weights.
4. Eggs are packed in cases, with a standard count, to the case.
5. Flour, sugar, potatoes are some of the materials packed in bags of standard weights.
6. Consult one of the following books:

The School Cafeteria - Mary De Garmo Bryan
Food Production, Marketing, Consumption - Stewart
Restaurant Management - J. O. Dahl

Look up the following information

1. The weight of a basket of spinach, a crate of lettuce, a box of apricots (fresh), a till of tomatoes, a crate of eggs (small, medium, large). Make a record of your findings.

Why has it been necessary to specify that these goods have a definite weight in each package? What would be the difference in these two directions -- 4 heads of cabbage -- 15 lbs. of cabbage?

ASSIGNMENT:

1. A restaurant used 20 gallons of salad oil in one week. The oil came packed _____ gallons to the case.
How many cases should be ordered for one month?
2. A school used 8,400 half-pints of milk in 21 days.
What was the daily consumption?
3. There are approximately 20 slices of bread to a loaf, not including the crusts.
How many loaves should be ordered for 100 sandwiches?
4. How many pounds of butter would be needed for 300 guests, if a cutter yielding 60 cuts per pound were used? for 360 guests with a 72 cut per pound?
5. There are 24 ice cream sandwiches in a package.
How many packages should be ordered for 480 servings?
6. Fish sticks are packed in 5 lb. boxes of 150 fish sticks each.
Three fish sticks are used for each serving.
How many 5 lb. boxes should be ordered for 300 portions?
7. A manager wanted to use 4 oz. Swiss steaks for a luncheon.
He found the steaks were packed 40 to the box at \$11.60 per box.
What was the cost per serving?
8. An institution pack of frozen vegetables will serve about 30 people.
How many boxes would be used for 180 servings?
9. A restaurant used two No. 10 cans of peas for a meal.
If peas are planned for six meals, how many cases should be ordered?
10. There are 176 oranges in a box that cost \$5.28.
What was the cost of one orange?
11. There are five medium size potatoes to one pound.
How many pounds should be ordered for 500 servings?
How many 100 pound bags would be ordered? 50 pound bags?
25 pound bags?
12. If there are 30 dozen eggs to a case, how many guests can be served from one case, allowing 2 eggs for each serving?

UNIT I - WHOLE NUMBERS

Computing the Daily Average Check

Lesson No. 12

OBJECTIVE:

1. To learn how to figure the average amount of the guest checks.
2. To understand the importance of the amount of the "average check".

RELATED INFORMATION:

Every restaurant operator is in business for the purpose of making money.

At the end of the day, he totals the income from the day's business. Also, he will want to know how many customers he has had. With these two figures, he will be able to figure what the average check has been or what the average guest has spent.

The hotel dining room will probably have fewer guests than an automat, so we would expect that the average check for the hotel would be much larger.

PROCEDURE:

First, let us consider our school lunch room. Use the monthly report of the total income. Find the total number of students served. Divide the number who purchased food into the income. This figure will be the average check. (Records are available in the cafeteria)

ASSIGNMENT:

1. An industrial cafeteria for May 16 showed receipts of \$314.25. There were 419 guests. What was the average check for the day?
2. The hotel dining room receipts for dinner were \$164.25. The average check was \$2.25. How many guests were served?
3. A restaurant took in \$747.04. There were 322 guests. What was the average check?
4. Compare the average check from the various types of eating places that have been used in this lesson. What factors would cause the variations of the amounts of the average check?

5. A Y.M.C.A. cafeteria served 140 guests at breakfast.
60 checks amounted to 75 cents each.
30 checks amounted to 55 cents each.
50 checks amounted to 45 cents each.

What were the total receipts for the meal? What was the average check?

6. A lunch room manager found that an average of 25 persons bought cakes at 10 cents per cut. Each person remained 8 minutes to eat the cake. Would this be a profitable business? Reason?
7. A small luncheonette has set the following standard - 10 persons per hour for each of their 20 stools. If each person spent 30 cents, what would be the income for one hour?
8. What would the manager of the above restaurant take in, in the following periods: 1 1/2 hours at breakfast; 2 1/2 hours at lunch?
9. A restaurant manager discovered that he had to take in \$265.00 per meal in order to meet expenses and make a living income. If he figured his average check amounted to 85 cents, how many customers must be served per meal?

UNIT I - WHOLE NUMBERS

Achievement Test No. 1

1. The kitchen manager issued the following number of eggs; six to the meat cook, four dozen to the salad cook, and one and one-half dozen to the baker. How many dozens were issued? At 45 cents per dozen, what was the total cost of the eggs used?
2. From a ham that weighed 14 lbs., the cook was able to carve forty orders. The ham cost 47 cents per pound. What was the total cost of the ham? What was the cost per order?
3. The receipts from one month's business in a small restaurant amounted to \$2,463.08. The expenses for food were \$1,253.10. How much was left for other expenses?
4. There were 2603 school lunches served in one month. At twenty-five cents each, how much money was received for all of the lunches?
5. There are fifty peach halves to a No. 10 can. How many cans would you need for 150 servings, allowing two halves of peaches for each serving?
6. Lima beans cost 96 cents per No. 10 can. What would be the cost of one case of lima beans?
7. Portion cut, 5 oz. veal cutlets cost 55 cents each. The cutlets are packed 35 to the box. What would be the price for one box?
8. $\$467.12 + 20.84 + 103.09 + 4.26 =$
9.
$$\begin{array}{r} 6037 \\ \times 212 \\ \hline \end{array}$$
10. A restaurant record showed that receipts for one week were \$4268.18. The average check for the week was \$6.02. How many customers ate at the restaurant?

11. A menu advertised the following low calorie luncheon:

ITEM	AMOUNT	CALORIES
Tomato Juice	1/2 cup	50
Roast Beef (lean)	5 slices (2 1/2 x 1/4 in)	100
Radish Roses	3	9
Head Lettuce Wedge with 1 t. French Dressing	$\frac{1}{6}$ medium head	90
Bread with 1/2 t. Butter	1 slice	110
Grapes (seedless)	Medium bunch	75
Iced Tea (clear)	8 oz. glass	<u>0</u>
	Total	

If a woman planned a diet of 2400 calories per day, how many calories could she have for the remainder of the day?

UNIT II - FRACTIONS

Review - Terms

Lesson No. 1

OBJECTIVE: To learn how fractions are used in Commercial Foods.

RELATED INFORMATION:

You have completed the unit on whole numbers. Were you surprised to find that addition, subtraction, multiplication and division are so important to the foods trade?

Now you are ready to start Unit 2 which will first review your knowledge of working with fractions.

Later in this unit you will learn that fractions are also very important to the foods worker.

The following facts will refresh your memory on the terms used in the study of fractions.

PROCEDURE: A fraction is a part of a whole number. It is composed of two parts. The numerator which is the number written above the line, the denominator is written below the line and indicates the size.

$\frac{2}{3}$

In the fraction $\frac{2}{3}$ a whole thing or "1" has been divided into three parts and two parts have been taken.

"2" is the numerator

"3" is the denominator

1. What do the following mean -- $\frac{5}{6}$ $\frac{3}{4}$ $\frac{1}{8}$ $\frac{11}{12}$ $\frac{3}{23}$ $\frac{6}{64}$ $\frac{10}{20}$
2. Write the following as fractions:
three sevenths, fifteen forty-fifths, four forty-seconds
nine sixteenths, seven tenths.

QUESTIONS:

1. a. What is the number above the line called?
b. What does this number mean?
2. a. What does the number below the line mean?
b. What is the number below the line called?

QUESTIONS: (Cont'd)

3. How many months do we have in one year?
How many months do we go to school?
Write this number as a fraction.
4. There are _____ cents in a dollar. A boy spent 33 cents.
Write this number as a fraction. How many cents remain?
Write this number as a fraction.
5. A cake is cut into sixteen pieces. Each piece is one _____
of the whole cake.
6. The following fruit is to be used to make four fruit salads.
Write as a fraction, the fruit to be used for one salad.

4 Salads

1 Salad

2 slices pineapple
1 banana
1 orange
 $\frac{1}{2}$ cantaloupe

- a.
7. What part of the school day is spent in shop?
b.
One hour of shop time is given to discussion.
Write this number as a fraction of the total shop time of the
total school day.
8. A loaf of bread has 20 slices. One slice is _____ of a loaf.
9. There are 12 eggs in one dozen. One egg equals _____ of a dozen.
Two parts of a pear which had been cut into eight parts would be
_____ of the pear.
An orange had 16 segments. Three were used. Write this number
as a fraction.
_____ dimes make one dollar. Each dime is one _____ of the dollar.

UNIT II - FRACTIONS

Review - Types

Lesson No. 2

OBJECTIVE: To recall the different types of fractions.

RELATED INFORMATION:

There are three types of fractions:

- a. The proper of common fraction $(\frac{2}{3})$
- b. The improper fraction $(\frac{3}{2})$
- c. The mixed number $(3\frac{1}{3})$

We may change any improper fraction to a mixed number and any mixed number to an improper fraction.

This exercise will be used almost every day in the foods class.

ASSIGNMENT: Classify the following according to the three types of fractions:

- | | | |
|----|----------------|----------------|
| 1. | $\frac{1}{12}$ | $\frac{12}{8}$ |
| | $3\frac{1}{2}$ | $4\frac{1}{7}$ |
| | $\frac{4}{6}$ | $\frac{3}{10}$ |
| | $7\frac{1}{8}$ | $\frac{24}{5}$ |
| | $\frac{5}{2}$ | $6\frac{2}{9}$ |

2. Change the mixed numbers in No. 1 to improper fractions.

3. Change the improper fractions in No. 1 to mixed numbers.

4. The following foods indicate the quantities as follows:

- | | | |
|------------------|-----------------------------|--|
| Baked Beans | 15 $\frac{1}{2}$ oz. | a. Label these quantities to which types of fractions they represent |
| Soup | 6 $\frac{1}{4}$ cups | |
| Corned Beef Hash | 5 $\frac{1}{2}$ lbs. | b. Change the mixed numbers to improper fractions. |
| Corned Beef Hash | 5 $\frac{7}{8}$ lbs. | |
| Mushrooms | $\frac{1}{3}$ cups | |
| Devilled Ham | 1 $\frac{1}{2}$ tablespoons | |
| Cranberry Sauce | 7 $\frac{5}{6}$ lbs. | |
| Asparagus | 6 $\frac{7}{16}$ lbs. | |

5. The following menu yields about 740 calories. Write the calorie value of each food as a fraction.

onion ring soup	20 calories
2 broiled lamb chops	260 calories
1 c. buttered broccoli	75 calories
1 medium baked potato	100 calories
chefs salad	45 calories
roll and butter	130 calories
black coffee	0 calories
fruit cup with lime sherbert	110 calories

6. A manager found a new recipe. The chef was directed to make a test of the recipe for flavor and acceptance. The recipe and the test recipe follows:

<u>Ingredients</u>	<u>50 Portions</u>	<u>Fraction (Test Portion)</u>
Cauliflower	9 lb.	1 lb.
Butter	12 T.	2 T.
Flour	5 T.	2 T.
Milk	12 c.	2 c.
Cheese (cheddar)	20 oz.	4 oz.
Cheese (Parmesan)	16 T.	4 T.
bread crumbs		

- Use the numbers in the "50 Portion" column for the denominators of the fractions.
- Use the number in the "Test Portion" for the numerators.
- Classify the fractions.

UNIT II - FRACTIONS

Reduction

Lesson No. 3

OBJECTIVE: To develop skill and accuracy in the reduction of fractions.

RELATED INFORMATION:

It is important that you be able to reduce and handle fractions as this work is the basis of a great part of the food trade work.

Practice in this exercise will be very helpful.

PROCEDURE:

- A. To reduce the value of a fraction, the top and bottom numbers are divided by a number which will go into each evenly.

Example:

$$\frac{6}{9} \div \frac{3}{3} = \frac{2}{3}$$

When the resulting answer can no longer be divided on top and bottom by a number common to both, we then have the fraction reduced to its lowest term.

$$\frac{15}{45} \div \frac{5}{5} = \frac{3}{9} \div \frac{3}{3} = \frac{1}{3}$$

- B. To reduce fractions like $\frac{28}{8}$ $\frac{14}{4}$ $\frac{7}{2}$ first divide the bottom number into the top, check the remainder, and reduce it as below.

$$1. \quad \frac{28}{8} = 8 \overline{) 28} \begin{array}{r} 3\frac{4}{8} \\ \underline{24} \\ 4 \end{array} = 3\frac{1}{2}$$

$$2. \quad \frac{14}{4} = 4 \overline{) 14} \begin{array}{r} 3\frac{2}{4} \\ \underline{12} \\ 2 \end{array} = 3\frac{1}{2}$$

$$3. \quad \frac{7}{2} = 2 \overline{) 7} \begin{array}{r} 3\frac{1}{2} \\ \underline{6} \\ 1 \end{array} = 3\frac{1}{2}$$

- C. The next step is to take a mixed number (a whole number and a fraction) and put it back into fraction form:

$$4\frac{5}{8} = 8 \times 4 = 32 + 5 = \frac{37}{8}$$

We multiply the bottom number (denominator) of the fraction by the whole number and add the top number (numerator) to it.

To reduce the improper fraction to a mixed number, we divide the denominator into the numerator, subtract, show the remainder.

Example:

$$\begin{array}{r} 8 \overline{) 37} \\ \underline{32} \\ 5 \end{array} = 4\frac{5}{8}$$

ASSIGNMENT:

1. Reduce the following fractions to lowest terms.

$$\frac{2}{6} \quad \frac{4}{8} \quad \frac{16}{24} \quad \frac{8}{32} \quad \frac{10}{25} \quad \frac{20}{50} \quad \frac{21}{49} \quad \frac{12}{18} \quad \frac{14}{48} \quad \frac{45}{60}$$

2. Change to improper fractions.

$$5\frac{1}{2} \quad 10\frac{3}{8} \quad 5\frac{1}{6} \quad 7\frac{6}{7} \quad 8\frac{1}{3} \quad 4\frac{5}{12} \quad 3\frac{11}{24} \quad 5\frac{4}{9} \quad 9\frac{3}{9} \quad 4\frac{6}{26}$$

3. Write as a whole number or a mixed number.

$$\frac{15}{2} \quad \frac{13}{5} \quad \frac{16}{4} \quad \frac{9}{5} \quad \frac{88}{8} \quad \frac{36}{10} \quad \frac{23}{7} \quad \frac{14}{3} \quad \frac{36}{6} \quad \frac{34}{11}$$

4. Change each fraction to the denominator named.

$$\frac{1}{3} \text{ to eighteenths} \qquad \frac{7}{12} \text{ to forty-eighths}$$

$$\frac{1}{2} \text{ to eighths} \qquad \frac{2}{3} \text{ to thirtieths}$$

$$\frac{2}{11} \text{ to forty-fourths} \qquad \frac{2}{13} \text{ to twenty-sixths}$$

5. $\frac{6}{16}$ lbs. butter = _____ lbs. butter

6. $\frac{21}{3}$ teaspoons sugar = _____ t. sugar
7. $\frac{17}{2}$ lbs. salt = _____ lbs. salt.
8. $\frac{13}{26}$ lbs. sugar = _____ lbs. sugar.
9. $5\frac{1}{2}$ lbs. chopped beef = _____ lbs. beef.
10. $\frac{32}{4}$ qts. milk = _____ qts. milk
11. $\frac{84}{12}$ cups milk = _____ cups milk
12. $\frac{120}{4}$ lbs. crisco = _____ lbs. crisco
13. $\frac{16}{8}$ lbs. flour = _____ lbs. flour
14. $\frac{340}{17}$ lbs. gelatine = _____ lbs. gelatine
15. $\frac{27}{2}$ lbs. tapioca = _____ lbs. tapioca
16. $\frac{23}{4}$ tablespoons baking powder = _____ tablespoons baking powder
17. $\frac{11}{4}$ teaspoons cream of tartar = _____ teaspoons cream of tartar
18. $\frac{637}{13}$ cans tuna = _____ 13 oz. cans tuna
19. $\frac{48}{4}$ lb. salmon = _____ 1 lb. cans salmon
20. Change $\frac{136}{16}$ to a mixed number.

UNIT II - FRACTIONS

Addition and Subtraction

Lesson No. 4

OBJECTIVE: To review work in addition and subtraction of fractions.
To learn how these processes are used in the food classes.

RELATED INFORMATION:

When we have a group of fractions that do not have a common denominator, we must have one before we can compare size or add or subtract them.

PROCEDURE:

1. To find the least (lowest) common denominator for a group of fractions - e.g. $\frac{1}{6}$ $\frac{3}{8}$ $\frac{2}{9}$ $\frac{3}{4}$

- a. Place the denominators of the group of fractions in a horizontal line with a hyphen between them.
- b. Box them in as in short division.

$$\underline{\quad /6-8-9-4 \quad}$$

- c. Check for common factors in one or more numbers. See if there is a number that can be divided evenly into several of these denominators. In this case 2 goes into 6-8-4.

$$\underline{\quad 2/6-8-9-4 \quad}$$

- d. Divide and bring down the quotients that were divisible an exact number of times.

$$\begin{array}{r} \underline{2/6-8-9-4} \\ 3-4---2 \end{array}$$

- e. Bring down the denominators that were not divisible. Repeat until all the denominators are reduced to 1.

$$\begin{array}{r} \underline{2/6-8-9-4} \\ \underline{2/3-4-9-2} \\ \underline{2/3-2-9-1} \\ \underline{3/3-1-9-1} \\ \underline{3/1-1-3-1} \\ 1-1-1-1 \end{array}$$

f. Multiply all numbers on the outside of the box.

$$2 \times 2 = 4 \times 2 = 24 \times 3 = 72$$

72 is the L.C.D. or least (lowest) common denominator.

2 Practice -- Find the least (lowest) common denominator for the following fractions:

a. $\frac{1}{3}$ $\frac{1}{4}$ $\frac{1}{7}$ $\frac{1}{2}$

b. $\frac{1}{5}$ $\frac{1}{3}$ $\frac{1}{6}$ $\frac{1}{2}$

c. $\frac{1}{7}$ $\frac{1}{5}$ $\frac{1}{3}$ $\frac{1}{6}$

d. $\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$ $\frac{1}{5}$

3. Before fractions can be added, the bottom numbers or the denominators must all be the same. Therefore, find the L.C.D. Add the numerators and reduce the fractions if necessary.

Example: Add $\frac{3}{4}$ $\frac{1}{4}$ $\frac{1}{4}$ $\frac{3}{4}$ All these fractions have a common denominator.

Add $2\frac{1}{16} + 3\frac{3}{16} + 7\frac{5}{16} + 2\frac{1}{16}$ All denominators are the same.

Add the whole numbers.

$$2 + 3 + 7 + 2 = 14$$

Adding the whole numbers and the fraction = $14\frac{5}{8}$

4. Practice - add the following:

a. $\frac{3}{8}$ c. $\frac{9}{16}$ e. $7\frac{1}{8}$ g. $7\frac{3}{64}$ i. $5\frac{1}{2}$
 $\frac{5}{8}$ $\frac{1}{4}$ $6\frac{3}{8}$ $11\frac{5}{8}$ $3\frac{7}{12}$

$\frac{1}{8}$ $\frac{1}{8}$ $9\frac{3}{8}$ $2\frac{1}{4}$

b. $\frac{3}{4}$ d. $2\frac{1}{4}$ f. $2\frac{3}{16}$ h. $8\frac{11}{12}$ j. $1\frac{2}{3}$

$\frac{1}{2}$ $5\frac{3}{4}$ $5\frac{3}{8}$ $5\frac{5}{8}$ $5\frac{1}{8}$

$\frac{3}{8}$ 6 $3\frac{1}{2}$ $2\frac{9}{16}$

5. Subtraction of fractions like addition requires a L.C.D.

Example: subtract $\frac{3}{8}$ from $7\frac{7}{8}$; $2\frac{3}{16}$ from $9\frac{11}{16}$

$$\begin{array}{r} 7\frac{7}{8} \\ - \frac{3}{8} \\ \hline 7\frac{4}{8} = \frac{1}{2} \end{array}$$

$$\begin{array}{r} 9\frac{11}{16} \\ - 2\frac{3}{16} \\ \hline 7\frac{8}{16} \frac{1}{2} = 7\frac{1}{2} \end{array}$$

Practice:

a. $15\frac{2}{3}$

c. $5\frac{7}{12}$

e. $27\frac{4}{5}$

$$\begin{array}{r} 15\frac{2}{3} \\ - 7\frac{9}{16} \\ \hline \end{array}$$

$$\begin{array}{r} 5\frac{7}{12} \\ - 3\frac{1}{2} \\ \hline \end{array}$$

$$\begin{array}{r} 27\frac{4}{5} \\ - 19\frac{3}{4} \\ \hline \end{array}$$

b. $7\frac{15}{32}$

d. $53\frac{3}{18}$

$$\begin{array}{r} 7\frac{15}{32} \\ - 6\frac{1}{8} \\ \hline \end{array}$$

$$\begin{array}{r} 53\frac{3}{18} \\ - 19\frac{1}{9} \\ \hline \end{array}$$

ASSIGNMENT:

The following quantities of materials were used in the kitchen. Find the total of each.

a. Flour $2\frac{1}{8}$ c. $4\frac{1}{4}$ c. $1\frac{1}{16}$ c. $3\frac{1}{4}$ c.

b. Eggs $\frac{1}{12}$ doz. $2\frac{3}{12}$ doz. $2\frac{1}{3}$ doz. $3\frac{1}{6}$ doz.

c. Butter $\frac{1}{4}$ lb. $2\frac{1}{8}$ lb. $3\frac{1}{16}$ lb. $1\frac{3}{4}$ lb.

d. Milk $1\frac{1}{3}$ qts. $4\frac{1}{4}$ qts. $5\frac{1}{8}$ qts. $3\frac{1}{6}$ qts.

e. Four and one quarter pounds of vegetable fat were issued from the store room. Two and one-eighth pounds were used. What remained at the end of the meal?

f. There were $2\frac{2}{3}$ dozen oranges in the refrigerator. The salad cook used $1\frac{1}{4}$ dozen (one and one-fourth dozen). What was left?

D U F
E D
3 3 3

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

- g. $25\frac{2}{3}$ lbs. potatoes minus $10\frac{1}{4}$ lbs. = _____ lbs.
- h. $7\frac{2}{5}$ gallons milk minus $4\frac{1}{4}$ gallons = _____ gallons
- i. The kitchen manager has seventeen and one half dollars in the petty cash fund. The following expenditures were made: six and one half dollars, three dollars and one quarter, one dollar and twenty cents.
 Write the amount of money as fractions.
 Figure the expenditures and the amount of money that was left.
- j. The inventory showed that there was $3\frac{5}{8}$ lbs. pepper on hand. The inventory at the end of the following month showed that there was $2\frac{3}{16}$ lbs. on hand. How much pepper was used?

UNIT II - FRACTIONS

Multiplication

Lesson No. 5

OBJECTIVE: To learn how the multiplication of fractions is used in the foods trades.

RELATED INFORMATION:

There are several types of problems in the multiplication of fractions. Most of the problems in the foods shop involve work with simple fractions. You will find the work in the foods shop more simple after this review.

PROCEDURE: Multiplication of simple fractions.

a. $\frac{3}{4} \times \frac{1}{2} \times \frac{3}{8}$

$$\begin{array}{r} 3 \times 1 \times 3 = 9 \\ 4 \times 2 \times 8 = 64 \end{array}$$

1. Look for cancellation from top to bottom - there is none.
2. Multiply the top numbers (numerators)
3. Multiply the bottom numbers (denominators)
4. Answer is $\frac{9}{64}$

b. $\frac{9}{16} \times \frac{2}{3} \times \frac{1}{2} \times \frac{5}{8}$

$$\frac{\overset{3}{\cancel{9}}}{16} \times \frac{\overset{1}{\cancel{2}}}{\underset{1}{\cancel{3}}} \times \frac{\underset{1}{\cancel{1}}}{\underset{1}{\cancel{2}}} \times \frac{5}{8} \quad \begin{array}{l} (2 \text{ into } 2) \\ (3 \text{ into } 9) \end{array}$$

1. Cancel from top to bottom.
2. Multiply top $3 \times 1 \times 5 = 15$.
3. Multiply bottom $16 \times 1 \times 1 \times 8 = 128$.
4. Answer $\frac{15}{128}$

c. The next step you will want to review is the multiplication of a whole number by a mixed number.

1. $6 \times 2\frac{1}{2}$

$$\frac{\overset{3}{\cancel{6}}}{1} \times \frac{5}{\underset{1}{\cancel{2}}} = 15$$

- a. Change mixed number to improper fraction.
- b. Cancel.
- c. Multiply top number.
- d. Multiply bottom number.

2. Another method of putting the same problem down

$$\begin{array}{r} 6 = 6 \times 2 = 12 \\ \times 2\frac{1}{2} = +6 \times \frac{1}{2} = \frac{3}{1} \\ \hline 15 \end{array}$$

Practice:

$$12 \times 4\frac{3}{4} = \frac{12^3}{1} \times \frac{19}{1} = 57$$

or

$$\begin{array}{r} 12 \\ \times 4\frac{3}{4} \\ \hline 48 \\ 9 \\ \hline 57 \end{array}$$

$$\frac{3}{1} \times \frac{12^3}{1} = 9$$

$$15 \times 3\frac{5}{8} = \frac{15}{1} \times \frac{29}{8} = \frac{435}{8} = 54\frac{3}{8}$$

or

$$\begin{array}{r} 15\frac{5}{8} \\ \times 3 \\ \hline 45 \\ 9\frac{3}{8} \\ \hline 54\frac{3}{8} \end{array}$$

$$\frac{5}{8} \times \frac{15}{1} = \frac{75}{8} = 9\frac{3}{8}$$

- 3.
- | | | | |
|----|--------------------------------------|----|---------------------------------------|
| a. | $\frac{9}{10} \times \frac{3}{4} =$ | f. | $12\frac{1}{2} \times 8\frac{1}{4} =$ |
| b. | $9\frac{1}{3} \times \frac{7}{12} =$ | g. | $8\frac{5}{16} \times 4\frac{1}{2} =$ |
| c. | $3\frac{1}{2} \times 7\frac{1}{2} =$ | h. | $2\frac{5}{9} \times 8\frac{1}{36} =$ |
| d. | $2\frac{4}{7} \times 4\frac{2}{3} =$ | i. | $4\frac{7}{9} \times 6\frac{2}{3} =$ |
| e. | $16 \times 12\frac{5}{12} =$ | j. | $11\frac{2}{5} \times 9\frac{3}{4} =$ |

ASSIGNMENT:

1. One Minute French Dressing

Basic Recipe		$\frac{1}{2}$ Times Recipe	$3\frac{1}{2}$ Times Recipe
Salt	$2\frac{1}{2}$ tablespoons		
Sugar	2 tablespoons		
Pepper	2 teaspoons		
Paprika	2 teaspoons		
Prepared Mustard	$1\frac{1}{2}$ tablespoons		
Vinegar	2 c.		
Worcestershire Sauce	1 tablespoon		
Oil	$1\frac{1}{2}$ quarts		

2. Use three of the following recipes:

- Indicate the source of the recipe that you use.
(book, page; card, number)
- Copy the recipe.
- Figure the part of the recipe indicated by the fraction to the right.

- Chili Con Carne
- Cottage Pudding
- Oatmeal Cookies
- Barbecue Sauce
- Corn Soup

3. A restaurant sells 300 cups of coffee a day. How many cups would be sold in: $\frac{1}{3}$ of a day? $\frac{1}{12}$ of a day?

4. A 7 lb. leg of lamb yields

10 - servings -- each $\frac{1}{4}$ lb.

13 - servings -- each $\frac{3}{16}$ lb.

20 - servings -- each $\frac{1}{8}$ lb.

What could the chef figure from (a) five 7 lb. legs?
(b) eight 7 lb. legs?

5. In making out an order for dishes, silver, and glassware for a commercial cafeteria that was to be equipped to serve 300 guests, the manager was advised to order the following:

No. Guests	Equipment	Quantity	Total
300	Dinner Plates	$1\frac{1}{2}$ times	
	Bread & Butters	$3\frac{1}{2}$ times	
	Sauce Dishes	$2\frac{1}{3}$ times	
	Sherbert Glasses	$4\frac{1}{4}$ times	
	Water Glasses	$2\frac{2}{3}$ times	
	Knives	$1\frac{1}{2}$ times	

UNIT II - FRACTIONS

Size Comparison

Lesson No. 6

OBJECTIVE: To understand the meaning of fractions as to size comparison.
To learn how to apply this knowledge in the work of the foods trade.

RELATED INFORMATION:

Sometimes it is difficult for a worker to think in parts instead of a whole number. This is especially true when we are attempting to make a comparison of size. Part of the confusion that we may experience may be cleared up if we will always remember the meaning of "fraction" -- as part of one.

It would be quite different if you asked your father for a dollar and he gave you one-fourth of a dollar. You would know this immediately because you have been handling money for some time. However, when you were a child, numbers or parts of numbers made little difference to you.

In one of our earlier lessons we spoke of the need for uniform servings to keep a customer happy. Therefore, to accomplish this we must always divide that ONE into an equal number of parts that must be the same size.

PROCEDURE:

1. Study the accompanying diagrams. Count the number of parts into which each whole unit has been divided. Write the total of the number of parts for each diagram.
2. Write the fraction that would represent one part of the diagram.
3. How do these pieces compare in size?
4. Do you think it would make any difference to a customer which piece he had been served? Explain your answer.

A

B

C

D

E

ASSIGNMENT:

1. Oranges are packed in boxes containing 150, 288, 176 or 216 oranges. One orange from each box would be what fractional part of the box. Which would be the largest orange? the smallest?
2. A family of five uses a 25 pound bag of potatoes in ten days.
 - a. What part of the bag is used each day?
What part of the daily quantity consumed is the fractional allowance per person?
 - b. Write as a fraction the quantity consumed daily by each person.

3. There are five tomatoes to one pound. Each tomato is to be sliced into five slices. Each salad has $\frac{3}{5}$ of the total number of slices or _____ slices on each salad. 25

The salad maker was told to serve two slices on a sandwich. How did the number of slices of tomatoes on each item compare with the salad above?

4. $\frac{1}{18}$ = 1 part of a package of Mr. Bigs. There are _____ in one package.

5. 10,000 paper napkins are in one case.

a. $\frac{1}{5}$ of the case = _____ napkins.

b. $\frac{1}{8}$ of the case = _____ napkins.

c. $\frac{1}{25}$ of the case = _____ napkins.

d. $\frac{1}{20}$ of the case is used for each meal. The case of napkins will be used up in _____ meals.

6. A group borrowed five dozen forks for a picnic. Four forks were lost. What fraction of the total number borrowed was lost? What fraction of the total number was returned?

7. John wanted to buy one dozen oranges from a box that was marked 150 oranges to the box. Mary said she wanted a dozen from a box marked 176 oranges to the box because she would get a larger orange than John. Who got the larger orange? Prove it.

8. a. From a crate of 45 cantaloupe the salad maker was told to make 405 servings. What part of a melon would be used for one serving?
b. If eight pieces were cut from each melon, would the serving be larger or smaller than the first way the melon was cut?

9. The charge for a #40 scoop of ice cream is seven cents; for a #12 scoop, fifteen cents.
a. Why this difference in price?
b. If you could afford either serving, which would you select?
c. If a customer was watching calories, which serving should be selected?

10. There are 500 milk straws packed in each box.
100 students take two straws each.
- What fraction of the box is used by the students?
 - If each student took one straw, what fraction of a box would each student use?
 - In one week 25 straws were dropped on the floor or were ruined and had to be thrown away. What fractional part of the box was lost?
- 11.
- One box of 500 milk straws cost 25 cents.
What is the cost of one? Write this number as a fraction.
 - What would be the additional cost to the cafeteria if 250 straws were used daily? The straws are furnished to the customer as an added milk cost to the management.
 - At the cost per straw, how much money would be lost in forty weeks if 25 straws were ruined in a week.
 - Milk costs the cafeteria $6\frac{1}{4}$ cents per half pint. What is the added cost of furnishing two straws?
 - What part of a dollar does this added cost represent?

UNIT II - FRACTIONS

Computing Loss of Weight in Food Preparation

Lesson No. 7

OBJECTIVE: To learn the importance of considering the difference in the weights before and after food preparation or cooking.

RELATED INFORMATION:

Many people who have had little experience and training in food preparation do not take this loss into consideration in computing the cost of foods.

This can be one cause for a business failure.

If you know how to make these calculations, you can be a valuable worker to any establishment.

PROCEDURE:

- A.
1. Prepare 10 lbs. of chopped beef for a meat loaf. Weigh all of the ingredients that you have used. Add them to the weight of the meat.
 2. Before serving, weigh the cooked meat. Record the weight.
 3. Weigh the fat that is in the pan.
 4. Is there any difference between the first and second group of figures?
 5. Use the weight of the fat that has accumulated in the pan as the numerator of the fraction, and the weight of the meat before it was put in the oven as the denominator. That fraction is the part of the meat that was lost during cooking.
- B.
1. Stem, clean, and prepare seven pounds of spinach (fresh). Cook according to directions (no water to be used for cooking).
 2. When the spinach is tender, drain it thoroughly. Do not throw the original weight of the vegetable as the denominator. The fraction indicates the loss in weight.
 3. Weigh the cooked vegetable.
 4. Use the figure from No. 2 as the numerator of the fraction, the original weight of the vegetable as the denominator. The fraction indicates the loss in weight.

ASSIGNMENT:

1. A turkey weighed $16 \frac{1}{4}$ lbs. after cooking. The meat was removed from the bones. There was $7 \frac{1}{4}$ lbs. solid meat that could be used for slicing. 1 lb. 7 oz. that could be used for salads and sandwiches. The skin weighed 6 oz. What was the weight of the bones?
2. A dessert cook prepared twelve quarts of cup cake mixture. How many cup cakes should this twelve quart batch yield if a 16 scoop is used to measure the mixture?
The dessert cook made 184 cakes. What fractional part of the mixture was wasted?
3. The vegetable man put 35 lbs. of potatoes into the vegetable peeler. He did not sort the potatoes according to size. When he took the potatoes out of the machine he was instructed to weigh them. The weight was 30 lbs. What fraction of the load was lost through careless handling?
4. Two tablespoons of butter was scraped from the butter cutter that had been placed on the dish machine to be washed. What part of a pound of butter was being wasted?
How many days will this waste continue before one pound of butter would be lost?
Find out the current cost of one pound of butter.
How much money was being lost daily?
How many days would elapse before one dollar would be lost?
5. Two and one-half dozen bananas weighed 10 lbs. The weight of the fruit after removing the skin was 8 lbs. What fraction represents the loss in weight after removing the skins?
6. A watermelon weighed 25 lbs. The rind returned after serving weighed $\frac{2}{5}$ of the original weight. What was the weight of the edible portion (E.P.)?
7. Consult the text book -- Production, Marketing and Consumption - Stewart
for the following information:
 - a. the number of quarts of cream needed for 1 lb. butter
 - b. the quantity of milk and cream needed for 1 lb. cheese
 - c. the weight of the bones from a beef carcass
8. Comment on the information you have gathered and discuss its application to this lesson in applied mathematics for foods trade.

UNIT II - FRACTIONS

Portioning Foods

Lesson No. 8

OBJECTIVE: To appreciate the method of portioning foods so that the yield will be as planned and so that portions will be equal.

RELATED INFORMATION:

The need for equal portions cannot be emphasized too much. A little thought on pans, their size, shape, etc. will help you. Pans for the steam table, the sauce pans, soup pots and other utensils are constructed to hold specified quantities.

PROCEDURE:

1. Look at the marking on the outside of the stock pot.
This pot holds _____ gallons.
 - a. If it is half full of soup, there should be a yield of _____ gallons.
 - b. The cook was instructed to make one-quarter of a pot of the soup. How many gallons should be prepared?
2.
 - a. Measure the number of cups of water that will be needed to fill the coffee maker to the brim. _____ number of cups.
 - b. Would you fill the coffee maker to this point? Why?
Empty the coffee maker and measure the water so that it is three-quarter full. How many cups did you need to fill it to this point? Use the first number that you have for the denominator of the fraction, the last number as the contents of the coffee maker?
3.
 - a. Measure the number of quarts of water that will be needed to fill the soup pot from the steam table to the very top.
 - b. Record the number.
 - c. Put eight quarts of water into the pot. What part of the total volume is eight quarts?
 - d. One-fourth of a quart of soup is given on an "a la carte" order. What would be the yield from eight quarts of soup?
 - e. $\frac{1}{8}$ quart of soup is served as part of the luncheon menu. What would be the yield from eight quarts?

ASSIGNMENT I:

1. Make the following paper models:
 - a. a circle the size of the pie tin
 - b. a circle the size of the layer cake tin
 - c. a rectangle the size of
 1. the largest cookie or baking sheet
 2. the rectangular pans, one of each size including a loaf or bread tin
2. Divide the circles so that 8, 9, 6, equal servings can be made. Each would be one _____, one _____, one _____, of the whole circle or pie or cake.
3. Measure the length and the width of the rectangular sheets of paper. Divide into 12, 24, 48, 36, 30 servings. Each serving would be what fractional part of the whole? Compare the size of each serving.
4. Divide the model of the loaf tin into slices that will be $\frac{3}{4}$ inch in width or thickness. How many slices have you made from the loaf?
5. Recipe cards are worked out for standard portions and will give this information, (a) recipe yield, (b) size of the pan to use. What advantage is this information to the worker?
6. Butter and margarine are frequently in solid pounds prints. Cut such a print into half, cut each into half again, cut each of these pieces into half again, each piece in half again. How many pieces are there? Each piece is what part of the pound?

ASSIGNMENT II:

1. A cup of soup holds $\frac{1}{4}$ cup, a bowl holds $\frac{1}{2}$ cup of soup, a shallow soup plate $\frac{1}{3}$ cup. Which is the largest serving? the smallest?
2. A portion of a layer cake divided into twelve pieces, is one _____ of the cake.
3. If each piece of cake in the former problem was sold for a quarter of a dollar, what would be the receipts from two cakes?
4. A pie cut into six cuts would give a customer one _____ of the pie.
5. Six cans of pie cherries will be needed for 48 (9 inch pies). What fraction of the case of cherries would be needed for four pies? (six cans of cherries to a case)

UNIT II - FRACTIONS

Achievement Test No. 2

1. The record showed that of 385, 500 eating places, one-third went out of business for varied reasons. How many establishments failed?
2. One pound of soup base will make five gallons of soup. How many gallons can be made from three-fifths of the jar?
3. $4\frac{1}{2}$ pounds of chicken was waste (bones, skin, etc.) The original weight of the chicken was $18\frac{1}{2}$ lbs. How much chicken meat was usable?

4. Add the following:

$$\begin{array}{r} a. \quad 47\frac{7}{12} \\ \quad \quad 8\frac{3}{4} \\ \hline \quad \quad 16\frac{1}{4} \end{array}$$

$$\begin{array}{r} b. \quad 4\frac{5}{8} \\ \quad \quad 2\frac{3}{4} \\ \hline \end{array}$$

$$\begin{array}{r} c. \quad 33\frac{1}{2} \\ \quad \quad 9\frac{7}{8} \\ \hline \quad \quad 3\frac{1}{4} \end{array}$$

5. Multiply the following:

$$a. \quad 15 \times 1\frac{1}{3}$$

$$b. \quad 72 \times \frac{1}{4}$$

$$c. \quad 4\frac{1}{2} \times 50$$

6. Take $\frac{1}{4}$ of the following recipe:

6 qts. milk
12 T. cornstarch
10 T. cocoa
 $\frac{3}{4}$ c. sugar
2 t. vanilla

7. Take $1\frac{1}{2}$ times the following recipe:

2 lb. flour
4 t. baking powder
1 t. salt
3 c. sugar
 $1\frac{1}{2}$ c. fat
 $2\frac{1}{4}$ c. milk
1 t. flavoring

8. Divide

a. $\frac{3}{5} \div \frac{3}{10}$

b. $\frac{8}{25} \div \frac{36}{45}$

c. $12\frac{1}{2} \div \frac{5}{14}$

9. A restaurant owner found the money he took in from the week was spent as follows:

$\frac{1}{5}$ for food, $\frac{1}{8}$ for rent, $\frac{1}{4}$ for wages, $\frac{1}{10}$ for utilities
 $\frac{1}{20}$ for insurance.

- a. What part of the income was spent?
- b. What part of the receipts was left?

10. A student who is present every day for the school year is in school for 1080 hours.

540 hours	=	fractional part of year spent in shop
90 hours	=	fractional part of year spent in art
108 hours	=	fractional part of year spent in English
180 hours	=	fractional part of year spent in Phys. Ed.
162 hours	=	fractional part of year spent in other studies

UNIT III - DECIMALS

Review

Lesson No. 1

OBJECTIVE: To recall and review the use of decimals.

RELATED INFORMATION:

The division of integral unit into 10ths, 100ths, 1000ths, etc. is called decimal division. There are three ways of expressing a decimal division:

1. words - nine-tenths
2. common fraction - $\frac{9}{10}$ $\frac{9}{100}$ $\frac{9}{1000}$
3. decimals - .9, .09, .009

In other words, any fraction having 10, 100, or 1000 or any multiple of ten for the denominator may be written without the denominator. In its place we have the decimal form and decimal point.

You recognize in No. 2 that the decimal may be written as a common fraction, so decimals are really fractions written in another way.

The following is a table that will help you to recall. Each number is based on its position in relation to the decimal point.

Decimal places are read as follows:

.0	- tenths
.00	- hundredths
.000	- thousandths
.0000	- ten-thousandths
.8	- eight tenths
.08	- eight hundredths
.008	- eight thousandths
.0008	- ten-thousandths

Note that the number to the right of the decimal point ends in ths; the number to the left in ds.

Example: Use the table - read the following:

7,385,651.789: Seven million, three hundred eighty five thousand, six hundred fifty one and seven hundred eighty-nine thousandths. The decimal point is read as "and".

PRACTICE:

A. Write the following numbers in words:

- | | |
|---------------|--------------|
| 1. 135.678 | 6. 178.8937 |
| 2. 221.1156 | 7. 663.098 |
| 3. 3327.776 | 8. 732.8092 |
| 4. 54321.7898 | 9. 2144.928 |
| 5. 457.3486 | 10. 116.2492 |

B. Write the following words in numbers:

1. One thousand, two hundred forty-six and two thousand, one hundred nine thousandths.
2. Six million, eight hundred two thousand, one hundred ninety-two and three hundred seventy two thousandths.
3. Three thousand and five ten thousandths.
4. Twenty four and six one hundredths.
5. Eighty four thousand, three hundred two and forty-four hundredths.
6. Four hundred twenty eight, ten thousandths.
7. Thirty nine and twenty five thousandths.
8. Seven and fifteen hundredths.
9. Sixteen and seventy thousandths.
10. Fifty six thousandths.

ASSIGNMENT: Study the following table. This is an example of a food analysis chart of the nutrients in canned foods.
 1. You will notice that the decimals are used in many parts of the chart. Answer the questions that follow the chart.

Food	Wt. Gm.	Approx. Measure	Calories	Prot. Gm.	Fat Gm.	Cho. Gm.	Ca. Mg.	P. Mg.	Fe Mg.	Vit.A I.U.	Thia. Vit.B Mg.	Ribo-flavin Mg.	Niacin Nicotinic Acid Mg.	Ascorbic Acid Vit.C Mg.
Apricots	122	4 halves - 2 T. syrup	105	.6	.2	25.0	9.8	19.5	.85	2650	.022	.024	.42	5
Tomato Juice	182	6 oz.	38	1.5	.2	7.5	12.7	32.8	1.64	1575	.100	.051	1.40	27
Beans Cut Green	108	$\frac{1}{2}$ cup	21	1.2	.1	3.8	36.7	22.7	1.30	320	.030	.039	.35	3
Salmon	113	$\frac{1}{2}$ cup	168	24.2	7.9	.1	207.9	330.0	.68	.75	.024	.181	8.83	---

-57-

- Which food in the above table is the best source of Vitamin C? _____
 Which food in the above table is the poorest source of Vitamin C? _____
- Which food in the above table yields the greatest number of calories? _____
 Which food in the above table yields the smallest number of calories? _____
- What food in the above table is a good source of Vitamin A? _____
 What food in the above table is a poor source of Vitamin A? _____
- What food in the above table has the largest amount of carbohydrate? _____
 What food in the above table has the least amount of carbohydrate? _____
- List the foods in the above table in order of importance in yield of calcium _____
 List the food in the above table that is the best source of phosphorous _____
 List the food in the above table that is the best source of iron _____

2. Prepare a chart like the model on the previous page. List the following foods on the chart:

Fresh orange juice	4	oz.
Cornflakes	1/2	cup
Whole milk	1	cup
White toast	2	slices
Butter	2	t.
Hard cooked egg	1	
Chopped cabbage	1/2	cup
Mayonnaise	1	T.
Fresh tomato	1	medium size
Whole wheat muffin	1	
Sliced canned pineapple	1	large slice
Ground beef	4	oz.
Potato baked	1	medium
Raw carrot sticks	2	oz.
Jello	4	oz.
Whipped cream	2	T.
Butter	2	t.
Whole milk	1	cup
Vanilla ice cream	4	oz.
Salted peanuts	2	oz.
Milk chocolate bar	1	(plain)
Coca cola	1	bottle

Consult one of the following text books for a food chart analysis:
 Elements of Food and Nutrition -- Dowd and Dent.
 Foods for Home and School -- Harris and Lacey.

3. List the food values for the foods that are listed in No. 2. This list of foods is representative of three meals that a teen-ager should be eating. Snacks have been provided for between meals.

BE CAREFUL IN RECORDING THE FIGURES.
 YOU WILL USE THE CHART AGAIN IN ANOTHER LESSON.

4. To verify the occurrence of aluminum in foods, a manufacturing company has printed the following information. Aluminum can be found in foods as follows: whole wheat 3.45, raw carrots 3.80, green cabbage 22.70, apples 1.50. Write in words the quantity of aluminum that is present in each of the foods listed.
5. The minerals in the sample foods chart are _____, _____ and _____.
6. What food on your chart is the best source of phosphorous?
7. Which fruit on your chart is the best source of iron?
 How much iron does each fruit provide?

UNIT III - DECIMALS

Converting Fractions to Decimals

Lesson No. 2

OBJECTIVE: To review the method of converting fractions to decimals.
To become acquainted with the application of this operation to the foods trade.

RELATED INFORMATION:

To change a decimal to a common fraction, use the figures in the quantity as a numerator and place for the denominator the figure one followed by as many zeros as there are figures to the right of the decimal point in the quantity.

A. Example: $.8 = \frac{8}{10}$ the 8 (quantity) is placed over 1 plus 1 zero because we have but 1 number after the decimal point

$.85 = \frac{85}{100}$ because we have 2 numbers after the decimal point, hence 2 zeros

Practice: Change the following to common fractions:

1. .325
2. .004
3. .0205
4. 9.3
5. .546

B. To change a common fraction to a decimal, we divide the denominator into the numerator and add a decimal point plus 2 zeros

Example: $\frac{3}{4} = 4 \overline{)3.00}$
 $\quad \quad \quad \underline{28}$
 $\quad \quad \quad \underline{20}$
 $\quad \quad \quad \underline{20}$

Practice: Change the following to decimals:

1. $\frac{1}{20}$

6. $\frac{3}{4}$

11. $\frac{3}{5}$

2. $\frac{2}{5}$

7. $\frac{3}{8}$

12. $\frac{4}{5}$

3. $\frac{1}{8}$

8. $\frac{5}{8}$

13. $\frac{1}{12}$

4. $\frac{1}{2}$

9. $\frac{7}{8}$

14. $\frac{1}{3}$

5. $\frac{1}{4}$

10. $\frac{1}{5}$

15. $\frac{2}{3}$

ASSIGNMENT:

1. A food establishment that spent \$500.00 has an inventory valued at \$125.00. Write this problem as a decimal. As a fraction.
2. A gallon of milk weighs 8.36 pounds.
 - a. How many quarts in 41.80 lbs.
 - b. How much will 41.80 lbs. cost at 21 cents per quart?
3. Change the following to decimal numbers:

$$8\frac{3}{8}, \quad 27\frac{8}{16}, \quad 15\frac{3}{20}$$

4. A manager divided his eight hour working day as follows:
 - 1 hour checking stock
 - 2 hours planning meals
 - 4 hours visiting markets, checking and comparing prices
 - 1 hour conference with the cooksWrite these various periods as fractions. As decimals.
5. A dishwashing engineer found that $3\frac{1}{5}$ minutes were needed for complete cleaning of one rack of dishes. Write this figure as a decimal. How many racks could be cleaned in two hours?
6. Frozen shrimp are packed in 2.5 lb. packages (15, 20, 30 to the pound).
 - a. What would be the count for a package of each size?
 - b. At the current market price what would be the cost of each package?
 - c. How many shrimp cocktails could be made from each package if
 - 3 shrimp from the 15 count package were used
 - 4 shrimp from the 20 count package were used
 - 6 shrimp from the 30 count package were used
 - d. At 65¢ per cocktail, how much would a restaurant receive from the sale of a box of each size shrimp which were made into cocktails?
 - e. Figure the loss or gain at the current market price.

7. After analysis of food costs, the manager found that it was necessary to "mark up" the selling price to cover the cost of labor, etc. Figure the costs from the following table:

	<u>Food Cost</u>	<u>Mark Up</u>	<u>Selling Price</u>
a.	.55	$\frac{2}{5}$	
b.	.81	$\frac{2}{3}$	
c.	.75	$\frac{1}{2}$	
d.	.25	$\frac{1}{5}$	
e.	.35	$\frac{4}{5}$	
f.	.66	$\frac{1}{6}$	

UNIT III - DECIMALS

Addition and Subtraction

Lesson No. 3

OBJECTIVE: To review the procedure in adding and subtracting decimals.
To practice these operations in problems related to the foods trade.

RELATED INFORMATION:

In adding or subtracting numbers with decimals, there is just one rule to remember -- keep the decimals under each other and in a straight line.

Example: $18.03 + 41.9 + 207.31$ (Addition)

$$\begin{array}{r} 18.03 \\ 41.90 \text{ -- note -- a zero may be used to fill in the column} \\ +207.31 \\ \hline 267.24 \end{array}$$

Example: $31.309 - 19.56$

$$\begin{array}{r} 31.309 \\ -19.560 \text{ --note - zero added} \\ \hline 11.749 \end{array}$$

Practice:

1. Copy the following and add.
 - a. $9.028 + 116.05 + 5.945 + 75.07$
 - b. $3.5 + 111.721 + 4.005 + 17.205$
 - c. $2.1 + .003 + 103.5 + 17.205$
 - d. $6.215 + 3.97 + 178.2 + 156 + 3.001 + 10.2$
 - e. $5.0245 + 110.721 + 4.07 + 15.2036 + 7.5 + 14.08$

2. Copy the following and subtract.
 - a. $31.809 - 19.56$
 - b. $1053.16 - 1007.407$
 - c. $306.4 - 32.09$
 - d. $78.5137 - 59.306$
 - e. $205.06 - 140$
 - f. $402.09 - 325.387$

ASSIGNMENT:

1. In Lesson 1 of this unit, you made a chart showing the analysis of various foods. Find the total of the following columns:
 - a. protein grams
 - b. fat grams
 - c. carbohydrate grams
 - d. calcium milligrams
 - e. phosphorous milligrams
 - f. iron milligrams
 - g. thiamin
 - h. riboflavin
 - i. niacin

Note: This exercise can be used in computing diets.

2. The following chart has been prepared to show the number of calories used per hour per pound of body weight for various activities. Figure the difference in the calorie requirement for each pair of activities.

Activity	Calories	Activity	Calories	Difference
a. walking upstairs	7.18	bicycling	1.10	?
b. dancing	1.95	eating	0.65	?
c. skating	2.10	swimming	3.25	?
d. sitting at rest	0.65	sleeping	0.43	?
e. running	3.70	sitting at work	0.7	?
f. dishwashing	0.93	vacuum cleaning	1.78	?
g. singing	0.79	sewing by hand	0.72	?

3. In the table below

- A represents the price of the meal to the guest
- B represents the cost of the entree (meat or meat substitute)
- C represents the cost of other courses (salad, appetizer, etc.)
- D represents the total food cost B + C
- E represents all other expenses such as labor, heat, profit, light, etc. A-D

Assignment: Fill in columns D and E

Price of Meal	Cost of Entree	Cost of Other	Total	Cost Allowed for Other Expenses
A	B	C	D	E
.60	.09	.15		
.80	.17	.15		
1.25	.35	.15		
.70	.13	.15		

NOTICE: that as the cost of the meal increases, the cost of the entree increases. That the cost of the other courses remains the same. How would you account for this situation?

4. Meat costs before and after cooking were as follows:
Fill in C.

Raw A	Cooked B	Increase C
.24	.42	
.28	.49	
.32	.56	
.40	.70	

UNIT III - DECIMALS

Multiplication

Lesson No. 4

OBJECTIVE: To practice multiplication of decimals.
To discover how these processes are applied to work in the foods trade.

RELATED INFORMATION:

To multiply with decimals, the number of decimal places in both numbers are counted. The total is counted off in the answer. Count from right to left and then point off.

Example:

A. $8.24 \times .95$ 2 places + 2 places = 4 places

$$\begin{array}{r} 8.24 \\ \times .95 \\ \hline 4120 \\ 7416 \\ \hline 78280 \end{array}$$

point off 4 places

7.8280

7.828

the zero may be crossed off

B. $.0036 \times 72$ 4 places + 0 places = 4 places

$$\begin{array}{r} .0036 \\ \times 72 \\ \hline 72 \\ 252 \\ \hline 252 \end{array}$$

.2592 4 places

Practice: Multiply the following:

a. $7.03 \times .09$

d. $.95 \times 8.25$

b. 46.9×50.7

e. 87.5×8.24

c. $.25 \times .06$

f. $30.08 \times .67$

ASSIGNMENT:

1. A girl weighs 125 lbs. She irons for two hours. Each hour that she is working she uses 0.93 calories per pound. How many calories would she use for the entire period?

2. The circumference of a circle is $3.1416 \times$ the diameter. Measure the diameter of the following and figure the circumference of each:
 - a. a pie tin
 - b. a layer cake tin
 - c. a dinner plate
 - d. a bread and butter plate
 - e. a sauce dish
 - f. an opening in the steam table I
for the largest inset, for the smallest inset.
3. If the cost of preparing a bowl of soup is .0193, what would it cost to prepare 50 bowls. If the soup is sold for 15 cents per bowl, what is the profit on one bowl? on 50 bowls?
4. At \$1.10 per hour, how much would a worker make in 43 hours?
5. Multiply the following:
 - a. $.185 \times 17$
 - b. $.0625 \times 48$
 - c. $.0875 \times 74$
 - d. $.1575 \times 38$
 - e. $.6125 \times 67$
6. Meat costs 0.125 per serving. What will be the cost of 62 servings?
7. How much will be made if it is sold for .625 per serving?
 - a. per serving?
 - b. on the total servings?
8. The cost of one plum is 0.0013 cents. What is the cost of 85 plums?
9. Pork chops cost .2375 each. What will be the cost of 145 chops?
10. a. A portion of pie costs 0.143 cents to prepare. What would 24 pieces or 3 pies cost?
 - b. .057 was made on 1 piece. What would the profit be on the three pies?

UNIT III - DECIMALS

Division

Lesson No. 5

OBJECTIVE: To practice division of decimals in preparation for their use in the foods trade.

RELATED INFORMATION:

To divide a whole number into a decimal put the decimal point in the answer just above where it is inside the box.

Examples:

- a. Dividing a whole number into a number containing a decimal:

$$\overline{6/6.96}$$

First, place the decimal for the answer right above the decimal in the dividend. Then divide.

$$\begin{array}{r} \underline{1.16} \\ 6/6.96 \end{array}$$

- b. Dividing a whole number into a whole number with the idea of getting a decimal in the answer:

$$\overline{5/17}$$

$$\begin{array}{r} \underline{3.4} \\ 5/17.0 \\ \underline{15} \\ 20 \\ \underline{20} \end{array}$$

- Place the decimal at the end of the dividend and add a zero. The decimal in the answer (quotient) should be directly above the decimal in the dividend.

- c. Dividing a decimal number into a decimal number:

$$\overline{.038/.231762}$$

Clear the decimal from the divisor. To do this, move the decimal to the right as far as you can, in this case 3 places.

$$\overline{.038/231.762}$$

Then move the decimal in the dividend just as many places to the right as you moved it in the divisor, in this case 3 places. (Note that the zero in this divisor is no longer needed).

$$\overline{.038/231.762}$$

Place the decimal in the answer directly above the decimal in the dividend.

$$.038 \overline{)231.762}$$

Divide.

$$\begin{array}{r} 6.099 \\ 38 \overline{)231.762} \\ \underline{228} \text{ xx} \\ 376 \\ \underline{342} \\ 342 \\ \underline{342} \end{array}$$

Practice:

- | | |
|-------------------------|--------------------------|
| a. 3.036 divided by .06 | e. 82.50 divided by 1.25 |
| b. 3.728 divided by 16 | f. .45 divided by 15 |
| c. 10.044 divided by 36 | g. 1.44 divided by .8 |
| d. 75.025 divided by 25 | h. 168.72 divided by 12 |

ASSIGNMENT: Find the cost of the following:

1.

	Portions	Cost	Cost Per Unit Serving
a.	15	.50	
b.	45	\$117.45	
c.	35	14.00	
d.	20	1.08	
e.	20	9.309	

2. Compute the yield (number of portions) from the following. Carry out to 3 decimal places.

Article	Total Cost	Cost Per Serving	Yield
a. cheese sandwich	\$9.375	.075	
b. bread (banana)	2.70	.135 per loaf	
c. olives	3.90	.007	
d. peas (canned)	4.60	.0894	
e. pineapple (canned slices)	7.00	.1272	
f. beans (green)	3.85	.116	
g. cranberry sauce	6.50	.112	

3. \$84.00 was received from 112 guests. What was the average check?

4. 12 shrimp cost 0.6552 cents. What was the cost of 1 shrimp?

5. Divide:

a. $1.7243 \div .43$

d. $41357 \div .175$

b. $475.13 \div 1.18$

e. $580.5 \div 21.5$

c. $82.614 \div .028$

6. Complete the following:

Total Cost	Per Unit Cost	Number of Units
a. \$57.50	.0525	
b. 137.85	.2175	
c. 8.40	.0215	
d. 62.425	.0625	
e. 193.80	1.15	

UNIT III - DECIMALS

Short Processes

Lesson No. 6

OBJECTIVE: To develop skill and increase efficiency when working with decimals

RELATED INFORMATION:

Whenever we wish to multiply or divide by such numbers as 10, 100, 1000, etc., we may use a short process.

- A. To multiply: the decimal point is moved to the right as many places as we have zeros

Example:

652.	x	10	=	6520.
52.	x	100	=	5200.
.0046	x	10	=	0.046
.0046	x	1000	=	004.6 or 4.6

- B. To divide: move the decimal point one place to the left for each zero in the divisor.

Example:

625.	÷	10	=	62.5
7837	÷	100	=	78.37
19.536	÷	100	=	.19536
18.271	÷	1000	=	*.018271
15.623	÷	10000	=	.0015623

*Zeros must be prefixed as shown when necessary.

Practice: Multiply the following:

- | | | | | | |
|----------|---|------|-----------|---|-----|
| a. 3.32 | x | 10 | f. 78.92 | x | 10 |
| b. 56.8 | x | 100 | g. 5.86 | x | 100 |
| c. 32.1 | x | 1000 | h. 78.9 | x | 10 |
| d. 6.892 | x | 10 | i. 221.56 | x | 100 |
| e. 46.8 | x | 100 | j. 3.35 | x | 10 |

Practice: divide the following:

- | | |
|-----------------|-----------------|
| a. 68.25 + 10 | f. 221.56 + 100 |
| b. 256.11 + 100 | g. 5.86 + 100 |
| c. 338.7 + 10 | h. 78.92 + 10 |
| d. 6.892 + 100 | i. 6.543 + 10 |
| e. 46.8 + 10 | j. 562.21 + 10 |

ASSIGNMENT:

1. A camp director worked on a food allowance of 82 cents per child per day. There were 200 children at the camp. What was the total food allowance for the entire camp population? The total food allowance for the season was \$8200.00. How many days of camp were there?
2. Figure the following total costs:
 - a. 40 qts. milk @ 17.5 cents per qt.
 - b. 200 loaves bread @ 13.5 cents per loaf
 - c. 1000 servings of jelly @ .007 cents per serving.
 - d. 180 eggs @ .04 each.
3. A budget of \$4000.00 was allocated to the foods department for new equipment. .3 of the budget was planned for a new refrigerator. How much will the refrigerator cost? How much will be left for other equipment? Write this figure as a decimal.
4.
 - a. At \$36.00 for 200 servings of meat, what is the price per serving.
 - b. At \$3.20 for one theatre ticket, what is the cost of 200 tickets?
 - c. 170 lbs. ham cost \$136.00, what is the price per lb.?
 - d. Text books cost \$2.40 each, the total cost \$57.60. How many text books were purchased?
5. If 100 cans of sardines cost \$28.00, what is the cost of one can?
6. If a 100 lb. drum of pancake mix costs \$18.00, what is the cost of one pound?
7. If 720 slices of melba toast cost \$4.32, what is the cost of one slice?

8. Shoulder lamb chops cost .26 each. What will be the cost of 40 servings? One chop per serving.
9. One hundred, thirty-six, one ounce servings of apple jelly cost \$1.15. What is the cost per serving?
10. The cost of one No. 10 can of tomato juice is .5166. It yields 32-3oz. servings. What would be the cost of one serving? of 50 servings?
11. What would be the cost for 2 ounces of tuna fish if 66 1/2 oz. cost \$3.60? If two ounces of fish are used for each sandwich, what would be the cost for 100 sandwiches?
12. There are 30 dozen eggs in a case. At \$13.50 per case, what would be the cost of one egg?
13. 110 eggs were used for a meal. What was the food cost for eggs for that meal?
14. A gallon of water weighs 8.35 pounds. Milk weighs 1.03 times as much as water. What is the weight of a gallon of milk? 40 qts.?
15. .5958 is the cost of one quart of salad dressing. What is the cost of one gallon?

UNIT III - DECIMALS

Computations

Lesson No. 7

OBJECTIVE: To be able to apply the use of decimals in the various computations in business procedures of the foods trades.

RELATED INFORMATION:

A successful foods operator must pay strict attention to money details.

In previous lessons, the cost of servings or portions of foods was stressed. It may have been surprising to you that a per serving cost was small. However, it is these small costs that an owner must watch. Also realize that you have been working with food costs, only. Later you will consider other costs that must be considered in carrying on a business.

Dollars and cents computations will involve all of the processes you have practiced earlier in your work in the Commercial Foods mathematics.

PROCEDURE: Recall all of the situations in which you have used dollars and cents since you have been in the foods class.

Breakage of china and glassware in restaurants results in losses totalling millions of dollars a year. Consult the cafeteria inventory for the price list of the various types of dishes (plate, cups, etc.). Breakage is costly.

ASSIGNMENT:

1. Use the price list of dishes and compute the loss if the following were broken in one month:
 - 4 dinner plates
 - 6 bread and butter plates
 - 1 salad plate
 - 2 tea pots
 - 3 sauce dishes

2. A restaurant purchased 100 lbs. of corned beef at 32 cents per lb. They sold 665 corned beef sandwiches at 20 cents each. The corned beef for each sandwich cost 12 cents and there was a three cent allowance for bread (no butter or salad dressing used). Did the restaurant gain or lose on this transaction? How much?

3. Three gallons of corn soup was scorched, and had to be thrown away. The management found that it cost 50 cents to make one gallon of soup. What was the total loss?

4. Each employee was given a meal allowance of one dollar per meal. Three employees took an extra serving of ice cream which could have been served or sold for 25 cents per serving. One employee took a 35 cent piece of pie and one took two frankfurters at 12 cents each and two rolls to go with the frankfurters, which cost 3 cents each. There were 12 employees. What was the cost to the management for the food that was allowed? What was the additional cost to the management for the extra food consumed? What was the total cost?
5. The porter found 4 forks, 2 knives, and 6 teaspoons in the refuse from the dining room. If these had been lost, what money value would have been lost -- knives cost \$6.45 per dozen, forks \$5.60 per dozen, teaspoons \$1.10 per dozen.
6. An employee reported for work 10 minutes late. He worked 2 1/2 hours and then took a coffee break of 20 minutes. Later in the day he made a personal phone call on his employer's time, which took 14 minutes from his work. He was to work until 6:30 P.M. but he left his station at 6:24 P.M. How many minutes of company time did this worker use and lose? If the employee received \$1.00 per hour, how much money did he collect for not working?
7. Consult the current issue of Restaurant Management magazine or Institutions Magazine. Report any topics in either magazine that will illustrate losses in business operation. Illustrate your report by showing actual figures used in the article.
8. Milk (bulk) cost \$.175 per quart. Half pints (containers) cost .0625 per half pint. What would be the cost of one quart of the milk if half pints were used for food preparation? Would the management gain or lose by this procedure? Why would he prefer that the cooks use the bulk milk?
9. Milk costs \$.0625 per half pint. What should the selling price be to clear 3 cents on each half pint?
10. a. If 30-40 half pints of milk were left over every day, what would be the criticism of the person placing the daily orders?
b. What would the 30 cost the owner at the price previously stated?

UNIT III - DECIMALS

Relation of Decimals and Computations

Lesson No. 8

OBJECTIVE: To understand the relation of the use of decimals to the various computations in the foods department.

RELATED INFORMATION:

There is scarcely an operation in the food trade where dollars and cents can be eliminated.

From the beginning of business to the close, the consideration of money transactions is paramount.

All of the fundamental operations that were reviewed will be used in the following lessons.

Reminder: Watch the decimal point in all of the work that you will be doing.

PROCEDURE: Work the following problems which are representative of the type you will meet with in the trade.

1. 800 students spent 25 cents each. What was the total amount spent?
2. Find the total cost of the following:
15 lbs. butter @ 60 cents per lb.
12 heads lettuce @ 20 cents each
15 bunches celery @ 15 cents each
10 dozen rolls @ 24 cents per dozen
30 lbs. watermelon @ 4 cents per lb.
3. 75 guests spent \$36.00. What was the average check?
4. 70 Idaho potatoes cost \$3.00. What should be added to the unit cost to bring up the selling price to ten cents each? Carry out the decimal to three places.
5. Meat cost is 65 cents per pound. It is sold at 95 cents per pound. What is the gain per pound? What would be the profit on 18 1/2 pounds?
6. It costs approximately \$10.00 per formula to test and perfect a dish to a point of satisfaction. If 300 formulas were to be tested, what would be the cost of this service? How long would it take an operator to make up for this cost if he allowed 50 cents per day to his daily expense budget?

7. A 24 pound leg of veal yields approximately 38 portions. At 54 cents per serving, what would be the receipts from the sale of the veal?
8. \$450.00 was received from 70 guests. What was the average check?
9. A foods worker worked 8 hours on Monday, 6.5 hours Tuesday, 7 hours Wednesday, 5 hours Thursday, and 8.5 hours on Friday. What were the total number of hours worked? At \$1.25 per hour, what would the total wages be?
10. At 92 cents per pound for coffee, what would be the cost of one cup allowing 40 cups to each pound? Add .015 per serving for cream and .0014 for sugar. What should the selling price of one cup be in order to make a profit of 5 cents on each cup of coffee?

UNIT III - DECIMALS

Invoices

Lesson No. 9

OBJECTIVE: To learn to apply the information on decimals in working with invoices.

RELATED INFORMATION:

When goods are delivered to an establishment, a delivery slip or bill or invoice is left with each order. The goods are checked against the invoice for quantity and price. Invoices that accompany an order for staples or for any large quantity of goods may have added shipping charges, which increase the actual cost of the goods.

Also, check the invoice for the "brand" of goods to make sure that nothing of inferior quality is slipped into the order.

PROCEDURE:

1. Prepare an invoice or a bill for the following:

- a. 2 cases 24 No. 2 Tomato @ \$2.75 per case
4 cases 24 1 lb. cans @ 23.45 per case
3 cases 48 1 lb. cans salmon+ @ 31.50 per case
- b. A charge of ten cents per case will be made for delivery. What would be the cost of delivery?
- c. What will be the total cost of the goods?

2. The following equipment items were purchased. What should be the total of the bill?

- 5 dozen 5 oz. glasses @ \$1.80 per dozen
- 6 dozen 12 oz. glasses @ 3.60 per dozen
- 10 dozen teaspoons @ 1.70 per dozen
- 12 dozen forks @ 2.40 per dozen
- 6 dozen knives @ 4.35 per dozen

3. Trays are listed as follows:

- less than 5 dozen \$39.95 per dozen
- for lots over 5 dozen 35.95 per dozen

What is the per tray cost at each figure?

A sample tray set of four is offered for \$12.00. Suppose some one put in an order for three of the sample sets, what would be the price per dozen? per tray?

- 4. a. An order was placed for 6 dozen dinner plates @ \$9.56 per dozen and 8 dozen 6 inch bowls @ \$4.94 per dozen. What should be the total of the invoice?
- b. On checking the order, two bowls were found to be have been broken in shipment. The dealer told the customer to deduct the price of the items from his bill. What will be the amount of the deduction?

5. The following statement or invoice was received from the milk dealer:

2467 half pints milk	@	.0625	\$154.19
3-40 qt. cans bulk milk		.175 per qt.	20.04
10 qts. heavy cream	@	1.67 per qt.	16.70
3 qts. light cream	@	.92 per qt.	3.68
20 lbs. cottage cheese	@	.17 per lb.	3.40
			<u>\$198.01</u>

Check this statement. If you find any errors, make a note of them. Check the total. If you should find any errors, what would you do?

6. A box of 216 oranges at \$5.75 was ordered, but when the delivery was made it was a box of 176. The dealer said that the customer could have the box delivered for the same price although the larger oranges cost more per box. Would holding this box be a bargain? Why? Prove your answer. How much would be received for each box if the oranges were sold for 5 cents each?
7. Take the daily delivery slips for the milk for one month. Make out a chart as follows, using the headings -- H.C. (heavy cream) L.C. (light cream)

Date	1/2 Pts.	Qts. bulk	Qts. H.C.	Qts. L.C.	Pts. H.C.	Pts. L.C.	1/2 Pts. H.C.	1/2 Pts. L.C.	Cottage Cheese 8 oz.	Cottage Cheese 5 lbs.

8. Check the totals and check the charges with the statement from the milk company.
9. Make a similar chart for the ice cream. Copy the headings for your chart from the delivery slips. Check the bill from the ice cream company just as you did from the milk company.

UNIT III - DECIMALS

Receipts

Lesson No. 10

OBJECTIVE: To practice using decimals in figuring receipts.
To learn the application of decimals to the computation of receipts.

RELATED INFORMATION:

In the last lesson, the subject of moneys spent was considered. This lesson emphasizes moneys received.

The importance of being able to analyze costs and to figure them in dollars and cents has been discussed in an earlier lesson.

In this lesson we will consider sources and methods of handling receipts or moneys received.

PROCEDURE:

- A. Consult the day book. Make a list of all the money received for each day for one month. Find the total receipts.
- B. \$1146.63, \$1238.41, \$942.08, \$2001.66, \$1805.06, \$214.18
Add these receipts.

ASSIGNMENT:

- 1. The following is a report from a dining room that had a system of charges. Charges are considered as cash sales

<u>Cash Sales</u>	<u>Charges</u>	<u>Total Sales</u>
\$ 82.27	4.12	
102.19	3.95	
62.45	2.17	
58.72	.86	
<u>71.38</u>	<u>3.25</u>	<u> </u>

Total

Total

Total

- 2. Many restaurants or eating places have various sources of income besides the regular dining room receipts. Copy and add the following:
 - a. from the dining room \$763.82, b. from the lunch counter \$60.40, c. from the baked goods counter \$49.23, d. from "take out orders" \$154.29. What were the total receipts for the day?

3. An owner of a small restaurant devised the following method of computing the daily receipts. He sorted the daily slips in various denominations. One day his record read as follows:

<u>Number of Tickets</u>	<u>Denominations</u>	<u>Total</u>
54	.35	
75	.50	
24	.75	
21	1.00	
43	1.25	
10	1.50	
7	2.25	
3	2.50	

Total

4. The owner gave the cashier \$15.00 in change to start the day. When the cash was checked against the daily receipts, there was a total of \$193.00. This included the money used for the cash drawer. Was the cashier over or under? How much?
5. The owner considered this an average day's business. What was the total number of guests served on the day in Problem 3? What was the average check?
6. Using the total sales as an average for a day's business, what would be the receipts for 20 days?
7. The following expenses were deducted from the receipts for 20 days:

\$1046.23 food supplies, \$565.00 labor, \$125.00 rent.

What will remain from the month's receipts to take care of other expenses, savings, and a salary for the owner?

UNIT III - DECIMALS

Achievement Test No. 3

1. Write the following as decimals:
 - a. two hundred seven and eighty three thousandths
 - b. seven tenths
 - c. seventy two and ninety three thousandths
 - d. six and five hundredths
 - e. three hundred forty six millionths

2. Add the following:
 $139.327 + .427 + 27.083 + 18.27 + 1.64$

3. Subtract the following:
 - a. $105.207 - 20.003$
 - b. $117.05 - 18.24$
 - c. $29.325 - 18.66$
 - d. $807.6 - 135.2$
 - e. $21.4300 - 8.1291$

4. Multiply the following:
 - a. $.875 \times .36$
 - b. $.002 \times .014$
 - c. 32.25×2.376
 - d. 6.42×50
 - e. 48.37×25

5. Divide the following:
 - a. 93.66 by 21
 - b. 467.967 by 4.01
 - c. 281.3232 by 3.76
 - d. 468.312 by 316
 - e. 350.96 by 214

6. What will be the cost of the following: 3 bags of potatoes @ \$3.75 each, 32 lbs. butter @ .81 per lb., 2 - 100 lbs. sugar @ \$5.75 each?

7. $\$467.14 + \$201.36 + \$420.01 + \$296.43 + \$819.63$ represent the receipts for five days. If the expenses were $\$1546.23$, for the same period, what remains?

8. A cook works 7 hours on Monday, 8 hours Tuesday, 4 hours and 45 minutes on Wednesday, 6 hours and 15 minutes on Thursday, 8 hours on Friday and 10 hours on Saturday. At $\$2.50$ per hour, what would the cook earn?

9. Multiply the following by the short method:

- a. 54.3×100
- b. 221.46×10
- c. 409.54×1000
- d. 68.4×50
- e. 201.3×100

10. Divide the following using the short method:

- a. 802.5 by 100
- b. 61.5 by 10
- c. 611.50 by 10
- d. 212 by 100
- e. 41968.5 by 1000

11. Work out the following unit costs:

Total Cost	Number	Unit Cost
35.20	48	
3.96	176	
3.125	50	
50.00	40	
24.00	96	

UNIT IV - PERCENTAGE

Review

Lesson No. 1

OBJECTIVE: To recall the terms that apply to percentage.

RELATED INFORMATION:

Percentage is a name given to a group of rules or methods used in business transactions.

The term percent is used to indicate the number of hundredths. It means two decimal places and is expressed by the sign %.

You will find the word used frequently in papers, magazines, on the radio and TV.

PROCEDURE: In one dollar there are 100 cents.
One cent may be written in the following manner:

a. fraction $\frac{1}{100}$ b. as a decimal .01 c. or as 1%

3% would mean $\frac{3}{100}$ or .03

25% would mean $\frac{25}{100}$ or .25

50% would mean $\frac{50}{100}$ or .50

5% would mean $\frac{5}{100}$ or .05

Any percent above 100 is more than 1 whole unit.

110% equals $\frac{100}{100} + \frac{10}{100}$ or 1.10

200% equals $\frac{100}{100} + \frac{100}{100}$ or 2

125% equals $\frac{10}{100} + \frac{25}{100}$ or 1.25

There may be time when you will need to change a fraction into percent:

Example: fraction $\frac{7}{8}$ Use the denominator as the divisor.

The divisor: $8 \overline{) 7.000}$ Use the numerator as the dividend and add 3 zeros.

$$\begin{array}{r} 87 \\ \underline{64} \\ 23 \\ \underline{16} \\ 70 \\ \underline{56} \\ 140 \\ \underline{140} \\ 0 \end{array}$$

To get percent from the decimal .875, move the decimal point to the right 2 places -- 87.5%

ASSIGNMENT: Work out the following:

- | 1. | | <u>Fraction</u> | <u>Decimal</u> | <u>Percent</u> |
|----|----|-----------------|----------------|----------------|
| | a. | $\frac{1}{2}$ | | |
| | b. | $\frac{1}{8}$ | | |
| | c. | $\frac{1}{5}$ | | |
| | d. | $\frac{1}{10}$ | | |
| | e. | $\frac{3}{4}$ | | |
2. Change the decimals to %:
- a. .05
 - b. .8
 - c. .025
 - d. .0625
 - e. .055
3. Change these percents to decimals:
- a. 5%
 - b. 75%
 - c. $16\frac{2}{3}$ %
 - d. 15%
 - e. 18%
4. The salad maker is told to use 50% of the lettuce for salad. What fraction of the quantity is to be used?
5. 10% of forty teaspoons was found to have dented handles. How many were dented?
6. Of 5 dozen oranges, 10% was spoiled. How many oranges were spoiled?
7. a. 10% of a student's work was incorrect. What % was correct?
There were 50 questions.
b. How many were right?
c. How many were wrong?

8. a. 50 cents is _____% of one dollar.
 b. 10% is what fraction of a dollar?
 c. 8% of 32 = _____.
 d. 25% of 400 = _____.
9. a. 11.05 is _____% of 85.
 b. 20% of 6.00 = _____.
 c. 40% of 4000 = _____.
 d. 7% of \$842.00 = _____.
 e. $\frac{3}{4}$ of 100 = _____.
 f. 1% of \$15.00 = _____.
10. An operator found that by assigning a worker to the job of sorting strawberries, he was able to save 5% of 25 quarts of berries that he had purchased each week. How many quarts would be saved in four weeks?
11. There were 7100 persons who ate in a restaurant in one month. The following month showed an increase of 30% in the number of guests. How many people ate there the second month?

UNIT IV - PERCENTAGE

Application

Lesson No. 2

OBJECTIVE: To learn how to apply knowledge of percentage to working problems in the foods trade.

RELATED INFORMATION:

A. You have been working with problems that have represented expenditures or receipts of food trade establishments.

A successful business man is also interested in knowing how to interpret these figures in percentage.

Many business concerns will have sales where discounts are given in order to sell goods.

You will see advertisements for "pre-inventory" sales and many others. The merchant offers goods at special prices, but he is still able to make a margin of profit.

This procedure can not be followed in the foods trades because this business deals with a product that must be used as soon as it is produced.

Recognizing this fact, you can see how important it is for the food merchant to be accurate, for if he is not, his business will not last long.

Labor cost and overhead expenses must be added to the cost of raw materials to arrive at a selling price. Location of the eating place will affect both of these figures, therefore the percentage of profit will vary.

ASSIGNMENT:

1.

- a. Make a detailed list of all of the materials used for a special meal served in the school.
- b. Compute the market price of the materials (use daily slips, stock purchase cards, etc.) to find the prices.
- c. Add the following percentages to the food cost:
 1. 15% for labor
 2. 1% for overhead expenses
 3. 20% for miscellaneous expensesThis would be the selling price.
- d. If you were serving 30 guests, what would be the guest charge? Make the figure in the unit of 5 or 10, not an odd number as 6 or 9.

2. The materials in a meat loaf amount to 76 cents. Add 25% to this cost. What will be the selling price?
3. Figure the following:

	<u>Food Cost</u> <u>Per Serving</u>	<u>% Profit</u>	<u>Selling Price</u>
a. Macaroni and cheese	.035	15%	
b. Chocolate pudding	.0046	33 1/3%	
c. Swiss steak	.275	40%	
d. Ice cream	.105	75%	
e. Roll and butter	.0425	25%	
f. Fresh green beans	.0215	12 1/2%	

B. Use of Knowledge of Percentage in Proportion of Various Ingredients

Example: There are many foods either concentrated or dehydrated that are used in the preparation of foods. The worker must know how to interpret the directions on the packages.

Concentrated fruit juice - to reconstitute - read the directions for the brand being used.

ASSIGNMENT:

1. Read the directions on a can of concentrated soup. What percentage of water is added to reconstitute the soup?
2. a. Read the directions for reconstituting as dehydrated soup base. How many ounces of base are needed for 16 ounces of water?
b. Repeat, using a bouillon cube.
3. A recipe for French Dressing requires 75% oil and 25% vinegar. If you were to make four cups of dressing, what quantity of each ingredient would you use?
4. To reconstitute powdered skim milk solids into liquid form, 25% powder is used to _____ % water?
5. One day the cook needed to make pastry flour from all-purpose flour and cornstarch. The directions called for 75% flour and 25% cornstarch. If 16 cups of the mixture were needed, how many cups of each would be used?

6. The law in our state permits the sale of milk of a water content not exceeding 87 1/2%. 3% butterfat is the minimum requirement. What percentage of other materials or milk solids are there?
7. A recipe calls for 3 lbs. fat. The cook was instructed to use 33 1/3% vegetable fat and 66 2/3% butter. How many pounds of each type of fat will be used?
8. Iced tea sold for 10 cents a serving. It cost 20% of the selling price. What did the cost of preparing one serving amount to?
9. The restaurant owner uses a quick method of computing the added cost to the basic food cost for a la carte dishes:

	<u>Price of Table d'hote Dishes</u>	<u>% Increase</u>	<u>Price for A La Carte</u>
a.	19 cents	40%	
b.	29 cents	40%	
c.	1.08	40%	
d.	35 cents	40%	

10. A restaurant with an income of \$35,000.00 figured a 34% food cost. What was the food cost?
11. Mark up each of the following price meals to each of the percentages listed. The result will be the selling price.

Meal cost	.63,	.74,	.85,	\$1.15
% Increase	45%	50%	32%	

The various percentages listed would represent establishments of varied localities and overhead.

12.
 - a. Total the price of all the meats that were used in the school cafeteria for one month.
 - b. Find the total cost of all food for that month.
 - c. Find the % of the total used for meat.
 - d. Find the % of the total used for milk.

UNIT IV - PERCENTAGE

Discounts

Lesson No. 3

OBJECTIVE: To discover the use of percentage in computing discounts.
To learn how discounts can be applied to work in the food trades.

RELATED INFORMATION:

Although the food that is produced in the shop may not be sold at a discount, the manager can take advantage of discounts when purchasing the raw materials, in paying bills within prescribed times.

PROCEDURE:

1. The manager must analyze any offer of discount on purchases. Never buy on price alone. Remember quality will build lasting business.
2. Don't let the salesman rush you with the story that he is double parked or that he has another appointment in ten minutes. Watch offers of goods that may be given at a price under these conditions.

ASSIGNMENT:

1. The vegetable dealer called at 10 A.M. to sell corn at \$3.00 per bag (100 ears). Earlier, the price had been \$3.50. What would be the % of discount by taking advantage of this offer?
2. Most vendors offer various discounts on bills paid within specified times. What would be the total savings on the following bills?
\$462.17, \$30.54, \$2.79, \$358.14 -
 - a. a discount of 15% on each for payment in 10 days.
 - b. 10% in 30 days.
 - c. 5% in 90 days.
3. A salesman quoted \$27.90 for six cases of canned corn. The customer inquired whether he could have a discount. The salesman agreed that since he was willing to purchase that quantity, he would give him \$4.185 discount. What percentage would that equal?
4. The retail price of potatoes is .05 per lb. The restaurant purchases a bag of 100 lbs. at \$3.00. What was the percentage of discount given for purchasing the larger amount?
5. Inventory showed that 40% of the coffee order was used in one month. If 60 lbs. had been ordered
 - a. how many pounds had been used?
 - b. What percentage of the original order remains?
 - c. How many pounds?

6. A discount on purchases is frequently given to workers.
How much would a worker save by the following purchases?

2 coffee cakes @ .65 each, $1\frac{1}{2}$ lbs. cooked ham @ \$1.35 per lb.

1 qt. potato salad @ .45

A 15% discount is allowed on each item.

UNIT IV - PERCENTAGE

Gratuities

Lesson No. 4

OBJECTIVE: To learn how to use percentage in figuring gratuities.

RELATED INFORMATION:

Many workers in the food industry depend upon tips or gratuities as part of their income.

An efficient worker in the service department is able to make considerable money on tips.

Some establishments request that guests do not tip but a percentage of the total amount that the worker sells to the guest is added to the worker's pay.

A comment was made in a former lesson that a food trade worker is a salesperson. Consider your tip or gratuity as a commission for your selling ability. The better salesperson you are, the greater the tip.

PROCEDURE AND ASSIGNMENT:

1. You are working in an establishment that adds 6% of the sales you make to your wages. Your business for one week amounted to \$519.25. Your wages are \$40.00. How much money will you receive for commission in addition to your wages?
2. A restaurant guest hesitates in giving his order, but the waitress is on the job! Before he has a chance to order a 65 cent hamburger, she makes the following suggestion, "The fried chicken has been very popular to-night and it is mighty good. Would you care to try it?" The customer accepted the suggestion and spent \$1.95. At 15%, what would the tip amount to on each sale? What would be the difference for the larger check?
3. A 15% tip was received on the following sales slips. What was the total of the money received? \$4.95, \$2.60, \$1.35, \$1.25, \$6.40, \$3.85.
4. Wages amounted to \$50.00. What percent of wages was sales commission if the commission amounted to \$2.00.
5. A woman was asked to serve at a buffet supper. She was offered \$10.00 for 2 1/2 hours. She said she couldn't do it unless she was paid 50% more than the offer. How much did she want for her work?

6. A worker lost three days pay at \$7.00 per day.
 - a. What percentage of his pay did he lose?
 - b. What was his salary for six days?

7. A bakery salesperson sold \$563.25 worth of baked goods for which a 5% commission is added to his pay. What will the commission amount to?

8. A waitress served a group whose bill amounted to \$10.65. \$1.60 was left as the tip. What was the % of the tip?

9. A waiter earned wages of \$2140.00 for one year. His tips amounted to \$1091.40. What was the % of his tips?

10. Four waitresses pooled their tips for the day. The total money in the box amounted to \$48.50. They agreed to give the bus boy 1% of the total tips. Two waitresses worked for two meals and each received 25% of the remaining tips. How much did the other waitresses receive as their share?
 - a. How much did the bus boy receive?
 - b. How much did each of the first two waitresses receive?
 - c. How much did each of the second two waitresses receive?

UNIT IV - PERCENTAGE

Achievement Test No. 4

1. What is the difference between the terms hundred and hundredths?
2. Write $37\frac{1}{2}\%$ as a fraction. a decimal.
3. Figure the profit on \$5000.00 at 150% and at 1.5%
4. If you earn \$200.00 per month and spend \$15 for uniforms, \$7.50 for shoes, \$3.50 for hose and \$5.00 for other wearing apparel, what percent of your wages was spent for these items? What percent of your wages do you have left? How many dollars will this equal?
5. A business has expenses of \$6454.57. The receipts were \$10,410.59. What percentage of profit was made?
6. The cost of preparing a serving of apple pie is .08. What should the selling price be in order to make a profit of 75%?
7.
 - a. What % of 50 is 5?
 - b. What % of 35 is 7?
 - c. What % of 48 is 12?
 - d. What % of 30 is 3?
 - e. What % of 90 is 45?
8. A worker was advised to budget his salary as follows: 10% savings, 25% food, 5% clothing, 10% shelter, 10% entertainment, 15% travel expenses, 10% church, 5% charities, 10% investments. If he earned \$325.00 per month, how much would he use for each expense?
9. The selling price of the meals listed below is 40% more than the food cost. Find the food cost. 95 cents, 65 cents, 50 cents, \$1.25, 85 cents.
10. 216 oranges cost \$6.25. What should the selling price of one orange be to show a profit of $33\frac{1}{3}\%$ on each orange?

UNIT V - MEASUREMENTS

Review

Lesson No. 1

OBJECTIVE: To recall the terms necessary to the study of the tables of measurements as applied to the work in the commercial foods.

RELATED INFORMATION:

A. Unit of Measure

To measure the quantity of any object, it is necessary to decide on a method of measuring. Whatever is selected is known as a unit of measure.

B. The objects used as units of measure must meet certain specifications of size or volume, which have been established by law. This type of equipment is known as standard equipment.

C. All recipes and formulae are developed by using standard measurements and standard measuring equipment.

ASSIGNMENT:

1. Collect the following equipment from the cafeteria: measuring cup, set of measuring spoons, quart measure, gallon measure, (These articles are examples of standard measuring equipment).
2. Take a coffee cup, a soup spoon and a teaspoon from the dining room. (These articles are not standard measuring equipment).
3. Compare and contrast the articles that you have collected, as to appearance, size.
Fill the measuring cup with water. Pour the water into the coffee cup. Will the coffee cup hold all of the water? Examine the markings on the measuring cup. What do the marks show?

Test the quantity of water that the standard tablespoon will hold with that of the soup spoon.
Repeat, using the standard teaspoon and the regular teaspoon.

Fill the quart measure, using the standard measuring cup. How many cups of water were needed to fill the measure? How did the number of markings on the quart measure compare with the number of cups that were needed to fill it?

What would your conclusions be regarding the use of standard measuring equipment?

D. To save time in quantity food preparation, many ingredients are weighed.

The units of measure used for this work are grams, ounces, pounds.

ASSIGNMENT: Examine the gram scales.
Examine the scales registering ounces and pounds.
Examine a portion scales.

1. Weigh one gram of flour.
2. Weigh one ounce of flour.
3. Weigh one pound of flour.
4. Compare the quantities of one gram of flour with one ounce of flour. Measure each unit of weight with a standard measuring spoon. How many tablespoons in one gram of flour? one ounce?

E. Some materials are measured according to other standard units such as, peck, bushel. You will find that these units must have specific weights.
For example, a bushel of green peppers weighs 25 pounds.
By consulting tables of specifications, you will be able to learn the various weights required for certain fruits, vegetables and other packs.
Specifying weights for certain packs has been found to give a more accurate measurement.

ASSIGNMENT: Consult your text book for a "A Chart of Comparative Weights and Amounts of Fresh Foods".

Select three examples for class discussion.

F. Temperatures: The standard unit for measuring temperature is the degree. A small o to the upper right of the figure is used to designate the degree. (80°)

The standard piece of equipment for measuring temperature is the thermometer. There are two main types of thermometers - the Fahrenheit and the Centigrade.

F. is used to represent the Fahrenheit thermometer on which 32° records the freezing point, and 212°, the boiling point of water.

C. is used to represent the Centigrade thermometer, where the freezing temperature is shown by 0 and the boiling point is 100.

Although the Fahrenheit thermometer is used almost exclusively in the kitchen, it would be well for you to examine a centigrade thermometer.

Various thermometers are used for different purposes in the kitchen. All are worked out on the Fahrenheit scale.

- a. candy thermometer, fat thermometer
- b. the oven thermometer
- c. refrigeration thermometer

Many pieces of equipment are constructed with thermostats - instruments that control temperatures. The scale of degrees or temperatures register the same as on a thermometer. This instrument has the advantage of not only registering temperatures, but controlling them. However, a thermometer is needed to check the thermostat should it get out of order.

Thermostatically controlled equipment is becoming a necessary part of every food establishment. It takes the guess-work out of food preparation, is a safety control, and also helps to save food from over-cooking, thus controlling the quality of the finished product.

OVEN THERMOMETER

Used for testing temperatures of oven heat.

MEAT THERMOMETER

Used to determine the internal temperatures of meats.

CANDY AND FAT THERMOMETER

Used for testing temperatures of sugar syrups, candy and deep fat frying

Collect the various types of thermometers from the kitchen so that you will be able to recognize each.

Notice the scales on each thermometer differ. Also note that certain thermometers will register much higher temperatures than others.

There is another instrument used to determine temperatures, when steam is used for cooking, called a pressure gauge. Gauges are marked in various ways to indicate pressures as well as temperatures.

Warning

Be certain of the directions for operating any equipment where steam is used, as it can be dangerous ! ! !

ASSIGNMENT:

Inspect the cafeteria equipment to learn the different types of thermometers or thermostats that are used.

If there are no pieces of equipment available to illustrate the use of pressure gauge, you may be able to see it on the heating equipment in the school or you may see it when you visit the Hotel Show or a commercial kitchen.

- G. Measurement of time is also very important to the trade. Tested recipes indicate the time for cooking as part of their directions.

Seconds, minutes, and hours are the units used in the preparation of foods.

Days, weeks, months, years are the additional units used in computing various phases of business operations.

- H. There is another unit of measurement that foods students will want to understand - the calorie. This is a unit of heat or energy derived from the foods consumed.

ASSIGNMENT:

Consult your text book for "Daily Food Needs".

Find the number of calories that a person your age requires daily.

Find the number of calories that a man doing heavy work needs daily.

Find the number of calories that a woman doing light work needs daily.

Find the number of calories that a child one year old needs daily.

Compare the number of calories need for each of the examples. How do you account for the difference in the number of calories that each person requires?

REVIEW:

1. a. Define the meaning of standard equipment.
b. Why should standard equipment be used?
2. The units of measuring materials by weight are _____, _____, _____

3. You may purchase 10 pounds of potatoes or 1 bushel of potatoes. What two units of measurements are represented here?
4. The boiling point of water is _____F. _____C.
5. _____ represents the internal temperature for 10-12 pound turkey.
(Consult the meat thermometer).
6. Which is more advantageous to the customer? To order a bushel of spinach or 35 pounds of spinach. Give the reason for your answer.
7. What should the internal temperature of a 12-15 lb. standing roast of beef be to produce a rare roast?
(Consult the meat thermometer).
How many minutes per pound should the meat be cooked to produce a rare roast?
What would be the total time for a roast of the weight listed to be cooked?
If the meat is put in a pre-heated oven at 9:45 A.M., at what time should the meat be ready to serve?
8. How do the temperatures in Problem 7 compare with those of Problem No. 5?

UNIT V - MEASUREMENTS

Reading Thermometers

Lesson No. 2

OBJECTIVE: To learn how to read the various thermometers used in the commercial foods kitchen.
To be able to interpret the mathematics of the thermometer in the preparation of foods.

RELATED INFORMATION:

Accurate measurements, care in combining ingredients and use of standard recipes, as well as quality ingredients are some of the requisites of a uniform product. However, if the product is not cooked properly, it will not be acceptable.

Various thermometers are helpful and indispensable in food preparation.

PROCEDURE:

A. Using the candy thermometer. This instrument will be used in making cake icings, fillings, jelly, as well as in making various confections.

1. Examine the candy thermometer and make a record of the various temperatures, as well as the descriptive adjective that corresponds to each temperature.

Note: The higher the temperature of a sugar mixture, the more brittle the finished product. This continues until all of the moisture is driven off and the mixture becomes a black mass of carbon which, of course, will not be usable in the foods trade.

Icings are usually cooked to the "fondant" stage or "soft". Find the temperature that corresponds to this description.

2. Take one cup sugar and $\frac{1}{3}$ cup water. Stir until the ingredients are well mixed. Put the thermometer into the syrup. Heat on a low flame until the mixture reaches 238°F. At what temperature did the mixture remain for some time, before reaching the required temperature?
3. Continue to cook the syrup, checking the temperatures at the various stages described on the thermometer.

CAUTION: REMEMBER THAT THIS MIXTURE IS VERY HOT. PROTECT YOUR HANDS AND DO NOT ALLOW ANY OF IT TO TOUCH YOUR SKIN. USE A HEAVY DRY POT HOLDER AND HAVE A DRY CLOTH ON WHICH TO PLACE THE THERMOMETER WHEN IT IS REMOVED FROM THE SYRUP. LET THE THERMOMETER COOL BEFORE PLACING IN WATER.

4. What finally happens when the syrup is cooked beyond the "brittle" stage?
5. Did this change take place slowly or rapidly? What did you learn from this exercise about the changes that take place in sugar cookery?

B. The Deep Fat Thermometer

1. Compare the lowest and highest temperatures on this thermometer with that of the candy thermometer.
2. Consult a cook book and find the recommended temperatures for frying the following in deep fat: chicken croquettes, fillet of flounder, crullers, French fried potatoes.

Put the required fat into a frying kettle, put on a low flame and place the deep fat thermometer into the kettle. When the temperature of the fat reaches the required temperature, frying starts. Check the length of time required for the fat to reach each of the desired temperatures.

Experiment by frying one of the foods listed. After the first batch has been fried, check the temperature of the fat. What has happened? What was the cause of this? What must happen before more food is fried? List the number of minutes or seconds for the fat to recover the temperature.

PRECAUTION: HOT FAT CAN CAUSE PAINFUL BURNS.
HOT FAT CAN ALSO CAUSE FIRES.
WORK CAREFULLY.

When the fat becomes too hot, what two conditions exist? Fat temperatures that are too high spoil the flavor of foods as well as take the "life" out of the fat. Fat that is not hot enough is soaked up by the food. This results in a greasy, indigestible product.

These two points should impress you with the importance of frying foods at the right temperatures.

Newer and more improved equipment for deep fat frying has thermostatically controlled temperatures.

- C. The Meat Thermometer is inserted into the thickest part of the piece of meat and the meat is cooked until the internal temperature of the meat reaches the desired degree.

Inspect the markings on the meat thermometer and notice that various kinds of meats require different temperatures.

Which requires a higher internal temperature - rare roast beef or fresh pork?

- D. Oven Thermometer and Thermostat. Most ovens are equipped with a thermostat which controls and regulates oven temperatures. A portable oven thermometer is usually available to check the thermostat.

Set the thermostat on the bake oven to 400F. Set a portable oven thermometer on the center of the shelf of the oven. In 15 minutes, check the thermometer to see if it and the thermostat agree.

Write the figures that represent the various temperatures that are described on the thermometer, e.g., what figure corresponds to the word "moderate". Why would it be more accurate to give the figure for the temperature especially when writing recipes?

- E. The Refrigerator Thermometer. Many refrigerators are equipped with regulators so that temperatures can be controlled. There are also portable thermometers which can be used to determine the temperature of the refrigerator.

Using a portable refrigerator, check the temperature in the morning before the day's work begins, again at noon, and again at the end of the day. What have you learned about the effect of opening the refrigerator door on the temperature? 35° - 40° is the desirable temperature for keeping food cold. 50°F. is conducive to bacteria growth and is not desirable.

Set the thermometer in the freezer or in the ice cream cabinet. Record the temperature after 30 minutes have elapsed. How does the temperature compare with that of the refrigerator?

- F. Dishwashing Machine Thermometer. Board of Health recommends that the temperature of water for dish washing in a machine be 140°F., for rinsing 180°F.

Check the temperature of the water at the beginning of the dish cleaning period and at the end. Record your findings.

ASSIGNMENT:

1. Check the temperature required for soft icing.
2. How do the internal temperatures for the following compare:
 - a. roast beef - medium
 - b. roast beef - well done
 - c. fresh pork
 - d. roast leg of lamb

3. Why are the terms like "hot oven", "moderate oven" inaccurate? What would be the exact temperatures for these terms?
4. If you were using an oven equipped with a thermostat, at what temperature would you set it for "hot"? "slow"?
5. Which is higher, the boiling point of water or 236°F.? How much?
6. A reading of the refrigerator the first thing in the morning was 38°F. At noon it was 52°F. How would you account for the higher temperature?
7. A piece of meat weighing 16 lbs. before cooking lost 1 lb. 3 oz. when cooked at 325°F. At 400°F. in the same length of time an identical piece lost 2 lbs. 1 oz. What would be your deduction as to the effect of higher temperatures on meat shrinkage? What would be the cooked weight of the two pieces of meat?

UNIT V - MEASUREMENTS

Using Scales

Lesson No. 3

OBJECTIVE: To learn the importance of accuracy in using various types of weighing scales as used in the foods trade.

RELATED INFORMATION:

Various types of scales are used in the foods trades.

1. Platform scales - at the point of delivery to weigh cases, barrels, etc.
2. Kitchen scales - used for weighing ingredients and small packages.
3. Portion scales - used to weigh portions of food - especially in diet kitchens.
4. Computing scales - convenient when figuring portion costs.

PROCEDURE: The scales that are used in a food establishment can be used as a check on deliveries. It is always wise to check all deliveries.

Platform Scales

Balance the scales before weighing ingredients.
Always report any variation - shortage or overage immediately.
This work is usually taken care of by the store room clerk.

Kitchen Scales - used for weighing ingredients.

This is a time saving method as well as an assurance of obtaining more uniform results with a quantity recipe.

ASSIGNMENT:

A.

1. If a platform scale is available, weigh a bag of sugar or a bag of flour (100 lbs.). Balance the scale and after checking the weight on the delivery slip, find out if it agrees.
2. Weigh a case of eggs - check for size (small, medium, large). Does the weight agree with the prescribed weight?
3. Repeat No. 2 using a basket of spinach, crate of lettuce (note the kind of lettuce), case of #1's standard tomatoes, barrel of dish machine powder.

Check to see if the figures agree with those on the specification list. You will find information charts of "Comparative Weights" in your institutional books.

B. Kitchen Scales Procedure - balance the scales.

1. Weigh a nine inch mixing bowl, a six inch mixing bowl.
Mark the weight of each bowl.
2. Put enough flour into each bowl to make one pound of flour.
What must you remember when you are weighing the flour?
Can you suggest two methods of doing this?
3.
 - a. Weigh 1 lb. carrots (A.P.) as purchased, tops, etc.
 - b. Remove the tops. Weigh again. What is the difference?
 - c. Suppose you bought 2 dozen bunches of carrots. What would be the waste?
 - d. Multiply this by the cost per pound to determine the money that you would be losing.
4. Sort enough potatoes of uniform size to make 25 lbs. Put them into the paring machine. Eye them after being pared. Weigh the potatoes again. Any difference? Mark down any loss. Cost of one pound. Cost of lost weight.
5.
 - a. Weigh an uncooked smoked ham, leg of lamb or standing rib roast of beef. Record the weight and check with the dealer's bill.
 - b. Cook the meat. Weigh again after cooking. Record the weight. Figure the number of pounds or ounces or both of shrinkage.
 - c. Bone the meat. Weigh the bones and other trimmings.
More loss!
 - d. Weigh the boned meat.
 - e. Multiply the number pounds of loss by the cost per pound. Add this to the bill that was rendered for the meat as delivered. What is the present cost per pound?
6.
 - a. Weigh six head of iceberg lettuce.
 - b. Weigh six head of Boston lettuce.
 - c. If you are purchasing the lettuce by weight, which would be the better buy?
 - d. Trim the leaves from both types of lettuce that cannot be used for salads. Weigh the trimmings. Any loss?

UNIT V - MEASUREMENTS

Purchasing by Weight vs. Count

Lesson No. 4

OBJECTIVE: To ascertain the value of purchasing by weight or count.

RELATED INFORMATION:

Institutional purchasing is usually done on the basis of weights rather than by count.

You will be better able to appraise the two methods of purchasing with some experience in figuring cost and then make a comparison.

ASSIGNMENT:

1. Check the weight of a case of small, a case of medium, and a case of large eggs.
 - a. How many dozen are in each case?
 - b. Compare the current market price per case for each size egg.
 - c. What is the price per egg of each size?
2. On which case would the restaurateur make more money - selling a case of medium or a case of large eggs. The eggs are to be used on an a la carte breakfast menu. Consult a menu from your locality for the price of a single or two eggs.
3. A box of 150 apples (for table - fancy) sells for \$7.50. The weight is 48 lbs.
 - a. What is the cost per apple?
 - b. What is the cost per lb.?
 - c. What would be the approximate number of apples in one pound?
 - d. If the apples were sold at 10 cents each, what would be received for the box of apples?
4. Corn per bag of 100 ears costs \$4.00, or it may be purchased for 65 cents per dozen. Show by figuring which is the better buy.
5. Which would be the better buy?
 - a. 1 crate of 27 cantaloupe @ \$5.40 per crate
 - b. 1 crate of 36 cantaloupe @ \$7.92 per crate
 - c. Figure the cost per cantaloupe of each size.
 - d. What would be the cost per serving if eight servings were made from each of the 27 cantaloupes?
 - e. What would be the cost per serving if six servings were made from each of the 36 cantaloupes?
 - f. Each serving is to be offered to the customer for 15 cents per serving. What would be the profit from each box?
 - g. Which is the better buy? Why?

6. Check the weight of a stalk of bananas, a hand of bananas. Consult the market price of each unit.
 - a. What will determine the number of bananas in one pound? Weigh out one pound and figure the cost of each banana.
 - b. Since you cannot sell bananas by weight to a restaurant customer, add 25% of the cost of one banana to arrive at the selling price. What will be the charge for one banana?
7. Look up the following units - the weight of
 - a. till of tomatoes
 - b. lug of tomatoesIf the price of a till were \$2.50 and the price of a lug were \$5.75, which would be the better buy? Why?
8. Fresh plums are packed in baskets with the following description - "4 x 5"
 - a. Find out what this description means.
 - b. Find out how many baskets there are to a box or a crate.
 - c. Figure how many plums this carte would yield.
 - d. At \$11.50 per box or crate, what would be the cost per serving if three plums are given to a customer?
 - e. How many servings can be made from this pack?

UNIT V - MEASUREMENTS

Tables

Lesson No. 5

OBJECTIVE: To recall the various tables of measurements especially those used in the foods trades.

RELATED INFORMATION:

The following tables that you learned in the lower grades of school will be used for many of the jobs that you will do in foods work.

PROCEDURE: Review of the various tables and parts of the tables that will be needed for foods work.

A. Table of Liquid Measure

3t. (teaspoons)	=	1 T. (tablespoon)
16 T.	=	1 c. (cup)
2 c.	=	1 pint (pt.)
4 c.	=	1 quart (qt.)
4 qts.	=	1 gallon (gal.)

B. Table of Dry Measure

3 t.	=	1 T.
6 T.	=	1 c.
16 ounces (oz.)	=	1 pound (pd.)
2 c.	=	1 lb. sugar
2 c.	=	1 lb. fat
4 c.	=	1 lb. flour

Note: The measurements listed are the ones that you will need to memorize. There are other tables of Equivalents in your foods text books. You will use these when computing costs of recipes.

C. Table of Weights

28.35 grams (gr.)	= 1 oz.
16 oz.	= 1 lb.
2 c.	= 1 lb. fat or sugar
4 c.	= 1 lb. flour

D. Table of Temperatures

0 degrees Fahrenheit	= 0°F.
32°F.	= freezing
212°F.	= boiling point

E. Table of Time

60 seconds (sec.)	= 1 minute
60 minutes	= 1 hour (hr.)
24 hours	= 1 day
30 days	= 1 month
12 months	= 1 year (yr.)

F. Size of Cans in which Food is Purchased for Food Establishments.

1. Learn to recognize each size can.

a. Use the model cans to learn sizes.

b. Cans of various sizes may be found in the cafeteria store room. Select a variety, check weights and contents and compare with the weights and contents on the standards.

$\frac{1}{2}$ cups
20 ounces
24 to the case

7 cups
3 lbs. 8 oz.
12 to case

$3\frac{1}{2}$ cups
28 ounces
24 to the case

13 cups
6 lbs. 10 oz.
6 to case

ASSIGNMENT:

1. Cut a one pound print of butter or margarine or lard in half:
 - a. Each piece will be what part of a pound?
 - b. Each piece will be how many ounces?
 - c. Each piece will be how many cups?
 - d. Each piece will be how many tablespoons?

2.

a.	One pound of fat	=	_____ cups.
	One half-pound of fat	=	_____ cups.

3.

a.	One cup of fat	=	_____ tablespoons.
b.	One pound of fat	=	_____ tablespoons.

4. One tablespoon of butter = _____ teaspoons.

5. How many standard measuring cups will one gallon of soup yield?

6.
 - a. Which weighs more, one pound of sugar or one pound of flour?
 - b. How many cups in one pound of sugar? one pound of flour?

7. The temperature of the ice cream cabinet registered minus 10 degrees F. Is this above or below freezing? On what do you base your answer?

8. A turkey weighing $18\frac{3}{4}$ lbs. was to be cooked 12 minutes per pound. In how many hours and minutes should the turkey be cooked? If the turkey were put into a preheated oven at 9 A.M., at what time should it be taken out if cooked according to the above directions?

9. A No. 10 can yields _____ cups, a No. $2\frac{1}{2}$ can _____ cups, and a number 5 can _____ cups. If one can of each size was used to make a fruit punch, how many quarts of punch would you have?

10.

a.	$\frac{3}{4}$ cup flour	=	_____ T. flour.
b.	$1\frac{1}{2}$ quarts of vinegar	=	_____ cups of vinegar
c.	2 cups flour	=	_____ oz. flour
d.	_____ degrees F.	=	boiling point of water.
e.	3 cups of flour = _____ T. = _____ oz. = _____ lb.* _____		

UNIT V - MEASUREMENTS

Achievement Test No. 5

1. Define the term "unit of measure".
2. What type equipment does one need in order to use the "units of measure"?
3. How does a "gram" compare with an "ounce"? Select one food from the table of food composition to illustrate. Weigh one gram of flour and 1 ounce of flour. Measure, using a tablespoon. Compare.
4.
 - a. Name the various thermometers used in the food trade.
 - b. The unit of measure on a thermometer is called a _____.
 - c. A _____ regulates temperatures, a _____ registers temperatures.
 - d. Why are thermometers necessary for the foods trade?
5.
 - a. What is a calorie?
 - b. What is this the unit of measure for?
 - c. Why do people "count calories"?
6. Two No. 10 cans of peas weighed the same. When the cans were opened, one had 8 oz. more peas than the other. What term is used to describe the weight after the liquid is removed?
7. Potatoes 30 lbs. A.P. (as purchased) were peeled and eyed. There was a loss of 3 lbs. 6 oz. What was the edible portion (E.P.)?
8. 25 lbs. of fat was put into the frying kettle. At the end of the day 19 lbs. remained. How many pounds of fat was used? If it costs 15 cents per pound to get potatoes ready for frying and the fat cost 19 cents per pound, what would be the cost of frying the 20 pounds of potatoes that were used on that day?
9. How many 3-ounce portions would the above potatoes yield?
10. Compare the cost of the following (cost per egg):
 - a. 1 dozen small eggs at 45 cents per dozen
 - b. 1 dozen medium eggs at 55 cents per dozen
 - c. 1 dozen large eggs at 65 cents per dozen

UNIT VI - ACCOUNTS

Wages

Lesson No. 1

OBJECTIVE: To learn how to apply the principles of mathematics in computing a worker's wages based on different time units.

RELATED INFORMATION:

Constant répetition has been made to making money throughout your work in related mathematics. In this lesson you will think of the money that you will make.

The amount of money that you will make will depend upon many things, such as, ambition, attendance, application, and experience.

We will consider wages only in this lesson. Tips were discussed in an earlier lesson.

Wages in a food establishment are based on the kind of job that you have, the experience and the responsibility connected with the job. A beginner cannot expect the same rate of pay as a worker who has been on the payroll for years.

It costs your employer money to train you, so for a time you are a "liability" to the establishment not an "asset".

Wages may be paid on different units of time: hour, day, week, month, year. Find out during your interview just what unit of time will be used to figure your pay.

ASSIGNMENT:

1. Find out what the rate per hour is in your locality for restaurant workers. At eight hours per day, 5 day week, what would your wages be at this hourly rate?
2. The store room clerk was paid \$60.00 per week. He worked 6 days, 8 hours per day. What was his rate of pay per hour?
3. The kitchen manager received a salary of \$250.00 per month. She worked 6 days per week, 8 hours per day.
 - a. What is her rate of pay per day (30 days to the month)?
 - b. Pay per week (4 weeks to the month)?
 - c. Pay per hour?
4. The chef was paid \$150.00 per week. He worked 50 weeks. What did he receive for that period of time?

5. A hostess was hired at \$150.00 per month. At the end of three months, she was promised a 5% increase.
- What would her wages be?
 - In six months there was to be a 10% increase of the existing salary and the following year she was to receive a 20% increase. What would her salary be per month at this time?
6. There are certain deductions authorized to be taken from your wages:
- Social Security and Withholding Tax are deductions authorized by the Federal Government.
 - Other deductions such as - hospitalization, savings plans, government bonds, are more or less voluntary.
 - Sample form for your study of the Government deductions will be provided.
 - Investigate the laws pertaining to unemployment insurance.
 - The money received after the various deductions is known as "net pay" but it is often termed "take home pay".
7. The dish machine operator is paid \$1.10 per hour. What would his wages be for the week if his time card read as follows?
NOTE: This station often requires a person to work a "split shift".

Monday	7:30 A.M.	to	10:45 A.M.
	11:30 A.M.	to	3:15 P.M.
	5:00 P.M.	to	8:00 P.M.
Tuesday	8:45 A.M.	to	10:45 A.M.
	12:15 P.M.	to	3:15 P.M.
	5:30 P.M.	to	7:30 P.M.
Wednesday	7:45 A.M.	to	10:45 A.M.
	11:45 A.M.	to	2:15 P.M.
	5:30 P.M.	to	7:30 P.M.
Thursday	8:00 A.M.	to	10:40 A.M.
	12:00 M.	to	3:00 P.M.
	5:00 P.M.	to	8:00 P.M.
Friday	8:30 A.M.	to	10:15 A.M.
	11:45 A.M.	to	2:15 P.M.
	5:30 P.M.	to	7:45 P.M.
Saturday	9:00 A.M.	to	12:30 P.M.
	1:30 P.M.	to	4:30 P.M.

8. Compute the following: 35 hours @ \$1.00 per hour.

Deductions

Withholding tax	\$4.35
Social Security	.35
Hospitalization	.90

What is the net pay?

9. In No. 8 what % of the whole pay was deducted?

10. Salary	\$575.00
Deductions	20%
Net Pay	_____?

UNIT VI - ACCOUNTS

Financial Records

Lesson No. 2

OBJECTIVE: To understand various financial accounts necessary for the operation of food trade establishments.

RELATED INFORMATION:

Studies made by the Department of Commerce as well as by private groups show that many small food trade establishments fail because of either inadequate records or none at all.

Records can be very simple. They need not be longer or more involved than the following questions.

1. How much business am I doing?
2. How much net profit did I earn?
3. What were my food costs?
4. What were my other expenses?
5. What is my investment in my establishment?
6. What are the trends in my sales, expenses and profits-
or how am I progressing from year to year?
7. How much stock do I have?
8. How much money do I owe - wholesale dealers and others?
9. How much cash do I have on hand and in the bank?
10. How does my establishment compare with others of the same
type?

If a business man can answer these questions, he knows if everything is right or wrong. He knows if there are any unfavorable conditions and is in a position to take care of them.

ASSIGNMENT:

1. What evidence is available to show that poor records are the rule rather than the exception?
2. What are the results of poor records?
3. Express the following statement in another way, "What are the trends in my sales, expenses and profit?"
4. What do you understand by "net profit"?
5. What value is it to an operator to compare his establishment with others of the same type?

UNIT VI - ACCOUNTS

Receipts From Sales

Lesson No. 3

OBJECTIVE: To learn how to keep records of moneys received from various sources in the food establishment.

RELATED INFORMATION:

Would you take a job without knowing how much money the job would pay?

What would you think of a food shop owner who had no idea of how much money he received every day?

PROCEDURE: The cash register is one way that a business man can get a fairly accurate account of the money he has taken in each day.

1. The receipts minus the amount of cash or change in the cash drawer at the start of the day's business should equal the amount of money taken in and balance with the cash register tape.
2. There should be a method of determining total receipts from various sources, viz. from goods sold over the counter such as baked goods, candy, tobacco, etc.
3. It is important that this information be broken down into different classifications since some of the items may be in on a consignment or commission basis.
4. The record of daily sales should be entered into a simple cash book. The operator will then be able to make comparisons with receipts of other years, same month and day.

ASSIGNMENT:

1. What does the term consignment mean? What are some materials that might be sold in a restaurant on this basis? Why would an operator need to know whether this business was yielding a profit?

2. Below is a sample of receipts for one week's business and one method of grouping them.

<u>Meals</u>	<u>Beverages</u>	<u>Candy</u>	<u>Tobacco</u>	<u>Miscellaneous</u>
\$425.46	\$ 14.37	\$ 4.80	\$ 5.80	\$ 4.20
369.54	9.23	5.07	7.64	4.07
521.06	15.46	3.25	14.21	5.10
471.28	5.04	2.09	6.75	4.01
415.48	10.25	4.25	10.65	4.15
469.53	11.35	5.26	11.25	5.68

Copy the above figures and total each column.

3. If the owner receives 15% commission on the sale of tobacco and candy, what is the actual total that he can add to his own receipts?
4. Refer to the cafeteria records for the current year and the previous year. Check the total receipts for the year. Compare the total monthly receipts of each year. Also check the number of sales made on the days or the periods that you compare? How may any differences be explained?
5. A business man finds that his cash receipts were as follows:
\$74.96, \$207.32, \$112.52, \$102.43, \$97.32, \$106.53
- What are the total receipts for the week?
 - If he allows a 45% of each day's receipts for food cost, how much money may he allot for food each day?
 - What would be the total food allowance?

UNIT VI - ACCOUNTS

Orders and Requisitions

Lesson No. 4

OBJECTIVE: To learn how to work out orders and requisitions.

RELATED INFORMATION:

Care in food purchasing can mean success or failure in this business.

Price is not the only consideration when purchasing food materials, quality should be the first consideration.

Also, the buyer must consider his needs. Stock piled up in the store room represents money. This is really a liability not an asset.

PROCEDURE: Purchasing food materials.

1. Select several dealers.
2. Have a list of materials ready that you will want to purchase.
3. Watch so-called "inducement prices".
4. Be well informed on the specifications you will want your purchases to meet.

ASSIGNMENT:

A.

1. Perishables (fruits, vegetables, meats are purchased semi-weekly). The following sources should be consulted before purchasing:
 - a. Market reports.
 - b. Visit wholesale markets to see what is available.
 - c. Build menus around foods that are "in season" or are good buys.
2. Make a list of foods that are ordered every week.
3. Compare present cost with the cost of different seasons, e.g., Florida oranges (February - May). How do the prices compare? You may consult the prices in the day book.
4. Lettuce is \$2.50 per dozen heads.
Cabbage is \$2.25 per bag.
 - a. Find out how many lbs. are in a bag of cabbage.
 - b. A head of lettuce weighs approximately one pound.
 - c. How would the cost of the two vegetables compare in price per lb.?
 - d. How could a restaurant operator use these two items to advantage?
 - e. Consult the market price of the following greens: chicory, escarole.
 - f. How do the prices compare with the price of lettuce?
 - g. How may the restaurant operator take advantage of this?

Staples are materials that can be stored for some time without spoilage. Ordering staples varies with the size of the establishment. In some operations the order for staples is made on an annual basis. This method is rather difficult and it means the outlay of a great deal of money, so most restaurants order staples on the average of once a month.

ASSIGNMENT:

B.

1. An operator has prepared the following order. Check these price quotations on case lots from two wholesale houses. Lists are available in the cafeteria.

ARTICLE	QUALITY	UNIT COST	TOTAL
2 cs. 6/10 cut green beans	choice		
3 cs. 6/10 peas #4 sift	choice		
5 cs. 6/10 tomatoes	standard		
1 cs. 6/10 apricots, peeled halves medium syrup	choice		
1 cs. 6/10 pear halves Bart- lett 35/40 medium syrup	choice		
1-100 lb. bag all purpose flour	Gold Medal		
1-100 lb. bag granulated sugar	or equal		

Furnishings and Equipment The cost of equipment and furnishings is listed as a capital expense (original cost). As new equipment is developed and as furnishings and equipment become obsolete and wear out, new will have to be purchased.

ASSIGNMENT:

C.

1. A restaurant owner decided to redecorate the dining room.
 - Painting cost \$350.00
 - Draperies - 40 yards of material @ \$1.25 per yard
 - Cost of making draperies \$25.00
 - New hardware for hanging curtains \$5.75
 - a. What would be the total cost of the draperies?
 - b. If the owner decided that he would also purchase new floor covering for \$285.00, what would be the cost for all the new decorations?
 - c. He planned to charge 1/3 of the cost of this work to the current year's expenses. What would this amount to?

2. New Equipment. Deep fat fried foods are becoming very popular. An operator decided he would investigate the cost of a new frying machine. He found the price of the machine to be \$575.00. If the fry kettle could be used for ten years, how much would he charge to his expense account for each year?
3. Paper Goods. Frequently the vast amount of paper goods that is used is often forgotten. Figuring the cost of this item will enlighten you as to the money that is involved in this item.

Annual cost of paper goods amounted to \$413.74. If a restaurant operates 302 days per year, what would be the daily cost of paper goods?

4. Laundry is another expense that can cause a leak in profits.

The average charge for laundry was \$58.55 per week. What was the cost for fifty weeks?

5. Heat, light, water, telephone, rent, licenses, taxes, cleaning supplies, stationery are among items listed as operating expenses.

Look through the annual requisition for cleaning and paper supplies. List the expenditures that were made for these items.

UNIT VI - ACCOUNTS

Inventories

Lesson No. 5

OBJECTIVE: To become familiar with computing inventories.

RELATED INFORMATION:

An inventory is a list of items on hand. The inventory count should be taken periodically.

ASSIGNMENT:

1. Prepare an inventory sheet with the following headings:
Item Unit Cost Value
List all of the canned goods on hand in alphabetical order.
Put in the unit price. Take this from the requisition sheet.

2. Figure the value of the following items. Make an inventory sheet for this.

2 cs. 6/10 cherries Royal Anne	@ \$10.50 per case
4 cs. 6/10 peas	@ \$ 6.30 per case
1 cs. 6/10 sauerkraut	@ \$ 3.75 per case
1 cs. 12/66 oz. tuna flakes	@ \$11.50 per case
1 cs. 12/26 oz. jello	@ \$ 3.85 per case
2 M. paper doilies	@ \$ 2.25 per M
1/2 cs.-10 M. napkins	@ \$ 7.40 per case
2 1/2 cs. 12/5 grapefruit juice	@ \$ 3.65 per case

3. Find out the total value of the above inventory.

4. If you were a manager, what items would you order on the basis of the quantities listed on the inventory?

5. Make out an inventory sheet like the sample and list all of the supplies in the store room. Make classes of goods, such as, canned vegetables, canned fruits, paper goods, etc., in alphabetical order.

6. Fill out the unit cost.

7. Figure the value of the inventory.

8. Consult the inventory of the previous month to find the unit cost.

9. Subtract the total found in No. 7 from the total of the previous month.

10. Add the figure representing the expenditures on the inventory to the other food costs to arrive at the total food costs for the month. What is the total?

UNIT VI - ACCOUNTS

Records

Lesson No. 6

OBJECTIVE: To learn how to use different types of business records.

RELATED INFORMATION:

A foods trades business should make records of various types of business deals. To do this special forms may be used.

PROCEDURE: Prepare a form like the sample which is called an "Analysis of Cash Payments".

ANALYSIS OF CASH PAYMENTS

Date	(Month)		(Year)								
	Cash Paid	Food Purchases	Salaries & Wages	Laundry	Supplies	Repairs	Heat Light	Water	Rent	Tel.	Other
1		160.06				45.00			115.00		
2		-		8.75						35.00	
3		125.25	205.46								
4		-			5.88						
5		114.63					75.00				
6											
7		74.88									
8			101.23		5.40	2.69					15.00
9		43.27									
10											
11											
12											
Total											

ASSIGNMENT:

1. Compute the totals of each column. The total of the cross column when added together should equal the total of cash paid.

2. A cash disbursement book provides a record of cash expenditures. Below is a sample of one method of preparing a disbursement book. Total the disbursements.

CASH DISBURSEMENTS RECORD BOOK

(Year)		Firm		
(Month)		Sexton	120.46	Check No. 47
		Mary Jones	25.57	Cash
		Consolidated Laundry	18.50	Cash
		Freight Forwarding	17.82	Check No. 48

3. Prepare a cash disbursement sheet for the following. Total the expenditures.

Cunningham Brothers	\$22.50	check No. 214
Louis Ender	54.00	check No. 187
Gildersleeve	141.51	check No. 213
Bull Markets	49.76	cash
Dairylea	182.00	check No. 212
Ambrose	61.10	check No. 211
Sunshine Biscuit Co.	23.17	cash

4. What benefit would these records be to a business concern?
5. What problem would you feel that a small business operator would encounter in working out these forms?

UNIT VI - ACCOUNTS

Business Forms - Profit and Loss Statement

Lesson No. 7

OBJECTIVE: To learn the importance of a profit and loss statement and how to prepare a balance sheet.

RELATED INFORMATION:

In any business two financial statements are necessary:

1. a profit and loss statement and
2. a balance sheet.

A. The profit and loss statement summarizes business as follows:
 Sales of food, less cost of food sold = gross margin.
 Gross margin, less total operating expenses = net profit.

A typical profit and loss statement for one month may read as follows:

			% of Sales
Sales			
Sales		\$2,000.00	100
Food cost			
Inventory beginning	\$ 200.00		
Food Purchases for the month	<u>850.00</u>		
Total	\$1050.00		
Less final inventory	150.00		
		900.00	45
Gross Margin		\$1,100.00	55
Operating Expenses			
Salaries and Wages	600.00		30
Rent	140.00		7
Laundry	20.00		1
Paper and cleaning supplies	20.00		1
Utilities	60.00		3
Replacements, repairs, and maintenance	40.00		2
Depreciation	40.00		2
Advertising	10.00		0.5
Taxes and Insurance	40.00		2
Miscellaneous	30.00		1.5
Total		\$1,000.00	50
Net Profit		100.00	5

B. An annual report would be a sum total of the twelve monthly reports.

The balance sheet is a statement of the assets - or those things owned by the business. The liabilities are those amounts owed by the business. Assets minus liabilities - Net Worth.

An annual report may be something like the following:

<u>Current Assets</u>		
Cash	\$900.00	
Food inventory	150.00	
Deposits with Public Utility Co.	<u>25.00</u>	
<u>Total Current Assets</u>		\$1075.00
<u>Fixed Assets</u> comprise articles and equipment that are more or less stationery and can be used for some time.		
The value of fixed assets may be as follows:		
Large equipment (kitchen)	\$2500.00	
Dining room fixtures and furnishing	1500.00	
Small kitchen equipment	200.00	
China, glass, silver, linens	500.00	
Miscellaneous furniture and equipment	<u>200.00</u>	
<u>Total Fixed Assets</u>		4900.00
<u>Total Assets</u>		5975.00
<u>Current Liabilities</u>		
Accounts payable	\$ 600.00	
Installment accounts or notes	<u>1100.00</u>	
<u>Total Liabilities</u>		1700.00
<u>Net Worth</u>		
Owner's capital June 1	4175.00	
Net profit for June	100.00	4275.00
		\$5975.00

ASSIGNMENT:

1. What is the difference between gross margin and net profit?
2. Prepare a balance sheet for the following:

<u>Foods Sales</u>	\$3418.24
<u>Cost of Food</u>	1210.15
<u>Gross Margin</u>	<hr/>

Operating Expenses

Salaries and wages	\$ 521.42
Employees meals	74.16
Laundry	58.60
Sundry supplies and expenses	46.08
Repairs	17.25
Heat, light, power, water, telephone	52.18
Insurance	17.00
Rent	150.00
Depreciation - furniture and fixtures	22.00
Legal service	18.00
Interest expense	9.00
Payroll taxes	28.00
Miscellaneous expenses	15.42

3. What was the net profit on the above statement?
4. It is good practice to break down the different food products purchased. Make ten columns and use the following as the headings:
Meats, Poultry, Fish, Fruit, Vegetables, Butter, Milk and Cream, Ice Cream, Groceries, Other Food Purchases. Consult the day book from the cafeteria and enter into each column the amount spent daily for each food group listed.
5.
 - a. Total the amounts in each of the columns. This represents the money spent for each group for the month.
 - b. List the foods according to cost 1. the most expensive, 10. the least expensive.
 - c. Which foods should be sold at the highest prices?
 - d. Consult a commercial restaurant menu to verify your conclusions regarding selling prices.

6. a. The United States Treasury Department, Internal Revenue Service - from Bulletin F. shows the following table of depreciation values on equipment and furnishings for restaurants. This is a partial list that owners use in figuring depreciation for income tax calculations.

	<u>AVERAGE USEFUL LIFE (YEARS)</u>
Chairs	10
Kitchen equipment	10
Silverware	5
Tables	15
Trays	10

- b. Consult the equipment inventory for the cafeteria. List the cost of each of the above items. (The total value of each item listed)
- (1) How would you arrive at the amount of deduction you would be entitled to?
 - (2) Figure the allowance for depreciation on the following pieces of kitchen equipment: range, refrigerator, bake oven.
7. The gross profit for a business was as follows:
 January, \$602.54, February, \$1143.56, March, \$1076.84
 April, \$2103.24, May, \$2174.88, June, \$1891.44,
 July, \$2278.42, August, \$976.44, September, \$2264.80,
 October, \$1902.15, November, \$1536.48, December, \$2521.46.
 What was the gross profit for the year?
8. Expenditures were as follows:
 January, \$496.32, February, \$920.16, March, \$843.01,
 April, \$1094.15, May, \$1438.54, June, \$1007.68,
 July, \$1461.25, August, \$903.56, September, \$1115.49,
 October, \$1013.88, November, \$1245.63, December, \$1098.21.
 What were the total expenditures for the twelve months?
9. What was the net profit?

UNIT VI - ACCOUNTS

Reconciliation of Bank Balance

Lesson No. 8

OBJECTIVE: To learn how to prepare a reconciliation of a bank balance.

RELATED INFORMATION:

Cash is the one asset in any business that can be converted quickly into other items. It is also the one that can disappear quickly and some times it is difficult to know where it has gone and what it was used for.

Cash available for use may be classified as:

- a. "cash on hand"
- b. "cash in the bank"

Cash on hand would be the money you actually had available either in the cash register or safe. Since it is not a safe business practice to keep too much cash on hand, the cash that is not needed is put in the bank. That sum would represent the cash in the bank.

When money or checks are put in the bank, the person depositing the money, makes out a deposit slip. The bank clerk will check the slip and then enter the deposit into the depositor's bank book.

Usually at the end of each month, the bank sends out a statement to each depositor.

The amount shown on the bank statement of a checking account may not be the same as the amount of money that is available for use for these reasons.

1. If deposits are made daily, the statement of any particular date rarely includes the deposit of that date, because the deposit would not be posted by the bank until the following day.
2. Checks drawn against the account a few days before the statement was made may not agree with the balance, because all of the checks may not have cleared and been charged to the account.

In Lesson 6 you learned how to make up a "Cash Disbursements Record Book" and you also learned how to prepare an "Analysis of Cash Payments".

PROCEDURE:

1. Review the two forms used in Lesson 6.
2. Make up a simple form like the sample.

RECONCILIATION OF BANK STATEMENT

Date - June	Expenditures	Deposits
Balance		\$ 568.45
Additional deposits		119.50
		402.15
		110.00
	Total	<u>\$1200.10</u>
 Outstanding Checks		
Check No.	Date	
163	6/27	\$ 96.45
164	6/28	102.15
158	6/20	<u>54.82</u>
	Total	<u>\$253.42</u>
Balance Available		 <u>\$ 946.68</u>

The bank charged \$2.15 for handling the account, so be sure to subtract that amount from your balance.

3. All cancelled checks accompany the bank statement. Check these first against the check book as well as the statement- to safeguard that the amounts were not changed. A colored pencil could be used to show the cancelled checks that have been returned. It would follow that items not checked off would be outstanding.

ASSIGNMENT:

1. Cash available may be classified as _____ and _____.
2. Discuss this statement, It is not a safe business practice to keep too much cash on hand.
3. What are the advantages of paying bills by check?
4. Explain why the bank statement may not agree
 - a. with the deposits
 - b. with outstanding checks.

5. A bank statement shows the following:

Balance April 30 - \$3426.09.

Deposits - \$142.08, \$107.43, \$211.58, \$40.96, \$124.88,
\$136.21, \$145.00
(deposits made for the month of May)

Cancelled checks - \$181.21, \$40.23, \$156.09, \$212.15, \$87.28,
\$415.98
(expenditures during the month of May)

Outstanding checks - \$408.15, \$11.57, \$21.76, \$87.59

Deposits made after the statement has been made up -
\$114.28, \$109.21, \$324.68

Bank charge \$2.76

Prepare the reconciliation for this bank statement. The statement was received from the bank on May 30.

6. How much cash would this business have in the bank account?
7. When would the outstanding checks appear on a bank statement?

UNIT VI - ACCOUNTS

Achievement Test No. 6

1. Make out the following payroll:
2 workers 40 hours each @ \$1.10 per hour
3 workers 35 hours each @ \$1.65 per hour
2 workers 40 hours each .75 per hour
2. A worker received \$75.28 and 40% commission on his salary.
 - a. What was the commission?
 - b. What will be the total amount that the worker will receive?
3. What is the difference between gross profit and net profit?
4. The receipts for one day in a restaurant were \$702.64.
 - a. Figure the gross profit.Use the following percentages as a basis for computing the problem
 - (1) 45% food cost _____ = \$ _____ food cost
 - (2) 10% labor _____ = \$ _____ for labor
 - (3) ? % for other expenses and profit ? \$ _____
5. \$205.76, \$119.48, \$316.07, \$291.21, \$368.14, \$407.89, \$118.54, are the total receipts for each day. What were the total receipts for the week?
6.
 - a. \$102.46, \$80.02, \$157.43, \$109.18, \$175.07, \$318.02, were the daily expenditures for the above restaurant. What were the total expenditures?
 - b. Was there a profit or loss? How much?
7. The following bills were received by a restaurant operator who was preparing to open a new restaurant:

canned goods and staples	\$1743.08
kitchen equipment, machines, etc.	5419.95
kitchen equipment, tools and utensils	461.89
dining room equipment	
tables	420.00
chairs	420.00
draperies	186.00
dishes	502.57
glassware	180.75
silver	326.00

What were the total expenditures?

8.
 - a. Tables cost \$14.00 each. How many tables were purchased?
 - b. If four chairs were used for each table, how many chairs were purchased?
 - c. What was the cost of each chair?
9. The inventory on March 1 was valued at \$308.15. Staples which amounted to \$57.92 were purchased. At the end of the month the inventory amounted to \$184.68. How many dollars were spent from this account for the month?
10. True or False?
 - a. A profit and loss statement should be prepared by any business at definite intervals.
 - b. Business often fails because of poor records.
 - c. A restaurant owner or buyer for the business should receive salesmen at any time.
 - d. The check stub and the cancelled check are evidence that bills have been paid.
 - e. New workers are assets to a business.
 - f. Disbursement means money received.
 - g. The cash register tape can be used as a check of the restaurant receipts.
 - h. The value of the inventory represents money saved.
 - i. A good business operator tries to control all types of waste.
 - j. Employees who waste time deserve good pay.

COMMERCIAL FOODS

Related Mathematics I

General Review

-
1. Which fraction is the largest - $\frac{1}{4}$ $\frac{1}{3}$ $\frac{1}{8}$
 2. a. If a nine inch layer cake was cut into eight pieces, each piece would be one _____ of the cake.
b. How much money would be received if the entire cake was sold at 25 cents per cut?
 3. The cost of producing the cake was 40 cents. Was the cake sold at a profit or loss? How much?
 4. A caterer submitted the following figure or estimate for a wedding reception: \$35.00 for a wedding cake, \$1.25 per guest for fancy sandwiches, petits fours and coffee, plus 15% gratuity. What would be the cost of the reception for 200 guests?
 5. Find the cost of preparing 60 fruit cups @ .056 each.
 6. The weight of a leg of lamb before cooking was 7 lbs. 2 oz. After cooking, it weighed 5 lbs. 6 oz. What was the loss of weight during cooking?
 7. Change the following measurements to their equivalent weights:
a. 4 tablespoons butter, b. 6 tablespoons flour, c. 1 1/2 cups sugar, d. 8 cups fat, e. 1 quart milk.
 8. What % of a worker's pay is deducted for:
a. social security, b. withholding tax and c. unemployment insurance benefits? Consult government publication for rates.
 9. A man works 40 hours at \$2.75 per hour.
a. How much does he earn? b. Figure out each deduction, using the rates from Problem 8. c. What is his "take home" pay?
 10. A restaurant bought a new appliance that cost \$475.00. \$105.00 credit was applied for turning in a piece of used equipment.
a. What was the cash cost for the new appliance?
b. By paying cash, 5% of the purchase price was deducted. How much would this deduction amount to?
 11. According to the inventory on Jan. 1, there were 35 #10 cans of peas on hand. On Jan. 31, there were 15 on hand.
a. How many #10 cans were used? b. At \$0.56 1/4 per can, what was the value of the peas that were used? d. What is the value of the stock on hand Jan. 31?

12. The cost of a standard recipe yielding 50 portions is \$2.975. What is the cost per portion?
13. The daily receipts in a restaurant were as follows:
\$138.46, \$209.21, \$186.23, \$146.19, \$168.70, \$203.27.
What was the total?
14. 23% of the total receipts in Problem 12 was used for food, 2% for rent. a. What amount was used for each? b. How much money was left?
15. The restaurant in Problem 13, served 743 customers. What was the average amount of each check?
16. If 30 servings can be obtained from one No. 10 can of peas, how many cans will be required for 180 servings?
17. 100 tea bags cost 65 cents. What is the cost of one tea bag.
18. 5% of a box of 125 tomatoes was spoiled. How many tomatoes were unfit for use?
19. A seashore restaurant took in \$6245.35 in July. The following November, the receipts were 60% of those received in July. How much money was taken in during November?
20. How many gallons of brick ice cream cut 8 to the quart should be purchased to serve 256 portions?
21. A restaurant famous for popovers figured that the average served per guest is 3. How many dozen popovers should be made for 80 guests?
22. How many ounces in 10 lb. 8 oz. veal. How many 3 ounce portions will this quantity serve?
23. How many half-pint cartons of milk will 5 gallons of milk yield?
24. What fraction of a case of canned goods is each of the following?
a. 3-#10 cans, b. 4-#5 cans, c. 24-#1 cans,
d. 2-#10 cans, e. 8-#5 cans
25. Sardines are usually packed $100\frac{1}{4}$ cans to a case. In one month, 30 cans were used.
a. Write this number as a fraction.
b. Write the number representing the number of cans left as a fraction.

26.
 - a. 3 cups flour equals what fractional part of one pound?
 - b. 2 cups milk equals what fractional part of one quart?
 - c. 4 eggs equals what fractional part of one dozen?
 - d. 10 tablespoons equals what fractional part of one cup?
 - e. 1 quart equals what fractional part of one gallon?
27. A cook worked 6 hours, 45 minutes on Monday; 7 hours, 30 minutes on Tuesday, 8 hours on Wednesday; 5 hours on Thursday; and 6 hours, 40 minutes on Friday. What was the total time worked?
28. At \$3.20 per hour, how much did the cook earn?
29. A waitress received \$40.00 as wages. Tips amounted to three-tenths of her wages.
 - a. How much did she make in tips?
 - b. What were her total earnings?
30. Add the following: \$32.53, \$410.68, \$1.87, \$0.43, \$16.19, \$217.03, \$411.00, \$17.65, \$225.02.
31. Divide 7645 by 63.
32. A honeydew melon cost 59 cents. It was cut into 12 pieces which were sold at 15 cents each.
 - a. How much was received from the sale of the melon?
 - b. Was there a profit or a loss? How much?
33. A restaurant owner received a bill for \$563.12 for canned goods. He paid the bill in 10 days in order to take advantage of a 15% discount.
 - a. What was the discount?
 - b. How much did he have to pay for the canned goods after deducting the discount?
34. If coffee costs 88 cents per pound and yields 40 cups, what is the cost of one cup?
35. Find the total number of calories that the following luncheon will yield: 2 slices of white bread @ 65 calories each; 2 ounces luncheon meat @ 165 calories; 1 cup malted milk @ 280 calories.
36. If a person were on a 2000 calorie daily allowance, how many calories would remain for the other two meals?
37. The following bills were received for one week; meats \$356.89, fruits and vegetables \$112.38, dairy products \$206.54, groceries and staples \$187.41, bakery products \$87.28, fish and seafood \$193.48. What is the total of the bills?
38. The owner of the above establishment found that \$912.15 remained after paying the bills. What was the total of the receipts for this period?

39. The meat salesman quoted \$1.10 per pound for club steaks. Later, he offered the restaurant a special price of 99 cents per pound if the owner would purchase 6 boxes of 40 pounds each.
- What would have been the cost of this quantity of meat at the first quotation?
 - What was the cost at the second figure quoted?
 - How much would be saved by buying the large quantity?
40. At 17 1/2 cents per pound, what is the cost of 1,200 loaves of bread? Each loaf weighs 2 pounds 4 ounces.
41. What is the cost per loaf of the bread in the preceding problem? Carry out the figure to five decimal places.
42. The pastry cook prepared the following products, which were sold as follows:
- 50 servings Jello @ 10 cents each
 - 10 pumpkin pies - 6 cuts per pie at 25 cents per cut
 - 5 layer cakes - 10 cuts per cake at 25 cents per cut
 - 20 baked apples at 15 cents each
 - 75 servings pudding at 20 cents per serving
 - 5 dozen cream puffs at 35 cents for each cream puff
- What were the total receipts from this production station?
43. The dessert cook worked 8 hours at \$1.50 per hour and the materials used for the various desserts cost \$29.32.
- What was the total cost of the labor?
 - What was the difference between the receipts and the cost of production?
44. Write in words the following decimals:
- | | |
|---------|---------|
| a. .25 | d. .6 |
| b. .01 | e. 1.35 |
| c. .131 | |
45. a. Subtract 1423.018 from 7186.241
b. Divide 40738 by 212
46. Multiply 21468 by 107
47. 12 gallons of soup were served for dinner in an industrial cafeteria. How many bowls or 1 cup servings were served?
48. A restaurant used 3 cases of eggs in 4 days. How many dozen eggs were used?
49. How many pounds of tomatoes averaging 5 to a pound should be ordered for 250 servings? 1/2 tomato will be used for each serving.
50. A business paid 6% of its income for taxes and 5% interest on a mortgage. The income was \$10,246.83. What was the amount for each expense?

JULY 1960

TO THE TEACHER

This book has been written for use in individual and group projects. It is intended that the lessons will be further clarified by demonstrations and visual aids.

The purpose of this manual is twofold: to acquaint the students with the equipment and utensils found in a kitchen; and to teach the pupils how to prepare simple meals, which will lay a foundation of knowledge for these homemakers of tomorrow.

In view of the particular needs of the students for whom this has been written, special attention has been given to the pronunciation and explanation of words used throughout the units. Since it is very important to establish a vocabulary of terms that are essential in a cooking class, new words are written in syllables and explained in each lesson, and repeated in alphabetical order in the glossary for reference use.

The material has been compiled in organizational sequence, but the lessons do not necessarily have to be taught in succession. The units are intended for a one-year course in cooking, the class being held for one hour a day, five days a week.

Included in this manual is a check list for recording class activities that have been accomplished, and a page on which the students may enter any cooking projects they have performed at home. This has been done as an incentive to each pupil, and also to give the student a feeling of achievement for the projects completed. A copy of the check list should be of great assistance to the teacher, when the students return for more advanced work in cooking.

I would like to express my sincere thanks to Miss Dorothy Brevoort, Supervisor of Vocational Homemaking in the State of New Jersey, for her cooperation and assistance; and to Mrs. Berminna Solem, former teacher at the New Jersey School for the Deaf, who is responsible for all the excellent sketches.

Mary Margaret Pieslak
July, 1960

FOREWORD

Even though our way of life has changed considerably down through the ages, the need to prepare a woman for her most important role in life as wife, mother, and homemaker, is still the responsibility of our homes, churches, and schools.

To the homemaker, the good health of her family and herself is a constant concern. Therefore the planning, preparation, and serving of wholesome, tasty, and attractive meals becomes necessary.

This book and those to follow it will find a long-felt need for a clear and concise text on Foods. Although it has been prepared for a special purpose, its simplicity and thoroughness should make it a real aid to all girls beginning the important and fascinating subject of Foods.

I am certain that the use of and the resultant benefits from this text will indeed indicate to the author that her time and efforts have been sincerely appreciated by the students and staff of the New Jersey School for the Deaf.

C. M. Jochem, Superintendent
New Jersey School for the Deaf

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

When You Come to Class Each Day

Lesson 1

Objective: To learn what you must do when you come into this class.

Information:

Rules are very important. Your mothers have rules that you must obey. There are rules for the games you play. Rules teach us how to do things the right way. It is the same with cooking. The rules you will learn are going to help to make you better cooks.

Now you will learn what to do at the beginning of each class.

1. Put on your uniform. Be sure it is neat and clean.
2. Hang your dress on a hanger so that it will stay clean and tidy.
3. Comb your hair before you come into the classroom. You must never comb your hair near food.
4. Get out your notebook and pencil.
5. Sit down on your chair.
6. Listen carefully to all instructions.

Vocabulary:

objective	-	ǒb jěk' tív -- what we are going to learn
information	-	ǐn fǒr mǎ 'shǔn -- the things you must know in the lesson
uniforms	-	ū 'nǐ fǒrms -- dresses that look alike and are worn by each girl in class
tidy	-	tí 'dǐ -- neat
instruction	-	ǐn strǔk 'shǔn -- a telling of what you are to do
vocabulary	-	vǒ kǎb 'ú lěr ǐ -- words and their meanings that you will learn
assignment	-	ǎ sǐn 'měnt -- work to be studied

Assignment:

1. Why do we have rules to follow?
2. Why do you wear a uniform in cooking class?
3. Why should you never touch your hair when you are cooking?
4. Why must you watch the teacher and pay attention at all times in class?

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

A Good Cook Is Clean and Neat

Lesson 2

Objective: To learn to be neat in your appearance and in your work.

Information: You would not want to eat food that is dirty. To make sure our food is clean, we must keep ourselves, and everything we use spic and span.

Now you will learn many ways to be clean and neat in your cooking.

1. Always wash your hands before you start to prepare any food.
2. When you must cough or sneeze, turn your head away from food.
3. Always wash your hands after using a handkerchief.
4. Do not touch your hair while cooking.
5. Keep your books away from all food.
6. Keep your work space wiped clean while you are working.
7. Open and close cabinets with clean, dry hands.
8. Open and close doors and drawers quietly.
9. Get out the utensils and food needed before you start to cook.
10. Put all utensils and food away in their proper place.
11. Be sure each unit is swept and in perfect order at the end of each class.

Vocabulary:

appearance	- a pēr'āns -- the way you look
spic and span	- spik ānd spān -- neat and clean
prepare	- prē pār' -- to get ready
work space	- wûrk spās -- the counter on which you will prepared your food
cabinets	- kăb i nĕts -- closets with shelves in them where you will keep your food and utensils
utensils	- ū tĕn'sils -- tools used in the kitchen
proper	- prōp'ēr -- right, correct
unit	- ū'nit -- one part of the classroom

Assignment:

1. Why is it important to be very clean in the kitchen?
2. How will you keep your work space clean while you are preparing food?
3. Why do you cover your mouth and turn your head away from food when you cough?
4. Why do you keep your books away from food?
5. What will happen if you do not have your utensils and food ready before you start to cook?

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

Safety Rules

Lesson 3

Objective: To learn to work safely.

Information: The kitchen is a safe place if the cook is careful. If you are careless, you may hurt yourself or someone else. Always keep safety in mind. Then our kitchen will be a safe place to work in.

Here are some safety rules you must remember.

1. Be sure no one is in your way when you are carrying any food.
2. Never walk backwards. Always turn and look to be sure your path is clear.
3. Look before you reach for something on a high shelf.
4. Use a dry pot holder to pick up hot dishes.
5. Do not put hot pans on your work space.
6. Be sure your hands are dry before lifting a hot pan from the stove.
7. Keep all pot handles turned toward the inside of the stove, so you won't knock the pots over.
8. Do not leave oven doors open.
9. Lift pot covers away from you.
10. Stir hot foods with a wooden spoon because the handle stays cool.
11. Wipe up things that spill on the floor at once.
12. Always cut away from you.
13. Watch your fingers when cutting.
14. Do not put sharp knives in the dishpan with other dishes or utensils.
15. Keep cabinet doors closed so you don't bump into them.

Vocabulary:

safety	-	sāf' tī -- carefulness for yourself and others so that no one will get hurt
backwards	-	bāk' wērdz -- with your back first
pot holder	-	pōt hōl' dēr -- many small pieces of cloth sewed together with which you pick up hot pots
stir	-	stūr -- mix or move with a spoon
handle	-	hān 'dʒl -- the part of the pot that you hold when you pick up the pot
spill	-	spil -- to drop food or liquid

Assignment:

1. Why is safety so important in the kitchen?
2. Why must you look before you walk in the kitchen?
3. Why do you keep pot handles away from the edge of the stove?
4. Why must your hands be dry before lifting a hot pan from the stove?
5. Why must your pot holder be dry when you pick up hot dishes?
6. Is it all right to use a dish towel instead of a pot holder? Why?
7. Why should you wipe up any spilled food at once?
8. When you are cooking at home, why is it important to wear clothes that are not loose and have no big pockets or bows?

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

Dishwashing Rules

Lesson 4

Objective: To learn the right way to wash dishes.

Information: You have probably washed dishes many times at home. Dishwashing will be easier, and we can save much time if we know how to wash dishes.

Now you will learn the right way to wash dishes.

1. Scrape food off dishes with a rubber food scraper.
2. Soak soiled dishes at once. Soak dishes that were used for milk, eggs, or flour in cold water. Soak all other dishes in hot water.
3. Rinse each dish under the faucet.
4. Stack the dishes neatly to one side of the dishpan.
5. Wash and rinse only a few dishes at a time so that you will not break any.

6. Wash dishes in this order:

- a. Glassware
- b. Silverware
- c. China
- d. Small cooking utensils
- e. Large cooking utensils

7. Wash, rinse, and dry the dishpan.

Vocabulary:

scrape	- skrāp -- to clean off
soak	- sōk -- to keep wet
soiled	- soil'd -- dirty
rinse	- rīns -- to wash in clean water
stack	- stāk -- to put the dishes one on top of the other in a neat way
glassware	- glās' wâr -- all the glasses you use when you eat
silverware	- sil'vēr wâr -- all the knives, forks, and spoons you use when you eat
china	- chí' nâ -- all the dishes you use when you eat
order	- ôr' dēr -- the way one thing follows another

Assignment:

1. Why do you scrape the dishes before you wash them?
2. What dishes are soaked in cold water?
3. Why do you wash only a few dishes at a time?
4. Why do you wash glassware first?
5. Give the order in which we wash dishes.
6. Why must you wash, rinse, and dry the dishpan?

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

Kitchen Aids

Lesson 5

Objective: To learn the things that will help us to keep our kitchen clean.

Information: We have products and tools that make washing and cleaning in our kitchen much easier for us. Years ago people had to work harder and longer to do their cleaning jobs. We want to know all the products that will help us to keep our kitchen clean in the best and fastest way.

Here are some products you will use.

1. Soap powder or detergent

Put soap or detergent in the dishpan.

Turn hot water on the soap powder to make suds.

2. Steel wool

Wet steel wool and rub it on stained utensils.

3. Cleanser

A little cleanser cleans a whole sink bright and shiny.

4. Brushes

Long handled brushes help to clean bottles and graters.

5. Water

Lots of hot water to rinse clean dishes makes them easier to dry. See them shine!

6. Dish cloths and dish towels

Always use clean dish cloths and dish towels to be sure your dishes are clean and bright.

7. Baking soda

Baking soda in warm water to wipe out your refrigerator will keep it clean and fresh

8. Silver polish

Silver polish keeps your silverware looking like new.

Vocabulary:

product - prŏd'ukt -- something that is made

detergent - dĕ tŭr'jĕnt -- a product that is like soap and is used for washing

stained - stānd -- soiled or dirty

Assignment:

1. How do you get good suds in your dishpan?

2. When do you use baking soda in cleaning?

3. When do you rinse dishes with hot water?

4. Make a list of the kitchen aids you have at home.

UNIT I - THINGS TO KNOW BEFORE YOU START COOKING

Following a Recipe

Lesson 6

Objective: To learn how to follow a recipe.

Information: Now we are going to prepare food. After we make our food, we are going to eat it. We all like food that tastes good. Be very careful to follow your recipe exactly. Know what you are doing. Do not guess. Then we will all enjoy eating our food.

Now you will learn how to follow a recipe.

1. Read through the whole recipe before you start to prepare the food.
2. Be sure you understand all the words and measurements in the recipe.
3. Read the list of ingredients on the left side first, then the right side. Do not read across the line.
4. Get out all the utensils and food needed.
5. Remember to use exact measurements.
6. Follow each direction in order.
7. Keep your work space neat while you are working.
8. Be sure to serve hot foods while they are hot, and cold foods while they are cold.

Vocabulary:

recipe	-	řes'í pē --	the way to make something to eat
taste	..	tāst --	the feeling you get when food is in the mouth. The taste may be sweet, or sour, or bitter, or salty.
exactly	..	ěg zākt'lí --	perfectly or just right
measurement-		mězh'ěr měnt --	a way of finding the size or amount of anything
ingredients	-	in grē'di ěnts --	foods used in a recipe
direction	-	dí rěk'shŭn --	a telling how to do something

Assignment:

1. Why must you read through the whole recipe before you start to prepare food?
2. Why do you read down the left column of ingredients first?
3. How does it help you to get out all the utensils and food needed before you start to make something?
4. Why do you always use exact measurements?
5. Why must you follow each direction in order?

UNIT II - USE AND CARE OF EQUIPMENT

The Sink

Lesson 1

Objective: To learn how to use and take care of the sink.

Information: We use the sink more than anything else in the kitchen. It is used before we cook, while we are cooking, and after we cook. We must follow some rules so that our sink will look tidy at all times.

Now we will learn how to use and take care of the sink.

1. While preparing food, wash, dry, and put away utensils that will not be needed again.
2. Soak pans as you finish with them.
3. Keep part of the sink free of soiled dishes.
4. Keep sharp-edged tools away from other utensils.
5. Do not pour any grease into the sink.
6. Take out any garbage that is in the drain.
7. Close faucets while washing the sink.
8. Clean sink with hot water and cleanser.
9. Be sure faucets and soap dish are clean.
10. Rinse sink well with hot water and wipe dry.
11. Wipe up any water which has spilled around the sink, so that you will not slip.

Vocabulary:

equipment	- ɛ kwip'měnt -- the big things you need, like the stove and refrigerator
grease	- grēs -- any oil or fat
garbage	- gār'bij -- any food or part of food that is not to be eaten
faucets	- fō'sěts -- what you use to turn the water on or off in the sink
cleanser	- klěnz'ēr -- the powder used to clean the sink
drain in the sink	- drān -- the pipe through which the water goes down

Assignment:

1. How does it help you to soak the pans when you finish using them?
2. Why do you keep part of the sink free from soiled dishes?
3. What will happen if you pour grease into your sink?
4. Why must you clean the drain in the sink?
6. Why do you use cleanser in your sink?

UNIT II - USE AND CARE OF EQUIPMENT

The Garbage Can

Lesson 2

Objective: To learn how to use and care for the garbage can.

Information: The garbage can must be kept just as clean as all our other equipment. We do not like to see flies or bugs in the kitchen. If garbage is not taken care of, flies and bugs will come around.

Now you will learn how to use and care for the garbage can.

1. Open a paper bag and set it in the garbage can. This makes cleaning easier.
2. Keep the cover of the garbage can closed.
3. Drain all liquid off the garbage before putting it in the garbage can.
4. Do not put any broken glass or tin cans in the garbage can. Someone can get cut.
5. Garbage must be emptied every day. Close the paper bag and take it out of the garbage can.
6. Wash the inside of the garbage can with hot soapy water. Rinse and dry. Put in a clean paper bag.
7. Keep the outside of the garbage can as clean as the inside.

Vocabulary:

- to drain - drān -- to pour off liquid
liquid - lik'wid -- anything that flows or pours
to empty - ěmp'ti -- to take everything out of

Assignment:

1. Why do you put a paper bag in the garbage can?
2. Why must you keep the garbage can closed?
3. Why don't you put liquid in the garbage can?
4. Why is it important to keep broken glass and tin cans out of the garbage can?
5. Why must you keep the inside and outside of the garbage can clean?

UNIT II - USE AND CARE OF EQUIPMENT

The Refrigerator

Lesson 3

Objective: To learn how to use and take care of the refrigerator.

Information: Our refrigerator works for us. It saves us time and money by saving our food. We must use it in the right way and take good care of it. If we do this, our refrigerator will work for many, many years.

Now you will find out how to use and care for the refrigerator.

1. Keep the refrigerator door closed. Open it only when you have to get food, and close it again right away.
2. Do not put hot foods in the refrigerator.

3. Cover all foods. This keeps the food from getting dry.
4. Keep milk and meat in the coldest part of the refrigerator. The coldest part is near the freezer.
5. Leave room between food. This lets the cold air go around the food.
6. Put only clean food in the refrigerator.
7. Be sure all jars, containers, and bottles are clean and dry.
8. Wipe up any spilled food at once.
9. Defrost, wash, and clean the refrigerator once a week.
 - a. Turn off the switch in the refrigerator.
 - b. Take out the ice cubes by running cold water on the trays.
 - c. Take all food out of the refrigerator.
 - d. Remove all shelves and containers.
 - e. Wash the inside of the refrigerator, the racks, and containers with warm water. Add 1 teaspoon of baking soda to the warm water.
 - f. Wipe everything dry.
 - g. Turn on switch in refrigerator.
 - h. Refill ice cube trays and put back in place.
 - i. Return racks, containers, and food to refrigerator.
 - j. Clean outside of refrigerator with a little cleanser or cleaning wax.

Vocabulary

refrigerator	- rĕ frij'ĕr ā tĕr -- a box to keep things cold
freezer	- frĕz'ĕr -- a box that keeps food so cold that the food becomes hard
container	- kŏn tĕn'ĕr -- anything that is used to hold something
defrost	dĕ frŏst' -- to take away frost or ice
switch	swĭch -- the thing you use to turn the refrigerator on or off
add to	- ăd -- put with

Assignment.

1. Why should foods be cool before you put them in the refrigerator?
2. What happens to uncovered food in the refrigerator?
3. Why do you leave room between the food?
4. How does it help you when all jars, containers, and bottles are clean and dry?
5. Why do you defrost the refrigerator?
6. How do you take ice cubes out of the ice tray?

7. What do you put in the warm water when you clean the refrigerator?
Why?

8. How do you clean the outside of the refrigerator?

UNIT II - USE AND CARE OF EQUIPMENT

The Gas Stove

Lesson 4

Objective: To learn how to use and care for the gas stove.

Information: Our gas stove is automatic. We do not have to use a match for the burners or the oven. At home, some of you may have to use a match with your gas stove. We must be very careful when we are near the stove. We know our safety rules and must always keep them in m

Now you will learn how to use and care for the gas stove.

1. There are pilot lights near the top burners and in the ovens. These pilot lights must be on, or you cannot turn on the stove.
2. To turn on the oven or burner of an automatic gas range, you just turn the knob for the oven or the burner you want to use.
3. To light the burner of a gas stove that needs a match:
 - a. Take out match and close match box.
 - b. Strike the match away from you.
 - c. Hold the match near the burner you want to light.

- d. Turn the knob for that burner on full.
 - e. Wet the burned match before you throw it away.
 - f. After lighting it, adjust the flame so that it stays under the pan. If the flame comes around the pan, the food heats more slowly, you waste gas, and the pan will get dark.
4. To light the oven of a gas stove that needs a match (where there are two knobs, one to turn on the oven and one temperature control knob):
- a. Set the temperature control knob to the temperature you want.
 - b. Open the oven door in case there is any gas in the oven.
 - c. Strike the match away from you.
 - d. Hold the match near the hole in the bottom of the oven. This hole is marked "light here."
 - e. Turn the oven knob on full.
 - f. Be sure oven is lit.
 - g. Close oven door.
5. To light the oven of a gas stove that needs a match (where one knob turns on the oven and is also the temperature control knob):
- a. Open the oven door in case there is any gas in the oven.
 - b. Strike the match away from you.
 - c. Hold the match near the hole in the bottom of the oven, marked "light here."
 - d. Press the oven-temperature knob in, and turn it on full.
 - e. Be sure oven is lit.
 - f. Close oven door.
 - g. Set the oven-temperature knob to the temperature you want.
6. To light the oven of a gas stove that needs a match (where there is no temperature control knob):
- a. Open the oven door in case there is any gas in the oven.

- b. Strike the match away from you.
 - c. Hold the match near the lighting hole in the broiler.
 - d. Turn the oven knob on full.
 - e. Be sure oven is lit.
 - f. Close oven and broiler doors.
 - g. In this type of oven, you must use a thermometer. You change the temperature by turning the oven knob higher or lower.
7. A gas flame should be blue, not yellow. A blue flame is hotter than a yellow one.
 8. Lower the flame when food starts to boil.
 9. Turn the gas off if any food boils over.
 10. Turn off the gas as soon as the cooking is finished.
 11. To remove a cover from a pan on the stove, lift the cover away from you.
 12. Do not lean against the stove. You may turn the gas on.
 13. Do not reach across an empty lighted burner.
 14. Be sure the stove is cool before you clean it.
 15. Wash the inside and outside of the stove with warm, soapy water, and rinse with clean warm water.
 16. Use steel wool to clean stains.
 17. After cleaning, light the burners and oven to dry them.

Vocabulary:

automatic	- ô t ^h măt'ik -- a stove that lights by turning a knob. You do not need a match, as the stove has pilot lights.
pilot light	- pī'lūt līt -- the small flame that is always lit so that a burner can be turned on.
burner	- būr/nēr -- the part on the top of the stove where the flame comes
knob	- nôb -- a handle to turn
to adjust	- ă júst' -- change to make right

temperature	- ìem'pēr à túr -- how hot or cold
control	- kǒn trōl /-- a way to keep the temperature just as you want it.
to boil	- boil -- to make the liquid hot enough so that you see bubbles on the top.
remove	- rē mōov /-- to take away
thermometer	- thēr mǒm'ē tēr -- a tool for telling how hot or cold it is

Assignment:

1. What do we mean by a gas stove?
2. Do you use a match to light an automatic gas stove?
3. What are pilot lights?
4. Why do you close the match box before you strike the match?
5. Why do you strike a match away from you?
6. Why must you wet a match before you throw it away?
7. What happens when the flame comes around the pan?

8. What is the temperature control knob?
9. Why do you open the oven door before you strike the match?
10. Why do you strike the match before you turn on the gas?
11. Why should a gas flame be blue?
12. Why do you lower the flame when food starts to boil?
13. What do you do if food boils over on the stove? Why?
14. Why do you lift the cover of a pan on the stove away from you?
15. What kind of stove do you have at home?

UNIT II - USE AND CARE OF EQUIPMENT

The Electric Stove

Lesson 5

Objective: To learn how to use and care for the electric stove.

Information: We know all about the gas stove. An electric stove is different. Not all electric stoves look the same. Some look like a gas stove. Sometimes, electric burners are built in your work space, and the oven is built in your wall. When the oven is built in the wall, you do not have to bend over to use it.

Now you will learn how to use and take care of the electric stove.

1. The surface units, which are the burners that get red, take a little longer to get hot than the burners on a gas stove.
2. The knobs for the burners are marked to show you high, medium, simmer, and low heat.
3. Always start the burner at "high," so it will get very hot fast.
4. When the burner is hot, turn the knob to the kind of heat you want.
5. Be careful that the burner does not get too hot. If the burner is too hot, the food will boil over.
6. Turn the burner off before the food is finished cooking. Burners on electric stoves stay hot for a long time.
7. Be sure your pan covers the red part of the surface unit.
8. To use the oven, you turn the oven knob to the temperature you want.
9. Use warm, soapy water to clean the electric stove the same as you do the gas stove, but do not put the surface units in water. Water will ruin the electrical connections.

Vocabulary:

surface units	- sŭr'fis ũ'nits -- the burners on top of the stove
high heat	- hī hēt -- large heat. The heat is turned all the way on, and the unit gets very, very hot.
medium heat	- mē'di ũm -- middle heat. The heat is not large or small. The heat is between high and low.
simmer	- sim'ēr -- to cook slowly on top of the stove. Keep the liquid just under the boiling point. You see tiny bubbles around the edge of the liquid.
low heat	- lō -- little heat. The heat is turned on just a little
electrical connections	- ě lĕk'tri kál kŏ nĕk'shŭns -- all the wires on the electric stove

Assignment:

1. What are the surface units on the electric stove?
2. Where do you turn the knob for the burner when you start cooking?
3. Why do you turn the burner of an electric stove off before the food is finished cooking?
4. Why should your pan cover the red part of the surface unit?
5. Why don't you put the surface units in water?

UNIT III - MEASUREMENTS AND ABBREVIATIONS

Rules About Measuring

Lesson 1

Objective: To learn some rules about measuring.

Information: The way we measure the ingredients in a recipe can make our food taste good or bad. Let us measure exactly, so that everything we make will be perfect. The recipes we use have been made many times before. The people who wrote the recipes know just how much of each food is needed. Be sure to read and follow the measurements exactly. Never guess when you measure.

Now we will learn some rules about measuring.

1. You have a metal measuring cup for dry ingredients. The one-cup mark is at the very top of the cup so that you can level off the food.
2. You have a glass measuring cup for liquid ingredients. The one-cup mark is below the top of the cup so that you will not spill the liquid.
3. A liquid measuring cup has a lip to make it easy to pour from.
4. Measuring cups are marked for:

5. You have a set of measuring spoons.

6. A teaspoon or tablespoon used at the table is not used for measuring.
7. You have a spatula to level off dry food to make your measurement perfect. Always fill the cup or spoon heaping full. Then level off with the spatula.
8. The measurements you read in a recipe are level.

1 cup of dry ingredients

1 cup of liquid ingredients

9. Measure dry ingredients first, then liquids, then fats.

Vocabulary:

- | | | |
|--------------|---|---|
| abbreviation | - | ă brē vi ā' shŭn -- a short way to write a word |
| perfect | - | pŭr' fĕkt -- without any mistakes |
| lip of a cup | - | lĭp -- the part of the cup that bends out so that liquid will pour out without spilling |
| level | - | lĕv' ěl -- flat and smooth |
| heaping | - | hĕp' ĭng -- filled more than level |
| spatula | - | spăt' ŭ lâ -- a flat utensil that can bend. It looks like a knife, but it is not sharp |

Assignment:

1. Name the two kinds of measuring cups.
2. Which kind of cup is used to measure dry ingredients?
3. Which kind of cup is used to measure liquid ingredients?
4. What is the difference between the two kinds of measuring cups?
5. How are measuring cups marked?
6. Name the kinds or sizes of spoons in your set of measuring spoons.
7. Why can't you measure with a teaspoon or tablespoon that you use at the table?
8. Why do you use the spatula when you measure?
9. Why must your measurements be level?
10. Why do you measure dry ingredients first, then liquids, then fats?

UNIT III - MEASUREMENTS AND ABBREVIATIONS

How To Measure Dry Ingredients

Lesson 2

Objective: To learn how to measure dry ingredients.

Information: We know some general rules about measuring. We know how to level off a measurement. There are some special rules for measuring different dry foods. They are very important. We will practice measuring dry foods to make sure we understand how to do it. We must remember these rules because the recipe will not explain them. They are things you have to know before you start cooking.

Now you will learn how to measure dry ingredients.

1. There are four things you must always do when you measure flour:
 - a. Measure the flour you need.
 - b. Sift the flour onto a paper towel.
 - c. Measure the flour again.
 - d. Sift the flour again with the other dry ingredients in the recipe.
2. Use a spoon to fill the cup with flour.
3. Never shake or pack the flour down in the cup.
4. If you need part of a cup of flour, tap the cup lightly with a spoon to level the flour in the cup.
5. Sift granulated sugar before you measure it, if the sugar is lumped.
6. Sift powdered sugar before you measure it.
7. Brown sugar is the only dry ingredient that you pack down in the cup or spoon when you measure it.
8. For all other dry ingredients, just remember that all measurements are level.

Vocabulary:

- practice - prak' tis -- to do the same thing over and over again
- sift - sift -- to put through a screen to keep any big pieces away from the little pieces
- granulated sugar - gran' ŭ lāt ěd -- grains of sugar that are the same size as grains of fine sand
- powdered sugar - pou' dĕrd -- white sugar that has been ground into a fine powder
- lumpy - lŭmp' i -- sticking together of a food in bunches

Assignment:

1. What are the four things you must do when you want to measure flour?
2. Why must you measure flour after you sift it?
3. Why is it wrong to shake or pack down flour in a cup?
4. How do you measure part of a cup of flour?
5. Why do you sift powdered sugar before you measure it?

UNIT III - MEASUREMENTS AND ABBREVIATIONS

How To Measure Liquid Ingredients

Lesson 3

Objective: To learn how to measure liquid ingredients.

Information: Our recipes tell us just how much of each food is needed. Our rules for measuring liquids are different from the rules we learned for dry ingredients. We will remember that all measurements must be perfect. That rule is the same for liquid and dry foods.

Now you will learn how to measure liquids.

1. Put the glass measuring cup on a flat surface. Never hold it in your hand when you measure.
2. Always have the cup at eye level. If you look down or up at the cup, your measurement will be wrong.
3. Remember to fill the cup to the mark that shows the measurement you need.
4. Never pour liquid to the top of the glass measuring cup. This would give you more than one cup. Read the marked lines.
5. Put a silver spoon in the glass measuring cup when you measure hot liquids. Pour the hot liquid on the spoon, and not on the glass, when you fill the cup.
6. Butter the cup or spoon lightly before you measure sticky liquids like honey.

Vocabulary.

flat surface	- flăt sŭr'fĭs -- smooth, straight part
eye level	- ĭ lĕv'ĕl -- in a straight line with the eye
pour	- pŏr -- to make something flow
marker lines	- măr'kĕr lĭns -- lines to show where an exact measurement is
sticky	- stĭk'ĭ -- making things hold together

Assignment:

1. Why do you put the glass measuring cup on a flat surface when you measure liquids?
2. Why must you have the glass measuring cup at eye level for perfect measurements?
3. What measurements are marked on a glass measuring cup?
4. Why is it wrong to pour liquid to the top of a glass measuring cup?
5. Why do you pour hot liquids on a silver spoon, and not on the glass, when you fill the cup?
6. Why do you butter the cup or spoon lightly before you measure sticky foods?

UNIT III - MEASUREMENTS AND ABBREVIATIONS

How To Measure Fats

Lesson 4

Objective: To learn how to measure fats.

Information: We use many kinds of fats. Some are solid and some are liquid. The solid fats we will use are butter, oleomargarine, and shortening. Sometimes we have to melt our fat for a recipe. We call the liquid fat that we use an oil. Again, we remember that all measurements must be perfect.

Now you will learn how to measure fats.

1. To measure a solid fat:

- a. You use a glass measuring cup.
- b. You must be able to add fractions to equal one cup.

$$\begin{array}{r} \frac{1}{4} \\ + \frac{3}{4} \\ \hline \frac{4}{4} = 1 \end{array} \quad \begin{array}{r} \frac{1}{3} \\ + \frac{2}{3} \\ \hline \frac{3}{3} = 1 \end{array} \quad \begin{array}{r} \frac{1}{2} \\ + \frac{1}{2} \\ \hline \frac{2}{2} = 1 \end{array}$$

- c. Pour cold water into the measuring cup up to the mark which will equal one cup when the amount of fat you need is added. For $\frac{1}{3}$ cup of fat, pour in $\frac{2}{3}$ cup of cold water. For $\frac{1}{4}$ cup of fat, pour in $\frac{3}{4}$ cup of water.
- d. Put in fat until the water is up to the mark for one cup.
- e. Use a tablespoon and rubber scraper to put the fat into the cup.
- f. You must not spill any of the water.
- g. Be sure the water covers the fat.
- h. When the water reaches the 1-cup mark, stop adding fat and pour off all the water.
- i. Now you have the perfect amount of fat.

2. If you need melted fat for a recipe, melt the fat before you measure it.
3. When you use a spoon to measure solid fat, hold your finger under the bowl of the spoon to keep from bending the spoon.

Vocabulary:

solid	- söl' id -- anything that is firm and will not flow
melt	- mélt -- to change a solid to a liquid
fraction	- frāk' shūn -- a part of something
equal	- ē'kwāl -- the same
rubber scraper	- rūb'ēr skrāp'ēr -- a utensil with a flat piece of rubber on a handle
bowl of a spoon	- bōl -- the rounded part of the spoon which holds food or liquid
margarine	- mār'jā rin -- a food made of fats and vegetable oils. It may be used instead of butter.
shortening	- shōrt' nīng -- a fat used in cooking

Assignment:

1. What kind of measuring cup do you use to measure fat?
2. How much water do you need to measure $\frac{1}{3}$ cup of fat?
3. How much water do you need to measure $\frac{1}{2}$ cup of fat?
4. How much water do you need to measure $\frac{3}{4}$ cup of fat?
5. Why must you be careful not to spill any water when you measure fat?
6. If you spill any water when you measure fat , what should you do?
7. Why must all the fat be covered with water?
8. Why do you hold your finger under the bowl of the spoon when you use a spoon to measure solid fat?

UNIT III - MEASUREMENTS AND ABBREVIATIONS

Abbreviations

Lesson 5

Objective: To learn the abbreviations used in cooking.

Information: Abbreviations are short ways of writing words. They are used in recipes to save time and space. We must know the meaning of the abbreviations we will use. Some of the short forms are very much alike, so always read them carefully.

Now we will learn the abbreviations.

- | | |
|------------------------------|-----------------------------|
| 1. t. or tsp. means teaspoon | 10. qt. means quart |
| 2. T. means tablespoon | 11. gal. means gallon |
| 3. C. means cup | 12. min. means minute |
| 4. B. P. means baking powder | 13. hr. means hour |
| 5. B. S. means baking soda | 14. choc. means chocolate |
| 6. Sq. means square | 15. temp. means temperature |
| 7. oz. means ounce | 16. ° means degrees |
| 8. lb. means pound | 17. f. g. means few grains |
| 9. pt. means pint | |

Assignment:

1. What are abbreviations?
2. Name some abbreviations and their meanings.

UNIT III - MEASUREMENTS AND ABBREVIATIONS

Equivalents

Lesson 5

Objective: To learn the equivalents you will use.

Information: Equivalents are different units of measure that are the same in size. These are important because they give you a shorter way to measure foods in many recipes.

Now you will learn some equivalents.

- | | | | | | |
|-----------|---|------------------|------------------------|---|--|
| 1. 3 tsp. | = | 1 T. | 8. 4 qt. | = | 1 gal. |
| 2. 4 T. | = | $\frac{1}{4}$ C. | 9. 1 C. of fat | = | $\frac{1}{2}$ lb. |
| 3. 8 T. | = | $\frac{1}{2}$ C. | 10. 2 C. of fat | = | 1 lb. |
| 4. 16 T. | = | 1 C. | 11. 2 C. of sugar | = | 1 lb. |
| 5. 2 C. | = | 1 pt. | 12. 4 C. of flour | = | 1 lb. |
| 6. 4 C. | = | 1 qt. | 13. 1 C. of cake flour | = | 1 C. less
2 T. of all-purpose flour |
| 7. 2 pt. | = | 1 qt. | 14. 1 egg | = | 4 T. |

Vocabulary.

equivalents - $\frac{1}{e}$ kwiv'á lents -- different ways to get the same amount of something

Assignment:

1. What does the word, equivalent, mean?
2. Name some equivalents.

UNIT IV TABLE MANNERS. TABLE SETTING, AND TABLE SERVICE

How To Act at the Table

Lesson 1

Objective: To learn how to act at the table.

Information: Our table manners tell a lot about us. We should not have special ways to eat for visitors. We practice good manners at every meal. Then we do not have to stop and think how to act when others are with us. You cannot hope to have good manners without practice. When we know the rules for correct manners, it is easier for us to enjoy eating. Remember that practice makes perfect!

Now you will learn some good table manners.

1. Wash your hands before you eat.
2. Sit straight on your chair.
3. Keep your feet on the floor.
4. Open your napkin in half and lay it across your lap.
5. Keep your hands in your lap when you are not using them. Never put your elbows on the table.
6. Keep your hands close to your body at the table. You do not want to knock anything over.
7. Wait until everyone is seated before you start to eat.
8. Eat slowly.
9. Eat the piece of food that is nearest you on your plate.
10. Do not mix different kinds of food on your plate together before starting to eat.
11. If a food is very hot, just wait until it cools. Do not blow on it.
12. Take small bites. Chew one bite and swallow it before you put more food in your mouth.
13. Cut one piece of food at a time.

14. Never talk with food in your mouth.
15. Chew with your lips together. It makes a noise when your mouth opens and shuts. No one wants to hear you chew food.
16. Do not reach in front of other people for food. Ask someone to please pass the food.
17. Turn the handle of a pitcher toward the person to whom it is being passed.
18. Never hand food, like a roll, to someone else. Always pass the serving plate.
19. Never butter a whole slice of bread at one time. Break off a small piece and then butter that piece.
20. Do not bend your head to reach your food. Bring the food up to your mouth.
21. Never comb your hair or put on make-up at the table.
22. Press your napkin lightly against your lips while you are eating. Do not wipe your face. A napkin is not the same as a towel.
23. When you are finished eating, put your napkin next to your plate.
24. Ask to be excused before you leave the table.

Vocabulary:

manners	- mǎn'ěrs -- the way you act
correct	- kō rěkt' -- right
napkin	- nǎp'kin -- a piece of cloth or paper used at the table to keep your lips and fingers clean
serving plate	- sŭrv'ing plāt -- a plate of food that is passed to each person. You take some food from the serving plate and put it on your own plate. You do not eat from a serving plate.

Assignment:

1. Why do you wash your hands before you eat?
2. Why should you sit straight on your chair?
3. Why do you keep your hands close to your body at the table?
4. Why should you take the piece of food on your plate that is nearest you?
5. Do you blow on food to cool it?
6. If you are asked a question while you have food in your mouth, what should you do?
7. Is it all right to talk with food in your mouth?
8. Is it all right to cut all your food into little pieces before you start to eat?
9. Why do you keep your mouth closed when you chew food?

10. How do you get food that you cannot reach on the table?

11. How do you pass rolls?

12. How do you butter bread?

13. How would you pass a serving fork? a knife?

14. Where do you put your napkin when you finish eating?

15. What do you say before you leave the table?

UNIT IV - TABLE MANNERS, TABLE SETTING, AND TABLE SERVICE

Use of the Silverware

Lesson 2

Objective: To learn the right way to use silverware.

Information: It is important to know what silverware to use for different foods. We must also know the right way to hold our silverware. Each knife, fork, and spoon is placed on the table for a reason. If you are not sure which piece of silver to use, watch your hostess. Let the hostess start first.

Now you will learn some rules about the use of silverware.

1. Eat with your right hand if you are right-handed. Eat with your left hand if you are left-handed.
2. Use the silver that is farthest away from you on both sides first.
3. Never bring food to your mouth with a knife.
4. Do not put soiled silverware on the tablecloth.
5. Never leave a spoon in your cup or glass. Put it on the saucer or plate that is under your cup or glass.
6. The sharp edge of the knife is always toward you.

7. Use your knife only for foods that cannot be cut with a fork.
8. Turn the tines of the fork up, when you bring food to your mouth.
9. Hold the fork in your left hand, with the tines down, when you cut food.
10. After cutting food, change the fork from the left to the right hand, if you are right-handed.
11. When cutting food, hold the handle of the knife and fork firmly. Each handle should rest in the palm of the hand. Put the forefinger along the handle to keep the knife and fork from slipping.
12. When you have finished eating, leave your knife and fork across the center of the plate.
13. If you have a bread-and-butter plate, leave the butter knife on your bread-and-butter plate.

Vocabulary:

hostess	-	hōs'tēs	--	the girl who is in charge of the meal
saucer	-	sō'sēr	--	a small dish on which a cup is set
tines	-	tīns	--	the points of a fork
palm of the hand-		pām	--	the inside of the hand
forefinger	-	fōr'fing gēr	--	the finger next to the thumb

Assignment:

1. How do you know which silverware to use first?
2. Do you ever bring food to your mouth with your knife?
3. Where do you leave your spoon, when you are finished eating?
4. Where is the sharp edge of the knife, when the knife is on your plate?
5. Do you hold the tines of the fork up or down, when you bring food to your mouth?
6. How do you hold the fork, when you cut food?
7. Where do you leave your knife and fork when you finish eating?

UNIT IV - TABLE MANNERS, TABLE SETTING, AND TABLE SERVICE

How To Set the Table

Lesson 3

Objective: To learn how to set the table.

Information: We all like to see a pretty table. The things we put on the table are there to be used. The way we place things on the table makes the setting look nice. We must keep in mind that each piece of flatware, china, and glassware has a certain place on the table. Let us practice setting the table in the correct way at home and in school.

Now you will learn the rules for setting the table.

1. Everything you use must be clean.
 - a. Dishes, glassware, and flatware should be shining.
 - b. Tablecloths and napkins must be spotless.
2. The flatware, china, glassware, and napkin to be used by each person is called a cover.
3. The plate is placed in the center of the cover. It should be one inch from the edge of the table.
4. The knife is put to the right of the plate. The sharp edge of the knife goes toward the plate.
5. The spoons go to the right of the knife. The bowls of the spoons are turned up.
6. Forks are placed to the left of the plate. The tines of the forks are turned up.
7. All flatware should be one inch from the edge of the table in a straight line with the china and napkin.
8. If no knife is to be used, the fork may be placed to the right of the plate.
9. Place on the table the flatware that is needed.
10. The water glass is placed just above the tip of the knife.
11. A milk glass is put next to the water glass, and just a little below it.

12. A cup and saucer are placed to the right of the spoon.
The handle of the cup is to the right.
13. A bread-and-butter plate is placed just above the fork.
The butter spreader goes across the top of plate with the handle to the right.
14. The napkin is placed to the left of the fork. The open corner of the napkin is at the lower right.

Vocabulary:

- | | | |
|-----------------|---|--|
| flatware | - | flăt'wâr -- the silverware that you eat with |
| cover | - | kŭv'ěr -- the flatware, china, glassware, and napkin to be used by one person |
| butter spreader | - | bŭt'ěr sprĕd'ěr -- a small knife given to each person for buttering bread or rolls |

Assignment:

1. What is a cover?
2. How far from the edge of the table do you place the dishes and flatware?
3. On which side of the plate do the knife and spoons go?
4. Where do you place the fork?
5. If you do need a knife, where do you put the fork?
6. Where does the sharp edge of the knife go?
7. Where do you place the water and milk glasses?
8. Where do you put the bread-and-butter plate?
9. Why is the open corner of the napkin at the lower right?
10. Draw a cover.

UNIT IV - TABLE MANNERS, TABLE SETTING, AND TABLE SERVICE

How To Serve a Meal

Lesson 4

Objective: To learn how to serve a meal.

Information: We have all helped to serve meals at home. Have you been serving meals in the right way? We have some easy rules to follow. These rules will help to make serving easier. We use these rules for every meal, whether it is a very small one or a large dinner. We like to see a quiet and careful person serve meals. Take your time and think of the people who are eating. We do not want to bump a person's arm, or spill any food.

Now you will learn how to serve a meal.

1. Always wash your hands before you serve food.
2. Do not handle food or dishes any more than you have to.
 - a. Never touch the top or inside of a cup or glass.
 - b. Never touch the bowl of a spoon, the blade of a knife, or the tines of a fork.
 - c. Never touch the part of a plate where food will be placed.
3. Use a tray to carry the dishes, flatware, and glasses to the table. This saves time and work.
4. Never reach across anyone.
5. Serve all food from the left side of the person.
6. Use your left hand to put plates on the table.

7. Serve all beverages from the right side of the person.
8. Use your right hand to serve all beverages.
9. When a guest serves herself at the table, you must pass the serving dishes to the left of the guest.
10. Do not stack used dishes at the table.
11. Do not start to clear the table until everyone is all finished eating.
12. After the meal, take away serving dishes first.
13. Remove all used dishes from one cover at a time.
14. Remove dishes with your left hand from the left side of the guest.
15. Remove glasses and cups with your right hand from the right side of the guest.
16. Leave water glasses on the table until last.

Vocabulary:

- blade - blād -- the flat, thin part of the knife that is used for cutting
- beverage - bĕv'ĕr ij -- something to drink

Assignment:

1. Why should you wash your hands before you serve food?
2. Why must you be careful how you handle food and dishes?
3. How does it help you to use a tray to carry dishes, flatware, and glasses to the table?
4. From which side do you serve food to each person?
5. Which hand do you use to put a plate in front of a guest?
6. From which side are beverages served and taken away?
7. Which hand do you use to serve milk?
8. Is it all right to stack used dishes at the table?
9. Which dishes are taken away from the table first?
10. Why do you leave water glasses on the table until last?

UNIT V - BEVERAGES

Fruit Beverages

Lesson 1

Objective. To learn about fruit beverages.

Information: Fruit helps to keep our bodies healthy. We use fresh fruit fresh fruit juices, canned fruit juices, and frozen fruit juice concentrates in different kinds of fruit beverages. Many times we like to mix two or three kinds of juices for our beverage. To make a pretty drink, we may add fresh fruit or colored ice cubes to the beverage.

Now you will learn about some fruit beverages.

1. Fruitade is made by mixing fruit juice with sugar and water.
2. Punch is a mixture of different fruit juices. You may add ginger ale.
3. Fruit soda is made by mixing fruit juice or soda with sherbet.
4. Fruit fizz is a mixture of fruit juice, sugar, water, and carbonated water.

Vocabulary:

fruit	-	froot -- the part of certain plants that you can eat
beverage	-	běv'ěr ij -- something to drink
juice	-	jōos -- the liquid part of a food
concentrate	-	kōn'sěn trāt -- a food or beverage with some of the liquid taken out
mix	-	miks -- to put together or to stir together
ade	-	ād -- a beverage that is made by mixing fruit juice with sugar and water
punch	-	punch -- a drink made by mixing fruit juices and other liquids
mixture	-	miks'tūr -- two or more things that are put together

- sherbet - shūr' bēt -- a frozen dessert made of fruit juice, sugar, water, and egg white
- fizz - fiz -- a beverage that bubbles up or makes a hissing sound
- carbonated - kār' bōn āt ěd -- water that is made to bubble. You can see bubbles in it
- attractive - ā trāk' tiv -- pretty

Assignment:

1. What are beverages?
2. How do you make a fruit drink look more attractive?
3. What is punch?
4. What is a fruit fizz?

UNIT V - BEVERAGES

Recipe for Orangeade

Lesson 2

Objective: To prepare and serve orangeade for four people.

Utensils:

glass measuring cup
glās mēzh'ēr'ing kŭp

metal measuring cup
mēt'əl mēzh'ēr'ing kŭp

paring knife
pār'ing nif

wooden spoon
wōd'n spōon

squeezer
skwēz'ēr

bread board
brēd bord

pitcher
pich'ēr

strainer
strān'ēr

Ingredients:

2 oranges

3 C. of cold water

1 lemon

ice cubes

$\frac{1}{2}$ C. of sugar

Procedure:

1. Cut oranges and lemon in half on bread board.
2. Squeeze oranges and lemon.
3. Strain the juice into a pitcher.
4. Pour the cold water and sugar into the pitcher.
5. Stir well.
6. Add ice cubes to the orangeade.
7. Serve in a tall glass on a small plate.

Vocabulary:

procedure	-	prō sē'dūr -- the way to make something
strain	-	strān -- press through strainer to keep out little pieces, so that you will have only liquid
squeeze	-	skwēz -- to press hard

Assignment:

1. Name the utensils you will have ready when you start to make orangeade.
2. Why do you use a bread board for cutting?
3. How many oranges and lemons do you need to make orangeade for eight people?
4. What new words have you learned?

UNIT V - BEVERAGES

Recipe for Lime Fizz

Lesson 3

Objective: To prepare and serve lime fizz for four people.

Utensils:

glass measuring cup	pitcher
metal measuring cup	wooden spoon
squeezer	bottle opener
paring knife	bōt'ŭl ō'pēn ɛr

Ingredients:

$\frac{1}{2}$ C. lime juice	2 C. water
$\frac{3}{4}$ C. sugar	2 7 oz. bottles of carbonated water
	ice cubes

Procedure:

1. Cut three limes in half on bread board.
2. Squeeze limes.
3. Strain the juice into the pitcher.
4. Add the sugar to the juice.
5. Pour the water into the pitcher.
6. Stir well.
7. Put ice cubes into each glass.
8. Pour 2 T. of lime juice into each glass.
9. Fill glasses with carbonated water when you are ready to serve.

Vocabulary:

lime - lim -- a small, sour, greenish-yellow fruit that grows on a tree

sour - sour -- not sweet

Assignment:

1. Why do you call this beverage a fizz?

2. Why do you wait to pour the carbonated water into the glasses until you are ready to serve?

3. How much lime juice would you need to serve lime fizz to eight people?

4. How much sugar would you need to serve lime fizz to eight people?

UNIT V - BEVERAGES

Milk

Lesson 4

Objective: To learn about milk.

Information: Milk is one of our best foods. It helps make strong bones, good teeth, and rich, red blood. It is important to have some milk at every meal. There are many ways to get our milk besides drinking it. We may use milk on cereal and fruit. Puddings and custards are made from milk.

Now you will learn about some different kinds of milk.

1. Whole milk is milk with cream in it.
 - a. Pasteurized milk is whole milk in which the cream separates from the milk. You can see the cream at the top of the bottle.
 - b. Homogenized milk is whole milk in which the cream does not separate from the milk. (Homogenized milk has also been pasteurized, but it is not called pasteurized milk.)
2. Skim milk is milk with the cream taken out.
3. Buttermilk is the liquid that is left after butter is made, but the buttermilk we buy in the stores is usually made out of skim milk.
4. Evaporated milk is canned milk with some of the water taken out.
5. Condensed milk is canned milk with some of the water taken out and sugar added.
6. Powdered or dry milk is milk with all of the water taken out.

Now you will learn some things about milk.

1. Each kind of milk is good for you.
2. Milk in the bottle is called fresh milk.
3. Milk in the bottle must be kept cold, or it will sour.

4. Skim milk and buttermilk have very little fat.
5. Evaporated milk can be used in place of whole milk by adding the amount of water that was taken out before it was canned.
6. Canned and powdered milk can be kept for a much longer time than fresh milk.
7. Canned and powdered milk do not cost as much as fresh milk.
8. You may use powdered milk for whole milk by adding the right amount of water.
9. To heat milk, always use a low flame.
10. Milk is hot enough to drink when it scalds, or a skin forms on the top of the milk.

Vocabulary:

homogenized milk	-	h ^o m ^o j ⁱ l ^e n ⁱ z ^d -- whole milk in which the cream does not separate from the milk
pasteurized milk	-	p ^ä s ⁱ t ^{er} i ^z d -- whole milk in which the cream does separate from the milk
separate	-	s ^ë p ⁱ ä r ^ä t -- to come apart or to break into parts
skim milk	-	sk ⁱ m -- milk with the cream taken out
evaporated milk	-	e ⁱ v ^ä p ⁱ o ⁱ r ^ä t ^v ed -- milk with some of the water removed
condensed milk	-	k ^ö n ^ä d ^ë ns ^t ' -- milk with some of the water removed and sugar added
powdered milk	-	pou ⁱ d ^{er} d -- milk with all of the water removed
sour milk	-	sour -- milk that has spoiled. It does not taste good to drink, but is sometimes used in cooking.
scald	-	sk ^ö ld -- to heat just below the boiling point

Assignment:

1. How does milk help your body?
2. Should you have milk at every meal?
3. If you do not drink enough milk, how else can you get milk at your meals?
4. Name two kinds of whole milk.
5. Name two kinds of canned milk.
6. What is powdered milk?
7. Name two kinds of milk that have very little fat.
8. Why must fresh milk be kept cold?
9. What must you add to evaporated milk or powdered milk if you want to use it in place of whole milk?
10. What kind of flame do you use to heat milk?
11. How do you know when milk is hot enough to drink?
12. What kind of milk do you get at home?

UNIT V - BEVERAGES

Cold and Hot Beverages Made With Milk

Lesson 5

Objective: To learn about some cold and hot beverages made with milk.

Information: We do not always drink plain milk. There are many things we may mix with milk. Sometimes we may add another food and sugar, if we want a sweeter drink. We want to make different kinds of milk drinks. Let us see how many kinds we have had before!

Now you will learn about some cold beverages made with milk.

1. A milk shake is milk with another food beaten into it.
 - a. Milk with flavoring, like vanilla or chocolate.
 - b. Milk with fruit juice or mashed fruit.
 - c. Milk with flavoring or fruit and ice cream added to it.
2. For a chocolate milk shake, you may buy chocolate syrup in a can, or make your own.
3. Eggnog is milk with egg, sugar, and flavoring beaten into it.

Now you will learn about some hot beverages made from milk.

1. Cocoa is a mixture of cocoa, sugar, salt, and water heated with milk.
2. Hot eggnog is scalded milk added to egg and flavoring.

Vocabulary:

flavoring	-	flā'vēr'ing	-- anything that is added to a food to give a certain taste
vanilla	-	vā'nīl'ä	-- a flavoring made from the beans of the vanilla plant
chocolate	-	chök'ō lit	-- a food that is sometimes used for flavoring

- mash - m^ush -- to beat smooth
- eggnog - ěg' n^og -- a beverage of eggs beaten with sugar, flavoring, and milk
- syrup - sⁱr ūp -- a sticky or thick liquid made of sugar and other food
- cocoa - k^o' k^o -- ground chocolate with some of the fat removed. It is also the name given to the beverage made by cooking this powder with sugar and hot milk.

Assignment:

1. What is a milk shake?
2. What is a syrup?
3. What is cocoa?
4. Name two flavorings.

UNIT V - BEVERAGES

Recipe for Vanilla Milk Shake

Lesson 6

Objective: To prepare and serve vanilla milk shakes for four people.

Utensils:

glass measuring cup

pitcher

metal measuring cup

food scraper
fōd skrāp'ēr

measuring spoons
mēzh'ēr ing spōons

mixing bowl
miks'ing bōl

egg beater
ēg bēt'ēr

Ingredients:

$2\frac{2}{3}$ C. milk

$\frac{1}{3}$ C. sugar

2 tsp. vanilla

pinch of nutmeg or cinnamon

Procedure:

1. Pour the milk into the mixing bowl.
2. Add the vanilla and sugar to the milk.
3. Beat with an egg beater.
4. Pour into a pitcher. Use your food scraper to get everything out of the bowl.
5. Pour milk shake into glasses.
6. Sprinkle nutmeg or cinnamon on top of each milk shake just before serving.
7. Serve in a tall glass.

Vocabulary:

- pinch - pínch -- very little - as much as you can take between the finger and thumb
- nutmeg - nŭt'mĕg -- a powder that is used for flavoring
- cinnamon - sín 'à mŭn -- a powder that is used as a spice for flavoring
- sprinkle - spríng 'k'l -- to drop something in small bits

Assignment:

1. Why do you use an egg beater instead of a spoon?
2. How does a food scraper help you?
3. Why do you sprinkle nutmeg or cinnamon on a milk shake?
4. How much milk would you need to make milk shakes for eight people?

UNIT V - BEVERAGES

Recipe for Banana Milk Shake

Lesson 7

Objective: To prepare and serve banana milk shakes for four people.

Utensils:

mixing bowl

glass measuring cup

paring knife

measuring spoons

masher
măsh'ěr

egg beater

food scraper

spatula
spăt'ù lă

Ingredients:

3 bananas

$2\frac{2}{3}$ C. milk

3 T. sugar

1 tsp. vanilla

Procedure:

1. Peel and slice bananas.
2. Put sliced bananas in mixing bowl.
3. Mash the bananas.
4. Add sugar, vanilla, and milk.
5. Beat with egg beater.
6. Pour into pitcher, and then glasses.
7. Serve.

Vocabulary:

- banana - bā nǎn'á -- a long fruit with a heavy yellow skin. The part you eat is soft, and has a creamy color.
- peel - pēl -- to take off the outside skin
- slice - slīs -- cut across in thin, flat pieces

Assignment:

1. What utensil is used to mash bananas?
2. If you do not have this utensil, what can you use to mash bananas?
3. What does slice mean?
4. Name some other fruits you may use instead of bananas.

UNIT V - BEVERAGES

Recipe for Eggnog

Lesson 8

Objective: To prepare and serve eggnog for four people.

Utensils:

mixing bowl

measuring spoons

glass measuring cup

egg beater

spatula

case knife

kās nīf

food scraper

Ingredients:

2 eggs

$\frac{1}{4}$ tsp. salt

4 T. sugar

$\frac{1}{4}$ tsp. vanilla

4 C. milk

dash of nutmeg

Procedure:

1. Break eggs into mixing bowl.
2. To break an egg, make a crack in the shell by striking across the middle of the egg with the sharp edge of a case knife. With the tip of your thumbs on either side of the crack, carefully open the egg.
3. Beat the eggs with an egg beater until fluffy.
4. Add sugar, milk, salt, and vanilla.
5. Beat the mixture again.
6. Pour the mixture into a pitcher, then into glasses.
7. Sprinkle nutmeg on each eggnog.
8. Serve.

Vocabulary:

- dash - dăsh -- a tiny bit, pinch
- fluffy - flŭf'ŭi -- very soft and light

Assignment:

1. How do you break an egg?

2. What part of a cup is the same as 4 T. ?

3. How many cups are in 1 quart?

4. Using a measuring cup, how much sugar would you need to make eggnog for eight people?

UNIT V - BEVERAGES

Recipe for Chocolate Milk Shake

Lesson 9

Objective: To prepare and serve chocolate milk shakes for four people.

Utensils:

glass measuring cup

measuring spoons

metal measuring cup

food scraper

double boiler

wooden spoon

dŭb 'l boil 'ēr

spatula

saucepan

sos 'pān

Ingredients:

1 sq. unsweetened chocolate

$\frac{1}{4}$ tsp. vanilla

$\frac{1}{3}$ C. boiling water

$2\frac{2}{3}$ C. milk

$\frac{1}{3}$ C. sugar

pinch of nutmeg or cinnamon

dash of salt

Procedure:

First you will make chocolate syrup.

1. Fill the bottom part of the double boiler $\frac{1}{3}$ full with hot water. This is not the water listed under ingredients.
2. Put the bottom part of the double boiler on a burner on the stove. Turn the burner on.
3. Put the chocolate in the top of the double boiler.
4. Place the top part in the bottom part of the double boiler.

5. Cook until the chocolate is melted.
6. While the chocolate is melting, boil some water in a small saucepan.
7. After the water has boiled, measure $\frac{1}{3}$ C. of water.
8. Add the water, sugar, and salt to the melted chocolate in the top of the double boiler.
9. Cook for 5 minutes, or until smooth.
10. Stir the mixture a little, while it is cooking.
11. Turn off the burner.
12. Take the top part of the double boiler out of the bottom part.
13. Let the mixture cool.
14. Add vanilla to the mixture.

Now you will make the milk shake.

1. Put the chocolate syrup and milk into a mixing bowl.
2. Beat this mixture with an egg beater.
3. Pour the milk shakes into a pitcher, and then into four glasses.
4. Sprinkle a little nutmeg or cinnamon on the top of each milk shake.
5. Serve.

Vocabulary:

- | | | | |
|-------------|---|-------------|---------------------------|
| unsweetened | - | ˈʌn swētʰnd | -- not sweet |
| smooth | - | smūth | -- without bumps or lumps |

Assignment:

1. What is always put in the bottom part of the double boiler?
2. Why do you put hot water in the bottom part of the double boiler?
3. Why do you melt chocolate over water?
4. How much boiling water would you need to make milk shakes for eight people?

UNIT V - BEVERAGES

Recipe for Cocoa

Lesson 10

Objective: To prepare and serve cocoa for four people.

Utensils:

saucepan	wooden spoon
glass measuring cup	double boiler
measuring spoons	ladle
spatula	lā'd'l

Ingredients:

3 T. sugar	$\frac{1}{2}$ C. water
3 T. cocoa	$3\frac{1}{2}$ C. milk
dash of salt	

Procedure:

1. Mix sugar, cocoa, and salt in a saucepan.
2. Add water and mix again.
3. Bring to boiling point over low heat.
4. Cook for 3 minutes.
5. Stir the mixture while it is cooking.
6. Pour the mixture into the double boiler. Look at Lesson 9 to make sure you know how to use the double boiler.
7. Add milk to the mixture in the double boiler. Stir.

8. Heat the cocoa.
9. Use a ladle to put the cocoa into cups.
10. Sometimes you may put a marshmallow into each cup.
11. Serve.

Vocabulary:

marshmallow - mārsh'māl ō -- a soft, white candy covered with powdered sugar

Assignment:

1. How much is a dash of salt?
2. If you measure the cocoa with a teaspoon, how many teaspoons will you need to make 3 tablespoons?
3. Why do you put a saucer under the cup?

UNIT VI - TOAST

How To Prepare Buttered Toast

Lesson 1

Objective: To learn how to prepare and serve buttered toast.

Information: All of us have eaten toast. Toast is bread that is made brown by heating. How do you make toast at home? Do you use a toaster or broiler? Sometimes we serve plain toast, and sometimes we add food to the toast to make it taste a little different. We eat toast for breakfast, or use toast for a sandwich, or for a snack.

Now you will learn some different ways to make toast.

1. Most people make toast in a toaster. The new toasters have a little knob you may turn to get light or dark toast.
2. To make many slices of toast at one time, you may use the broiler in your stove.
 - a. For dry, crisp toast set the temperature control knob for the broiler at 350°.
 - b. Put the rack 2 inches from the heat in the broiler.
 - c. Put the slices of bread on the rack in your broiler.
 - d. You must watch the toast in the broiler.
 - e. When one side of the bread is brown, turn the toast over to brown the other side.
3. Butter the toast while it is warm.
4. Always serve toast hot.
5. If toast gets cold, warm it in the oven before serving.
6. Always cut the toast in half before serving.
7. Toast may be served with jam or marmalade.

Vocabulary

toast	- tōst -- bread that is made brown by heating
broiler	- broil'ēr -- the part of a stove where food can be cooked directly under the flame. There is nothing between the flame and the food.
breakfast	- brēk'fāst -- the first meal of the day
meal	- mēl -- the food you prepare to be eaten at one time
sandwich	- sänd'wich -- two or more slices of bread with other food between them
snack	- snāk -- a small amount to eat at one time
jam	- jām -- fruit boiled with sugar until it is thick and smooth
marmalade	- mār'mā lād -- fruit, fruit peelings, and sugar boiled together until thick. Marmalade is not smooth.

Assignment:

1. Name two ways to make toast.
2. What do you use to make many slices of toast at the same time?
3. Why do you turn on the broiler before you get out the bread?
4. If toast gets cold, how do you warm it before serving?
5. When do you butter the toast?
6. Do you serve toast in a whole slice?

UNIT VI - TOAST

Cinnamon Toast

Lesson 2

Objective: To prepare and serve cinnamon toast for four people.

Utensils:

measuring spoons

spatula

small jar
smól jār

butter spreader

bút'ēr spred er

baking sheet

bāk'ing shēt

Ingredients:

4 slices of bread

butter

3 T. sugar

2 tsp. cinnamon

Procedure:

1. Turn on the broiler. Set the temperature control knob at 350°.
2. Be sure the rack is 2 inches below the heat.
3. Measure the sugar and cinnamon and put in jar.
4. Close jar tight, and shake well.
5. Put 4 slices of bread on the rack in the broiler.
6. When one side of bread is brown, turn bread to the other side.
7. Butter the bread as soon as it is toasted on both sides.
8. Sprinkle each slice of toast with the mixture of cinnamon and sugar.
9. If toast gets cold, place the toast on a baking sheet, and put it in a warm oven for about 3 minutes.
10. Cut each slice of toast in half, and serve at once.

Vocabulary:

- tight - tīt -- firm or hard so that no food can spill out
- shake - shāk -- to move up and down quickly

Assignment

1. How many teaspoons are in 3 T. ?
2. Why do you shake the cinnamon and sugar?
3. Why do you use the broiler for toast in class?
4. When eating, do you pick up half a slice of toast at one time?
5. Make toast, using a mixture of 3 T. sugar, 1 T. cocoa, and $\frac{1}{2}$ tsp. cinnamon to sprinkle on the toast.

UNIT VI - TOAST

French Toast

Lesson 3

Objective: To prepare and serve French toast for four people.

Utensils:

baking sheet

shallow bowl

shāl'ō bōl

glass measuring cup

measuring spoons

fork
fōrk

frying pan
fri'ing pān

turner
tūr'nēr

Ingredients:

4 slices of bread

$\frac{1}{4}$ tsp. salt

2 eggs

1 T. shortening

$\frac{1}{2}$ C. milk

Procedure:

1. Break the eggs into a shallow bowl.
2. Add the milk and salt to the eggs.
3. Beat well with a fork.
4. Put the frying pan on the stove, over a small flame.

5. As soon as it is hot, add the shortening. Butter or cooking oil may be used instead of shortening.
6. Melt the shortening. Be sure the shortening covers the whole bottom of the frying pan.
7. Be careful not to burn the shortening because your fat will turn brown and make smoke
8. Dip 1 slice of bread at a time in the egg mixture.
9. Be sure the whole slice of bread is covered with the egg mixture.
- 10 Use your turner to put the bread in the frying pan.
- 11 When one side of the bread is brown, turn the bread over with your turner, and brown the other side.
12. Place bread on a baking sheet in a warm oven until all the French toast is ready to be served.
13. When you are finished using the frying pan, let it cool a little before putting water in it.
- 14 Serve French toast while it is hot.
15. French toast may be served with butter, syrup, jam, honey, or fruit.

Vocabulary:

- | | | |
|---------|---|--|
| shallow | - | shál'ò -- not deep |
| dip | - | díp -- to wet by putting into a liquid and lifting out |
| honey | - | hún'í -- a sweet, sticky, yellow liquid made by bees |

UNIT VII - FRUIT

Names of Some Fruits

Lesson 1

Objective: To learn the names of some fruits.

Information: We all eat fruit. How many kinds of fruit have you eaten? Have you eaten some fruits that are sweeter than others? Fruits are not only good to look at but they taste so good. Fruits help to give us energy and vitamins. We find a lot of Vitamin C in fruit. We should have some fruit every day.

Now you will learn the names of some fruits. Color the pictures of these fruits.

Vocabulary

- energy - ǎn'êr jí - the strength to do things
- vitamin - vī'tà mǐn -- things found in foods that are needed to keep us well and strong. Different vitamins are found in different foods.

Assignment:

1. How do fruits help your bodies?
2. What vitamin is found in many fruits?
3. Should you have some fruit every day?
4. Name some different kinds of berries.
5. Name three kinds of melons.

UNIT VII - FRUIT

Some Ways To Buy Fruit

Lesson 2

Objective: To learn some of the different ways that you can buy fruit.

Information: We see fruit in many different ways in the store. When you go to the store, find some of the ways that fruit is sold. Look for fresh fruit and fruit in boxes, jars, and cans. See how many names you can remember.

Now you will learn some different ways to buy fruit.

1. Fresh or raw fruit is fruit that you buy just as it is grown.
2. Dried fruit is fruit that has had the water taken out of it.
3. Canned fruit is fruit that is preserved in liquid in a can or jar, sometimes with sugar added.
4. Frozen fruit is fruit that is preserved by keeping it hard and cold.
5. Fruit juice can be bought either fresh, canned, or frozen.

Vocabulary:

- raw - rō -- not cooked
- preserve - prē zūr'v' -- keep from spoiling

Assignment:

1. What is raw fruit?
2. What is dried fruit?
3. Name some canned fruit that you have eaten.
4. What does preserve mean?

UNIT VII - FRUIT

Ways To Prepare Fruit

Lesson 3

Objective: To learn some ways to prepare fruit.

Information: Fruit may be served fresh, or cooked in many ways. How many of you have fruit growing in your yard at home? People grow fruit to eat fresh, to make juice, to can or freeze for the winter, or to make jams or jellies.

Now you will learn some ways to prepare fruit:

To prepare fresh fruit to be eaten raw:

1. Wash large fruit in water, using a brush to make sure all dirt is off the fruit.
2. Wipe the fruit dry.
3. Wash berries and grapes in a colander, by running cold water over the fruit.
4. Let the water drain off.
5. Remove stems from the berries.
6. Keep fruit in the refrigerator or a cool place. Bananas should not be kept in the refrigerator.

To prepare fresh fruit for cooking:

1. Select fruit which is fresh and ripe.
2. Wash the fruit well, and drain it.
3. Handle the fruit lightly. Do not crush it.
4. Remove any bad spots.
5. If fruit is to be peeled, take off thin peeling. Do not waste the fruit. Take off only the skin.

6. When cooking fruit, do not overcook. The color and flavor change when fruit is cooked too long.
7. You will learn to cook fruit by stewing and baking

To prepare dried fruit:

1. Some dried fruits, like dates, figs, and raisins, are eaten as they are bought.
2. Dates are sometimes stuffed.
3. Dried fruits may be stewed, like stewed prunes or stewed apricots.

Vocabulary:

colander	-	kŭl'ân dēr	--	a bowl with holes to let liquid drain off a food
stem	-	stēm	--	the part that holds the fruit to the plant or tree
select	-	sē lēkt'	--	pick out
stew	-	stū	--	boil slowly or simmer
bake	-	bāk	--	to cook in the oven
stuffed	-	stūft	--	filled

Assignment:

1. Why do you use a bowl to wash large fruit?
2. Why do you wash berries in a colander?
3. Why is it important to take off only the skin, when peeling fruit?
4. What happens when fruit is overcooked?
5. What is stewing?
6. What is baking?
7. How do you use dried fruit?

UNIT VII - FRUIT

How To Prepare Fresh Fruit

Lesson 4

Objective: To learn how to prepare fruit to be served in halves, sliced, and as a fruit cup.

Information: We have learned that fresh fruit may be served in halves, sliced, or cut up. We are going to learn how to prepare grapefruit halves, orange slices, and fruit cup. We always wash and chill the fruit first. We are careful how we handle cut fruits because we don't want to lose the juice. We want the fruit to look attractive when we serve it.

Now you will learn how to prepare grapefruit halves, orange slices, and fruit cup.

To prepare halves of grapefruit:

1. Cut the grapefruit in half so that the blossom end is in one half and the stem end in the other half.
2. Remove the seeds.
3. Cut the sections from the membrane and skin with a fruit knife.
4. Remove the center with a paring knife or scissors.
5. Serve cold on a salad plate.
6. Serve half a grapefruit to each person.

To prepare orange slices:

1. Remove the skin and membrane from an orange with a paring knife.
2. Cut along the membrane line of each section, and take out the sections.
3. Chill the sections.
4. Serve in a small dish.

To prepare fruit cup:

1. Use three or four different kinds of fruit.
2. To use grapefruit, orange, banana, and berries:
 - a. Prepare the grapefruit and orange, just as you did for orange slices.
 - b. Peel the banana. Cut it in pieces.
 - c. Put cut banana in bowl.
 - d. Put the grapefruit and orange sections on top of the banana. This will keep the banana from getting dark.
 - e. Add some berries to the other fruit.
1. Chill the fruit.
- g. Serve in sherbet glasses.

Vocabulary:

halves	-	hāvs	--	two parts the same size
seeds	-	sēds	--	the little pits or stones in some fruit
sections	-	sěk' shũns	--	parts of the fruit that can be cut apart
membrane	-	mēm' brān	--	a thin, soft covering or skin
skin	-	skin	--	a covering
fruit knife	-	froot nif	--	a knife with a thin, curved blade
core	-	kōr	--	the center of some fruits, like apples and pears. You do not eat the core.

Assignment:

1. Why must you be careful how you handle cut fruit to be served in a fruit cup?
2. How do you cut a grapefruit in half?
3. What kind of knife do you use to cut grapefruit sections?
4. Why do you put the grapefruit and orange sections on top of the banana in the bowl?
5. How do you serve fruit cup?

UNIT VII - FRUIT

Ways To Fill Dates

Lesson 5

Objective: To learn about filling dates.

Information: A date is a small, sweet, brown fruit. It is a fruit that has a long pit through the middle. Many people buy pitted dates, which are dates with the pit taken out. Dates are very good as a snack. We may eat plain dates, or put different kinds of fillings in the dates.

Now you will learn about filling dates.

1. Pitted dates are bought in a package.
2. Be sure you have a long slit in one side of the date.
3. Fill each date with peanut butter, or nuts, or cream cheese, or a cherry.
4. For a sweet filling, you may make a sugar mixture, which you will learn in the next lesson.
5. After the dates are filled, you may press the edges together or leave an opening so that the filling shows.
6. You may roll the dates in sugar to make them a little different.

Vocabulary:

filling	-	fĭl'ĭng	--	what is put in
pit	-	pĭt	--	the seed of the fruit
package	-	pāk'ij	--	something that is wrapped and tied or sealed
slit	-	slĭt	--	opening
press	-	prĕs	--	push

Assignment:

1. What is the color of a date?
2. What are pitted dates?
3. What does filling mean?
4. Name some different fillings for dates.

*

UNIT VII - FRUIT

Recipe for Stuffed Dates

Lesson 6

Objective: To prepare stuffed dates.

Utensils:

measuring spoons	strainer
metal measuring cup	squeezer
mixing bowl	scraper
wooden spoon	paring knife
sifter	
sift 'er	

Ingredients:

- 1 T. butter
- $1\frac{3}{4}$ C. confectioners' sugar
- 2 T. orange juice
- 1 $6\frac{1}{2}$ -ounce package of pitted dates

Procedure:

1. Put butter into mixing bowl.
2. Soften butter by pressing butter against the sides of the mixing bowl with a wooden spoon.
3. Sift the confectioners' sugar onto a paper towel.
4. Measure the confectioners' sugar.
5. Add sugar to butter and beat with a wooden spoon.
6. Squeeze an orange and put the juice through a strainer.
7. Measure the orange juice and stir it into the sugar mixture.

8. Roll this mixture in your hands until it is about one inch thick.
9. Cut in pieces and stuff some into each date.
10. To make the dates look pretty, sometimes you may put some jelly or a gumdrop on top of the filling.

Vocabulary:

- | | | | | |
|---------|---|-----------|----|---|
| soften | - | sŏf'ĕn | -- | make something so that it can be mixed easily |
| roll | - | rŏl | -- | turn over and over again |
| gumdrop | - | gŭm' drŏp | -- | a candy that is soft enough to chew |

Assignment:

1. How do you soften butter?
2. Do you always sift confectioners' sugar before you measure it?
3. Why do you put the juice through a strainer?
4. Do beat and stir mean the same thing?
5. What does it mean to roll the mixture in your hands?
6. How much confectioners' sugar would you need to make the filling for two packages of pitted dates?

UNIT VII - FRUIT

Recipe for Baked Apples

Lesson 7

Objective: To prepare and serve baked apples for four people.

Utensils:

metal measuring cup

spatula

glass measuring cup

apple corer
äp'1 kōr'ēr

measuring spoons

baking dish
bāk'ing dish

baking cup
bāk'ing kúp

Ingredients: 4 apples
 $\frac{1}{4}$ C. brown sugar
 $\frac{1}{4}$ tsp. cinnamon

2 tsp. butter
 $\frac{1}{2}$ C. water

Procedure:

1. Set the temperature control knob for the oven at 375°.
2. Wash and dry apples.
3. Core the apples. Do not peel them.
4. Put the apples in the baking dish.
5. Mix the sugar and cinnamon in the baking cup.
6. Put some of the sugar mixture in the hole in each apple.
7. Put some butter on top of the sugar mixture that is in the apple.
8. Pour the water around the apples in the baking dish.
9. Bake for 45 minutes.
10. Serve hot or cold. You may serve whipped cream on top of each apple.

Vocabulary:

whipped cream - hwipt krēm -- cream that has been beaten with a beater to make it thick

Assignment:

1. Do you pack brown sugar in the cup when you measure it?

2. What does core mean?

3. Why do you pour the water around the apples in the baking dish?

4. Try making baked apples with a different filling. Put half a marshmallow in the bottom of the hole. Fill the hole with raisins. Put the other half of the marshmallow on top of the raisins.

UNIT VII - FRUIT

Recipe for Applesauce

Lesson 8

Objective: To prepare and serve applesauce for four people.

Utensils:

bread board

glass measuring cup

paring knife

metal measuring cup

saucepan

measuring spoons

cover
kuv'ēr

wooden spoon

large strainer

lārj strān'ēr

mixing bowl

fork

Ingredients:

4 apples

$\frac{1}{4}$ C. sugar

$\frac{1}{2}$ C. water

$\frac{1}{4}$ tsp. cinnamon

Procedure:

1. Wash the apples, but do not peel them.
2. Cut them into four parts.
3. Take out the pits and any brown spots.
4. Cut the apples into smaller pieces on the bread board.
5. Put the cut apples in a saucepan.
6. Pour the water into the saucepan.
7. Cover the saucepan.
8. Cook over medium heat.
9. Stir once in a while, not all the time.

10. Cook until the apples are soft. Prick the apples with a fork to find out if they are soft.
11. Take the pan off the stove.
12. Put the strainer in the mixing bowl.
13. Pour the apples into the strainer.
14. Mash the apples through the strainer with a wooden spoon, until only the skins are left in the strainer.
15. Add the sugar and cinnamon to the cooked apples. Stir.
16. Serve hot or cold in a small dish.

Vocabulary:

prick - pri^vk -- make a little hole

Assignment:

1. Why do you have to cook apples in water?
2. Why do you cover your saucepan?
3. How can you tell when the apples are soft?
4. Why do you use a strainer?
5. What is a dessert dish?
6. Do you put a plate under the dish of applesauce when you serve it?
7. You have made smooth applesauce. Now to make applesauce that is not smooth. Follow your recipe, except for two steps:
 - a. Peel your apples after you wash them.
 - b. Do not put the cooked apples through the strainer.

BUFF
ED
333

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

UNIT VII - FRUIT

Recipe for Stewed Prunes

Lesson 9

Objective To prepare and serve stewed prunes for four people.

Utensils:

saucepan
measuring spoons
paring knife

Ingredients.

$\frac{1}{2}$ lb. of prunes
1 slice of lemon
3 T. sugar

Procedure:

1. Wash the prunes.
2. Put the prunes in the saucepan.
3. Cover the prunes with water.
4. Let the prunes soak for one hour.
5. Add the slice of lemon.
6. Put the pan over a medium flame.
7. When the water comes to a boil, turn the flame low, so that the prunes will simmer.
8. Cook for 45 minutes.
9. Take out the lemon slice.
10. Add the sugar.
11. Let the prunes cool before serving.

Assignment:

1. Are prunes a dried fruit?

2. Why do you soak the prunes before cooking them?

3. What does simmer mean?

4. Name some other fruits that you may stew.

UNIT VII - FRUIT

Ways To Serve Fruit

Lesson 10

Objective: To learn some ways to serve fruit.

Information: How many ways has fruit been served to you? We drink fruit juice, and we eat fresh and cooked fruit. Sometimes fruit is served whole, and sometimes it is cut up. Fruit is very good for us whether we eat it fresh or cooked.

Now you will learn some ways to serve fruit.

Fresh fruit may be served:

1. Whole, like an apple or banana.
2. Halved or cut in half, like a grapefruit or melon.
3. Slices, like sliced peaches or pears.
4. Cut in small pieces, like a dish of different kinds of fruit mixed together. This is called fruit cup.
5. As a juice, like orange juice.

Cooked fruit may be served:

1. Whole, like a baked apple, or stewed berries.
2. In halves, or smaller pieces, like stewed peaches or pears.
3. Mashed, like apple sauce.

Dried fruit may be served:

1. Whole, like dates or figs or raisins.
2. Stuffed, like dates with a filling.
3. Stewed, like stewed prunes or apricots.

Assignment

1. Name some ways that fresh fruit may be served.
2. What is fruit cup?
3. How may cooked fruit be served?
4. Name some dried fruits that you eat without cooking them.

UNIT VII - FRUIT

When To Serve Fruit

Lesson 11

Objective: To learn when to serve fruit.

Information: When do you eat fruit? Do you think you should eat fruit only for breakfast? We see people eat fruit at any meal, and sometimes between meals. Fruit may be served in one way at breakfast, in another way at lunch or supper, and in a different way again at dinner.

Now you will learn when to serve fruit.

1. Fruit as an appetizer.
 - a. Fruit juice at breakfast or before dinner.
 - b. Whole or cut raw fruit at breakfast or before lunch or dinner.
 - c. Stewed fruit at breakfast.
2. Fruit as a salad.
 - a. Many kinds of cut-up fresh fruit served on lettuce for lunch.
 - b. Sliced fruit on lettuce for dinner.
3. Fruit as a garnish.
 - a. Slices of fruit with meat, like baked ham with pineapple slices.
 - b. Lemon slices with fish.
4. Fruit as a dessert.
 - a. Raw fruit served whole or cut up.
 - b. Stewed or baked fruit.
 - c. Fruit with other food, such as jello or cake, or in a pie.
5. Fruit as a snack--any kind of fruit is good as a snack.

Vocabulary:

lunch	- lŭnĉ -- a light meal served in the middle of the day
dinner	- dĭn'ĕr -- the biggest meal of the day
supper	- sŭp'ĕr -- a light meal in the evening, when dinner is eaten in the middle of the day
appetizer	- ăp'ĕ tĭz ĕr -- a little food or drink served at the beginning of a meal
salad	- săl'ăd -- food, usually cold, that is served with a dressing
dressing	- drĕs'ĭng -- a food or mixture of foods that is added to a salad to give it a certain flavor
lettuce	- lĕt'ĭs -- a green leaf used in salads
garnish	- găr'nĭsh -- something to make a dish of food look pretty
dessert	- dĭ zŭrt' -- something that is eaten at the end of a meal

Assignment:

1. What is an appetizer?
2. How is fruit served as an appetizer?
3. At what meals are fruits used in a salad?
4. What food is put under the fruit in a salad?
5. What is a garnish?
6. How do you serve fruit for dessert?

UNIT VIII - CEREALS AND QUICK BREADS

Cereals

Lesson 1

Objective: To learn about cereals.

Information: There are many, many kinds of cereal. Some are ready to eat, and some need to be cooked. Cereals give us energy. They are a very good breakfast food. Some cereals are better for us than others. Watch for the words "whole-grain cereal" on the package. Whole-grain cereals are the best for us.

Now you will learn about cereals.

Ready-to-eat cereals.

1. Ready-to-eat cereals should be kept in a dry place to keep them crisp.
2. Be sure to keep the package tightly closed.
3. If cereal becomes soft, put it in a shallow pan in a warm oven for a few minutes. This will make the cereal crisp again.
4. Cereal may be served with sugar and milk, or with fruit and milk.

Cooked cereals.

1. Cooked cereals should be smooth. You do not want lumps.
2. Cooked cereals must be well cooked.
3. Cooked cereals should be salted during cooking for flavor.
4. Cooked cereals should be firm, not watery.
5. Cereal may be cooked with milk instead of water.
6. When cooking cereal, do not stir all the time. That will make the cereal too soft.
7. Follow the measurements and directions on the package exactly.
8. Cooking in the double boiler after the cereal has thickened will keep the cereal from burning.

Vocabulary:

- cereal - sēr'ē āl -- food made from grain
- grain - grān -- the seeds of certain plants that can be eaten
- crisp - krisp -- not soft; easily broken
- thickened - thik'ēnd -- made more solid

Assignment:

1. Find the names of some whole-grain cereals in the store.
2. Why are cereals good for us?
3. Why should you keep packages of ready-to-eat cereals tightly closed?
4. If ready-to-eat cereal gets soft, how do you make it crisp again?
5. Why do you put salt in cereal when you are cooking it?
6. What is sometimes used instead of water to make cooked cereal?
7. When cooking cereal, why do you put it in the double boiler after the cereal has thickened?

UNIT VIII - CEREALS AND QUICK BREADS

Quick Breads

Lesson 2

Objective: To learn about quick breads.

Information: We are going to learn about quick breads that are made light by baking powder. We do not want to eat a bread that is heavy to pick up. That is why we use baking powder. We have all eaten biscuits and muffins. These are two kinds of quick breads. When we know how to make plain biscuits and muffins, we may add other foods to our recipes to change the flavor of a quick bread. This is very helpful because these breads are served at many meals.

Now you will learn about some quick breads.

1. Baking powder biscuits.

- a. Baked biscuits should be about twice as big as when they were put in the oven.
- b. The biscuits should be light brown on top and bottom.
- c. The biscuits should have straight sides and smooth tops.
- d. The biscuits should have tiny, even holes on the inside. They should not have some big and some little holes.
- e. The color of the inside should be creamy white.
- f. When you break open a biscuit, the inside should come apart in layers.
- g. Do not use a knife to open a biscuit. Biscuits are too soft for a knife to cut.
- h. Biscuits may be served with butter or jam.
- i. Biscuits taste best when served hot.

2. Muffins

- a. Muffins should have a well-rounded top, The tops are not as smooth as the tops of baking powder biscuits.
- b. The tops should be evenly and lightly browned.
- c. The insides should have tiny, even holes.
- d. Muffins should feel very light.
- e. The crust should be crisp and thin.

3. Dough

- a. A baking powder biscuit mixture is a dough.
- b. For a dough, cold shortening is put with the dry ingredients.
- c. For a dough, mix the ingredients only enough to make a soft dough.
- d. A soft dough is one which you can pick up in your hands. It will not stick to your hands.

4. Batter

- a. A muffin mixture is a batter.
- b. For a batter, melted shortening is poured into the dry ingredients.
- c. Stir only enough to wet the dry ingredients. You will have muffins with big holes if you stir the batter too much.
- d. A batter is too thin and sticky to be picked up in your hands. You use a spoon or pour the batter.

Vocabulary:

- | | |
|---------|--|
| biscuit | - bis'kit -- a kind of bread baked in small shapes |
| muffin | - muf'in -- a quick bread made with egg |
| layers | - lā'ers -- one flat piece on top of another |

- dough - dō -- a mixture of flour, liquid, and other foods that can be kneaded
- knead - nēd -- work or mix with the hands
- batter - băt'ər -- a mixture of flour, liquid, and other foods that can be stirred or poured

Assignment:

1. What helps to make your quick breads light?
2. Name two kinds of quick breads.
3. What is the color of the inside of a baking powder biscuit?
4. Do you use a knife to open a biscuit?
5. Do the tops of muffins and baking powder biscuits look the same?
6. Does a good muffin have tiny holes through the inside?
7. Should muffins have a thick crust?
8. What is a dough? Name a dough.
9. Do you melt the shortening for a dough?
10. What is a soft dough?
11. What is a batter? Name a batter.
12. What happens if you stir a batter too much?
13. Can you pick up a batter with your hands?

UNIT VIII - CEREALS AND QUICK BREADS

Recipe for Baking Powder Biscuits

Lesson 3

Objective: To prepare and serve baking powder biscuits.

Utensils:

mixing bowl

glass measuring cup

metal measuring cup

measuring spoons

pastry blender
pās'trī blēnd'ēr

flour sifter

spatula

wooden spoon

food scraper

baking sheet

wooden board

cake rack

kāk rāk

cookie cutter
kōōk'ī kūt'ēr

Ingredients:

1 C. sifted flour

2 tsp. baking powder

$\frac{1}{4}$ tsp. salt

2 T. shortening

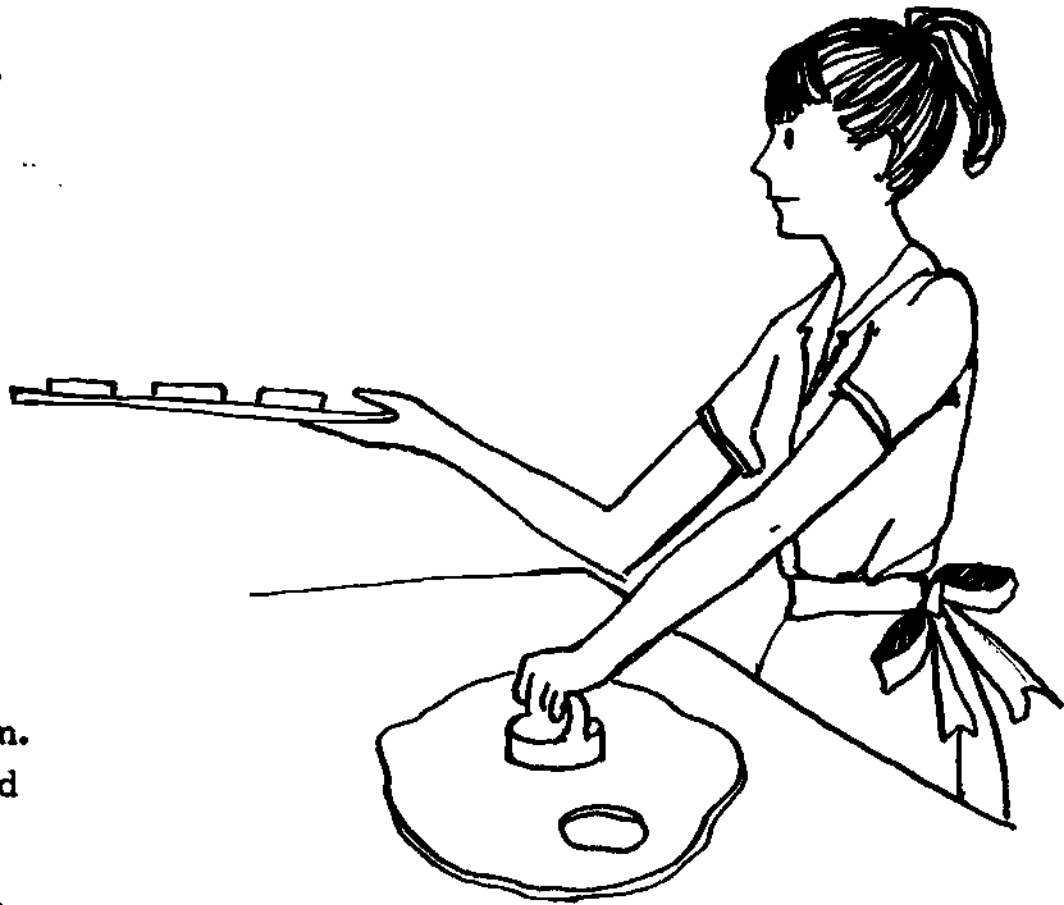

$\frac{1}{3}$ C. milk

Procedure:

1. Turn your oven on to 450°.
2. Measure the flour.
3. Sift the flour onto a paper towel.
4. Put the sifter into the mixing bowl.
5. Measure the flour again.
6. Sift flour, baking powder, and salt into the mixing bowl.
7. Add the shortening to the flour mixture.
8. Cut in the shortening with a pastry blender until you cannot see any lumps of shortening.
9. Add the milk, stirring only until the mixture is in one ball.

10. Sprinkle a little flour on the wooden board.
11. Knead the dough with your hands only until the dough is smooth.
12. Pat the dough on the board until it is about $\frac{3}{4}$ inch thick.
13. Cut the dough with a floured cookie cutter.
14. Place the biscuits, 1 in. apart, on an ungreased baking sheet.
15. Bake in a 450° oven for about 15 minutes.
16. Place biscuits on cake rack until ready to serve.
17. Serve hot with butter or jam.
18. This recipe makes about eight biscuits.

Vocabulary:

pat - pát -- touch lightly to make flat

ungreased - ůn grēst' -- with no fat

Assignment:

1. Why do you turn your oven on before you start to prepare the biscuits?
2. How do you know when the shortening is cut into the flour mixture?
3. What does knead mean?
4. Why do you put flour on your cookie cutter?
5. Why do you place the biscuits 1 inch apart on the baking sheet?
6. How do you know if you have a perfect biscuit?

UNIT VIII - CEREALS AND QUICK BREADS

Recipe for Muffins

Lesson 4

Objective: To prepare and serve muffins.

Utensils:

2 mixing bowls	spatula	cake rack
glass measuring cup	small saucepan	wooden spoon
metal measuring cup	baking cup	tablespoon
measuring spoons	egg beater	muffin pan mūf'in pān
food scraper	sifter	

Ingredients:

1 C. sifted flour	$\frac{1}{3}$ C. milk
$1\frac{1}{2}$ tsp. B.P.	1 egg, beaten
2 T. sugar	1 T. melted shortening
$\frac{1}{4}$ tsp. salt	

Procedure:

1. Turn the oven on to 400°.
2. Mix and sift dry ingredients.
3. Put a little hot water in a saucepan.
4. Put the shortening in the baking cup, and place the baking cup in the saucepan.
5. Heat on the stove until the shortening is melted.
6. Beat the egg in a mixing bowl.
7. Add milk and melted shortening to the egg.
8. Pour this egg mixture into the flour mixture.

9. Stir only until the flour is wet. The batter should have lumps. Do not make it smooth.
10. Grease the muffin pan. Put a little shortening on wax paper and rub each muffin cup. If the cups are not greased, the muffins will stick to the cups.
11. Fill each cup half full with the batter. Use a tablespoon and food scraper to put the batter in the muffin pan.
12. Put a little water in each muffin cup that does not have batter in it.
13. Bake in 400° oven for 20 to 25 minutes.
14. Put a clean toothpick into the center of one muffin to see if it is baked. If the toothpick comes out clean and dry, the muffins are ready to be taken out of the oven.
15. This recipe makes six muffins.

Vocabulary:

- | | | | |
|-----------|---|-------------|--|
| wax paper | - | wáks pā'pēr | -- paper that has a coating of wax to keep food from soaking through |
| greased | - | grēst | -- with fat put on |

Assignment:

1. What are the rules for mixing and sifting dry ingredients?
2. Why do you melt shortening over hot water?
3. Should muffin batter be smooth?
4. What will happen if the muffin pan is not greased?
5. Why do you fill the muffin cups only half full?
6. Why do you put water in the muffin cups that you don't use?
7. How do you know when the muffins are baked?

UNIT VIII - CEREALS AND QUICK BREADS

Different Biscuit and Muffin Recipes

Lesson 5

Objective: To learn how to make different biscuit and muffin recipes.

Information: First, we must be able to make perfect plain biscuits and muffins. Then, we may add food or make some changes in the basic recipe to give different flavors to our quick breads.

Now you will learn how to make different biscuit and muffin recipes.

1. Cheese biscuits

Add $\frac{1}{2}$ C. grated cheese to basic biscuit dough before adding the milk.

2. Drop biscuits

Use $\frac{1}{2}$ C. of milk instead of $\frac{1}{3}$ C. The dough will be sticky. Drop by spoonfuls on a greased baking sheet.

3. Butterscotch biscuits

Put a little butter and brown sugar under each biscuit on the baking sheet. When the biscuits are done, turn them upside down, so that the butterscotch mixture will be on top.

4. Berry muffins

Use the basic muffin recipe, and 1 tsp. more of shortening, 1 T. more of sugar and $\frac{1}{3}$ C. of berries. Add the fruit at the same time the liquid is added.

5. Jelly muffins

Put the basic muffin batter in the muffin cups, but save a little. Put 1 tsp. of jelly on each muffin. Cover the jelly with the batter you saved.

Vocabulary:

- basic - bās'ik -- most important. A basic thing is something you must learn first, and then you can go ahead to make other things that are like it.
- grated cheese - grāt'ěd chēz -- cheese that has been rubbed against a prickly piece of metal to cut it into small bits
- butterscotch - büt'ēr skōch' -- a mixture of brown sugar and butter

Assignment:

1. What is grated cheese?
2. How is the dough of drop biscuits different from the dough of plain baking powder biscuits?
3. How do you make butterscotch biscuits?
4. When you make berry muffins, when do you add the berries to the muffin mixture?
5. How do you make jelly muffins?

UNIT IX - EGGS

About Eggs

Lesson 1

Objective: To learn about eggs.

Information: We should eat at least four or five eggs every week. Eggs may be eaten at any meal. Many times eggs are eaten instead of meat at dinner. They are also very good at breakfast, lunch, or supper. There are so many different ways to fix eggs. We are going to learn just a few ways to cook eggs.

Now you will learn some things about eggs.

1. Eggs with a brown shell are just as good as eggs with a white shell.
2. Eggs should be kept in the refrigerator.
3. The two parts of an egg are the white part and the yolk or yellow part.
4. Eggs should be cooked slowly. Eggs cooked over a high flame get tough and hard.
5. Never boil eggs. When you cook eggs in boiling water, you will find a greenish color around the yolk.
6. The easiest way to cook eggs is in the shell, like a hard-cooked egg.
7. Devilled eggs or stuffed eggs are made from hard-cooked eggs.
8. A fried egg is an egg cooked in a little fat.
9. A scrambled egg is a beaten egg, cooked in a little fat.
10. Sometimes other food, like chopped meat, is cooked with scrambled eggs.
11. When eggs are served on a plate, you eat them with a fork.
12. When soft-cooked eggs are served in a cup or small dish, eat them with a spoon.
13. Devilled eggs are eaten with your hand.

Vocabulary

shell	-	shě́l -- the hard outside covering
yolk	-	yṓk -- the yellow part of an egg
tough	-	tů́f -- not easy to chew
fried	-	frī́d -- cooked in a little fat in a pan on top of the stove
scrambled	-	skrām' b' ld -- mixed together
chopped	-	chópt -- cut into small pieces
devilled egg	-	děv'ld ěg -- hard-cooked egg, in which the yolk has been mashed with other food and put back into the hard-cooked white

Assignment:

1. How many eggs should you eat every week?
2. At what meals do you serve eggs?
3. Are eggs with a white shell better than eggs with a brown shell?
4. Where should you keep eggs?
5. What are the two parts of an egg?
6. Do you cook eggs over a high flame?
7. Do you ever boil eggs?
8. What is a fried egg?
9. What is a scrambled egg?
10. How do you eat eggs served on a plate?
11. How do you eat devilled eggs?

UNIT IX - EGGS

Eggs Cooked in the Shell

Lesson 2

Objective: To prepare and serve eggs cooked in a shell.

Utensils: saucepan wooden spoon

Ingredients: eggs

Procedure:

1. If eggs are very cold, put them in a bowl of warm water. Then they will not crack when placed in the boiling water.
2. Fill the saucepan about half full with hot water.
3. Put the saucepan on the stove.
4. Bring the water to a boil.
5. Turn the flame low, so that the water will simmer, and not boil.
6. Place the eggs, one at a time, in the water with a wooden spoon. Put the eggs in slowly, so they will not crack.
7. Be sure the water covers the eggs.
8. For soft-cooked eggs:
 - a. Cook the eggs for 3 to 5 minutes.
 - b. Take the eggs out of the water with a wooden spoon.
 - c. Break open the eggs and serve hot in an egg cup or small dish.
 - d. Serve with butter, salt, and pepper.
9. For hard-cooked eggs:
 - a. Cook the eggs for 20 minutes.
 - b. Put the eggs in cold water right away. This makes them easy to peel.
 - c. Crack the big end of the egg and peel off the shell.
 - d. Serve sliced on lettuce, cut in halves, as devilled eggs, or in a salad.
 - e. Serve with salt and pepper.
 - f. Hard-cooked eggs keep well in the refrigerator.

Vocabulary:

crack - krák -- break open

egg cup - ěg kůp

Assignment:

1. What utensil is used to put eggs in simmering water?
2. Why do you use this utensil?
3. How long do you cook soft-cooked eggs?
4. How do you serve soft-cooked eggs?
5. Do you serve soft-cooked eggs hot or cold?
6. How long do you cook half-cooked eggs?
7. Why do you put hard-cooked eggs in cold water as soon as they are cooked?
8. Name some different ways to serve hard-cooked eggs.

Vocabulary:

- mayonnaise - mā 'ō nāz' -- a salad dressing made of egg yolks
beaten with other food
- paprika - pǎ prē 'kā -- a red-colored powder that is sprinkled
on some food to make it look attractive

Assignment:

1. What kind of eggs are used for devilled eggs?
2. Which way do you cut each egg?
3. How do you measure $\frac{1}{8}$ tsp. ?
4. What utensil do you use to mash the egg yolk mixture?
5. Why do you put paprika on top of each devilled egg?

UNIT IX - EGGS

Fried Eggs

Lesson 4

Objective: To prepare and serve a fried egg.

Utensils:

saucer

frying pan

turner

Ingredients:

egg

fat

Procedure:

1. Break the egg into a saucer.
2. Put a little fat in the frying pan. The fat may be shortening, butter, or oil.
3. Melt the fat in the frying pan over a low flame. Do not let the fat burn.
4. Pour the egg carefully into the frying pan.
5. Cook slowly until the egg white is firm. You do not want the egg white brown on the edge.
6. Sometimes, you may like to turn the egg over to cook it more on the other side.
7. Use a turner to take the egg from the pan to the plate.
8. Serve hot with salt and pepper.

Assignment:

1. What kind of flame do you use for a fried egg? Why?
2. How do you know when the egg is cooked?
3. Try serving a fried egg between two slices of toast.
4. Try another way to serve a fried egg:

- a. Cut a hole in a slice of bread with a cookie cutter.
- b. Spread the bread with butter.
- c. Place the bread, buttered side down, in the frying pan.
- d. Break the egg into the hole in the bread.
- e. Cook over low heat.
- f. Serve hot with salt and pepper.

UNIT IX - EGGS

Scrambled Eggs

Lesson 5

Objective: To prepare and serve four scrambled eggs.

Utensils:

mixing bowl	frying pan
fork	turner
measuring spoons	

Ingredients:

4 eggs	$\frac{1}{4}$ tsp. salt
4 T. milk	fat

Procedure:

1. Break the eggs into the mixing bowl.
2. Beat the eggs with a fork.
3. Add the milk and salt to the eggs.
4. Beat again.
5. Melt a little fat in the frying pan over a low flame.
6. Pour the egg mixture into the hot frying pan.
7. Cook slowly, stirring all the time, until the eggs are done.
8. Use a turner to take the eggs from the frying pan to the plate.
9. Serve hot.

Assignment:

1. What utensil do you use to beat the eggs for scrambled eggs?
2. Try making scrambled eggs, leaving the milk out.
3. Try serving scrambled eggs between two slices of toast.
4. Try adding chopped meat, chopped onion, or chopped green pepper to the egg mixture before it is cooked.
5. Try making scrambled eggs in the double boiler.

UNIT X - SIMPLE BREAKFASTS

How to Plan, Prepare, and Serve Breakfast

Lesson 1

Objective: To learn how to plan, prepare, and serve simple breakfasts.

Information: We know how to prepare many foods that may be served for breakfast. Now we want to prepare some of these foods at the same time and serve a breakfast. Maybe we would like to have fruit, cereal, and cocoa for a meal. There are many different breakfasts that may be planned from the foods we have prepared.

Now you will learn how to plan, prepare, and serve breakfast.

1. First you must plan what food you will serve for the breakfast. This food is called the menu.
2. You must know how long it takes to prepare each food.
3. Be sure the hot foods will be served hot, and cold foods cold.
4. The table must be set before any food is served.
5. To set the table, you must know what flatware, china, and glassware will be needed.
6. Remember the rules for setting the table and serving food that you learned in Unit IV.
7. Be sure to serve the food in the order in which you will eat it.

Vocabulary:

- plan - plān -- think of how to do something
menu - mēn'ū -- a list of foods to be served at one meal

Assignment:

1. What is the first thing you do when you are going to make a breakfast?
2. What is a menu?
3. Why must you know how long it will take to prepare each food?
4. Why must you know what flatware, china, and glassware will be needed?

UNIT X - SIMPLE BREAKFASTS

Breakfast Menu No. 1

Lesson 2

Objective: To plan, prepare, and serve breakfast for four people.

Information: Breakfast Menu:

Pineapple Juice
French Toast
Milk

Now you will plan, prepare, and serve this menu.

1. The only food that will take time to prepare is the French toast.
2. You will need about 20 minutes to prepare the French toast.
3. Set the table before you start to prepare the toast.
4. Get out the glasses and plates you will need for serving the food.
5. Prepare the egg mixture.
6. While the toast is cooking, pour the pineapple juice and milk.
7. Set the glass of juice and milk at each place.
8. Put the butter and jelly on the table.
9. Remember to watch your toast, so that it will not burn.
10. Serve the French toast hot.

Assignment:

1. Why do you set the table before you prepare the French toast?
2. What flatware is needed for this menu?
3. What glasses and plates are needed for this menu?
4. Which foods are served cold, and which foods are served hot?
5. Draw the cover you will use for this menu.
6. Prepare and serve this menu.

UNIT X - SIMPLE BREAKFASTS

Breakfast Menu No. 2

Lesson 3

Objective: To plan, prepare, and serve this breakfast for four people.

Information: Breakfast Menu:

Half Grapefruit

Cooked cereal

Milk

Assignment:

1. How many grapefruits will you need?
2. Which foods will be served hot and which foods will be served cold?
3. Which food will take you the longest time to prepare?
4. What kind of dish will you use to serve cereal?
5. What flatware, china, and glassware will be needed?
6. In what order will you prepare and serve the food in this menu?
7. Draw the cover you will use for this menu.

8. Prepare and serve this menu.

UNIT X - SIMPLE BREAKFASTS

Breakfast Menu No. 3

Lesson 4

Objective: To plan, prepare, and serve this breakfast for four people.

Information: Breakfast Menu:

Fruit Cup
Scrambled Eggs
Buttered Toast
Cocoa

Assignment:

1. Plan the order in which you will prepare this menu.
2. Which foods may be prepared first and set aside?
3. How many eggs will you need?
4. Will you serve whole slices of toast?
5. Which food must be served as soon as it is ready?
6. Is all the food put on the table at the same time?
7. Draw a cover for this menu.

8. Prepare and serve this menu.

UNIT X - SIMPLE BREAKFASTS

Breakfast Menu No. 4

Lesson 5

Objective: To plan, prepare, and serve this breakfast for four people.

Information: Breakfast Menu:

Orange Juice
Fried Eggs
Butterscotch Biscuits
Butter
Milk

Assignment:

1. What is the first thing you will do before you prepare any of the food?
2. Which foods must be prepared and served as soon as they are ready?
3. How long will it take you to make biscuits?
4. When will you put the butter on the table?
5. Do you need a knife for this breakfast?
6. Will you have all the food on the table at the same time?
7. Draw a cover for this menu.

8. Prepare and serve this menu.

UNIT XI - COOKIES

Recipe for Peanut Butter Cookies

Lesson 1

Objective: To prepare peanut butter cookies.

Utensils:

glass measuring cup	spatula
metal measuring cup	baking sheets
measuring spoons	sifter
three mixing bowls	fork
wooden spoon	cake rack
food scraper	turner

Ingredients:

$\frac{3}{4}$ C. flour	$\frac{1}{4}$ C. brown sugar
$\frac{1}{2}$ tsp. baking soda	$\frac{1}{4}$ C. granulated sugar
dash salt	$\frac{1}{4}$ tsp. vanilla
$\frac{1}{4}$ C. shortening	$\frac{1}{4}$ C. peanut butter
	$\frac{1}{2}$ egg

Procedure:

1. Set the oven at 375°.
2. Grease the baking sheets.
3. Sift the flour, then measure it.
4. Sift the flour with baking soda and salt. Set this mixture aside.
5. Put egg into small bowl. Beat with a fork. Set aside.
6. Cream the shortening in another bowl.
7. Beat in the sugars with a wooden spoon.
8. Add egg and beat again.
9. Stir in peanut butter and vanilla.
10. Stir in the flour mixture, a little at a time.
11. Make the dough into small balls with your hands.
12. Place cookies on a greased baking sheet.

13. Flatten each ball with the tines of a fork.
14. Bake in 375° oven for 10 minutes.
15. Be sure the baking sheet does not touch the side^s of the oven. .
16. Use a turner to take cookies from the baking sheet to the cake rack to cool.

Vocabulary:

cookie	-	kōok' i -- a small, thin cake
peanut butter	-	pē' nūt but' er -- a smooth, soft food made from peanuts
cream	-	krēm -- to mix until soft and smooth

Assignment:

1. How do you measure $\frac{1}{2}$ egg?
2. What does it mean when you say to "cream" the shortening?
3. How much water do you need to measure $\frac{1}{4}$ C. of shortening?
4. What is a greased baking sheet?
5. What does it mean when the recipe says to flatten each ball with the tines of a fork?
6. Why must you make sure the baking sheet is not touching the side of the oven?

UNIT XI - COOKIES

Recipe for Raisin-Oatmeal Cookies

Lesson 2

Objective: To prepare raisin-oatmeal cookies.

Utensils:

glass measuring cup	food sc. aper
metal measuring cup	wooden spoon
measuring spoons	baking sheets
sifter	teaspoons
mixing bowl	cake rack
spatula	turner

Ingredients:

$\frac{1}{2}$ C. flour	2 T. granulated sugar
$\frac{1}{4}$ tsp. baking soda	$\frac{1}{2}$ egg
$\frac{1}{2}$ tsp. cinnamon	1 T. milk
$\frac{1}{4}$ tsp. salt	$\frac{1}{2}$ C. raisins
$\frac{1}{4}$ C. shortening	1 C. quick-cooking rolled oats
$\frac{1}{4}$ C. brown sugar	

Procedure:

1. Set oven at 375°.
2. Grease the baking sheets.
3. Sift the flour, then measure it.
4. Sift the flour again with baking soda, cinnamon, and salt into a bowl.
5. Add the shortening, sugars, egg, and milk.
6. Beat well with a wooden spoon.
7. Stir in raisins and oats.
8. Drop teaspoons of the mixture 2 inches apart on greased baking sheets.
9. Bake for 12 to 15 minutes.
10. Cool cookies on a cake rack.
11. Keep cookies in a covered jar.

Vocabulary:

oats - ōts -- a grain which is used for food

Assignment:

1. Why do you grease the baking sheets?

2. What kind of cup do you use to measure the raisins?

3. Why do you put the cookies 2 inches apart on the baking sheet?

4. Why do you use a cake rack?

5. Why do you keep cookies in a covered jar?

UNIT XI - COOKIES

Recipe for Sugar Drops

Lesson 3

Objective: To prepare sugar drops.

Utensils:

glass measuring cup
metal measuring cup
measuring spoons
spatula
mixing bowl
wooden spoon
sifter
food scraper

baking sheets
cake rack
turner
chopping bowl
chōp'ping bōl

food chopper
fōod chōp'ēr

Ingredients:

$\frac{2}{3}$ C. shortening	$1\frac{1}{2}$ C. flour
$\frac{3}{4}$ C. sugar	$1\frac{1}{2}$ tsp. baking powder
1 egg	$\frac{1}{4}$ tsp. salt
1 tsp. vanilla	$\frac{1}{2}$ C. chopped nuts
4 tsp. milk	$\frac{1}{2}$ C. raisins

Procedure:

1. Set the oven at 375°.
2. Chop walnuts in the chopping bowl. Measure the nuts after they are chopped.
3. Grease the baking sheets.
4. Cream the shortening with a wooden spoon.
5. Mix the sugar in with the shortening.

6. Add the eggs and beat well.
7. Beat in the vanilla and milk.
8. Sift the flour, then measure it.
9. Sift the flour again with baking powder and salt into the shortening mixture.
10. Mix well.
11. Stir in the chopped nuts and raisins.
12. Drop on greased baking sheets by teaspoons.
13. Bake for 12 minutes.
14. Cool cookies on a cake rack. Cookies must be flat on the rack.

Vocabulary:

walnut - wôl'nut -- a large nut with a rough shell

Assignment:

1. Why is your chopping bowl made of wood?
2. How do you measure $\frac{2}{3}$ C. of shortening?
3. Name the dry ingredients in this recipe.
4. Why must you be sure the cookies are flat on the cake rack?

UNIT XII - SANDWICHES

About Cold Sandwiches

Lesson 1

Objective: To learn about cold sandwiches.

Information: We know that a sandwich is two or more slices of bread with food in between. We may use white, whole wheat, or rye bread. Sometimes the bread for sandwiches is toasted or cut into shapes.

Now you will learn about sandwiches.

1. Cold sandwiches may be:
 - a. Made for lunch or supper at home.
 - b. Made and packed to take out.
 - c. Made for parties.
2. Bread must be sliced for a sandwich.
3. Bread slices more easily if it is one day old.
4. For a fancy sandwich, cut sliced bread into shapes with cookie cutters.
5. Spread each slice of bread with softened butter or margarine. This keeps the sandwich filling from soaking through the bread.
6. Mayonnaise may be used instead of butter if the sandwich is to be eaten right away. Mayonnaise will soak through bread if it is left on the bread for a while.
7. Fillings for sandwiches:
 - a. Sliced meat or cheese.
 - b. Meat, fish, or egg salad.
 - c. Cream cheese alone or mixed with other food.
 - d. Peanut butter alone or mixed with other food.
 - e. Jelly alone or mixed with other food.
8. If sandwiches are not to be eaten right away, wrap each sandwich in wax paper. You do not want the bread to get dry or hard.
9. Cut each sandwich in half or in four parts before it is served.

Assignment:

1. Name three kinds of bread that may be used for sandwiches.
2. When do you serve sandwiches?
3. What is used to cut bread slices into fancy shapes?
4. Why do you spread softened butter or margarine on each slice of bread?
5. What happens if mayonnaise is left on bread slices for a while?
6. Name four different fillings for sandwiches.
7. When do you wrap sandwiches in wax paper? Why?
8. Do you cut a sandwich before you serve it?

UNIT XII - SANDWICHES

Recipe for Egg Salad Sandwich

Lesson 2

Objective: To prepare and serve four egg salad sandwiches.

Utensils:

chopping bowl	measuring spoons
food chopper	spatula
mixing bowl	food scraper
paring knife	case knife
wooden board	

Ingredients:

4 hard-cooked eggs	$\frac{1}{4}$ tsp. salt
2 T. diced celery	8 slices of bread
1 T. diced onion	softened butter
3 T. mayonnaise	lettuce

Procedure:

1. Peel eggs.
2. Chop eggs in chopping bowl. Then put eggs in mixing bowl.
3. Wash celery, then dice it.
4. Peel and wash onion, then dice it.
5. Add celery and onion to chopped eggs.
6. Mix in the mayonnaise and salt.
7. Wash lettuce. Pat lettuce dry in a towel.
8. Spread softened butter on each slice of bread.
9. Spread egg salad on four slices of bread.
10. Put a lettuce leaf on top of the egg salad.
11. Place a slice of bread on top of each of the slices with filling.
12. Cut in half or in four parts.
13. Serve.

Vocabulary:

- dice** - dīs -- to cut into small pieces
- celery** - sěl'ěr ĭ -- a vegetable that grows in stalks. It may be eaten raw or cooked.
- onion** - ůn'yůn -- a round vegetable that grows in the ground
- vegetable** - vĕj'ĕ tā ħl -- a plant or part of a plant that is used for food

Assignment:

1. What does dice mean?
2. Are celery, onions, and lettuce vegetables?
3. How do you wash and dry lettuce?
4. Try making egg salad, using chopped olives or chopped pickles instead of onions and celery.

UNIT XII - SANDWICHES

Party Sandwiches

Lesson 3

Objective: To prepare party sandwiches.

Utensils:

wooden board
cookie cutters

mixing bowl
fork
case knife

Ingredients:

sliced bread
softened butter

cream cheese
jelly

Procedure:

1. Cut the bread with fancy cookie cutters.
2. Have two slices of bread the same shape for each sandwich.
3. Spread each slice of bread with softened butter. Be sure the butter goes to the edge of the bread.
4. Put the cream cheese in a bowl and mash with a fork until it is soft.
5. Spread cream cheese on one piece of bread.
6. Spread jelly on the other piece of bread.
7. Put the two pieces together.

Assignment:

1. Why is it important to spread the butter to the edge of each slice of bread?

2. Why do you want the cream cheese to be soft?

3. Make fancy sandwiches with other fillings.

4. Make fancy sandwiches using a piece of bread with filling, and no bread on top of the filling. These are called open-faced sandwiches.

UNIT XIII - SIMPLE DESSERTS

Jello Whip

Lesson 1

Objective: To prepare and serve jello whip for four people.

Utensils: saucepan wooden spoon
 glass measuring cup egg beater
 mixing bowl

Ingredients: 1 package of Jello 2 C. water

Procedure:

1. Empty the package of Jello into a mixing bowl.
2. Boil 1 cup of water.
3. Pour the 1 cup of boiling water over the jello powder. Boiling water makes the powder melt faster.
4. Stir until you can't see any powder.
5. Add 1 cup of cold water. Stir.
6. Put bowl of jello in the refrigerator.
7. After the jello begins to set or get solid, beat the jello with an egg beater.
8. Serve plain or put whipped cream on top of each dish of jello.

Vocabulary:

jello - jĕl'ō -- a kind of dessert that comes as a powder

Assignment:

1. Why do you pour boiling water on the jello powder?
2. Serve jello without beating it.
3. Make jello with pieces of fruit in it. When jello begins to set, do not beat it. Just add pieces of fruit, and put jello back in the refrigerator until it is firm.

UNIT XIII - SIMPLE DESSERTS

Vanilla Pudding

Lesson 2

Objective: To prepare and serve vanilla pudding for four people.

Utensils: mixing bowl egg beater
 glass measuring cup ladle

Ingredients: 1 package of instant vanilla pudding
 2 C. milk

Procedure:

1. Pour milk into a mixing bowl.
2. Empty the package of instant pudding into the milk.
3. Beat the mixture with an egg beater. The mixture will start to get thick as you beat.
4. Use a ladle to put the pudding into dessert dishes.
5. Chill in the refrigerator for about 15 minutes.
6. Serve plain or put a little whipped cream on each serving.

Vocabulary:

pudding - pŭd'ing -- a sweet, soft dessert with some kind of flour in it

Assignment:

1. What is a pudding?
2. Make pudding using a package of instant chocolate, butterscotch, or strawberry pudding.
3. How much instant pudding and milk would you need to make this recipe for eight people?

UNIT XIII - SIMPLE DESSERTS

Grape Tapioca Pudding

Lesson 3

Objective: To prepare and serve grape tapioca pudding for four people.

Utensils: glass measuring cup saucepan
 metal measuring cup wooden spoon
 measuring spoons ladle

Ingredients: $\frac{1}{4}$ C. quick-cooking tapioca $2\frac{1}{2}$ C. grape juice
 $\frac{1}{4}$ C. sugar 1 T. lemon juice
 dash of salt

Procedure:

1. Mix tapioca, sugar, salt, and grape juice in a saucepan.
2. Cook over medium heat until mixture boils. Stir all the time.
3. Stir in lemon juice.
4. Cool the mixture for 20 minutes by setting saucepan in a larger pan of cold water. Keep the water cold.
5. Stir the pudding and spoon it into dessert dishes.
6. Chill in refrigerator.
7. Serve plain or with a little whipped cream on top of each serving.

Vocabulary:

tapioca - $t\check{a}p \ i \ \check{o}'k\grave{a}$ -- a food used in puddings. It helps to thicken the pudding

Assignment:

1. What is tapioca?
2. What is medium heat?
3. How do you cool the mixture in the saucepan?
4. How much grape juice would you need if you were making this recipe for eight people?

UNIT XIV · SIMPLE LUNCHEONS

Luncheon Menu No. 1

Lesson 1

Objective: To plan, prepare, and serve this luncheon for four people.

Information: Luncheon Menu:

Cream Cheese and Jelly Sandwich
Raisin-Oatmeal Cookies
Banana Milk Shake

Vocabulary:

luncheon - lūn'chūn -- a light meal served in the middle of the day

Assignment:

1. Which food will you prepare ahead of time, or the day before you are to serve this menu?
2. Where will you keep the cookies until you are ready to serve them?
3. Name the order in which you will prepare this menu.
4. Draw a cover for this menu.
5. Prepare and serve this menu.

UNIT XIV - SIMPLE LUNCHEONS

Luncheon Menu No. 2

Lesson 2

Objective: To plan, prepare, and serve this luncheon for four people.

Information: Luncheon Menu:

Lunch Meat Sandwich with Lettuce
Applesauce
Peanut Butter Cookies
Milk

Assignment:

1. Which food may be prepared the day before this menu is to be served?
2. Will any of this food be served hot?
3. Plan the order in which you will prepare this meal.
4. Will all of this food be served at the same time?
5. Draw a cover for this menu.
6. Prepare and serve this menu.

UNIT XIV - SIMPLE LUNCHEONS

Luncheon Menu No. 3

Lesson 3

Objective: To plan, prepare, and serve this luncheon for four people.

Information: Luncheon Menu:

Egg Salad Sandwich
Jello with Fruit
Sugar Drops
Cocoa

Assignment:

1. Which food must be prepared the day before this menu is to be served?
2. Name the order in which you will prepare this food.
3. Will any of this food be served hot?
4. Will all of this food be served at the same time?
5. Draw a cover for this menu.
6. Prepare and serve this menu.

WORDS YOU NEED TO KNOW

- abbreviation - ǎ brē vĭ ä'shŭn -- a short way to write a word
- add to - ǎd -- put with
- ade - ād -- a beverage that is made by mixing fruit juice with sugar and water
- adjust - ǎ jŭst' -- change to make right
- appearance - ǎ pēr'āns -- the way you look
- appetizer - ǎp'ē tiz'ēr -- a little food or drink served at the beginning of a meal
- assignment - ǎ sĭn'mĕnt -- work to be studied
- attractive - ǎ trāk'tĭv -- pretty
- automatic stove - ò tō māt'ĭk -- a stove that lights by turning a knob. You do not need a match, as the stove has pilot lights.
- backwards - bāk'wĕrdz -- with your back first
- bake - bāk -- to cook in the oven
- banana - bá nān'á -- a long fruit with a heavy yellow skin. The part you eat is soft, and has a creamy color.
- basic - bās'ĭk -- most important. A basic thing is something you must learn first, and then you can go ahead to make other things
- batter - bāt'ēr -- a mixture of flour, liquid, and other foods that can be stirred or poured
- beverage - bĕv'ēr ĭj -- something to drink
- biscuit - bĭs'ĭt -- a kind of bread baked in small shapes
- blade - blād -- the flat, thin part of the knife that is used for cutting
- boil - boil -- to make the liquid hot enough so that you see bubbles on the top

bowl of a spoon	- bōl -- the rounded part of the spoon which holds food or liquid
breakfast	- brĕk'fĕst -- the first meal of the day
broiler	- broil'ĕr -- the part of a stove where food can be cooked directly under the flame. There is nothing between the flame and the food
burner	- bŭr'nĕr -- the part of the top of the stove where the flame comes
butterscotch	- bŭt'ĕr skōch' -- a mixture of brown sugar and butter
butter spreader	- bŭt'ĕr sprĕd'ĕr -- a small knife given to each person for buttering bread or rolls
cabinets	- kĕb'i nĕts -- closets with shelves in them where you will keep your food and utensils
carbonated	- kĕr'bōn ĕt ĕd -- water that is made to bubble. You can see bubbles in it.
celery	- sĕl'ĕr i -- a vegetable that grows in stalks. It may be eaten raw or cooked.
cereal	- sĕr'ĕ ĕl -- food made from grain
china	- chĭ'nĕ -- all the dishes you use when you eat
chocolate	- chōk'ō lit -- a food that is sometimes used for flavoring
chopped	- chōpt -- cut into small pieces
cinnamon	- sĭn'ĕ mŭn -- a powder that is used as a spice or flavoring
cleanser	- klĕnz'ĕr -- the powder used to clean the sink
cocoa	- kō'kō -- ground chocolate with some of the fat removed. It is also the name given to the beverage made by cooking this powder with sugar and hot milk.
colander	- kŭl'ĕn ĕr -- a bowl with holes to let liquid drain off a food

concentrate	- kǒn' sě̃n trāt -- a food or beverage with some of the liquid taken out
condensed milk	- k' ǎnst' -- milk with some of the water removed and sugar added
container	- kǒn tān' ẽr -- anything that is used to hold something
cookie	- kōok' i -- a small, thin cake
core	- kōr -- the center of some fruits, like apples and pears. You do not eat the core. To core a fruit means to take out the center part
control	- kǒn trōl' -- a way to keep the temperature just as you want it
correct	- kǒ rěkt' -- right
cover	- kǔv' ẽr -- the flatware, china, glassware, and napkin to be used by one person
crack	- krāk -- break open
cream	- krēm -- to mix until soft and smooth
crisp	- krisp -- not soft; easily broken
dash	- dāsh -- a tiny bit, pinch
defrost	- dē frōst' -- to take away frost or ice
dessert	- dǐ zǔrt' -- something that is eaten at the end of a meal
detergent	- dē tǔr' jěnt -- a product that is like soap and is used for washing
devilled egg	- dǎv' ld ẽg -- hard-cooked egg, in which the yolk has been mashed with other food and put back into the hard-cooked white
dice	- dīs -- to cut into small pieces
dinner	- dǐn' ẽr -- the biggest meal of the day
dip	- dǐp -- to wet by putting into a liquid and lifting out

direction	- dĭ rĕk'shŭn -- a telling how to do something
dough	- dō -- a mixture of flour, liquid, and other foods that can be kneaded
drain in the sink	- drān -- the pipe in which the water goes down
to drain	- drān -- to pour off liquid
dressing	- drēs'ing -- a food or mixture of foods that is added to a salad to give it a certain flavor
eggnog	- ěg'nōg -- a beverage of eggs beaten with sugar, flavoring, and milk
electrical connections	- ě lĕk'trĭ kāl kō nĕk'shŭns -- all the wires on the electric stove
empty	- ěmp'tĭ -- to take everything out of
energy	- ěn'ēr jĭ -- the strength to do things
equal	- ě'kwāl -- the same
equipment	- ě kwĭp'mĕnt -- the big things you need, like the stove and refrigerator
equivalents	- ě kwĭv'ā lĕnts -- different ways to get the same amount of something
evaporated milk	- ě vāp'ō rāt ěd -- milk with some of the water removed
exactly	- ěg zākt'lĭ -- perfectly or just right
eye level	- ĭ lĕv'ĕl -- in a straight line with the eye
faucets	- fō'sĕts -- what you use to turn the water on or off in the sink
filling	- fil'ing -- what is put in
fizz	- fiz -- a beverage that bubbles up or makes a hissing sound
flatware	- flāt'wār -- the silverware that you eat with
flavoring	- flā'vĕr'ing -- anything that is added to a food to give a certain taste

flat surface	- flăt sŭr'fĭs -- smooth, straight part
fluffy	- flŭf'ĭ -- very soft and light
forefinger	- fŏr'fĭng ġēr -- the finger next to the thumb
fraction	- frăk'shŭn -- a part of something
freezer	- frēz'ēr -- a box that keeps food so cold that the food becomes hard
fried	- frĭd -- cooked in a little fat in a pan on top of the stove
fruit	- frŏot -- the part of certain plants that you can eat
garbage	- ġăr'bĭj -- any food or part of food that is not to be eaten
garnish	- ġăr'nĭsh -- something to make a dish of food look pretty
glassware	- ġlăs'wâr -- all the glasses you use when you eat
grain	- ġrăn -- the seeds of certain plants that can be eaten
granulated sugar	- ġrăn'ŭ lăt'ĕd -- grains of sugar that are the same size as grains of fine sand
grated cheese	- ġrăt'ĕd chēz -- cheese that has been rubbed against a prickly piece of metal to cut it into small bits
grease	- ġrēs -- any oil or fat
greased	- ġrĕst -- with fat put on
gumdrop	- ġŭm'drŏp -- a candy that is soft enough to chew
halves	- hăvs -- two parts the same size
handle	- hăn'd'ĭl -- the part of the pot that you hold when you pick up the pot
heaping	- hĕp'ĭng -- filled more than level

high heat	- hī hēt -- large. The heat is turned all the way on, and the unit gets very, very hot
homogenized milk	- hō mǒj'ē nīzd -- whole milk in which the cream does not separate from the milk
honey	- hūn'ī -- a sweet, sticky, yellow liquid made by bees
hostess	- hōs'tēs -- the girl who is in charge of the meal
information	- ĭn fōr mā'shūn -- the things you must know in the lesson
ingredients	- ĭn grē'dī ěnts -- foods used in a recipe
instruction	- ĭn strūck'shūn -- a telling of what you are to do
jam	- jām -- fruit boiled with sugar until it is thick and smooth
jello	- jěl'ō -- a kind of dessert that comes as a powder
juice	- jōos -- the liquid part of a food
knead	- nēd -- work or mix with the hands
knob	- nōb -- a handle to turn
layers	- lā'ērs -- one flat piece on top of another
lettuce	- lět'is -- a green leaf used in salads
level	- lěv'ěl -- flat and smooth
lime	- līm -- a small, sour, greenish-yellow fruit that grows on a tree
lip of a cup	- līp -- the part of the cup that bends out so that liquid will pour out without spilling
liquid	- līk'wīd -- anything that flows or pours
low heat	- lō -- little heat. The heat is turned on just a little

lumpy	- lŭmp' i -- sticking together of a food in bunches
lunch	- lŭnch -- a light meal served in the middle of the day
luncheon	- lŭn' chŭn -- a light meal served in the middle of the day
manners	- măn' ěrs -- the way you act
margarine	- mǎj' já rŭ -- a food made of fats and vegetable oils. It may be used instead of butter
marker lines	- mǎr' kĕr lĭnes -- lines to show where an exact measurement is
marmalade	- mǎr' mǎ lǎd -- fruit, fruit peelings, and sugar boiled together until thick. Marmalade is not smooth
marshmallow	- mǎrsh' mǎl' ō -- a soft, white candy covered with powdered sugar
mash	- mǎsh -- to beat smooth
mayonnaise	- mǎ ō nǎz -- a salad dressing made of egg yolks beaten with other food
meal	- mĕl -- the food you prepare to be eaten at one time
measurement	- mĕzh' ěr mĕnt -- a way of finding the size or amount of anything
medium heat	- mĕ' dĭ ŭm -- middle heat. The heat is not large or small. The heat is between high and low
melt	- mĕlt -- to change a solid to a liquid
membrane	- mĕm' brǎn -- a thin, soft covering or skin
menu	- mĕn' ŭ -- a list of foods to be served at one meal
mix	- mĭks -- to put together or to stir together
mixture	- mĭks' tŭr -- two or more things that are put together
muffin	- mŭf' in -- a quick bread made with egg

napkin	- nǎp'kǐn -- a piece of cloth or paper used at the table to keep your lips and fingers clean
nutmeg	- nŭt'mĕg -- a powder that is used for flavoring
oats	- ōts -- a grain which is used for food
objective	- ōb jĕk'tiv -- what you are going to learn
onion	- ŭn'yŭn -- a round vegetable that grows in the ground
order	- ôr'dĕr -- the way one thing follows another
package	- pāk'ij -- something that is wrapped and tied or sealed
palm of the hand	- pām -- the inside of the hand
paprika	- pǎ prĕ'kâ -- a red-colored powder that is sprinkled on some food to make it look attractive
pasteurized milk	- pǎs'tĕr ĭzd -- whole milk in which the cream separates from the milk
pat	- păt -- touch lightly to make flat
peanut butter	- pĕ'nŭt bŭt'ĕr -- a smooth, soft food made from peanuts
peel	- pĕl -- to take off the outside skin
perfect	- pŭr'fĕkt -- without any m'istakes
pilot light	- pī'lŭt lit -- the small flame that is always lit so that a burner can be turned on
pinch	- pĭnch -- very little -- as much as you can take between the finger and thumb
pit	- pĭt -- the seed of the fruit
plan	- plăn -- think of how to do something
pot holder	- pôt hōl'dĕr -- many small pieces of cloth sewed together, with which you pick up hot pots
pour	- pōr -- to make something flow

powdered milk	- pou'děrd -- milk with all of the water removed
powdered sugar	- pou'děrd -- white sugar that has been ground into a fine powder
practice	- praċk'tis -- to do the same thing over and over again
prepare	- pre pâr' -- to get ready
preserve	- pre zûrv' -- keep from spoiling
press	- pres -- push
prick	- priċk -- make a little hole
procedure	- pro sê'dûr -- the way to make something
product	- prođ'ukt -- something that is made
proper	- prop'ēr -- right, correct
pudding	- pood'ing -- a sweet, soft dessert with some kind of flour in it
punch	- pûnċh -- a drink made by mixing fruit juices and other liquids
raw	- rô -- not cooked
recipe	- res'i pē -- the way to make something to eat
refrigerator	- rê frij'ēr ā tēr -- a box to keep things cold
remove	- remōv' -- to take away
rinse	- rins -- to wash in clean water
roll	- rōl -- turn over and over again
rubber scraper	- rûb'ēr skrāp'ēr -- a utensil with a flat piece of rubber on a handle
safety	- sâf'ti -- carefulness for yourself and others so that no one will get hurt

salad	- sál'ád -- food, usually cold, that is served with a dressing
sandwich	- sǎnd'wich -- two or more slices of bread with other food between them
saucer	- sô'sěr -- a small dish on which a cup is set
scald	- skôld -- to heat just below the boiling point
scrambled	- skrām'b'ld -- mixed together
scrape	- skrāp -- to clean off
sections	- sěk'shŭns -- parts of the fruit that can be cut apart
seeds	- sēds -- the little pits or stones in some fruits
select	- sē lěkt' -- pick out
separate	- sěp'á rāt -- to come apart or to break into parts
serving plate	- sŭrv'ing plat ... a plate of food that is passed to each person. You take some food from the serving plate and put it on your own plate. You do not eat from a serving plate
shake	- shāk -- to move up and down quickly
shallow	- shál'ō -- not deep
shell	- shěł -- the hard, outside covering
sherbet	- shŭr'bět -- a frozen dessert made of fruit juice, sugar, water, and egg white
shortening	- shôrt'ning -- a fat used in cooking
sift	- sŭft -- to put through a screen to keep any big pieces away from the little pieces
silverware	- sil'ver wār -- all the knives, forks, and spoons you use when you eat
simmer	- sim'ēr -- to cook slowly on top of the stove. Keep the liquid just under the boiling point. You see tiny bubbles around the edge of the liquid

skim milk	- skĭm -- milk with the cream taken out
skin	- skĭn -- a covering
slice	- slĭs -- to cut across in thin, flat pieces
slit	- slĭt -- opening
smooth	- smōoth -- without lumps or bumps
snack	- snāk -- a small amount to eat at one time
soak	- sōk -- to keep wet
soften	- sōf' ěn -- make something so that it can be mixed easily
soiled	- soil' d -- dirty
solid	- sōl' ĭd -- anything that is firm and will not flow
sour	- sour -- not sweet
sour milk	- sour -- milk that has spoiled. It does not taste good to drink, but is sometimes used in cooking.
spatula	- spăt' ũ lă -- a flat utensil that can bend. It looks like a knife, but it is not sharp
spic and span	- spĭk and spăn -- neat and clean
spill	- spĭl -- to drop food or liquid
sprinkle	- sprĭng' k' l -- to drop something in small bits
squeeze	- skwēz -- to press hard
stack	- stāk -- to put the dishes one on top of the other in a neat way
stained	- stānd -- soiled or dirty
stem	- stēm -- the part that holds the fruit to the plant or tree
stew	- stū -- boil slowly c simmer

- sticky - stik' i -- making things hold together
- stir - stur -- mix or move with a spoon
- strain - stran -- press through a strainer to keep out little pieces, so that you will have only liquid
- stuffed - stuft -- filled
- supper - sup'er -- a light meal in the evening, when dinner is eaten in the middle of the day
- surface units - sur' fīs ū' nits -- the burners on top of the stove
- switch - swich -- the thing you use to turn the refrigerator on or off
- syrup - sir' ūp -- a sticky or thick liquid made of sugar and other food
- tapioca - tap' i ō' ká -- a food used in puddings. It helps to thicken the pudding
- taste - tast -- the feeling you get when food is in the mouth. The taste may be sweet, or sour, or bitter, or salty.
- temperature - tēm' pēr á tūr -- how hot or cold
- thickened - thik' end -- made more solid
- tidy - tidī -- neat
- tight - tit -- firm or hard, so that no food can spill out
- tines tins - the points of a fork
- toast - tost -- bread that is made brown by heating
- tough - tuf -- not easy to chew
- ungreased - un grēst' -- with no fat
- uniforms - ū' ni fōrms -- dresses that look alike and are worn by each girl in class

unit	- ũ 'nít -- one part of the classroom
unsweetened	- ũn swēt'hd -- not sweet
utensils	- ũ tēn'sils -- tools used in the kitchen
vanilla	- vá nil'á -- a flavoring made from the beans of the vanilla plant
vegetable	- vēj'ē tā b'l -- a plant or part of a plant that is used for food
vitamins	- vī'tā minz -- things found in foods that are needed to keep us well and strong. Different vitamins are found in different foods.
vocabulary	- vō káb'ū lēr i -- words and their meanings that you will learn
walnut	- wól'nūt -- a large nut with a rough shell
wax paper	- wāks pā'pēr -- paper that has a coating of wax to keep food from soaking through
whipped cream	- hwipt krēm -- cream that has been beaten with a beater to make it thick
work space	- wūr ^o k spās -- the counter on which you will prepare your food
yolk	- yōk -- the yellow part of an egg

UNIT I - ACHIEVEMENT TEST

True or False

1. Your uniform must always be neat and clean.
2. When you put on your uniform, it is all right to leave your dress on the back of the chair.
3. Carry your comb with you in cooking class.
4. You do not have to wash your hands after using a handkerchief.
5. Keep your books on your work space.
6. Only wipe your work space when you are all finished.
7. Get out all utensils and food needed before you start to cook.
8. Sweep the floor before you wash dishes.
9. Look around before you walk with any food.
10. It is all right to use the dish cloth to lift a hot pan.

11. Always turn pot handles toward the inside of the stove.
12. Do not stir hot foods with a wooden spoon.
13. Always cut towards you.
14. Wash sharp knives with the other utensils.
15. Soak dishes with milk, egg, or flour in hot water.
16. Wash only a few dishes at a time.
17. Always wash glassware first.
18. Steel wool is used to wash china.
19. Use the same dish towel for one week.
20. Baking soda is used to clean the refrigerator.

UNIT II - USE AND CARE OF EQUIPMENT

ACHIEVEMENT TEST

True or False

1. Do not put any dishes in the sink while you are cooking.
2. Keep sharp-edged tools away from other utensils.
3. Pour the grease you do not want into the sink.
4. Push small pieces of garbage down into the drain.
5. Use cleanser to clean the sink.
6. Keep the cover of the garbage can closed.
7. Put broken glass and tin cans in the garbage cans.
8. Drain off liquid before you put garbage in the garbage can.
9. It is all right to put warm food in the refrigerator.
10. The coldest part of the refrigerator is near the freezer.

11. Leave the switch on while you clean the refrigerator.
12. Use baking soda in warm water to clean the inside of the refrigerator.
13. The pilot lights in a gas stove must be lit, or you cannot light the stove.
14. Leave the match box open while you strike the match.
15. Strike a match away from you.
16. Throw the burned match in the garbage can, as soon as you are finished with it.
17. Food will cook faster if the flame goes around the pan.
18. The best gas flame is yellow.
19. An electric burner gets hot faster than a gas burner.
20. Food will boil over or burn if the burner is too high.
21. The burners on an electric stove stay hot for some time after the burner is turned off.

UNIT III - MEASUREMENTS AND ABBREVIATIONS

ACHIEVEMENT TEST

True or False

1. A metal measuring cup is used for dry ingredients.
2. Some liquid ingredients are flour, sugar, and salt.
3. All measurements should be level.
4. Measure liquids first, then fats, then dry ingredients.
5. A spatula is used to level off dry foods.
6. A recipe tells you how to make something to eat.
7. Always sift flour two times.
8. Measure the flour after you sift the flour once.
9. Be sure to pack the flour down in the cup.
10. All measurements must be perfect.

11. You do not have to have the measuring cup at eye level to measure liquid ingredients.
12. Butter is a liquid fat.
13. To measure $\frac{1}{3}$ cup of fat, you need $\frac{2}{3}$ cup of water.
14. To measure $\frac{3}{4}$ cup of fat, you need $\frac{1}{2}$ cup of water.
15. When you measure fat, the water must cover the fat.
16. Write the abbreviations for these words:

teaspoon
 cup
 temperature
 tablespoon
 baking powder
 pound
 quart
 minute
 pint
 hour

17. Write the equivalents for these measurements:

1 tablespoon = _____ teaspoons
 1 cup = _____ tablespoons
 1 pint = _____ cups
 1 pound of fat = _____ cups of fat
 1 egg = _____ tablespoons

UNIT IV - TABLE MANNERS, TABLE SETTING, AND TABLE SERVICE

ACHIEVEMENT TEST

True or False

1. Wash your hands before you start to eat.
2. Rest your elbows on the table while you are waiting to eat.
3. Start to eat as soon as you sit down at the table.
4. Never blow your food to make it cool.
5. Put as much food in your mouth as you can at one time.
6. Never talk with food in your mouth.
7. Keep your mouth closed when you are chewing food.
8. Bend your head to your food, while eating.
9. Butter the whole slice of bread, then break off a piece to eat.
10. It is all right to put your knife in your mouth.
11. When you are finished eating, put your soiled silverware on the table.
12. The sharp edge of the knife is always toward you.
13. Place only the flatware that is needed, on the table.

14. The plate, flatware, and napkin are placed at the edge of the table.
15. Hold the top of the glass when serving a beverage.
16. Stack soiled dishes at the table, then carry them away.

Fill in the blanks

1. The flatware, china, glassware, and napkin to be used by each person is called a _____.
2. The knife is placed to the _____ of the plate.
3. Spoons go to the right of the _____.
4. The bowls of the spoons are turned _____.
5. Forks are placed to the _____ of the plate.
6. All flatware should be _____ from the edge of the table.
7. The water glass is placed just above the _____.
8. A cup and saucer are placed to the right of the _____.
9. A bread-and-butter plate is placed above the _____.
10. Use a _____ to carry the dishes, flatware, and glasses to the table.
11. The napkin is placed to the left of the _____.
12. Serve and take away all food from the _____ side of the guest.
13. Use your _____ hand to serve all food.
14. Serve and take away all beverages from the _____ side of the guest.
15. Use your _____ hand to serve beverages.

UNIT V - BEVERAGES

ACHIEVEMENT TEST

1. Match the following:

- | | |
|-------------------------|--|
| ___ 1. Fruitade | a. whole milk in which the cream separates from the milk |
| ___ 2. Fruit fizz | b. milk with some of the water removed and sugar added |
| ___ 3. Homogenized milk | c. a beverage made by mixing fruit juice with sugar and water |
| ___ 4. Skim milk | d. the liquid that is left after butter is made |
| ___ 5. Condensed milk | e. milk with all of the water removed |
| ___ 6. Milk shake | f. a beverage of fruit juice, sugar, water, and carbonated water |
| ___ 7. Pasteurized milk | g. milk with another food beaten into it |
| ___ 8. Buttermilk | h. whole milk in which the cream does not separate from the milk |
| ___ 9. Evaporated milk | i. milk with the fat taken out |
| ___ 10. Powdered milk | j. milk with some of the water removed |

2. Name the following utensils:

228

UNIT VI - TOAST

ACHIEVEMENT TEST

Match the following:

- | | | |
|-----|---------------|--|
| ___ | 1. broiler | a. two or more slices of bread with other food between them |
| ___ | 2. jam | b. a small amount to eat at one time |
| ___ | 3. marmalade | c. the first meal of the day |
| ___ | 4. snack | d. a sweet, sticky, yellow liquid made by bees |
| ___ | 5. shortening | e. bread that is made brown by heating |
| ___ | 6. honey | f. fruit boiled with sugar until it is thick and smooth |
| ___ | 7. breakfast | g. the food you prepare to be eaten at one time |
| ___ | 8. sandwich | h. a fat that is used in cooking |
| ___ | 9. toast | i. the part of the stove where food can be cooked directly under the flame |
| ___ | 10. meal | j. fruit, fruit peelings, and sugar boiled together until thick |

Fill in the cover with the things you would use to serve French toast and cocoa.

Prepare and serve cinnamon toast and chocolate milk shake for two people.

UNIT VII - FRUIT
ACHIEVEMENT TEST

Match the following:

- | | |
|---------------------|---|
| ___ 1. raw fruit | a. things found in foods that are needed to keep us well and strong |
| ___ 2. canned fruit | b. the seedy part in the middle of some fruit |
| ___ 3. dried fruit | c. fruit that you buy just as it is grown |
| ___ 4. frozen fruit | d. boil slowly or simmer |
| ___ 5. vitamins | e. food that is preserved in a liquid, sometimes with sugar added |
| ___ 6. colander | f. filled with something |
| ___ 7. core | g. fruit with the water taken out |
| ___ 8. stuffed | h. a bowl with holes to let the liquid drain off |
| ___ 9. stew | i. cook in the oven |
| ___ 10. bake | j. fruit that is preserved by keeping it hard and cold |

True or False

- ___ 1. Top reserve fruit means to keep it from spoiling.
- ___ 2. Large fruit is washed in a colander.
- ___ 3. The color and flavor of fruit changes when fruit is cooked too long.
- ___ 4. If a fruit is pitted, it means that the pit has been taken out.
- ___ 5. Always peel the apple when you make baked apples.
- ___ 6. Halved fruit is fruit that is cut in small pieces.
- ___ 7. Fruit juice may be served as an appetizer.
- ___ 8. Fresh fruit on lettuce is called a garnish.
- ___ 9. Lunch is the biggest meal of the day.
- ___ 10. Dessert is eaten at the end of a meal.

UNIT VIII - CEREALS AND QUICK BREADS

ACHIEVEMENT TEST

True or False

- ___ 1. Whole grain cereals are the best for you.
- ___ 2. Ready-to-eat cereals should be crisp.
- ___ 3. Cooked cereals should be lumpy.
- ___ 4. Never cook cereal with milk.
- ___ 5. Baking powder biscuits do not change in size during baking.
- ___ 6. The top of a baking powder biscuit is smooth.
- ___ 7. Always open a biscuit with a knife.
- ___ 8. The crust of a muffin should be thick.
- ___ 9. Cold shortening is used for a dough.
- ___ 10. Baking powder biscuits and muffins are basic recipes.

Match the following:

- | | |
|----------------------------|--|
| ___ 1. cereal | a. work or mix with your hands |
| ___ 2. greased | b. mixture of flour, liquid, and other foods that can be kneaded |
| ___ 3. cheese biscuits | c. utensil used to cut shortening into flour |
| ___ 4. knead | d. with no fat |
| ___ 5. meaning of "batter" | e. food made from grain |
| ___ 6. jelly muffins | f. a food made from dough |
| ___ 7. butterscotch | g. mixture of flour, liquid, and other foods that can be stirred or poured |
| ___ 8. ungreased | h. with fat put on |
| ___ 9. meaning of "dough" | i. a food made from batter |
| ___ 10. pastry blender | j. a mixture of brown sugar and butter |

UNIT IX - EGGS

ACHIEVEMENT TEST

True or False

- 1. We should eat at least four or five eggs every week.
- 2. Eggs are served only for breakfast.
- 3. Eggs with a white shell are better than eggs with a brown shell.
- 4. Eggs should be kept cold.
- 5. The yolk is the white part of the egg.
- 6. Cook eggs over a high flame.
- 7. Eggs served on a plate should be eaten with a fork.
- 8. When cooking eggs in the shell, be sure the eggs are covered with water.
- 9. Put hard-cooked eggs in cold water as soon as they are cooked.
- 10. Serve devilled eggs while they are hot.

Match the following:

- | | |
|---|--|
| <input type="checkbox"/> 1. soft-cooked egg | a. egg cooked in a little fat in a frying pan |
| <input type="checkbox"/> 2. scrambled egg | b. egg cooked in water for 3 to 5 minutes |
| <input type="checkbox"/> 3. hard-cooked egg | c. hard-cooked egg in which the yolk has been mashed with other food |
| <input type="checkbox"/> 4. fried egg | d. egg beaten with milk and cooked in a little fat in a frying pan |
| <input type="checkbox"/> 5. devilled egg | e. egg cooked in water for 20 minutes |

UNIT X - SIMPLE BREAKFASTS

ACHIEVEMENT TEST

True or False

- 1. A menu is a list of the food to be served at one meal.
- 2. You must know the menu before you set the table.
- 3. Always be sure to put all the food on the table at the same time.
- 4. The first thing you do, when you are going to make a breakfast, is to prepare the food.
- 5. Always set a knife, fork, and spoon for each person.
- 6. Serve cooked cereal while it is hot.
- 7. Fruit cup may be prepared ahead of time, and kept in the refrigerator.
- 8. Always serve a sharp knife with biscuits.

UNIT XI - COOKIES
ACHIEVEMENT TEST

True or False

- 1. Turn on the oven after the ingredients in a recipe are mixed together.
- 2. Half an egg is the same as 2 T. of beaten egg.
- 3. A dash of salt is about the same as $\frac{1}{4}$ tsp. of salt.
- 4. Grease the baking sheet so that the cookies will not stick to the sheet.
- 5. To cream the shortening means to mix it until it is soft and smooth.
- 6. The baking sheet should not touch the sides of the oven.
- 7. Pile cookies on a cake rack to cool.
- 8. Measure nuts before they are chopped.
- 9. To measure $\frac{2}{3}$ C. of shortening, you use $\frac{1}{2}$ C. water.
- 10. Use a glass measuring cup to measure raisins.

UNIT XII - SANDWICHES

ACHIEVEMENT TEST

Fill in the blanks.

1. Two or more slices of bread with food in between is called a _____.
2. Three kinds of bread that may be used for sandwiches are _____, _____, and _____.
3. Bread must be _____ for a sandwich.
4. For fancy sandwiches, cut slices of bread into shapes with _____.
5. Spread each slice of bread with _____ or _____.
6. If sandwiches are not to be eaten right away, wrap each sandwich in _____.
7. A sandwich should be cut into _____ or _____ parts before it is served.
8. To _____ means to cut into little pieces.
9. Celery, onions, and lettuce are _____.
10. Mash cream cheese with a _____.

UNIT XIII - SIMPLE DESSERTS

ACHIEVEMENT TEST

Match the following:

- | | | |
|-------|------------|--|
| _____ | 1. jello | a. a sweet, soft dessert with some kind of flour in it |
| _____ | 2. pudding | b. a food used in puddings |
| _____ | 3. tapioca | c. a dessert that has been made into a powder |

UNIT XIV - SIMPLE LUNCHEONS

ACHIEVEMENT TEST

True or False

- 1. Lunch and luncheon mean the same thing.
- 2. Always put a knife on the table when serving a sandwich.
- 3. It is all right to put a cookie jar on the table for lunch.
- 4. A cover is all the flatware, china, and glassware on the table.
- 5. Serve the food for each person from the right of the person.
- 6. Plan how much food you will need before you start to prepare a meal.
- 7. Be sure to know how many people your recipe will serve before you make the food.
- 8. Put a spoon at each cover if you are serving cocoa.
- 9. When you are finished eating, stack your dishes at the table.
- 10. Leave the table as soon as you are finished eating.

ACKNOWLEDGMENTS

This publication was developed by a group of instructors and tradesmen attending a workshop held on the campus of Mississippi State University on April 7 and 8, 1967. The group, called a Curriculum Committee, took the traditional approach and developed an analysis for the trade. The trade was systematically broken into its major segments, called blocks, and then into the basic manipulative tasks, called operations. Next, typical on-the-job activities, which contained the operations, were listed to give the trainee experience in useful and productive work. Then, informational topics which, when understood by the tradesman, would contribute to the intelligent use of his skills, were identified by the committee. Finally, the equipment, tools, and supplies necessary for training were listed.

The members of the Curriculum Committee are to be commended for their efforts and their cooperative attitude in the development of this basic plan.

The Committee was composed of:

H. M. Cook, Instructor, Hinds Junior College, Raymond
L. H. Holt, Instructor, Meridian Junior College, Meridian
C. F. Moore, Instructor, Holmes Junior College, Goodman
Herman Ray Nelson, Instructor, Hinds Junior College, Raymond
James J. Petrik, Instructor, Gulfport East High School, Gulfport
E. K. Rushing, Instructor, Mississippi Delta Junior College, Moorhead

This publication will serve as the starting point for the development of instructional materials to be used by the trade instructor.

HOW TO USE THIS PUBLICATION

As a tool for teaching, this publication is primarily designed for use in planning, preparing, presenting, and evaluating instruction. As a tool, it lists operations, jobs, and informational topics--with the job as the focal point. Each job should be assigned to students, either as a group, a subgroup, or individually. The following procedure is recommended as an effective teaching sequence.

Step I. -- Tell how the job is done.

Give a full explanation of the steps necessary to perform the job. Emphasize the proper sequence; stress techniques requiring special care; point out the hazards to persons and the equipment.

Step II. -- Show how the job is done.

Demonstrate the proper procedure for performing the job. Re-emphasize the sequence, techniques, and hazards. Make sure each student can see what is being done and understands the steps.

Step III. -- Have the student do the job.

Assign each student the task of applying what he has just learned. Supervise his work; correct any variation from proper procedure or any hazardous techniques. Re-explain when necessary.

Step IV. -- Check the student for proficiency.

Assign a similar job to the student to be performed independently. Observe his work and examine the completed product or service. He is proficient when he can perform the job without supervision in a prescribed length of time.

Students who have demonstrated proficiency in one job move to the next job. The teaching steps *tell, show, do, check* are used again. Students who are not proficient perform additional jobs of a similar nature and are retaught in weak areas.

Additionally, this publication can be used (1) by the director and the instructor in a local program in communicating with their craft committee, (2) by the local director in supervising instruction and program operation, and (3) by the state supervisory staff in communicating with local school administrators and in supervising the operation of local programs.

RADIO AND TELEVISION SERVICE AND REPAIRMAN

The radio and television service and repairman uses electronic testing instruments, such as ohmmeters, voltmeters, oscilloscopes, multimeters, and signal or cross bar generators. His hand tools include pliers, screwdrivers, metal snips, punches, hammers, electric soldering equipment, drills, vises, and hacksaws.

He locates the source of trouble in a radio or television receiver by first tuning it on various channels and wave bands to observe noises, non-lighting or heating of tubes, picture aberrations, and other interferences. He tests and replaces tubes where necessary and adjusts controls.

Minor adjustments, replacements, and repairs are done in the home or place of business of the customer. When extensive testing and major servicing are indicated, the serviceman takes the receiving set to the shop where, with the chassis removed from the cabinet, he visually checks for apparent defects; inspects wiring and solders loose connections; looks for discoloration, scale, or corrosion on condensers, resistors, and transformers which might indicate defective parts. Following a schematic diagram and using his electronic instruments, he tests voltages and resistances of circuits to isolate defects. Using his hand tools, he repairs and/or replaces defective capacitors, resistors, selection rectifiers, filters, transformers, and other faulty parts. He makes final adjustment of controls to obtain the desired density, linearity, focus, color convergence, and size of picture.

The television serviceman also installs antennas, selecting the antenna appropriate for the type of receiving set and the location of the transmission station. He bolts crossarms and elements in position and uses brackets and guy wires to secure the assembled antenna in place, observing insurance codes and local ordinances. After connecting the antenna to the receiving set, he orients the antenna and installs a reflector to obtain the strongest possible signal reception and checks the receiving set on all channels for desired results.

Detailed description may be found in the Dictionary of Occupational Titles, third edition, under TELEVISION SERVICE-AND-REPAIRMAN (any ind.) 720.281, and TELEVISION-INSTALLATION MAN (any ind.) 823.781.

COURSE DESCRIPTION

GENERAL OBJECTIVES

To develop knowledges and skills that make the trainee a radio and television repairman employable on a beginner's level.

ASSUMPTIONS

1. That those enrolling in training have had little or no previous experience in electronic or radio and television work.
2. That trainees have a nontechnical background in general science.
3. That they need additional instruction in the fundamentals of mathematics.

DESIRABLE PREREQUISITES

1. That trainees have a vocational commitment to electronics, radio and television trade.
2. That trainees have a general mechanical and electrical aptitude.
3. That they have had a course in general mathematics or algebra, but need additional instruction in arithmetic, simple algebra, and plane geometry and trigonometry.

NATURE OF TRAINING

1. The duration of training is normally three hours per day, five days per week, thirty-six weeks per year for two years; or, six hours per day, five days per week, thirty-six weeks per year for one year -- a total of 1080 clock hours of training.
2. Related instruction by lecture, demonstration, the use of audiovisuals, etc. immediately precedes application by the trainee in shop practice; instruction and its application are correlated as closely as possible at all times; and the major allotment of time is given to the development of manipulative skills.
3. No instruction directly related to the trade is offered outside the shop.

CONTENT OF THE RELATED INSTRUCTION

1. Detailed coverage of the following areas: radio, black-and-white television, and color television
2. Detailed coverage of soldering; use and care of hand tools; use, care, and adjustment of test instruments and equipment
3. Broad coverage of f-m receivers, recorders, record changers, and antennas
4. A strong emphasis on safety practices and processes and on work hazards
5. An explanation of fundamental information in basic electronics, radio, and television
6. The reading of schematics with emphasis on the use of manufacturer's specifications for the voltage, current and resistant valves, waveforms, measurement procedures and the interpretations of symbols for the radio and television field
7. The definition and spelling of trade terms applicable to the electronics, radio and television trade
8. Instruction in mathematics, such as arithmetic, simple algebra, plane geometry, and trigonometry, as applicable to the radio and television trade

TYPES AND LEVELS OF SKILLS TO BE DEVELOPED

1. Immediate marketable skills in the troubleshooting of electrical circuits and the repair of radio and television sets
2. Basic manipulative skills in soldering, assembling, and disassembling of electronic components in both hand-wired and printed circuitry

INSTRUCTIONAL BLOCKS

The following blocks are the major areas of instruction. Each has been assigned a number of hours for the purpose of indicating the relative amount of emphasis it is to receive in the total training period. Instructors are urged to plan training carefully, to select, sequence, and assign learning experience, thus making maximum use of available time. It should not be inferred that hour allotments be rigidly adhered to or that students be rotated on a clockwork or calendar basis. On the contrary, the emphasis is on individual proficiency. It is likely that students of lesser ability will require longer periods in certain areas. These students may gain only the minimum proficiencies while more able students will progress more rapidly and engage in many enriching experiences. Consequently, the planning, sequencing, and allotting are not designed to standardize programs, but to assist local teachers in planning more carefully and in conducting their instruction more carefully.

INSTRUCTIONAL BLOCKS

	Contact Hours
I. FUNDAMENTALS OF ELECTRONICS	390
II. RADIO	150
III. BLACK-AND-WHITE TELEVISION	360
IV. COLOR TELEVISION	180
	<hr/>
Total Hours	1080

ANALYSIS OF OPERATIONS

I. FUNDAMENTALS OF CONSTRUCTION

A. Soldering and splicing

1. File the tip of a soldering gun, pencil, or iron with a single-cut, flat-blade file
2. Tin the tip of a soldering gun, pencil, or iron
3. Tin the end of a strand of solid wire
4. Solder resistor leads with a soldering gun
5. Solder resistor leads with a soldering iron
6. Solder transistor leads with a soldering pencil
7. Splice and solder two pieces of hook-up wire together
8. Disconnect resistors from a chassis, using a soldering pencil, gun, or iron
9. Disconnect resistors from a printed circuit, using a soldering pencil
10. Replace tip on soldering gun
11. Disassemble components, using a soldering gun with solder vacuum attachment
12. Solder components, using a soldering pencil and heat sink
13. Solder heavy wire to the chassis, using a soldering gun and rosin core solder
14. Assemble and disassemble components, using right-angle pliers and a soldering gun
15. Assemble and disassemble components, using right-angle pliers and a soldering gun

B. Hand tools

1. Cut and remove components from a chassis, using diagonal pliers
2. Cut heavy wire with lineman's side-cutting pliers
3. Assemble and disassemble components with a flat-blade screwdriver
4. Assemble and disassemble components with a Phillips screwdriver
5. Cut light stock with a hacksaw
6. Remove and install screw and nuts with a spintite or socket wrench
7. Remove or install nuts and bolts with an adjustable wrench
8. Remove and install set screws with an allen wrench
9. Mark a center with a center punch and a hammer
10. Sharpen a twist drill

11. Drill holes in aluminum stock with a hand drill and twist drill
12. Drill holes in chassis or wood with twist drills and an electric drill
13. Cut a square hole in sheet metal with a square-hole punch
14. Cut a round hole in sheet metal with a round-hole punch
15. Measure the gage of a wire with a wire gage
16. Strip the insulation from wire with wire strippers
17. Sharpen a screwdriver blade with a file or grinder
18. Replace a hacksaw blade

II. METERS AND TEST EQUIPMENT

A. Volt-ohm-milliammeter (VOM)

1. Zero-adjust an ohmmeter
2. Measure d-c voltage with a VOM
3. Measure a-c voltage with a VOM
4. Measure d-c current with a VOM
5. Measure d-c current with a VOM (10-amp range)
6. Measure d-c current with a VOM (microamps)
7. Measure resistance with a VOM

B. Vacuum tube voltmeter (VTVM)

1. Zero-adjust a VTVM
2. Measure d-c voltage with a VTVM
3. Measure a-c voltage with a VTVM
4. Measure a-c, peak-to-peak voltage with a VTVM
5. Measure resistance with a VTVM

C. Basic measurements and checks with VOM and/or VTVM

1. Measure the plate voltage of a tube with a VOM
2. Measure the plate voltage of a tube with a VTVM
3. Measure the control-grid voltage of a tube with a VOM
4. Measure the control-grid voltage of a tube with a VTVM
5. Measure the screen-grid voltage of a tube with a VOM
6. Measure the screen-grid voltage of a tube with a VTVM
7. Measure the suppressor-grid voltage of a tube with a VOM
8. Measure the suppressor-grid voltage of a tube with a VTVM

9. Measure the forward and reverse resistance of a selenium rectifier with a VOM
10. Measure the forward and reverse resistance of a selenium rectifier with a VTVM
11. Measure the forward and reverse resistance of a diode with a VOM
12. Check capacitor for shorts with VOM or VTVM
13. Check capacitor for leaks with VTVM or VOM
14. Check capacitor for opens with VTVM or VOM
15. Check transformers for open circuit with VTVM or VOM
16. Check a transistor with VOM

D. Wide-band oscilloscope

1. Set up oscilloscope to identify a waveform or trace a signal
2. Set up an oscilloscope to measure voltage
3. Check frequency and phase
 - a. Check phase relationships with an oscilloscope
 - b. Determine an unknown frequency with an oscilloscope
 - c. Check modulation waveform with an oscilloscope
4. Use oscilloscope probes
 - a. Trace waveforms with an oscilloscope and demodulator probe
 - b. Determine an unknown frequency with an oscilloscope
 - c. Trace a signal, using the oscilloscope and low-capacity probe

E. Field-strength meter

1. Locate maximum signal for antenna with aid of field-strength meter
2. Adjust signal booster for maximum signal with aid of field-strength meter
3. Check antenna and lead-in installations with aid of field-strength meter

F. Capacitance checker

1. Check an electrolytic capacitor with a capacitor checker for leaks, shorts, opens
2. Check a ceramic capacitor with a capacitor checker for leaks, shorts, opens
3. Check a paper capacitor with a capacitor checker for leaks, shorts, opens

G. Tube tester

1. Test rectifier tubes
2. Test pentagrid tubes
3. Test tetrode tubes
4. Test pentode tubes
5. Test triode tubes
6. Test multisection tubes

H. Signal generator, r-f

1. Set the generator for rf
2. Set the generator controls for modulated rf
3. Set the generator controls for audio frequency (af)
4. Set the generator controls for sweep rf

I. Transistor checker

1. Check transistors for shorts
2. Check transistors for leaks
3. Check transistors for gain

J. Analyst

1. Check the flyback transformer for shorted turns
2. Substitute signals with an analyst
3. Set the analyst for r-f output signal
4. Set the analyst for video output signal
5. Set the analyst for i-f output signal
6. Set the analyst for audio output signal
7. Set the analyst for f-m (4.5) output signal
8. Set the analyst for color-bar pattern output signal
9. Set the analyst for dot-pattern output signal
10. Set the analyst for crosshatch-pattern output signal
11. Set the analyst for horizontal-pattern output signal
12. Set the analyst for vertical-pattern output signal
13. Set the analyst for sync-pulse output signal
14. Set the analyst for vertical-sweep output signal
15. Set the analyst for horizontal-sweep output signal
16. Check the boost voltage

K. Marker generator

1. Calibrate the marker generator
2. Select proper frequencies for marking a band

L. Sweep generator

1. Select frequency for a band
2. Adjust band width
3. Adjust attenuation

M. Marker adder

1. Produce a waveform for alignment of a broad-band amplifier, using a sweep generator, marker, and marker adder and an oscilloscope
2. Combine two waveforms with a marker adder

N. Color bar/dot/crosshatch generator

1. Use the crosshatch generator to set up linearity and size in the absence of a test pattern
2. Use the crosshatch generator of dot-bar generator to generate the following patterns
 - a. Dot
 - b. Vertical bars
 - c. Horizontal bars
 - d. Vertical and horizontal bars simultaneously

O. CRT checker: Check the CRT tube

AN EXPLANATION OF TERMS AS THEY ARE USED IN THE SUGGESTED JOBS

A trainee must possess a thorough understanding of the electrical and electronic fundamentals before he can become a competent repairman in the trade.

All of the jobs listed in Part I may not be of the same type that a trainee would perform in industry. However, performance of these jobs and a strong background in the theory of electrical and electronic fundamentals will enable the trainee to become proficient in the radio-television field.

To avoid needless and meaningless repetition, "jobs" of "check and/or replace components" have been omitted under each heading, except where the component is unique or exceptionally important to that circuit. To avoid the impression that there is a complete omission of service to these components, a typical list is given as the first division of Part II.

A review of the listings of jobs in Parts II, III, and IV reveals that the words "build" or "assemble" and "troubleshoot" are frequently used. A word of explanation will show that this frequent use is justified.

First, building or assembling one or more of the representative types of circuits within radios and televisions acts as a focal point for the trainee. He gains not only basic skills, but also an understanding of the place and function of each component within the circuit. Two types of circuit construction are encouraged: (1) The trainee should construct the circuit by mounting and soldering to develop a high degree of skill; (2) he should use the technique of breadboarding and make use of kits to reduce construction time.

Second, employment within the trade calls for constant troubleshooting, which is a systematic, logical approach to determining any fault in the operation of equipment. Thus, the full troubleshooting procedure will involve four steps:

1. Determine the symptoms through customer complaints and/or observing and listening to the unit.
2. Localize the trouble to a functional block or unit, using test instruments.
3. Isolate the specific circuit within the block or unit.

4. Locate the specific trouble within the circuit by testing each component.

The broad use of the term troubleshooting will be applied when dealing with an entire unit, in which case it will be necessary to include all four steps of procedure, as in each of the following jobs:

- a. Troubleshoot a dead a-m receiver.
- b. Troubleshoot a distorted a-m receiver.

On the other hand, when dealing with a specific circuit, it will be assumed that steps 1, 2, and 3 above have been performed. In such an instance, troubleshooting would involve only the testing of each component within a specific circuit. For example:

- a. Troubleshoot the audio circuit
- b. Troubleshoot the r-f circuit.

I. SUGGESTED JOBS IN ELECTRICAL AND ELECTRONIC FUNDAMENTALS

A. Ohm's law

1. Assemble a series circuit
2. Assemble a parallel circuit
3. Assemble a series-parallel circuit

B. Meters

1. Construct a circuit for measuring voltage
2. Construct a circuit for measuring d-c current
3. Construct an ohmmeter

C. Inductance

1. Wind a coil with an air core
2. Wind a coil with a ferrous core
3. Wind two coils and connect them in series
4. Wind two coils and connect them in parallel

D. Transformers

1. Construct a step-up transformer with 2:1 turns ratio
2. Construct a step-down transformer with 2:1 turns ratio

E. Capacitance

1. Construct a series capacitive circuit
2. Construct a parallel capacitive circuit

F. Time constant and resonance

1. Construct a series RC circuit
2. Construct a parallel RC circuit
3. Construct a series RL circuit
4. Construct a parallel RL circuit
5. Construct a series RLC circuit
6. Construct a parallel RLC circuit

G. Vacuum tubes

1. Construct a circuit, using a diode tube to determine the static or dynamic characteristics of the tube
2. Construct a circuit, using a triode tube to determine the grid cutoff

6. Build a voltage doubler power supply
7. Build an a-c/d-c power supply for a portable radio
8. Troubleshoot power supplies
9. Check and/or replace filter circuit components

H. Troubleshooting

1. Troubleshoot a dead a-m receiver
2. Troubleshoot a weak a-m receiver
3. Troubleshoot a distorted a-m receiver
4. Troubleshoot an intermittent a-m receiver
5. Troubleshoot a noisy a-m receiver
6. Troubleshoot a receiver for hum
7. Troubleshoot an a-m receiver that squeals or motorboats

I. F-M radio

1. Signal-trace f-m receiver
2. Install an f-m tuner
3. Align the i-f stages
4. Align the detector stage
5. Troubleshoot an f-m receiver
6. Align a multiplex circuit

J. Auto radio

1. Eliminate automobile electrical system noises in auto radio
2. Check and/or replace vibrator troubles
3. Adjust pushbutton tuning
4. Install and remove auto radios
5. Troubleshoot an auto radio
6. Install and check an auto antenna

K. Record changers

1. Clean and lubricate a record changer
2. Repair and adjust turntables of record changers
3. Troubleshoot and repair record changer
4. Check and/or replace a-c motor in record changer
5. Check the speed of record changer

16. Check and/or replace power cord
 17. Check and/or replace power plug
 18. Check and/or replace batteries
- B. R-F section
1. Check and/or replace a gang tuning capacitor
 2. Check and/or replace an antenna
 3. Check the r-f alignment of a receiver
 4. Assemble an r-f amplifier
 5. Troubleshoot r-f amplifier
- C. Oscillator and converter
1. Assemble an oscillator circuit
 2. Troubleshoot an oscillator circuit
- D. I-F section
1. Build an i-f amplifier
 2. Troubleshoot the i-f circuits
- E. Detector
1. Assemble a detector and AVC circuit
 2. Troubleshoot the detector and AVC circuit
- F. Audio section
1. Assemble and troubleshoot an audio voltage amplifier
 2. Assemble and troubleshoot a phase inverter
 3. Assemble and troubleshoot an audio power output stage
 4. Check and/or replace an output transformer
 5. Check the impedance matching of an output transformer
 6. Phase a system with two or more speakers
 7. Repair speaker cones
- G. Power supplies
1. Build a half-wave rectifier power supply
 2. Build a full-wave rectifier power supply
 3. Build a half-wave rectifier with diode rectifier
 4. Build a full-wave rectifier with diode rectifiers
 5. Build a full-wave rectifier, using a bridge

3. Construct a circuit, using a pentode tube to determine the dynamic characteristics of the tube

H. Transistors

1. Construct a common base amplifier
2. Construct a common emitter amplifier
3. Construct a common collector amplifier

I. Oscillators

1. Assemble a Hartley oscillator
2. Assemble a Colpitts oscillator
3. Assemble an oscillator, using a transistor

J. Amplification

1. Assemble a class "A" amplifier
2. Assemble a push-pull amplifier
3. Couple two amplifier stages together, using RC coupling
4. Couple two amplifier stages together, using capacitive coupling
5. Couple two amplifier stages together, using transformer coupling

II. SUGGESTED JOBS IN RADIO

A. Service to typical components

1. Check and/or replace tubes or transistors
2. Check and/or replace a coil
3. Check and/or replace a ceramic, paper, electrolytic capacitor
4. Check and/or replace a resistor
5. Replace a tube socket
6. Check and/or replace i-f transformer
7. Check and/or replace a power transformer
8. Check and/or replace a selenium rectifier or diode
9. Check and/or replace a volume control
10. Check and/or replace an on-off switch
11. Check and/or replace a tone control
12. Replace a transistor base
13. Check and/or replace speaker
14. Check and/or replace dual cord
15. Check and/or replace dual light

6. Change the needle and/or cartridge of record changer
7. Check and adjust the change cycle of record changer

L. Recorders

1. Troubleshoot and repair tape recorders
2. Check and/or replace a-c motor in tape recorder
3. Check, clean, and demagnetize tape recorder heads
4. Check and adjust the speed of tape recorder
5. Check and troubleshoot erase oscillator

III. SUGGESTED JOBS IN BLACK-AND-WHITE TELEVISION

A. Black-and-white television controls and adjustment

1. Turn on the television set and adjust the operating controls
2. Adjust the service control

B. Cathode-ray tube (CRT)

1. Adjust the ion trap on the CRT
2. Adjust the focus coil
3. Adjust the deflection yoke
4. Remove and/or replace the CRT socket
5. Remove a CRT from the chassis
6. Install a CRT in a chassis
7. Adjust centering devices on CRT
8. Adjust width sleeve
9. Check operating voltage at the CRT

C. Antennas, VHF and UHF

1. Install roof antennas
2. Install ground antennas
3. Check and repair antennas
4. Install lightning arrester
5. Install rotary antenna
6. Check and/or repair rotary motor and control
7. Install signal booster on antenna
8. Check and/or repair signal booster

D. Tuners

1. Install and adjust channel strips
2. Troubleshoot the tuner section
3. Adjust tuner controls
4. Replace and/or repair UHF section of tuner
5. Replace and/or repair VHF section of tuner
6. Check the r-f response of tuner
7. Adjust the r-f oscillator of tuner
8. Adjust and clean loose and dirty contacts of UHF or VHF tuner
9. Troubleshoot the tuners for such defects as direct-drive mechanism
10. Replace wafers on rotary-type tuners

E. Video amplifiers

1. Check video circuits for proper waveforms and voltages
2. Align video i-f transformers
3. Assemble a video stage
4. Check the video-frequency response
5. Adjust the traps
6. Troubleshoot video circuits

F. Audio circuits

1. Assemble audio circuits for television receiver
2. Troubleshoot audio circuit in television receiver

G. Power supply

1. Assemble a low-voltage television power supply
2. Troubleshoot a television power supply

H. Sound i-f circuits

1. Assemble i-f section
2. Check and/or align sound i-f section
3. Troubleshoot i-f section

I. Sound detector

1. Assemble sound-detector circuits
2. Align detector circuits
3. Troubleshoot the sound-detector circuits

J. Horizontal oscillator

1. Assemble a horizontal oscillator
2. Check and align to proper frequency
3. Troubleshoot horizontal oscillator circuit

K. Horizontal output and high-voltage circuits

1. Assemble a horizontal output circuit
2. Check circuit for correct waveforms
3. Check and/or replace the horizontal output transformer
4. Replace filament winding for high-voltage rectifier
5. Change high-voltage rectifier tube socket
6. Troubleshoot high-voltage and horizontal output circuits

L. Vertical oscillator and output circuit

1. Assemble a vertical oscillator and output stage circuit
2. Check for proper waveforms
3. Check for correct frequency of vertical oscillator
4. Troubleshoot vertical oscillator and output circuit

M. Detector

1. Assemble a detector circuit
2. Troubleshoot the detector circuit

N. I-F stages

1. Assemble the i-f circuits
2. Check and/or replace i-f transformer
3. Check and align i-f transformers
4. Troubleshoot the i-f circuits

O. Sync circuits and AGC

1. Assemble sync and AGC circuits
2. Troubleshoot sync and AGC circuits

P. Cabinet and chassis

1. Clean and repair cabinets
2. Clean picture tube
3. Clean the front glass or shield of television cabinet

4. Clean a television chassis

IV. SUGGESTED JOBS IN COLOR TELEVISION

A. Operating controls

1. Adjust hue control
2. Properly adjust fine tuner
3. Properly adjust horizontal oscillator
4. Adjust color saturation control

B. Service controls

1. Adjust high-voltage control
2. Adjust focus control
3. Adjust bias control
4. Adjust color-killer control
5. Adjust screen controls
6. Make convergence adjustment - (using dot-and-bar generator, and degaussing coil)

C. Chrominance circuits

1. Troubleshoot chrominance circuit
2. Align chrominance circuit

D. Color-demodulator circuits

1. Check waveform of demodulator circuits
2. Align color-demodulator circuits
3. Troubleshoot demodulator circuits

E. Band pass amplifier

1. Check for proper waveforms and alignment

F. Oscillator, 3.58 MHz

1. Check crystal
2. Tune oscillator circuit

G. Burst amplifier

1. Check and/or align burst amplifier
2. Troubleshoot the burst amplifier

H. Killer amplifier

1. Check waveform of killer amplifier
2. Troubleshoot the killer amplifier

I. Color amplifiers

1. Check waveform of color amplifier
2. Troubleshoot the color amplifier

J. Color AFC circuits

1. Check waveforms and voltages in color AFC circuit
2. Align color AFC circuit
3. Troubleshoot the color AFC circuit

K. Reactance circuit

1. Align reactance circuit
2. Check waveform of reactance circuit
3. Troubleshoot the reactance circuit

L. Color bar generator

1. Check the color sections of the television receiver, using the color bar generator
2. Adjust the color phasing control, using the color bar generator

11. Low-voltage power supply troubles

G. Video amplification

1. Video signal
2. Picture reproduction
3. Amplification of video signal
4. Manual contrast control
5. Video frequencies
6. Frequency and phase distortion
7. Video amplifier circuit
8. Transistorized video amplifier
9. Trouble in the video section

H. Brightness control and d-c clamping

1. Brightness control

2. D-C component and average value of the video signal
3. Clamping action and d-c leak bias and diode clamping circuit
4. Trouble in the brightness control and d-c clamping circuits

I. Video detector

1. Detection
2. Video detectors load resistance and filters
3. Detector diodes
4. Video detector diodes
5. Troubles in video detector circuits

J. Automatic gain control

1. Requirements of the AGC circuit
2. How the AGC bias controls gain
3. Advantages of AGC for picture signal
4. Keyed AGC circuit
5. AGC level adjustment
6. AGC troubles
7. AGC bias for transistor amplifiers

K. Sync separation

1. Vertical synchronization of the picture
2. Horizontal synchronization of the picture
3. Separating the sync from the video signal
4. Integration of the vertical sync
5. Noise in the sync
6. Sync separator circuits
7. Sync and blanking bars on the kinescope screen
8. Sync troubles

L. Deflection oscillators

1. The sawtooth deflection waveform
2. Producing sawtooth voltage
3. Blocking oscillator and discharge tube
4. Analysis of blocking oscillator circuit
5. Deflection generators with blocking oscillator and discharge tube
6. Deflection oscillator controls

7. Synchronizing the blocking oscillator
8. Multivibrators
9. Plate-coupled multivibrator
10. Cathode-coupled multivibrator
11. Multivibrator sawtooth generator
12. Synchronizing the multivibrator
13. Frequency dividers
14. Trapezoidal voltage waveshape
15. Incorrect oscillator frequency

M. Horizontal AFC circuits

1. AFC requirements
2. Push-pull sync discriminator
3. Circuit of multivibrator controlled by sync discriminator
4. Single-ended sync discriminator
5. D-C control tube (synchro-guide)
6. Sine wave oscillator with reactance tube (synchro-lock)
7. Hold-in range and pull-in range
8. Filtering the d-c control voltage
9. Phasing between horizontal blanking and flyback

N. Vertical deflection circuits

1. Triode vertical output stage
2. Vertical output transformers
3. Vertical linearity
4. Internal vertical blanking
5. Vertical deflection circuit with blocking oscillator
6. Combined vertical oscillator and output circuit
7. Transistorized vertical deflection circuit
8. Vertical deflection troubles

O. Horizontal deflection circuits

1. Functions of the horizontal output circuit
2. Horizontal amplifier circuit
3. Damping in the horizontal output circuit
4. Horizontal scanning and damping
5. Boosted B+ voltage

6. Flyback high voltage
7. Horizontal deflection controls
8. Deflection yokes
9. Horizontal output transformers
10. Analysis of horizontal output circuit
11. Typical horizontal deflection circuit
12. Transistorized horizontal deflection
13. Troubles in the horizontal deflection circuits

P. Picture i-f amplifiers

1. Picture i-f response
2. The intermediate frequency
3. I-F amplification
4. Double-tuned i-f amplifiers
5. Single-tuned i-f amplifiers
6. Stagger-tuned stages
7. Wave traps
8. Picture i-f alignment
9. Picture i-f amplifier circuits
10. Transistorized i-f stage
11. Troubles in the picture i-f amplifier

Q. The r-f

1. Operation of the r-f tuner
2. The r-f amplifier stage
3. R-F amplifier circuits
4. The mixer stage
5. The local oscillator
6. R-F alignment
7. Conversion methods for UHF channels

8. Parasitic arrays
9. Multiband antennas
10. Stacked arrays
11. Transmission lines
12. Characteristic impedance
13. Transmission-line sections as resonant circuits
14. Impedance matching
15. Antenna installation
16. Multiple installations
17. Troubles in the antenna system

S. The f-m sound signal

1. Frequency changes in a f-m signal
2. Audio modulation in an f-m signal
3. Definition of f-m terms
4. Reactance-tube modulator
5. Advantages and disadvantages of AM
6. Receiver requirements for an f-m
7. Triple-tuned discriminator
8. Center-tuned discriminator
9. The limiter
10. Ratio detector
11. Quadrature-grid f-m detector
12. Complete sound i-f circuit
13. Sound i-f alignment
14. Intercarrier sound
15. Intercarrier buzz

T. Receiver servicing

1. Receiver adjustments
2. Types of ghosts
3. R-F interference

4. External noise interference in the picture
5. Sound in the picture
6. Localizing hum troubles
7. Testing scanning linearity with bar patterns
8. Signal injection
9. Localizing receiver troubles
10. D-C voltage measurements
11. Oscilloscope measurements
12. Alignment precautions
13. Typical receiver circuit

U. Color television system

1. Color signals
2. Color addition
3. Definition of color television terms
4. Y signal
5. Types of color video signals
6. Q signal
7. I signal
8. R - Y signal
9. B - Y signal
10. G - Y signal
11. Desaturated colors
12. The transmitted chrominance signal
13. Matrix circuits
14. Color subcarrier frequency
15. Color synchronization
16. Colorplexed composite video signal waveforms
17. Vector addition of color signals
18. Chrominance section
19. Chrominance amplifier circuits
20. Burst amplifier circuits
21. Color AFC circuits
22. Automatic color control (ACC) bias
23. Color-killer circuit
24. Color-demodulator circuits

25. Color picture tubes

30. Color troubles

XVIII. MATHEMATICS

1. Arithmetic
2. Decimals
3. Fractions
4. Percentages
5. Powers and roots
6. Graphs
7. Algebraic addition and subtraction
8. Algebraic division and multiplication
9. Simple equations
10. Ratio and proportion
11. Powers of ten
12. Special products and factoring
13. Equation containing fractions
14. Graphs and sets of linear equations
15. Exponents and radicals
16. Logarithms
17. Basic trigonometry
18. Tables of trigonometric functions
19. Vectors

NOTE: All of the above topics should be taught with applications as applied to the Radio, Television, and Electronics trade

XIX. SAFETY

1. Personal
2. Hand tools and materials
3. Working with high voltages

4. Electrical shock treatment
5. Administering first aid

RADIO-TV EQUIPMENT LIST

ITEM NO.	QUANTITY	DESCRIPTION
1.	1	Electronics Lecture Demonstration Unit (To include console)
2.	1	Electronics Fundamentals Unit (Accessory to Item #1)
3.	1	Transistor Lecture Demonstration Unit
4.	1	Voltage Regulator Demonstration Unit
5.	1	Frequency Modulation Demonstration Unit
6.	1	Accessories Storage Drawer
7.	1	Oscilloscope, wide-band (Dual Trace)
8.	1	Square-wave Generator
9.	1	Vacuum-Tube Voltmeter (Lab Type)
10.	1	Audio Oscillator (Lab Type)
11.	1	R-F Signal Generator
12.	1	Master Antenna Distribution System (To include antenna)
13.	1	Power Line Monitor

STUDENT EQUIPMENT

14.	8	Fundamentals Units (Breadboarding)
15.	8	Regulated Power Supply
16.	8	Volt-ohm-milliameters
17.	8	Vacuum Tube Voltmeters
18.	8	Oscilloscope (Wide-band)
19.	8	R-F Signal Generator
20.	8	Audio Oscillator (Sine-Square Wave)
21.	8	Isolation Transformer
22.	8	Demodulator Probes (Brand to be same as VTVM)
23.	8	Bench Lamps (Fluorescent)
24.	2	Sweep Generator
25.	2	Marker Generator
26.	2	Marker Adder
27.	2	Color Bar/Dot/Crosshatch Generator
28.	2	Pattern Generators
29.	2	Yoke Substitution Unit (Universal)

ITEM NO.	QUANTITY	DESCRIPTION
30.	2	Substitution Box (Resistor, Capacitor, Rectifier)
31.	2	Capacitor Analyzer
32.	2	High-Voltage Probes (25KV) (Brand to be same as VOM)
33.	2	High-Voltage Probes (50KV) (Brand to be same as VOM)
34.	8 lots	Test Harness

SPECIAL EQUIPMENT

35.	2	Transistor Radio Analyzer
36.	2	Tube Checkers
37.	1	Multiplex Generator
38.	1	CRT Checker
39.	1	Field-Strength Meter
40.	1	Degaussing Coil
41.	2	Power Supply, DC (0-SV @ 10A; 0-16V @ 6A)
42.	1	Microphone (Dynamic)
43.	1	Microphone (Crystal)

SHOP EQUIPMENT AND HAND TOOLS

44.	8	Soldering Guns, 140-210W
45.	8	Pliers, Long nose, 6"
46.	8	Pliers, Diagonal, 5"
47.	8	Pliers, Combination, 6"
48.	8	Screwdrivers, 2" x 1/8"
49.	8	Screwdrivers, 6" x 1/4"
50.	8	Screwdrivers, 3" x 3/32"
51.	8	Screwdrivers, Phillips #1
52.	8 sets	Nut Drivers
53.	8	Alignment Kits
54.	1	Vise, Machinist (4" Jaw, 3" Opening)
55.	1	Drill Press, Bench model, 1/2", Jacobs Chuck
56.	1 set	Chassis Punch,* Round
57.	1 set	Chassis Punch, Square
58.	1	Circle Cutter

ITEM		
NO.	QUANTITY	DESCRIPTION
59.	1 pr.	Tin Snips (Aviation, 10")
60.	2	Wire Strippers
61.	1	Square, Combination
62.	1	Wrench Set, Open-end, 1/4" to 13/16" by 16ths
63.	1	Adjustable Wrench, 8"
64.	1	Hammer, Ball-peen, 8 oz.
65.	1 set	Punches (Center, Pin, Prick)
66.	1	Hacksaw, 12", Adjustable
67.	2	File Sets, Mill (6", 8", 10")
68.	1	Drill, Electric, 1/4", Heavy duty
69.	1	Tap and Die set, Electrician's
70.		Reamer, 1/8" Tip, 5-1/2" long
71.	1	Twist Drill Set, 1/16" through 1/2" by 32nds

OTHER SPECIAL EQUIPMENT

72.	Analyst
73.	Impedance bridge

BIBLIOGRAPHY

RECOMMENDED TEXTS:

A definite text has not been selected at this time. Some of the reasons for this are the rate at which new electronic devices are being employed in the electronic field and their effect upon different types of circuitry. The trainee must receive training in the fundamentals of electricity and electronics, radio, black-and-white television and color television; therefore, several texts are necessary to cover the complete field. Some of the texts being used by the radio and television instructors are listed below.

Kiver, Milton S. Color Television Fundamentals, 2nd ed. New York: McGraw-Hill Book Company, Inc., 1964.

Levy, Alex, and Murray Frankel. Television Servicing. New York: McGraw-Hill Book Company, Inc., 1959.

Mandl, Matthew. Fundamentals of Electronics, 2nd ed. Englewood Cliffs, New Jersey: Prentice-Hall, Inc., 1965.

Mandl, Matthew. Mandl's Television Servicing, 3rd ed. New York: The Macmillan Company, 1965.

Marcus, Abraham. Basic Electronics. Englewood Cliffs, New Jersey: Prentice-Hall, Inc., 1963.

Marcus, Abraham, and Samuel E. Gendler. Elements of Television Servicing for Bench and Field, 2nd ed. Englewood Cliffs, New Jersey: Prentice-Hall, Inc., 1963.

Marcus, William, and Alex Levy. Elements of Radio Servicing. New York: McGraw-Hill Book Company, Inc., 1955.

Marcus, Abraham, and William Marcus. Elements of Radio, 5th ed. Englewood Cliffs, New Jersey: Prentice-Hall, Inc., 1964.

Markus, John. Television and Radio Repairing, 2nd ed. New York: McGraw-Hill Book Company, Inc., 1961.

GENERAL BUSINESS

UNIT: THE INFLUENCE OF AUTOMATION ON BUSINESS AND PERSONAL LIFE

Major Teaching Objective

To develop an understanding of the basic principles, the social and economic implications, and the occupational opportunities important in automation and technological change

Learnings (Competencies) to be Developed

1. To understand what automation is and how it influences our daily lives
2. To trace the historical development of automation and data processing
3. To understand the social and economic implications of automation and technological change--its influence on job life and worker employability
4. To become aware of the jobs specifically related to automation
5. To understand the basis of the electronic computer and punched-card equipment

MEMORANDUM

TO: The ERIC Clearinghouse on Vocational and Technical Education
The Ohio State University
980 Kinnear Road
Columbus, Ohio 43212

FROM: (Person) Dr. George L. Luster (Agency) Instructional Materials Laboratory
(Address) Room 151, Taylor Ed. Bldg., University of Kentucky, Lexington, Ky. 40506

DATE: July 26, 1967

RE: (Author, Title, Publisher, Date) Mrs. Mavis C. Sparks,
"The Influence of Automation on Business and Personal Life"

Supplementary Information on Instructional Material

Provide information below which is not included in the publication. Mark N/A in each blank for which information is not available or not applicable. Mark P when information is included in the publication. See reverse side for further instructions.

- (1) Source of Available Copies: Not available to teachers outside Kentucky -- one or two copies will be supplied to the professional staff in vocational education
Address in each State that is responsible for teaching materials. (ERIC only).

Limitation on Available Copies _____ Price/Unit _____
(quantity prices) _____

- (2) Means Used to Develop Material:

Development Group Individual authorship

Level of Group State level -- specialist in business & office education

Method of Design, Testing, and Trial Designed by subject matter specialist;

to be revised upon recommendations by classroom teachers after first or second year of use.

- (3) Utilization of Material:

Appropriate School Setting area vocational school and high school

Type of Program high school class

Occupational Focus "generally applicable across job categories"

Geographic Adaptability applicable generally

Uses of Material course and lesson planning

Users of Material teachers

- (4) Requirements for Using Material:

Teacher Competency business and/or distributive education

Student Selection Criteria background

Time Allotment sophomore +

Supplemental Media --

	<u>Topic</u>	<u>Periods</u>
Group teaching:		
In classroom, at school	_____	_____
Outside classroom, at school	_____	_____
Field trips, away from school	_____	_____
	Total	_____
Individual Projects:	_____	_____
	_____	_____
Month(s) to be taught	_____	

Place of the Unit in the Course of Study

Everyone's life is affected in some way by the use of automated equipment. A broader back ground is needed to enter the business world. Business saves time, money, and manpower by using data processing machines. Society receives better services at lower costs. Each of us must continually adapt to progress and continue his education to up date his skills throughout his employable life. These realities of modern society, government, business, and industry demand that the student have some basic understanding of automation and technological advance.

Since general business deals with business skills and knowledge important in everyday life, and gives the background for study more advanced business courses, it is the appropriate course in which to include an exploratory unit on automation. The unit fits best near the end of the course, before the unit on "Successful Economic Citizenship," which deals with choosing a career and preparing for employment. Before this unit, the students should have a background of business services, a knowledge of business organization, and an understanding of his role as a producer and consumer. He will also have an awareness of a few automated and mechanical processes. This knowledge will facilitate his understanding of this unit.

A minimum of five to six class periods is suggested. The topic may be studied in greater depth by uses of special projects outside the classroom and the use of practice sets. Study time may be shortened by leaving the study of the specific job titles related to automation until the careers unit.

Suggestions for Introducing the UnitDeciding What Is to be Taught

The content suggested is to provide the student with a general knowledge of automation. The study may be broadened to specific applications to office work by the working of a practice set, such as Automation Office Practice by Wanous and Wanous published by South-Western Publishing Company, or the use of a programmed text, such as Kahn's Business Data Processing published by Gregg.

The topics outlined for study in this unit are given briefly below. They are developed in greater detail in the unit.

- a. What automation is and how it influences our daily lives
 - Definition of automation
 - Machines that are automated
 - Difference between technology and automation
 - Office equipment that is automated
 - Factory machinery that is automated
 - Examples of automation outside the business community
- b. Historical development of automation and data processing
 - Early inventions contributing to modern automation
 - Development of computers
 - Beginnings of automation in industry
 - Factors influencing its growth
- c. Social and economic implications of automation and technological change
 - Effect on business
 - Effect on employment
 - Effect on office personnel
 - Effect on school dropouts
 - Assistance for workers in meeting the problems of technological change
 - Effect on industry

- Expected social changes
- d. Jobs specifically related to data processing
 - Classification of jobs
 - Preference toward men or women
 - Basic requirements
 - Some of the more common job titles
- e. The electronic computer and punched card equipment
 - Speed
 - Uses
 - Kinds
 - How they solve problems
 - How they do arithmetic

Presenting the Unit to the Class

The unit should be packed with realism and concrete examples. The following approaches or a combination thereof may be helpful in giving the class a clearcut first view:

- a. Display pictures of computers. "Posters on Computers," a new bulletin board collection that covers computers from the abacus to the latest equipment in use, is available from J. Weston Walch, Publisher, Box 1075, Portland, Maine. It contains 18 posters, 9½ by 11 inches, printed on heavy-stock paper. Cost is \$1.50 per set.
- b. Display data processing equipment "software" for "hands on" experience. Obtain punched cards, program sheets, tapes, and data sheets from punched card and computer installations for the students to see and touch. A visit to a business using automated data processing will provide an opportunity to collect these. University and college computing centers and your own personal business transactions will yield examples for display.
- c. Use films and/or filmstrips to give an overall view and to set the scene.
 - "Have I Told You Lately I Love You," (16 min., sound, B & W, 20 min.), University of Southern California, Los Angeles, California; and University of California, Berkley, California.

This film tells the story of a modern family who are enslaved by automatic gadgets in home and business. They go through days with no real person-to-person contact because everything is done automatically. Emphasis is placed on life being more than a robot existence. The Machine Age's noncommunicative family life is dramatically and forcefully pointed out, even if somewhat exaggerated.

--"The Information Machine," (16 mm. or 35 mm., sound, color, 10 mm.), International Business, 590 Madison Avenue, New York 22, N. Y.; and local offices.

This is a sophisticated, sometimes amusing account of the development of the electronic computer beginning with primitive men and ending with the advent of machine simulation. Colorful and imaginative, this film is effective in explaining the nature of data processing. It is suitable for junior and senior high-school students and adults.

--"The Challenge of Electronic Data Processing," filmstrip, 87 frames, color, sound, 10 min.), The Association for Bank Audit, Control and Operation, 205 Touhy Ave., P.O. Box 500, Park Ridge, Illinois 60068.

This filmstrip explains the development of modern day data processing techniques and traces the history of record keeping from stone tablets to the computer. It explains what computers can and cannot do, how they may be used for business management decisions, and how they may be applied to large volume record keeping. Automation in banking is shown.

--"This Is Automation," (16 mm., sound, color, 30 min., rental \$1), University of Georgia, Athens, Georgia; and University of Wisconsin.

Examples are given, ranging from the manufacture of cookies to cars. Some are complex (machining automobile engine blocks), and others are as simple packaging nuts and bolts. The film is produced by General Electric.

d. Use transparencies throughout the unit to illustrate important points.

--"Story of Computer," (Science No. 32). A pictorial presentation of computers and their abilities. Printed originals, Cat. No. 278, \$1; prepared color transparencies, Cat. No. 778, \$30. 3M Company, Visual Products Division, 2501 Hudson Rd., St. Paul, Minnesota 55119.

--See also transparency masters attached to back of this unit.

Learnings (Competencies) to be Developed

1. To understand what automation is and how it influences our daily lives.

This approach starts with the student's experiences and gives him a background on which to build understanding of the unfamiliar to follow. If one or more of the visual aids previously suggested is shown at the beginning of the class period, this discussion may serve as a summarization of important points.

Suggested Content

a. What is automation?

--Words sometimes used interchangeably with automation are: technology, technological change, mechanization, electronic data processing, scientism, electronics, and advanced instrumentation.

--A general definition often used "any mechanical device or system which reduces mental or manual effort," actually defines technology or mechanization.

--Technology includes mechanical or electro-mechanical devices which are paced and controlled by men who operate them as well as machines that are automatic or self-directed.

--A more accurate definition of automation is the repetition of machine functions through self-directed control. This embraces the principle of feedback or self-correction.

b. What are some machines that control themselves?

--Some examples are the transfer machine in a Detroit automobile factory, the control panel in an oil refinery, and the electronic computer in the business office.

--The amount of work produced is not limited by the abilities of the human operator, but by the capabilities of the machine itself.

--The operator provides the machine with its instructions or program; but once these have been given, the machine is self-acting.

c. What are some machines that are self-correcting?

--Two devices that are self-correcting are a windmill and a heating system controlled by a thermostat.

--The wind turns the mill which lifts the water. When the wind changes direction, the tail fan repositions the fan wheel so

that it continues to face into the wind. Because of this automatic control, the mill can pump water for years without interruption.

--When the heating system in a home is thermostatically controlled, the thermostat tells the furnace to return the room to the desired condition when the temperature gets too high or too low. The correct temperature is thus maintained through feedback; that is, through the furnace feeding back the heat needed to return the room to the desired temperature. The furnace is self-directed, no human effort is required unless a different temperature is desired.

d. What does one think of first when he hears the words technology and automation?

--One thinks almost immediately of the computer.

e. Is there other equipment in the business office that falls in these categories?

--Yes, there are typewriters, desk calculators, duplicators, integrated data processing equipment, and punched-card equipment.

--This equipment can keep inventory records, compile sales figures, handle payroll accounts, prepare income tax returns, and make time studies. Some can even translate languages. Railroads and airlines use it for making seat reservations. A central computer keeps a record of available space on future flights. All flight and seat information is stored in coded form in its memory unit. When a ticket agent pushes a series of buttons, the computer checks its memory unit and tells the agent whether a seat is available on a particular flight. The agent can then reserve the seat by pushing another series of buttons. The reservation systems of several airlines can be interrelated on one network.

f. What equipment do factories have of this type?

--They have machines which perform operations, control operations, move materials from one operation to the next, inspect products, maintain inventories, and fill orders.

--Since this type of automation is much used in the automobile industry it is often referred to as "Detroit Automation."

--An example is the application used by the Ford Motor Company, Cleveland, Ohio. It processes complete engine blocks with automation. It takes only 14.6 minutes for a series of 530 automatic operations to produce finished products. The key unit in the system is the toolmeter, a tool control board which looks like a big switch board and tells the operator

when to replace worn tools in the engine-block line. A light flashes on at the moment a tool needs changing. It can be replaced without halting production.

g. Is automation confined to the business community only?

--No, the armed forces, have guided missiles, space vehicles, supersonic aircraft, and automatic atomic submarines. Computers were used in preparing Telstar and placing it into orbit.

--The home has automatic washers and dryers, stoves with control panels that resemble the cockpit of a jet airliner, and electric can openers.

--Automobiles may have automatic transmissions, power windows, brakes, and steering.

Teaching-Learning Activities

- a. Ask the students for their own definition of automation. Make it a part of a bulletin board display, with pictures of automatic machines.
- b. Ask the students to list, from their own experience, all the mechanical devices they can that reduce physical or mental human effort. Record these on the chalkboard.
- c. Ask the students to list as many devices as possible that are self-directed.
- d. Have the students list what they would like to learn about automation. Use these items in planning future lessons.
- e. Alert students to the timeliness and importance of automation by having them bring to class for discussion at least one article from a newspaper or magazine concerning some phase of automation.
- f. Have the students keep a vocabulary notebook of automation terms. From this lesson they may define the following:

automation	data processing
technology	computer
electro-mechanical	"Detroit Automation"
feedback	
- g. Have students bring evidence to class to show that automated equipment is being used in business. (punched tags on clothes, punched card bills, mark sensed credit card receipts, etc.)

b. For the Teacher

--Data Processing for Business Education Department in Pennsylvania's Public Schools (Bulletin 276). Department of Public Instruction, Commonwealth of Pennsylvania, Harrisburg, Pa. Free. pp. 6-17.

This booklet has been prepared to give business teachers a background in data processing. Most of the information can be used as a reference in preparing daily lesson plans. It explains what rather than how.

--"Automatic Data Processing Glossary," U. S. Government Printing Office, Washington, D. C. 20402. 40¢

--"Automation Dictionary," Minneapolis-Honeywell Regulator Co., Information Service Department, 60 Walnut Street, Wellesley Hills, Massachusetts 02181. \$1

2. To trace the historical development of automation and data processing.

Since work began, man has tried to reduce his efforts through use of tools and machines. Notable inventions through the centuries which have lead to today's **electronic computers and automated factories** are **the wheel, pulley, levers, steam power, gas power, electrical power, conveyor belts, and assembly lines**. Some developments more directly related to modern day automation and data processing with which the student should be acquainted are given below:

Suggested Content

a. What were some early related inventions which lead to the development of modern automation?

--The ancient Greeks, Romans, and Chinese developed and used the abacus as a counting device. It is still in use today.

- Blaise Pascal, a famous French mathematician and philosopher, built some "arithmetic machines" 1642-1643.
- Jacques de Vaucanson, a French inventor, built a mechanical loom for manufacturing figured silks in 1741. Its pedals were moved automatically by means of a drum pierced with holes.
- Oliver Evans, an American inventor, built a completely automatic flour mill near Philadelphia in 1784.
- James Watt invented and used a flyball governor, a feedback device to control the speed of his famous invention, the steam engine.
- Joseph Marie Jacquard, a Frenchman, adapted De Vaucanson's ideas into an automatic loom operated by punched cards much like those used in today's electronic office machines in 1801.

b. When were computers developed?

- Business data processing, a product of the nineteenth century, came into being in 1822 when Charles Babbage developed a "different engine" for calculating mathematical tables. Later improvements lead to the first internally stored program computer in 1833.
- Some feel that the work of Dr. Herman Hollerith beginning in 1887, the application of punched cards in recording, compiling, and tabulating the 1890 U. S. Census, is more significant as a beginning date for business data processing. By 1900 Hollerith had developed an automatic electric sorting machine that could sort at the rate of 300 cards a minute, a semi-automatic unit tabulator, and a key punch machine. Later he left the Census Bureau and formed the Tabulating Machine Company, out of which emerged Remington Rand Corporation and IBM, today's top computer manufacturers.
- In the 1940's electronic computers were developed and used to solve acute military problems such as gunfire control. The winning of World War II can be attributed in some measure to their use.
- It wasn't until after 1950 that computers were used for the solving of problems outside the fields of engineering and science.
- The first all-electric computer was developed by John W. Mauchly and J. Presper Eckert at the University of Pennsylvania (1943-45). Their efforts lead to the development of the Univac, which became the world's first commercial electronic data processing machine. It was made available commercially in 1951. A significant feature of Univac over its forerunners was its ability to handle alphabetic and certain typewritten characters as well as numerics.

- In 1952 the eyes of the American people were opened when a computer, after receiving some early returns of the Presidential election between Eisenhower and Stevenson, accurately predicted the outcome of the election.
- By 1954 the first computer was installed in private industry. Another development during the 50's was the introduction and use of medium-sized and small computers. Small computers generally cost less than \$50,000; medium-sized computers cost from \$50,000 and \$500,000; and large computers over \$500,000.
- Early computers were operated by means of vacuum tubes which were bulky and demanded considerable power. Early in 1964, tiny transistors were used in their place. This was a considerable step forward since these units require less power and occupy less space in the computer.

c. Where and when did automation begin in industry?

- Electronic devices were first adapted for use in factories during the production boom following World War II.
- The automobile industry was the first major industry to make widespread use of automatic machines.
- Automatic control systems were developed to regulate chemical and oil-refining processes. These systems greatly increased the quality and quantity of the products produced.
- By 1954 automatic machines were producing television sets.

d. What factors have influenced the growth of automation?

- The increased needs created by our tremendous population growth and greater per-capita demand for consumer goods have been factors.
- American business and industry are trying to reduce per unit costs to offset what management views as excessive labor wage rates. This is to prevent loss of profits.
- Many U. S. businesses are trying to cut costs in order to compete with foreign producers in both domestic and foreign markets.
- The increasing demand of government for more records (income tax, unemployment benefits, social security) has accelerated the introduction of automation in the business office.
- Other factors are increased competition, increased complexity of products, and the demand by management for more quantitative information to aid in decision making.

- Generally, the need is to produce more information faster than ever before.

Teaching-Learning Activities

- a. Demonstrate the abacus.
- b. Discuss the industrial revolution and why automation is sometimes called the second industrial revolution. Contrast the operation of the machines developed in each.
- c. Discuss the history of the typewriter as an example of the impact of machines on work in the business office.
- d. Demonstrate sorting cards with a keysort to show how a simple mechanical device will save time and effort.
- e. Illustrate the window envelope as a simple automated device.
- f. Have the students add the following names and terms to their automation vocabulary list:

Blaise Pascal	abacus
Jacques de Vaucanson	vacuum tubes
Oliver Evans	transistors
James Watt	industrial revolution
Joseph Marie Jacquard	second industrial revolution
Charles Babbage	IBM
Dr. Herman Hollerith	Univac
Remington Rand	

Suggested References

- a. For the student
 - Read articles in encyclopedias on automation, the industrial revolution, and the typewriter. Reports may be prepared on these subjects.
- b. For the teacher
 - Data Processing for Business Education Department in Pennsylvania's Public Schools, pp. 18-20.
 - "Automation: A Must Unit for General Business," by Gunder A. Myran, pp. 6-9, 31-32. Business Education World, Vol. 43, June, 1963.

3. To understand the social and economic implications of automation and technological change.

In the long-run, automation is expected to increase production, give us more and better jobs, and improve our standard of living. As we

look around us, we see that these blessings are coming, but not without making old jobs obsolete and eliminating the demand for certain skills. A willingness to work and a strong back are no longer good enough even for many "unskilled jobs." In order for the high-school student to understand the ramifications of data processing, he should know the effect it has on the business world, on present and future employment, on present and prospective office employees, and on his future, especially if a high-school education is not attained.

Suggested Content

- a. What has been and will be the effect of data processing on business?

--In inquiry and reply--preparing and sending letters, reports, memorandums, etc.--where ability to make decisions is needed, data processing may not offer much relief.

--In the field of recordkeeping, it is changing not only the work being done but also the jobs of those employed. The magnitude and complexity of business, government reports, increasing payroll deductions, limited supply of properly trained clerical workers, and the demand for better services have increased the volume of office work so manual and mechanical filing, collecting, and retrieving information is no longer possible or desirable.

--It allows management to receive the information needed to make decisions shortly after the close of the quarter, month, or year. With manual processing, management would often receive their report for one month at the end of the next month. Punched card equipment speeded up the process to the middle of the next month but the computer made this information available the second day of the following month.

--More businesses have access to computers. Cheaper and more compact computers are available which are now within the reach of small businesses. Service bureaus and cooperative data processing centers have been established by firms with similar operations.

- b. How will data processing affect employment?

--A 45 percent increase in clerical workers is expected between 1960 and 1975. This is how the second largest occupational group in the nation employs about 10.5 million people. The rate of growth is increasing faster than the work force as a whole. This is true irrespective of the development and use of office machines that can do work in minutes that formerly took weeks to accomplish.

--Sixty million jobs will change in character in the next generation. There will be many new jobs created that have not previously existed.

- It will not be necessary to hire a large number of temporary employees for short periods of time.
 - The percentage of factory workers will decrease and the percentage of office and laboratory workers will increase.
 - The managerial, technical and professional groups are rapidly overtaking the semi-skilled machine operator groups in employment.
- c. How will office personnel be affected?
- Some employees will have to be retrained. Others will have to broaden their background and gain additional understandings and competencies.
 - Fewer employees will work in accounting departments in branch offices and a greater number will be employed in a centralized office. Banks with suburban branches are examples of this. Often a person working in a branch office does not want to move to a centralized office of the same company.
 - The percentage of men working in offices will increase. Women do not like to work at night, and computers will be operating 24 hours a day because of their high rental.
- d. What happens to those who drop out of school?
- Competition in many entry occupations, especially lower level clerical jobs will increase. Vocational competency will be needed to acquire, adjust to, and move ahead in a job.
 - There will be fewer jobs for those who have little formal academic or vocational education. Clerical jobs requiring no specific skill are found only in offices that haven't automated. Work that involves repetitive or routine tasks is disappearing from the business office because it is being done by machines.
- e. What is being done to help workers meet the problems caused by technological change?
- Government programs are increasing unemployment benefits.
 - Industrially depressed areas are being redeveloped (Area Redevelopment Act).
 - Programs of retraining unemployed and underemployment workers are being initiated (Manpower Development and Training Act).
 - New educational and training programs are becoming available in schools, colleges, and industries. For example, The Armour

Company has set up a fund for studies to find opportunities for employment for workers displaced by automation and to inaugurate training programs. One cent per hundred pounds of meat shipped is contributed to this fund.

--Displaced workers may be moved to other industries.

- f. What influences the economic effect automation will have from industry to industry?

--The kind of automation technique being employed--electronic data processing, Detroit automation, process control, or machine tool control--influences the increase or decrease in the number of workers and how old employees will be integrated in the new systems.

--The strength of labor-management relations often decides the welfare of the employees.

--The versatility of the work force, age levels, and education levels are influential. Some employees may not be capable of learning the new skills that would be required of them.

--Some companies may need more workers because they are able to turn out a better product at lower prices.

- g. What social changes can we expect?

--Automation is the key to a shorter work week. There is an unmistakable trend toward less work and more leisure. Forced idleness or unemployment should be avoided. Will we be able to adjust to having more leisure time?

--Automation brings about lower prices.

Teaching-Learning Activities

- a. Discuss the effect of data processing on office work, in terms of communication and recordkeeping.
- b. Describe how management depends upon data processing.
- c. Discuss the effect of data processing on office employment.
- d. Discuss reasons why the installation of a computer eventually necessitates the hiring of a greater number of clerical employees.
- e. Obtain U. S. Department of Labor employment statistics for discussion.
- f. Invite a representative of the state employment service to discuss employment trends.

- g. Invite a representative of a large factory to discuss automation and employment in his plant.
- h. Have your school's guidance counselor discuss curriculums designed to meet the demands that society and the business world will impose on the student.
- i. Have students be on the alert for magazine articles and newspaper accounts of the effect of automation on employment.

Suggested References

a. For the teacher

--Data Processing for Business Education Departments in Pennsylvania's Public Schools, pp. 22-28.

--"Automation (Implications for the Future)," edited by Morris Philipson, (V-46, \$1.95). Vintage Books, Random House, Inc., New York, New York.

This pocketbook contains a series of articles in the implications of automation for industry, labor, theory, government, the social sciences, education, and leisure. Each article is written by a specialist in the field and each is very enlightening. There are eighteen articles in all.

--Adjustments to the Introduction of Office Automation (Bulletin 1276, \$.50). Published by the U. S. Department of Labor. Superintendent of Documents, Washington, D. C. 20402.

This is a study of some of the implications of the installation of electronic data processing in 20 offices in private industry, with special reference to older workers.

Instructional Materials

a. Films

--"Technology and You," (16 mm., sound, color, 13 min.). Rental \$4.50. University of Michigan, Ann Arbor, Michigan; and University of Wisconsin, Madison, Wisconsin.

Technology is defined. Examples of its application in transportation, architecture and automation; its use in electrical, atomic and solar power; and its use in research are given. Vocational opportunities for students and the importance of preparation for employment are emphasized.

--"Technique for Tomorrow," (25 min., B & W). Produced by Ford Motor Company. Available from Business Screen Magazines, Inc., 7064 Sheridan Road, Chicago 26, Illinois.

Automatic control of machinery and the mechanical transfer of materials are described as a modern industrial revolution. The positive results of automation are shown to be high productivity with less human effort and a new standard of living for all.

- b. Transparencies (See masters attached at back of unit.)

4. To become aware of the jobs specifically related to data processing.

There are many jobs that are automated or affected by automation. In this unit, however, study will be confined to job titles directly related to automation. This portion of the unit could be combined with a careers unit, rather than being included at this time.

Content to be Included

- a. How are automated (computer orientated) jobs classified?
- Computer orientated jobs may be classified as professional technical, and clerical.
 - The professional require four years of college or the equivalent, the technical require six months to two years of post high school education or equivalent, and the clerical require a high-school education or equivalent.
 - Some positions cross categories.
- b. Are men likely to be given preference to women for these positions?
- Yes, men may be given preference in hiring.
 - The expense of renting or purchasing equipment is heavy and computer installations are frequently operated 24 hours a day.
 - Men are more likely than women to remain in a position for a longer period of time after they have been trained for their job.
 - They are more willing to work at nights because of family obligations.
 - Labor laws in some states restrict the number of hours and the time of day that women may work.
- c. What are some of the basic requirements for the jobs?
- Since one error can be carried through an entire process and make the end result worthless garbage, accuracy in reading, figuring, speaking, spelling, and writing is a must.

- Skill to operate a typewriter and a keypunch is necessary since these are basic machines to the system.
- A knowledge and understanding of bookkeeping and accounting, business organization, filing, and business communications (including mailing procedures, office procedures, business forms, and reference materials) is especially helpful.
- Some general characteristics a person must have in addition to knowledge are: the ability to see relationships, maturity to judgment, ability to analyze problems before solving them, efficient work habits and methods, good business ethics, and ability to adapt to change.

d. What are some of the common jobs? (See Dictionary for Occupational Titles for addition information. Reference numbers are given.)

- Key punch (card punch) operator. (D.O.T. 1-25.62) A keypunch operator must be able to type with a high degree of accuracy. He will find a knowledge of ten-key adding machine operation helpful as his machine's keyboard combines the features of both the electric typewriter and the ten-key adding machine.

His job includes typing (punching) data from source documents such as sales slips and time cards into punched cards. He is responsible for loading and unloading the machine, preparing program cards, and detecting faulty operation. He may also operate other unit record equipment. It takes about a week of intensified training to learn the fundamentals for this position and about 120 hours to develop vocational competency.

- Peripheral (auxiliary or unit record) equipment operator (D.O.T. 1-25.60 and 1-25.98). This person is responsible for operating all the machines that prepare material for the computer. He may not be required to operate a key punch, but in some installations he may be called upon to wire a control panel.

About six weeks of specialized training is required. The operator must be able to identify incorrectly punched cards or tapes and recognize situations which might cause the system not to operate properly. If he desires to advance to computer-operator, he needs a knowledge of accounting, algebra, business organization and management, and data processing principles.

- Console (Computer) operator (D.O.T. 1-25-17). The computer operator's chief function is to put into operation the instructions given by the programmer and to operate the computer while it carries out these instructions. If the computer stops running, gives faulty information, or needs new directions, he may type-in new instructions. He needs the ability to think rapidly and make quick decisions as he must do his work while the computer runs. About two to six months of concentrated training is necessary to maintain this position.

--Tape librarian (D.O.T. 1-20-04). The tape librarian maintains files of magnetic tapes, punched cards, paper tapes, and decks of punched cards for use by the console and auxiliary equipment operators. She prepares a reference card for each set which gives the information contained, purpose of the program, and date generated.

A knowledge of filing, accuracy, and ability to get along with others is important in this position.

--Programmer (D.O.T. 0-69.981). The programmer prepares the instructions for the computer. He first determines what information is needed and from whom it may be obtained. He then prepares a complete description of the job in the form of a flow chart or block diagram. From this the instructions are converted into machine language. He also organizes and directs the people who do the work.

He must have a general knowledge of business organization and management, plus a specific background in the business in which he is working. He must also have a knowledge of algebra, and a thorough understanding of the machine functions and characteristics on which he is preparing a program. He needs an insight into both computers and unit record equipment.

--Systems analyst (D.O.T. 0-69.985). The systems analyst coordinates the work of the other departments with the data processing facility. This is one of the most responsible data-processing positions.

Teaching-Learning Activities

- a. Refer to a copy of the Dictionary of Occupational Titles with the class to locate other automation job titles.
- b. Invite someone who works with data-processing equipment to describe his work to the class.
- c. Visit a computing center to observe people at work in data-processing activities.
- d. Discuss places where one may prepare for or receive training in data-processing work. Have students study college catalogues, business offerings, area vocational school offerings, and company training ads in newspapers.
- e. Have the students prepare a block diagram of how to work a long division problem, how to get home from school, how to study, etc., to illustrate the planning phase of the programmer goes through in doing his work.

- f. Add the following to the vocabulary notebook:

professional	console operator
technical	tape librarian
clerical	programmer
key punch operator	systems analyst
peripheral equipment operator	computing center

Instructional Materials

- a. Films

--"Careers in Business Data Processing," (16 mm., sound, color, 13 min., \$5 rental). University of Southern California, Los Angeles, California.

--"Computer Programming," (16 mm., sound, 26 min.). System Development Corporation, 2500 Colorado Avenue, Santa Monica, California.

A good film to show to logically minded programmers or those interested in knowing what a programmer does.

- b. Transparencies (See masters at back of unit.)

5. To understand the basis of the electronic computer and punched card equipment

This learning deals with only a general overview of computer operation. It is provided in order that the student may gain an insight into the capacity of an automated device and because computers and automation are synonymous in the minds of many. It will also assist students in developing a background for the study of electronic data processing as it applies to office work.

Content to be Included

- a. What are computers?

--They are electronic or mechanical devices that solve mathematical problems and perform clerical tasks.

--They can add, subtract, multiply, and divide.

--Although they are sometimes referred to as electronic brains, they lack the ability to think out things for themselves. All they can do is carry out the instructions that their human operators give.

b. How fast do they operate?

--Their electronic circuits can act 1,000 times faster than a nerve cell in the human brain.

--They can do 8,000 additions or subtractions in one second. They have solved in one minute a problem that would take a man 2½ years to figure with pencil and paper.

c. How are they being used?

--Business uses them to prepare payrolls, write bills for customers, do accounting, take dictation, write letters, read incoming mail, figure taxes, keep inventories, keep records of deposits, and keep records of subscriptions.

--Manufacturing uses them to control the flow of oil through tanks and to transfer mixtures from one processing vat to another. Other uses are to run machines and control production lines in some automobile plants and factories.

d. What kinds are there?

--There are two basic kinds: digital and analog.

--Digital computers give results by counting numbers. The numbers can be used to represent anything that can be measured. These computers are used by industries and business firms to make precise calculations and are the most widely used of the two types. They can do arithmetic and such logical operations as comparing, selecting, matching, and sorting information. Some simple digital computers are our hands, the abacus, and cash registers. They determine how many.

--Analog computers are faster than digital computers but are less exact. They are used frequently by scientists for research projects that do not require highly exact solutions. They must be designed to fit the needs of the particular problem to be solved. They are built to be an analogy or physical likeness of the problem that they are designed to solve, but they may use far different physical qualities to arrive at their solution. Simple analog computers are clocks, thermometers, and weighing scales. They determine how much.

--Our discussion will be confined to digital computers.

e. How do computers solve problems?

--Let's think first of how an individual solves a problem with a calculator. (1) He has the calculator to do his arithmetic. (2) He has a piece of scratch paper to keep track of intermediate steps and the order of work. (3) He has tables to calculate square root, interest, etc. (4) His mind controls the entire operation.

--The computer has (1) an arithmetic unit to correspond to the calculator, (2) a control unit to direct the operation and keep track of the steps, (3) a control memory or storage unit to take the place of the reference book of tables, (4) input units to give the right kind of information, and (5) output units to provide the result obtained to its human operators.

--The arithmetic unit performs all the computations. It does adding, subtracting, multiplying, and dividing. In addition it makes such logical decisions as distinguishing between positive, negative, and zero values. It can tell whether one value is greater than, less than, or equal to another value.

--The control unit directs and coordinates the entire system as a single multipurpose machine. It takes data from storage and operates on instructions given by the programmer.

--The storage or memory unit is like an electronic filing cabinet. It may be a part of the computer system or an auxiliary device such as magnetic disks, drums, and tape.

--The input unit accepts the initial information required to solve the problem. It can receive information from punched cards, paper tape, magnetic tape, magnetic ink characters, or from the typewriter keyboard connected to the computer.

--The output unit give the results of the computer operation. It may give the results on cards, magnetic tape, paper tape and/or printed or typed forms.

f. How do computers do arithmetic?

--Computers have thousand of circuits, resembling electric-light switches, that can be either off or on indefinitely.

--They make use of the binary system in solving arithmetic. This is a two-digit system using one 1 and 0; one is represented by on; zero by off. These are referred to as bit values. Combination of 1 and 0 can be used to represent any number letter or symbol that is to be handled by the computer. Single and multiple-digit decimal numbers are expressed by the position of the bit symbols (1 and 0) which are based on the progression of powers of two: the unit position of a binary number has the value of 1, the next 2, the next 4, the next 8, etc.

Decimal Number	Binary Coded Decimal (Binary Value)							
	128	64	32	16	8	4	2	1
1	0	0	0	0	0	0	0	1
2	0	0	0	0	0	0	1	0
4	0	0	0	0	0	1	0	0
8	0	0	0	0	1	0	0	0
16	0	0	0	1	0	0	0	0
32	0	0	1	0	0	0	0	0
64	0	1	0	0	0	0	0	0
128	1	0	0	0	0	0	0	0

Decimal Digit	Binary Notation
0	0000
1	0001
2	0010
3	0011
4	0100
5	0101
6	0110
7	0111
8	1000
9	1001

On the basis of place value, the following decimal numbers would be expressed:

Decimal Number	Binary Equivalent
15	00001111
96	001100000
130	010000010

Teaching-Learning Activities

- Have students prepare a punched card showing their name, address, and telephone number. Have them mark off the card in fields and "black-in" the spaces where the holes would be punched.
- Obtain a mathematics textbook and have the students work addition, subtraction, multiplication, and division problems using binary arithmetic.

- c. Visit a business which uses data processing to do accounting.
- d. Have the students add the following to their vocabulary study:

computer	bits
digital computer	binary arithmetic
analog computer	paper tape
arithmetic unit	magnetic tape
control unit	punched card
storage unit	nine edge
input unit	twelve edge
output unit	zone punch

Instructional Materials

a. Films

--"What is EDP?" (15 min., color, 16 mm.) International Business Machines, Data Processing Division, White Plains, New York. (Free--call local representative.)

This film discusses the basic principles of electronic data processing. It explains the provisions for input, storage, processing, and output of data. It deals briefly with punched cards, paper and magnetic tape, magnetic ink, and magnetic drum, disk, and tape storage. It is designed for those of high school level and above who have some interest and background in the subject.

b. Transparencies (See masters at the back of the unit.)

SURGICAL TECHNICIAN

UNIT: SURGICAL ASEPTIC TECHNIQUE

Major Teaching Objective

To develop understandings and skills in the principles and application of aseptic technics to prevent and control infections in the operating room

Learnings (Competencies) To Be Developed

1. To understand the development and principles of aseptic technic
2. To prepare the operating room for action
3. To give preoperative care of skin
4. To put on sterile gown and gloves
5. To set up sterile tables and drape patients
6. To handle and dispose of infectious and contaminated material

Place of Unit in Course

Surgical aseptic technic is based upon the unit "Sterilization and Disinfectants." This unit deals with the principles and technics necessary to maintain the sterile field after the equipment and supplies have been sterilized.

The importance of surgical asepsis cannot be stressed enough in view of the potential danger from infection to patients and personnel. The presence of pathogenic organisms or practice of faulty technic can result in serious consequences to patients following surgery. For this reason the student should be made aware of his/her responsibility to maintain rigid control of asepsis at all times.

Several hours of clinical experience are needed during this unit. They will give an opportunity for the student to gain experience in procedures included in each learning. An attempt has been made to arrange the learnings in a logical sequence necessary to effective practice during a surgical procedure. However, the teacher should feel free to arrange the learnings to best suit the students' needs.

Suggestions for Teaching the Unit

This unit requires much class activity to practice skills included in each learning before going into the clinical area.

Before each practice session is held the teacher might use transparencies or slides to help demonstrate the procedure. The teacher should emphasize specific points and allow time for discussion and questions while slide or transparency is viewed. Real supplies and equipment should be available for use by the students. Films on aseptic technic should be used to summarize the learning.

Since aseptic technic is only as good as the most careless member of the team, have students evaluate the ability of other students to use correct procedures and techniques. This might be done by having the students list errors, and the results which may occur when there is a break in good technic.

Introducing the Unit to Class

The teacher may begin the unit with a short review of microbiology and how disease is transmitted. Since the students will have some clinical experience, the teacher may ask each student to prepare a report of how sterile goods is stored in the local operating room.

Learning (Competencies) To Be Developed

1. To understand the development and principles of surgical aseptic technic

Surgical aseptic technic is the total effort of every person in the operating room to keep the area free from bacteria. Since it

was first demonstrated that micro-organisms were responsible for disease, medical science has searched for ways to make the operating room safe.

- a. Louis Pasteur (1857) first demonstrated that organisms could be killed by heat.
 - This would prevent germs from entering wounds.
 - Would help to prevent high death rate among surgical cases
 - Joseph Lister followed with theory that germs came from outside the body and grew under certain conditions.
 - It was discovered that bacterial growth could be retarded or killed by use of antiseptic carbolic acid
 - It was also believed that air was a source of ... contamination.

- b. Discovery of sterilization by heat proved to be a very practical method of killing bacteria before they came in contact with a wound.
 - Skin has a natural power of self protection against bacteria.
 - Antiseptics protect against infection while asepsis is without infection.
 - Antiseptics may decrease natural resistance of skin to bacteria.

- c. Every person in contact with the operating room has an obligation to maintain rigid asepsis.
 - Good health is essential; minor skin infections or colds can menace the patients progress.
 - Cleanliness is of utmost importance; shoes and uniforms worn in operating room should not be worn outside of hospital.
 - Hair should be clean and completely covered.

- d. Discovery of antibiotics has tended to cause some laxity in adhering to aseptic technics.
 - Bacteria can become resistance to antibiotics. This is especially true of Staphylococcus aureus.
 - Research shows that Staphylococcus organisms can live indefinitely and can be harbored by humans without causing infection.
 - They can be carried from one person to another by improper care of linen, equipment, supplies, and by individual contact.
 - Most susceptible individuals are new-born infants, debilitated persons and new surgical patients.
 - Every effort must be made to identify source of "Staph" infections, by frequent tests to determine bacteria in air.

- Special care of operating room is essential in cases of skin infections, burns, or surgery involving severely infected areas.
- e. All sterile goods, instruments and supplies are stored in the area designated for this purpose only.
 - Includes prepackaged supplies
 - Sterile supplies dated. Must be checked at intervals and resterilized if outdated.
 - Indicator tape shows when sterilization is effective.
 - Sterile supplies must be kept dry. Moisture results in contamination of packaged contents.
 - After a package has been opened, remove its contents from sterile storage area. Never return an opened package to sterile storage area.
- f. Contamination of articles occurs when:
 - The article is touched by hands or unsterile instruments
 - They become wet when ampules are broken over sterile table or area
 - An unsterile object is dropped on sterile area
 - A person reaches across the sterile area
 - Infectious material from wounds contact them
 - Airborne sources of bacteria are present

Suggested Teacher-Learning Activities

- a. Obtain a petri dish with culture media and place on desk for a short period. Arrange with laboratory to prepare slides to show students how this airborne bacteria grows.
- b. The students may prepare written reports of post-operative hospital infections. Have students identify how these can be avoided.
- c. Use of a film on principles of surgical aseptic technic.

Suggested References and Instructional Materials

a. References

- Medical and Surgical Nursing, pp. 36-37, 236-237
- Practical Nursing, pp. 135, 143

- A Manual of Operating Room Technology, pp. 3, 44, 93, 94, 97
- "Staphylococcal Disease and Related Subjects," pp. 27-29

2. Preparation of operating room for action

The surgical unit must be kept in readiness for immediate action upon notification. At the same time operating-room personnel must coordinate actions to meet the needs of the surgeon preceeding

surgery and during the surgical process. To facilitate planning, all surgical cases are scheduled except those which are deemed emergencies.

The attention given to preparation of the operating theater is of utmost importance. The post-operative convalescent period is influenced by conditions in the operating room. Hospitals may be held legally responsible for negligence where post-operative complications are traced to errors in technic.

Furniture, equipment, lights, walls, and floors must be dust free. Equipment and lights must be checked for safety factors and function. Supplies must be available for instant use, and in the designated place.

- a. Most operating rooms are constructed with tile walls for easy cleaning.
 - Previous to time surgery is scheduled, walls are washed with germicidal solution.
 - Furniture, lights and large equipment are wiped free of dust with damp cloth.
 - Floors are cleaned after each case.
 - Germicidal floor mats may be placed at entrance.

- b. The danger of static electricity is eliminated.
 - All personnel dressed in cotton clothing
 - Static free shoes
 - Hospital provides surgeons scrub suits, gowns. Nurses are provided scrub dresses, headgear and mask.
 - Hospital provides special static-free boots for personnel to wear during time surgical procedures are performed.

- c. Before preparing the surgical rooms for action, identify the type of surgery to be performed and what room will be used by each surgeon.
 - All necessary articles essential to the type of surgery should be available so that the circulating nurse does not need to leave the room during the surgical procedure.
 - Oxygen supply must be adequate, and equipment ready for administration.
 - Anesthetic machines are usually the responsibility of the anesthetist, however, equipment such as airways, suction tubes, syringes, needles and masks must be checked by operating room nurse, and be ready for use.
 - Supply cupboards in O.R. contain extra sterile goods, sutures, Bard Parker pans for knife blades and scissors, antiseptic solutions, stimulants, syringes and needles. Other supplies deemed necessary for efficient operation of theater may be kept in this area.
 - Sterile packs and packages obtained from the sterile supply room and placed in proper area ready to be opened.

- Adequate amount of solutions for external use are placed in a convenient area.
 - Solutions for intravenous infectious and blood transfusions are available, with proper tubing for administration.
- d. Allow adequate time to open sterile packages and packs before patient is brought to the operating room. Once the sterile article is opened, great care must be exercised to avoid contaminating the contents.
- Large packs are usually opened first on the nurse's work table.
 - The wrapper covers the table with the inside making a sterile field for linens, sutures, sponges and instruments.
 - The "scrubbed" technician will arrange sterile articles, after putting on sterile gown and gloves.
 - Additional supplies may be placed on sterile area by use of a sterile pick-up forcep or by dropping sterile articles on the area.
 - When using sterile pick-up forceps be sure that forceps do not touch the sides of the container. Always keep forcep blades downward.
 - Do not wave sterile article in air or touch table with forcep.
- e. Once opened, sterile supplies must be covered until ready for use.
- The sterile cover is folded back so that only the inside touches the contents on the table.
 - When opening or handling sterile articles be sure to keep hands above the waist line.
 - Contaminated articles demand immediate replacement of the entire sterile field.
- f. Sterile covered containers should be opened only when necessary, and the lid replaced as soon as possible. The lid should be held in such a way that the sterile undersurface is downward. If it becomes necessary to set the lid down, the sterile undersurface should be upward.
- Possibility of airborne contamination
 - Dust particles fall downward.
 - Do not return unused sterile objects to sterile container.
- g. Basins for various types of solutions and specimens are wrapped separately or in sets.
- Large basins for antiseptic solutions used by surgeons and assistants to dip hands after scrubbing.
 - Small basins for solution to moisten sponges, for specimens, discarded sponges and to break sutures encased in glass ampule.

Suggested Teacher-Learning Activities

- a. Use slides to show how to unwrap sterile packs and packages. Discuss with student what to look for.
- b. Obtain supplies from hospital operating room and demonstrate how to open sterile packs and packages. Have each student demonstrate using technic observed in slides and by demonstration of teacher.
- c. The teacher may purposely contaminate an area and have students show how such contamination may be avoided by keeping the sterile article where it can be seen at all times.
- d. A problem may be developed on the effects of poor aseptic technic, results to patient, and how the staff is involved.

Suggested References and Instructional Materials

a. References

- Aseptic Technique for Operating Room Personnel, pp. 26-27
- The Operating Room Technician, pp. 34-41

- "Nursing and Asepsis in the Modern Hospital" pp. 54-55

3. Preoperative care of skin

The preparation of the skin is dependent upon diagnosis, anticipated surgical procedure, and condition of the patient. While the major portion of preoperative care is the responsibility of the nursing unit, the surgical technician will often be responsible for proper preparation of the skin around the surgical area.

Skin preparation is usually carried out the evening before scheduled surgery to avoid disturbing the patient after pre-operative medications have been given. This also avoids delay in the surgical schedule.

When emergency surgery is scheduled the patients skin is prepared immediately before the preoperative sedation is given and the patient is taken to operating room.

Each hospital has established procedures for skin preparation that supplement the basic rules.

- a. The skin is a protective organ that covers the body for protection, absorption, elimination, sensory, and temperature-control purposes.

-- Skin and hair harbor micro-organisms that may become pathogenic when there is a break or cut in skin.

- Condition of skin varies according to age, color, nutritional factors and exposure.
 - Persons with blond coloring tend to have more sensitive and delicate skin.
- b. Before skin preparation of patient is started, the technician should be aware of open lesions or breaks in the skin.
- May lead to post-operative infections
 - May require special treatment and preparatory procedures
 - Alert operating room supervisor of patients skin condition, if open lesions or breaks in skin are observed.
- c. When entering the room to prepare the patient's skin, the manner of approach can have a definite effect on the patients attitude towards pending surgery.
- The patient may have many fears which may be intensified if technician is inconsiderate.
 - Always explain procedures to allay fear of the unknown.
 - Approach patient with understanding attitude.
 - Use caution and tact when talking with patient. Discussion of surgical treatment and prognosis is up to the patients physician.
 - Learn to listen to the patient. This may bring out valuable information that can affect progress during surgery.
 - Respect the patient's desire for privacy. Expose only the area being prepared.
 - The patient is an individual, and consideration should be given to his desires.
 - When surgery involves the cranial area, make certain a permit has been signed before hair is cut and scalp shaved.
- d. The objective of preparing the patient's skin before surgery is to make it as free as possible of bacteria, without causing irritation or impairing its natural protective function which might interfere with healing.
- Diagnosis determines area of preparation.
 - Some procedures are for diagnostic reasons.
 - Equipment for skin preparation is assembled on tray and kept in constant readiness. Equipment includes basins, cotton or sponges, razor with new blade.
 - Adhesive, ointments, and grease must be removed first with benzene or ether.
 - The operative field may be cleansed with cleaning agent such as phiohex, surgical soap and water before shaving.
 - Approximately 10-12 inches on each side and at the top and bottom of the site of incision should be cleansed and shaved.
 - All hair must be removed from area.
 - Avoid causing small scratches or cuts with razor.

- Do not allow excess solution to trickle down the sides of the patient, the groins or folds of fat.
 - When shaving procedure is completed cover the area with a sterile towel, or follow the procedure of the local hospital.
 - The operative area is cleansed with disinfectant after the patient is brought to operating room.
 - Depilatory cream may be substituted for shaving method.
- e. In some surgical cases a 24-hour skin preparation may be required.
- Every surgeon has special instructions for preoperative preparation for orthopedic, skull, skin grafts and eye surgery. Other areas such as heart and lung may be included.
 - When amputation is to be done be sure to check extent of area involved before beginning skin preparation
- f. For purpose of adequate skin preparation, the body is divided into operative fields.
- Cranial area (may involve entire skull)
 - Neck and thyroid area
 - Chest area (includes breast amputation)
 - Abdominal area
 - Inguinal area
 - Perineum and anal area
 - Spine
 - Kidney
 - Extremities
- g. When skin graft is scheduled, obtain instructions from supervisor as to what area will be used for grafting purposes.
- Most common area is the anterior thighs.
 - Abdomen sometimes used
 - Depends on extent of damaged skin and amount of healthy skin

Suggested Teacher-Learning Activities

- a. Transparencies may be used to show extent of operative fields.
- b. A problem may be developed which deals with the approach to a patient who must have preoperative skin preparation and is apprehensive of the surgical procedures.
- c. Clinical experiences should be arranged to allow the student experience in preparing the patient's skin.
- d. Slides may be used to demonstrate skin preparation before clinical experience.

- e. Pole playing may be an effective teaching-learning experience to stress approach to the very frightened patient, and the patient who is reluctant to be exposed for skin preparation
- f. Develop problems with students. For example-- How effective is skin preparation in preventing Staph infections? What may be the results when skin is scratched during the preparatory procedure?

Suggested References and Instructional Materials

a. References

- A Manual of Operating Room Technology, p. 137
- The Operating Room Technician, pp. 44-45
- Aseptic Technic For Operating Room Personnel, pp. 51-53
- "Human Hair A Reservoir of Staphylococcus", p. 757

4. To put on sterile gown and gloves

Skin preparation by the surgeon and his assistants previous to the surgical procedure is carried out to make the hand and arms as free of bacteria as possible. These individuals are referred to as "scrubbed" and will wear sterile gowns and gloves during the procedure. This lessens the danger of wound infections.

Once the hands and arms are scrubbed, the gown and gloves put on, the individual is limited only to the work area which is considered sterile.

- a. The scrubbing procedure involves three steps: 1) to remove surface dirt and organic matter from skin, 2) to remove normal oily film, 3) degerm clean skin. Before procedure begins, the hair must be completely covered and the mask be in place.
 - Water adjusted at scrub sink to temperature and flow. Must be continuous during scrubbing.
 - Nails should be kept short. Stainless steel nail files are provided to clean around and under nails during the scrub process.
 - Use firm bristle brush from sterile dispenser at scrub sink.
 - Average length of scrub is ten minutes.
 - Lather hands and arms below elbow well and rinse frequently. Make sure hands and arms below the elbow do not touch sink.
 - Following scrub, immerse hands in antiseptic solution for one minute.
 - Dry with sterile towel. Drop towel away from sterile area.
 - Transient skin flora easy to remove from skin surface, however, bacteria which inhabit the deeper layers, pores, and hair follicles of skin are a more difficult to remove.

- Hands must be free of cuts, abrasions, or dermatitis. These are a potential source of danger to patient.
 - While the newer soaps or compounds provide bacteriostatic action on skin for hours, the initial scrubbing time cannot be reduced.
- b. After completing the scrubbing process, the sterile gown is put on. The scrub nurse will assist the surgeon in the gowning procedure after she has completed putting on her sterile gown and gloves.
- The sterile gown may be obtained from the open laparotomy pack, or be handed to the "scrubbed" person.
 - Hold the neckband and gently let the gown unfold so armholes face the wearer.
 - Hands should be kept up when gown is put on.
 - The circulating nurse can assist by reaching inside and pulling the gown on, tying tapes at back.
 - Knit cuffs should partially cover hands to aid in covering the cuff with the sterile gloves.
 - Gowns remain sterile only as long as they are dry.
 - Once gowned the scrub nurse must face sterile areas. The back of the gown is considered unsterile.
- c. Sterile gloves are put on last. Small containers of powder or glove lubricant are sterilized with each glove package so hands can glide more easily into the gloves. Hands should be powdered away from sterile area to avoid the spread of powder dust particles. Only the inside of the glove may be touched with the clean hand.
- The left hand is gloved first by grasping the inside cuff of the glove and slipping hand into glove. Cuff remains turned down until right hand is gloved.
 - Slip gloved left hand inside of cuff on right hand glove and slip right hand into glove.
 - After both hands are gloved, fold gown cuffs and pull gloves over the cuffs.
 - Gown cuffs should not pull out when reaching for an object.
 - If glove is torn at any time discard it immediately and request new package of gloves.
 - The area of contamination is the inner cuff of the glove which may contact the skin surface before the gown cuff is covered.
- d. The scrubbed nurse usually assists the surgeons during the gown and gloves process.
- Holds gown by neck band and gently shakes out gown to full length
 - Make a cuff of the neck area to protect gloved hands.
 - Outside of gown faces assistant
 - Surgeon slips into gown facing assistant
 - Circulating nurse pulls gown on from back and ties tapes
 - Pours powder or lubricant on hands

- Holds right hand glove with fingers on inside of turned back cuff, palm of glove toward surgeon and stretch cuff to allow him to introduce his hand
- Keep thumbs outward to avoid touching surgeons hand

Suggested Teaching-Learning Activities

- a. The teacher may use slides to show the gowning and glove procedure. These should be shown before practice. Have students identify how the gown is picked up and opened, why cuffs are left well down on hand, and how gloves are put on.
- b. Develop this problem:-- How effective is hand scrubbing as compared with the various cleansing agents now used in the O.R.?

Suggested References and Instructional Materials

a. References

- "Surgical Hand Scrubbing," pp. 75-77

5. To set up a sterile table

Shortly before the patient is brought to the operating room all work tables should be draped with sterile covers. Linens, instruments, basins, sutures, and other supplies should be arranged for fast and efficient use. The scrub nurse and the circulating nurse work together to set up tables and solution basins.

- a. The scrub nurse will drape all tables, solution pans and doctor's instrument tray.
 - Air currents carry contaminants, and linens should not be shaken or flourished when handled.
 - Make a cuff or turn corners over gloved hands to avoid contact with unsterile surface.
 - Table is draped so that the side near the scrubbed person is draped first.
 - Only the top of the table is considered a sterile area, and the part of drape that falls below this is considered unsafe.
 - If drape shows any holes, tears or worn places, discard at once and replace with another.
 - Drapes should not be held too high or be allowed to touch floor.
- b. Upon completion of the draping procedure the scrub nurse organizes the nurse's work table.

- Linens arranged in order of use
 - Instruments required for type of operation arranged for easy accessibility
 - Knife blades placed in handles
 - Sutures and ligatures prepared and placed in sterile towel
 - Each piece of equipment checked for good working order. This includes instruments, sutures, needles, and suction tip, and others.
 - Count number of sponges on hand with circulating nurse. Each sponge must be accounted for before incision is closed.
 - Circulating nurse will pour solutions at the request of the scrub nurse. All solutions must be sterile. Hold containers high from sterile receptacle. Avoid spilling or splashing solution.
 - The surgeon's instrument table is prepared by placing only the necessary instruments, sponges and ligatures needed to begin the operation.
- c. After patient has entered the operating room, sterile drapes are placed in such a way that the patient is completely covered with the exception of the face and head.
- The circulating nurse must keep close observation of sterile areas and persons for break in technic.
 - Never hesitate to tell physician or assistants immediately when a break in technic has been observed.
 - Conversation should be kept at a minimum.

Suggested Teacher-Learning Activities

- a. Overlay transparencies demonstrating each step of setting up the nurse's work table may be used in this learning. This gives the student a concept of how the procedure starts and the appearance of the table when procedure is completed.
- b. Develop this problem-- How could Staph infection occur during the surgical procedure and with good aseptic technic?

Suggested References and Instructional Materials

a. References

- Aseptic Technique for Operating Room Personnel, pp. 56-60
- A Manual of Operating Room Technology, pp. 90-92
- "Evaluation of Draping Technique in Prevention of Surgical Wound Contamination," p. 292
- "Porous Paper Drapes Block Bacteria," p. 54
- "Disposable Drapes Provides Effective Bacterial Barriers," pp. 36-87

6. To handle contaminated or infectious material

Surgical cases are divided into two categories: 1) clean, 2) contaminated or "dirty." Clean cases are those in which no known infection is present at the time the patient is brought to the operating room. Contaminated or "dirty" cases are those in which gangrene or pus is associated with a frank infection. Negligence in handling contaminated articles from either type of case can result in serious consequences throughout the hospital. Patients with tuberculosis should wear masks to operating room.

- a. Unless a known infection exists, a surgical case is assumed to be clean, however, an infectious condition may be discovered after the incision is made.
- b. Contaminated articles should be handled as little as possible. A small area should be limited to contaminated articles.
- c. All equipment and supplies used for surgical procedure are considered contaminated when operation is completed and the patient is removed from operating room.
 - Drapes checked by scrub nurse for instruments
 - Sterile tables dismantled by scrub nurse and linens disposed to linen hamper. Plastic material discarded.
 - Instruments, equipment, and supplies accounted for and removed to clean-up room
 - All instruments-- must be opened and washed in solution basin before being placed in instrument-washer sterilizer
 - Gloves should be worn when handling contaminated material.
 - Unused large gauze sponges are sent to the laundry or discarded.
 - Small unused sponges may be returned to unsterile stock for counting and resterilization.
 - Gloves should be rinsed off before stripping from hands.
 - Used sponges, broken ampules, discarded in plastic liners of kickbucket should be taken to incinerator.
 - Suction bottles are flushed with germicidal solution before being prepared for sterilization.
 - Anesthesia equipment is cleaned with germicidal detergent solution between each case.
 - Care must be taken to avoid cuts or pricks on hands from knife blades and needles which have been used.
 - Floor is cleaned with germicidal solution and set-up for next case.
- d. Known contaminated or "dirty" cases require special precautions in the cleaning process.
 - All used linen is placed in bags, marked contaminated and sent immediately to laundry.
 - Unused linens, dressings, and sponges are placed in bag and sterilized before laundered or processed.
 - Procedure for cleaning gloves, instruments and other equipment is the same as that used in clean cases.
 - Room is disinfected. Floors are cleaned with germicide.

- When forceps are used to pick up contaminated material, they must be sterilized before used again
- Room need not be quarantined if careful cleaning procedures are followed.
- Wear gloves when handling infected or contaminated article.

Summary

- a. In light of new data about micro-organisms, the methods of control in all surgical cases should be considered potentially dirty.
- b. Involuntary actions and habits of staff must be replaced with deliberate actions to prevent contamination.
- c. Staff must develop concern for P. aerogenes, gram-negative and gram-positive bacteria, and the virus of homologous serum hepatitis, as a potential contaminant in all surgery.
- d. Infectivity and resistance to Staph infection still unsolved.
- e. All organic debris, sponges, etc., that fall on wall should be treated immediately with germicidal solutions.

Suggested Teacher-Learning Activities

- a. Develop this problem-- How would you manage the operating room cleanup if the surgical case assumed to be "clean" was found to be infectious?
- b. Develop this problem-- How may bacteria from used sponges and debris be prevented from becoming airborne during a surgical procedure?

Suggested References and Instructional Materials

Evaluation of Unit

1. Teacher-student evaluation of performance in skills and related activities included in this unit.
 - a. Preparation of operating room for surgery
 - b. Clean-up procedures in the operating room
 - c. Preparation of patients skin
 - d. Gown and glove procedure
 - e. Set up for operation

2. Two methods may be used to evaluate the students skill development
 - a. Teacher observation of individual student's performance in the operating room
 - b. The teacher may use the overhead projector with transparencies which show the articles and equipment used in these skills. The transparency should not be labeled. The student may identify the articles and equipment and the skills related to the illustration on the screen.
3. An objective test on basic knowledge
4. Subjective evaluation by student and teacher to determine change in behavior.

Availability of Materials

As long as the supply will permit, a maximum of two copies of these materials will be made available to each state. The persons who receive these copies should be professional people who have state responsibilities in teaching materials, teacher education, or supervision. We regret that we are unable to supply materials for vocational teachers in other states. Vocational educators at the state level may, however, if they desire duplicate Kentucky materials for the use of their vocational teachers.

FOREWORD

This course of study, consisting of an analysis of DENTAL ASSISTANT, together with assignment sheets covering the related (occupational) information to be taught by the school, has been prepared for teaching dental assistants on an individual basis in a cooperative part-time program.

The original analysis was developed in 1950 by Mrs. Marion Hoblit, Coordinator of Cooperative Occupational Education, Senior High School, Springfield, Missouri. The original manuscript was edited by Emil H. Rohlf, Coordinator of Cooperative Occupational Education, Normandy Senior High School, St. Louis County, Missouri. Special credit is due to Mr. William F. Van Trump, Research Assistant in Industrial Education at the University of Missouri, who prepared the present revision of the analysis and the assignment sheets.

We wish to acknowledge our indebtedness to Dr. H. H. London, Professor of Industrial Education at the University of Missouri, who supervised the preparation of the material, and to Mr. James B. Karnes, Instructor in Industrial Education at the University of Missouri, who edited the manuscript. We acknowledge the assistance of Dr. J. F. Burge, Dentist, Columbia, Missouri and (Mrs.) Edna Trower, Past President of the Missouri Dental Assistant Association and member of the Board of Directors and Consultant in Dentistry Practice Administration, for their advice in connection with the selection of the content of the course of study. Credit is due Dr. H. Pat Wardlaw, Assistant Commissioner of Education, Mr. Merton C. Wheeler, Director of Industrial Education, and other staff members of the State Department of Education for their efforts in the development of the Industrial Education Curriculum Series of which this course of study is a part.

INTRODUCTION

In preparing this course of study, it has been assumed that the attainment of occupational competency in any type of work involves three different, yet closely related, types of learning. They are:

1. Mastery of the practical job skills and procedures performed by the worker in the occupation.
2. Comprehension of the technical and related information basic to an intelligent understanding and practice of the occupation.
3. Development of those personal-social traits which are essential for the successful worker.

The first group of these "learning units" -- the job skills and procedures -- has been arranged in the analysis under the heading of "Job Training". The second group of learning units -- the technical and related information -- has been arranged under the heading of "Related Information". And the third group -- the personal-social traits -- has been listed under "Personal-Social Traits Essential for the Dental Assistant" in the introductory section addressed to the student.

In a cooperative educational program it is necessary for both cooperating agencies -- the school and the employer -- to understand clearly just what each is to be responsible for in the training of the student-worker. Experience has shown that most of the practical job skills and procedures of an occupation can best be learned through supervised work on the job. Experience has shown also that the school can best teach most of the technical and related occupational information needed by young student-workers. This division of responsibility has been made in the arrangement of the course of study; that is, it is expected that the student-worker will master the job skills and procedures through practical work on the job under the immediate supervision of the employer, and that he will receive instruction in related occupational information in the school under the direction of the coordinator.

Skills and related information are matters for direct instruction, but personal-social traits are acquired only through practicing them during the process of acquiring skills and information and in one's daily conduct. Therefore, both the employer and the school, as well as the home, must assume responsibility for developing in the student-worker those habits, attitudes and character traits which are essential for success in his occupation and in life. Both the employer and the school should be constantly on the alert to see that the student-worker places desirable interpretations on his experiences and that he does not practice habits and exhibit character traits detrimental to his success.

Since the coordinator's class will be made up of fifteen or more students, each differing from the other significantly, studying a dozen or more occupations which differ markedly in their requirements, it follows that it will be impossible for him to teach, through the group method, the occupational information which relates to the specific job of each student worker. In order to be effective, this type of instruction must be individualized. There is, of course, some related information, such as occupational health and safety; workmen's compensation, wage hour laws, fair labor standards, unemployment compensation, and the like, which is of common interest and concern to all student-workers, and may be effectively taught by the group method. But if the coordinator is to make a real contribution to the in-service vocational education of his students, he must devote a major portion of his classroom instruction to content which deals specifically with the work of each boy and girl enrolled.

With this requirement in mind, and in order to facilitate individual instruction, these assignment sheets have been prepared. Each contains certain record data as to number and range of units covered, introductory paragraphs designed to develop interest, explain the importance of the assignment, and to convey to the student what he is expected to learn, specific assignments including reading, learn activities and a series of new type questions designed to check his attainment.

Obviously, it is desirable to teach the related information in the school at the time it will be used most advantageously on the job. This means that the two phases of the student-worker's training should parallel each other in a progressive manner. The coordinator will find the assignment sheets well adapted to this end. He can select from day to day the assignment which covers the informational units related to the work being done on the job. With this arrangement, the coordinator will become, during a major portion of his classroom time, a supervisor, study and helping teacher.

In selecting books for the course, an effort has been made to restrict the number to an adequate coverage of the material, and to select those of recent publication so that current practices can be consistently presented. It is recommended that copies of these books be secured and kept in the coordinator's classroom for ready use by the student.

The key sheets available in a separate manual, have been prepared to enable the coordinator to score quickly the objective tests which are a part of each assignment sheet. These key sheets give the correct answers to the questions, as well as the reference and the page on which each answer can be found. The key sheets should be kept in the coordinator's possession.

TO THE STUDENT WORKER

The vocation of dental assisting has steadily advanced through the past years. It has developed from a position of a glorified cleaning woman to a skilled technician who understands the problems and techniques of the dentist she serves. A great deal of credit for this development goes to Juliette Southard and others like her, who organized the American Dental Assistants Association. This organization has pioneered the education of dental assistants. Each girl who proves her proficiency as a dental assistant, by completing a certification course and examination prepared by the Certification Board of the American Dental Assistants Association, is granted the privilege of using the title, Certified Dental Assistant.

Opportunities for Dental Assistants

Dental assistants can find employment with private general practitioners, a group of dentists, the Veteran's Administration, The U.S. Public Health Service, and in the Armed Forces of our country. The large majority of assistants are employed by private general practitioners.

The salary paid dental assistants varies with the locality in which they are employed and their experience. A beginning part-time worker would earn, generally, \$1.00 per hour. Full-time assistants who are in their initial training period earn approximately \$40.00 per week while full-time, trained assistants will earn from \$175 to \$300 per month, depending upon the ability of the assistant and the responsibility of the position.

Personal Qualifications of the Dental Assistant

The practice of dentistry is extremely important to the health and welfare of the individual, the family, the community, and the nation. The dental assistant has an important part in providing dental service. Before a person decides to enter training as a dental assistant, she should understand what is expected of her. Among the more important personal-social traits required of a dental assistant are:

Cheerfulness. The ability to appear cheerful has a desirable infectious influence on other people.

Friendliness. The assistant manifests her friendliness by having a sincere and genuine interest in the welfare of each patient who comes into the office.

Dependability. The dependable assistant is always on time, regular in her work habits, and does her work well.

Initiative. The ability to see for oneself what ought to be done and to go ahead and do it is a desirable trait in all occupations.

Intelligence. Average or above intelligence is necessary to successful performance.

Appearance. Suitable dress, wise use of cosmetics, appropriate coiffure, and satisfactory grooming pay dividends in any field of endeavor. A scrupulously clean uniform and a carefully groomed assistant add much to the professional atmosphere of an office.

Cooperation. It is essential that the assistant work harmoniously with her doctor, the patients, and the other employees.

Accuracy. This trait is of extreme importance in a dental office where diagnosis and treatment depend upon absolute accuracy of tests, information, and the preparation of material and equipment.

Poise. The assistant should have satisfactory control of her emotions and good carriage.

Orderliness. Effective and consistent work habits and correct procedure and techniques employed on the job can mean the difference between success and failure.

Courtesy. The courteous assistant is civil and polite in all situations.

Professional Attitude. Professionalism is revealed by a deep and sincere respect and interest in your work.

ANALYSIS OF DENTAL ASSISTANT

<u>JOB TRAINING: What the Worker Should Be Able</u>	<u>Assign. No.</u>	<u>RELATED INFORMATION: What the Worker Should Know</u>
	<u>Orientation</u>	
	1	1. The importance of dentistry
	1	2. The job of the dental assistant
	1	3. History of dentistry
	1	4. The purpose of dentistry
5. Conduct oneself in a professional manner	1	5. Ethics and conduct
6. Speak correctly	1	6. The importance of pleasing speech
7. Walk and stand properly	1	7. The value of proper posture
8. Converse with patients	1	8. Office conversation techniques
9. Practice office etiquette and courtesy	1	9. Factors in developing good public relations
10. Maintain a neat and well-groomed professional appearance	1	10. Acceptable dress and grooming

Reception Procedures

1. Give information on the phone	2	11. Common telephone courtesies and techniques
2. Receive information on the phone	2	12. Kinds of business calls
3. Greet patients and other callers	2	13. Correct and accepted ways to greet patients
4. Assist in establishing a proper relationship between the child patient and the dentist	2	14. Psychology involved in dealing with children
5. Dismiss the patient	2	15. Accepted procedures for dismissing the patient

JOB TRAINING: What the Worker Should Be Able to Do	Assign. No.	RELATED INFORMATION: What the Worker Should Know
16. Collect and record personal information on patients	3	16. Kinds of information to collect from the patient
	3	17. Importance of collecting and recording personal information
18. Present cases to patients	3	18. Case presentations
19. Make appointments	3	19. Procedures for keeping the appointment book
20. Remind patients of appointments	3	20. Problems incurred in arranging appointments
21. Recall patients periodically	3	21. Advantages of recalling patients periodically
	3	22. Types of patient recall systems

Dental Office Management

23. Write receipts	4	23. Value of receipts
24. Maintain the day sheet	4	24. Keeping the day sheet
25. Prepare bank deposits	4	25. Methods of preparing bank deposits
26. Check deposit slips	4	26. Methods of checking bank deposits
27. Handle petty cash fund	4	27. Items for which petty cash can be used
28. Check and file invoices	4	28. Methods for handling invoices and statements
29. Type and send statements		
30. Write checks	4	30. Procedures to follow in writing checks and paying bills
31. Reconcile bank statements	4	31. Method for reconciling bank statements

JOB TRAINING: What the Worker Should Be Able to Do	Assign. No.	RELATED INFORMATION: What the Worker Should Know
32. Collect delinquent accounts	4	32. Problems encountered in collecting accounts
33. Check credit ratings of patients	4	33. Methods of checking credit ratings
34. Maintain supply control record system	4	34. Procedures for supply control
35. Perform office maintenance duties	5	35. Values of office task control cards
36. Handle incoming and outgoing mail	5	36. Types of mail encountered
37. Type letters	5	37. Factors and problems involved in mail handling
38. Pay office bills	5	38. Methods for handling dental office bills
39. Arrange convention and travel reservations	5	39. Factors to consider when making convention and travel reservations
40. Arrange flowers	6	40. Flower arrangements and plant care
41. Ventilate, dust, regulate heat and light, tidy up rooms and furniture	6	41. Daily housekeeping duties
42. Close office	6	42. Things to check in closing the office
43. Clean draperies, furniture and rugs	6	43. Ways to clean draperies, furniture and rugs
44. Clean and care for sterilizers and autoclaves	6	44. Methods of caring for sterilizers and autoclaves
45. Sterilize handpieces and contra-angles	6	45. Methods for sterilizing handpieces and contra-angles
46. Lubricate handpieces and contra-angles	6	46. Methods for lubricating handpieces and contra-angles

JOB TRAINING: What the Worker Should Be Able to Do:	Assign. No.	RELEVANT INFORMATION: What the Worker Should Know
47. Clean and maintain equipment finishes	6	47. Materials to use to care for finishes on equipment
48. Clean and maintain the dental unit	6	48. Considerations for maintaining the dental unit
49. Clean and maintain the Vacudent or Airdent unit	6	49. Steps for maintaining the Vacudent and Airdent unit
50. Clean and maintain the dental chair and cabinets	6	50. Things to maintain on the dental chair and cabinets
51. Attach handpieces to shaft	6	51. Types of handpieces
52. Clean and maintain laboratory and equipment	6	52. Care of laboratory and equipment
53. Talk intelligently about parts of the head and mouth	7	53. Anatomy of the head
	7	54. Names and locations of the teeth
	7	55. Means for identifying the parts of the teeth
56. Talk intelligently about caries	8	56. Common causes of caries
	8	57. Common dental diseases
58. Talk intelligently about types of cavities	8	58. Methods of classification of cavities
59. Instruct patient in choice of food for proper diet	8	59. Importance of diet on prevention of cavities
	8	60. Vitamins common to various foods
	8	61. Effect of bacterial action
62. Instruct patient in care of teeth	9	62. Principles of good oral hygiene
63. Demonstrate proper tooth brushing technique	9	63. Approved procedure for brushing teeth
	9	64. Values of tooth brushing

JOB TRAINING: What the Worker Should Be Able to DO	Assign. No.	RELATED INFORMATION: What the Worker Should Know
	9	65. Kinds of tooth brushes
	9	66. Common causes of tooth stain
67. Stimulate gum tissues	9	67. Proper technique for massage of gums
68. Talk intelligently about orthodontics	9	68. Principles of orthodontics
69. Solder and spot weld appliances	9	69. Procedure for soldering and spot welding

Operating Room Procedures

	10	70. Methods of sterilization
71. Sterilize instruments	10	71. Need for and uses of sterilized articles
72. Clean and sort burrs	10	72. Types of burrs
73. Assist with anesthesia	11	73. Kinds of anesthesia
74. Assist in meeting emergencies such as hemorrhage and loss of consciousness	11	74. Common first aid processes
75. Seat the patient	12	75. Things to be done to properly seat the patient for treatment
76. Prepare patient for treatment		
77. Bring out patient's records		
78. Adjust dental chair		
79. Care for patient's appliances	12	79. Procedure for caring for the patient's dental appliances
80. Provide dentist with proper instruments	12	80. Importance of selecting proper tools and materials for work to be performed

JOB TRAINING: What the Worker Should Be Able to Do	Assign. No.	RELATED INFORMATION: What the Worker Should Know
81. Arrange instruments	12	81. Value of proper arrangement of tools and materials
82. Assist with recall prophylaxis and examination	12	82. Preparation of basic set-up for recall prophylaxis and examination
	12	83. Types of mandrels and polishers
84. Hold mirrors for dentist	12	84. Kinds of mirrors
	12	85. Kinds of explorers
	12	86. Kinds of scalers
87. Conduct oneself in a professional manner	12	87. The dental assistant's conduct in the operating room
88. Secure and arrange tools	12	88. Sequence of tool operations in making a preparation
89. Assist with each step of the preparation		
90. Assist with installation of rubber dam	12	90. Uses for rubber dam
	12	91. Kinds of rubber dam clamps
91. Assist with pulp testing process	12	92. Purpose of pulp testing
93. Assemble and fill syringes	12	93. Types of syringes
94. Sterilize syringes	12	94. Care of syringes
95. Prepare cements	13	95. Kinds of cements
96. Clean cement mixing equipment	13	96. Uses of the various cements
97. Mix silver amalgam	13	97. Method for preparing silver amalgam
98. Assist with inserting amalgam restorations	13	98. Procedure for inserting amalgam restorations
	13	99. Types of cutting instruments

JOB TRAINING: What the Worker Should Be Able to Do	Assign. No.	RELATED INFORMATION: What the Worker Should Know
100. Mix synthetic porcelain	13	100. Method for preparing synthetic porcelain
101. Assist with inserting synthetic porcelain restorations	13	101. Procedure for inserting synthetic porcelain restorations
102. Polish synthetic porcelain restorations	13	102. Method for polishing synthetic porcelain restorations
103. Prepare acrylic filling material	13	103. Procedure for preparing acrylic restorations
104. Assist with inserting and finishing acrylic fillings	13	104. Method of inserting and finishing acrylic fillings
105. Assist with gold foil fillings	13	105. Procedure for gold foil fillings
107. Make wax patterns	13	106. Types of instruments for gold foil work
107. Make wax patterns	13	107. Method for making wax patterns for gold castings
109. Assist with fitting steel crowns	13	108. Materials available for making individual tooth impressions
109. Assist with fitting steel crowns	14	109. Procedure for fitting steel crowns
110. Assist with fitting gold inlays	14	110. Procedure for fitting gold inlays
111. Assist with three-quarter and full gold crown construction	14	111. Procedure for three-quarter and full gold crown construction
112. Assist with jacket crown construction	14	112. Procedure for jacket crown construction
113. Assist with bridge-work construction	14	113. Procedure for bridgework construction
114. Assist with setting gold inlays, crowns, bridges, and jacket crowns	14	114. Method for setting gold inlays, crowns, bridges, and jacket crowns

Assignment
Sheet No. 1

Covering
Units 1-10

INTRODUCTION TO THE DENTAL PROFESSION

Dentistry is a profession which has a universal need for its services. It is interesting work and provides an opportunity for service to one's fellow man. The dentist and his assistant are expected to exhibit professional and ethical conduct in keeping with the requirements of the profession.

Knowledge of good speech, posture, grooming and how to meet the public is of great importance to success as a dental assistant. These can be developed through reading and a conscious effort to practice and improve.

In this assignment you will have the opportunity to become acquainted with the dental profession, and with what will be expected of you as a professional employee.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 1-21; 180-185.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. The dental student must study many of the same subjects as the student in a medical school; however, the instruction is largely concerned with the oral cavity and the head.
- T F 2. In order for a dentist to maintain professional status he must keep his knowledge and skill freshened by continuing his education.
- T F 3. A dental assistant relieves the doctor from duties which do not require professional training.
- T F 4. The ratio of the number of people per dentist is steadily decreasing.
- T F 5. Dental assistants should attempt to learn several operating procedures at the same time.

- T F 6. The dental assistant should make a deliberate effort to read about dental procedures.
- T F 7. The main purpose served by a dental assistant is to save the dentist's time.
- T F 8. The dental assistant should adjust the routine of the dental office to fit her training.
- T F 9. A knowledge of psychology applied to the handling of people is of importance to both the dentist and his assistant.
- T F 10. An active dental assistant should join the Dental Assistants' Association.
- T F 11. The need for dental services is greater in a civilized society than in a primitive society.
- T F 12. A person's teeth are important factors involved in the digestive process.
- T F 13. The personal records the dentist keeps on each patient are the property of the patient.
- T F 14. The dentist can use the information in the patient's files for any use he may desire.
- T F 15. Patients have the right to examine their personal files at any time.
- T F 16. Ethics requires that no personal information an assistant learns in the office be mentioned outside that office.
- T F 17. Records should be placed so it is inconvenient for the patient to try to read them.
- T F 18. The dental assistant learns a great deal about the personal life of the dentist.
- T F 19. Dentists prefer that their assistants "forget" about any details of their family life that may arise.
- T F 20. The nature of dental work produces little friction between the dentist and his assistant.
- T F 21. Familiarity can breed contempt.
- T F 22. First names should not be used between the dentist, his assistant, and his wife.
- T F 23. If the assistant has the appearance of lightness on her feet, a cheery smile and a friendly eye, people she contacts will enjoy being near her.

ED

333

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

- T F 24. People draw impressions about us by observing the rapidity with which we speak.
- T F 25. When a person inhales, the lungs fill with air and the diaphragm is pulled up.
- T F 26. Upper chest breathing results in a deep, loud voice.
- T F 27. Diaphragmatic breathing can be achieved by practice.
- T F 28. By practicing inhaling and slowly exhaling, upper chest breathing can be achieved.
- T F 29. When a person speaks, air rushes between his vocal cords causing them to vibrate and thus produce sound.
- T F 30. Once air from the lungs has been resonated, it must be formed into words.
- T F 31. Clear speech depends upon the ability to easily open the mouth widely.
- T F 32. A high-pitch voice is considered most pleasant.
- T F 33. When speaking intensely, a person speaks with loudness.
- T F 34. Conversation in an office should be expressed with force or energy.
- T F 35. Rate of speech is determined by pauses between words or phrases.
- T F 36. A good conversationalist is a good listener.
- T F 37. The dental assistant should engage in conversation with the patient for as long a period as the patient desires to talk.
- T F 38. The assistant should attempt to be informed about all subjects of current interest.
- T F 39. Uniforms should be changed twice a week.
- T F 40. Cost of white shoes and hose are deductible from income tax.
- T F 41. The use of perfume is a good way to keep down body odors.
- T F 42. Early records indicate that there was less separation between medicine and dentistry than today.
- T F 43. Early treatments for disease often consisted of sacrifices or the application of some special remedy.
- T F 44. The Etruscans developed dental appliances before the founding of Rome.

- T F 45. Paul Revere was a practicing dentist.
- T F 46. A method of dental prophylaxis introduced in 1852, consisting of separating the teeth and filing away portions of the approximal surfaces of the crowns to prevent and arrest caries, was called "Arthurizing."
- T F 47. Cocaine was first used as an injection anesthetic in dentistry in 1867.
- T F 48. W. K. Roentgen began the practical application of x-rays to dental uses.
- T F 49. The German botanist, Link, first isolated and studied penicillin mold in 1929.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The specialist in dentistry who engages in the process of straightening teeth is known as a (an) _____.
2. The primary responsibility of the dental assistant is to save the dentist time and to directly aid in the production of _____ at the chair.

36. The first relationship between mouth bacteria and the decay of teeth was demonstrated by Dr. _____.
37. The first local anesthetic to be used was _____.
38. The idea of using antiseptic procedures was introduced by _____.
39. _____ years were required to train a dentist in 1942, indicating a trend toward longer period of training for dentistry.
40. In 1905 synthesized procaine was introduced under the name _____.
41. Ever since the action of sulfanilamide was demonstrated, the field of _____ has developed rapidly.
42. Vulcanite has been replaced by various types of _____ for use as a denture base material.
43. The dental profession requires high _____ and _____ conduct from its members.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. If the personalities of the dentist and his assistant clash, the assistant should (A) try to change herself; (B) try to change the dentist; (C) find a new job; (D) serve only as receptionist.
- _____ 2. In order to speak with a good voice tone for long periods of time, the speaker should learn to breathe using the (A) upper chest method; (B) diaphragmatic method; (C) lower chest method; (D) pharynx method.
- _____ 3. When the sound of vibrating vocal cords is resonated, the sound is (A) increased in volume; (B) decreased in volume; (C) raised in pitch; (D) lowered in pitch.
- _____ 4. Resonance is produced by the (A) larynx; (B) uvula; (C) vocal cords; (D) pharynx.

7. All dental radiographs are made by the use of a beam of ionizing radiation. The most common type of radiation used is (A) x-rays; (B) gamma rays; (C) ultraviolet rays; (D) radio waves.
8. If a patient requires a crown, the preparation is (A) a high crown; (B) a low crown; (C) a crown with many sized teeth; (D) a crown with many sized teeth.
9. Quality of vision is largely determined by (A) refraction; (B) accommodation; (C) accommodation; (D) vision.
10. An assistant can know what the patient is thinking by (A) examining his records; (B) observing him closely; (C) asking the dentist; (D) talking about sports.
11. The earliest person to describe the maxillary sinus was (A) Benvenuto Cellini; (B) Leonardo da Vinci; (C) Galen; (D) Marco Polo.
12. The first post-graduate school of orthodontia was established by (A) Kingsley; (B) van Foreest; (C) Angle; (D) Franklin.
13. The man who was outstanding for promoting preventive dentistry was (A) Black; (B) Long; (C) Cellini; (D) Leyden.
14. The Crawford Brothers introduced in the United States (A) cavity preparation; (B) filing instruments; (C) a textbook on dentistry; (D) amalgam filling.
15. The American Society of Dental Surgeons was organized in (A) 1739; (B) 1779; (C) 1839; (D) 1879.
16. Drs. C. W. Long and C. T. Jackson introduced (A) gold fillings; (B) ether anesthesia; (C) gas anesthesia; (D) novocaine.
17. The first dental engines were powered by (A) a hand; (B) steam; (C) electricity; (D) gas.
18. The resin now widely used as a base material for artificial dentures is (A) polyvisol; (B) vulcanite; (C) bakelite; (D) acrylic.

WORKING

The dental assistant is a representative in his relationship with all visitors to the dental office. The assistant usually makes the first contact with patients and other visitors, and the reactions of the public toward the dental office are greatly affected by these first impressions.

The dentist and his staff work as a team to efficiently carry out their duties. Each member of the team must possess specialized skills and knowledge that are gained through study and work experience.

In this assignment you will have the opportunity to learn about the role of the dentist and his assistant, dental ethics and conduct, and professional qualifications of the dental assistant.

Assignment

Read the reference listed below.

Answer the questions below and turn in this assignment by _____.

- A Schwarzrock. Effective Dental Assisting, pp. 22-58.

Questions

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. The assistant can safely assume that the patient will do what she wants him to do.
- T F 2. Praise and flattery can be used by the assistant to get patients to do what she wants them to do.
- T F 3. Dental assistants should not disagree with a patient's ideas.
- T F 4. Public relations refers to soliciting new patients.
- T F 5. Planning and effort are necessary to develop good public relations.
- T F 6. Dentists are likely to have unpleasant relationships with a few patients.

- T F 7. If a dental office is run in a very businesslike manner, good public relations will follow.
- T F 8. The peculiarities of patients should be remembered by the assistant.
- T F 9. When an unpleasant situation arises and the patient is under emotional strain, the best thing the assistant can do is to postpone the discussion until a later time.
- T F 10. The dental assistant should be in complete control of her emotions.
- T F 11. When the dentist is working with a patient, the assistant should enter their conversation frequently.
- T F 12. If the next patient must be kept waiting beyond his appointment time, tell him the delay will be only a few minutes.
- T F 13. Dentists like to know the name of the person who referred the patient to their office.
- T F 14. When speaking on the phone, it is best to talk as if the person were standing in the room with you.
- T F 15. If a patient should become abusive over the telephone, the assistant should hang up.
- T F 16. If an assistant is caring for a patient and the telephone rings, she should stop what she is doing and take care of the telephone call first.
- T F 17. If the dentist is working in the laboratory or otherwise busy when a patient telephones to speak with him, the assistant should say he is with a patient and ascertain what the caller wants.
- T F 18. It is easy to give out information over the telephone that need not have been revealed.
- T F 19. Prices for dental work should not be given over the telephone.
- T F 20. It is courteous to hang up first when a telephone conversation is completed.
- T F 21. If an appointment is canceled, the assistant should try to make another for a later time.
- T F 22. Mothers appreciate assistance in putting coats and hats on their children.
- T F 23. Some materials for entertaining children should be available in the waiting room.

- T F 24. If a new potential patient enters the office and is apparently in pain, give him the earliest open appointment left in the appointment book.
- T F 25. Salesmen should be allowed to see the dentist at their convenience.
- T F 26. If another doctor enters the office, take him to the dentist wherever he may be working, immediately.
- T F 27. If a visitor to the office refuses to give his name and business, the assistant should call the dentist for assistance.
- T F 28. Assistants should not ask the patient calling on the telephone if he is having pain.
- T F 29. If an assistant has difficulty making an appointment for the time desired by the patient, she should place the patient's name on a call list.
- T F 30. It is important for the dentist and his assistant to know if a child patient objects to seeing the dentist.
- T F 31. Children have a natural inborn fear of dental offices.
- T F 32. The dentist will expect the assistant to know about child psychology.
- T F 33. Children should be brought to visit a dentist before they reach the negative stage common to young children.
- T F 34. Many children never get to visit a dentist until they experience pain in the oral cavity.
- T F 35. A child can tell if the assistant is only pretending to be sympathetic toward him.
- T F 36. If a child misbehaves while in the dental chair, any toy or gift should be withheld.
- T F 37. The dentist is responsible for the proper dismissal of patients.
- T F 38. The assistant should assist the patient in removing any debris from his face.
- T F 39. The patient should be dismissed in such a way that he does not feel rushed.
- T F 40. The assistant should tell the departing patient good-by as he leaves the operating room.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. Two of man's basic needs which can be used effectively in human relationships in the dental office are their desire for _____ and need for _____.
2. The most important reason people neglect their teeth is _____.
3. Patient comfort is conditioned by _____ set by the office staff.
4. Learning how to make the patient _____ is important to the long-range success of the office.
5. People will generally respond more favorably to a(an) _____ approach than to a(an) _____ approach.
6. Psychological studies would indicate that the individual exists in a continual state of _____.
7. _____ differs at various age levels.
8. A child will develop his small body muscles between the ages of _____ and _____.
9. A negative attitude is characteristic of the _____-year-old child.
10. The _____ child is extremely self-conscious.
11. A feeling of personal worth can be gained through attending to the _____.
12. When the indirect approach is used in working with the patient, you increase his feeling of _____ and _____.
13. The text suggests calling the preliminary registration form a(an) _____ form.
14. To most effectively speak over a telephone, use a(an) _____ voice tone.
15. If the dentist is busy and a patient telephones and asks to talk with him, the assistant should record the caller's _____ and _____ and have the dentist call him back later.
16. Overdue accounts should be discussed only with the _____.
17. Every telephone conversation should be closed with a pleasant " _____."

- T F 27. A married woman's given name is not recorded on her personal record card.
- T F 28. Patients' records are filed alphabetically according to the patient's last name.
- T F 29. If the dentist has several patients having the same last name, it makes no difference in what order they are filed.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. Dental work that requires the most concentration and effort should be scheduled in the _____ .
2. Recall appointments for prophylaxis and examination are best scheduled in the _____ hours.
3. First appointments with new patients for discussion of necessary work are best scheduled in the _____ hours.
4. The time schedule for the next day should not be typed until all _____ have been verified.
5. All entries in the appointment book should be written with _____ .
6. When the dentist has finished presenting the case to the patient the assistant should be ready with the _____ .
7. The most accurate way to get a personal information form completed is to have the _____ record the information desired.
8. In order that a dentist can reach a patient as rapidly as possible, both the _____ and _____ phone numbers should be listed.
9. Pre-school children should receive dental appointments only in the _____ .
10. Frequently the first appointment consists of _____ and _____ and a recording of the case history.

11. When the dentist discusses the findings from the first examination with the patient, it is referred to as a _____.
12. The best place to discuss dental needs with a patient is in a _____.
13. Before a dentist treats a minor, he must get the consent of his _____.
14. A good protection against claims of malpractice is a complete _____.
15. Since they must be changed occasionally, addresses and telephone numbers should be written on the patient's record with _____.
16. The patient's x-rays and individual record card are protected by placing them in a(an) _____.
17. The file containing the records of the patients whose work is in progress and not completed is called the _____ file.
18. Patient records are the property of the _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. Appointments for operative work, bridgework, and dental impressions should be scheduled in the (a) morning; (B) noon; (C) early afternoon; (D) late afternoon hours.
- _____ 2. The appointment book should be large enough to use for (A) one month; (B) six months; (C) one year; (D) two years.
- _____ 3. School children under ten years of age should receive dental appointments (A) before noon; (B) afternoon; (C) only on Saturdays; (D) only on school holidays.
- _____ 4. Your responsibilities in office management include (A) delegating duties to members of the staff; (B) keeping your dentist busy; (C) soliciting new patients; (D) referring patients to specialists.
- _____ 5. Recent research studies indicate that there is greater economy in (A) short appointments; (B) no appointments; (C) long appointments; (D) frequent appointments.
- _____ 6. The new patient's examination and diagnosis card measures (A) 2 x 4; (B) 4 x 6; (C) 6 x 9½; (D) 8½ x 11 inches.
- _____ 7. If the work for a patient has been completed but he has not paid, his file is placed in the (A) active file; (B) dead file; (C) accounts receivable file; (D) expenditures file.

- _____ 8. If a patient indicates that he will not return to the office as a patient, the assistant should (A) throw away his records; (B) place his records in the dead file; (C) give the records to the patient; (D) send the records to his new dentist.
- _____ 9. The length of time the dentist should keep patients records is determined by (A) the choice of the dentist; (B) the statute of limitations; (C) desires of the patient; (D) storage facilities.

Covering
Units 23-34

MAINTAINING BUSINESS RECORDS

Most medical and dental offices do not have elaborate systems of bookkeeping, but business records must be kept so that it is possible to determine the financial status of the office at any given time. Practically every office and every business will have a different method of keeping books, but in the main the fundamentals are the same regardless of the system.

Also, the problem of inventory and control of supplies frequently is delegated to the assistant.

In this assignment you will have the opportunity to study some general bookkeeping procedures and supply control systems.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a one page paper explaining the difference between patient records and business records.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 85-118, 142-143.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T". If it is false, draw a circle around the letter "F".

- T F 1. Most dental offices follow very similar bookkeeping systems.
- T F 2. In some cities accounting firms can be found which will take over all bookkeeping duties.
- T F 3. Receipts should be made for payments received through the mail.
- T F 4. Every cash payment received requires a receipt be given the patient.
- T F 5. Receipts should be made out to the individual responsible for paying the account.
- T F 6. The carbon paper in a receipt book must be changed frequently.

- T F 7. Some day sheets provide space for entering the amount of actual time each patient spends in the chair.
- T F 8. At the end of a day the total cash and checks on hand should equal the total amount of charges made for that day.
- T F 9. Deposit slip books should be changed yearly.
- T F 10. It is not necessary to keep a record of expenditures from the petty cash fund.
- T F 11. At the beginning of each month the petty cash fund is brought up to its original balance.
- T F 12. The petty cash fund is used for making change for patients paying cash.
- T F 13. All income from the dental office is deposited in the dentist's personal checking account.
- T F 14. It is possible for the dentist to make arrangements to have the assistant sign checks to pay the bills of the dental office.
- T F 15. It is the best practice to make out a check before filling in the check stub.
- T F 16. Reconciliation in office work refers to the process of determining the correctness of the bank statement as compared with the checkbook stubs.
- T F 17. Some banks have a service charge for handling checking accounts.
- T F 18. The bank's monthly statement of the checking account should always agree with the figures on your last check stub.
- T F 19. If it seems impossible to reconcile the bank statement, it is best to accept the bank's figure.
- T F 20. It is considered best practice to type monthly statements.
- T F 21. According to law, dental offices close their books on the 25th of each month.
- T F 22. Systematic and routine collection follow-up of all delayed accounts facilitates their successful collection.
- T F 23. A running inventory of supplies is accomplished by keeping an accurate set of supply control cards.
- T F 24. The patient's service and account record is actually a combination of two records.

- T F 25. The total of all the balances on all the patient's account records should equal the total amount of money for which you will send statements.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. Receipts should be filled out in _____.
2. The patient receives the _____ copy of the receipt.
3. The daily record of the financial affairs of the office is called the _____.
4. The total amount of all receipts for a day is ascertained by adding the _____ column and the _____ column of the day sheet.
5. The total amount of actual charges for the day is ascertained by adding the _____ column and the _____ column of the day sheet.
6. Bank deposit slips should be made in _____.
7. Bank deposit slips are obtained from the _____ in which the dentist has his account.
8. Dental office expenditures of a minor nature are paid from a _____ fund.
9. The assistant should package together all statements and invoices collected over a period of one _____.
10. The person usually responsible for making out checks for the expenses of the dental office is the _____.
11. Office records should be written with a _____ ink.
12. The balance remaining in the dental office checking account can be found by examining the _____.
13. Procedures for collecting delinquent accounts should be decided by the _____.
14. A supply control card contains the name of the item, its _____, the _____, and where _____.
15. Supply control cards should be arranged alphabetically by the _____ name.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. When a dentist speaks of "chair time" he is referring to
(A) the hour of the appointment; (B) the amount of time
the patient is in the chair; (C) the age of the dental
chair; (D) the time required by the assistant to maintain
the chair.
- _____ 2. It is best practice to deposit cash and checks in a bank
(A) daily; (B) twice a week; (C) weekly; (D) every two
weeks.
- _____ 3. A check that has tiny holes punched in it has been
(A) voided; (B) canceled; (C) returned because of insuffici-
ent funds; (D) incorrectly endorsed.
- _____ 4. Checks that were written against the office checking
account but are not received by the bank at the end of
the month are referred to as being (A) bad; (B) lost;
(C) voided; (D) outstanding.
- _____ 5. Considerable saving can be made in the purchase of dental
office supplies by purchasing (A) in the bulk; (B) single
items; (C) only items needed immediately; (D) items by
the half-dozen.
- _____ 6. Properly kept supply control cards will indicate (A) the
quality of the item; (B) the length of time for delivery;
(C) the invoice number; (D) the most desirable quantity
to purchase.
- _____ 7. The fact that supplies need to be reordered is reported
by the (A) supply control cards; (B) running inventory;
(C) ledger; (D) day sheet.

Sheet No. 5

Covering
Units 35-39

MANAGING THE OFFICE

Opinions and attitudes are formed as a result of first contacts, whether this contact is made in the office, by correspondence or by telephone. Impressions are modified by the subsequent contacts that are made while the person is a patient and even after he is discharged.

Your efficiency in handling the day-by-day problems that arise in the office should greatly please the dentist, and will certainly build a good feeling on the part of the patient toward the dentist.

In this assignment you will have the opportunity to study office routines such as handling the mail, answering correspondence, and making conference arrangements.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare an outline of your duties that pertain to managing the dental office where you are employed.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 118-139, 543-546.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T". If it is false, draw a circle around the letter "F".

- T F 1. Economy in the purchase of stationery for the dental office should be given first consideration.
- T F 2. Most letters can be considered sales letters, and should utilize a high level of persuasion.
- T F 3. The pattern of stereotyped expressions in business letter writing should be avoided.
- T F 4. Business letters can be a means of developing good public relations.
- T F 5. The opening statement in a business letter is a formality of little importance to the letter.
- T F 6. The opening statement in a business letter should be about you--the writer of the letter.

- T F 7. Most collection letters are examples of how to maintain good public relations through correspondence.
- T F 8. The business letter should be no longer than is necessary to say what is necessary to be said.
- T F 9. The climax of the letter should come in the middle.
- T F 10. The business letter should be ended with alternate proposals whenever possible.
- T F 11. The margin at the bottom of a business letter should be slightly larger than the margin at the top.
- T F 12. The last paragraph of the business letter is called the complimentary close.
- T F 13. A recall control card contains the age and salary of the patient.
- T F 14. After a patient has been sent a recall notice, his recall card is placed behind the index tab of the month preceding the appointment.
- T F 15. The dental assistant should insist that the patient have his name put on recall.
- T F 16. If a patient voluntarily has his name placed on recall, he will most likely come to the office for a recall.
- T F 17. The profession of dentistry is morally responsible for teaching good oral habits and care.
- T F 18. Office task control cards should be written with pencil.
- T F 19. Maintenance tasks which must be performed daily need not be recorded for reference purposes.
- T F 20. The waiting room should be dusted and magazines arranged before patients begin to arrive.
- T F 21. The foot-rest on the dental chair should be scrubbed daily.
- T F 22. The assistant should make a daily check on the supply in the medicine bottles.
- T F 23. Children seldom appreciate receiving birthday cards from their dentist.
- T F 24. Birthday control cards should be the same color as the appointment recall cards.
- T F 25. Letters written to the dentist by other doctors should not be opened by the assistant.

- T F 26. Any letters of complaint from patients should be placed in the patient's record file after they have been answered.
- T F 27. If a letter is received with a "permit" postage mark, the assistant should know that it contains advertising matter.
- T F 28. The assistant should be sure to pay the dental office bills promptly.
- T F 29. It is of extreme importance that the assistant attach an identifying tag on each dental case as it is removed from the protective wrapper.
- T F 30. Before the assistant makes convention reservations for the dentist, she should carefully read over the convention folder.
- T F 31. If the assistant is asked to make travel arrangements for the dentist, she arranges for him to use the fastest means of transportation available.
- T F 32. Airline tickets should always be picked up in advance of the flight date.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. A good business letter should use the technique of _____ rather than _____.
2. Good business letters should not be written in _____ language.
3. The opening of a business letter should capture the reader's _____, the middle is the _____, and the close should be designed to get _____.
4. A new trend in formal business letter writing is to drop the meaningless salutation and substitute one which is both _____ and _____.
5. The _____ is the appropriate book to use when you are not sure of the spelling of a word.
6. It is preferred practice to write " _____ " notes by hand rather than on the typewriter.
7. The handling of incoming mail should be accomplished with _____ and _____.
8. Reminders for equipment maintenance, recall control and birthday card lists are best obtained by using a _____ - _____ file.

9. The recall control card is filed in the come-up card file _____ before the time noted for the recall.
10. The recall notice of an appointment should be sent to the patient _____ before the actual appointment date.
11. The cards in a come-up card file having to do with maintenance of the dental laboratory are called _____ cards.
12. The name of the piece of equipment to be serviced is placed in the _____ corner of the task control card.
13. The day a maintenance task is scheduled to be performed is recorded in the _____ of the task control card.
14. Acrylic cases should be unwrapped as soon as they are received from the laboratory and placed in _____.
15. Items received in the dental office from the dental laboratory which do not require immersion should be stored in _____.
16. First-class travel by train is more commonly called _____ travel.
17. Hotel reservations are made by writing to the _____.
18. A brief statement including all information concerning travel, reservations, and convention meetings, is called a(an) _____.
19. Duties such as handling mail and answering correspondence are referred to as _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. A come-up card file must be checked (A) hourly; (B) daily; (C) weekly; (D) monthly.
- _____ 2. Come-up cards used for any one type of reminder should be the same (A) weight; (B) thickness; (C) color; (D) width.
- _____ 3. The recommended size for come-up cards is (A) 2 x 4; (B) 4 x 6; (C) 6 x 8; (D) 8 x 11 inches.
- _____ 4. The dental office should be thoroughly aired (A) hourly; (B) daily; (C) weekly; (D) monthly.
- _____ 5. The assistant should prepare the birthday cards for the next month at about the (A) first of the month; (B) first of the preceding month; (C) daily as they occur; (D) near end of the preceding month.

- 6. The assistant should never open (A) personal mail; (B) letters from other doctors; (C) letters from patients; (D) announcement of meetings.
- 7. Letters containing advertising matter usually have (A) handwritten addresses; (B) postage stamps affixed; (C) a tucked-end flap; (D) no return address.
- 8. All checks received in the dental office should be (A) endorsed by the dentist; (B) endorsed by the assistant; (C) stamped with a bank stamp; (D) given to the dentist for safekeeping.
- 9. When hotel reservations are made, the hotel manager wants to know (A) the number of pieces of luggage to expect; (B) if the dentist will eat in the hotel dining room; (C) the credit rating of the dentist; (D) the number of nights the room is needed.

HOUSEKEEPING AND MAINTAINING EQUIPMENT

Cleanliness of the office is essential for the health of the patient. Also, it is another factor in creating a favorable attitude from first impressions. The new patient will be quick to judge your dentist's work by the manner in which the housekeeping is performed.

In addition to the care of the office, the dental assistant is usually responsible for the care of the dental equipment in the office, keeping it clean, oiled, and in operating condition at all times. Much of the success of the dentist's work depends on how well the dental assistant does this phase of her work.

In this assignment you will have the opportunity to learn about caring for the dental office and the various pieces of equipment.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a list of the maintenance duties you perform periodically. Divide the list into groups, such as daily, weekly and monthly, or as suggested by your employer.

- B. Information Sheet No. 1.

Questions:True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- | | | |
|---|---|--|
| T | F | 1. Some plants live with only artificial illumination as a source of light. |
| T | F | 2. Potted plants should be watered regularly. |
| T | F | 3. Short cut-flowers are best arranged in a tall, narrow vase. |
| T | F | 4. Chrysanthemums are used in arrangements which stress the line of the individual flower. |
| T | F | 5. The dental office should be aired every day. |
| T | F | 6. Everything in the office, operating room, and laboratory should be dusted daily. |

- T F 7. All switches and main valves should be turned off before leaving the office at the close of the day.
- T F 8. Equipment manufacturers usually provide an instruction booklet for care of their equipment.
- T F 9. Soap and water are good for cleaning stainless steel.
- T F 10. Enamel surfaces are cleaned with Bon-Ami and water.
- T F 11. If the enamel is chipped, the assistant should employ a painter to touch up the spots.
- T F 12. Wax on wood surfaces should be removed at regular intervals.
- T F 13. Once a piece of wood furniture becomes scratched, it must be refinished to cover the scratch.
- T F 14. Most plastic surfaces can be cleaned with kitchen cleanser and water.
- T F 15. Draperies and curtains should be cleaned as soon as the first signs of soil appear.
- T F 16. Detergents are available for removing spots from upholstered furniture.
- T F 17. Slipcovers wear longer if they are kept clean.
- T F 18. Floor cleaner-waxes are suitable for all types of floor covering materials.
- T F 19. Excess water may be harmful to linoleum and asphalt tile floors.
- T F 20. The water level in the water sterilizer should be checked several times each day.
- T F 21. The water sterilizer should contain enough water to fully cover the tray in its lower position.
- T F 22. If exceptionally hard water is used in a water sterilizer, the boiler should be cleaned daily.
- T F 23. As the oil in an oil sterilizer evaporates, more should be added.
- T F 24. The oil sterilizer should be warmed before it is emptied.
- T F 25. The autoclave should be drained and cleaned every week.
- T F 26. The autoclave should be scrubbed with soapy water and run through several cycles every six months.
- T F 27. The autoclave contains discharge screens which require cleaning.

- T F 28. The hand piece requires oiling daily.
- T F 29. The outer shell of the handpiece is called the "sheath."
- T F 30. The handpiece is not removed from the oil sterilizer until it cools.
- T F 31. After replacing an oil sterilized handpiece on the engine arm, run the engine wide open to throw out excess oil from the wrist-joint assembly.
- T F 32. Come-apart, right-angle handpieces should be dis-assembled while they are still hot from the sterilizing process.
- T F 33. Come-apart, contra-angle handpieces should be re-assembled while they are still hot from the sterilizing process.
- T F 34. Oil remaining on the surface of the contra-angle handpieces after sterilization should be left as a rust preventative.
- T F 35. Regular types of contra-angles can be sterilized in the oil sterilizer or in special cleansers recommended by the manufacturer.
- T F 36. The dental unit should be wiped down daily.
- T F 37. The cuspidor bowl should be cleaned twice a week.
- T F 38. The tension on the engine belt should be relieved after each patient has been dismissed.
- T F 39. If the brushes in a foot controller of a dental engine have begun to cut into the plates, the assistant should send the unit out for repairs.
- T F 40. The guide ways of the hydraulic mechanism of the dental chair should be wiped lightly with an oiled cloth each week.
- T F 41. X-ray machines require considerable time for maintenance purposes.
- T F 42. All medicament bottles should be labeled.
- T F 43. The tops of dental cabinets should be protected with wax.
- T F 44. Instruments stored in the dental cabinet are kept sterile.
- T F 45. The assistant should be sure to shut off the motor to the Vacudent unit whenever it is not in use.
- T F 46. The filter bag in a Vacudent unit assists in the separation of water from air.
- T F 47. The debris collected in Vacudent filter bags should be discarded.

- T F 48. If the switch to the Vacudent unit refuses to stay on this indicates a leak in the air line.
- T F 49. A full filter bag on a Vacudent unit tends to decrease suction.
- T F 50. Diamond instruments should be cleaned immediately after use.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. A good way to minimize the amount of time spent on equipment maintenance is to prepare a written _____ for the work.
2. Before waxing enamel surfaces, clean the surfaces with _____.
3. The text recommends waxing wood furniture _____.
4. Leather surfaces can normally be cleaned with _____ and water.
5. The most satisfactory way to clean rugs is by sending them to a _____.
6. Corrosion, rust and staining of steel instruments in a water sterilizer is prevented by adding _____.
7. Water boiler scale that cannot be removed with normal cleaning can be removed by boiling a _____ per cent solution of _____ in the boiler.
8. After emptying, the oil sterilizer should be scoured with _____ before it is refilled.
9. The reservoir of the autoclave should be filled with _____ water.
10. The reservoir of the autoclave should be kept _____ full.
11. The reservoir of the autoclave should be scrubbed with _____ and lukewarm _____.
12. If steam escapes from the door of the autoclave, replace the _____ inside the door.
13. If the sheath on the handpiece is removable, the sheath can be sterilized in a(an) _____ or a cold sterilizing solution.
14. The sterilization of a handpiece in an oil sterilizer requires _____ minutes from a cold start.

15. After removing the sterilized handpiece from the oil sterilizer the sheath should be wiped with _____.
16. Freshly sterilized contra-angles and right-angles should be placed _____ the other angles on the storage tray.
17. The cuspidor bowl is cleaned with _____ soap or _____.
18. The saliva ejector screen should be cleaned every _____.
19. The contents of the cuspidor trap should be placed into the _____ jar.
20. Dental engines require oiling every _____ weeks.
21. Before removing the water supply screen for cleaning, turn off the _____.
22. The foot controller on a dental unit should be lubricated every _____ months.
23. The levers operating the motor chair should be oiled every _____ months.
24. The tilting lock under the seat of the dental chair should be oiled every _____ months.
25. Every six months the _____ of the motor on the dental chair should be filled to the proper level.
26. The only parts of the x-ray requiring oiling are the _____ and the _____.
27. The recommended way to tape labels on bottles is with a strip of _____.
28. Bottles should not be filled with over _____ inch of medicament.
29. The amount of medicament in each bottle should be checked _____.
30. Cement bottles should be stored in the same drawer as the cement _____ and _____.
31. The shelves of the surgical cabinet are covered with autoclaved _____.
32. Sterilized towels are moved from the autoclave by gripping them with sterile _____.
33. The surgical cabinet should be cleaned and all instruments re-sterilized _____.

34. Spraying bacterial solution into the mouthpiece tends to eliminate _____ growth in the Vacudent filter bag.
35. After every bloody operation, the Vacudent unit should be flushed with _____.
36. Used Vacudent filter bags are best stored in _____.
37. The Vacudent filter tank should be cleaned once a _____.
38. The Vacudent power unit filter paper should be changed every _____ days.
39. If a Vacudent valve sticks, it can be loosened by _____ the system with _____.
40. Leaking air connections on a Vacudent unit can be remedied by coating the connections with _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. Enamel surfaces should be waxed every (A) week; (B) two weeks; (C) month; (D) two months.
- _____ 2. Leather surfaces are cleaned with (A) Bon-Ami; (B) soap powder and water; (C) castile soap; (D) alcohol.
- _____ 3. When upholstered furniture is too soiled for spot cleaning, it should be cleaned by (A) dry cleaning; (B) washing with soap and water; (C) vacuum cleaning; (D) washing with saddle soap.
- _____ 4. Under normal conditions the water sterilizer should be emptied and scoured at least once a (A) day; (B) week; (C) month; (D) year.
- _____ 5. The capacity of the oil sterilizer is one (A) ounce; (B) pint; (C) quart; (D) gallon.
- _____ 6. Each week the entire handpiece assembly should be sterilized in a(an) (A) autoclave; (B) alcohol sterilizer; (C) oil sterilizer; (D) cold sterilizer.
- _____ 7. The gas-burner cup of wax drippings should be cleaned with (A) turpentine; (B) water; (C) Bon-Ami; (D) chloroform.
- _____ 8. The saliva ejector hose is cleaned by flushing it with (A) cold water; (B) alcohol; (C) very warm water; (D) chloroform.
- _____ 9. The cuspidor trap should be cleaned (A) several times a day; (B) once a day; (C) once a week; (D) once a month.

- _____ 10. When oiling a dental engine, inject _____ into each oiling hole (A) two drops of oil; (B) one-half teaspoon oil; (C) two drops of Vaseline; (D) two ounces of linseed oil.
- _____ 11. Water supply screens should be cleaned every (A) week; (B) three weeks; (C) month; (D) three months.
- _____ 12. The foot control unit on a dental unit should be lubricated with (A) linseed oil; (B) motor oil; (C) machine oil; (D) Vaseline.
- _____ 13. The sliding channels of the chair back should be lubricated (A) daily; (B) weekly; (C) monthly; (D) yearly.
- _____ 14. The lock assembly on the head rest of the dental chair requires oiling every (A) month; (B) three months (C) six months; (D) year.
- _____ 15. Dental cabinet tops should be cleaned with (A) liquid wax; (B) paste wax; (C) Clorox; (D) Bon-Ami.
- _____ 16. Instruments that must be kept sterile are stored in a (an) (A) surgical cabinet; (B) mobile dental cabinet; (C) stationary dental cabinet; (D) autoclave.
- _____ 17. Vacudent filter bags should be changed (A) weekly; (B) monthly; (C) every six months; (D) yearly.

Assignment
Sheet No. 7

Covering
Units 53-55

ANATOMY AND TECHNICAL TERMS

Many medical and technical terms are used by the dentist. If an assistant is to fulfill the duties of her job to the fullest, she should be thoroughly familiar with the anatomy of teeth.

Some of the terms used in the textbook are not always used by all dental schools and, therefore, are not always used by dentists. If the dental assistant is familiar with the terms used in this lesson, any adjustment that must be made to fit a dentist's vocabulary will not be difficult.

In this assignment you will have the opportunity to become familiar with the common anatomical terms used in dentistry.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a list of words pertaining to dentistry, used by your employer, with which you are not familiar. Write a definition for each.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 185-205.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. The upper jaw moves when a person chews or talks.
- T F 2. The arched portion of the cheek bone is located above the ramus of the mandible.
- T F 3. The chewing motion of the jaws is activated by muscles.
- T F 4. Each side of the head contains a complete set of the muscles of mastication.
- T F 5. Human lips are composed of gristle covered with skin.
- T F 6. The vermilion border is found in both humans and other warm-blooded animals.

- T F 7. As people age, the nasolabial groove gets shallower.
- T F 8. When most people just barely part their lips, the edge of their front teeth shows just below the upper lip.
- T F 9. The maxillary tuberosity is located behind the lower teeth.
- T F 10. When making a cast of the mouth, the maxillary tuberosity must be included in the cast.
- T F 11. When the gum is in healthy condition it is a deep red color.
- T F 12. The mucosa lining of the cheeks and lips is usually a deeper red color than the gums.
- T F 13. The gum is attached to the base of the teeth.
- T F 14. Beneath the tongue, the lingual frenum is found.
- T F 15. The complete set of lower teeth is referred to as the lower arch.
- T F 16. Enamel occurs in the same thickness over the entire crown.
- T F 17. Enamel is made up of microscopic rods which point approximately perpendicular to the dentine.
- T F 18. Many nerve fibers infiltrate the dentine material.
- T F 19. Dentine is weak and crumbly.
- T F 20. The gingivae is attached to the tooth at the cervical line.
- T F 21. The cementum directly contacts the bone tooth socket in the jaw.
- T F 22. Mandibular teeth erupt before the maxillary teeth.
- T F 23. Each arch of teeth is divided into four quadrants.
- T F 24. In a complete set of teeth there are four teeth with the same name.
- T F 25. Short cuts are commonly used by dentists for the identification of teeth.
- T F 26. The official nomenclature adopted by the American Dental Association classifies the teeth according to quadrants.
- T F 27. The surface of the tooth toward the tongue is known as the mesial surface.
- T F 28. The mesial surfaces of the two central incisors are next to each other.

- T F 29. While the adult has 32 teeth in a complete set, the child has only 26 primary teeth.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The lower jaw swings on two joints called the _____ joints.
2. The bone comprising the lower jaw is called the _____.
3. The portion of the lower jaw bone that extends from near the ear downward toward the chin is called the _____.
4. The portion of the lower jaw bone that forms the angle of the chin is called the _____.
5. The cheek bone is formed by a bone called the _____.
6. The muscle used in mastication that passes under the arch of the cheek bone and fans out in a large area on the side of the head is the _____ muscle.
7. The muscle which is attached along the lower edge of the zygomatic arch is the _____ muscle.
8. The muscle that lies on the inner surface of the ramus of the mandible and helps to close the jaws is the _____.
9. Some dentists used the word _____ to denote above and _____ to denote lower.
10. The inside of the human mouth is covered with a lining called _____.
11. The folds of the membrane in the corners of the mouth are called the _____.
12. The little portion of skin connecting the inner lip and gum in the midline of the mouth is called the _____.
13. The space inside the mouth enclosed by the lips, cheeks, palate, and floor of the mouth is referred to as the _____.
14. The mouth opening to the oral cavity is called the _____.
15. The technical name for the gums is _____.
16. The trough between the gums and the inner surface of the cheek is referred to as the oral vestibule or _____.

17. The red membrane lining of the mouth contains glands that secrete a watery substance called _____.
18. The roof of the mouth contains a hard, bony support called the hard _____.
19. The palatine velum is more commonly called the _____.
20. The little finger-like projection hanging down in the throat from the palatine velum is called the _____.
21. Tonsils lie between the _____ arch and the _____ arch.
22. The heavy arch-like fold that runs from behind the last upper tooth to the retromolar pad behind the last lower tooth is called the _____ fold.
23. The parotid gland produces _____.
24. The parotid duct is more commonly called _____ duct.
25. Beneath the tongue are found two salivary glands called _____.
26. The adult mouth contains _____ teeth.
27. The deciduous dentition in children contains _____ teeth.
28. When a mouth is closed and the teeth are touching, they are said to be in _____.
29. When teeth are closed in a position as though biting with the back teeth, they are said to be in _____.
30. The outer surface of the crown of a tooth is covered with _____.
31. The hardest material in the body is the _____ on teeth.
32. Enamel is made up of _____, _____ and _____.
33. The main body of the tooth is composed of _____.
34. The root of a tooth is covered with a thin, dense material called _____.
35. The process of new teeth entering the mouth is called _____.
36. The six upper and the six lower front teeth are referred to as the _____ teeth.
37. The surface of a tooth that touches its neighbor to the rear is known as the _____ surface.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. Support for the lower teeth is provided by the bone called the (A) ramus; (B) mandible; (C) arch; (D) temporal.
- _____ 2. That portion of the upper jaw bone that provides support for the upper teeth is called the (A) maxilla; (B) mandible; (C) pterygoid; (D) cheek bone.
- _____ 3. The muscle which is located on the inner side of the ramus and makes the jaw slide in a forward motion is the (A) internal pterygoid; (B) external pterygoid; (C) masseter; (D) temporal.
- _____ 4. The line connecting the skin of the lips and mucous membrane is called (A) superior maxilla; (B) inferior maxilla; (C) intersection; (D) vermillion border.
- _____ 5. Behind the last tooth is found a rounded little hump called the (A) frenum; (B) maxillary; (C) retromolar pad; (D) buccal hump.
- _____ 6. That portion of mucous membrane lining the cheeks is called (A) alveolar mucosa; (B) buccal mucosa; (C) gingiva; (D) frenum.
- _____ 7. The gum free margin reaches a depth of approximately (A) 1/16 inch; (B) 1/8 inch; (C) 3/16 inch; (D) 1/4 inch.
- _____ 8. Mumps are identified with the (A) dentine; (B) posterior pillar; (C) uvula; (D) parotid gland.
- _____ 9. The part of the tooth that is visible is called the (A) crown; (B) dentine; (C) cementum; (D) bone.
- _____ 10. The pulp chamber of a tooth is filled with (A) dentine; (B) cusp; (C) nerves; (D) cementum.
- _____ 11. That portion of the tooth that lies beyond the enamel crown forms the (A) pulp canal; (B) root; (C) cusp; (D) nerves.
- _____ 12. The cervical line is formed by the (A) union of cementum and enamel; (B) enamel fissure; (C) root apices; (D) root bifurcation.
- _____ 13. A tooth is supported in its socket by the (A) jaw bone; (B) pulp horn; (C) blood vessels; (D) peridental membrane.

DIET, DENTAL DISEASE, AND CAVITY CLASSIFICATION

Caries is a disease that is present in almost everyone's teeth at one time or another. It concerns the destruction of the enamel and subsequent decay of teeth.

Patients frequently ask dental assistants questions concerning care of teeth and causes of decay. An alert assistant should be prepared to discuss with interested patients the fundamentals of tooth care, the importance of diet, and kinds of cavities.

In this assignment you will have the opportunity to learn about the causes and treatments for caries, the importance of diet to dental health, and how cavities are classified.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a drawing of the upper and lower arch with the teeth properly located and identified. Indicate the four quadrants.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 205-219, 231-240.

Questions:True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. It is possible for the dentist to classify the types of cavities found in the patient's mouth.
- T F 2. Cavities which occur in the proximal surfaces of incisors and cuspids are class-two cavities.
- T F 3. Diet and nutrition are one and the same.
- T F 4. If your appetite is satisfied, this is a good indication your diet is providing the necessary food elements for good nutrition.
- T F 5. If your diet includes foods from each of the basic food groups, you can be reasonably sure it is providing the nutrition which you need.

- F F 6. Vitamin C is so important to the diet that precaution should be taken to provide for it daily.
- T F 7. Butter and margarine both supply the same vitamins, and are considered to be high energy foods.
- T F 8. The diuretic action of coffee and tea retards the elimination of liquids.
- T F 9. The calorie is the amount of heat necessary to raise the temperature of one kilogram of water one degree centigrade.
- T F 10. Fat foods are slow to digest, but burn quickly and give more than twice as many calories as carbohydrates of protein.
- T F 11. Proteins help to regulate body functions as well as build and repair body tissue.
- T F 12. Vitamin C is of little value to the health of the supporting tissue of the teeth.
- T F 13. Raw apples, celery, or carrot straws are recommended for cleaning the teeth at the close of a meal or snack.
- T F 14. Microbiology is the science of the nature, life and actions of microorganisms that are harmful to man.
- T F 15. Bacteria are one-celled vegetable microorganisms containing chlorophyll.
- T F 16. All bacteria require oxygen to live.
- T F 17. Reproduced bacterial cells are exactly the same as the mother cell.
- T F 18. The protozoa are essentially one-celled animals.
- T F 19. The virus organism can be distinguished from other organisms by use of an ordinary microscope.
- T F 20. Children are immune from caries until they reach about five years of age.
- T F 21. Our mouths contain considerable numbers of bacteria.
- T F 22. Bacterial plaques occur most commonly along the biting edge of the teeth.
- T F 23. The acid from the action of bacteria on food reaches its maximum formation within thirty minutes after eating.
- T F 24. A proper diet is of help in controlling caries.
- T F 25. Ammoniated dentrifices oppose the acid-producing organisms in the mouth.

- T F 26. If the growth of the bacterial organisms in the mouth is inhibited, more enzyme production occurs.
- T F 27. Modern dentrifices reduce the formation of new carious lesions fifty to seventy-five per cent.
- T F 28. Anti-enzyme type dentrifices operate at a different stage in the acid-forming process than the ammoniated dentrifices.
- T F 29. Acid formation is inhibited for long intervals by the anti-enzyme type dentrifice.
- T F 30. Drugs used in present-day dentrifices have proved their effectiveness.
- T F 31. The only method for using fluorine to reduce the number of cavities is by placing it in drinking water.
- T F 32. Plaques form thick, large masses and with their enzymes produce acid rapidly.
- T F 33. Rinsing the mouth with water after eating aids in the removal of food particles.
- T F 34. The dietary list in the textbook excludes hot cereals.
- T F 35. Dietary suggestions in the textbook insist that no sugar can be used in any form.
- T F 36. Sugar aids in the preservation of canned fruits.
- T F 37. Peanut butter and jelly sandwiches are suggested as an in-between meal snack.
- T F 38. Proper care of the teeth is a technical subject which the dental assistant should not attempt to discuss with the patient.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. A _____ cavity involves but one surface of a given tooth, while a _____ cavity involves two or more.
2. Improper diet over a long period of time can result in such diseases as _____, _____, _____, and _____.
3. _____ products provide proteins, calcium and minerals in the diet.
4. Absorbing of food by the digestive organs and turning it into living tissue is a process known as _____.

5. The food requirements which we need each day to meet the nutritional demands of our bodies are referred to as the _____.
6. Vitamins are necessary for growth, for regulation of the _____, and for the protection of _____.
7. The supporting tissue of the teeth will not be healthy without an adequate Vitamin _____ intake.
8. All plant and animal life is dependent upon the existence of _____ in the soil.
9. The three general morphologic types of bacteria are _____, _____, and _____.
10. Bacterial cells reproduce by _____.
11. _____ generally require a fluid environment in which to live; therefore, they can usually be found in pools and puddles.
12. Smallpox is an example of a _____ disease.
13. The technical term for tooth decay is _____.
14. Caries attacks the _____ of the teeth.
15. Bacterial plaques can be made visible by painting the teeth with five per cent _____ or one per cent _____ solution.
16. Authorities believe bacteria on the teeth produce _____ that cause acids to form which attack the enamel.
17. Mouth acids formed after eating cause a _____ of the enamel.
18. Continued action of mouth acid on tooth enamel causes first a _____ spot, then loss in _____ of the _____, then _____.
19. First pain from caries usually occur when it reaches the _____ junction.
20. Severe pain from caries results when it reaches the _____ tissues.
21. The use of fluorine in the drinking water reduces the cavity rate _____ per cent.
22. A plaque should be removed by brushing the teeth and cleaning between them with _____.
23. Chewing a piece of _____ or _____ gum helps clean the teeth of food particles.

24. The most successful means of stopping a carious lesion is to replace the diseased portion of the tooth with a _____.
25. Early diagnosis of caries can be accomplished by periodic mouth examinations with _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. Cavities occurring in the proximal surfaces of a crown involving the removal and restoration of the incisal angles, are: (A) Class I; (B) Class II; (C) Class III; (D) none of these.
- _____ 2. The body's daily requirement for energy is met by three types of nutrients: (A) carbohydrates, fats and proteins; (B) fats, proteins and sugars; (C) carbohydrates, vitamins and sugars; (D) proteins, sugar and fats.
- _____ 3. The film-like covering of bacteria on teeth is referred to as (A) a film of bacteria; (C) caries; (C) a bacterial plaque; (D) rampant caries.
- _____ 4. Food can be removed from the mouth by (A) eating coarse foods last; (B) eating a wet dessert last; (C) eating cake or cookies; (D) eating molasses.
- _____ 5. A good diet to aid in caries control should include (A) salad dressings; (B) ice cream; (C) honey; (D) fresh fruits.
- _____ 6. A good substitute for sugar is (A) honey; (B) molasses; (C) syrup; (D) saccharine.

Assignment
Sheet No. 9

Covering
Units 62-69

ORAL HYGIENE AND ORTHODONTICS

A beautiful smile is an immeasurable asset to the personality of an individual. The smile is impaired by anything less than a healthy and well-aligned set of teeth. Oral hygiene is the science that deals with the preservation of the health of the hard and soft tissues of the mouth. Orthodontics is the science which has for its object the prevention and correction of malocclusion of the teeth.

The education of the public in this phase of preventive dentistry is the responsibility of the dental assistant as well as the dentist and dental hygienist.

In this unit you will have the opportunity to obtain the information necessary for fulfilling your obligation to inform the public of good dental health.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a schematic drawing of one tooth and identify the parts and the supporting tissue.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 246-263, 521.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- | | | |
|---|---|---|
| T | F | 1. Teaching of good oral hygiene is a responsibility of the dental office. |
| T | F | 2. Most dental offices are doing an adequate job of teaching dental hygiene. |
| T | F | 3. Adults who have been taught proper dental hygiene in school do not have further need for training. |
| T | F | 4. You should be able to teach the dental patient the proper method of home care of the teeth. |
| T | F | 5. There is some disagreement among dentists as to the proper method of brushing teeth. |
| T | F | 6. Mucous glands are present in the lining of the mouth. |

- T F 7. Smoking is a frequent cause of tooth stain.
- T F 8. Stains are commonly removed from teeth by use of chemicals.
- T F 9. Oil of peppermint is used in the mixing of flour of pumice and whiting to make the mixture stick together.
- T F 10. Flour of pumice is a common ingredient of most commercial dentifrices.
- T F 11. For all practical purposes one dentifrice is as good as another.
- T F 12. The main reason for brushing the teeth is for the removal of food deposits before calculus begins to form.
- T F 13. Tooth brushes made from natural bristles are considered to be better for cleaning than those made from nylon.
- T F 14. One of the great advantages of natural bristles is their longer service life.
- T F 15. A definite tooth brushing routine should be established in order to insure thoroughness.
- T F 16. Teeth should be brushed with a back and forth motion of the tooth brush on the gum line.
- T F 17. Care is necessary in the brushing operation not to pierce or injure the gums with the bristles of the toothbrush.
- T F 18. The direction of applied pressure is the same when brushing the lower teeth as in brushing the upper teeth.
- T F 19. Gum tissues should be stimulated to prevent blood from stagnating in the capillaries.
- T F 20. Orthodontics is that science which has for its major objective the treatment of children's teeth.
- T F 21. The only purpose of the orthodontist is to improve the appearance of the patient.
- T F 22. The dental arch is the horseshoe-shaped curve made by the bony projection, gums and teeth of either the upper or lower jaw.
- T F 23. The arch is the same as the dental arch.
- T F 24. Rubber bands are frequently used to align the upper and lower teeth.
- T F 25. There is no accurate way for the orthodontist to check progress on his patient.

- T F 26. It is not unusual for orthodontic treatment to extend over a period of two years.
- T F 27. Retainers come in standard sizes and shapes.
- T F 28. The dental assistant who works for an orthodontist may need to know how to solder and spot-weld.
- T F 29. More secretarial work is usually required for the orthodontist than for the general practitioner.
- T F 30. When trimming casts, the art portion should be trimmed parallel to the occlusal plane.
- T F 31. Orthodontic work includes some soldering.
- T F 32. Methods of radiographic cephalometry are used in orthodontic offices.
- T F 33. Orthodontic work involves the keeping of very detailed records.
- T F 34. Orthodontic adjustments involve a large number of short adjustment appointments.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The _____ should accept the responsibility of teaching the patient proper home care of the teeth.
2. _____ is a precipitate of saliva.
3. The gelatin-like layer which forms on the surface of the teeth in protected areas is called the _____.
4. Salivary calculus is formed by the depositing of various _____ on the gelatinous matrix of the _____.
5. The white deposit on the neck of teeth near the gum line is _____.
6. A thorough _____ is the best protection against discoloration from smoking.
7. The operation by which hard and soft accretions and stains are removed from teeth is a _____.
8. Pumice when combined with a _____ can be used as an _____.
9. _____ is combined with whiting or flour of pumice in preparing them for prophylaxis use.

10. The retention of the bacterial plaques on the teeth for a prolonged period of time will cause the formation of _____.
11. The length of time and the thoroughness with which the teeth are brushed is more important to the control of dental caries than the _____ used.
12. Nylon filaments of toothbrush quality were introduced in _____.
13. Three factors which have limited the use of natural bristles in toothbrush manufacture are _____, _____, and _____.
14. The recognized interdental brushing method suggested in the reference is called a modified _____ method.
15. The word _____ means poor positioning of the teeth.
16. Orthodontic treatment seeks to improve the _____ of the mouth and also restore _____ of the complete mouth.
17. A dental assistant in the specialty of orthodontia should memorize the _____ classification of malocclusions.
18. The part of the orthodontic appliance which is cemented to the tooth is called a _____.
19. The part of the orthodontic appliance called the _____ appears to be a wire which follows the shape of the dental arch.
20. Three methods by which the orthodontist can study the progress of a patient is by use of _____, _____, and _____ photography.
21. At the conclusion of active treatment, a _____ is normally worn for an indefinite period of time to hold the teeth in the proper position.
22. A study model consists of two parts, the _____ portion and the _____ portion.
23. The dental specialty which deals with the prevention and correction of irregularities of the teeth is called _____.
24. The most commonly used impression material in orthodontic work is _____.

Listing

Directions: List the items called for in each of the following. Select your answers carefully.

1. Three factors of good dental hygiene include:

- (A) _____
- (B) _____
- (C) _____

2. Tools and materials commonly used in performing a dental prophylaxis are:

- (A) _____ (C) _____
- (B) _____

3. The glands which produce the saliva in the mouth are:

- (A) _____ (B) _____ (C) _____

4. The proper procedure for brushing teeth as established by the modified Charters-Stillman method is:

- (A) _____ (D) _____
- (B) _____ (E) _____
- (C) _____ (F) _____

5. In addition to improving the appearance of the patient, orthodontic treatment includes changing the original relationship of:

- (A) _____
- (B) _____
- (C) _____

STERILIZATION AND CARE OF DENTAL INSTRUMENTS

Sterilization refers to the process of removing or destroying all microorganisms. Sterilization is essential to the protection of the patient, since the dentist works continually in an area where bacteria thrive; namely, in the warm, moist human mouth.

As the dental assistant you will be expected to sterilize as well as to care for the dental instruments.

In this unit you will have an opportunity to learn the proper technique for sterilizing and care of various dental instruments.

Assignment:

1. Read the references listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a written report on the subject - "Sterilization Techniques Used in My Employer's Practice."

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 219-231, 270-280

Questions:True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T". If it is false, draw a circle around the letter "F".

- T F 1. The responsibility of the dental assistant for proper sterilization of instruments is limited to her employer.
- T F 2. If dental instruments are cared for with a high degree of cleanliness, they will be sterile.
- T F 3. An inexperienced person may easily confuse cleanliness with sterility.
- T F 4. Once an instrument has been sterilized, it is not difficult to keep it sterile.
- T F 5. Some microorganisms are destroyed more easily by one method of sterilization than by another.
- T F 6. The tray in which sterile instruments are to be placed should be covered with linen, paper towel, or light-weight muslin.

- T F 7. The Castle Speed Clave should be set at 250 degrees Fahrenheit for 13 minutes for sterilizing instruments.
- T F 8. A germicide can be used effectively for the sterilization of instruments.
- T F 9. All types of instruments can be sterilized together.
- T F 10. Steam under pressure is hotter than steam in open air.
- T F 11. The Diach Control pellet is used to absorb the excess moisture in the autoclave.
- T F 12. Dry heat sterilization is preferred for sterilizing cutting instruments.
- T F 13. Higher temperatures are required for sterilizing with dry heat than by autoclaving.
- T F 14. Dry heat sterilization is quicker than autoclaving.
- T F 15. Aluminum foil can be used successfully for wrapping instruments for sterilization.
- T F 16. When sterilizing by the boiling water method, the instruments should be placed on a rack one-half inch above the water.
- T F 17. Instruments cannot be sterilized by use of boiling water alone.
- T F 18. Time required for hot oil sterilization of instruments should begin when the sterilizer is turned on.
- T F 19. Chemical solutions are used for disinfecting rather than for sterilizing.
- T F 20. The syringe, if suspended for storage in alcohol, should be wiped with sterile gauze before use.
- T F 21. The greatest objection to the use of Ethyl alcohol as a germicide is the fact that it is intoxicating.
- T F 22. If instruments are to be sterilized, they do not need to be washed.
- T F 23. Blood will stain instruments if it is allowed to harden.
- T F 24. Chemical solutions used for sterilization will deteriorate over a prolonged period of use.
- T F 25. Instruments boiled in water will not rust.
- T F 26. Instruments should be handled with forceps when being removed from the sterilizer tray.

- T F 27. Mirrors can be sterilized in an autoclave.
- T F 28. A local anesthetic is administered with a syringe.
- T F 29. The fluid to be administered with a barrel syringe is obtained in cartridges.
- T F 30. The movable plug in an anesthetic cartridge faces the needle when inserted in the syringe.
- T F 31. A dull needle should be replaced with a new one after the syringe is autoclaved.
- T F 32. A piece of sterilized cotton should be placed over syringe needles before they are autoclaved.
- T F 33. Carbide dental burs have some special mark to distinguish them from steel burs.
- T F 34. Shanks on dental burs are standardized and can be used interchangeably in different types of handpieces.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. _____ is the removal or destruction of all forms of life.
2. Growth of bacteria can be stopped or inhibited by the use of a(an) _____.
3. Proper sterilization temperatures can be checked by use of a(an) _____ pellet.
4. Temperatures recommended for dry heat sterilizers range from _____ to _____ degrees centigrade.
5. The original purpose of oil sterilization was to avoid _____ of cutting edges, and to provide for _____ of the dental handpiece.
6. Items sterilized in molten metal sterilizers should be immersed approximately _____ seconds immediately before use in the mouth.
7. Formaldehyde preparations are objectionable as disinfectants because they are _____ and _____.
8. The _____ quality of quaternary ammonium compounds makes them more acceptable for disinfecting.
9. Before sterilizing, hand instruments should be brushed with _____ and _____ and thoroughly rinsed.

10. Most offices disinfect instruments with cutting edges in a _____ sterilizer.
11. The sterilizer replacing the water sterilizer is the _____.
12. Cutting instruments to be sterilized in an autoclave should have their cutting edges protected with an _____ coating.
13. Anesthetic syringes should be sterilized in the autoclave for _____ minutes.
14. Items sterilized in molten metal sterilizers should be immersed approximately ten _____.
15. Instruments should be removed from the sterilizer by gripping them with sterile _____.
16. Instruments removed from the sterilizer should be dried with _____ towels.
17. Rubber goods are kept new looking by wiping them with gauze moistened with _____.
18. The hollow passage extending the length of a syringe needle is called the _____.
19. Syringe storage jars should be filled with 70 per cent solution of _____.
20. The syringe needle can be checked for sharpness by drawing it backward over a piece of _____.
21. Before a syringe needle is used, excess alcohol is removed by wiping the needle with _____ gauze.
22. After use all dental burs should be cleaned by brushing with a _____.
23. Syringes should be autoclaved for _____ minutes.
24. Long-shanked dental burs are designed for use in the _____.
25. Sterilization is necessary for the protection of the _____ because bacteria thrive in the moist _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The preferred method of sterilization is (A) dry heat; (B) boiling water; (C) autoclave; (D) hot oil.

- _____ 2. Proper sterilization temperature of the autoclave should be checked (A) daily; (B) weekly; (C) monthly; (D) with each use.
- _____ 3. Instruments sterilized in a water sterilizer must be boiled for a minimum of (A) 5; (B) 10; (C) 15; (D) 20 minutes.
- _____ 4. Materials used in root canal treatment are sterilized in (A) dry heat; (B) oil; (C) water; (D) molten metal sterilizers.
- _____ 5. Autoclave loads not containing syringes must be processed for (A) 5; (B) 10; (C) 15; (D) 20 minutes.
- _____ 6. Miscellaneous items in the operating room which are touched in the course of treating the patient should be wiped with a cloth moistened with (A) alcohol; (B) benzene; (C) turpentine; (D) soap and water.
- _____ 7. The gage number of syringe needles indicates (A) hole diameter; (B) outside diameter; (C) needle length; (D) lumen diameter.
- _____ 8. Sterilized syringes are stored in a (an) (A) autoclave; (B) water sterilizer; (C) oil sterilizer; (D) syringe jar.

Assignment
Sheet No. 11

Covering
Units 73-74

DRUGS, ANESTHESIA, FIRST AID AND EMERGENCY CARE

Much of the preliminary preparation of the patient for treatment is handled by the dental assistant while the dentist is busy with another patient or is working in the laboratory. Since procedures will differ for various treatments, and since dentists will have their own preferences, this part of your training will be received on the job.

To do this job effectively, however, you will need to possess a knowledge of the various drugs and anesthesia used in the office. Your knowledge should include the proper dosage; the precautionary measures to be taken; the expected reaction to the dosage; and emergency care to be applied in the event it is necessary.

This unit will serve to acquaint you with the above information in order that you may be able to respond effectively if and when a situation occurs.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a list of drugs and anesthesia used by your employer. Outline as follows: proper dosage, precautionary measures, expected reactions and emergency care.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 240-245, 263-270.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. A drug is a medicine.
- T F 2. Some drugs may be poisonous if used in an excessive quantity.
- T F 3. You will frequently prescribe drugs for use by your patients.
- T F 4. Patients are sometimes instructed to take a drug at home before a future appointment.
- T F 5. Medication to be taken at home, should be accompanied by oral instruction for administering.

- T F 6. Tablets taken internally should not be touched with the hand.
- T F 7. Most drugs are easy to identify and do not need to be labeled.
- T F 8. The patient can be expected to be in a good humor when entering the dental office.
- T F 9. Unfavorable reaction of every patient to medication should be anticipated by the dental assistant.
- T F 10. Syncope can be brought on by fear or pain.
- T F 11. If a patient faints, cold applications to the face assist in reviving him.
- T F 12. One sign of a reaction to procaine is bleeding from the nose.
- T F 13. If a patient has an unfavorable reaction to procaine, artificial respiration and oxygen are necessary.
- T F 14. Hypertension is most commonly found in patients under thirty years of age.
- T F 15. Arteriosclerosis is one cause of hypertension.
- T F 16. Hemostatic agents induce clot formation.
- T F 17. If a patient develops epistaxis, the assistant should call a medical doctor immediately.
- T F 18. If a patient has convulsions following the use of a local anesthetic agent, an intravenous administration of pentothal sodium should be given immediately.
- T F 19. An overgrowth of the soft tissues of the mouth indicates the patient may have an epileptic history.
- T F 20. If a person goes into convulsions, some type of mouth prop must be used to prevent damage to the tongue and lips.
- T F 21. Pain is a Greek word meaning penalty.
- T F 22. An anesthetic is an agent capable of producing no feeling.
- T F 23. Nitrous oxide was discovered as an anesthetic agent by Joseph Priestley in 1772.
- T F 24. Nitrous oxide when used with oxygen to produce anesthesia is administered by use of a syringe.
- T F 25. The use of chloroform as a general anesthesia is more popular in Europe than in this country.

- T F 26. Analgesia is a word which means the same as anesthesia.
- T F 27. When the patient begins to pass from analgesia to anesthesia, the assistant must reduce the amount of gas.
- T F 28. As a dental assistant, you will never be required to give general anesthesia.
- T F 29. Nerves are the means by which communication is maintained between the sense organ and the central nervous system.
- T F 30. Messages which the nerves transmit are actually tiny electrical impulses.
- T F 31. In general anesthesia the brain and spinal cord are rendered incapable of receiving and transmitting all messages.
- T F 32. The local anesthetic does not affect the central nervous system.
- T F 33. Novocaine is a frequently used local anesthetic agent.
- T F 34. Topical anesthetics are frequently used to take the place of locals.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The science which deals with the nature and properties of drugs is called _____.
2. A good rule to follow when working with drug dosage is - "be _____, do not _____."
3. The book - " _____," by the American Dental Association is a popular reference on pharmacology as it relates to the practice of dentistry.
4. Medication should be handed to the patient in a _____.
5. If a patient becomes pale and his pupils become dilated, the assistant should place the patient's _____ down between his _____.
6. An unfavorable reaction to epinephrine is indicated by a _____.
7. If procaine and epinephrine are used together and an unfavorable reaction occurs from both, the patient's blood pressure will _____ and his pulse will be _____.

8. Before giving a hypertensive patient medication to reduce nervousness, consult the patient's _____.
9. If during surgery the patient bleeds considerably, he is said to have a _____.
10. The most reliable method of inducing a clot is _____ of the investing soft tissues in the area about the injured vessels.
11. Irregular, intermittent and variable muscular contractions involving large areas are referred to as _____.
12. If convulsions occur following the use of a local anesthetic agent, intravenous administration of _____ should be given immediately.
13. If a child has a history of epileptic seizures, it is probable that he will have a _____ following the use of a local anesthetic agent.
14. _____ is a Greek word meaning no feeling.
15. The ingredients of a common mixture used to produce and maintain anesthesia are _____ and _____.
16. The Duke University Inhaler is used to produce analgesia by the use of _____.
17. A dental assistant must know how to _____ equipment used for giving general anesthesia; however, she should never be expected to give _____.
18. _____ anesthesia is the most common form of anesthesia for dentistry.
19. Nerves are connecting links between the _____ and the _____.
20. A _____ is a chemical or drug which shrinks or constricts the blood vessel where the local anesthesia is placed.
21. Topical anesthetics may be obtained either in _____ or _____ form.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The term, syncope, refers to (A) vomiting; (B) fainting; (C) a dental tool; (D) a cavity filling material.
- _____ 2. If a patient faints, the assistant should let him inhale (A) spirits of ammonia; (B) alcohol; (C) ether; (D) hydrogen.

- _____ 3. Increased blood pressure is called (A) an allergy; (B) sensitivity; (C) apprehension; (D) hypertension.
- _____ 4. An agent used to limit hemorrhaging is (A) oxygen; (B) salve; (C) oxycel; (D) novocaine.
- _____ 5. Epistaxis refers to (A) nose-bleed; (B) fainting; (C) tremor; (D) pallor.
- _____ 6. A gas commonly used for analgesia and general anesthesia is (A) laughing gas; (B) hydrogen; (C) nitrous oxide; (D) helium.
- _____ 7. A drug used to produce general anesthesia by injecting it into a blood vessel in the arm is (A) novocaine; (B) propane; (C) trichlorethylene; (D) pentothal sodium.
- _____ 8. When using a Duke University Inhaler, the flow of vapor is controlled by the (A) dentist; (B) absorbent wick; (C) patient; (D) assistant.
- _____ 9. Nerves are best described as (A) network of small wires which transmit electrical current; (B) no one knows what they are; (C) long cords of whitish, translucent material; (D) invisible messengers between the sense organs and the central nervous system.

ASSISTING IN THE OPERATING ROOM

One of the most common and most effective methods of tooth repair is that of filling teeth. A large percentage of our adult population boasts of one or more dental fillings. Many children have found it necessary to have fillings in their baby or deciduous teeth.

A large amount of the assistant's time will be spent assisting the dentist with tooth preparation. She should be able to talk intelligently with her dentist about teeth and the various types of fillings. Her knowledge of procedures should be thorough enough for her to anticipate the dentist's actions.

In this assignment you will have the opportunity to study the duties required of a dental assistant while assisting with the preparation of teeth.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Prepare a list of instruments and plan the procedure for each of the basic operation set-ups (consult your employer for the list of set-ups).

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 288-293; 434-453.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. The assistant should be sympathetic toward the patient.
- T F 2. The assistant should try to carry on a conversation with the patient while the dentist is busy operating.
- T F 3. Instruments required for an operation should be placed on the bracket table before the operation starts.
- T F 4. The assistant should keep all instruments used during an operation in order.
- T F 5. Dentists try to follow the same sequence of steps for each type of operation.

- 12
- T F 6. The assistant should know the sequence of instrument usage for each type of operation.
- T F 7. The assistant should be alert to take from the dentist the instrument he has been using and hand him the next one he will need.
- T F 8. The assistant should constantly watch for things causing the patient to be uncomfortable.
- T F 9. It is especially important to be completely set up before starting dental preparations for young children.
- T F 10. If a child indicates interest in a piece of dental equipment, the assistant should show him the various parts.
- T F 11. The assistant should attempt to turn the interest of the child to things outside the dental office in order to de-emphasize the dental equipment.
- T F 12. The presence of parents in the operatory tends to help children get along better while in the dental chair.
- T F 13. It is a bad practice to leave a child alone in the dental chair.
- T F 14. Rubber dams are tucked under the free gum margin into the gingival crevice.
- T F 15. Dental chairs can be adjusted to make the patient more comfortable.
- T F 16. The assistant should ask the patient to leave packages and purses in the waiting room.
- T F 17. If a patient must remove his dental appliance, the assistant should dry it and place it on the bracket table.
- T F 18. When returning an appliance to a patient, the assistant should let the patient pick it up.
- T F 19. Patients seldom forget appliances that were removed for dental examination or work.
- T F 20. When preparing the set-up for basic operative procedures, the assistant should see that air and water syringes are available.
- T F 21. The mouth mirror, explorer, and cotton pliers are essential in a basic operative set-up.
- T F 22. The saliva ejector is placed on the bracket table before the patient is seated.
- T F 23. Dental mirrors are manufactured in assorted sizes.

- T F 24. Explorers are manufactured as single-end and double-end instruments.
- T F 25. The assistant does not place a bib on patients for non-operative purposes.
- T F 26. If, during the pulp testing process, the full degree of current is applied without response in the tooth, the tooth is known to be alive.
- T F 27. The pulp tester examines all the teeth in the mouth at one time.
- T F 28. During an oral examination of new patients, the dentist records missing teeth and condition of the gums.
- T F 29. If, during an oral examination, the assistant fails to get one notation written before the dentist gives another, she should try to remember it and go to the next notation.
- T F 30. When a patient is in for a recall prophylaxis and examination, his last x-ray should be placed on the view box.
- T F 31. The new patient examination procedure for children is the same as that for adults.
- T F 32. Baby teeth should never be filled, since they are only temporary.

Completion

Directions: Fill in the blank(s) with the word(s) required to complete the sentence correctly.

1. If the assistant wishes to give a message to the dentist while he is working in the operating room, she should _____ him a _____.
2. The patient should be referred to and addressed by _____.
3. The assistant stands by the patient's _____ side.
4. During long operations the assistant can give the patient's jaws a rest by placing a _____ between his teeth.
5. The most satisfactory way of keeping the field of operation dry is by the application of a _____.
6. If the dentist indicates he wants to use a rubber dam, the assistant should cut a piece about _____ inches long.
7. The holes punched in a rubber dam are _____ to aid in slipping them over the teeth.

8. The rubber dam is held down to the most distal tooth with a rubber dam _____.
9. Rubber dam clamps are placed into position by a rubber dam _____.
10. The left and right free ends of the rubber dam are held snugly in place by the rubber dam _____.
11. Rubber dams are made more comfortable by placing _____ under the dam.
12. Pulp testing involves the application of a small _____ to the tooth.
13. During the pulp testing process the assistant gradually increases the amount of _____ flowing through the tester.
14. The patient's clothing is protected by a _____.
15. Two types of dental mirror stems are _____ and _____.
16. The two types of dental mirrors available are the _____ and _____.
17. During a recall oral examination, the only thing noted on the patient's record is the areas of new _____.
18. When preparing for a recall prophylaxis, _____ feet of floss tape are needed.
19. Prophylaxis paste is placed for use in a _____ dish.
20. If upon completion of a recall prophylaxis and examination dental work has been found necessary, the assistant should be certain the patient has an _____ for its completion.
21. Full upper and lower denture patients are recalled for examination once each _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The shape a dentist cuts into a tooth into which filling material is placed is called a (A) cavity; (B) preparation; (C) depression; (D) incision.
- _____ 2. Pulp testing gives information concerning (A) tooth vitality; (B) gum condition; (C) membrane condition; (D) condition of enamel.

- _____ 3. As soon as a patient indicates he has felt a response from the pulp tester, the assistant should (A) turn the current to high; (B) turn the current to zero; (C) allow the current to remain steady; (D) unplug the tester.
- _____ 4. A basic set-up for non-operative procedures includes (A) explorers; (B) copper bands; (C) gingival margin trimmers; (D) amalgam fillers.
- _____ 5. When the dentist is ready to proceed with the oral examination, the assistant should stand to the (A) rear of the dentist; (B) rear of the patient; (C) to the left of the dentist; (D) left of the patient.
- _____ 6. A recall prophylaxis and examination requires the assistant to lay out for use (A) face bows; (B) impression trays; (C) scalers; (D) hydrocolloid syringes.
- _____ 7. For a toothbrushing demonstration, the assistant should provide (A) vulcanite burs; (B) a toothbrush; (C) prophylaxis handpiece; (D) bristle polishers.

Assignment
Sheet No. 13

Covering
Units 95-108

MATERIALS AND PROCEDURES FOR FILLING TEETH

After the dentist completes the tooth preparation some type of filling material must be prepared and inserted in the preparation. This, properly done, completes the restoration process.

The assistant is of much value to the dentist in the filling process because she can prepare the filling material and have everything ready to complete the process rapidly.

In this assignment you will have the opportunity to learn about filling materials, their preparation and use, and tooth filling procedures.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 294-321; 454-465; 477-483.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. The powder and liquid combined to make the zinc oxide-eugenol-thymol combination are poured together in a shallow bowl and stirred.
- T F 2. More liquid is added to a zinc-phosphate cement to thicken it.
- T F 3. Zinc-phosphate cement powder once removed from the original storage bottle should not be put back in the bottle.
- T F 4. The liquid used in mixing zinc-phosphate cement absorbs water from the atmosphere if not kept tightly covered.
- T F 5. The dentist must work rapidly when using zinc-oxide-eugenol cement because it hardens rapidly.
- T F 6. Exposed pulps are capped with zinc-phosphate cement.
- T F 7. Glass slabs and instruments used with zinc-oxide-eugenol should be cleaned immediately after they are used.

- T F 8. Slabs and spatulas should not be washed with soap and water.
- T F 9. Silver tooth fillings contain 65 per cent silver.
- T F 10. Dentists customarily mix their own silver amalgam alloys.
- T F 11. Wasted amalgam has reclaim value.
- T F 12. Amalgam carvers and burnishers are used in the amalgam filling procedure.
- T F 13. Synthetic porcelain is mixed by grinding it with a mortar and pestle.
- T F 14. When each synthetic porcelain powder particle is wetted, the outside of the particle dissolves and the inside remains intact.
- T F 15. The particles of synthetic porcelain powder are accurately graded in size.
- T F 16. The glass slab used for mixing synthetic porcelain should be cooled to 32 degrees Fahrenheit.
- T F 17. It is essential that the ingredients for mixing synthetic porcelain be carefully weighed before they are combined.
- T F 18. Synthetic porcelain should not be mixed until the exact moment the dentist is ready.
- T F 19. Synthetic porcelain fillings are finished immediately after being placed in the preparation.
- T F 20. When acrylic fillings are placed using the pressure method, the mix is completed on a slab.
- T F 21. Moistened felt discs are used for finishing acrylic fillings.
- T F 22. A rubber dam is used during the gold foil filling procedure.
- T F 23. The dental assistant can be of little assistance during a gold foil filling operation.
- T F 24. Non-cohesive gold foil requires annealing before it is placed in the preparation for condensing.
- T F 25. Zinc-oxide-eugenol cement is used as a part of an operative procedure.
- T F 26. Materials used in dentistry for filling teeth are relatively few.

- T F 27. Ward's Wonderpack is a commercial preparation of zinc-oxide-eugenol cement.
- T F 28. It is permissible to add water to Ward's Wonderpack to accelerate and assure uniform setting.
- T F 29. Zinc-phosphate cement is available commercially in powder form only.
- T F 30. The total elapsed mixing time for zinc-phosphate cement is approximately two and one-half minutes.
- T F 31. The process called amalgamation is a chemical and physical reaction between any metal and mercury.
- T F 32. The crushing strength of an amalgam is referred to as its tensile strength.
- T F 33. When mercury is added to a silver alloy, a new alloy is created.
- T F 34. The expansion of an amalgam filling can be influenced by the care exercised in preparing the mixture.
- T F 35. Overmixing of silver amalgam will retard the setting.
- T F 36. High crushing strength of a silver amalgam is vital for the long service life of a filling.
- T F 37. Silver amalgams do not require polishing.
- T F 38. It is possible to form gold into a sheet thinner than the diameter of a human hair.
- T F 39. Gold is sold by the sheet.
- T F 40. A sheet of gold foil is called a gold leaf.
- T F 41. Gold can be cold welded directly in a tooth which has been prepared to receive the restoration.
- T F 42. Annealed gold foil is inherently cohesive.
- T F 43. Exposure to air can cause gold foil to be impure.
- T F 44. Spirits of ammonia placed in a small open jar near gold will prevent it from becoming impure.
- T F 45. Underannealing will destroy the value of a piece of gold for further use.
- T F 46. Alcohol is preferred as a fuel for annealing gold foil by the piece method.

- T F 47. After a piece of gold foil is annealed by piece method, it should be placed in an air tight box.
- T F 48. Electric annealers are commonly used for bulk annealing.
- T F 49. Annealed gold foil should be kept warm after it is annealed until the dentist is finished with the restoration.
- T F 50. Gold foil which remains after restoration is completed should be left in the annealer for the next restoration.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The glass slab used for the preparation of synthetic porcelain cements should be cooled to between _____ and _____ degrees Fahrenheit.
2. The base used under fillings, for cementing inlays, crowns, bridges and jacket crowns is _____ cement.
3. The consistency of zinc-phosphate cement used as a base is like _____.
4. The setting time for zinc-phosphate cement can be hastened by _____ of the mix.
5. The liquid used in zinc-oxide-eugenol cement contains 98 per cent _____ and 2 per cent _____.
6. A zinc-oxide-eugenol cement mix requires _____ times as much powder as liquid.
7. The rate of setting of zinc-oxide-eugenol cement can be speeded up by adding _____ crystals.
8. The glass slab used for mixing zinc-oxide-eugenol cement should be cleaned by wiping it with _____ and then washing it with soap and water.
9. Zinc-oxide-eugenol cement is sometimes used as a _____ treatment.
10. Silver amalgam alloy contains a minimum of _____ per cent tin.
11. The metal that is used as a deoxidizing agent and to help overcome melting and alloying problems in the silver amalgam is _____.
12. Silver alloy particles are mixed with _____ to make an amalgam alloy filling.

13. The ingredients of silver amalgam are mixed by an electric machine called an _____.
14. After silver amalgam has been triturated, the excess _____ is removed.
15. When the dentist works the amalgam into the preparation, he is _____ the amalgam.
16. The final polish is put on an amalgam restoration using half and half dry _____ and _____.
17. Amalgam restorations are coarse polished using _____ paste as the abrasive.
18. Most synthetic porcelain mixes should be spatulated for _____ minutes.
19. The liquid and powder of a synthetic porcelain mix is spatulated with a rapid _____ motion.
20. Immediately after using with synthetic porcelain, the glass slab and spatula should be cleaned with _____.
21. The most commonly used gold foil is _____ gold foil.
22. Silver amalgam is used almost exclusively as a filling material for the _____ teeth.
23. Silver amalgam is easy to use and requires _____ of both the dentist and the patient.
24. _____ is an important variable in amalgam fillings which must be controlled.
25. The setting time of an amalgam is determined by the _____, _____, _____, and _____.
26. Crushing strength of an amalgam restoration is affected by _____, amount of _____, and the technique used in _____ and _____.
27. Gold foil restorations are made with the use of gold in its _____.
28. Annealing is a cleansing operation and is necessary in order to make gold _____.
29. _____ gases cannot be driven off by the process of annealing.
30. _____ and _____ are essential factors in the proper annealing of gold.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The consistency of zinc-phosphate cement used for bases differs from that for cementing crowns in that the base cement must be (A) thinner; (B) heavier; (C) lighter; (D) darker.
- _____ 2. Properly mixed zinc-oxide-eugenol cement is the consistency of (A) molasses; (B) cream; (C) varies with use; (D) water.
- _____ 3. Tin is added to a silver alloy to (A) increase strength; (B) replace zinc; (C) speed up setting; (D) reduce expansion.
- _____ 4. A mortar and pestle is used for (A) triturating alloy and mercury; (B) measuring mercury; (C) measuring alloy; (D) weighing alloy and mercury.
- _____ 5. The length of time that must lapse between the installation and the finishing and polishing of an amalgam filling is (A) 30 minutes; (B) six hours; (C) 24 hours; (D) three days.
- _____ 6. The first number toward the operative end of dental cutting instruments indicates the (A) width of the blade; (B) length of the blade; (C) angle of the blade; (D) grade of steel.
- _____ 7. The purpose for spatulating synthetic porcelain powder and liquid is to (A) grind the powder finer; (B) beat the liquid into the powder; (C) wet the surface of each particle of powder; (D) crush the powder into the liquid.
- _____ 8. If a spatulated synthetic porcelain mix has a high glossy sheen, the mix is (A) too dry; (B) just right; (C) under spatulated; (D) too thin.
- _____ 9. The entire spatulation process for mixing synthetic porcelain should be completed within (A) 30 seconds; (B) 60 seconds; (C) two minutes; (D) five minutes.
- _____ 10. Before a shade guide is used it should be (A) polished; (B) moistened; (C) dried; (D) dulled.
- _____ 11. Acrylic filling materials placed using the pressure method are placed into the preparation with a (A) sable brush; (B) Texton trismer; (C) spatula; (D) Stellite instrument.

Assignment

Covering
Units 109-118

ASSISTING WITH INLAYS, CROWNS, BRIDGES AND JACKET CROWNS

The preparation of inlays, crowns, bridges, and jacket crowns involves much skill on the part of the dentist. The work of fitting these restorations is a tedious, delicate, and time-consuming job. A well-trained dental assistant can be of invaluable assistance in preparing and placing these devices.

In this assignment you will have the opportunity to study the duties required of a dental assistant when working with inlays, crowns, bridges and jacket crowns.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 466-476; 499-505; 511-513.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. To prepare for children's steel crown procedure, the assistant should prepare the basic set-up for operative procedures.
- T F 2. Cases prepared for children's steel crown procedure involving deep decay require that adrenalin be made available.
- T F 3. Children's steel crowns are set the next day after the preparation is made.
- T F 4. If the children's steel crown procedure involves treatment of the pulp, the dentist needs especially close assisting in the treatment process.
- T F 5. As a part of the gold inlay procedure, the assistant should light the gas burner at the bracket table.
- T F 6. Cast gold inlays are set during the same appointment at which the wax pattern is made.

- T F 7. Full gold crowns require subsequent appointments but three-fourth crowns can be completed in the appointment.
- T F 8. Elastic silicone impression material will not shrink if left exposed to air.
- T F 9. Full gold crowns are not set during the same appointment that the wax pattern is made.
- T F 10. Copper bands used in full gold crown placement are available in annealed and unannealed form.
- T F 11. Copper bands are not used in jacket crown placement.
- T F 12. Shade guides are used in jacket crown procedure.
- T F 13. When making a jacket crown, generally a drawing of the tooth crown with a distribution of the various shades over the various parts of the tooth is made.
- T F 14. Bridges may be supported entirely on jacket-crowns.
- T F 15. Impression material must be readied by the assistant for bridgework procedures.
- T F 16. Upper and lower bridges have the same type of pontics.
- T F 17. Lower posterior pontics frequently have a space left between the chewing surface and the ridge below.
- T F 18. Hydrocolloid must be prepared before the scheduled appointment at which it is to be used.
- T F 19. Both ends of the hydrocolloid tube should be opened before immersing it in water for boiling.
- T F 20. The patient should begin the salt water rinse before the dentist prepares the mouth for the impression.
- T F 21. The assistant should have the impression tray ready for insertion in the patient's mouth at the time that the dentist completes the application of hydrocolloid.
- T F 22. The hydrocolloid must be in thinner form for partial denture than for a multiple inlay or bridge.
- T F 23. When taking an impression of teeth prepared for bridge abutments, special appointments are recommended for each impression to be taken.
- T F 24. There are more types of impression materials available for use in taking an impression of an individual tooth than for larger restorations.
- T F 25. Copper bands are available in several sizes and in thicknesses of metal.

T F 26. The largest size copper band is designated by the number 1.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The tool used for making irregular shapes in metal is called _____ pliers.
2. Posterior temporary fillings used during the casting of a gold inlay are made of hard _____.
3. Temporary fillings in anterior teeth prepared for gold inlay are made of crown-forms or _____ and adhered with _____ paste.
4. When making ready for a bridgework procedure, the assistant should prepare the basic set-up for _____ procedures.
5. A bridge replacing one missing tooth is called a _____ bridge.
6. A bridge replacing one missing tooth consists of two _____ and a _____.
7. Abutments in bridgework are placed upon the _____ teeth.
8. The length of a bridge consists of the number of _____ plus the number of _____.
9. The facing on upper posterior bridges is usually made of _____ or _____.
10. A pontic hung like a hammock between the abutment teeth is referred to as a _____ pontic.
11. One hydrocolloid impression requires _____ tubes of hydrocolloid.
12. The hydrocolloid material is prepared in a _____.
13. Hydrocolloid tubes are prepared by boiling them in water for _____ to _____ minutes.
14. The final tempering of hydrocolloid material takes about _____ to _____ minutes.
15. A _____ or _____ cap or band may be substituted for the large tray when making individual tooth impressions for dies.
16. The lower edge of a copper band is trimmed to get the curvature of the tooth at the _____ when using the modeling compound method of taking tooth impressions.

17. If modeling compound is used to take an impression, it should be _____ after it is forced into the impression.
18. Rubber base impression materials can be removed from tools by wiping them with _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. Bridges may be supported entirely on (A) full crowns; (B) inlays; (C) matrix bands; (D) sprue bases.
- _____ 2. An abutment in bridgework procedure is a (A) replacement for missing tooth; (B) support; (C) cap on the replacement tooth; (D) band divider.
- _____ 3. A pontic in bridgework procedure is a (A) replacement for missing tooth; (B) cap on natural teeth; (C) support; (D) jacket crown.
- _____ 4. When setting a gold inlay, the assistant should have ready for use a (A) sable brush; (B) trimmer; (C) leather-faced mallet; (D) gold file.
- _____ 5. Impression trays for hydrocolloid impressions are cooled with (A) air; (B) alcohol; (C) water; (D) ether.
- _____ 6. Hydrocolloid ready for use to make an impression can be stored in a (A) refrigerator; (B) conditioner; (C) vacuum bottle; (D) mason jar.
- _____ 7. Dietrich's Impression Material should be prepared by (A) boiling; (B) freezing; (C) spatulating; (D) kneading.

SURGERY

Some dentists perform only a minimum of surgical work, but most dentists remove teeth, make incisions, and do whatever surgical work is necessary for the relief of pain.

Similar principles are applied in all surgical operations. Since the mouth does not lend itself to actual sterilization, a most careful aseptic technique must be applied at all times. The dental assistant can be of much assistance in providing the dentist with the necessary sterile instruments, swabs, ligatures, and other materials. Some assistants can do a better job of getting the patient in the right frame of mind for surgery than can the dentist.

In this assignment you will have the opportunity to study the tools and techniques pertaining to dental surgery.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 485-495.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. When preparing for periodontic procedures, the assistant should place a prophylactic at right angle with a rubber cup on the bracket table.
- T F 2. Mouth mirrors should not be used during periodontic procedures.
- T F 3. The purpose of periodontic procedure is to treat the mouth condition called pyorrhea.
- T F 4. When a tooth is scaled, it is polished with a paste and rubber cup.
- T F 5. If gum tissue must be cut away during treatment for pyorrhea, the dentist engages the assistance of a surgeon.
- T F 6. It is important to explore the medical history of the patient prior to surgery.

- T F 7. Pre-operative medication is valuable in reducing pain and bleeding during surgery.
- T F 8. The proper positioning of the patient's body is important for dental surgery.
- T F 9. Prior to dental surgery, the assistant should have the patient loosen tight clothing so the body can ventilate properly.
- T F 10. The stomach should be empty if general anesthesia is being used in dental surgery.
- T F 11. Accumulation of fluids and secretions in the lungs should be eliminated by medication and aspiration.
- T F 12. Hemostats are used for handling suture needles.
- T F 13. Before beginning surgery, the dentist and his assistant should scrub thoroughly.
- T F 14. A dentist can maintain a truly sterile field in oral surgery.
- T F 15. The assistant is of little help when the dentist sutures the wound in the mouth.
- T F 16. Endodontic procedure for routine treatment involves apical surgery.
- T F 17. The remarks and expression of the assistant during surgery have much to do with the calmness of the patient.
- T F 18. After a tooth has been extracted, the drinking of hot liquids helps reduce bleeding.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. Deep scaling during treatment for pyorrhea^a is accomplished with tools called _____.
2. Heavy calculus is removed using _____ scalers.
3. If bite equilibration is to be accomplished, the assistant should have _____ paper and a _____ stone ready.
4. A mere common name for calculus of the teeth is _____.
5. The position advocated for surgery in the dental office is the _____ position.

6. If dental surgery is performed in a hospital, _____ position is used.
7. To insure adequate airway during surgery, the patient's _____ should be supported.
8. The suture used in dental surgery is sterile plain _____.
9. The kidney-shaped dish used during dental surgery is called an _____.
10. During dental surgery, the patient's lips are coated lightly with _____.
11. Post-operative instructions should be given to the patient in _____.
12. The purpose of the endodontic procedure is to _____ a tooth.
13. The operating field for an apico-ectomy is painted with tincture of _____.
14. The principal washing agent when flushing root canals during an apico-ectomy procedure is a five per cent solution of _____.
15. During an apico-ectomy the bacteria in the root canal are destroyed by sealing in _____.
16. An apico-ectomy procedure _____ the tooth as well as removes a portion of the _____.
17. After a tooth extraction, the mouth should not be rinsed for _____ hours.
18. The rinse to use after a tooth extraction consists of _____ teaspoon of _____ in a glass of tepid water.
19. Swelling following surgery can be reduced by applying _____ outside the face.

Listing

Directions: List the items called for in each of the following. Select your answers carefully.

1. The dappen dishes which should be on the bracket table when a patient is to be treated for pyorrhea are:
 - (A) _____
 - (B) _____
 - (C) _____

2. Among the materials the assistant gets ready for an endodontic procedure for routine treatment, she should place on a sterile towel the following:

(A) _____

(C) _____

(B) _____

(D) _____

3. The Bard-Parker sterilizer when used in an endodontic procedure for routine treatment should contain:

(A) _____

(C) _____

(B) _____

(D) _____

Assignment
Sheet No. 16

Covering

DENTURES AND ORTHODONTIC DEVICES

Due to accidents, disease and age, people lose their teeth. The dentist, therefore, finds it necessary to reproduce a tooth, several teeth, or a complete set of teeth. This requires great accuracy and artistry because not only must the denture or partial denture fit perfectly and function properly, but it must not detract from the patient's appearance.

Many people have irregularities of the shape of the jaw and malocclusion of the teeth. These irregularities can be treated and corrected. This type of treatment, orthodontics, has become highly specialized and widely used.

The assistant must be prepared to assist the dentist in every possible way when he is building dentures or fitting orthodontic devices.

In this assignment you will have the opportunity to study the procedures in denture construction and orthodontic corrections.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, 280-288; 496-498; 509-510; 514-520.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T". If the letter is false, draw a circle around the letter "F."

- T F 1. Alginate will set faster if it is mixed with water below 70 degrees.
- T F 2. Alginate impressions should be poured as soon as possible.
- T F 3. Impression compound is placed on gauze when prepared in the compound heater.
- T F 4. After an impression has been taken and set, the cast should be poured immediately.

- T F 5. Casts are removed from the impression material by immersing them both in cold water.
- T F 6. Impression compound is removed from impression trays by softening it over an open flame.
- T F 7. Impression trays are sterilized after they have been used.
- T F 8. Some impression trays are made of metal that will melt over an open flame.
- T F 9. Face bow transfer is used to discover the proper relationship of the patient's lower jaw to his upper jaw.
- T F 10. The success of the articulation process rests upon how accurately the centers of rotation of the mandible are located.
- T F 11. At the ends of the "U" on the face bow are located pointers.
- T F 12. The centers of rotation of the temporo-mandibular joints can be located by using a hinge axis locator.
- T F 13. When using a kinematic face bow, part of the device attaches to the lower arch of the patient.
- T F 14. The bite fork of the transfer bow is imbedded in the upper trial denture when full dentures are being constructed.
- T F 15. The purpose of the first sitting in the construction of full dentures is to make an alginate impression of the opposing denture.
- T F 16. Zinc-oxide paste is used for alginate impressions.
- T F 17. Teeth are set up in the trial dentures before the patient appears for his sixth sitting.
- T F 18. It is important to have a member of the patient's family verify the appearance of the finished dentures.
- T F 19. If operative work is required in the mouth to prepare room for occlusal rests, this work should be performed after the partial denture has been completed.
- T F 20. During the fourth sitting, adjustments are made in the partial denture and they are placed in the patient's mouth.
- T F 21. Recall control cards for patients with partial dentures are marked for recall once a year.
- T F 22. Dentures must occasionally be re-fitted to the patient's mouth after they have been worn over a period of time.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. Red boxing wax is used for building up _____ when using the alginate impression technique.
2. Before an impression is taken, the patient is asked to rinse his mouth with _____.
3. If both upper and lower impressions are to be taken, the _____ is taken first.
4. After impressions are taken, they are rinsed in water and placed in the _____ solution.
5. After alginate impressions have been poured, they should be immersed in _____.
6. The patient's name should be written on the cast with a (an) _____.
7. Preparation of the impression compound should begin about _____ minutes before the time for the appointment.
8. The center of rotation of the _____ joints is the guide for face bow transfer.
9. The tool used to duplicate the movements of the mandible in relation to the maxilla is called the _____.
10. A kinematic face-bow is used to locate the _____ of the temporo-mandibular joints.
11. Zinc-oxide impressions are removed from the cast by immersing in _____ at _____ degrees for _____ minutes.
12. The patient should wear his finished dentures _____ to _____ days before the dentist makes his final check.
13. If one partial denture is to be constructed, the opposing model is poured in _____.
14. In order to design the clips on a partial denture, the study model is placed on a _____ instrument.
15. The desired shape and color of replacement teeth in a partial denture are selected during the _____ sitting.
16. Calculus that has collected on dentures due to use can be removed by soaking them in a _____ per cent solution of _____.

17. The most important rule for the care of all articulators is to keep them _____.
18. All sliding or hinged parts on an articulator should be lightly _____ to keep them in good operating condition.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. An impression of one arch requires the use of (A) one; (B) two; (C) three; (D) four cakes of impression material.
- _____ 2. Impression material is softened for use in a (A) freezer; (B) vacuum; (C) compound heater; (D) sterilizer.
- _____ 3. After an impression has been taken, the compound is set by (A) drying it in an oven; (B) chilling it in water; (C) cooling at room temperature; (D) drying it in cloth.
- _____ 4. After impression compound is removed from an impression tray, the tray is coated with (A) hydrocolloid; (B) water; (C) carding wax; (D) Vaseline.
- _____ 5. Impression trays can be brightened after continual use by (A) sanding; (B) steelwool; (C) Lan- γ -Sheen; (D) boiling.
- _____ 6. Final impressions of the full denture area are made during the (A) first; (B) second; (C) third; (D) fourth sitting.
- _____ 7. The third sitting in constructing full dentures involves (A) articulation; (B) making trial dentures; (C) securing final impressions; (D) inserting dentures in patient's mouth.

Assignment
Sheet No. 17

Covering
Units 141-151

IMPRESSIONS, MODELS, DENTURES AND CASTING

Many dentists make the impressions of the mouth and delegate much of the laboratory work to their assistants or have the modeling, denture construction, and casting work performed by highly skilled laboratory technicians. This is exacting work and requires a high degree of manipulative skill and finger dexterity. A great deal of the success of a prosthetic device depends upon the quality of the laboratory work.

The assistant should be able to perform basic laboratory jobs as well as talk intelligently with the dentist and laboratory technician about them.

In this assignment you will have the opportunity to learn about the materials used and the processes involved in making impressions, models, dentures, and castings.

Assignment:

1. Read the reference listed below.
2. Answer the questions below and turn in this assignment by _____.
3. Make a drawing of the biting surfaces of the upper and lower arches showing in relief the proper contours and occlusal carvings.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 321-394.

Questions:

True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. Gold alloys used for castings are generally composed of gold, silver, copper and platinum.
- T F 2. An alloy of gold, silver and copper is stronger than pure silver.
- T F 3. Moisture will cause a container of plaster of Paris to harden.
- T F 4. When mixing plaster of Paris, pour water into a bowl containing the dry powder.

- T F 5. When spatulating plaster of Paris, you need not be concerned about the amount of time required.
- T F 6. Quick-setting plaster of Paris is available in plain or flavored types.
- T F 7. Casts made of artificial stone are softer and not as strong as plaster of Paris casts.
- T F 8. Artificial stone is available in colors.
- T F 9. The amount of water added to a dental stone will affect the strength of the final product.
- T F 10. Artificial stone does not require vibrating.
- T F 11. Boxing wax is joined by heating the meeting ends.
- T F 12. Impressions taken in modeling compound do not distort during the boxing process.
- T F 13. Boxing material on an upper impression is luted to the tray.
- T F 14. A lower impression is easier to box than an upper impression.
- T F 15. A boxed impression is placed on the vibrator when it is poured.
- T F 16. Artificial stone, when poured into a vibrating boxed impression, will flow from the low areas to the higher areas of the impression.
- T F 17. If it is not possible to box an impression, the impression must be destroyed and a new one made.
- T F 18. Alginate impressions stick very tightly to their casts.
- T F 19. If an impression for a full denture is made from zinc-oxide paste, no coating material is required over the paste to aid in separating it from the cast.
- T F 20. Casts for partial dentures must be separated very carefully from the impression material in order to keep from fracturing the patient's tooth.
- T F 21. The wax pattern of an inlay is the exact duplicate of the gold casting to be made.
- T F 22. The material used to make a positive of an impression is the same as the amalgam filling used in restorations.
- T F 23. Dies can be made of a special artificial stone.

- T F 24. Inlay waxes are compounded to burn out of the mold leaving no residue harmful to the gold casting.
- T F 25. An oil base lubricant applied to the die will facilitate the removal of the wax pattern and protect its surface.
- T F 26. The investment ring should be lined with asbestos paper to cushion the unequal expansion of investment and ring.
- T F 27. Before the investment ring is filled with investment material, the wax pattern is lubricated with water.
- T F 28. The investment should be allowed to set for at least one-half hour before the ring is removed.
- T F 29. Class "C" golds castings should be quenched in water immediately after casting.
- T F 30. Class "B" golds are harder than Class "C" golds.
- T F 31. In order to conserve time in pickling, it is common practice to plunge a hot casting into cold acid.
- T F 32. After the casting is removed from the pickle, it should be rinsed in cold water to neutralize the acid.
- T F 33. The main purpose of polishing a gold inlay is to produce a high glossy attractive outer surface.
- T F 34. Gold expands when heated and shrinks when cooled.
- T F 35. Successful inlay casting is dependent upon careful control of the expansion and contraction of the various materials.
- T F 36. A thicker mix of investment and water should be used for vacuum investing than for investing without vacuum.
- T F 37. The use of an asbestos liner can be eliminated successfully when investing with vacuum.
- T F 38. The Barr investment unit mixes the investment material under vacuum.
- T F 39. The sprueing of wax patterns for vacuum casting is the same for non-vacuum casting.
- T F 40. Plaster of Paris and artificial stone are two materials commonly used for making dies.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. An impression of a patient's dental arch is the _____ in shape, of the patient's mouth.

2. When an impression is filled with a material, a model or _____ is formed.
3. Study models are made of _____.
4. The addition of salt to plaster of Paris will _____ its setting.
5. A plaster of Paris mix for a single arch impression requires about _____ cc of water.
6. As plaster of Paris is spatulated, care should be taken to work in as little _____ as possible.
7. Air bubbles are removed from plaster of Paris mix by _____ it on a machine called a _____.
8. The two types of plaster of Paris are _____ setting and _____ setting.
9. Artificial stone mix for the average single arch impression required _____ cc of water.
10. When mixing artificial stone the _____ is added to the _____.
11. Enclosing the impression and its tray with sides of wax strips is called _____ the impression.
12. Cast material is _____ into the impression to prevent the entrapment of air.
13. If a cast poured in an impression made of impression compound is left in the compound heater too long, the cast will _____ to the impression.
14. The machine used to trim casts is called a _____.
15. The two types of denture models are _____ and _____ denture models.
16. Partial denture impressions are referred to as _____.
17. Working models of dentures are poured in _____.
18. The limits of a full denture cast are dictated by _____.
19. Wax bite rim material is supplied in _____ inch bars that are _____ inch square in cross section.
20. Wax bite rim material softens at about _____ degrees.
21. Flaming and wiping a wax surface makes it _____ and _____.

22. The two methods of preparing patterns for gold castings are the _____ and the _____ methods.
23. A positive of the inlay impression is called a _____.
24. As an inlay impression is filled with amalgam, the excess _____ should be removed as the condensing into the impression proceeds.
25. A material similar to synthetic porcelain used for inlay dies is _____.
26. Before a die is used to construct the wax pattern, it is given a coating of _____ by the _____ - _____ process.
27. Kerr's microfilm is used as a _____ for removal of the wax pattern from the die.
28. The pattern should be carefully painted with the _____ before it is placed in the ring.
29. The wax pattern is removed from the investment by _____ it out.
30. When melting a nugget of gold, it should be placed on the _____ of the _____ in order to insure complete melting.
31. The process of boiling the casting to remove surface oxides is called _____.
32. The fact that metals occupy _____ space in their solid state creates a problem in correctly sprueing a pattern.
33. Correct positioning and sprueing for centrifugal castings requires that the pattern be placed _____ inch from the bottom of the ring.
34. The word _____ is used to describe the cooling of metal in a mold.
35. Two dangers to guard against in mixing investment materials is excess _____ and entrapped _____.
36. The over-all procedure for making a gold casting of an inlay or crown by the indirect method includes taking an individual tooth _____, constructing an amalgam _____, shaping the _____ pattern, mounting it on a _____, _____ the pattern, _____ the mold, and pouring the molten _____ in the mold.
37. Much hard work in finishing and polishing the wax pattern can be eliminated by paying particular attention to the _____.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The material used to make wax patterns for gold castings is (A) beeswax; (B) carnauba wax; (C) paraffin wax; (D) inlay wax.
- _____ 2. Mixing bowls used for preparing plaster of Paris are made of rubber because (A) it is easier to spatulate; (B) dry materials are easier to remove; (C) less water is absorbed; (D) it is possible to knead mix.
- _____ 3. Quick setting plaster of Paris sets up in (A) one to two minutes; (B) three to five; (C) five to ten; (D) ten to fifteen minutes.
- _____ 4. Artificial stone should be mixed to a consistency of (A) paste; (B) water; (C) cream; (D) molasses.
- _____ 5. Impressions taken in impression plaster must be coated with (A) Vaseline; (B) hydrocolloid; (C) zinc-oxy-phosphate; (D) tincture of green soap.
- _____ 6. After they are poured, impressions taken in alginate or hydrocolloid materials is generally (A) dried in an oven; (B) covered with cloth; (C) submersed in water; (D) air dried.
- _____ 7. Casts poured in an impression of modeling compound are separated by (A) immersing in water; (B) prying apart; (C) placing in a compound heater; (D) placing in an oven.
- _____ 8. Edentulous ridges are ridges (A) without teeth; (B) with partial teeth; (C) with a full set of teeth; (D) caused by pyorrhea.
- _____ 9. Before a wax pattern is invested, it should be thoroughly cleaned with a mixture of (A) green soap and hydrogen peroxide; (B) alcohol; (C) naphtha; (D) ether.
- _____ 10. Wax patterns are burned out of the investment at (A) 100 degrees for 30 minutes; (B) 500 degrees for one hour; (C) 1350 degrees for one-half hour; (D) 2000 degrees for two hours.
- _____ 11. After a gold casting has been removed from the investment, it is pickled in (A) water; (B) hydrogen peroxide; (C) ammonia; (D) sulphuric acid.

Matching

Directions: Read statements listed alphabetically in the right hand column and rearrange in correct sequence by placing the letters from the right hand listing in the space provided adjacent to the numbers in the left hand column.

1. The procedure for waxing up a pattern as described in the reference can be reduced to the following operations:

- | | |
|-----------|---|
| 1. _____ | A. Build up to approximate shape |
| 2. _____ | B. Seat the die |
| 3. _____ | C. Establish contacts and occlusion |
| 4. _____ | D. Check margins and replace missing portions |
| 5. _____ | E. Remove surplus wax |
| 6. _____ | F. Melt inlay wax |
| 7. _____ | G. Replace in die |
| 8. _____ | H. Establish the occlusion |
| 9. _____ | I. Build up contacts |
| 10. _____ | J. Smooth and polish |
| 11. _____ | K. Complete carving |
| 12. _____ | L. Run into preparation |
| 13. _____ | M. Lubricate contact areas |
| 14. _____ | N. Lift die from articulated model |
| 15. _____ | O. Press against walls of die |
| 16. _____ | P. Soften wax pattern |
| 17. _____ | Q. Seat die in model |
| 18. _____ | R. Remove from die and check inner surface |
| 19. _____ | S. Create proper contours and occlusal carvings |

RADIOGRAPHY

Radiographic, or x-ray, equipment has become an essential part of practically all dental offices. Through the use of this equipment, a shadow picture can be produced of any area and its adjacent or associated parts. The dentist can then use these findings in diagnosing dental conditions not exposed to normal vision.

Most dentists expect their new assistants to assist them in dental radiology to a limited extent. In fact, in many dental offices, after a period of training, the assistant assumes complete responsibility with the exception of the exposure procedure and the final interpretations of the films.

In this assignment you will have the opportunity to study the methods, uses, and cautions to be observed in dental radiology.

Assignment:

1. Read the reference listed below.
2. Prepare a sketch of your employer's x-ray processing room, along with a list of the available equipment. Next, prepare a revised sketch of the room showing improvements in placing equipment along with a list of equipment you would add to improve the developing process.
3. Answer the questions below and turn in this assignment by _____.

Reference:

- A. Schwarzrock, Effective Dental Assisting, pp. 395-433.

Questions:True-False

Directions: The following statements are either true or false. If the statement is true, draw a circle around the letter "T." If it is false, draw a circle around the letter "F."

- T F 1. X-rays are potentially dangerous to the dentist, his assistant, and the patient.
- T F 2. Persons regularly exposed to x-ray radiation should be selected to hold the film in the patient's mouth when it is necessary.
- T F 3. The intensity of x-ray radiation varies inversely as the square of the distance from the tube target.
- T F 4. X-ray radiation output varies with changes in kilovoltage.

- T F 5. Radiation produced by low kilovoltage x-rays is not capable of burning a patient.
- T F 6. The effect of x-ray waves on living tissue is cumulative.
- T F 7. If a patient has a record of easily sunburning, normal x-ray dosages should be considered very carefully before they are used.
- T F 8. If the peak x-ray kilovoltage is decreased, then the exposure time must also be decreased.
- T F 9. The central rays of the x-ray machine should be directed perpendicular to the surface of the x-ray film.
- T F 10. The occlusal x-ray technic is used to expose diseases of the mouth to x-ray radiation.
- T F 11. Before taking x-rays of a patient, the assistant should inquire as to when he was last exposed to x-ray or gamma ray radiation.
- T F 12. When preparing a patient for x-rays, the assistant should position his head so that the plane of occlusion of the teeth to be visualized is perpendicular to the floor.
- T F 13. The center of the x-ray film must be placed so that it is over the center of the region to be exposed.
- T F 14. The occlusal edge of the x-ray packet should be parallel with the occlusal edge of the teeth.
- T F 15. X-ray film may be bent in the mouth provided the bend occurs in the center of the region of interest.
- T F 16. X-ray film must be bent to get a satisfactory exposure in the molar region.
- T F 17. The tongue and muscles of the floor of the mouth should be relaxed in order to properly place x-ray films for the lower jaw.
- T F 18. Changes in the apical structure are shown on an x-ray taken with the bitewing technic.
- T F 19. X-ray film designed especially for use with the bitewing technic can be purchased.
- T F 20. Bitewings in the anterior region are of little value.
- T F 21. The extraoral technic requires film wrapped in lightproof paper.
- T F 22. X-rays may be used as evidence and therefore must be accurately labeled so they can be readily identified.

- T F 23. One method used to store the patient's x-rays is to file them in file drawers.
- T F 24. X-rays that are no longer current are discarded.
- T F 25. The x-ray developing tank originally holding the fixer solution should not be used for developer solution even if the tank has been scrubbed clean.
- T F 26. X-ray fixer solution has a shorter life than the developer solution.
- T F 27. The sequence in which films are placed in the mouth for bitewing x-rays varies with the areas to be exposed.
- T F 28. X-ray packets are available that make it possible to take two identical x-rays with the one packet.
- T F 29. X-ray film while wrapped in the packet should not be exposed to any kind of light.
- T F 30. If the temperature of developing solutions rises above the safe limit, it should be cooled by placing ice in the solution.
- T F 31. Fresh developing solutions increase the developing time required.
- T F 32. Place film to be developed on the lowest clips of the film holder.
- T F 33. The process of fixing an x-ray film must be timed to the exact second.
- T F 34. When x-rays are mounted, they are placed in a logical sequence of occurrence.

Completion

Directions: Fill in the blank(s) in each statement with the word(s) required to complete the sentence correctly.

1. The unit of measure for x-rays is called the _____.
2. One one-thousandth of a roentgen is called a _____.
3. The hazard of exposure to the operator of the x-ray unit can be eliminated by having the operator stay _____ the _____ of the x-ray.
4. The hazard from secondary radiation can be reduced to a permissible dose by standing at least _____ feet away from the patient's head.

5. If a patient receives an overdose of x-ray, his skin becomes _____ and he will lose the _____ on the exposed part.
6. The x-ray dosage rate is expressed in _____.
7. Soft radiation, produced by low kilovoltage x-rays, can be removed by using an _____ x-ray _____.
8. If a patient has been exposed to 1,200 milliamperere seconds of x-ray radiation, no further roentgenographic examinations should be given for _____ weeks.
9. When the x-ray film is placed within the patient's mouth, it is called the _____ technic.
10. The technic for producing an x-ray which will visualize the crowns of the teeth only is called the _____ technic.
11. Occlusal films measure _____ inches by _____ inches.
12. When using the long target-film technic, the distance between the target and the film is increased to at least _____ inches.
13. Contrast and penetration for the long target-film technic is controlled by increasing or decreasing the _____ setting on the x-ray machine.
14. When using the long target-film technic, _____ speed film should be used.
15. The extraoral technic requires the use of an aluminum _____ instead of a film holder.
16. The standard periapical film size is _____ inches by _____ inches.
17. An x-ray packet contains an outer wrapper, black _____, _____, and another piece of black _____.
18. X-ray film is stored in a box lined with _____.
19. The developer and fixer compartments, when emptied, should be scrubbed with a brush and a solution of _____.
20. When preparing for bitewing x-rays for patients over twelve years of age, the assistant should place _____ films on the bracket table.
21. When two films are used for small children, the first exposure is of the _____ side.
22. A full mouth x-ray requires _____ films.

23. Illumination in the dark room is provided by a _____ light.
24. Film is held for developing in a device called a _____
_____.
25. The temperature of the developer solution is ascertained by keeping in the solution a floating _____.
26. The warmer the developing solution, the _____ the film is developed.

Multiple-Choice

Directions: In the space at the left of each statement, write the letter of the item which will provide the correct answer to complete the statement.

- _____ 1. The unit of measure for x-rays is designated by the symbol (A) x; (B) r; (C) xr; (D) nr.
- _____ 2. The symbol mr represents (A) milioroentgens; (B) thousand-roentgens; (C) voltage; (D) amperes.
- _____ 3. The maximum total roentgen dosage to which any part of the body shall be permitted to be exposed continuously in one week is (A) .003r; (B) .03r; (C) 0.3r; (D) 3.0r.
- _____ 4. A safe x-ray dose for a patient in one sitting is (A) 200; (B) 1000; (C) 1200; (D) 12,000 milliamperere seconds.
- _____ 5. In dental x-ray work a bite block is used to (A) deflect radiation; (B) locate teeth to be pictured; (C) elongate the tooth shadow; (D) hold the x-ray film.
- _____ 6. The x-ray technic designed for visualizing the coronal portion of the tooth is the (A) bitewing; (B) periapical; (C) occlusal; (D) extraoral technic.
- _____ 7. When periapical x-ray films do not permit complete visualization of the region to be inspected roentgenographically, the dentist will use (A) long target; (B) bitewing; (C) anterior; (D) occlusal film.
- _____ 8. X-ray developing tanks are made from (A) cast iron; (B) copper; (C) rubber; (D) aluminum.
- _____ 9. The length of time the film should remain in the developing solution should be ascertained by (A) asking the dentist; (B) reading the label on the developer bottle; (C) looking in a textbook; (D) watching the films until they are developed.
- _____ 10. Developing solutions should never exceed the temperature of (A) 32; (B) 59; (C) 78; (D) 212 degrees.

11. After the film has been in the developer the required length of time, it is (A) dipped in water; (B) dipped in ether; (C) dried; (D) exposed to ultra-violet light.

CARE AND MAINTENANCE OF THE VACUDENT UNIT

1. Shut off motor at every opportunity when not in use. As in all equipment containing motors, this mechanism is expendable, and the length of life can be extended when it is given a chance to rest and cool off.
2. Spray Vacudent germicidal solution into mouthpiece, with motor running, at the end of each day. By spraying sufficient quantities to moisten inside of hose, it will tend to eliminate bacterial growth in the filter bag and tank.
3. Flush with water through mouthpiece after every bloody operation.
4. Change filter bags once or twice a week. Do not operate the equipment without a filter bag in place, even though the gold and amalgam cuttings are not to be saved. The filter bag serves a dual purpose of separating the water from the air, as well as catching debris. Used filter bags can be stored in a quart fruit jar and sterilized to prevent breeding of bacteria. When a sufficient number of bags have been saved, they can be turned in to a gold refining company for reclaim.
5. Remove and clean filter tank once a week, using special wrench provided with the unit. When setting the filter tank back in the box, use a little Vaseline on the tube fittings. This makes them work easily and prevents leaking and wearing.
6. Check power unit container once a week for condensation of moisture. If moisture is present, wipe unit dry. Change paper filters every thirty days, or oftener if wet. No water should collect in the bottom of the power unit. This should be checked periodically by pulling out the motor.
7. After an unusually long operation, check the glass container at the bottom of the cabinet for moisture. Water in this container will cause the motor to stop operating. Remove and dry the container. Be sure to tighten container firmly when replacing it.

Check Points on Vacudent Unit

1. What to do if the switch refuses to stay on.

This indicates water in the line and the need to empty the glass container at the bottom of the cabinet. Clean and dry out the container.

2. What to do if the suction seems weak and ineffective.
- (A) Check cloth filter bag in filter tank at cabinet, as it may be full of debris and in need of changing.
 - (B) An obstruction in the hose itself or in the "L" at the top of the filter tank.
 - (C) A stuck valve will prevent suction at the mouthpiece as there will be a leakage coming in from the drain line.
 - (1) To remedy this; run through volumes of water, flushing the system out completely and thoroughly.
 - (D) A leaky air line.
 - (1) Check all air line connections
 - (E) Air leaking through at filter tank.
 - (1) Use Vaseline at all connecting points and fittings of filter tank. Intake hoses should be left open to help cool the motor.

This information was taken from publications of Densco Incorporated, Denver, Colorado.

TRAINING PLAN AND PROGRESS RECORD
for
DENTAL ASSISTANT

JOB TRAINING: What the worker should be able to do	Proficiency Shown	RELATED INFORMATION: What the worker should know
---	--------------------------	---

Reception Responsibilities

Speak, walk, stand and dress properly, use telephone, greet patients, dismiss patients, present cases to patients

Acceptable greeting procedures, telephone courtesy, psychology of dealing with children, presenting cases

Time in hours _____

Care and Maintenance of Office and Equipment

Clean and tidy office, clean and maintain dental equipment

Methods for cleaning various pieces of office and dental equipment

Time in hours _____

Clerical Duties

Make appointments, handle mail, maintain records, send statements

Procedures for keeping appointment book, problems in mail handling, methods for keeping records, problems in collecting accounts

Time in hours _____

Basic Duties

Ready patients' records, seat patient, arrange instruments, assist with prophylaxis, brush teeth

Procedure for chair adjustment method of sterilization of equipment, prophylaxis procedures

Time in hours _____

Caries and Anatomy

Instruct patients in tooth care, identify anatomical terms

Causes of tooth decay, meaning of anatomical terms

Time in hours _____

Assist with Tooth Preparation and Restorations

Assist in emergencies, assist with each step of preparation, prepare cements, prepare amalgam, porcelain, and acrylic restorations, assist with gold foil fillings

First aid procedures, acceptable conduct in the operating room, sequence of tool operations, procedure for inserting restorations

Time in hours _____

Inlays, Crowns, Bridges and Jacket Crowns

Assist with steel crowns, gold inlays, gold crowns, jacket crowns and bridgework, prepare hydro-colloid materials, make dies

Procedure for fitting and setting steel crowns, gold inlays, gold crown, jacket crowns and bridge-work, set-up for hydrocolloid impressions, method for making dies

Time in hours _____

Surgery

Prepare patient, assist with suturing, devitalization apico-ectomy, tooth removal and treatment of oral disease

Use of anesthesia, procedure for surgery, devitalization, endo-dontic procedures, apico-ectomy and tooth removal

Time in hours _____

Dentures and Orthodontic Devices

Mix alginate, assist with taking impressions and articulation process, assist with denture construction and orthodontic appliance installation and adjustments

Procedure for taking impressions, care and use of articulators, process for denture construction and orthodontic procedures

Time in hours _____

Impressions, Models, Dentures and Castings

Mix plaster of Paris, artificial stone, pour models and casts, separate and trim models, make dies, pattern and cast gold inlays

Method of preparing plaster of Paris, artificial stone, procedure for pouring models, steps in making wax patterns

Time in hours _____

Radiography

Prepare patient, assist with taking radiograms, develop, fix, dry film

Procedure for adjusting x-ray machine, safe dosage rates, position of x-ray head, procedure for developing x-ray

Time in hours _____

Code for employer's use in marking student's progress:

Performed some operations in area

Performed some operations with reasonable proficiency

Performed most operations in area

Performed most operations satisfactorily

Impressions, Models, Dentures and Castings

Mix plaster of Paris, artificial stone, pour models and casts, separate and trim models, make dies, pattern and cast gold inlays

Method of preparing plaster of Paris, artificial stone, procedure for pouring models, steps in making wax patterns

Time in hours _____

Radiography

Prepare patient, assist with taking radiograms, develop, fix, dry film

Procedure for adjusting x-ray machine, safe dosage rates, position of x-ray head, procedure for developing x-ray

Time in hours _____

Code for employer's use in marking student's progress:

Performed some operations in area

Performed some operations with reasonable proficiency

Performed most operations in area

Performed most operations satisfactorily

TRAINING PLAN AND PROGRESS RECORD
for
DENTAL ASSISTANT

Student's Copy

JOB TRAINING: What the worker should be able to do Proficiency Shown RELATED INFORMATION: What the worker should know

Reception Responsibilities

Speak, walk, stand and dress properly, use telephone, greet patients, dismiss patients, present cases to patients

Acceptable greeting procedures, telephone courtesy, psychology of dealing with children, presenting cases

Time in hours _____

Care and Maintenance of Office and Equipment

Clean and tidy office, clean and maintain dental equipment

Methods for cleaning various pieces of office and dental equipment

Time in hours _____

Clerical Duties

Make appointments, handle mail, maintain records, send statements

Procedures for keeping appointment book, problems in mail handling, methods for keeping records, problems in collecting accounts

Time in hours _____

Basic Duties

Ready patients' records, seat patient, arrange instruments, assist with prophylaxis, brush teeth

Procedure for chair adjustment method of sterilization of equipment, prophylaxis procedures

Time in hours _____

Caries, and Anatomy

Instruct patients in tooth care, identify anatomical terms

Causes of tooth decay, meaning of anatomical terms

Time in hours _____

Assist with Tooth Preparation and Restorations

Assist in emergencies, assist with each step of preparation, prepare cements, prepare amalgam, porcelain, and acrylic restorations, assist with gold foil fillings

First aid procedures, acceptable conduct in the operating room, sequence of tool operations, procedure for inserting restorations

Time in hours _____

Inlays, Crowns, Bridges and Jacket Crowns

Assist with steel crowns, gold inlays, gold crowns, jacket crowns and bridgework, prepare hydro-colloid materials, make dies

Procedure for fitting and setting steel crowns, gold inlays, gold crown, jacket crowns and bridge-work, set-up for hydrocolloid impressions, method for making dies

Time in hours _____

Surgery

Prepare patient, assist with suturing, devitalization apico-ectomy, tooth removal and treatment of oral disease

Use of anesthesia, procedure for surgery, devitalization, and dental procedures, apico-ecto and tooth removal

Time in hours _____

Dentures and Orthodontic Devices

Mix alginate, assist with taking impressions and articulation process, assist with denture construction and orthodontic appliance installation and adjustments

Procedure for taking impressions, care and use of articulators, process for denture construction and orthodontic procedures

Time in hours _____

Impressions, Models, Dentures and Castings

Mix plaster of Paris, artificial stone, pour models and casts, separate and trim models, make dies, pattern and cast gold inlays

Method of preparing plaster of Paris, artificial stone, procedure for pouring models, steps in making wax patterns

Time in hours _____

Radiography

Prepare patient, assist with taking radiograms, develop, fix, dry film

Procedure for adjusting x-ray machine, safe dosage rates, position of x-ray head, procedure for developing x-ray

Time in hours _____

Code for employer's use in marking student's progress:

Performed some operations in area

Performed some operations with reasonable proficiency

Performed most operations in area

Performed most operations satisfactorily

INTRODUCTION

Skill in mathematics is as valuable to the needle trades worker as skill in handling the operations of the trade. The student who masters both enters the field with a double asset.

It is the purpose of this book to furnish the student with a basic knowledge of mathematics and to develop her skill in solving mathematical problems pertinent to the needle trades. Wherever it was possible, problem situations and terms common to the trade were used to familiarize the student with everyday practices in the field.

Fashion, after all, is a most important industry in America. The job opportunities are unlimited. Some of the highest paid feminine jobs are in Fashion, Merchandising, Promotion, and Advertising. Did you know that a buyer of piece goods can earn more than \$15,000 a year? A competent student with a needle trades background and a workable knowledge of mathematics could climb into one of these desirable careers.

The major part of the industry, generally known as the needle trades, consists of three types of establishments: (1) the regular factories or manufacturers; (2) the apparel jobbers; (3) the contract factories or contractors. As it would be impossible to present to the student problems dealing with all the different types of concerns in the trade, most of the problems have been worked out from a manufacturer's viewpoint. The functions of the manufacturing company cover the widest scope, from the buying of raw materials, through designing and preparing samples and arranging for the manufacture of garments from their materials, to the selling of the finished apparel.

The atmosphere of the book is informal and informing, stressing always the application of practical mathematics rather than the formal and theoretical.

This book includes many types of lessons. Some are designed for class discussion and serve to provide a background in the special application to the needle trades field; others supply specific practice in the kind of written or mental computations needed; still others are specially designed to teach pupils how to select pertinent facts, how to judge whether a result is reasonable, or how to estimate. It would be well to encourage the student to preserve the complete set of solutions to the problems in a suitable notebook for future reference, as there is every probability that she will use some of them later on when she goes to work.

If the student makes a sincere effort to master the pretest and review lessons, she will find she can more easily grasp the new material. The mastery of this course will provide not only a practical background for her vocation, but for life preparation as well.

NEEDLE TRADES MATHEMATICS - I

TABLE OF CONTENTS

	<u>Page</u>
UNIT I - WHOLE NUMBERS	
Pre-test No. 1.....	1
1 - Reading and Writing Whole Numbers.....	4
2 - Computing Material Costs of Garments.....	6
3 - Entering and Totaling Customers' Orders.....	9
4 - Estimating Quantities of Materials Needed.....	15
5 - Daily Package - Receipt Records.....	18
6 - Checking Daily Bills.....	22
7 - Computing Parcel Post Charges.....	25
8 - Short Cuts in Arithmetic.....	31
Achievement Test No. 1.....	34
UNIT II - FRACTIONS	
Pre-test No. 2.....	35
1 - Review of Terms.....	37
2 - Review of Types of Fractions.....	40
3 - Reduction of Fractions.....	42
4 - Addition and Subtraction of Fractions.....	45
5 - Multiplication of Fractions.....	49
6 - Division of Fractions.....	53
Achievement Test No. 2.....	55
UNIT III - MEASUREMENT	
Pre-Test No. 3.....	57
1 - Review.....	58
2 - Use of a Gauge.....	61
3 - Linear Measure Equivalents.....	65
4 - Use of a Yardstick.....	66
5 - Use of the Tape Measure.....	70
6 - Unit Measure.....	73
7 - Liquid Measure.....	76
8 - The Avoirdupois Weight Measure.....	78
9 - Measure of Time.....	80
10 - Measure of Money.....	83
Achievement Test No. 3.....	86

UNIT IV - RATIO AND PROPORTION

Pre-test No. 4	89
1 - Relation Between Quantities	90
2 - Estimates and Approximations	94
3 - Estimating Amounts for Tucking and Hems	96
4 - Estimating Fullness for Ruffling and Shirring	101
5 - Estimating Fullness for Smocking	107
6 - Estimating Allowance for Pleating	109
Achievement Test No. 4	113

UNIT V - DECIMALS

Pre-test No. 5	115
1 - Review	117
2 - Interchanging Fractions and Decimals	120
3 - Addition and Subtraction	125
4 - Multiplication	128
5 - Division.....	130
6 - Short Processes	133
7 - Rounding Off Decimals	135
8 - Computations Using Decimals	137
Achievement Test No. 5	139

UNIT VI - PERCENTAGE

Pre-test No. 6	141
1 - Review.....	144
2 - Types of Percentage	147
3 - Commercial Discounts	151
4 - Commissions	154
5 - Interest	156
6 - Determining Selling Prices	160
Achievement Test No. 6	163

UNIT VII - GEOMETRIC FORMS

Pre-test No. 7	165
1 - Definitions of Geometric Forms	166
2 - Angles	170
3 - Geometric Constructions	172
4 - Rectangle and Square	175
5 - Triangle.....	178
6 - Area of a Circle	181
7 - Application of Geometric Forms to Patternmaking and Fashion Accessories	185
Achievement Test No. 7	190

UNIT I - WHOLE NUMBERS

Pre-Test No. 1

OBJECTIVE: To recall the knowledge of whole numbers and to review working with whole numbers.

RELATED INFORMATION:

In this lesson you will have an opportunity to review the fundamental processes of working with whole numbers. After you have successfully completed this lesson, you will be ready to proceed with the mathematics planned especially for needle trades workers.

PROCEDURE:

1. Do all the work on paper furnished by the instructor.
Do not write on this sheet.
 2. Read the problem through very carefully.
 3. See what facts are given.
 4. See what the problem asks you to find.
 5. Do not leave a problem until you are sure the answer is right. This is not a speed test.
 6. Papers will be checked for legibility and neatness as well as accuracy.
- I. Review of signs and terms. Indicate which of the following are true and which are false.
1. The sign \div is the sign of addition. _____
 2. To add means to take away. _____
 3. The sign $\sqrt{\quad}$ is a sign of division. _____
 4. The sign $+$ means equals. _____
 5. The sign \times is the sign of addition. _____
 6. The sign \div is the sign of division. _____

7. Zero means not any, or nothing. _____
8. Plus means that numbers are to be added. _____
9. 12 is 5 less 7. _____
10. The sign = between two things means that they are the same value. _____
11. The sum is the name of the answer in multiplication. _____
12. - is the sign for minus. _____
13. The difference is the name of the answer in subtraction. _____
14. 13 is 4 more than 9. _____
15. What is left when you divide is called the remainder. _____

II. Addition

Add the following mentally. Put only the answers on your paper.

- | | |
|-----------------------------|--------------------------|
| 1. $5 + 8 + 4 + 3 + 2$ | 4. $12 + 3 + 6 + 15 + 7$ |
| 2. $9 + 7 + 5 + 1 + 6$ | 5. $8 + 13 + 6 + 5 + 17$ |
| 3. $10 + 14 + 15 + 11 + 17$ | |

III. Copy the following on your paper and add.

- | | | | | |
|------------|------------|--------------|-------------|---------------|
| 1. | 2. | 3. | 4. | 5. |
| 695 | 465 | 72877 | 1245 | 475891 |
| 499 | 256 | 25734 | 1770 | 698507 |
| 357 | 300 | 86754 | 1335 | 579243 |
| <u>382</u> | 537 | 42576 | 1245 | <u>126759</u> |
| | <u>364</u> | <u>65232</u> | <u>2715</u> | |

IV. Subtract the following mentally and put only the answers on your paper. Do not copy the problem.

- | | | |
|-------------|--------------|-------------|
| 1. $17 - 5$ | 3. $88 - 11$ | 5. $13 - 5$ |
| 2. $12 - 7$ | 4. $19 - 6$ | |

V. Copy the following on your paper and subtract.

1. $\begin{array}{r} 182 \\ - 130 \\ \hline \end{array}$

2. $\begin{array}{r} 1635 \\ - 1336 \\ \hline \end{array}$

3. $\begin{array}{r} 2715 \\ - 1164 \\ \hline \end{array}$

4. $\begin{array}{r} 276 \\ - 208 \\ \hline \end{array}$

5. $\begin{array}{r} 10905 \\ - 9814 \\ \hline \end{array}$

VI. Multiplication

Multiply the following mentally and put only the answers on your paper.

1. 8×6

3. 12×10

5. 5×11

2. 9×7

4. 3×7

VII. Copy the following on your paper and multiply.

1. $\begin{array}{r} 144 \\ \times 307 \\ \hline \end{array}$

2. $\begin{array}{r} 1075 \\ \times 33 \\ \hline \end{array}$

3. $\begin{array}{r} 3750 \\ \times 234 \\ \hline \end{array}$

4. $\begin{array}{r} 6294 \\ \times 176 \\ \hline \end{array}$

5. $\begin{array}{r} 7483 \\ \times 4613 \\ \hline \end{array}$

VIII. Division

Divide the following and put only the answers on your paper.

1. $12 \div 3$

2. $16 \div 4$

3. $32 \div 8$

4. $144 \div 6$

5. $36 \div 6$

IX. Copy the following on your paper and divide.

1. $36 \overline{)180}$

4. $16 \overline{)1920}$

7. $675 \overline{)39825}$

10. $65 \overline{)10595}$

2. $12 \overline{)238}$

5. $86 \overline{)63640}$

8. $32 \overline{)15200}$

3. $8 \overline{)128}$

6. $92 \overline{)349671}$

9. $70 \overline{)61225}$

UNIT I - WHOLE NUMBERS

Reading and Writing Whole Numbers

Lesson No. 1

OBJECTIVE: To understand the importance of being able to read and write numbers correctly.

RELATED INFORMATION:

It is important to know how to read and write numbers correctly in order to avoid errors in the trade work. It is a very common error to reverse the correct sequence of a group of numbers. In recording an order for 176 yards of fabric, a person might incorrectly write 167. Also, in writing a check, a common error is to write \$2030.00 instead of \$2000.30.

PROCEDURE:

- a. In receiving an order by phone or delivered personally, always re-check all figures with the person placing the order after writing the number or amount.
- b. In giving an order by phone always ask the person receiving the order to read back numbers or amounts as a re-check.

ASSIGNMENT:

1. Rewrite the following sentences using numerals where amounts are stated:
 - a. Ten million, forty-three thousand, seven hundred sixty-eight pounds of woolens were received in the U. S. since January first.
 - b. The Claudia Company had a net profit of forty-two thousand, seven hundred and fifty-three dollars for a three-month period.
 - c. Eleven thousand shares in the Claudia Company were issued in nineteen hundred fifty-seven.
 - d. At the end of thirteen weeks, net profits in the Clark Company had declined fifty and one-half percent. Net profit for that period was one hundred forty-four thousand, eight hundred and fifty-eight dollars and twenty-eight cents as compared with two hundred ninety-two thousand, six hundred forty-three dollars.

2. Read the following sentences:

- a. There are 675 dresses cut in style #101.
- b. The sales reported in 1957 by Smith and Co. totaled \$22,083,628 as compared with \$23,763,218 in 1958.
- c. The price for raw silk in 1958 was listed as 174,900 yen per bale.
- d. Easter business declined 23% this year with total sales at \$80,892,808.
- e. An agreement which involved 93,000 workers and 2675 employers was negotiated in the dress industry.

3. Find in today's Women's Wear Daily five sentences in which numbers containing five or more figures appear. Copy the sentences that contain the largest numbers. Be prepared to read these sentences in class.

UNIT I - WHOLE NUMBERS

Computing Materials Cost of Garments

Lesson No. 2

OBJECTIVE: To learn how to compute materials cost of garments.
To recognize the importance of knowing the cost of items used in the manufacture of garments.

RELATED INFORMATION:

Do you think you would have a true picture of the cost of a dress if you just figured the cost of the fabric? It is important to list also and total all trimmings and notions as well as the time spent in making a dress. The cost of all fabric, trimmings, and notions used in a garment is known as the materials cost. The time element is known as the labor cost.

A manufacturer must figure all items included in making each of the different style garments he will be producing. The total cost of fabric, notions, trimmings, labor, and overhead expense determines the selling price of his dresses.

Prices are subject to change; therefore the manufacturer must keep a close check on all items purchased for each garment. This lesson deals only with materials cost.

PROCEDURE:

In figuring the materials cost of a garment, a wholesale manufacturer usually finds it best to thoroughly check with the sample garment so that all materials used will be included in the computation.

Since the fabric is usually the most expensive portion, he checks the price of the fabric used in the garment and the yardage used in the garment. In a wholesale manufacturing firm, this item is usually checked with the piece goods buyer.

He then checks the prices of all trimmings used on the garment. In a wholesale manufacturing firm, there is usually a trimmings buyer who handles all trimmings and notions and novelties other than piece goods.

ASSIGNMENT:

For this lesson you will refer to the following price list:

Spun linen		68¢ per yard
Cotton Broadcloth		56¢ per yard
Dotted Swiss		45¢ per yard
Zippers	14" O. T. (open top)	14¢ each
	12" Pl. (placket)	11¢ each
	7" Sk. Pl. (skirt placket)	10¢ each
Buttons	Pearl S. S. /36 (self-shank, line 36)	6¢ each
	Pearl S. S. /30 (self-shank, line 30)	5¢ each
Pads	Snap-in	28¢ a pair
Monograms		\$1.25 each
Belts	$\frac{3}{4}$ " Washable	35¢ each
	1" Washable	40¢ each
Piqué Cording		4¢ per yard
Tucking		\$1.10 per yard

1. Compute the materials cost of one dress cut in each of the following styles:

a. Style #803 (sunback)

- 3 yards of spun linen
- 1 14" O. T. zipper
- 1 $\frac{3}{4}$ " belt
- 1 pair of snap-in pads
- 3 yards of piqué cord

b. Style #804 (sunback)

- 3 yards of cotton broadcloth
- 1 14" O. T. zipper
- 1 $\frac{3}{4}$ " belt
- 5 buttons S. S. /30
- 1 pair of snap-in pads

c. Style #805 (shirtwaist)

- 4 yards of spun linen
- 1 12" Pl. zipper
- 6 buttons S. S. /36
- 1 1" belt
- 1 monogram

d. Style #806 (sunback)
4 yards of cotton broadcloth
1 14" O. T. zipper
1 yard of tucking
1 $\frac{3}{4}$ " belt
1 pair of snap-in pads

e. Style #807 (two-piece dress)
4 yards of dotted swiss
1 7" Sk. Pl. zipper
4 buttons S. S. /30
1 $\frac{3}{4}$ " belt
 $\frac{1}{2}$ yard of tucking

f. Style #808 (sunback)
3 yards of dotted swiss
1 14" O. T. zipper
1 1" belt
1 pair of snap-in pads
2 buttons S. S. /36

2. A manufacturer made 132 dresses in style #806. How much was the total cost of materials used?
3. If 14" O. T. zippers cost 14¢ each, what would be the cost of 132 zippers used in style #806?
4. A manufacturer received two bolts of dotted swiss, each measuring 66 yards, to be used for style #807. How many dresses were cut in this style?
5. A bill for belts amounting to \$96.60 was received. The delivery included styles #803 and #804. The records showed that 146 dresses were made in style #803. How many dresses were made in style #804?
6. A total of 167 monograms was received for style #805. What was the total cost of monograms at \$1.25 each?
7. If snap-in pads cost 28¢ a pair, what would be the cost of the 189 pairs used in style #808?

UNIT I - WHOLE NUMBERS

Entering and Totaling Customers' Orders

Lesson No. 3

OBJECTIVE: To learn the method of entering and totaling customers' orders.

RELATED INFORMATION:

Before a manufacturer decides on the quantity of dresses, suits, or coats to be made, he must know the number of garments ordered. To do this he must keep a clear, simple record of all garments ordered by customers. Every garment ordered must be recorded in some way.

Let us say that you are a manufacturer who cut 100 dresses of style #803. In checking, you find that only 30 of the 100 dresses were actually sold to customers. This is definitely not a "running number". You can see the loss you would suffer if each of the 70 unsold dresses cost you \$10.00 each to manufacture.

Since these records will be handled daily throughout a complete manufacturing season, it is most important that they be entered on sturdy paper. One of the most common forms for entering customers' orders is made of oak tag. It is commonly known as the style card. The following information should be recorded on these style cards:

- a. The style number. Each style card records a single style.
- b. Short description of each style to easily identify it.
- c. Date of customer's order.
- d. Name of customer.
- e. Date order is due to be shipped.
- f. Sizes and colors ordered.

The following example of an order placed by a customer has been entered on a typical style card reprinted in this lesson.

Jones & Co. of Norfolk, Virginia placed the following order on June 4th, 1958, to be shipped within two weeks:

Style #808

Blue: 1 size 12, 3 size 16 (written as 1/12, 3/16)
Red: 2 size 14, 5 size 18 (written as 2/14, 5/18)
Pink: 6 size 10, 2 size 20 (written as 6/10, 2/20)

Notched Curves

DESCRIPTION Shankbelle

STYLE NO. 808

Date	NAME	Date Due	COLOR					COLOR					COLOR					COLOR																		
			10	12	14	16	18	20	10	12	14	16	18	20	10	12	14	16	18	20	10	12	14	16	18	20										
1958	James & Co.	6/18	1																																	

PROCEDURE:

Upon receipt of customers' orders, enter the necessary information on style cards. Remember that there is a style card for each style number.

ASSIGNMENT:

Enter on the proper style cards the following orders received during the month of June. All orders were placed with the understanding that shipment would be made within three weeks.

1. The following orders were received on June 2, 1958:

Becks Shop of Charleston, S. C. ordered

Style #803	Blue	2/12	2/16	1/20		
	Pink	2/10	3/12	3/14		
	Aqua	2/10	2/12	2/16		

Snead & Co. of Salem, Mass. ordered

Style #804	Navy	1/10	2/12	3/14	3/16	1/18
	Brown	2/14	2/16	1/18		
Style #803	Blue	1/10	2/12	2/14	1/16	

2. The following on June 4th:

Margarets of Miami, Fla.

Style #803	White	3/10	2/12	2/14	2/16		
	Maize	2/10	2/12	2/14	2/16		
Style #804	Beige	1/10	2/12	2/14	1/16		
	Black	1/10	2/12	3/14	3/16	2/18	1/20

Mrs. Satterwath of Richmond, Ind.

Style #804	Brown	1/10	2/12	4/14	5/16	3/18	1/20
	Navy	2/12	3/14	3/16	2/18	1/20	
	Black	1/10	2/12	2/14	2/16	1/18	
Style #806	Navy	1/10	2/12	2/14	2/16	1/18	
	Brown	1/12	2/14	3/16	1/18		
	Beige	1/10	3/12	3/14	2/16		

Cunninghams of Palm Springs, Calif.

Style #803	Blue	2/10	2/12	4/14	4/16	4/18	1/20
	White	3/10	4/12	6/14	6/16	1/18	
	Aqua	2/10	2/12	4/14	4/16		
Style #805	Maize	1/10	2/14	1/18			
	Aqua	1/12	1/14	1/16	1/18		

Gay-Nell of Wilmington, Delaware

UNIT I - WHOLE NUMBERS

Estimating Quantities of Materials Needed

Lesson No. 4

OBJECTIVE: To learn how to estimate yardage and trimmings needed.
To practice cross or horizontal addition.

RELATED INFORMATION:

After the record is made on style cards of all garments ordered by customers, it is important to estimate the fabric yardage and total trimmings needed to manufacture these garments.

Working with the style cards, as used in Lesson 3, the total quantity ordered is transferred to a "cutting ticket". The cutting ticket is usually a small paper form totaling the number of garments to be cut in each size and color of each style. The following information must appear on the cutting ticket:

- a. Date total is taken after all orders are entered on style card.
- b. Style number.
- c. Colors ordered.
- d. Sizes ordered.
- e. Total quantity of each color.

The horizontal total of each color is then multiplied by the average yardage per dress to obtain the fabric yardage estimate. All other items needed to complete the garments are estimated in the same way. Workers in needle trades must be able to add horizontally as quickly as vertically.

On page 16 is a sample of a cutting ticket used in the trade.

PROCEDURE:

- a. Total the number of garments ordered in sizes and colors on style cards.
- b. Transfer style numbers, colors, and sizes ordered to a cutting ticket.
- c. On the cutting ticket total horizontally the number of garments in each color.
- d. Total number of garments in each size. The totals of (c) and (d) must be the same.
- e. Estimate fabric needed in each color, using yardages listed in Lesson No. 2.
- f. Estimate trimmings needed for each style as listed in Lesson No. 2.

CUTTING TICKET

Date cut June 25, 19--

Date June 20, 19--

Style 714

Cutter _____

COLOR	10	12	14	16	18	20	34	36	38	40	42	44	46	TOTAL
White	2	7	15	21	19	12								76
Blue	3	8	21	25	21	14								92
Pink	2	7	14	19	17	6								65
Maize	1	5	6	12	10	4								<u>38</u>
														271 dresses
	8	27	56	77	67	36								

ASSIGNMENT:

1. Add without writing in a column:
 - a. $100 + 75 + 28 + 32 + 67 + 59$
 - b. $18 + 628 + 187 + 14 + 195 + 65$
 - c. $107 + 223 + 16 + 104 + 87 + 365$
 - d. $100 + 200 + 400$
 - e. $27 + 99 + 36 + 14$

2. Add both ways and check:
 - a. $5 + 14 + 8 + 20$
 - b. $3 + 4 + 7 + 8$
 - c. $10 + 15 + 16 + 14$
 - d. $9 + 8 + 20 + 14$
 - e. $11 + 31 + 70 + 18 + 64$
 - f. $94 + 19 + 17 + 18 + 25$
 - g. $24 + 32 + 83 + 8 + 13$
 - h. $7 + 16 + 64 + 9 + 12$
 - i. $5 + 6 + 7 + 20 + 22$

3. Total quantity of garments ordered in each style as shown on style cards used in Lesson No. 3.
4. Transfer the quantity of garments ordered to cutting tickets.
5. Total horizontally the number of garments in each color.
6. Total the number of garments in each style.
7. Check cross addition.
8. Which style would you consider the best "running number"?
9. Estimate yardage needed for each style using figures in problem 1 of Lesson No. 2.
10. Estimate total trimmings needed for all styles, using the figures in problem 1 of Lesson No. 2.
11. How many buttons must be ordered for 435 garments, if each garment requires 12 buttons for the front and 2 for the pockets?
12. A dress requires 13 buttonholes. How many buttonholes will be made on 379 dresses?

UNIT I - WHOLE NUMBERS

Daily Package-Receipt Records

Lesson No. 5

OBJECTIVE: To learn how to keep daily package-receipt records.

RELATED INFORMATION:

In order to keep an accurate record of all merchandise received, one of the first steps necessary is to receipt all bills that accompany packages. It is important that you pay only for what you receive. Packages can be misplaced and you may still be charged for them. Everything that is delivered to a manufacturing firm must be recorded in some way.

A common practice among businesses, whether they manufacture ready-to-wear or sell ready-to-wear, is to keep a daily package-receipt book. This receipt book can be divided into any number of columns. We will use a seven-column receipt book as shown on the following page. The following information should be recorded:

- a. The date the package is received.
- b. A consecutive receipt number.
- c. The supplier's name.
- d. The supplier's bill number, which is on the bill received with the package.
- e. The number of packages received.
- f. The items received.
- g. The amount of the bill.

PROCEDURE:

Upon receipt of a package, no matter what size, record it in the package-receipt book.

Check the quantity received with the quantity charged for on the bill.

As a further check, the receipt number that identifies the package is then written on the face of the bill. For example, the first entry on the package receipt book page is a record of a package received on June 2nd from Belbro Brothers. The package-receipt book number is #101. This number is written on the supplier's bill which is #1644.

Claudia Designs, Inc.

PACKAGE RECEIPT BOOK

DATE	PACKAGE RECEIPT NO.	SUPPLIER'S NAME	BILL NO.	NO. OF PACKAGES	ITEM	AMOUNT OF BILL
June 2	101	Belbro Bros.	1644	1	zippers	1 07
2	102	Amari Textiles	14007	1	spun	735 70
3	103	Perfect Pad Co.	50404	1	Pads	3 36
5	104	Belbro Bros.	1660	2	zippers	1 51

13	121	Art Monogram Co.	4692	1	Monogram	25 00
16	122	Perfect Pad Co.	57654	1	Pads	15 96
16	123	Amari Textile	14047	2	spun	57 00
16	124	Perfect Pad Co.	57691	1	Pads	14 32

ASSIGNMENT:

1. Why is it necessary to keep a record of every package received?
2. If, in checking receipt #114, you find you were charged with 100 belts but you received 102 belts, what would you do?
3. What is the supplier's bill number for receipt #103?
4. What type of fabric was received from Amari Textile on receipt #123?
5. Using lined paper and referring to the sample, make up a page for the package-receipt book of Claudia Designs, Inc., and make these additional entries:
 - a. On June 16th one bolt of piqué was received from Amari Textile Company. The bill number was 14061; the total cost was \$28.56.
 - b. On June 17th, Belbro Brothers delivered 1 box of zippers. The bill number was 1755; the cost was \$7.19.
 - c. On June 17th a package of belts amounting to \$19.98 was received from Max Felsom Company. The bill number was 5699.
 - d. Belbro Brothers delivered one package of zippers on June 18th. The bill number was 1763; the total cost was \$9.97.
 - e. Amari Textile Company was called to rush the delivery of spun rayon, which was needed for some special dresses. On the 18th, they shipped at once two cartons amounting to \$480.72; the bill number was 14096.
 - f. A great amount of boxes is needed in order to ship dresses in quantity. Goth Corrugated Container Co. delivered 5 bundles of boxes on June 21st. The bill number was 03536; the total cost was \$9.20.
 - g. Elmer Button Company delivered one package of buttons amounting to \$9.38, bill #6255, on June 21st.
 - h. Bill #4655 amounting to \$7.62 was received from Ellen's Novelty Company with a package of number twelve cordage, on the 22nd of June.

- i. Tucking, which was needed to complete one of the most popular styles, was received on June 23rd from Aimax Pleating Company, bill #7044, amounting to \$20.00.
 - j. There was a shortage of boxes and Goth Container Company was called to make a special delivery of three bundles of boxes. The bill was #03596 amounted to \$13.00. It was received on June 25th.
 - k. Some customers requested personal monograms. Art Monogram Company made a delivery of one package of monograms on June 28th. Bill #4701 amounted to \$22.50.
 - l. One package of belts was received from Fashion Belt Co. on June 28th. Bill #5911 amounted to \$27.00.
 - m. One package of pads was delivered by Perfect Pad Company on June 29th. Bill #57703 amounted to \$9.00.
 - n. Hirsch Company made a delivery of one package of zippers on June 29th. The bill amounted to \$7.65; bill #13125.
 - o. An additional package of belts was received from Fashion Belt Company amounting to \$6.48; bill #6083.
 - p. Every manufacturing firm uses printed invoices or bills. A shipment of invoice envelopes was received on June 30th from Long Paper Company amounting to \$3.00; bill #17673.
6. Referring to problem 5:
- a. What entry do you have recorded for receipt #133?
 - b. How many entries have you made where the item entered was zippers? List the firms who delivered zippers.
 - c. List the companies from which fabric was received.
 - d. What items would you consider as trimmings used on dresses listed in the entries you have made?
 - e. What receipt number have you given to the delivery made by Fashion Belt Company on June 28th?
7. What would you do if you received a package without a bill?

UNIT I - WHOLE NUMBERS

Checking Daily Bills

Lesson No. 6

OBJECTIVE: To understand the importance of checking daily bills and monthly statements.

RELATED INFORMATION:

What would you think of a dressmaker who kept a package-receipt book, but neglected to check the quantities charged on the bill with what she actually received? What would you think of a person who neglected to check the amount received with the amount she had ordered? You would probably agree that this is a poor way to conduct a business.

What would you do if you had ordered only 45 belts and received 60 belts? Remember you would be charged for these additional 15 belts on the bill. You must remember that in the needle trades there are changes every season. A dressmaker making one dress or a manufacturer making hundreds of dresses cannot afford to keep anything extra in stock unless it is a staple item.

At the end of each month, each supplier sends out a statement for the money due him. You, of course, must be able to check the amount of each bill you have received with the amount recorded on the statement of each supplier. A sample of a statement received from Belbro Brothers is shown below.

STATEMENT,

FOLIO _____

June 30 1960

M Belbro Bros.

338 W. 37 St.

To Claudia Dress Co.

TERMS: 2 % 152 W 36th St, N.Y.C.

June	2	Bill # 1644	1 07		
	5	# 1660	1 51		
	9	# 1683	10 67		
	10	# 1685	32 88		
	10	# 1694	12 20		
	17	# 1755	7 19		
	18	# 1763	9 97		
		<i>Total</i>			75 49

PROCEDURE:

Only one person in the firm receipts the bills.

After a bill is receipted, the package and bill are sent to the department which ordered the particular item. The following procedure is followed in each separate department.

- a. Check the quantity.
- b. Check the price on the bill with the price agreed at the time the order was placed.
- c. Check the total amount of the bill for accuracy.
- d. At the end of the month check the supplier's statements with the bills received.

ASSIGNMENT:

Note: Refer to the package-receipt entries in Lesson 5 to solve the following problems.

1. Why should the price of each item be checked before extending the total of the bill?
2. Perfect Pad Company delivered 24 pairs of pads at 18¢ a pair, bill #50404. Check the amount of the bill.
3. Ellen's Novelty Company delivered 436 yards of #12 cordage at 3¢ a yard. Check bill #4326.
4. A total of 582 belts were received from Fashion Belt Company. At 18¢ a belt, what is the total of the payment due?
5. Amari Textile Company delivered 60 yards of Birdseye piqué at 95¢ a yard. What is the total of the bill?
6. Total the bills received from Art Monogram Company as listed in the package-receipt book during the month of June. If the price of a single monogram is \$1.25, how many monograms were received?
7. Referring to the sample shown in this lesson, make up statements of bills for each supplier as they would be presented at the end of the month. Total each statement.
8. Total all the bills received during the month of June.

9. Are the totals of 7 and 8 the same amount? They should be.
10. If the #12 cordage received from Ellen's Novelty Company is 3¢ a yard, how many yards were received with bill #4655?
11. If Perfect Pad Company delivered 76 pairs of pads at 12¢ a pair, what is the price per pair of the remaining 38 pairs of pads received with bill #57654?
12. Bill #5608, received from Fashion Belt, was for 119 belts at 18¢ each. What is the total of the bill?

UNIT I - WHOLE NUMBERS

Computing Parcel Post Charges

Lesson No. 7

OBJECTIVE: To understand the method of computing parcel post charges for shipping merchandise.

RELATED INFORMATION:

Goods may be shipped by parcel post, railway express, airmail, air express, air freight, and truck. In the garment industry, many goods are shipped by parcel post.

Why do you suppose many kinds of goods are shipped by mail and not by freight? Shipping by mail affords a quick, convenient method of sending small packages and mail reaches more places than any other means of transportation. The special advantages of mail are the low transportation charges and the rapid delivery of goods.

Parcel post is considered fourth-class mail. The cost of sending a package by parcel post depends on the weight of the package and the distance it is to be sent. Packages to be sent by parcel post must weigh not less than 1 pound and not over 70 pounds. In determining weight for finding shipping charges, a fraction of a pound is counted as a full pound. Thus 18 ounces is counted as 2 pounds and $3\frac{1}{2}$ pounds as 4 pounds.

For determining distances in calculating postage, the country is divided into eight circular zones, with the post office from which the parcel is sent as the center of the circles. In order to find what zone a city is located in, we need to know only how far away it is. Any city within 50 miles of your post office is in Zone 1. A city between 50 and 150 miles from your post office is in Zone 2, and so on. Parcel post zone guides, published by the U. S. Post Office Department, are available for each post office unit.

On the next page you will find a copy of the Fourth Class Rates (Parcel Post Zone Rates) as of 1960.

If a package of merchandise weighs less than 16 ounces, it goes by third class mail, for which the rate is uniform regardless of the distance. The rate (1960) is 3¢ for the first two ounces and $1\frac{1}{2}$ ¢ for each additional ounce or fraction of an ounce.

Fourth-Class (Parcel Post) Zone Rates

Weight, 1 pound and not exceeding—	Zones							
	Local	1 and 2 Up to 150 miles	3 150 to 300 miles	4 300 to 600 miles	5 600 to 1000 miles	6 1000 to 1400 miles	7 1400 to 1800 miles	8 Over 1800 miles
2 pounds.....	\$0. 24	\$0. 33	\$0. 35	\$0. 39	\$0. 45	\$0. 51	\$0. 58	\$0. 64

Most packages sent by the garment industry are insured. In order to obtain payment for loss of, rifling of, or damage to a package mailed, it must be insured. The insurance fees follow:

<u>Liability</u>	<u>Fee</u>
\$ 0.01 to \$10.	\$0.10
10.01 to 50.	0.20
50.01 to 100.	0.30
100.01 to 200.	0.40

Liability for insured mail is limited to \$200.

There are times when a manufacturer wishes to send packages by parcel post and have the merchandise paid for at the time of delivery. The cost of the article and the cost of the postage are collected from the addressee when the article is delivered. This is collected-on-delivery service, which is usually called C. O. D. service. The amount collected is returned to the manufacturer by a postal money order. The C. O. D. fees follow:

FEEES (IN ADDITION TO POSTAGE)

Liability (and COD collection to \$200)	COD Fees	
	Registered (See 163.6)	Unregistered
\$0.01 to \$5	\$0.80	\$0.30
\$5.01 to \$10	.80	.40
\$10.01 to \$25	1.10	.60
\$25.01 to \$50	1.10	.70
\$50.01 to \$100	1.20	.80
\$100.01 to \$150	1.40	.90
\$150.01 to \$200	1.40	1.00
\$200.01 to \$300	1.50	Liability for unregistered COD mail is limited to \$200; for registered COD \$1,000, same as for other registered mail. Collection for COD mail, unregistered or registered, is limited to \$200.
\$300.01 to \$400	1.60	
\$400.01 to \$500	1.70	
\$500.01 to \$600	1.80	
\$600.01 to \$700	1.90	
\$700.01 to \$800	2.00	
\$800.01 to \$1,000	2.10	

PROCEDURE:

- A. Determine to what zone the package is being sent.
- B. Weigh the package; count any fraction of a pound as a full pound.
- C. Refer to rate chart in this lesson to figure parcel post charges.
- D. Figure additional charges, such as C. C. D., insurance, etc.

Example: Jones & Co., of Woodbridge, N. J. is sending a package which contains 2 dresses, weighing $3\frac{1}{2}$ pounds, to A. Smith, Newark, N. J. The package is valued at \$31.50. Find the cost of sending this package by insured parcel post.

Since Newark is within the first zone, you would check under zone 1, and in line with the four pound weight you would find a 43¢ charge for parcel post. The insurance fee is 20¢. Therefore, the total postal charges for this package amount to 63¢.

ASSIGNMENT:

- 1. Find the cost of sending each of these packages into the zone indicated:

<u>Weight</u>	<u>Zone</u>	<u>Weight</u>	<u>Zone</u>
a. 6 lbs.	3	e. 11 lbs.	8
b. 15 lbs.	6	f. 25 lbs.	7
c. 9 lbs.	5	g. $3\frac{1}{2}$ lbs.	1
d. 5 lbs. 9 oz.	Local	h. 13 lbs. 2 oz.	4

- 2. If a person is sending packages from New York City, in what zone is each of these cities? (The mileage in parentheses is the distance from New York.)

a. Atlanta, Ga. (876 miles)	i. Columbus, Ohio (544 miles)
b. Denver, Colo. (1768 miles)	j. Washington, D. C. (224 miles)
c. Seattle, Wash. (2932 miles)	k. Wichita, Kansas (1428 miles)
d. Santa Fe, N. Mex. (1980 miles)	l. Boston, Mass. (217 miles)
e. Baltimore, Md. (186 miles)	m. Cincinnati, Ohio (639 miles)
i. Richmond, Va. (330 miles)	n. Philadelphia, Pa. (88 miles)
g. Chicago, Ill. (814 miles)	o. Raleigh, N. C. (497 miles)
h. Miami, Fla. (1336 miles)	p. Akron, Ohio (474 miles)

3. Find the cost of sending each of these insured packages from Woodbridge, N.J. to the cities listed. The figures in parentheses are the zone numbers.

	<u>Weight</u>	<u>City</u>	<u>Liability</u>
a.	15 lbs.	Denver, Colo. (7)	\$24.50
b.	19 lbs.	San Francisco, Cal. (8)	9.75
c.	35 lbs.	New Orleans, La. (6)	55.50
d.	27½ lbs.	Havre, Mont. (8)	36.50
e.	12½ lbs.	Detroit, Mich. (4)	105.50
f.	9 ounces	El Paso, Texas (8)	97.50
g.	2 lbs. 3 czs.	Duluth, Minn. (5)	76.50 C. O. D.
h.	11 ounces	New York, N. Y. (1)	49.50
i.	5 lbs.	Richmond, Va. (3)	14.75 C. O. D.
j.	12 lbs.	Madison, Wis. (5)	50.00
k.	15 lbs.	Cleveland, Ohio (4)	50.50
l.	13½ lbs.	Baltimore, Md. (2)	75.00
m.	25 lbs.	Hartford, Conn. (2)	49.75

4. The shipping department of Woodbridge Garment Company records the daily shipments made by parcel post on a "manifest." Using a manifest similar to the one on the next page, enter the shipments appearing in problem 3 and figure the total postage.

UNIT I - WHOLE NUMBERS

Short Cuts in Arithmetic

Lesson No. 8

OBJECTIVE: To gain speed in figuring and checking problems.
To develop the skill of calculating problems mentally.

RELATED INFORMATION:

It is important to be quick in figuring problems in the trade, and the ability to use short cuts is an asset.

PROCEDURE:

A. To multiply by:

1. 10 Add a zero to the multiplicand, as: $788 \times 10 = 7880$

2. 5 Add a zero and then divide by 2:

$$788 \times 5 = \frac{7880}{2} = 3940$$

3. 25 Add 2 zeros to the multiplicand and divide by 4:

$$788 \times 25 = \frac{78800}{4} = 19700$$

4. 11 Add a zero to the multiplicand and add the original number:

$$788 \times 11 = \begin{array}{r} 7880 \\ + 788 \\ \hline 8668 \end{array}$$

5. 9 Add a zero to the multiplicand and subtract the original number:

$$788 \times 9 = \begin{array}{r} 7880 \\ - 788 \\ \hline 7092 \end{array}$$

B. Checking addition problems

Perhaps the only way that most of you know how to check an addition problem is by re-adding the problem in the opposite direction. You are now going to learn a new way of checking an addition problem. It is called the "casting-out of nines."

Example:

4897	4	8	9	7	=	19	=	10	=	1		
2348	2	3	4	8	=	8				8		
9572	9	5	7	2	=					5		
3644	3	6	4	4	=					8		
<u>7856</u>	<u>7</u>	<u>8</u>	<u>5</u>	<u>6</u>	=	26			=	<u>8</u>		
28317	2	8	3	1	7	=	12	=	<u>3</u>	30	=	<u>3</u>

Before explaining this method, is there anyone in the class who can see and explain how the above problem was checked?

The casting-out of nines can save a great deal of time in checking an addition problem, but first you must have an answer to check.

In the casting-out of nines, instead of re-adding in the opposite direction, you add the digits across (horizontally), casting out nines and zeros until you end with a single digit.

Example:

$$4 + 8 + 9 + 7 = 19 = 1 + 9 = 10 = 1$$

$$\begin{array}{c} 9 \\ (2 + 3 + 4) + 8 \end{array} = 8$$

$$\begin{array}{c} 9 \\ 9 + 5 + (7 + 2) \end{array} = 5$$

Can you work out the remaining rows?

These single digits are then added vertically and the answer is broken down to a single digit. If your original addition was correct, the single digit in your answer will be the same as that in the last step of your check. In the problem above, $3 = 3$.

ASSIGNMENT:

Exercise I. Multiply the following using short cuts:

1. 343×11

9. 84×5

2. 1788×5

10. 308×9

3. 770×5

11. 6775×5

4. 732×9

12. 208×10

5. 102×11

13. 44×9

6. 298×5

14. 676×11

7. 722×11

15. 5567×10

8. 307×9

Exercise II. Which of the following problems have the correct answers? Do not work the problem over. Check them by casting-out nines method.

1.

$$\begin{array}{r} 43763 \\ 98143 \\ 76214 \\ \underline{13420} \\ 231540 \end{array}$$

2.

$$\begin{array}{r} 1430 \\ 9572 \\ 6341 \\ \underline{256} \\ 17599 \end{array}$$

3.

$$\begin{array}{r} 47 \\ 23 \\ 95 \\ 41 \\ 62 \\ \underline{58} \\ 306 \end{array}$$

4.

$$\begin{array}{r} 46 \\ 95 \\ 32 \\ 14 \\ 87 \\ \underline{73} \\ 348 \end{array}$$

5.

$$\begin{array}{r} 143 \\ 256 \\ 904 \\ 82 \\ \underline{176} \\ 1571 \end{array}$$

6.

$$\begin{array}{r} 76 \\ 93 \\ 46 \\ 81 \\ 43 \\ \underline{19} \\ 358 \end{array}$$

UNIT II - FRACTIONS

Pre-Test No. 2

In this test there are some important facts you should know by this time. See if you can go through this test without an error.

EXERCISE I. Add the following:

- | | | | | |
|--|--|--|---|--|
| 1. $\begin{array}{r} 9\frac{1}{8} \\ 7\frac{3}{4} \\ 3\frac{1}{2} \\ \hline \end{array}$ | 2. $\begin{array}{r} 1\frac{3}{4} \\ 2\frac{1}{2} \\ 6\frac{3}{4} \\ \hline \end{array}$ | 3. $\begin{array}{r} 4\frac{3}{8} \\ 3\frac{7}{8} \\ 13\frac{3}{8} \\ \hline \end{array}$ | 4. $\begin{array}{r} 17\frac{5}{8} \\ 8\frac{1}{2} \\ 3\frac{1}{2} \\ \hline \end{array}$ | 5. $\begin{array}{r} 3\frac{1}{4} \\ 1\frac{1}{2} \\ 47\frac{7}{12} \\ \hline \end{array}$ |
| | 6. $\begin{array}{r} 4\frac{3}{8} \\ 3\frac{1}{4} \\ 3\frac{1}{2} \\ \hline \end{array}$ | 7. $\begin{array}{r} 12\frac{1}{2} \\ 15\frac{1}{4} \\ 8\frac{5}{8} \\ \hline \end{array}$ | 8. $\begin{array}{r} 6\frac{5}{8} \\ 6\frac{1}{4} \\ 6\frac{7}{8} \\ \hline \end{array}$ | |

EXERCISE II. Subtract the following:

- | | | | | |
|--|--|--|---|--|
| 1. $\begin{array}{r} 2\frac{1}{2} \\ - 1\frac{1}{4} \\ \hline \end{array}$ | 2. $\begin{array}{r} 7\frac{3}{4} \\ - 3\frac{7}{8} \\ \hline \end{array}$ | 3. $\begin{array}{r} 6\frac{3}{4} \\ - 1\frac{1}{2} \\ \hline \end{array}$ | 4. $\begin{array}{r} 12\frac{7}{8} \\ - 3\frac{1}{2} \\ \hline \end{array}$ | 5. $\begin{array}{r} 8\frac{1}{2} \\ - 1\frac{3}{4} \\ \hline \end{array}$ |
| | 6. $\begin{array}{r} 4\frac{5}{8} \\ - 2\frac{3}{4} \\ \hline \end{array}$ | 7. $\begin{array}{r} 3\frac{1}{4} \\ - 1\frac{5}{8} \\ \hline \end{array}$ | | |

EXERCISE III: Multiply the following:

- | | | | | |
|--|--|---|--|--|
| 1. $\begin{array}{r} 15 \\ \underline{1\frac{1}{3}} \end{array}$ | 2. $\begin{array}{r} 14 \\ \underline{2\frac{1}{8}} \end{array}$ | 3. $\begin{array}{r} 72 \\ \underline{\frac{1}{4}} \end{array}$ | 4. $\begin{array}{r} 16 \\ \underline{3\frac{1}{2}} \end{array}$ | 5. $\begin{array}{r} 50 \\ \underline{7\frac{1}{6}} \end{array}$ |
|--|--|---|--|--|

EXERCISE IV: Divide the following:

1. $1\frac{1}{2} \div \frac{1}{8}$

2. $3\frac{1}{4} \div \frac{1}{4}$

3. $3\frac{1}{2} \div \frac{1}{16}$

4. $22\frac{3}{4} \div 13$

5. $17\frac{1}{2} \div 7$

6. $\$18.25 \div 36\frac{1}{2}$

7. $2\frac{1}{2} \div \frac{3}{4}$

8. $74\frac{1}{4} \div \frac{3}{8}$

9. $288 \div \frac{1}{12}$

10. $40 \div \frac{1}{6}$

UNIT II - FRACTIONS

Review of Terms

Lesson No. 1

OBJECTIVE: To review terms used in the study of fractions.

RELATED INFORMATION:

Often we talk about something that is part of something else, as a part of a yard, part of a gross, part of a dozen, part of an inch, or part of a pound. Fractions, which we will cover in this lesson, are parts of a whole thing which has been divided or broken into equal parts. Fractions are constantly being used by the needle trades worker in the problems he meets daily.

You have learned that if you divide anything into two equal parts, one of the parts is called one-half ($\frac{1}{2}$). And you remember that if you divide anything into four equal parts, one of the parts is called one-fourth ($\frac{1}{4}$). Parts like $\frac{1}{2}$ or $\frac{1}{4}$ are called fractions or fractional parts.

In this lesson the terms most commonly used will be reviewed.

PROCEDURE:

The following facts are important in the understanding of fractional terms. A fraction, as stated above, is part of a whole thing which has been divided or broken into equal parts.

The fraction is composed of two parts:

- a. The number below the line in a fraction shows how many parts in the whole unit. It is called the denominator.
- b. The number above the line in a fraction shows how many parts have been taken or used. It is called the numerator.

You can see that in reading fractions, you must read the numerator first and then the denominator. In the fraction $\frac{3}{8}$ - a whole unit or "1" has been divided into eight parts and three parts have been taken.

$\frac{3}{8}$ is the numerator
 $\frac{3}{8}$ is the denominator

ASSIGNMENT:

1. What do the following mean:
 - a. $\frac{3}{4}$
 - b. $\frac{3}{16}$
 - c. $\frac{7}{8}$
 - d. $\frac{3}{10}$
 - e. $\frac{5}{6}$
2. Write the following fractions:
 - a. four-fifths
 - b. twenty thirty-sixths
 - c. three-sixteenths
 - d. twelve thirty-sixths
 - e. seven-fourteenths
 - f. fourteen-thirtieths
3. What does numerator mean and where is it found in the fraction?
4. What does the number below the line mean?
5. Into how many equal parts is circle A divided? Circle B?
What is each one of these parts called?

A

B

6.
 - a. There are _____ cents in a quarter.
 - b. What part of a quarter is ten cents?
 - c. Write this number as a fraction.
7. The following materials were used to make six different garments.
Write as a fraction, the amount of material used in making one garment:

	<u>6 garments</u>	<u>1 garment</u>	<u>Fraction</u>
a.	24 yards of chambray	3 yards	
b.	36 buttons	4 buttons	
c.	6 zippers	1 zipper	
d.	3 spools of thread	$\frac{1}{2}$ spool	

8. a. How many months are there in one year?
b. What part of a year is 4 months?
c. What part of a year is 2 months?
d. What part of a year is 1 month?
9. Which is more, $\frac{1}{4}$ or $\frac{1}{2}$?
10. a. How many fifths are there in twenty-five? b. in a quarter?
c. What part is five of twenty-five? d. of a quarter?
11. Write the fractions of a dollar for the following amounts:
a. 25¢ b. 30¢ c. 15¢ d. 70¢ e. 60¢
12. Give the value in cents of the following fractions of a dollar:
a. $\frac{1}{10}$ b. $\frac{1}{2}$ c. $\frac{6}{8}$ d. $\frac{7}{10}$ e. $\frac{1}{5}$

OBJECTIVE: To recall the different types of fractions.

RELATED INFORMATION:

- a. A proper fraction is a fraction whose numerator is smaller than its denominator and whose value is less than a unit. Thus $\frac{7}{12}$ and $\frac{2}{3}$ are proper fractions.
- b. An improper fraction is one whose numerator is equal to or greater than its denominator, and whose value is therefore one complete unit or more than one unit. Thus $\frac{8}{8}$ or $\frac{16}{4}$ are improper fractions.
- c. A mixed number is a number expressed by a whole number and a fraction combined. $1\frac{1}{4}$ is a mixed number.

We may change any improper fraction to a mixed number and any mixed number to an improper fraction.

PROCEDURE:

To change improper fractions to mixed numbers or whole units:

Example: $\frac{16}{4}$ - an improper fraction

To change an improper fraction to a mixed number or whole unit, divide the numerator (16) by the denominator (4), which will give you an answer of 4 complete units.

To change mixed numbers to improper fractions:

Multiply the whole number by the denominator and to the result add the numerator. Write the sum over the denominator of the original fraction.

Example: Suppose you have the mixed number $3\frac{1}{2}$. To change it to an improper fraction, multiply the whole number (3) by the denominator and to the result (6) add the numerator (1) which equals 7. Write the sum (7) over the denominator of the original fraction (2). The improper fraction would be $\frac{7}{2}$.

ASSIGNMENT:

1. Classify the following according to the three types of fractions:

a. $\frac{13}{12}$

e. $\frac{35}{50}$

i. $\frac{13}{8}$

b. $8\frac{1}{4}$

f. $74\frac{1}{4}$

j. $\frac{1}{47}$

c. $\frac{15}{16}$

g. $\frac{7}{12}$

k. $\frac{16}{5}$

d. $53\frac{5}{8}$

h. $\frac{3}{10}$

l. $3\frac{1}{2}$

2. Change the mixed numbers in problem 1 to improper fractions.

3. Change the improper fractions in problem 1 to mixed numbers.

4. The following figures indicate materials in inventory at the end of the month. (1) Give the type of fraction for each one. (2) Change the mixed numbers to improper fractions.

		<u>Type</u>	<u>Change</u>
a.	Spun Linen	$45\frac{7}{8}$ yds.	
b.	Broadcloth	$25\frac{3}{8}$ yds.	
c.	Dotted Swiss	$34\frac{3}{4}$ yds.	
d.	14" O. T. Zippers	$1\frac{1}{12}$ gr.	
e.	12" Pl. Zippers	$\frac{5}{12}$ gr.	
f.	7" Pl. Zippers	$\frac{1}{6}$ gr.	
g.	S. S./30 Pearl Buttons	$6\frac{5}{6}$ gr.	
h.	S. S. /36 Pearl Buttons	$1\frac{3}{4}$ gr.	
i.	Pins	$2\frac{1}{2}$ lbs.	
j.	Thread	$\frac{3}{12}$ doz.	

5. Change the following improper fractions to whole numbers or to mixed numbers:

a. $\frac{13}{3}$

d. $\frac{33}{8}$

g. $\frac{32}{8}$

j. $\frac{12}{12}$

b. $\frac{28}{5}$

e. $\frac{14}{4}$

h. $\frac{13}{5}$

k. $\frac{72}{7}$

c. $\frac{21}{9}$

f. $\frac{36}{6}$

i. $\frac{17}{2}$

l. $\frac{65}{11}$

6. Change to improper fractions:

a. $\frac{1}{58}$

c. $12\frac{3}{8}$

e. $3\frac{2}{5}$

g. $6\frac{1}{3}$

b. $5\frac{1}{6}$

d. $9\frac{3}{9}$

f. $11\frac{5}{36}$

h. $17\frac{5}{18}$

UNIT II - FRACTIONS

Reduction of Fractions

Lesson No. 3

OBJECTIVE: To develop skill and accuracy in the reduction of fractions.

RELATED INFORMATION:

Changing the form of a fraction without changing its value is called reducing the fraction. Thus, when we change $\frac{2}{4}$ to $\frac{1}{2}$ we are reducing the fraction without changing its value. It is important that you be able to reduce and handle fractions, since this work is basic to a great part of the needle trades.

Proper fractions like $\frac{1}{16}$, $\frac{3}{16}$, $\frac{5}{16}$, and $\frac{7}{8}$ are said to be in their lowest terms. That is, both the numerator and the denominator cannot be further reduced by dividing each of them by the same number. When in this condition they are also referred to as being in their simplest form.

Such fractions as $\frac{2}{4}$, $\frac{12}{16}$, $\frac{18}{64}$ are not in their lowest terms nor in their simplest form because each may be further reduced by dividing both terms (numerator and denominator) by a number which will be exactly contained in them. This exact divisor is called a factor, and because it is common to both terms it is known as a common factor of these terms.

Both the numerator and the denominator of $\frac{2}{4}$ may be divided by 2. This number 2, therefore, is a common factor of these terms. The division reduces both terms of the fraction by changing the numerator to 1 and the denominator to 2, making the fraction read $\frac{1}{2}$ instead of $\frac{2}{4}$. This process is known as factoring.

Although the form of this fraction has been changed by this reduction, its value has not changed. To illustrate this further: $\frac{2}{4}$ of an inch equals $\frac{1}{2}$ of an inch; $\frac{2}{4}$ of 1 yard equals $\frac{1}{2}$ of a yard. In like manner $\frac{12}{16}$, and $\frac{18}{64}$ when reduced to lowest terms become $\frac{3}{4}$ and $\frac{9}{32}$ respectively. Here again the form of the fraction has been changed but the value has not changed. A fraction should always be expressed in its simplest form. That is, the the numerator and the denominator should be reduced as much as possible by dividing both terms by common factors as explained above.

PROCEDURE:

- A. To reduce a proper fraction, the numerator and the denominator are divided by a number which will go into each evenly.

Example:

$$\frac{4}{8} \div \frac{4}{4} = \frac{1}{2}$$

- B. To reduce an improper fraction to a whole number or to a mixed number divide the numerator by the denominator.

Example:

$$\frac{3}{2} \quad 1\frac{1}{2}$$

- C. To change a mixed number to an improper fraction, multiply the whole number by the denominator of the fraction, and then add to this amount the numerator of the fractional part of the mixed number. Write the resulting number over the same denominator.

Example:

$$5\frac{3}{8} \quad 5 \times 8 = 40 + 3 = \frac{43}{8}$$

ASSIGNMENT:

1. Reduce each of the following fractions to its lowest terms:

a. $\frac{12}{15}$	e. $\frac{24}{36}$	i. $\frac{6}{36}$	m. $\frac{35}{50}$
b. $\frac{15}{21}$	f. $\frac{27}{45}$	j. $\frac{12}{36}$	n. $\frac{12}{144}$
c. $\frac{14}{28}$	g. $\frac{9}{36}$	k. $\frac{25}{35}$	o. $\frac{67}{72}$
d. $\frac{18}{24}$	h. $\frac{60}{144}$	l. $\frac{10}{16}$	p. $\frac{16}{32}$

2. Change to improper fractions:

a. $6\frac{1}{2}$ b. $9\frac{1}{3}$ c. $3\frac{11}{12}$ d. $12\frac{3}{4}$ e. $3\frac{7}{16}$

3. Write as a whole number or a mixed number:

a. $\frac{9}{8}$ b. $\frac{24}{4}$ c. $\frac{36}{8}$ d. $\frac{13}{13}$ e. $\frac{31}{12}$

4. Change each fraction to the denominator named:

a. $\frac{3}{8}$ to $\overline{16}$	e. $\frac{7}{12}$ to $\overline{144}$	i. $\frac{12}{72}$ to $\overline{144}$
b. $\frac{11}{16}$ to $\overline{32}$	f. $\frac{12}{16}$ to $\overline{8}$	j. $\frac{1}{4}$ to $\overline{12}$
c. $\frac{2}{3}$ to $\overline{12}$	g. $\frac{8}{32}$ to $\overline{4}$	k. $\frac{5}{8}$ to $\overline{32}$
d. $\frac{3}{4}$ to $\overline{16}$	h. $\frac{1}{8}$ to $\overline{72}$	l. $\frac{3}{9}$ to $\overline{36}$

5. a. $\frac{2}{8}$ of a yard equals _____ of a yard
- b. $\frac{32}{4}$ quarts of oil equals _____ qts. of oil
- c. $\frac{12}{144}$ gross buttons equals _____ gr. buttons
- d. $\frac{6}{16}$ lbs. of pins equals _____ lbs. of pins
- e. $\frac{20}{16}$ of an inch equals _____ inches
- f. $\frac{6}{8}$ of an inch equals _____ of an inch
- g. $\frac{13}{8}$ of an inch equals _____ inches
- h. $\frac{31}{8}$ yards equals _____ yards

UNIT II - FRACTIONS

Addition and Subtraction of Fractions

Lesson No. 4

OBJECTIVE: To review work in addition and subtraction of fractions.
To learn how these processes are used in the trade.

RELATED INFORMATION:

Fractions cannot be added or subtracted unless they have the same denominator. When a group of fractions have the same denominator, they are said to have a common denominator. When we have a group of fractions that do not have a common denominator, we must obtain one before we can add or subtract them.

One of the basic rules of mathematics is "only like things or parts of like things may be added or subtracted." Thus, $\frac{1}{2}$ yard cannot be added to $\frac{1}{3}$ pound. In adding or subtracting parts of like things, as $\frac{1}{8}$ of a yard, $\frac{1}{6}$ of a yard, and $\frac{1}{4}$ of a yard, not only must the things (yards in this case) be alike, but the parts of the thing must be expressed in fractions having the same denominator.

Here we find that 24 can be used as a common denominator.

Example: $\frac{1}{8}$ yard = $\frac{3}{24}$

$$\frac{1}{6} \text{ yard} = \frac{4}{24}$$

$$\frac{1}{4} \text{ yard} = \frac{6}{24}$$

PROCEDURE:

If you can't readily find the least (smallest) common denominator by examination, the following method can be used.

To find the least common denominator in the following problem:

$$\frac{3}{8} + \frac{5}{6} + \frac{3}{4} + \frac{7}{10}$$

2/8	6	4	10
2/4	3	2	5
2/2	3	1	5
1	3	1	5

- a. Set the denominators down in a horizontal row as shown.
- b. Divide by the smallest factor common to two or more of them. This process is continued until no two of the remaining numbers can be divided by a common factor. Since 3 and 5 have no common factor, they remain the same.
- c. After all possible divisions have been completed, multiply all the numbers along the outside of the box.
 Ex: $2 \times 2 = 4 \times 2 = 8 \times 1 = 8 \times 3 = 24 \times 1 = 24 \times 5 = 120$.
 120 is the least common denominator.

$$\frac{3}{8} = \frac{45}{120}$$

$$\frac{5}{6} = \frac{100}{120}$$

$$\frac{3}{4} = \frac{90}{120}$$

$$\frac{7}{10} = \frac{84}{120}$$

$$\begin{array}{r} \hline 319 \\ 120 \overline{) 319} \\ \underline{240} \\ 79 \\ \underline{60} \\ 19 \\ \underline{12} \\ 7 \\ \underline{6} \\ 1 \end{array}$$

- d. The next step in adding these fractions is to change them to equivalent fractions having 120 as their new denominator.
 The numerator 45 is obtained by dividing 8 into 120 (= 15); $15 \times 3 = 45$.
 Proceeding in the same manner, we obtain 100 as numerator for the 2nd number, 90 for the 3rd, and 84 for the 4th. We now have the simple problem of adding all the new numerators and placing this sum (319) over 120 to obtain $\frac{319}{120}$. Since this is an improper fraction, we must divide 319 by 120 to get a mixed number. $(2\frac{79}{120})$

To add mixed numbers, we must find the least common denominator of the fractional portions of the mixed numbers. Thus, to add $12\frac{5}{6}$, $16\frac{7}{12}$, and $6\frac{2}{3}$, we must first find the least common denominator of

$$\frac{5}{6}, \frac{7}{12} \text{ and } \frac{2}{3}.$$

A close examination shows that this is 12, so these fractions are changed to fractions having 12 as a denominator.

$$\frac{5}{6} = \frac{10}{12} \quad 12\frac{10}{12}$$

$$\frac{7}{12} = \frac{7}{12} \quad 16\frac{7}{12}$$

$$\frac{2}{3} = \frac{8}{12}$$

$$\frac{6\frac{8}{12}}{34\frac{25}{12}}$$

$$12\frac{25}{25}$$

$$\frac{34\frac{1}{12}}{36\frac{1}{12}}$$

$$\frac{36\frac{1}{12}}$$

Adding the fractions first, the total is $\frac{25}{12}$, which is an improper fraction. Simplify this to $2\frac{1}{12}$. This is then added to 34, making a total of $36\frac{1}{12}$.

Subtraction of fractions, like addition, also requires a least common denominator.

Example: Subtract $\frac{3}{8}$ from $\frac{7}{8}$.

$$\begin{array}{r} \frac{7}{8} \\ - \frac{3}{8} \\ \hline \frac{4}{8} = \frac{1}{2} \end{array}$$

Example: Subtract $1\frac{3}{4}$ from $2\frac{7}{8}$

$$\begin{array}{r} 2\frac{7}{8} = 2\frac{7}{8} \\ - 1\frac{3}{4} = 1\frac{6}{8} \\ \hline 1\frac{1}{8} \end{array}$$

ASSIGNMENT:

- Find the least common denominator for the following fractions and add:

a. $\frac{1}{2} + \frac{3}{4} + \frac{5}{8}$

b. $\frac{9}{16} + \frac{3}{8} + \frac{5}{12}$

c. $\frac{7}{12} + \frac{1}{4} + \frac{3}{8}$

d. $\frac{3}{5} + \frac{9}{12} + \frac{17}{30}$

2. Sample pieces of fabric measuring $3\frac{5}{8}$, $4\frac{3}{4}$ and $5\frac{1}{2}$ yards were used to make dresses requiring $3\frac{1}{2}$, $4\frac{3}{4}$, and $4\frac{1}{4}$ yards. How much fabric was left?
3. Add the following:
- | | | | | |
|---------------------------------|-----------------------------------|---------------------------------|-----------------------------------|----------------------------------|
| a. $\frac{3}{8}$ | b. $\frac{7}{36}$ | c. $\frac{3}{4}$ | d. $\frac{2}{3}$ | e. $\frac{2}{5}$ |
| $\frac{5}{8}$ | $\frac{9}{36}$ | $\frac{1}{2}$ | $\frac{5}{6}$ | $\frac{1}{2}$ |
| <u>$\frac{1}{8}$</u> | <u>$\frac{11}{36}$</u> | <u>$\frac{3}{8}$</u> | <u>$\frac{11}{12}$</u> | <u>$\frac{7}{10}$</u> |
4. The following quantities of materials and notions were used in making garments ordered by customers. Find the total of each:
- a. Linen: $65\frac{7}{8}$, $57\frac{3}{8}$, $35\frac{1}{4}$, $30\frac{1}{2}$ yds.
- b. Buttons: $7\frac{5}{6}$, $10\frac{3}{12}$, $5\frac{1}{6}$, $11\frac{2}{3}$ gross
- c. Pins: $3\frac{1}{8}$, $2\frac{1}{2}$, $\frac{3}{4}$, $4\frac{3}{16}$ pounds
5. There were $15\frac{3}{12}$ gross of buttons in inventory at the beginning of the month. During the month, $6\frac{1}{6}$ gross were used. What was left?
6. In joining two pieces of material together, a $\frac{7}{8}$ inch seam was taken. In pinking the seam, $\frac{1}{4}$ inch was trimmed. How much seam remained?
7. The fabric inventory showed that there were $155\frac{3}{8}$ yards of linen on hand. The inventory at the end of the following month showed a balance on hand of $69\frac{3}{4}$ yards. How much linen had been used?
8. The following bolts of broadcloth were used up in making a quantity of blouses: $40\frac{3}{4}$, $35\frac{7}{8}$, $31\frac{1}{2}$, $19\frac{2}{3}$, and $30\frac{1}{6}$ yards. What was the total fabric used?
9. A dressmaker needs 5 pieces of cloth measuring $4\frac{2}{3}$, $7\frac{1}{2}$, $2\frac{5}{8}$, $4\frac{3}{4}$, and $3\frac{7}{8}$ yards. How many yards of cloth should she buy?
10. From a bolt containing $30\frac{5}{8}$ yards, a clerk sold $3\frac{3}{4}$ yards. How many yards were left on the bolt?

UNIT II - FRACTIONS

Multiplication of Fractions

Lesson No. 5

OBJECTIVES: To learn how the multiplication of fractions is used in the trade.

To develop skill in multiplication of fractions.

RELATED INFORMATION:

You will find many problems in needle trades that require a quick and accurate knowledge of multiplying fractions. The multiplication of fractions may be somewhat shortened by the process of cancellation. This is accomplished by striking out, or canceling, factors that are common to both numerator and denominator. How this is done is illustrated in the following problem:

$$\text{Multiply: } \frac{3}{4} \times \frac{7}{12} \times \frac{8}{21}$$

Working out the cancellation, the solution becomes:

$$\begin{array}{ccccccc} & & & & 1 & & \\ & & & & & & \\ 1 & & 1 & & 2 & & \\ \cancel{3} & \times & \cancel{7} & \times & \cancel{8} & = & \frac{1}{6} \\ 4 & & 12 & & 21 & & \\ 1 & & 6 & & 3 & & \\ & & & & 1 & & \end{array}$$

Cancellation is really a reduction to lowest terms before multiplying takes place. This reduction is accomplished by dividing both terms of the fraction by factors that are common to each. The method of cancellation as used in the above problem is explained as follows:

Seven is a factor of 7 in the numerator and 21 in the denominator. These are "cancelled" by drawing a line through each number and placing above the numerator and below the denominator the figures which represent the number of times this factor 7 is contained in 21. Cancel the rest of the numbers in the same way.

To obtain the result of this cancellation, all uncanceled terms remaining in the numerator are multiplied together for a new numerator, and all uncanceled terms remaining in the denominator are multiplied together for a new denominator.

There are four types of operations involved in multiplying fractions. They are:

- a. Multiplying a fraction by a fraction.
- b. Multiplying a fraction by a whole number.
- c. Multiplying a mixed number by a whole number.
- d. Multiplying a mixed number by a mixed number.

Solution:

3 yds. (width of the skirt) \times $1\frac{1}{2}$ (allowance for fullness) = $4\frac{1}{2}$ yds.
(length of ruffle needed)

$4\frac{1}{2}$ yds. \div $1\frac{1}{6}$ yds. (material is 42" wide) = $3\frac{6}{7}$ strips of material
needed for ruffle.

4 strips ($3\frac{6}{7} = 4$ Any fraction of a width must be counted as a
whole width)

$\frac{4}{24}$ width of ruffle
of material needed for the ruffle (or $\frac{2}{3}$ yard).

OR

$$\begin{array}{r} 4 \\ \times 3\frac{1}{2} \\ \hline 12 \\ 14 \end{array} \quad \begin{array}{l} \frac{1}{2} \text{ of } 4 = 2 \\ 3 \times 4 = \frac{12}{14} \end{array}$$

Type D: Multiplying a mixed number by a mixed number.

Example: $4\frac{1}{2} \times 8\frac{1}{4}$

1. Change the mixed numbers to improper fractions. $\frac{9}{2} \times \frac{33}{4}$
2. Cancel where possible (none in this case).
3. Multiply numerators. $9 \times 33 = 297$
4. Multiply denominators. $2 \times 4 = 8$
5. Change to whole number, mixed number, or proper fraction.

$$\frac{8/297}{37\frac{1}{8}}$$

ASSIGNMENT:

1. Work the following problems. Be on the alert for cancellations. Reduce answers to lowest terms.

a. $\frac{1}{2} \times \frac{3}{8}$

b. $\frac{3}{16} \times \frac{1}{2} \times \frac{1}{4}$

c. $\frac{5}{16} \times \frac{2}{5}$

d. $\frac{5}{6} \times \frac{7}{12} \times \frac{9}{36}$

e. $\frac{2}{3} \times \frac{7}{12}$

f. $5 \times \frac{3}{12}$

g. $10 \times \frac{5}{6}$

h. $9 \times \frac{1}{8}$

i. $2\frac{5}{8} \times 7$

j. $5\frac{1}{2} \times 8$

k. $14 \times \frac{2}{3}$

l. $7 \times \frac{5}{8}$

m. $12\frac{1}{2} \times 8\frac{1}{4}$

n. $5\frac{1}{2} \times 6\frac{3}{4}$

o. $2\frac{1}{12} \times 1\frac{7}{8}$

p. $\frac{5}{32} \times 3$

q. $16 \times \frac{5}{12}$

r. $9 \times 3\frac{1}{8}$

2. A dressmaker has an order to make 4 dresses; $3\frac{1}{2}$ yards are needed to make one dress. How many yards will she need?
3. If it takes $1\frac{1}{4}$ hours to make a blouse, how long will it take to make 14 blouses?
4. Each scallop on the neckline of a blouse measures $1\frac{1}{8}$ inches. If there are 14 scallops, what is the measurement of the neckline?
5. One skirt requires $2\frac{3}{8}$ yards. How much yardage will a dozen skirts need?

6. Compute the following:

- | | |
|---|-------------------------|
| a. $\frac{1}{2}$ yd. x 3 | _____ yds. of fabric |
| b. $\frac{1}{4}$ yard x 8 | _____ yds. of bias tape |
| c. 16 tucks x $\frac{1}{2}$ inch | _____ inches |
| d. $4\frac{1}{2}$ hours x 50 employees | _____ working hours |
| e. $72 \times \frac{1}{4}$ oz. balls of cording | _____ ozs. |
| f. $4\frac{5}{12} \times 8$ | _____ gross |
| g. $9 \times 6\frac{1}{2}$ yards | _____ yards |

7. Figure the fabric yardage needed, using the following quantities and yardage per garment:

	<u>Style #</u>	<u>Yds. Per Garment</u>	<u>Quantity to be Made</u>
a.	101	$2\frac{1}{16}$	79
b.	105	$3\frac{1}{2}$	132
c.	107	$4\frac{1}{3}$	111
d.	110	$3\frac{5}{8}$	51
e.	111	$1\frac{3}{8}$	60

UNIT II - FRACTIONS

Division of Fractions

Lesson No. 6

OBJECTIVE: To review methods for the division of fractions as used in the trade.

RELATED INFORMATION:

During the day the needle trades worker often finds it necessary to divide fractional measurements of materials, divisions of time, numbers of articles, or amounts of money.

PROCEDURE:

There are as many types of operations in division as in multiplication of fractions. In division, one basic rule applies: invert the divisor and proceed as in multiplication.

Example: $\frac{1}{2} \div 3 = \frac{1}{2} \div \frac{3}{1} = \frac{1}{2} \times \frac{1}{3} = \frac{1}{6}$

Invert the terms of the divisor (turn the fraction upside down) and then proceed as in multiplying fractions. In this method, cancellation may be used.

To divide a mixed number by a whole number or vice versa, change both numbers to improper fractions before proceeding to invert the divisor and multiply.

ASSIGNMENT:

1. Work out the following problems:

a. $\frac{1}{8} \div 2$

b. $\frac{3}{10} \div 5$

c. $3 \div \frac{1}{2}$

d. $12 \div \frac{1}{3}$

e. $\frac{9}{16} \div 3$

f. $3\frac{3}{4} \div 5$

g. $276\frac{5}{6} \div 8$

h. $2\frac{1}{3} \div 6$

i. $328\frac{3}{8} \div 9$

j. $328\frac{3}{4} \div 5$

2. Three-quarters of a yard divided by two equals _____
3. How many $\frac{3}{4}$ units can be obtained from a $2\frac{1}{4}$ unit?
4. Nine buttons are placed in a 12-inch space. The first and last buttons are at the ends of the cloth. Give the distance apart.
5. Give the size scallop that will result if $17\frac{1}{2}$ inches is divided into 7 scallops.
6. Thirteen hems were made in $22\frac{3}{4}$ hours. Give the average time for making one hem.
7. Work out the following problems:
- | | |
|--------------------------------|-------------------------------|
| a. 12 yds. $\div \frac{1}{2}$ | f. $\frac{1}{2}$ yd. $\div 4$ |
| b. 16 in. $\div \frac{1}{2}$ | g. $\frac{3}{4}$ yd. $\div 2$ |
| c. 8 in. $\div \frac{1}{4}$ | h. 20 in. $\div \frac{1}{5}$ |
| d. $\frac{1}{4}$ doz. $\div 3$ | i. 9 yds. $\div \frac{1}{3}$ |
| e. $\frac{1}{2}$ doz. $\div 6$ | j. 12 yds. $\div \frac{1}{3}$ |
8. The finished length of a coat dress is $43\frac{3}{4}$ inches from the neck to hem. Plan the spacing for 14 buttons. (The first button is at the neckline and the last space is equal to the others.)
9. In trimming a gathered skirt with rickrack, a dressmaker decided to use 8 rows of evenly spaced rickrack, leaving a space above and below the rickrack. The finished length was 27 inches. What would the spacing be between the rows of rickrack?
10. How many quarter-yard pieces of ribbon can be cut from:
- | | | |
|------------------------|------------------------|-------------------------|
| a. $5\frac{3}{4}$ yd.? | b. $7\frac{1}{4}$ yd.? | c. $10\frac{1}{4}$ yd.? |
|------------------------|------------------------|-------------------------|
11. How many $\frac{1}{2}$ yard banners can be made from:
- | | | |
|-------------------------|-------------|--------------------------|
| a. $6\frac{1}{2}$ yds.? | b. 15 yds.? | c. $11\frac{1}{2}$ yds.? |
|-------------------------|-------------|--------------------------|
12. One-third of a dozen is how many? Are you multiplying or dividing? By what?

UNIT III - MEASUREMENT

Pre-Test No. 3

1. Change $103\frac{1}{2}$ " , 81" , 88" , $22\frac{1}{2}$ " , and 12" to yards. Add the total yardage.
2. How many yards are needed for 6 dresses, each requiring 3 yards and 14"?
3. 18" is what part of a yard?
4. List the following fractions of an inch--largest first.
 $\frac{7}{8}$, $\frac{3}{16}$, $\frac{3}{4}$, $\frac{2}{8}$, $\frac{1}{2}$, $\frac{15}{16}$
5. If a dozen buttons cost 42¢, what is the cost of one button?
6. A piece of lace insertion at 3¢ a yard costs \$12.60. How many yards were in the piece?
7. What is the cost of 6 dozen pearl buttons @ \$2.70 a gross?
8. At 52¢ a dozen spools, what is the cost of $2\frac{1}{2}$ gross spools of thread?
9. Find the cost of $10\frac{1}{2}$ pounds of dressmaker pins @ 30¢ a quarter pound.
10. How many pairs of pads in a shipment of 376 pads?
11. How many quarts of oil are there in $3\frac{1}{2}$ gallons?
12. If 24" of material costs 36¢, what would $1\frac{1}{2}$ yards cost?
13. True and False:

- | | | | |
|----|-----------------------------|-------|----------------------|
| a. | 6 yards | = | 206 inches |
| b. | $4\frac{1}{2}$ inches | = | $\frac{1}{8}$ yard |
| c. | $\frac{17}{8}$ yards | = | $2\frac{1}{8}$ yards |
| d. | 4 gills | = | 1 gallon |
| e. | 8 pints | = | 4 quarts |
| f. | 40 ounces | = | $2\frac{1}{2}$ lbs. |
| g. | $\frac{1}{4}$ hour | = | 20 minutes |
| h. | ¢ | means | dollars |
| i. | 53 quarters | = | \$13.00 |
| j. | $\frac{5}{8} - \frac{2}{4}$ | = | $\frac{3}{4}$ |

UNIT III - MEASUREMENTS

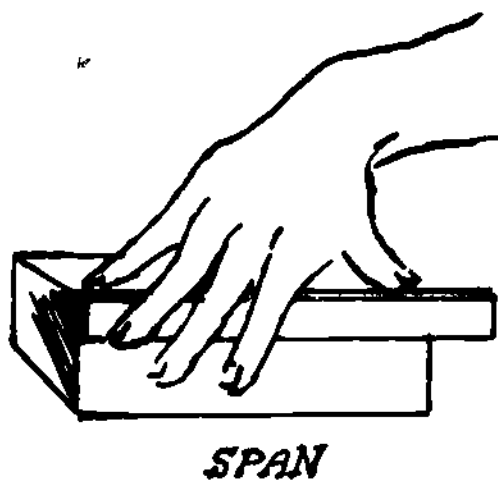

Review

Lesson No. 1

OBJECTIVE: To recall the terms necessary to the study of measurement as applied to the work in needle trades.

RELATED INFORMATION:

To measure any object means to apply some unit of measure to it. Without a system of measurement it would be impossible to carry on any kind of a business. In the garment industry, fabric, ribbons, and some notions are purchased by the yard; buttons by the gross; pins by the pound; and cleaning fluid by the gallon. It is important, therefore, to know the measures common to the needle trades and to understand how to apply them.

The idea of numbers originally started with counting on the fingers. So measurement was first connected with parts of the body. Thus we had the foot, the span, the finger, and the joints on the finger all used as units of measure. The yard was taken as the distance from the tip of the nose to the outstretched fingers.

Because each town had its own standards of measure, it made a great deal of difference whether one bought a yard of cloth in Venice, in Genoa, or in London. It didn't take long to find out that one man's rule of measuring "a yard" from the tip of his nose to outstretched fingers was not the same as another's. Because of this, steps were taken to adopt standards of measure.

YARD

Any length could be used as a unit in measuring lengths. But lengths cannot be compared unless the units in measuring them are the same. Today nearly every nation has fixed standard units which everyone must use. At the Bureau of Standards in Washington, D. C. , you can see the bar on which one yard is marked. The distance between two marks on the bar (at a certain temperature) is defined to be one yard.

Being able to measure length, time, weight, and other quantities helps us to make ourselves understood clearly by other people. It also cuts down on waste of time and materials.

PROCEDURE:

In using measuring tools, there are a few simple rules to be mastered.

1. To measure directly with a ruler, place the end of the ruler flush with one end of the object to be measured. Glance along the ruler to the other end of the object. Read the marking on the ruler at this point as the measurement.
2. If the end of the ruler is badly worn, it would be better to place the one-inch mark of the ruler flush with the end of the object to be measured. But then you must remember to subtract that inch from your final marking.

The following tools will be needed in this lesson:

6-inch or 12-inch ruler, yardstick, tape measure.

ASSIGNMENT:

1. Measure the width of the schoolroom using your foot as a unit of measure. Then measure it with a yardstick and compare the two measurements.
2. The first joint of the thumb is sometimes taken as one inch. Measure and see if this is so in your case. If it isn't, see if you have a joint on one of your fingers which is one inch. Use this joint to measure the length of a page in this book. Then measure the page with a ruler.
3. Measure the length of lines a, b, c.
 - a. _____
 - b. _____
 - c. _____
4. Another interesting unit of measure based on a part of the body was the digit. The digit was the size across the middle finger at the center. The digit was about $\frac{3}{4}$ inch. The width of four fingers from the waistline has been used many times for the placement of a pocket. Measure the width of your four fingers and compare this with the measurement of the distance between the waistline and the pocket in any skirt pattern or ready-made skirt available.
5. What measurements are necessary to consider if you wish to make a dress?

UNIT III - MEASUREMENT

Use of a Gauge

Lesson No. 2

OBJECTIVES: To learn how to make and use a gauge.

To learn the importance of accuracy when working with parts of an inch.

RELATED INFORMATION:

How often have you needed a small measuring tool to help you turn up a hem of a dress accurately when altering it? You probably found that a piece of cardboard cut to the measurement of the width of the hem being altered proved to be a simple and accurate tool. There are many instances when you will find a small, accurate measuring tool an aid in your shop work. The simplest and most dependable device is a gauge, which you can make for any special measurement you need. In addition to being used for measuring hems, gauges are used for measuring spaces between tucks, buttons, snaps, and pleats, and for any other operation that requires a small measuring tool. Today you will find a variety of plastic gauges on the market for these purposes.

In making your own gauge, it is important to understand the parts of an inch. The inch is mankind's oldest unit of length.

As you have learned in Unit II, we use the term fraction to mean a part of something or one or more of the equal parts of a whole thing. To do well in any job in the needle trades, you must know how to compute with fractions, especially in measurements.

In the following drawings you can see equal parts of an inch. Note that although the three rulers are divided differently, they are all three inches long.

EIGHTHS - $1/8$ INCH

QUARTERS - $1/4$ INCH

SIXTEENTHS - $1/16$ INCH

1. Into how many parts is the inch in the top drawing divided?
Each part is what part of an inch? Write this fraction.
2. Into how many parts is the inch in the center drawing divided?
Each part is what part of an inch? Write this fraction.
3. Into how many parts is the inch in the bottom drawing divided?
Each part is what part of an inch? Write this fraction.

In checking the drawings, you can see that a, b, c, are all the same measurement even though they are $\frac{1}{8}$, $\frac{1}{4}$, and $\frac{1}{16}$.

In needle trades, the ruler or tape measure ordinarily used to measure lengths is divided into inches, and each inch is divided into either 2, 4, 8, 16, or 32 equal parts, depending upon the nature of the work that is to be measured. In making a gauge, we will work with $\frac{1}{2}$, $\frac{1}{4}$, and $\frac{1}{8}$, since the work you will be doing seldom calls for measurement more accurate than $\frac{1}{16}$ of an inch.

PROCEDURE:

Cut a piece of cardboard to measure 3" by 1 1/2". Measure in 1/4" from each of the long sides and draw a line parallel to each edge. Mark your measurement along this line, using the measurements from the sample gauge shown here.

Cut in on a straight line to each mark, then clip on a slant line to notch. The distance from the corner to the straight line of the notch is the measure used.

The gauge must be very accurate, or the gauge is of no value to you.

Two Common Uses of the Gauge in Needle Trades

Measuring Gauge for Tucks

Slip-Stitched Hem

ASSIGNMENT:

1. Following the directions on the previous page, make a cardboard gauge as shown with the following measurements indicated on the gauge:
 $\frac{1}{4}$ " , $\frac{5}{8}$ " , $\frac{3}{4}$ " , 1" , and 2".
2. Make a gauge which you would use in making a hem, marking 2" and 3".
3. A dressmaker said, "Place a pin at the $\frac{3}{4}$ mark of a length of cloth."
 - a. Into how many parts was the dressmaker thinking the length was divided?
 - b. How many of these parts was she thinking about?
4. Would you expect the sum of $\frac{3}{4}$ and $\frac{1}{2}$ to be more or less than 1"? Explain.
5. Joan added $\frac{3}{4}$ and $\frac{1}{2}$ and got $\frac{4}{6}$ or $\frac{2}{3}$. Explain why $\frac{2}{3}$ is the wrong answer. What mistake did Joan make?
6. Would you expect the sum of $\frac{5}{8}$ and $\frac{1}{4}$ to be closest to $\frac{1}{2}$, 1, or $1\frac{1}{2}$? Explain.
7. Suppose you were asked to make a hem on a garment $\frac{1}{2}$ " less than the pattern was marked. The pattern marking was $\frac{15}{16}$ ". Would you expect the finished hem to be closest to $\frac{1}{4}$ " , $\frac{1}{2}$ " , $\frac{3}{4}$ " , or 1"? Explain.
8. If you were asked to trim $\frac{1}{16}$ " away from a seam that was $\frac{3}{8}$ " , would you expect the remaining seam to be more than $\frac{1}{4}$ " but less than $\frac{3}{8}$ " ? Explain.
9. Bring illustrations of specific uses of gauges in the trade.

UNIT III - MEASUREMENT

Linear Measure Equivalents

Lesson No. 3

OBJECTIVE: To learn the linear measure as applied to needle trades.

RELATED INFORMATION;

Linear or "long" measure is used daily in the needle trades field. Fabrics, ribbons, braids, cable cord, and many other notions cannot be handled unless you have a working knowledge of the linear table which follows:

12 inches (in. or ")	equals	1 foot (ft. or ')
3 feet	equals	1 yard (yd.)
36 inches	equals	1 yard

PROCEDURE:

List the tools that are used for measuring lengths in the needle trades room.

Measure the lengths of ribbon, fabric, zippers, rickrack, and cable cord given to you by the instructor.

Most figuring in the needle trades can be done mentally once you have a clearer understanding of the relationship of the units to each other. Since one foot is one-third of a yard, 12 inches, which equal 1 foot, is also one-third of a yard. You can also see that 36 inches, which is 3 feet, is also one yard.

ASSIGNMENT:

1. What part of a foot is one inch?
2. What is meant by a foot in terms of inches?
3. What part of a yard is one foot?
4. What is meant by a yard in terms of inches?
5. What is a yardstick?
6. What is a tape measure? How long is your tape measure?
7. The number of yards in 72" equals _____?
8. The number of inches in 3 yards equals _____.
9. The number of yards in 180 inches equals _____.
10. The number of inches in 7 yards equals _____.

UNIT III - MEASUREMENT

Use of a Yardstick

Lesson No. 4

OBJECTIVE: To learn the fractional parts of the yardstick as used in the needle trades.

RELATED INFORMATION:

The most common tool used in the measuring of fabric and notions is the yardstick. It is divided into halves, quarters, and eighths. A garment worker seldom uses the unit foot in working with fabrics or yard goods. Perhaps the only time the term is used is in measuring work area in a factory. All fabrics received from "piece goods houses" (manufacturers or distributors of fabrics) are usually marked in eighths. Almost all measurements are spoken of in inches and yards.

Linear measure equivalents are used constantly in the trade, and all needle trades workers should know the fractional equivalents of yards in inches. The student should memorize the following parts of the yard:

36" equals 1 yard

$4\frac{1}{2}$ " equals $\frac{1}{8}$ yard

9" equals $\frac{1}{4}$ yard

$13\frac{1}{2}$ " equals $\frac{3}{8}$ yard

18" equals $\frac{1}{2}$ yard

$22\frac{1}{2}$ " equals $\frac{5}{8}$ yard

27" equals $\frac{3}{4}$ yard

$31\frac{1}{2}$ " equals $\frac{7}{8}$ yard

PROCEDURE:

Examine carefully a yardstick from the needle trades shop. You will notice that one side is marked in fractions of a yard and the other side is marked in inches divided into eighths. Using cord or ribbon, measure the following lengths:

$\frac{7}{8}$ yd., $\frac{1}{2}$ yd., $1\frac{3}{8}$ yd., $\frac{1}{8}$ yd.

Practice Mental Drill

1. In order to save time in the adding or subtracting of fractions of a yard, the equivalent fractional form should be arrived at mentally. Practice orally the following:

a.	$\frac{1}{2}$ yd.	=	$\frac{1}{4}$ yd.	g.	$\frac{1}{2}$ in.	=	$\frac{1}{16}$ in.
b.	$\frac{1}{4}$ yd.	=	$\frac{1}{8}$ yd.	h.	$\frac{3}{4}$ in.	=	$\frac{3}{16}$ in.
c.	$\frac{1}{2}$ yd.	=	$\frac{1}{8}$ yd.	i.	$\frac{1}{8}$ in.	=	$\frac{1}{16}$ in.
d.	$\frac{3}{4}$ yd.	=	$\frac{3}{8}$ yd.	j.	$\frac{3}{8}$ in.	=	$\frac{3}{16}$ in.
e.	$\frac{6}{8}$ in.	=	$\frac{3}{4}$ in.	k.	$\frac{5}{8}$ in.	=	$\frac{5}{16}$ in.
f.	$\frac{4}{8}$ in.	=	$\frac{1}{2}$ in.	l.	$\frac{7}{8}$ in.	=	$\frac{7}{16}$ in.

2. Give the number of inches in each of the following:

a.	$\frac{1}{4}$ yds.	e.	$\frac{3}{4}$ yard
b.	$\frac{1}{2}$ yard	f.	$3\frac{1}{2}$ yards
c.	$\frac{7}{8}$ yard	g.	$1\frac{3}{8}$ yards
d.	$\frac{1}{8}$ yard	h.	$2\frac{2}{4}$ yards

ASSIGNMENT:

1. If you purchase the following lengths of fabric, you should know the parts of a yard that they represent:

a.	$22\frac{1}{2}$ "	_____	g.	9"	_____
b.	18"	_____	h.	$13\frac{1}{2}$ "	_____
c.	27"	_____	i.	45"	_____
d.	$31\frac{1}{2}$ "	_____	j.	$40\frac{1}{2}$ "	_____
e.	36"	_____	k.	54"	_____
f.	$4\frac{1}{2}$ "	_____	l.	63"	_____

2. What is the number of yards and inches in 110 inches of gros-grain ribbon?
3. Each student needs one strip of twill tape 4 inches long. How much tape will be needed for 20 students?
4. Using the rule for changing mixed numbers into improper fractions, change the following mixed numbers:

a. $1\frac{1}{4}$ yds. to $\frac{7}{8}$ yd.	f. $5\frac{5''}{8}$ to $\frac{7}{8}$ inches
b. $3\frac{1}{2}$ yds. to $\frac{7}{8}$ yd.	g. $3\frac{3''}{8}$ to $\frac{17}{16}$ inches
c. $2\frac{3}{4}$ yds. to $\frac{7}{8}$ yd.	h. $1\frac{3''}{4}$ to $\frac{17}{16}$ inches
d. $4\frac{7}{8}$ yds. to $\frac{7}{8}$ yd.	i. $7\frac{7}{8}$ yd. to $\frac{7}{8}$ yd.
e. $2\frac{1}{8}$ in. to $\frac{17}{16}$ in.	j. $8\frac{3}{4}$ yd. to $\frac{7}{4}$ yd.
5. From a $1\frac{1}{2}$ yard "cut" of dotted swiss, how many $\frac{1}{8}$ yd. strips for ruffling can be cut on the crosswise grain?
6. The yardage needed for an apron is $1\frac{1}{8}$ yds. How much material is needed for 24 aprons?
7. At the beginning of the term, the needle trades class had an order to make 32 pinafore aprons. The material needed for one pinafore was $2\frac{7}{8}$ yds. There were on hand 3 bolts of material measuring $35\frac{5}{8}$ yds., $30\frac{2}{8}$, and $30\frac{3}{8}$ yds. What were the lengths of the remnants left?
8. If 45 yards of material were used for a class of 30 students, what was the average amount used by each student?
9. If 16 inches was cut from a $1\frac{5}{8}$ yard remnant, how much remained?
10. If you bought $5\frac{3}{4}$ yards of silk shantung for a dress, and $\frac{3}{8}$ of a yard remained, how much was used?
11. In distributing bias tape, $\frac{7}{8}$ of a yard was cut from a $40\frac{1''}{2}$ piece. What part of a yard remained?
12. From a piece of cloth measuring $30\frac{3}{8}$ yards, $2\frac{1}{4}$ yards were cut at one time and $5\frac{3}{8}$ yards at another. How much was left?
13. How many children's dresses can be made from a 42-yard bolt of fabric when it takes $3\frac{1}{2}$ yards for each dress?

14. Mary Jane bought what she thought was enough fabric to make a dress. In cutting the fabric, she found she needed another half yard. The store had sold all the fabric and Mary Jane could not make the dress. What should she have done before buying the fabric?
15. How many pieces of ribbon 8" long can be cut from a bolt whose length is:
- a. 10 yards b. 12 yards c. 15 yards d. 9 yards?
16. Towels require 42 inches of material. How many towels can be cut from a bolt that contains:
- a. 20 yards b. 14 yards c. 15 yards d. 21 yards
e. 25 yards?
17. Dresses that require $4\frac{1}{2}$ yards are to be cut from a bolt of spun linen. How many can be cut if the bolt measures:
- a. 65 yds. b. 30 yds. c. $58\frac{1}{2}$ yds. d. 81 yds.?

UNIT III - MEASUREMENT

Use of the Tape Measure

Lesson No. 5

OBJECTIVE: To learn how to use the tape measure and to understand the importance of accurate measurement in achieving quality workmanship.

RELATED INFORMATION:

Accurate measurement is absolutely necessary for good trade workmanship. You wouldn't consider using a yardstick to measure your waist, but perhaps you have used a piece of cord. A much better tool for measuring the waistline is the tape measure. Measurements are reliable guides and accurate measurements are indispensable.

The tape measure is used constantly to measure irregular, curved, and straight surfaces in trade work. Tape measures come in various lengths. The one most commonly used by the needle trades is made of cloth and is 60 inches long. In your selection of a tape measure be sure it has metal ends and is marked on both sides.

Due to the structural lines of the body, it is necessary to use a tool for measuring which will curve with these lines. Therefore, a cloth tape measure is the only measuring device that can answer the purpose. Accuracy in measuring results in a saving of time and energy for all needle trades workers involved in the manufacturing of garments.

PROCEDURE:

Working with a tape measure, count the divisions in an inch. Name the smallest divisions of an inch on the tape measure. Compare the divisions on the tape measure with the divisions on a ruler. If you have not mastered the division of a yard, you can work out the parts of a yard using a tape measure. Since the tape measure is made of cloth, you can fold it very easily. Placing a pin at 36", which is one yard, fold the edge of the tape measure to meet the 36" mark; this will show you that 18" equals one-half yard. Dividing the tape measure in half again will show you that 9" equals one-quarter of a yard.

Having located the lines on the actual figure or dress form to be measured, the next step is to take measurements. A dressmaker taking measurements of customers must be sure the person being measured is standing erect, yet in an easy position, with the weight evenly distributed on both feet. The person taking the measurements must be accurate in placing the tape measure on the lines. She must be accurate in reading and recording the measurements. A chart for body measurements is suggested for this record.

Chest—in. taken around the body above the bust up under the arms.

Bust—in. taken around the body over the fullest part of the bust.

Waist—in. taken around the natural waistline.

Hip—in. taken around the fullest part, about 7 inches below natural waistline, or lower if necessary.

Measurement Chart	My Measurements
BUST (around fullest part)	
WAIST (snug)	
HIP (about 7 inches below waist or fullest part)	
NECK (around base of neck)	
WRIST (not too tight)	
BACK LENGTH TO WAIST (base of neck to waistline)	
FRONT LENGTH TO WAIST (base of neck to waistline)	
SHOULDER (neck to armhole)	
WIDTH OF BACK (armhole to armhole, 4 inches down from shoulder seam)	
WIDTH OF CHEST (armhole to armhole above bust)	
LENGTH OF SLEEVE (top of arm to wrist, arm bent)	
WIDTH OF SLEEVE (around fullest part above elbow)	
BACK SKIRT LENGTH (waist to hem)	
FRONT SKIRT LENGTH (waist to hem)	

ASSIGNMENT:

1. Using a tape measure, take the measurements of a fellow student as described in the measurement chart included in this lesson.
2. Record the measurements of all dress forms used in the needle trades classes.

UNIT III - MEASUREMENT

Unit Measure

Lesson No. 6

OBJECTIVE: To gain skill in converting various units of measure.

RELATED INFORMATION:

In the needle trades industry, the trimming buyer, operator, cutter, finisher, draper, and sample hand at one time or another meet the problem of counting units or working with units.

The trimming buyer orders all findings, notions, etc. needed to complete garments. Most of these items are sold by the unit; therefore the unit measure, which is one of the simplest to learn, is used by her daily.

Many factories manufacturing small items or inexpensive garments pay their workers by the dozen or gross. An operator or finisher can easily check her pay at the end of the week if she understands the unit measure.

Example: An operator made 110 items and the price quoted for labor was 15¢ a dozen. She received \$1.20 for this work. In checking, she found she should have received \$1.37.

In the designing of a garment, you will notice many items that have two similar pieces. These two pieces constitute a pair. Sleeves, cuffs, two-gore skirt fronts, two-gore skirt backs. Therefore, 12 units of the same item would be six pairs. If we had sleeves for 12 blouses this would be 12 pairs or one dozen pairs of sleeves.

PROCEDURE:

Learn the following unit measure:

2 units	=	1 pair
12 units	=	1 dozen (doz.)
12 dozen	=	1 gross (gr.)
144 units	=	1 gross (gr.)
12 gross	=	1 great gross (gt. gr.)

ASSIGNMENT:

1. How many pairs of pads are there in 3 dozen? 5 dozen? 7 dozen?
2. How many dozen pockets are there in a bundle of 180? 132? 60?
108? 90? 80?
3. Express $2\frac{1}{2}$ gross in terms of dozens.
4. If the U. S. manufactured 35,553,731 gross of buttons in a certain year, how many buttons were manufactured?
5. There are 6 buttons sewed on a card. Figure the number of dozens of buttons on 36 cards, on 60 cards, on 80 cards.
6. How many dozen blouses are there in a bundle of 186? 148? 120?
7. How many gross yards of red bias tape are contained in 576 yards?
720 yards? 432 yards?
8. The following orders for pads were placed by the trimming buyer:
124 pairs for style #601, 162 pairs for style #603, 86 pairs for style #607. How many pairs of shoulder pads are needed for the three styles combined? How many dozen pairs of shoulder pads?
9. How many gross of buttons are needed for the following order:

	<u>Style #</u>	<u>Amount of Dresses</u>	<u># of Buttons on a Dress</u>
a.	602	284	7
b.	601	176	5
c.	604	98	4
d.	603	144	6
e.	605	242	3
f.	607	379	14
g.	609	165	10
h.	611	137	11

10. Figure the price per unit if the following items are sold by the dozen:
 - a. Handbags @ \$21.36 per dozen
 - b. Blouses @ \$19.80 a dozen
 - c. Belgian beaded handbags @ \$186. a dozen
 - d. Stockings @ \$9.00 a dozen
 - e. Stretch stockings @ \$10.50 per dozen
 - f. Tailor's chalk @ 15¢ a dozen
 - g. $4\frac{1}{2}$ " embroidery scissors @ \$19.50 a dozen

11. Figure the price per unit if the following items are sold by the gross:

- a. S. S. /36 fresh water pearl buttons @ \$4.50 a gross
- b. Full ball /16 chalk buttons @ \$2.16 a gross
- c. S.S. /16 rhinestone buttons @ \$3.24 a gross
- d. S. S. /36 ocean pearl buttons @ \$14.00 a gross
- e. Flat center /30 self-buttons @ \$1.30 a gross

UNIT III - MEASUREMENT

Liquid Measure

Lesson No. 7

OBJECTIVE: To learn liquid measure as applied to the needle trades in the purchase of oils, cleaning fluid, etc.

RELATED INFORMATION:

You will find in working with machines that the proper oiling and care of a sewing machine are essential in order to get the best results and longest service with the least trouble and expense. You will also find that in purchasing oils for your machine the following table of measure must be understood:

Liquid Measure

4 gills	=	1 pint (pt.)
2 pints	=	1 quart (qt.)
4 quarts	=	1 gallon (gal.)

PROCEDURE:

Memorize the liquid measure table listed above. Following is an example of one of the many problems you will meet:

If two gallons of machine oil were to be put into one-pint oil cans, how many one-pint oil cans would be needed?

Answer: 1 gallon = 4 quarts
1 quart = 2 pints
8 pints in one gallon
x 2 gallons
16 pint oil cans would be needed.

ASSIGNMENT:

1. How many quarts of cleaning fluid are there in $20\frac{3}{4}$ gallons?
2. How many gill containers will be needed to divide 4 gallons of machine oil?
3. At the beginning of the school year, one gallon of machine oil was received. During the term, one-half gallon was used. How many gills were left?

4. Cleaning fluid is sold in one-quart bottles. If the fluid is transferred to gill-size bottles for easier use, how many bottles can be filled from 3 quarts of cleaning fluid?
5. Four gills were taken from a quart can. How much liquid was left?
6. Complete the following:
- | | | | |
|-------------------------------------|---|-------|-------|
| a. 10 pts. of oil | = | _____ | qts. |
| b. 20 gals. of water | = | _____ | pts. |
| c. 120 pts. of cleaning fluid | = | _____ | gills |
| d. 50 quarts of cleaning fluid | = | _____ | gals. |
| e. 60 gills of carbon tetrachloride | = | _____ | qts. |
7. If one quart of cleaning fluid costs \$1.35, what would one gallon cost?

UNIT III - MEASUREMENT

The Avoirdupois Weight Measure

Lesson No. 8

OBJECTIVE: To learn the units of weight measure used in the needle trades.

RELATED INFORMATION:

In the needle trades the following materials are sold by weight: pins, paper, thread, cotton padding, etc.

A needle trades worker must know the following table of weights:

$$\begin{array}{l} 16 \text{ ounces (oz.)} = 1 \text{ pound} \\ 100 \text{ pounds} = 1 \text{ hundred weight (cwt.)} \end{array}$$

PROCEDURE:

Since this is a simple table to learn, you will practice the following orally:

1. How many pounds of pins are there in 32 ounces?
2. Eight-ounce boxes of pins are used in class. How many boxes are in a five-pound carton?
3. How many pounds of pattern paper are in a roll weighing one cwt.? 2 cwt.?
4. If the electric iron used in class weighs $2\frac{7}{8}$ pounds, how many ounces does it weigh?

ASSIGNMENT:

1. If at the beginning of the year two 5-pound cartons of 8-ounce boxes of pins were received, and at the end of the year there were $2\frac{1}{2}$ pounds of pins left, how many 8-ounce boxes were used?
2. How many pounds are in 42 packages each weighing 8 ounces?
3. Two rolls of pattern paper, each weighing one cwt., were ordered. Each roll was twelve pounds short. How many pounds of paper were received?

4. If our cotton mills use 3,743,089 bales of cotton in one year, weighing 1,873,074,716 pounds, what is the average weight per bale? Answer to the whole pound only.

5. Taking inventory, you find you have:

198 lbs. of heavy pattern paper
135 lbs. of marking paper
140 lbs. of separating tissue
97 lbs. of multi-clear marking paper

What is the total weight of paper on hand?

UNIT III - MEASUREMENT

Measure of Time

Lesson No. 9

OBJECTIVE: To learn to handle problems involving time.

RELATED INFORMATION:

Everyone working in the garment trade has chosen his particular job not only because he is interested in this field, but mainly to earn a living. If you are earning money now by baby sitting, doing housework, or in any other way, you know the importance of figuring how much money you should receive for your work. People do make mistakes and since "time is money," you will be the loser if you cannot figure out your own earnings.

Earnings are figured by the hour or the week (time work), or by the piece or unit (piecework).

PROCEDURE:

It is important to learn the following table of the measure of time:

60 seconds (sec.)	=	1 minute (min.)
60 minutes (min.)	=	1 hour (hr.)
24 hours	=	1 day (da.)
7 days	=	1 week (wk.)
52 weeks	=	1 year (yr.)
365 days	=	1 year
100 years	=	1 century

In many factories, the time is mechanically recorded and shows fractions of hours. In order to check the time, one should be able to calculate fractions. The following fractional equivalents of the hour should be memorized:

$\frac{1}{4}$ hr.	=	15 min.
$\frac{1}{2}$ hr.	=	30 min.
$\frac{3}{4}$ hr.	=	45 min.

ASSIGNMENT:

1. The girls in the trade class recorded their time in the classroom during the past week. Compute the actual time spent per week for each student listed.

Student	Mon.	Tues.	Wed.	Thurs.	Fri.
A.	9:15	9:30	9:05	9:45	9:10
	11:10	11:50	11:10	11:55	11:45
B.	9:00	9:05	9:00	9:05	9:05
	11:45	11:40	11:50	11:35	11:40
C.	9:15	9:20	9:25	9:05	9:10
	11:40	11:50	11:40	11:05	11:15
D.	9:00	9:00	9:00	9:05	9:00
	11:45	11:30	11:15	11:50	11:55

2. During the time assigned to trade work on Thursday, Jane was excused 45 minutes from class for a special Clee Club rehearsal; spent 15 minutes for a group meeting; and, due to bad weather, the class was dismissed 20 minutes early. How much time did Jane lose from her trade work that day?

3. A class was given 90 freshman pinafores to be made. It took 3 weeks of trade time (3 hrs. a day) to complete the work. There were 20 girls in the class. What was the average time for a girl to stitch one pinafore?
4. Joan took 2 trade sessions to stitch a smock. How many hours would it take for her to stitch $1\frac{1}{2}$ dozen smocks?
5. On Monday Alice began work on a child's dress at 9:15. At 10 o'clock she was called into the office and was there 45 minutes. She returned to shop and was dismissed for lunch at 11:50. How much time did Alice spend on the dress that day?
6. In most dress factories today, the work day is 7 hours long. If you started to work at 8:45 and left at 4:15, how much time was allowed for lunch?
7. An operator works 7 hours a day and each day makes an average of 8 dresses @ $\$2.08\frac{1}{4}$ a dress. She left two hours early on Monday and one hour early on Friday. What is her wage loss at the end of the week?
8. A lesson in the making of a two-piece placket took 20 minutes; the rest of shop time (3 hrs. a day) was spent in practicing that lesson. How long was the practice work at the machine that day?

UNIT III - MEASUREMENT

Measure of Money

Lesson No. 10

OBJECTIVE: To learn the importance of counting change correctly to avoid mistakes.
To learn the proper way to indicate amounts of money in writing.

RELATED INFORMATION:

Calculations involving the use of money enter into the daily lives of practically everyone of us whether we are students, workers, householders, or businessmen. Because of this it is very important that you have a working knowledge of elementary calculations used in buying, selling, business transactions, and places of employment.

The unit of the money system in the United States is the dollar. This is divided into small units each represented by its own coin.

The one-cent piece or penny	=	$\frac{1}{100}$	of a dollar
The five-cent piece or nickel	=	$\frac{5}{100}$	of a dollar or $\frac{1}{20}$
The ten-cent piece or dime	=	$\frac{10}{100}$	of a dollar or $\frac{1}{10}$
The twenty-five cent piece or quarter	=	$\frac{25}{100}$	of a dollar or $\frac{1}{4}$
The fifty-cent piece or half-dollar	=	$\frac{50}{100}$	of a dollar or $\frac{1}{2}$

There are also larger multiples of the dollar, as two dollars, five dollars and so on. These are usually issued in bill form and make it convenient to handle large sums of money.

PROCEDURE:

- A. Whether you are buying lunch in school, shopping in retail stores, or receiving your weekly wages, you must be familiar with a simplified method of counting change. It is important to re-check your change when it is given to you.

Example: Count the change received from a clerk if 53¢ is spent out of one dollar. (Note: you are not to say $\$1.00 - 53¢ = \underline{\quad}$?)

Answer: $53 + 2 = 55 + 2 \text{ dimes} = 75 + \text{one quarter} = \1.00

Learning the following table will help to simplify counting change:

5 pennies	=	1 nickel
2 nickels	=	1 dime
10 dimes	=	1 dollar
5 nickels	=	1 quarter
2 quarters	=	$\frac{1}{2}$ dollar
4 quarters	=	1 dollar
2 half-dollars	=	1 dollar
10 dollars	=	1 eagle

- B. The symbol used in writing amounts of money is \$, known as the dollar sign. It is placed in front of the figure or figures representing the number of dollars. The writing of amounts of money resembles the writing of decimals. The decimal point is used to separate dollars from cents and is placed directly after the number representing dollars, as \$10.75.

If the amount is less than a dollar, the decimal point is placed in front of the "cents" only, and a 0 is used to express the dollar; for example, \$0.45.

The sign ¢ indicates cents, and is quite often used in amounts less than one dollar. When the cent sign is used, neither the dollar sign nor the decimal point should be used. Example: 45¢.

ASSIGNMENT:

- Examine the following amounts and write correctly those that are not properly expressed:
 - \$.72
 - \$0.19¢
 - \$4.50
 - \$.39¢
 - 36¢
- \$10 = how many dimes? = how many quarters?
- \$5 = how many cents? = how many nickels?
- \$3.50 = how many quarters? = how many nickels?
- 10 nickels = _____ cents
 - 31 halves = _____ cents
 - 55 dimes = _____ cents
 - 88 quarters = _____ cents
 - 100 nickels = _____ cents

6. How much change should a boy get in presenting a \$5 bill in payment for a pair of jeans @ \$1.55 and a shirt @ \$1.25? List the units of money he will receive.
7. In giving cash for a check amounting to \$48.75, list the units of money you would use.
8. What is the total of the following:
 - 3 twenty-dollar bills
 - 6 ten-dollar bills
 - 5 five-dollar bills
 - 3 one-dollar bills
 - 7 fifty-cent pieces
 - 11 quarters
 - 56 dimes
 - 25 nickels
 - 40 pennies
9. List the change received if \$13.46 was spent out of \$20.
10. What was the change from \$10 for the following items:
2 yards of crepe @ 98¢ a yard, 1 zipper @ 40¢, 1 spool of thread @ 39¢, 1 package of seam binding @ 15¢, and 3 yards of dacron @ 69¢?

UNIT IV - RATIO AND PROPORTION

Pre-Test No. 4

1. Mary said she could do twice as much work as Joan. How many pinafores did Joan make if Mary made 26?
2. The sophomore class made 39 blouses; the freshmen made 27 blouses. What is the ratio of the work done by the former class to that of the latter?
3. Four blouses can be made in a 7-hour day. How many working days will it take to complete 24 blouses?
4. If 5 yards of velvet cost \$25.25, find the cost of 3 yards.
5. A homemade dress costs \$4.60; a ready-made dress costs \$11.50. What is the ratio between them?
6. If the trimming for 16 dresses costs \$21.12, then \$26.40 will purchase trimming for how many dresses?
7. Find the ratio of the following quantities:
 - a. \$1.25 to \$.25
 - b. 3 yards to 2 yards
 - c. 16 gr. to 32 gr.
 - d. 8 thimbles to 16 thimbles
 - e. 46 girls to 138 girls
 - f. 4" to 2"
 - g. 6 spools to 9 spools
 - h. 9 hours to 30 min.
 - i. 5 yards to 15 yards
 - j. 16 in. to 4 yards

UNIT IV - RATIO AND PROPORTION

Relation Between Quantities

Lesson No. 1

OBJECTIVE: To learn how to compare numbers in terms of ratio and proportion.

RELATED INFORMATION:

The mysterious word "ratio" merely means "relationship". The relationship of your weight to your height, of the length of the school day to the whole day, of the money your family pays for housing compared with the family income - all these are ratios. We are constantly using ratios in our thinking and our speaking. We might say: my house is twice as long as it is wide; my father earns four times as much as my brother; this dress uses three times the yardage of that one.

If during the summer vacation Joyce earned twice as much as Joan, that is, if for every dollar earned by Joan, Joyce earned two dollars, the ratio of their earnings would be 2 to 1.

There are occasions when the needle trades worker is given amounts and must compute their relationship to other amounts. This occurs in estimating shirring, smocking, tuckings, and pleatings.

We may express ratio in three ways. If we wish to compare the quantities 3 and 5, we could use any of these methods:

1. 3:5 (read 3 is to 5)
2. $3 \div 5$
3. $\frac{3}{5}$ (fraction)

As a matter of custom, a ratio is generally written in fractional form. We can, therefore, do anything to a ratio, without changing its value, that we can to any other fraction. Consequently, both terms of a ratio can be either multiplied or divided by the same number without changing its value.

Complete the following statements so that a new ratio, equal to the first, will result:

$$\frac{2}{3} = \frac{6}{?}$$

$$\frac{8}{12} = \frac{2}{?}$$

$$\frac{20}{25} = \frac{4}{?}$$

$$\frac{12}{15} = \frac{?}{5}$$

A proportion is a true statement of equality of two ratios. If you completed the above exercises correctly, each is a proportion. Thus, $\frac{2}{3}$ and $\frac{6}{9}$ are equal and the statement $\frac{2}{3}$ equals $\frac{6}{9}$ (or, as it is commonly written, $2:3 :: 6:9$) is a proportion. The fractional form is more convenient for computation.

There are four terms in a proportion. The first and third terms are the numerators of the fractions; the second and fourth terms are the denominators. The first and the last terms (2 and 9) are called the extremes; the second and third (3 and 6) are called the means.

PROCEDURE:

I. Ratio

The ratio of one number to another is the quotient of the first number divided by the second.

A. Example: Joan is 30 years old and her sister is 15 years old. The ratio of Joan's age to her sister's is 30 to 15 or 2 to 1.

Solution: $\frac{30 \text{ (divide by 15)}}{15 \text{ (divide by 15)}} = \frac{2}{1}$ You would read this ratio as 2 to 1.

If the scale of a drawing says "one inch to one yard", it does not mean a 1 to 1 ratio, but a ratio of 1 to 36, because both quantities must be in the same unit of measure.

B. Example: Separate 35 into two parts so that their ratio shall be 3 to 4.

Solution: The simplest way to solve this problem is as follows: Using a question mark (?) in place of the unknown numbers, let:

$3 \times ? =$ the smaller part
 $4 \times ? =$ the larger part

The sum of the parts is 35; thus the equation is:

$$\begin{array}{r} 3 \times ? = \\ 4 \times ? = \\ \hline 7 \times ? = 35 \end{array} \qquad \frac{5}{7/35}$$

The smaller part is $3 \times 5 = \frac{15}{4} = \frac{3}{4}$
 The larger part is $4 \times 5 = 20$

II. Proportion

Whenever we have a statement that two ratios are equal, we have a proportion. Since a proportion is an equation, we can use the rules that apply to equations to solve problems involving proportions.

Example: If 8 yards of silk cost \$12, how much will 13 yards cost at the same rate?

Solution: $\frac{8 \text{ yards}}{13 \text{ yards}} = \frac{12 \text{ dollars}}{? \text{ dollars}}$

that is, $\frac{8}{13} = \frac{12}{?}$

Using the rule of cross-multiplication,

$$\begin{array}{ccc} \cancel{8} & & \cancel{12} \\ & \times & \\ \cancel{13} & & \cancel{?} \end{array}$$

we get:

$$\begin{aligned} 8 \times ? &= 156 \\ ? &= \$19.50 \end{aligned}$$

That is, 13 yards of silk cost \$19.50

Rules for forming a proportion:

- a. The two terms of each ratio must be like quantities, for example, in the above problem, each term of the first ratio is a number of yards; of the second, a number of dollars.
- b. The two numerators and the two denominators must be corresponding quantities; that is, the value of one numerator must depend upon the value of the other numerator. Again, in the above problem, the value of the second numerator, \$12, depends upon the number of yards purchased, or 8 yards, and the value of the second denominator, ? dollars, depends upon the number of yards purchased, or 13 yards.

Note: There are other ways of forming proportions, but for the purpose of minimizing errors, we will stick to these rules.

ASSIGNMENT:

1. Express the ratios of the following in the simplest form:
 - a. 21" to 7"
 - b. 50 bolts to 20 bolts
 - c. 3 spools to 6 spools
 - d. \$12.75 to \$102.00
 - e. 2 hours to 20 minutes
 - f. $1\frac{1}{2}$ " to $\frac{3}{4}$ "
 - g. 26 weeks to 1 year
 - h. 3 yards to 2 feet
 - i. 2 dimes to 1 dollar
 - j. 6 months to 9 days
 - k. 32 cones to 8 cones
 - l. 120 yards to 15 yards
2. Virginia spends 6 hours in shop every day and Mary spends 4 hours. What is the ratio of the time Virginia spends to the time Mary spends? For every three hours Virginia spends, how many hours does Mary spend?
3. Operator A made 14 dozen blouses in one week. Operator B made $3\frac{1}{4}$ dozen. What is the ratio of the number of blouses made by A to the number made by B?
4. Write the following ratios as fractions (reduce in each case to the lowest terms)
 - a. 9:12
 - b. 36:3
 - c. 18:15
 - d. 45:55
 - e. 16:48
 - f. 24:26
5. If a length of percale is 48" long and 36" wide, find the ratio of the length to the width. Of the width to the length.
6. Find the ratio of 25 to (a) 30 (b) 50 (c) 60.
7. What is the ratio of 15 minutes to (a) 1 hour, (b) half-hour, (c) 45 minutes?
8. What is the ratio of 15¢ to 75¢?
9. Three numbers have the ratio 3:4:5. Find the numbers if their sum is 96.
10. If 10 girls operating power sewing machines can produce 140 dresses in 14 hours, how many dresses can 15 girls produce in the same amount of time?
11. On an annual income of \$3600, \$700 is set aside for rent. At the same rate, how much should be set aside from an income of \$4000?
12. Twenty-four circular sections can be cut from $1\frac{1}{2}$ yards of 36" organdy. How many sections can be cut from $2\frac{1}{4}$ yards?

UNIT IV - RATIO AND PROPORTION

Estimates and Approximations

Lesson No. 2

OBJECTIVE: To learn to estimate answers to problems.

RELATED INFORMATION:

In many cases it will be helpful to make a rough estimate of the answer to a problem before solving for the exact result. Errors are often made in placing the decimal point, thus giving results that are ridiculous.

Example: Find the cost of $3\frac{3}{4}$ yards of cloth at \$1.10

Solution: First estimate the cost by rounding $3\frac{3}{4}$ yds. to the nearest whole number, 4 yards, which at \$1.10 gives you an estimate of \$4.40. Then by actual calculation you find the result is \$4.125.

$\begin{array}{r} 3.75 \text{ yds.} \\ \$1.10 \\ \hline 3750 \\ 375 \\ \hline \$41250 \end{array}$	OR	$\begin{array}{r} \$1.10 \\ 3.75 \text{ yds.} \\ \hline 550 \\ 770 \\ 330 \\ \hline \$41250 \end{array}$
--	----	--

By estimating in advance, such results as \$41.25 or \$0.41 are recognized to be wrong.

ASSIGNMENT:

In each of the following problems, first estimate the result, then solve for the exact result.

1. Find the cost of 22 yards of material at \$1.10 a yard.
2. A man worked 42 hours in a week. His hourly wage was \$1.77 an hour. How much did he earn?
3. Find the cost of $17\frac{1}{4}$ yards of percale at $23\frac{1}{4}\text{¢}$ a yard.
4. At $4\frac{1}{4}$ yards of material per dress, how many can be made from a bolt of $75\frac{3}{4}$ yds.?
5. At \$10.75 per dress, how many can be bought for \$130.00?

6. If each dress needs 6 buttons, how many dresses will a stock of $1\frac{1}{2}$ gross buttons trim?

7. $2\frac{1}{2} \times 3\frac{1}{2}$

8. $4\frac{1}{4} \times 3\frac{3}{4}$

9. $23 \times 3\frac{3}{4}$

10. $31 \times 4\frac{1}{2}$

11. $\$2.00 \div 16\frac{1}{2}$

12. $28\frac{1}{2} \div 7\frac{1}{2}$

UNIT IV - RATIO AND PROPORTION

Estimating Amounts for Tucking and Hems

Lesson No. 3

OBJECTIVE: To learn the basic rule for estimating amounts for tucking and hemming.

RELATED INFORMATION:

A tuck is a fold in the cloth for the purpose of trimming or decoration. A tuck takes up twice its own depth, that is, a one-inch tuck takes up two inches of fabric.

In the garment industry there are special firms that handle tucking, shirrings, and pleatings to be used in the making of garments. When figuring tucking it is important to know the width of the material to be tucked, the size of the tuck, and the finished size needed to cut the pattern needed for the dress.

This is the procedure that is followed: after a sample has been made in the sample room and the garment is ready to be put into production, the estimated yardage is sent out to be tucked. When the tucking is completed and returned to the manufacturer, the pattern is placed on the tucking and cut.

A hem on a piece of cloth is an edge turned over to form a border or finish. In making a hem, the edge must always be turned or taped to prevent fraying, except for heavy or loosely woven cloth. The amount turned under is usually $\frac{1}{4}$ " or, for narrower hems, $\frac{1}{8}$ " is allowed. For example, for a one-inch hem, plus $\frac{1}{4}$ " for turning, you would have to allow $1\frac{1}{4}$ " of cloth.

PROCEDURE:

You must remember that, no matter what size tuck is used, the same rule applies: "Twice the width of the tuck from stitch to fold is the amount of material used for one tuck."

Example A:

This child's dress was completed in the sample room and is now ready to put into production.

In checking the skirt, you find the finished length of the skirt is 20", there are four $\frac{1}{2}$ " tucks, and a 2" hem with $\frac{1}{4}$ " allowed for turning.

What is the width of the material to be sent out for tucking?

Solution:	20"	finished length of skirt
	4"	taken up by tucks (4 tucks @ $2 \times \frac{1}{2}$ ")
	<u>$2\frac{1}{4}$"</u>	width of hem and turning
	26 $\frac{1}{4}$ "	width of material needed to be sent out for tucking

Example B:

The above sample blouse has a tucked yoke. In the manufacture of garments with tucking used in this manner, the width of the fabric is completely tucked. All the stitching of tucks is done on the length. This is known as "all-over tucking".

Broadcloth 36" wide was used for this tucking. Thirty-six tucks, each $\frac{3}{16}$ " wide, were made across the width of the fabric.

What is the width of the fabric after tucking? If each yoke requires 11" of tucked fabric, how many yokes can be cut out of the width?

Solution:

36"	width of the broadcloth before tucking	
- $\frac{13\frac{1}{2}}{2}$ "	taken up by the tucks ($\frac{3}{16} \times 2 = \frac{6}{16} = \frac{3}{8}$ "	$\frac{3}{8}$ " x 36 tucks)
$\frac{22\frac{1}{2}}{2}$ "	width of broadcloth after tucking	

$\frac{11/22}{2}$	yokes can be cut out of the width.
-------------------	------------------------------------

PRACTICE:

1. Make a gauge to be used in making $\frac{1}{4}$ " tucks with $\frac{1}{4}$ " space.
2. Using a $\frac{1}{4}$ " gauge, make a $\frac{1}{4}$ " tuck in a piece of paper. How much material is taken up by the tuck?

3. Using your gauge, turn a one-inch hem on a paper and see that it is perfectly straight. How much material is taken up by the hem?
4. Take a piece of paper 6" wide and, using your gauge, make a half-inch hem with $\frac{1}{8}$ " allowance for turning and three $\frac{1}{4}$ " tucks, with $\frac{1}{4}$ " space between tucks. How much material is taken up by the hem and tucks?

Example C:

In checking this sample, we find the designer used fabric tucked with $\frac{1}{4}$ " tucks with a $\frac{1}{4}$ " space between tucks.

How many tucks were made in this fabric, which was 42" wide?

What was the finished width of the material?

Solution:

$$\frac{1}{2}'' \text{ or } \frac{2}{4}'' = \text{material taken up by tuck } (\frac{1}{4}'' \times 2)$$

$$\frac{1}{4}'' = \text{space between}$$

$$\frac{3}{4}''$$

$$42'' \text{ (width of the material)} \div \frac{3}{4}''$$

$$\frac{42}{1} \div \frac{3}{4} = \frac{42}{1} \times \frac{4}{3} = 56 \text{ tucks}$$

$$42'' = \text{width of material before tucking}$$

$$- \frac{28''}{1} = \text{material taken up by the 56 tucks } \times \frac{1}{2}''$$

$$\frac{14''}{1} = \text{width of material after tucking}$$

ASSIGNMENT:

1. How many tucks, each $\frac{1}{4}$ " wide, can be made from a piece of material one yard wide, if the tucks are $\frac{1}{4}$ " apart?
2. How many $\frac{1}{8}$ " tucks, $\frac{1}{4}$ " apart, can be made from a piece of material twenty-four inches wide?
3. A piece of cloth contains eight $\frac{1}{2}$ " tucks, $\frac{1}{4}$ " apart. If the tucks start 4" from each edge of the cloth, how wide is it? How wide would it be if the tucks were ripped out?
4. A piece of cloth originally $29\frac{1}{4}$ inches wide contains how many $\frac{1}{4}$ " tucks, $\frac{1}{4}$ " apart, if the first and last tucks are $\frac{1}{4}$ " from the edge of the cloth? How wide will the finished piece be?
5. If three 2" tucks, $\frac{1}{2}$ " apart are to be put around a skirt which is to be 28" long when finished, how long must the skirt be cut to allow for the tucks and a $3\frac{3}{4}$ " hem with a $\frac{1}{4}$ " allowance for turning?
6. Material is sent to a commercial tucker. How wide will this 24" material be after tucking with $\frac{1}{16}$ " tucks set $\frac{1}{8}$ " apart?
7. How many $\frac{1}{32}$ " tucks, $\frac{1}{16}$ " apart can be made from a piece of muslin 24" wide?
8. How many $\frac{1}{8}$ " tucks, $\frac{1}{8}$ " apart can be made from a piece of lawn 30" wide?
9. If a piece of cloth contains thirty 1" tucks and is 30" long, how long would it be if the tucks were ripped out?
10. Give the amounts of material allowed for one tuck in the following sizes:

- | | |
|---|---|
| <p>a. $\frac{1}{16}$ _____</p> | <p>e. $\frac{1}{4}$ _____</p> |
| <p>b. $\frac{1}{8}$ _____</p> | <p>f. $\frac{1}{2}$ _____</p> |
| <p>c. 1" _____</p> | <p>g. $1\frac{1}{2}$ _____</p> |
| <p>d. $\frac{3}{8}$ _____</p> | <p>h. $\frac{3}{4}$ _____</p> |

UNIT IV - RATIO AND PROPORTION

Estimating Fullness for Ruffling and Shirring

Lesson No. 4

OBJECTIVE: To learn the basic rules for estimating ruffling and shirring.

RELATED INFORMATION:

A ruffle is a strip of cloth gathered in narrow folds on one edge and used for trimming. When making ruffles, allowance must be made for fullness. In determining allowances, one and one-half times the distance is usually allowed for ordinary ruffles; but where less fullness is desired $1\frac{1}{3}$ or even $1\frac{1}{4}$ times is allowed. The amount of fullness required for ruffling depends on the garment and the type of fabric used. A heavier fabric will not need as much gathering as a sheer fabric. Different proportions of material are allowed according to the use to which it is to be put. A ruffle cut along the width is generally more satisfactory, but they are often cut along the length of the cloth.

Double rows of ruffles are very effective in some cases and sometimes when ruffles are very narrow, three or five rows are used.

PROCEDURE:

In estimating how much material is required for ruffles or shirring, the fullness desired is the determining factor.

Example A:

This skirt has a 6" ruffle sewed to the bottom of the skirt. The skirt measures 3 yards wide and the fabric used is 42" dacron/cotton.

How much material is required for the ruffle if the allowance is $1\frac{1}{2}$ times the width of the skirt for fullness? (The ruffle is to be cut along the width of the fabric.)

Solution:

3 yds. (width of the skirt) \times $1\frac{1}{2}$ (allowance for fullness) = $4\frac{1}{2}$ yds.
(length of ruffle needed)

$4\frac{1}{2}$ yds. \div $1\frac{1}{6}$ yds. (material is 42" wide) = $3\frac{6}{7}$ strips of material
needed for ruffle.

4 strips ($3\frac{6}{7} = 4$ Any fraction of a width must be counted as a
whole width)

$\frac{4}{24''}$ width of ruffle
of material needed for the ruffle (or $\frac{2}{3}$ yard).

Example B:

This blouse has a shirred batiste ruffle in the front. Two yards of embroidered batiste for each blouse was sent out to be shirred. The front space to which this trimming was to be sewn measured 14".

What was the ratio or allowance for shirring?

Solution:

2 sides to the front of the blouse \div 2 yds. of embroidered batiste = 1 yard used for each side of blouse front.

$$36 \div 14'' \text{ (finished length)} \quad 14/\overline{36}^{2\frac{1}{2}}$$

$$2\frac{1}{2} : 1 = \text{the ratio}$$

$2\frac{1}{2}$ times the length is the allowance for shirring

Example C:

In computing the material needed to make this 3-tier gathered skirt, the width at the bottom of each tier is the determining factor.

The top tier measures 7" long and 2 yards wide. The second tier measures 9" long and the allowance for fullness is 2 times the width of the top tier. The third tier measures 12" long and is 2 times the width of the second tier.

How much fabric is needed to make this 3-tier gathered skirt, if 36" fabric is used?

Note: All seams and the hem allowances are included in these figures.

Solution:

The yardage needed for each tier must be computed individually.

Top tier: 2 yards of 7" width are needed for the top tier. Since the material is 1 yard wide, two yards will require 2 strips each 7" wide.
 $2 \times 7" = 14"$ of material for the top tier.

Second tier: 2×2 yds. = 4 yards of ruffling needed. In this case, 4 yards means 4 strips, each 9" wide.
 $4 \times 9" = 36"$ or 1 yd. of material needed for second tier.

Bottom tier: 2×4 yds. = 8 yards of ruffling needed (width of second tier with fullness allowed).
 $8 \times 12" = 96"$ or $2\frac{2}{3}$ yards of material needed for bottom tier.

Total material needed:

Top tier	14"
Second tier	36"
Bottom tier	96"

146" or 4 yards and 2 inches needed.

You would have to purchase $4\frac{1}{8}$ yards.

ASSIGNMENT:

1. A nylon net petticoat measures 3 yards around the bottom. We have decided to add a ruffle 9" deep and to figure the fullness at $2\frac{1}{2}$ times. Nylon net is 72" wide. How much net is needed for the ruffle? (Hint: if the number of strips is fractional, use the next highest whole number).
2. How many pieces of percale 36" wide are needed for 3 yards of ruffling?
3. How many yards of ruffling are needed for 14 aprons if each apron is one yard wide, and half the width of the apron is added for fullness?
4. If gathering stitches are made approximately $\frac{1}{16}$ " long, how many stitches are there in an inch?
5. How much material would you need for a gathered skirt, if the waist measurement is 26" and the length is 27" including all seams and hem, and the allowance for fullness is 4:1? The material used is 36" wide.
6. In making a gathered skirt, $3\frac{3}{4}$ yards of 36" material was used. The waist measurement was 24", the length was 27" including all seams and hem. What was the fullness allowed?
7. In finishing a slip, it was decided to add an 8" ruffle. The bottom of the slip was 44" wide; the allowance for shirring was $1\frac{1}{2}$ times. How many strips of 44" material would be needed for 1 slip? How many yards for 150 slips?
8. If the side and bottom edges of one pair of net curtains measures 4 yards each, how much additional material will be needed to cut a 5" ruffle including seams and hem for the side and bottom edge? The net is 50" wide and the ratio is 2:1.
9. How much additional 42" rayon taffeta will be necessary to make an 8" shirred ruffle including seams and hem, around the bottom of two gross slips, if the lower edge of one measures 41" and the ratio is 2 to 1?
10. What width of cloth is needed for making a ruffle $3\frac{7}{8}$ " deep allowing $\frac{7}{8}$ " for a heading and $1\frac{1}{4}$ " for hem and $\frac{1}{4}$ " for first turn of hem? Find the amount of material required to make 3 yards of ruffling if made of material 36" wide.

UNIT IV - RATIO AND PROPORTION

Estimating Fullness for Smocking

Lesson No. 5

OBJECTIVE: To learn the method used in figuring material used in smocking.

RELATED INFORMATION:

Smocking is the gathering in lines at regular intervals so as to produce a shirred effect (see below). The type of garment being made determines the style of smocking used. You will find smocking used mostly in children's wear. It has traditionally been done by hand, but recently machine smocking has come into use.

Types of Smocking

PROCEDURE:

The general rule for smocking is to allow three times the width of the finished design (ratio 3:1). The fullness desired determines the width of fabric needed.

Example: In a 2" finished design, 6" of material was used. This particular smocking used 3 times the finished design.

$$\frac{3}{2/6} \text{ Ratio } 2:6 = 1:3$$

ASSIGNMENT:

1. The smocking at the head of a sleeve measured 3" when finished. If the material measured $7\frac{1}{2}$ " before smocking, what was the additional fabric allowed for the smocking? What was the ratio?
2. How much material is required for a smocking design measuring $2\frac{1}{2}$ " finished at $3\frac{1}{2}$ times the width?
3. A skirt measuring 22" around the waist is being trimmed with smocking around the top. How much material is needed at 3 times the width of design?
4. A smocking design measuring $5\frac{3}{4}$ " when finished requires $3\frac{1}{4}$ times the width of the design. Find the width of material needed.
5. Find the material needed for the following smocking designs:

	<u>Width</u>	<u>Ratio</u>
a.	16"	$\frac{3}{14}$
b.	$5\frac{1}{2}$ "	$2\frac{1}{4}$
c.	$2\frac{1}{2}$ "	2
d.	$4\frac{1}{4}$ "	3
e.	24"	4

UNIT IV - RATIO AND PROPORTION

Estimating Allowance for Pleating

Lesson No. 6

OBJECTIVE: To learn the basic rules in figuring material needs in the making of pleats.

RELATED INFORMATION:

Perhaps you are fond of wearing the ever-popular pleated skirt. This is a style that remains in fashion always; in children's wear, through teen-age, to women's wear. Pleats used this way not only add fullness but also give line interest to clothing.

Pleats can be prepared by the dressmaker or, as in the garment industry, sent out to a shop that will do steam pleating, - sometimes called machine pleating. Steam pleating usually proves an economy in time and also stays in very well.

A pleat is a fold in the fabric that releases fullness. As you look around in your class, you may observe a number of different kinds or arrangements of pleats. They will probably fall into one of the following groups. The first group covers straight pleats pressed into the desired type such as: box pleats, inverted pleats, kick or side pleats, and unpressed pleats. Novelty pleating done by the machine pleaters, the second group, includes accordion, crystal, fine knife pleating, and variations and combinations of box pleats.

PROCEDURE:

When the edges of pleats touch, how much material must you allow for the pleats? A one-inch pleat requires three inches of material, or a fitted all-around pleated skirt with pleats touching requires three times the hip measurement.

1. From material or paper, make a one-inch pleat with a one-inch underlay. Mark where your pleat ends.
2. Open the pleat and measure the surface needed to make a single pleat.
3. You will find that the underlay measures two inches.
4. The complete surface or material needed would be two inches for underlay plus one inch for the width of the pleat.

5. To make a single pleat, the material must be cut three times the width of the pleat, if the underlay is the same width as the pleat.

The important facts in the construction of a pleat are:

- A. The depth of the pleat or the underlay, which is the amount of material from outside fold of pleat to the inside fold of the pleat. (The actual measurement of the material needed to form underlay will be twice the depth.)
- B. The width of the pleat or the space between pleats. It is the amount of each pleat that shows between folds on top of skirt.
- C. The type of pleating to be made.

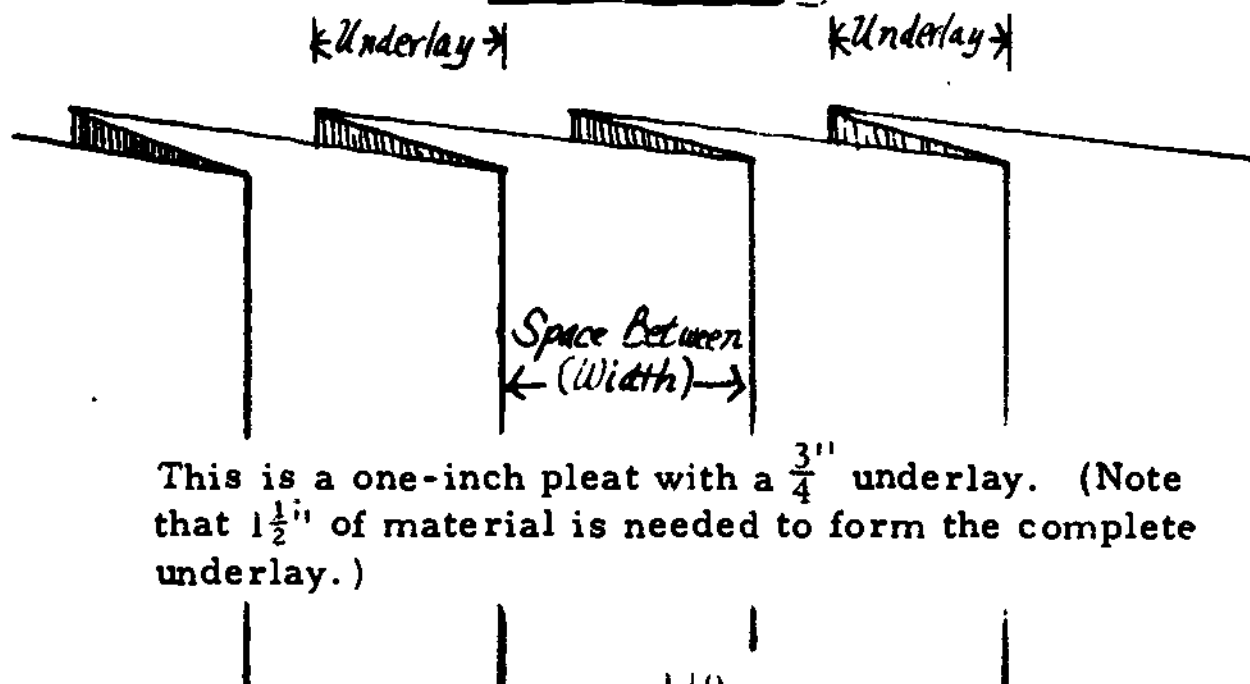

A box pleat requires twice as much as a single pleat and a double box pleat twice as much as a box pleat.

The following diagrams show the formation of a single pleat:

Fabric Prepared for One-Inch Side Pleats with $\frac{3}{4}$ " Underlay

Finished Pleating

This is a one-inch pleat with a $\frac{3}{4}$ " underlay. (Note that $1\frac{1}{2}$ " of material is needed to form the complete underlay.)

Example: In making an unpressed pleated skirt with a one-inch space between each pleat and an underlay of one inch, the total material needed for one pleat would be three inches. In making an unpressed pleated skirt, the other measurements needed are the waist and the length. If the waist is 24" and the length 27" including hem, how many yards of 36" material would we need?

Solution: $24''$ (waist measurement) \times $3''$ (needed for each pleat) $= 72''$ of material \div $36''$ material $= 2$ lengths needed
 $27''$ length of skirt $\times 2 = 54''$ or $1\frac{1}{2}$ yards.

ASSIGNMENT:

1. Estimate the amounts required for these pleats:
 - a. one 2" box pleat
 - b. four 3" side pleats
 - c. two 1" side pleats
 - d. one 2" side pleat
 - e. one 4" inverted pleat
 - f. a 12" cut will make how many 2" side pleats?
2. How many yards of 54" woolen material will be needed for a skirt with a one-inch pleat and a 2" underlay, measuring 36" at the hip? The length of the skirt is 27" long including hem.
3. How many box pleats 2" wide with a full-size underlay can be made out of material 72" wide?
4. If it takes 81 inches to make 9 box pleats, how many inches will it take to make 7 box pleats of the same size?
5. How much material is required to make ten single pleats 2" wide with a 1-inch underlay? How many box pleats of the same width can be made out of the same piece of material?
6. How many single pleats, one inch wide with a 1-inch underlay can be made from a piece of material 24 inches wide? 42" wide? 14" wide?
7. The front of a child's dress was cut 28" wide, but when pleated it measured just 16". How many one-inch pleats with a 1-inch underlay were made in the dress front?
8. If it takes 72" to make 16 single box pleats, how many double box pleats could be made out of the same piece of material?

9. How many one-inch box pleats with a 1-inch underlay can be put into 42"?
10. How much material will be needed to make a pleated ruffle, $\frac{1}{2}$ " wide with a $\frac{1}{4}$ " underlay, for a taffeta slip which measures 48" around the lower edge? The ruffle is to be 4" deep with a $\frac{1}{8}$ " hem. The material is 42" wide.
11. How many yards of finished pleating would you need on three tiers of this dress: the first tier measures 42", the second 50", and the third 60". For 135 dresses?

UNIT V - DECIMALS

Pre-Test No. 5

1. Add the following:

- a. 24.75, 33.29, 8.35, 25.64
- b. 45.643, 8.295, 4.64, 35.63
- c. 25.64, 63.25, 29.74, 35.25
- d. 24.00, 32.24, 9.50, 10.00, 4.75

2. Subtract the following:

- a. 24.65 - 13.82
- b. 24.8 - 8.63
- c. 105.00 - 75.25
- d. 28.35 - 12.16
- e. 35.25 - 16.98
- f. 57.00 - 7.62

3. Tell how many decimal places there will be in each of these products.

- a. 2.5 x 3.4
- b. 23.5 x 22.4
- c. 1.67 x 2.34
- d. 60.8 x 3.47
- e. 1.25 x 2.25
- f. 2.64 x 43.7

4. Multiply the following:

- a. 25 yards of lace @ $6\frac{1}{2}\text{¢}$
- b. 66 yards of dotted swiss @ \$0.6975
- c. 27 buttons @ \$0.027
- d. 16 spools of thread @ \$0.057
- e. 112 yards of organdy @ \$0.605

5. Deduct the cost of the trimmings from the cost of materials used in the following garments:

	<u>Material</u>	<u>Trimmings</u>
a.	\$9.43	\$1.58
b.	6.75	1.86
c.	4.75	$\frac{3}{10}$ of a dollar
d.	7.46	$\frac{7}{10}$ of a dollar
e.	3.33	$\frac{1}{2}$ dollar

6. The price of $\frac{1}{4}$ " elastic is quoted @ \$0.035 per yard. The price is increased to \$0.0433. How much more will it cost per yard than the original quotation? Compute the additional cost of 435 yards.
7. A discount of \$3.56 is allowed from a bill of \$32.25. What is the amount of the bill after deducting the discount?
8. Find the total cost of making a dress, if you purchased $3\frac{5}{8}$ yards of dacron/cotton @ 69¢, zipper @ 45¢, 4 buttons @ $12\frac{1}{2}$ ¢ each, 2 spools of thread @ 10¢ a spool.
9. From a 54" length of serge, a 24" piece was sold. Find the cost of the remainder at \$1.75 per yard.
10. If a man owes \$325 and pays 25% of it, how much does he pay? How much remains to be paid?

UNIT V - DECIMALS

Review

Lesson No. 1

OBJECTIVES: To develop an understanding of the relation of decimals to fractions.
 To learn the proper way to read and write decimals in word form and to develop a concept of their size or value.

RELATED INFORMATION:

The following ad appeared in a newspaper: "Collars reduced from \$0.98 to \$0.50". If you can read \$0.98 or \$0.50 without using the word "cents", then you recognize \$0.98 and \$0.50 as decimal parts of a dollar. This is the most common use of decimals.

Decimals are a special way of writing fractions whose denominators are 10, 100, 1000, or any multiple of ten. Since decimals are only fractions in a different form, you must keep in mind that decimals are only parts of a unit. In reading decimals, the number to the right of the decimal point is the top number (numerator) of the fraction, while the bottom number (denominator) is determined by the number of places to the right of the decimal point. The digits to the right of the decimal point are known as certain decimal places.

PROCEDURE:

The following is a table that will help to recall the reading of decimals:

.6	One decimal place:	tenths	$\left(\frac{6}{10}\right)$
.06	Two decimal places:	hundredths	$\left(\frac{6}{100}\right)$
.006	Three decimal places:	thousandths	$\left(\frac{6}{1000}\right)$
.0006	Four decimal places:	ten thousandths	$\left(\frac{6}{10000}\right)$

Example A: $.98 = \frac{98}{100}$

There are two places to the right of the decimal point; therefore, the decimal place is hundredths.

Example B: A number like .125 means $\frac{1}{10} + \frac{2}{100} + \frac{5}{1000}$

But $\frac{1}{10} = \frac{100}{1000}$ and $\frac{2}{100} = \frac{20}{1000}$

Therefore $.125 = \frac{100}{1000} + \frac{20}{1000} + \frac{5}{1000}$ or $\frac{125}{1000}$

The easy way to read a decimal is to read the number after the decimal point and then give it the name of its last decimal place, as, in the above example, one hundred twenty-five thousandths.

A number like 12.125 is read as twelve and one hundred twenty-five thousandths. The word and is read only when you come to the decimal point.

The value of the decimal changes according to the position of the decimal point. Moving the decimal point one place to the left divides the value of the number by 10, while moving it one place to the right multiplies the value of the number by 10. This important relation is illustrated in the following arrangement of the number 3.055:

3.055	
30.55	This is 10 times the value of the number above it.
305.5	This is 10 times the value of the number above it.
3055.	This is 10 times the value of the number above it.

ASSIGNMENT:

Exercise I. Write the following numbers in words:

- | | |
|----------|----------------|
| 1. 9.46 | 6. 16.005 |
| 2. .346 | 7. 19.48 |
| 3. 24.06 | 8. .34 |
| 4. .0156 | 9. 178.8953 |
| 5. 34.7 | 10. 54,325.789 |

Exercise II. Read each number and then write it as a common fraction or as a mixed number.

- | | |
|---------|------------|
| 1. 3.5 | 5. .65 |
| 2. 9.98 | 6. .8 |
| 3. .785 | 7. 4.333 |
| 4. 8.37 | 8. 550.064 |

Exercise III. Write these numbers as decimals:

- | | |
|-------------------------|------------------------|
| 1. $\frac{16}{100}$ | 6. $\frac{702}{1000}$ |
| 2. $\frac{248}{1000}$ | 7. $28\frac{6}{10}$ |
| 3. $\frac{55}{100}$ | 8. $2\frac{56}{100}$ |
| 4. $2\frac{9}{10}$ | 9. $14\frac{1}{10}$ |
| 5. $16\frac{315}{1000}$ | 10. $\frac{630}{1000}$ |

Exercise IV. Write the following words in decimals:

1. Three hundred twenty-eight thousandths
2. Three thousand and five ten-thousandths
3. Eighty-six hundredths
4. Eighteen and two hundred ninety thousandths
5. Four hundred twenty-eight and four hundredths
6. Two and seven hundredths
7. Fifteen and eighty-four thousandths

Exercise V. Which of the following numbers have the same value?

1. .6 60 .60 .06 .600 600
2. 78 .78 7.80 780 .780 .0780

Exercise VII.

From a magazine or newspaper cut out or copy and bring to class five sentences or articles that contain decimals.

B. Changing decimals to fractions

1. Use the figure in the decimal as the numerator.
2. The figure for the denominator is 1 (one) followed by as many zeros as there are figures to the right of the decimal point.

Example: $.7$ equals $\frac{7}{10}$ The 7 is placed over 1 plus one zero because we have but one number after the decimal point.

$.75 = \frac{75}{100}$ Here we have two numbers after the decimal point, hence 2 zeros.

- C. Sometimes you will need to change a decimal or "disguised fraction" back to its fractional form. Follow this method:

Change $.375$ to 16ths

$$.375 = \frac{?}{16}$$

Multiply the decimal by the denominator of the fraction you want: 16 in this case. (Note that 3 decimal places must be marked off in the answer.)

$$\begin{array}{r} .375 \\ \underline{16} \\ 2250 \\ \underline{375} \\ 6.000 \end{array} = \frac{6}{16} = \frac{3}{8} \quad (\text{ans.})$$

Check this by changing $\frac{3}{8}$ to a decimal, as shown in A above.

D. Below is a sample of a decimal equivalents chart, a handy reference in the trade.

EQUIVALENT FRACTIONS AND DECIMALS

Fractions				Decimals	Fractions				Decimals
$\frac{1}{64}$	0.015 625	$\frac{33}{64}$	0.515 625

$\frac{16}{64}$	0.484 375	$\frac{63}{64}$	0.984 375
..	$\frac{1}{2}$	0.5

ASSIGNMENT:

Exercise I. Change the following fractions to decimals.
Do not use the chart except for checking.

- | | | |
|--------------------|-------------------|--------------------|
| 1. $\frac{3}{8}$ | 6. $\frac{6}{12}$ | 11. $\frac{8}{12}$ |
| 2. $\frac{1}{16}$ | 7. $\frac{1}{8}$ | 12. $\frac{7}{8}$ |
| 3. $\frac{15}{32}$ | 8. $\frac{3}{16}$ | 13. $\frac{1}{20}$ |
| 4. $\frac{5}{5}$ | 9. $\frac{7}{16}$ | 14. $\frac{5}{16}$ |
| 5. $\frac{9}{16}$ | 10. $\frac{5}{8}$ | 15. $\frac{9}{32}$ |

Exercise II. Change the following decimals to fractions and reduce to their lowest terms.

- | | | |
|---------|----------|----------|
| 1. .8 | 5. .4375 | 9. .55 |
| 2. .225 | 6. .0625 | 10. .90 |
| 3. .75 | 7. .8125 | 11. .780 |
| 4. .875 | 8. .15 | 12. .125 |
13. Change two feet, ten inches to the decimal part of a yard.
14. Change 11" to the decimal part of a foot. Carry your answer out to four decimal places.
15. What decimal part of a yard is 18"?
16. What common fraction has the same value as:
.4 .40 .400 .4000
17. What decimal part of an hour is 12 minutes?
18. Change the following decimals to the nearest 16th of an inch.
Use the chart to check your answer.
a. .8125 b. .4375 c. .1875 d. .5625
19. Using the decimal chart, change these decimals to fractions:
a. .28125 b. .40625 c. .96875 d. .59375
20. Since there are 12 units in a dozen, what decimal part of a dozen are the following:
a. 8 units b. 5 units c. 7 units d. 6 units

21. What decimal part of an hour is:

- a. 24 min. b. 30 min. c. 15 min. d. 50 min.

22. What decimal part of a yard is:

- a. $4\frac{1}{2}$ " b. 27" c. $13\frac{1}{2}$ " d. 24"

UNIT V - DECIMALS

Addition and Subtraction

Lesson No. 3

OBJECTIVE: To review the procedure of adding and subtracting decimals.

RELATED INFORMATION:

The addition and subtraction of decimals will be very simple for you if you remember just one rule -- Keep the decimal points under each other in a straight line.

A. Example: $67.5 + 4.125 + 8.96$

$$\begin{array}{r}
 67.500 * \\
 4.125 \\
 \underline{8.960} * \\
 80.585
 \end{array}$$

* Zeros have been added to fill the column. The value of a decimal does not change if zeros are added after the figures to the right of the decimal point.

Ex. : $.5 = \frac{5}{10}$, $.50 = \frac{50}{100}$, $.500 = \frac{500}{1000}$

All the above are equal to $\frac{1}{2}$. Their value was not changed by adding the zeros.

B. Example: Subtract 8.96 from 67.5

$$\begin{array}{r}
 67.50 * \\
 - 8.96 \\
 \hline
 58.54
 \end{array}$$

* Should the larger number in subtracting not extend to as many decimal places as the smaller, zeros may be added to the right of the decimal without changing its value.

PROCEDURE:

Remembering to keep the decimal points in a straight line, write the following as the teacher dictates, and add the columns.

1. $1.34 + .0254 + .706 + .00503 + .0704$
2. $36.04 + 9.00 + 547.0161 + 5.056 + 39.98$
3. $14.0014 + 7.43 + 5.5 + 6.006$
4. $2.1 + .003 + 103.5 + 17.205$
5. $75.07 + 5.945 + 116.05 + 9.028$

Subtract the following:

6. $306.6 - 32.09$
7. $205.06 - 140.$
8. $302.09 - 215.387$
9. $1035.61 - 907.47$
10. $78.5137 - 59.306$

ASSIGNMENT:

1. Change $\frac{4}{5}$, $\frac{2}{3}$, $\frac{5}{6}$ and $\frac{3}{4}$ to decimals and add.
2. Change .5, 3.5, .75, and .4 to common fractions and add.
3. What is the difference between the first number and the second in the following problems?

- a. $11.90 \quad 3.05$
- b. $5.98 \quad 4.50$
- c. $6.125 \quad 3.02$
- d. $402.5 \quad 23.09$
- e. $67.5132 \quad 49.607$
- f. $.263 \quad .096$

4. Add and check the following examples:

- | | | | | | | | |
|----|-------------------------|----|--------------------------|----|------------------------|----|--------------------------|
| a. | 1.25 | b. | 1.8 | c. | $.379$ | d. | 24.056 |
| | $57.$ | | 2.6 | | 2.05 | | 18.287 |
| | $.32$ | | $.759$ | | $.876$ | | $.94$ |
| | $.18$ | | $.375$ | | $.91$ | | 7.876 |
| | <u>$48.$</u> | | <u>1.48</u> | | <u>$.8$</u> | | <u>$.093$</u> |

5. $35.8 + 8.07 + 81.54 - 2.69 + 38. - 12.20 =$
6. $.053 + 5.15 + .5 - 2.935 + .007 =$
7. $\$9.56 + \$3.65 + \$15.95 - \$6.98 + 75¢ =$
8. $7.886 + 25.08 + 17.92 + 9.0 + 25.477 =$
9. How much more than \$6.85 is \$12.10?
10. What number subtracted from \$30 gives \$8.25?

UNIT V - DECIMALS

Multiplication

Lesson No. 4

OBJECTIVE: To practice multiplication of decimals as used in the trade.

RELATED INFORMATION:

Next to addition, multiplication is the most frequently used operation in arithmetic. It is used not only in figuring materials costs and labor costs, but also in the extension of invoices, purchase orders, etc. The terms used in multiplication are shown in the following example:

$$\begin{array}{r} 2.5 \text{ multiplicand} \\ \times \quad 5 \text{ multiplier} \\ \hline 12.5 \text{ product} \end{array}$$

PROCEDURE:

In multiplying, the most common error made is the wrong placement of the decimal point. To keep from making this mistake, follow these simple rules:

- a. Multiply, as in whole numbers, paying no attention to the decimal point.
- b. Count the number of decimal places in the two numbers you are multiplying.
- c. In the product, count off from the right the combined number of places and insert the decimal point.

For example:

A. 3.69×7.8 2 places + 1 = 3 places in the product

$$\begin{array}{r} 3.69 \\ \quad 7.8 \\ \hline 2952 \\ 2583 \\ \hline 28782 \end{array} = 28.782$$

Since there is one decimal place in the multiplier and 2 in the multiplicand, there is a total of 3 decimal places. Therefore, the decimal point in the product is placed before the 3rd figure counting from the right.

B. 12.75×12

2 places in just the multiplicand.

$$\begin{array}{r} 12.75 \\ \times \quad 12 \\ \hline 2550 \\ 1275 \\ \hline 15300 \end{array} = 153.00$$

Point off two places.

C. $.25 \times .25$

2 places + 2 places = 4 places

$$\begin{array}{r} .25 \\ \times .25 \\ \hline 125 \\ 50 \\ \hline 625 \end{array} = .0625$$

Rule: Point off four places.
Note that your answer consists of only three places. Therefore, a zero must be inserted to create the needed fourth place.

ASSIGNMENT:

1. Multiply the following:

- a. $23 \times .3$
- b. $.25 \times 5$
- c. 30.5×12.5
- d. $302 \times .009$
- e. 22.75×11
- f. $.235 \times .25$

2. If the cost of one 14" O. T. zipper was \$0.1234, what would be the cost of 144 zippers?

3. A dressmaker bought 2 pieces of batiste, at $42\frac{1}{2}$ ¢ per yard. One piece measured $41\frac{3}{4}$ yards and the other $48\frac{1}{2}$ yards. What was the total cost?

4. Find the cost of the following:

- a. 20 yards of drill cloth @ $22\frac{1}{2}$ ¢ per yard
- b. 24 yards of dacron/cotton @ 75¢ per yd.
- c. 13 yards of taffeta @ 85¢ per yard
- d. 5 yards of organdy @ $62\frac{1}{2}$ ¢ per yard
- e. 15 yards of percale @ $39\frac{1}{4}$ ¢ per yard

5. The following items were received at the beginning of the month. Figure the cost of each item.

- a. 15 cones of white thread @ \$1.42 per cone
- b. 36 cards of middy braid @ 9¢ a card
- c. 24 sets of chevrons @ 25¢ a set
- d. 11 boxes of thread @ \$2.48 a box

UNIT V - DECIMALS

Division

Lesson No. 5

OBJECTIVE: To practice division of decimals as used in the trade.

RELATED INFORMATION:

The division of decimals is done essentially the same as for whole numbers except that the position of the decimal in the quotient is important. You know from previous lessons that the incorrect placement of the decimal point can completely change the value involved. The terms used in division are shown in the following example:

$$\begin{array}{r} \text{quotient} \\ 2.15 \\ \hline \text{divisor } 5 \overline{)10.75} \\ \text{dividend} \end{array}$$

PROCEDURE:

In the division of decimals you will come across three different types of problems:

- A. Dividing a whole number into a number containing a decimal.

$$5 \overline{)10.75}$$

First place the position of the decimal point for the quotient directly above the decimal point in the dividend.

$$5 \overline{)10.75}$$

Then divide $\begin{array}{r} 2.15 \\ \hline 5 \overline{)10.75} \end{array}$

This is the simplest of all types of division of decimals.

- B. Dividing a whole number into a number where an exact answer is required to at least 3 decimal places.

$$3 \overline{)1073}$$

First place the decimal point at the end of the dividend and add a zero or as many zeros as needed.

$$3 \overline{)1073.000}$$

Place the decimal point for the quotient directly above the decimal point in the dividend.

$$3 \overline{)1073.000}$$

Then divide $\begin{array}{r} 357.666\bar{2} \\ \hline 3 \overline{)1073.000} \end{array}$

C. Dividing a decimal number into a decimal number.

$$.78 \overline{)93.99}$$

First, to mark the correct position of the decimal point in the quotient:

- Move the decimal point in the divisor to the extreme right, - in this case 2 places. .78 becomes 78.
- Move the decimal point to the right the same number of spaces in the dividend (in this case, two places). 93.99 becomes 9399.
- Mark the position in the quotient directly above the decimal point in the dividend.
78/9399.
- Divide. You can see that this problem needs an additional zero. You may add as many zeros as needed to complete the problem.

$$\begin{array}{r} 120.5 \\ 78 \overline{)9399.0} \\ \underline{78} \\ 159 \\ \underline{156} \\ 390 \\ \underline{390} \\ 0 \end{array}$$

D. Dividing a whole number by a decimal number.

Ex. Divide 326 by .25

First make the divisor a whole number by moving its decimal point to the right of the last figure (two places).

$$.25 \overline{)326}$$

Add as many zeros to the dividend as are necessary to equal the number of places moved in the divisor (two places).

$$25 \overline{)32600}$$

By removing the decimal point in this manner, the quotient is a whole number.

$$\begin{array}{r} 1304 \\ 25 \overline{)32600} \end{array}$$

Can you explain what we are doing when we move the decimal point the same number of places in both divisor and dividend?

ASSIGNMENT: (Be sure to include the dollar sign in your answer when needed.)

- | | |
|-----------------------|--|
| 1. $\$24.57 \div 9$ | 6. $.1368 \div 38$ |
| 2. $2.886 \div 6$ | 7. $4.958 \div 74$ |
| 3. $\$1.92 \div 8$ | 8. $213.726 \div 537$ |
| 4. $.01875 \div .625$ | 9. $1.125 \div 10.3125$ |
| 5. $\$8.38 \div .335$ | 10. $\$10.28 \div 27\frac{1}{2}\text{¢}$ |
-
11. In figuring the cost of a dress, \$4.23 was allowed for fabric. How many yards @ 72¢ a yard can be used?
 12. At \$2.98 a yard, how many yards of silk can be bought for \$17.14?
 13. The area in shop that could be used for work tables was 8.5 feet wide and 25.5 feet long. How many times the width is the length?
 14. At 24¢ a box, how many boxes can be purchased for \$125.52?
 15. A firm received 236 yards of fabric. The invoice amounted to \$159.89. What was the cost per yard?
 16. If an operator works 36 hours a week and makes a dress every 1.5 hours, how many dresses does she complete at the end of the week?
 17. At \$0.165 a dozen, how many dozen buttons can be bought for \$18.15?
 18. Divide each of the following by 3.1416
 - a. 15,
 - b. 17,
 - c. 340

UNIT V - DECIMALS

Short Processes

Lesson No. 6

OBJECTIVE: To learn short cut methods of working with decimals.

RELATED INFORMATION:

Time is one of the most important factors in successfully accommodating customers. Anything that helps to save time is of utmost importance. Whenever we wish to multiply or divide by such numbers as 10, 100, 1000, etc., we can save time by using short processes.

PROCEDURE:

Short processes for multiplication:

A. Find the following products:

- (1) $10 \times .035$ (2) $10 \times .35$ (3) 10×3.5

What happens to the decimal point of the multiplicand when you multiply by 10?

B. Multiply the following:

- (1) $100 \times .035$ (2) $100 \times .35$ (3) 100×3.5

What happens to the decimal point of the multiplicand when you multiply by 100?

C. Multiply the following:

- (1) $1000 \times .035$ (2) $1000 \times .35$ (3) 1000×3.5

What happens to the decimal point of the multiplicand when you multiply by 1000?

The above examples teach you this simple rule:

To multiply a number

- a. by 10, move the decimal point one place to the right.
- b. by 100, move the decimal point two places to the right.
- c. by 1000, move the decimal point three places to the right.

Remember that a whole number may be considered to have a decimal point after it.

$$59 = 59.$$

Practice: In the following examples write the product only:

- | | | |
|-----------------------|------------------------|-----------------------|
| 1. 10×10.75 | 4. 1000×32.1 | 7. 100×280 |
| 2. $100 \times .1134$ | 5. 100×6.75 | 8. $10 \times .67$ |
| 3. 10×652 | 6. $1000 \times .0065$ | 9. 100×10.19 |

To multiply by 200, multiply by 2 and then move the decimal point two place to the right. How would you multiply by 300? 500?

Example: $200 \times \$4.75 = \950.00

Short Processes for Division:

To divide a number by:

- 10, move its decimal point one place to the left.
- 100, move its decimal point two places to the left.
- 1000, move its decimal point three places to the left.

Practice: Using the short processes, divide:

- | | |
|---------------------|------------------------|
| 1. $67.50 \div 10$ | 4. $750.693 \div 1000$ |
| 2. $29.80 \div 10$ | 5. $.57 \div 10$ |
| 3. $68.00 \div 100$ | 6. $.069 \div 10$ |

ASSIGNMENT:

1. If it costs \$3.17 to make one dress, how much would 100 dresses cost at the same rate?
2. In a community chest drive, \$98.50 was collected from 100 employees. What was the average per person?
3. If the average price of wool is \$0.406 a pound and cotton is \$0.2974 a pound:
 - a. What is the price of 100 lbs. of each?
 - b. What is the price of 1000 lbs. of each?
4. A buyer ordered 100 dresses @ \$10.75 each. What was the total cash amount of her order?
5. Ten yards of taffeta @ 89¢ a yard was used in the making of a slip. What was the total cost of the taffeta?
6. If the bill for 100 zippers came to \$27.85, what was the average cost per zipper?

UNIT V - DECIMALS

Rounding Off Decimals

Lesson No. 7

OBJECTIVE: To learn the rule for rounding off decimals in the needle trades.

RELATED INFORMATION:

Many problems in decimals do not come out evenly and it is hard to determine just where to stop the process and still have a sufficiently accurate result. The number of decimal places to which answers should be carried is largely determined by the trade practice. In needle trades, it is sufficiently accurate to continue the problem until there are three decimal places in the answer. Then the answer is rounded off to two decimal places. The process of expressing a decimal to the degree of accuracy used in the trade is called "rounding off decimals".

PROCEDURE:

The following rules apply to most of the problems in the needle trades where the answer contains three decimal places "rounded off" to two decimal places:

1. If the third figure after the decimal point is 5 or more, the figure in the second decimal place is increased by 1 (and the third figure is dropped),
2. If the figure in the third decimal place is less than 5, it is dropped.

Example: $2.5 \div .06 = 06.\overline{250.000}$

$$\begin{array}{r} 41.666 \\ 06.\overline{250.000} \end{array}$$

- a. Note that in the problem $.06\overline{)2.5}$, zeros are added in order to carry the quotient to three places.
- b. Look at the third decimal place to determine whether or not the second digit should remain the same or be increased.
(.666)
- c. In this case the digit, 6, is more than 5. The second-decimal-place figure is increased to 7. The answer is "rounded off" to 41.67.

Practice: Round off the following:

- | | |
|-------------|-------------|
| 1. .756 | 6. 18.2702 |
| 2. \$1.9575 | 7. 221.7557 |
| 3. 7.324 | 8. .8967 |
| 4. 29.409 | 9. \$.625 |
| 5. 2.5644 | 10. 18.762 |

ASSIGNMENT: Round off the answers to the following problems to two decimal places:

- | | |
|--------------------------------------|------------------------|
| 1. $25.0097 + 0.9237 + 1.125$ | 11. $936.06 \div 2.25$ |
| 2. $.7895 + .6842 + 12.7 + 231.0924$ | 12. $128.5 \div 7.56$ |
| 3. $.1134 \times 125$ | 13. $19.575 - 8.756$ |
| 4. $.7895 \times 111$ | 14. $8.967 - .625$ |
| 5. 4.125×1.51 | 15. $25.6445 - 1.8762$ |
| 6. 44.002×21.10 | 16. $0.282 - 0.0924$ |
| 7. 3.1416×1.03 | 17. $.1134 - .0987$ |
| 8. $8.75 \div .063$ | 18. $1.056 - .565$ |
| 9. $1.5 \div 8.724$ | 19. $129.00 - 10.328$ |
| 10. $215.00 \div 46$ | 20. $11.7 - 8.032$ |

UNIT V - DECIMALS

Computations Using Decimals

Lesson No. 8

OBJECTIVE: To practice the use of decimals in various computations in the needle trades.

RELATED INFORMATION:

You have noticed that most of the calculations thus far have involved the use of money. Everything in a business costs money and every sound business must pay strict attention to money details. Thus far, we have considered materials costs and shipping costs. Later we will cover other costs that must be taken into consideration for a successful and profitable business.

PROCEDURE:

The following problem is used to show the losses that a firm could have if it did not figure its production to fill the demands of the day and if it did not keep a close check on waste. Many firms overproduce certain garments. In so doing, they may have more merchandise "on the racks" than they can really sell. These garments eventually are sold at a loss.

Example: A "lot" consisting of 350 dresses in style #802 was cut. A check showed that only 209 garments were sold. The materials cost for this style was \$2.93. What would be the total materials cost of the complete lot? What is the materials cost of the unsold garments? If, at the end of the season these garments were sold at a loss of $\frac{1}{2}$ the materials cost, what would the total loss be?

ASSIGNMENT:

1. The trimming buyer of Claudia Co. kept a stock of 6" neck zippers on hand. Due to the changes in fashion, there was no need for 6" zippers. If at the end of the year, 265 zippers were sold @ 3¢ and their original cost was \$0.065, what is the loss on one zipper? on the 265 zippers?

2. A manufacturer purchased 1000 yards of spun print @ 68¢ a yard to be used in style #805. In cutting the first lot, 455½ yards were used. The manufacturer soon found out that this particular style was not "reordering". Finding no other use for this fabric, the manufacturer sold it at \$0.435 per yard. What was the loss per yard? What was the total loss?
3. A firm purchased 675 zippers from Belbro Notion Company @ \$0.1387 each. At a later date, the firm decided to purchase the same amount of zippers directly from a zipper manufacturer and paid \$0.1134 each for the same type zipper. What was the saving per zipper when purchased directly from the manufacturer? What was the total saving?
4. A set of four rhinestone buttons costing 50¢ each appeared on the designer's "original" of style #607. To reproduce the style cheaply in quantity, the production department decided to use a similar but less expensive button selling @ 37¢ each. What was the total saved by using the less expensive button on 320 garments?

UNIT VI - PERCENTAGE

Pre-Test No. 6

Exercise I. Fill in the missing figures.

	<u>Fraction</u>	<u>Decimal</u>	<u>Percentage</u>
1.			50%
2.	$\frac{1}{3}$		
3.		.0625	
4.	$\frac{5}{12}$		
5.		$.66\frac{2}{3}$	
6.	$\frac{3}{8}$		
7.		.60	
8.			$87\frac{1}{2}\%$
9.			5%
10.		.5625	

Exercise II.

1. What is the 2% sales tax on \$748.50?
2. Change $6\frac{1}{5}$ to a decimal.
3. Find $\frac{1}{4}\%$ of 300.
4. What is the interest on \$1500.00 @ $2\frac{1}{2}\%$?
5. What is the percentage mark-down on a dress that originally sold for \$69.00 and is now selling for \$46.00?

Exercise III. Determine what percent

1. 36 is of 48.
2. 50 is of 75.
3. 8 is of 64.
4. 2 is of 5.
5. $\frac{1}{2}$ is of 4.

Exercise IV. Figure the following discounts:

1. 2% of \$118.63.
2. 8% of \$10.75.
3. $33\frac{1}{3}$ % of \$49.95.
4. 2% of \$254.14.
5. 25% of \$89.95.
6. 8% of \$127.50.

Exercise V. Find the missing numbers if:

1. $12\frac{1}{2}$ % of a number is 32 _____.
2. 6% of a number is 36 _____.
3. 80% of a number is 10.20 _____.
4. 15% of a number is 6.45 _____.
5. 35% of a number is .7945 _____.

CLEARANCE
33 $\frac{1}{3}$ % to 50%
off

**Profit Ratio
At Big Stores Off
To 2.8%; Sales Up**

**75% of Fall Budgets Spent
By Apparel Buyers in June**

**Big Store April
Sales Down 6%;
Stocks Off 4%**

**Fur Workers,
Makers Okay
3-Year Pact**

**Pay Raised 9-12%;
Contracting Hit**

**Sales in Week
At Department
Stores Up 5%**

**RAYON MOVEMENTS
DOWN 11% IN JUNE**

65% Dacron & 35% pima cotton

THESE NEWSPAPER CLIPPINGS ILLUSTRATE THE USE OF PERCENTAGE TO EXPRESS SOME SITUATIONS RELATED TO THE NEEDLE TRADES.

UNIT VI - PERCENTAGE

Review

Lesson No. 1

OBJECTIVE: To recall the terms and the uses of percentage.

RELATED INFORMATION:

Needle trades calculations in percentage have to do with determining rates or amounts of increase, decrease, discount, interest, commission, gain, loss, average, etc

The term "per cent" means hundredths and instead of writing the word "per cent" each time, the symbol % is used. For instance, 12% means $\frac{12}{100}$. You will find the word used frequently in papers, magazines, on the radio, and television.

The principles of arithmetic found in percentage are similar to problems found in fractions. There can never be enough emphasis placed on accuracy in the use of fractions, as the needle trades worker uses fractions throughout her math work.

The only difference between finding a "per cent" of a number and finding the fractional part of a number is that in percentage a per cent (%) changed to a decimal fraction is used, and in finding a fractional part of a number a common fraction is used. Thus to find 50% of a number, 50% is changed to .50 (which is the same as finding $\frac{1}{2}$ of the number).

PROCEDURE:

The use of $\frac{100}{100}$ or 100% is the basis of comparison used in percentage. The percentage value is changed to the decimal system for ease in computing and accuracy in pointing off the number of decimal places.

Following is a table showing different ways of expressing fractions, decimals, and percentage:

<u>Expressed in Words</u>	<u>Fraction</u>	<u>Decimals</u>	<u>Percentage</u>
One-hundredths	$\frac{1}{100}$.01	1%
Ten-hundredths	$\frac{10}{100}$.10	10%
One hundred hundredths	$\frac{100}{100}$	1.00	100%
One hundred fifty hundredths	$\frac{150}{100}$	1.50	150%
One hundred seventy-five thousandths	$\frac{175}{1000}$.175	17.5%

A. The rules for changing per cent to decimals:

Example: 12%

1. Remove the % sign. 12
2. Change to a decimal by placing a decimal point 2 digits to the left of the number for the given per cent.
(Note that this is the same as dividing by 100.) .12

B. There are times when you will need to change a fraction into "percentage".

Example: $\frac{1}{8}$

1. First change the fraction into a decimal by dividing the numerator by the denominator as learned in the previous unit. $\frac{.125}{8/1.000}$
2. The decimal .125 is then changed into percent by moving the decimal point two places to the right. 12.5%

ASSIGNMENT:

Exercise I. Work out the following:

	<u>Fraction</u>	<u>Decimal</u>	<u>Per Cent</u>
1.	$\frac{7}{8}$		
2.	$\frac{5}{12}$		
3.	$\frac{1}{3}$		
4.	$\frac{5}{16}$		
5.	$\frac{3}{10}$		

Exercise II. Change these per cents to decimals:

6. $3\frac{4}{5}\%$
7. 110%
8. 18%
9. $16\frac{1}{2}\%$
10. 6%

Exercise III. Change these decimals to per cent:

11. .875
12. 1.625
13. .8
14. .1875
15. 2.15
16. If a cutter was asked to cut only $33\frac{1}{3}\%$ of 396 yards of material on hand, how many yards would he cut?
17. In checking your pre-test paper, you found you had $12\frac{1}{2}\%$ of the questions wrong. What fraction of the questions were wrong? There were 32 problems. How many were wrong?
18. A box holds 16 spools of thread when full. There are 5 spools left in the box at the end of the month. What per cent of spools remain in the box?
19. At the end of the summer season, bathing suits were marked down 20%. What would be the sale price of a suit that originally cost \$17.95?
20. Bring to class 5 articles from newspapers or magazines that use per cent.

UNIT VI - PERCENTAGE

Types of Percentage

Lesson No. 2

OBJECTIVE: To learn to solve the types of problems encountered in percentage.

RELATED INFORMATION:

In working with percentage it is important to completely understand the problem. Three terms are used in percentage: base, rate, and percentage. The base is the number on which the percentage is computed; it represents the whole or 100%. The rate shows how many hundredths are used. The percentage is the product of the base and the rate. For example: in the problem of finding 5% of \$625, \$625 is the base, 5% is the rate, and \$3.25 is the percentage.

PROCEDURE:

There are three distinct kinds of problems involving percentage:

TYPE A. Finding a certain per cent of a number.

Example: A store advertised that dresses originally priced at \$12.98 would be reduced 25%. How much is actually deducted from the selling price?

1. Change the per cent to a decimal. $25\% = .25$

2. Multiply the number by the decimal.

\$12.98
x .25

6490
2596

32450 = \$3.25

Rule: Base x rate = percentage
 $\$12.98 \times 25\% = \3.25 (amount of reduction)

TYPE B. Finding what per cent one number is of another.

Example: Fabric which had been selling for 96¢ a yard was reduced 35¢ on a yard. What per cent of the original selling price was the discount price?

1. Write the fractional part one number is of the other. $\frac{35}{96}$
2. Change this fraction to a decimal.

$$\begin{array}{r} .3645 \\ 96 \overline{)35.00} \\ \underline{28\ 8} \\ 6\ 20 \\ \underline{5\ 76} \\ 440 \\ \underline{384} \\ 56 \end{array}$$

3. Change the decimal to per cent.

$$.365 = 36.5\%$$

Rule: Percentage \div base = rate
 $35 \div 96 = 36.5\%$

TYPE C. Finding a number when the per cent of it is known.

Example: At the end of the season, fabric was sold for \$1200. This amount was 64% of its original cost. What was the original cost of the fabric?

1. Change the per cent to a decimal. $64\% = .64$
2. Divide the per cent into the number given. $.64 / \underline{1200.00}$
 1875.00

Rule: Percentage \div rate = base
 $\$1200 \div 64\% = \1875

ASSIGNMENT:

1. Work the following problems:

- | | |
|---------------|------------------|
| a. 10% of 65 | f. 100% of 764 |
| b. 12% of 14 | g. 25% of 1086 |
| c. 72% of 450 | h. 2% of 28 |
| d. 65% of 48 | i. 86% of 230.30 |
| e. 3% of 100 | j. 34% of 17.6 |

2. If \$9.00 was 16% of a girl's weekly salary, what did she earn in a week? In 24 weeks?
3. A sewing machine costing \$255.00 was sold at a loss of $33\frac{1}{3}\%$. What was the selling price?
4. $37\frac{1}{2}\%$ of an operator's yearly income is \$1135.00; what is her yearly income?
5. A two-piece dress which takes an operator 3 hours to make requires 12% of the time on the skirt. How many hours were spent on the jacket?
6. In calculating the selling price of a garment, 30% of the selling price was allowed for mark-up. What is the cost of a garment that sells for \$12.75?
7. The following ad appeared in a newspaper:

FINAL CLEARANCE ON ALL SUMMER FASHIONS

a. Dresses	\$69.95	Reduced	$33\frac{1}{3}\%$
b. Suits and Coats	159.00	Reduced	30%
c. Gowns	245.00	Reduced	25%
d. Separates	14.95	Reduced	33%

What is the amount of reduction and final discount price on each item?

8. In a school of 450 students 22% were absent one day due to a heavy storm. How many students were absent?

9. A forelady in a shop who was being paid \$1.90 an hour, received a notice in her pay envelope stating that because of good work her hourly rate would be increased 10%. What will be her daily increase if she works 7 hours?
10. The net profits of a business for one year were \$190,000. The following year they were $4\frac{3}{4}\%$ greater. How much was the increase in profits in the second year?
11. Following is a list of items that are being sold at a discount. Figure the percentage of discount on each.

	<u>Original Price</u>	<u>Selling Price</u>	<u>% Discount</u>
a.	\$387.00	\$129.00	
b.	169.00	98.02	
c.	129.00	79.98	
d.	69.95	34.97	
e.	89.95	67.47	

UNIT VI - PERCENTAGE

Commercial Discounts

Lesson No. 3

OBJECTIVE: To develop an understanding of the application of percentage as used in commercial discounts.

RELATED INFORMATION:

As you know, goods are often sold for less than the marked price. When goods are sold for less than the marked price, they are said to be discounted. Of the four chief kinds of discount, which are cash, quantity, special sale, and trade discounts, the last (trade discounts) is the most common in the needle trades field. Trade discount is discount given by a wholesaler to a retailer. In the manufacturing of garments the allowance of 8% discount is generally given to the retailer. The terms stated are usually 8/10 E. O. M. which means eight per cent discount is allowed up to ten days after the end of the month.

The manufacturer in turn is allowed trade discounts, usually 1% or 2%, on fabrics, findings, etc.

PROCEDURE:

The following terms are a few of the discounts allowed in the needle trades field, both in manufacturing and retailing.

A. 8/10 E. O. M.

\$76.50	Example: On June 23rd a retail customer bought 6
<u>.08</u>	dresses @ \$12.75 making a total of \$76.50 due the
\$6.1200	manufacturer. The discount allowed was 8/10 E. O. M.

What was the discount allowed and up to what date could this deduction be made?

Answer: A discount of \$6.12 was allowed up to July 10th.

B. 1% net E. O. M. (One per cent allowed before the end of the month)

\$29.10	Example: A manufacturer was allowed the above dis-
<u>.01</u>	count on a bill for zippers dated June 10th, amounting
\$2.910	to \$29.10. What was the discount allowed and up to

what date could this deduction be made?

Answer: A discount of 29¢ was allowed up to June 30th.

C. 2% net 10/60

\$565.00
 .02
 \$113000

Example: A manufacturer was allowed the above discount on a bill for piece goods amounting to \$565.00 purchased on June 14th. What was the discount allowed if the bill was paid on July 30th?

Answer: The above term means that 2% is allowed up to 70 days. Since July 30th falls within that time, 2% or \$11.30 can be deducted from this bill.

D. Series Discounts

Some dealers allow two or more discounts, called chain discounts or series discounts. This method of discount is figured as follows: find the discount allowed at the first rate and subtract it from the price; then find the discount on the balance at the given rate, and subtract it from the first discounted price. This is the new cost.

Example: For a cash payment, a \$350.00 television set is given chain discounts of 7% and 5%. Find the cash payment.

\$350.00	\$350.00	\$325.50	
<u> .07</u>	- 24.50	- 16.28	
\$24.50	<u>325.50</u>	\$309.22	cash payment
	<u> .05</u>		
	\$16.2750		

ASSIGNMENT:

1. During an end-of-the-season sale, a store offered spring coats at a discount of 25%. What would be the discount allowed on a coat marked \$50.00?
2. The following amounts were billed to a retail store for garments purchased: \$100.50, \$64.50, \$21.50, \$12.75. The discount allowed was 8%. What was the amount of the check needed for the payment of these bills?
3. A manufacturer received the following bills for shipments of fabrics during the month of June: \$470.25, \$201.85, \$565.01, \$121.41. What is the amount of discount allowed @ 2% net/60?
4. On June 10th, a manufacturer received a package of buttons amounting to \$46.50. The discount allowed was 1% E.O.M. What is the amount of the discount and when is the discounted bill due?

5. Some retail stores give a 2% discount for cash. If you purchased several items amounting to \$22.50 and you paid cash, how much did you pay for them?
6. A 6% discount was allowed on a formal gown marked \$98.95. A month later the same gown was again reduced 8%. Find the final selling price.
7. Employees in a retail shop are allowed 30% discount. If an employee bought a coat marked \$90.00, what did she pay for it?
8. Find the amount due on the following statements received:

	<u>Amount of Statement</u>	<u>Discount Allowed</u>	<u>Amount of Discount</u>	<u>Amount Paid</u>
a.	\$96.40	8%		
b.	\$3628.50	2%		
c.	\$335.45	33 $\frac{1}{3}$ %		
e.	\$297.24	3%		
f.	\$352.56	1%		

9. Clara bought a typewriter for \$74.00 and received chain discounts of 3% and 2%. Find the cost of the typewriter.
10. Make out a bill for the following items:

$3\frac{1}{4}$ yds. of silk @ \$1.25 per yd.
 $1\frac{1}{4}$ yds. pellaon @ 59¢ per yd.
 $5\frac{1}{8}$ yds. dacron/cotton @ 79¢ per yd.
 9 buttons @ 72¢ adoz.
 4 spools of thread @ 39¢ a spool

Discount 5% for cash.
 What is the amount of the cash payment?

11. Are chain discounts of 4%, 4%, and 2% greater, less, or the same amount as a flat 10% discount? Explain your answer.

UNIT VI - PERCENTAGE

Commissions

Lesson No. 4

OBJECTIVE: To learn how to use percentage in figuring commissions.

RELATED INFORMATION:

Some people are paid for their work at the end of each week, others at the end of two weeks, and still others at the end of each month. The money that these people receive is called wages or salaries. As you know, people who sell things are often paid a certain per cent of the sale price of what they sell. The money that these agents receive is called commission. Commissions are usually expressed in per cent.

PROCEDURE:

Commissions can be paid at any agreed figure. Some salesmen are paid both a salary and commission, others are paid a commission only, and still others are paid a salary plus a commission on merchandise sold above a certain figure.

Example: Joan is a salesgirl and receives a salary of \$40.00 a week plus 2% commission on all sales made. What is her commission on sales of \$235.00? What are her total earnings?

Answer:	\$235.00	\$40.00
	<u>.02</u>	<u>5.70</u>
	\$ 5.70	\$45.70 total earnings

ASSIGNMENT:

1. Mr. Jones works for Junior Miss Dress Company and receives a commission of 7% of the total net monthly sales. For the month of June his net sales were \$21,350.75. What are his total earnings for the month of June?

2. Find the commission earned by each of the following salesmen for the month of May. The commission rate is 6%.

<u>Salesmen</u>	<u>Amount of Sales</u>
A.	\$18,750.50
B.	\$25,675.75
C.	\$16,320.00
D.	\$10,550.50
E.	\$20,125.25

What was the total of commissions paid out to salesmen?

3. Suppose you are a clerk and are given $4\frac{1}{2}\%$ commission on the amount of your sales. What is your commission on a sale of (a) \$1.00? on (b) \$10.00? on a sale of (c) \$100?
4. Mr. Lee is paid a salary of \$200 a month plus 5% commission on net sales. For the month of May his gross sales were \$15,250.25 and returns amounted to \$1400.00. What were his earnings for the month of May?
5. What is the commission at 8% on (a) a dress that sells for \$12.75? (b) on 25 dresses? (c) on 75 dresses?
6. Mr. Jones received a commission of 5% on the first \$10,000 of merchandise sold and 2% on any amount over \$10,000. At this rate what would he earn on \$18,750.00?

UNIT VI - PERCENTAGE

Interest

Lesson No. 5

OBJECTIVE: To learn to figure simple interest on money borrowed.

RELATED INFORMATION:

When you borrow money, a certain sum, called interest, is paid for the use of this money. The amount of money, for the use of which interest is charged, is called the principal.

Very often businessmen borrow money to help them in their business. With good management they can often make more money by borrowing than by not borrowing.

PROCEDURE:

The amount of interest paid for the use of money depends upon three things: (1) the principal, that is, the amount of money borrowed; (2) the time for which the principal is used; (3) the rate of interest charged. The term rate of interest means a certain per cent of the principal for one year. For computing interest, the year is divided into 12 months of 30 days each. The date of maturity, or the day the money is due, is found by counting the days.

The following formula is a helpful way to find interest:

Interest = principal X rate X time (expressed in terms of years.)

You can write the formula $I = prt$.

Example A: Find the interest for one year on \$575.00 at the rate of 6%.

$$\begin{array}{r} \$575.00 \\ \times .06 \\ \hline \$ 34.50 \end{array}$$

1. Change the per cent to a decimal.
2. Multiply the principal by the per cent.

Find the interest if the above loan was made for just 60 days. Using 30 days as one month, 60 days equals two months or $\frac{2}{12}$ of a year, which equals $\frac{1}{6}$.

$$\begin{array}{r} \$ 5.75 \\ 6 / \$34.50 \end{array}$$

Divide the amount of yearly interest by 6.

Notice that the interest on any sum of money @ 6% for 60 days is 1% of the principal. Therefore, this simple rule applies: To find the interest on any sum for 60 days at 6%, just move the decimal two places to the left.

Example: \$575.00 = principal
 \$5.75 = interest for 60 days @ 6%

Example B: Find the interest on \$2400 for 3 years, 7 months, 18 days at 6%.

Solution:

Interest on \$1 for 3 yrs. at 6%	=	\$0.18
Interest on \$1 for 7 mos. at 6%	=	0.035
Interest on \$1 for 18 days at 6%	=	<u>0.003</u>
Interest on \$1 for 3 yrs. 7 mos. 18 days	=	\$0.218

Therefore the interest on \$2400 equals

$$2400 \times \$0.218 = \$523.20$$

Example C: Sometimes you know the amount of interest paid and wish to calculate the rate. You can also use the formula to find the missing rate of interest.

The formula is then changed into the form:

$$r = \frac{I}{pt.}$$

What is the annual rate of interest if the annual interest on a principal of \$250 is \$10?

Solution:

$$r = \frac{10}{250} = \frac{250 \times .04}{250 \times 10.00} = 4\%$$

ASSIGNMENT:

1. Mr. Green borrowed \$4000 from the bank for 6 months @ 5%. How much interest did Mr. Green pay?
2. Lois can buy a sewing machine if she borrows \$120. She will have to pay \$8 a month for 18 months. If she buys the machine she can make 36 dresses in a year. She figures she will make an average profit of \$7 a dress. Do you think she should borrow the money and buy the sewing machine? Prove you are right.
3. Find the interest on the following sums for 60 days @ 6%.
(a) \$865, (b) \$14.50, (c) \$893.75, (d) \$1355, (e) \$367.80
4. Find (a) the date of maturity for each of the following loans;
(b) the amount of interest due on the notes at the date of maturity:

	<u>Date</u>	<u>Time</u>	<u>Interest Rate</u>	<u>Principal</u>
a.	May 1	60 days	6%	\$600
b.	May 15	2 mos.	6%	\$750
c.	March 11	150 days	6%	\$500

5. Find the interest on each sum for 60 days @ 6%, 7%, 5%, and 4%:
(a) \$150, (b) 216, (c) \$960, (d) 120, (e) \$90
6. Find the annual rate of interest for the following loans:

	<u>Amount Borrowed</u>	<u>Time</u>	<u>Amount Paid Bank</u>
a.	\$300.00	6 mos.	\$318.00
b.	150.00	90 days	153.00
c.	200.00	6 mos.	206.00
d.	200.00	1 yr.	206.00
e.	200.00	3 mos.	206.00
f.	350.00	1 yr.	374.50
g.	80.00	30 days	81.00
h.	674.00	60 days	680.74

7. Compare the rate of interest on a loan of \$500 for a year on which \$30 interest was paid and a loan of \$1000 for 6 months on which \$30.00 interest was paid.

8. Find the interest on the following:

- a. \$4000 for 3 yr., 4 mos., 18 days @ 6%
- b. \$3200 for 1 yr., 1 mo., 15 days @ 6%
- c. \$500 for 2 yr., 3 mos., 11 days @ 6%
- d. \$4400 for 4 yr., 3 mos., 9 days @ 6%

9. Find the missing item in each of the following exercises:

	<u>I.</u>	<u>P.</u>	<u>R.</u>	<u>T.</u>
a.	---	\$1500	3%	4 yrs.
b.	\$70	\$350	---	5 yrs.
c.	\$81	---	6%	3 yrs.
d.	\$350	\$2000	---	7 yrs.
e.	---	\$1500	$3\frac{1}{2}\%$	5 yrs.

UNIT VI - PERCENTAGE

Determining Selling Prices

Lesson No. 6

OBJECTIVES: To learn the use of percentage in determining selling price.
To understand the importance of overhead costs in determining selling price.

RELATED INFORMATION:

As a business is operated for profit, it is obvious that the owner will obtain for each item that he sells a price that is as high as is practicable.

The basic factors in determining the selling price of goods are: cost of materials used, labor costs, and operating expenses or overhead expenses, which include rent, taxes, heat, light and power, salaries other than factory, depreciation, supplies, etc. Quite often overhead costs run up as high as 25% of the total sales.

As the selling price includes everything (the cost of the merchandise, overhead expenses, and the net profit), it is the whole amount and should be used as the base, or 100 per cent. Then the cost of the merchandise, the various overhead expenses, the net profit, the margin, and practically all financial items, can be stated as percentages of the sales of the business.

PROCEDURE:

In determining the selling price, a manufacturer usually sets a certain per cent of materials and labor costs to cover his overhead and profit.

Example A: Determining selling price when the cost, the rate of overhead, and the rate of profit are known.

The president of Junior Miss Dress Co. has figured that 18% of the sales must be allowed for overhead expenses. He also wishes to make a net profit of 10% of his sales. At what price should he mark an article that costs him \$10.80?

Solution:

Selling price = 100%

Overhead Expenses	=	18% of S. P.
Net Profit	=	10% of S. P.
		<u>28%</u>
Balance is cost		72%
		<u>100%</u>

That is, \$10.80 = 72% of S. P.

Therefore $\$10.80 \div .72 = \15.00 Selling Price

Check:

18% of \$15.00	=	\$2.70
10% of \$15.00	=	1.50
Cost of article	=	<u>10.80</u>
		\$15.00 = 100% or Selling Price

Example B: A merchant buys a hat for \$3.00 and sells it for \$4.00.
What is his per cent of profit?

Solution:

The base is \$4.00 and the percentage is \$1.00. The rate or per cent of profit is $\frac{1}{4} = 25\%$

Proof:

\$4.00
x .25
<u>2000</u>
800
\$1.0000 = \$1.00 or 25% of S. P.

Example C: The Jean & Jane Dress Store sold a dress for \$75.00 with a gross profit of 35%. What was the cost?

Solution:

Since the selling price is taken as 100%, the cost is 65% of the selling price, hence the cost is

$\$75.00 \times 65\% = \$48.75 = \text{cost of dress}$

ASSIGNMENT:

1. Find the selling price of each of the following:

	<u>Cost</u>	<u>Overhead</u>	<u>Rate of Profit</u>
a.	\$12.50	20% of S. P.	15% of S. P.
b.	52.25	15% of S. P.	21% of S. P.
c.	15.00	17% of S. P.	8% of S. P.
d.	6.50	30% of S. P.	16.5% of S. P.

2. A haberdasher's overhead is $24\frac{1}{2}\%$ of his sales. He pays \$1.33 each for men's shirts and clears 9% on his sales. At what price should he sell them?

3. Find the wholesale price of the following styles if the overhead expense is figured @ 22% of the sales and the profit at 12%:

a.	Style #896	cost \$7.47
b.	Style #335	cost 8.96
c.	Style #819	cost 15.60
d.	Style #835	cost 25.45
e.	Style #847	cost 3.87.

4. If you want to make a net profit of 10% on a coat that cost \$40, and your cost of doing business is 16%, what should you set as its selling price?

5. If an article costs you \$30 and you sell it for \$40, what is your per cent of profit when your cost of doing business is 15%?

6. If you know the cost, selling price, and the profit, how can you find the per cent of overhead based on the selling price?

7. A merchant's overhead expenses average 17% of his sales. At what price must he sell an article which cost him \$24.75, if he expects to make a net profit of 10% on his sales?

8. Find the cost of the following items for sale in the Kirsch Co. store:

	<u>Selling Price</u>	<u>Gross Profit</u>
a. Dresses	\$9.95	48.6%
b. Coats	\$59.95	39.8%
c. Shorts	\$4.99	36%
d. Blouses	\$2.99	25%
e. Suits	\$39.95	41%

UNIT VII - GEOMETRIC FORMS

Pre-Test No. 7

1. How does a square differ from a rectangle?
2. All of a six-storey building's 204' by 78' inside measure is occupied by the R & K Department store. How many square feet of floor space are occupied?
3. How many square feet in two square yards?
4. Find the area of a square 6' wide and 6' long.
5. Find the area of a rectangle 3 feet wide and 6 feet long.
6. How many square feet of floor space will be taken up by a cutting table $4\frac{1}{2}$ feet wide and 28 feet long?
7. What is the perimeter of a placemat which measures 18" long and 12" wide?
8. Draw a 4" circle. Give its circumference and area.
9. Identify the following geometric forms:

a

b

c

10. Find the missing values in each of the following:

	<u>Circumference</u>	<u>Diameter</u>	<u>Radius</u>
a.	88 inches		
b.		35 feet	
c.	154 feet		

UNIT VII - GOEMETRIC FORMS

Definitions of Geometric Forms

Lesson No. 1

OBJECTIVE: To learn to identify geometric forms.

RELATED INFORMATION:

In the study of geometry, we compare lines, angles, surfaces, and solids and we note the characteristics of such figures as the circle, square, rectangle, and triangle. A flat surface has two dimensions, length and width.

Needle-trade workers use angles and lines constantly in their work, especially in the making of patterns, placing of tucks, hemlines, necklines, and accessories.

PROCEDURE:

It is important to recognize the following lines and angles:

A vertical line is a straight line whose direction is toward the center of the earth.

A horizontal line is parallel with the horizon, and is perpendicular to a vertical line.

An oblique line is a straight line whose direction is neither vertical nor horizontal.

Parallel lines are two or more lines running in the same direction which are equidistant from each other, and which will never meet.

An angle is formed when two lines running in different directions meet.

A right angle is one of the four equal angles formed by the intersection of two lines which are perpendicular to each other.

An obtuse angle is greater than a right angle.

An acute angle is smaller than a right angle.

A triangle is a plane surface bounded by three straight lines.

A square has four equal sides and four right angles.

A rectangle has four straight sides with opposite sides equal and four right angles.

A parallelogram has four straight sides, the opposite sides of which are parallel to each other.

A circle is a plane surface bounded by a single curved line called its circumference, every point on which is equidistant from the center.

Parts of a circle:

A chord (DE) is a line joining any two points on a circle.

A diameter (AB) is a chord which passes through the center.

A radius (CO) is a line drawn from the center to any point on the circle. (OA and OB are also radii).

A circumference is the length of the circle.

ASSIGNMENT:

1. Using the clock as reference, tell what type of angle is formed when hands show the following time:

- | | | |
|---------|---------|----------|
| a. 3:00 | d. 6:45 | g. 4:15 |
| b. 2:45 | e. 1:30 | h. 10:20 |
| c. 5:45 | f. 9:00 | i. 12:55 |

2.

What type of angle is formed where the overall straps cross in view a? Where they join the cross-tab in view b?

3. In preparing a dress for smocking, in what direction do the lines which form the transfer dots, or guide dots, run?

.....

4. In basting a center back or center front guide line, what kind of line is used?

5. What types of angles are found in collar (a)? (b)? (c)?

6. At what angle to the stitching are pins placed when the hem is pinned?

7. A mitered corner forms what kind of angle?

8. What kind of plane surface is a pocket 4" by 4"?
9. A linen guest towel measures 12" by 18". What is its shape?
10. From fashion magazine or newspaper, bring into class five designs using geometric forms.

UNIT VII - GEOMETRIC FORMS

Angles

Lesson No. 2

OBJECTIVE: To learn the kinds of angles and how to measure and draw an angle.

RELATED INFORMATION:

An angle is the amount of turning between two lines that meet at a point. The point where the two lines meet is called the vertex of the angle. In the figure shown, B is the vertex of the angle ABC ($\angle ABC$), and AB and BC are the sides.

An arc drawn within the angle shows the amount of turning. In the series of angles shown below, as line AB turns in a counterclockwise direction, a larger angle is formed. To measure angles, a complete turn is divided into 360 equal parts, known as degrees (360°). A right angle is a quarter of a turn and has 90° . An angle that is less than a right angle is called an acute angle. An angle that is greater than a right angle is called an obtuse angle. If an angle is larger than a straight angle, it is called a reflex angle.

The tool used to measure or draw an angle is a protractor. The protractor has two semicircular scales. The outer one reads from 0° at the left to 180° at the right. The inner scale reads from 0° at the right to 180° at the left.

PROCEDURE:

To measure any angle, such as $\angle XYZ$, place the center of the protractor at vertex Y and the zero line exactly on side YZ. Begin at the 0° mark on the scale and follow to the point where the other side of the angle (XY) crosses the scale. You will see that the line crosses at 45° , which is the size of $\angle XYZ$. What kind of angle is $\angle XYZ$?

(If the side of an angle being measured is not long enough to meet the scale on the protractor, either lengthen the side or place the edge of a sheet of paper or a ruler so it falls on the side of the angle. Then read the scale where the paper or ruler crosses the protractor.)

To draw an angle of a given size, for example 45° , draw a line YZ with the edge of the protractor. Then place the protractor so that its center lies at the point where you wish the vertex to be. Be sure the zero line falls on line YZ. Locate 45° on the scale and make a dot with your pencil at that point. Label that point X. Connect Y to that point with a line YX.

ASSIGNMENT:

1. How many degrees are there in:
 - a. $\frac{3}{4}$ of a complete turn of one side of an angle from the other?
 - b. $\frac{1}{2}$ of a straight angle?
 - c. $\frac{1}{2}$ of a right angle?
2. How can you tell whether an angle is acute, right, or obtuse by using the corner of a sheet of paper?
3. What effect has the length of the sides of an angle on its size?
4. Use the protractor to draw angles of 30° , 75° , 90° , 120° .

UNIT VII - GEOMETRIC FORMS

Geometric Constructions

Lesson No. 3

OBJECTIVE: To learn a few fundamental constructions that will aid in constructing patterns and complicated designs.

RELATED INFORMATION:

To make constructions, a straight edge and compass are needed.

A  B To draw a line segment equal to AB:

1. Draw XY, any working line. X  Y
2. Find the length of AB by adjusting the compasses so that the metal tip falls at one end and the pencil tip at the other end.
3. With point X as a center and a radius equal to AB, draw an arc intersecting XY at W.

4. XW will equal the given line segment AB.

How can you construct a segment which is twice as long as a given segment?

PROCEDURE:

- A. To bisect a given line segment.

Suppose you wish to bisect line segment AB. With point A as a center and any radius more than half the length of AB, draw an arc as shown. With point B as a center, and the same radius, draw an arc intersecting the first arc, forming points C and D. Draw line CD intersecting AB at E. Then E is the mid-point of AB.

Notice that it takes two points to determine or fix the position of line CD.

In this construction CD is also perpendicular to AB. Hence CD is called the perpendicular bisector of AB.

B. To construct a perpendicular.

To construct a perpendicular at a point on a line, not the center (point B on line AC):

1. With point B as a center and any convenient radius, draw an arc intersecting AC at points D and E.
2. With any greater radius and points D and E as centers, draw arcs intersecting above line AC at point F.
3. Draw BF. BF is perpendicular (\perp) to AC at point B.

C. To bisect an angle.

$\angle MNR$ is to be divided into two equal parts.

1. With point N as a center and any convenient radius, draw an arc intersecting the sides of the angle at S and T.
2. With the same radius, or any radius over half the distance between S and T, and with point S as a center, draw an arc within the angle.
3. With point T as a center and the same radius used in step 2, draw an arc intersecting the first arc at point W.
4. Draw line NW. NW bisects $\angle MNR$.

ASSIGNMENT:

1. Draw a line on your paper $3\frac{7}{8}$ " long. Bisect it using compass and ruler.
2. Draw lines on your paper equal to those shown here. Construct a line perpendicular to AB at point C in each case.

3. Construct a 45° angle with only a compass and an unmarked straight edge.

UNIT VII - GEOMETRIC FORMS

Rectangle and Square

Lesson No. 4

OBJECTIVES: To learn how to find the area and the perimeter of a rectangle and a square.
To learn how to apply this information to the trade.

RELATED INFORMATION:

Areas are calculated by means of units of square measure in much the same manner that lengths and distances are calculated by units of linear measure. However, in calculating areas, the two dimensions representing length and width are multiplied together. Their product gives the area.

If the dimensions are in inches their product is square inches, and the area is in square inches, abbreviated sq. in. If the dimensions are in feet, their product is in square feet, abbreviated sq. ft.; if in yards, their product is square yards, abbreviated sq. yd. and the area is in square yards; and so on.

Square Measure

144 square inches (sq. in.)	=	1 square foot
9 square feet (sq. ft.)	=	1 square yard
1296 square inches	=	1 square yard

PROCEDURE:

In this lesson we will cover the calculation of areas of squares and rectangles.

THE SQUARE

The square is a plane figure having four equal sides and four square or right-angle corners. Referring to the figure to the left, the area of a square is equal to the length multiplied by the width. Since the length is the same as the width, the area of a square is equal to the square of a side (that is, the length of a side multiplied by itself).

This figure represents fabric 36" wide and 1 yard long. Since 1 yard is 36", to find the area of this material in inches, you would multiply 36" x 36" = 1296 square inches. What is the area in square yards?

THE RECTANGLE

A rectangle, sometimes called an oblong, is a plane figure also having four sides and four square or right-angle corners. It differs from a square in that only the opposite sides are equal.

By referring to the figure at the left, the area of a rectangle is expressed as the product of the length and the width.

This figure represents fabric 54" wide and 1 yard or 36" in length. The area of this material is 54" x 36" or 1944 sq. in. What is the area in square yards?

A distinction must be made between area and perimeter. The perimeter of a plane surface is the distance around it, and the area is the number of units of area on its surface.

What is the perimeter of the rectangle at the right? Notice that there are two sides each 6 yards long, and 2 sides 54" wide. The perimeter may be expressed as

$$2L + 2W = p$$

Substitute the dimensions of the rectangle for the letters in this formula and see what the result is:

$$2 \times 6 + 2 \times 1\frac{1}{2} (54") = \text{perimeter}$$

$$12 + 3 = 15 \text{ yards}$$

In a square, L would equal W. We could just use the letter S for any side. What then would be the formula for the perimeter of a square?

ASSIGNMENT:

1. How many square feet of floor space will be taken up by a cutting table 4 feet wide and 22 feet long?
2. How many square inches is taken up in a yard of 36" material if the pattern piece to be cut measures 12" wide and 18" long?
How many pattern pieces can be cut from the yard of material?
3. How many square yards are in a piece of fabric measuring 60" wide and $4\frac{3}{4}$ yds. long?
4. How many square yards of 36" material are required to make four pairs of cafe curtains if each curtain measures 3 feet wide and 2 feet long?
5. How many handkerchiefs 10" square can be cut from a piece of linen whose width is 10" and whose length is (a) $1\frac{1}{9}$ yd.? (b) 2 yards 8"? (c) 4 yards? (d) 20 yards?
6. How many square feet of floor space is taken up in a shop by the following equipment?

26 sewing machines	24" wide and 48" long
2 cutting tables	$3\frac{1}{2}$ feet wide and 7 feet long
2 work benches	5 feet wide and 8 feet long
1 ironing table	5 feet wide and 7 feet long
7. What is the area of the following? Indicate for each the name of the plane figure.

45" by 45" tablecloth	64" by 104" tablecloth
52" by 68" tablecloth	52" by 52" tablecloth
8. The outside edge of the following tablecloths were trimmed with a three-inch fringe. How much fringe was needed for each tablecloth? for 144 tablecloths in each size? What is the total length of fringe needed for all 432 tablecloths? (Give your answers in inches and in feet.)
 - a. 64" by 84"
 - b. 72" by 90"
 - c. 72" by 108"
9. If it takes 96 sq. yards of linoleum to cover a hallway 24 yards long, how wide is the hallway?
10. What is the cost per square foot of floor space if 12,000 square feet cost \$750,000?
11. A department store is re-covering all its 3 floors with hardwood. If the store is 24 feet long and 90 feet wide, what will be the cost at \$78 per 1,000 square feet?

UNIT VII - GEOMETRIC FORMS

Triangles

Lesson No. 5

OBJECTIVE: To learn about the types of triangles and how to find the area of triangles.

RELATED INFORMATION:

A triangle is a plane figure having three sides and three angles. Although they may be of various shapes, the area of any triangle equals one half the product of the base (the side on which the triangle appears to be standing) by the altitude or the vertical height, which is the same as saying one half the base times the height.

There are four types of triangles that we should learn to identify:

1. An equilateral triangle is one in which all sides are equal and all angles are equal.

2. An isosceles triangle is one in which two sides are equal and two angles are equal.

3. A scalene triangle is one in which none of the sides or angles are equal.

4. A right triangle is one which has one right angle. Could a right triangle also be equilateral? Isosceles? Scalene?

PROCEDURE:

The area of each of these triangles is equal to one-half the product of the base and altitude. $A = \frac{bh}{2}$

To show that this rule is true, cut out of paper a rectangle, as shown in the following drawings:

After drawing the diagonal as indicated, cut along it, cutting each piece into two triangular parts as shown. Check them against each other to see that they are identical in shape and size. Each one of these triangles, therefore, equals one half the whole area of the figure of which it is a part. Since the area of the rectangle equals the length (base) multiplied by the width (vertical height), then the area of each triangle would accordingly equal one half the base multiplied by the vertical height. Prove this by finding the area of the rectangle ABCD; of the triangle ABC.

Since the area of a triangle is equal to one half the product of the base multiplied by the height, the height may be found by dividing the area by one half the base; and the base may be found by dividing the area by one half the height.

Example: The area of a triangle is 48 square inches. If its base is 16", find the height.

$$h = \frac{A}{\frac{1}{2}b} = A \div \frac{1}{2}b$$

Therefore, $48 \div 8 = 6$ inches is the height.

Example: The area of a triangle is 108 sq. ft. Its height is 18 ft. Find the base.

$$b = \frac{A}{\frac{1}{2}h} = A \div \frac{1}{2}h$$

$108 \div 9 = 12$ feet in the base.

ASSIGNMENT:

1. Find the area of a triangle whose dimensions are as follows:

- a. Base 13", height 12"
- b. Base 8 ft., height 4 ft.
- c. Base 6 yds., height 3 ft.

2. Find the missing part in each of the following:

	<u>Area of Triangle</u>	<u>Base</u>	<u>Height</u>
a.	64 sq. in.	16"	?
b.	72 sq. ft.	?	12 ft.
c.	108 sq. ft.	3 yds.	?
d.	?	14 yds.	16 yds.
e.	38 sq. ft.	22 sq. ft.	?

3. A dress has 2 triangular pockets that measure 6" at the base and $5\frac{1}{2}$ " in height. What is the area of one pocket? two pockets
If sequins are set on the pockets $\frac{1}{4}$ " apart, how many sequins must be purchased for the two pockets?

4. With your protractor measure the angles formed in the rectangle WXYZ.

What do you observe about the sum of the angles of a rectangle? How many degrees are there in the sum of the angles of $\triangle XYZ$? of $\triangle XWZ$? Do you see that the sum of the angles of these two triangles is the sum of all four angles of the rectangle?

5. Find the third angle of a triangle if two of its angles are:

- a. 40° and 65°
- b. 43° and 47°
- c. 10° and 76°

6. What is the area of $\triangle XYZ$ in problem 4 if XY is 3" and YZ is 6"?

UNIT VII - GEOMETRIC FORMS

Area of a Circle

Lesson No. 6

OBJECTIVE: To learn how to measure the parts of a circle and how to find the area of a circle.

RELATED INFORMATION:

A circle is a plane surface bounded by a single curved line called its circumference. All points of a circle are equally distant from the center. The diameter is a line which passes through the center of the circle and divides the circle into halves. The radius is equal to $\frac{1}{2}$ the diameter; it is the distance from any point on the circumference to the center of the circle.

PROCEDURE:

Observe the circle at the left. Using a piece of string or thread, measure its circumference. Measure its diameter and radius. How does the length of the radius compare with the length of the diameter?

By actual measurement it can be found that the circumference of a circle is always 3.1416 times the diameter. This ratio of the circumference of a circle to its diameter (3.1416) has been given the Greek name pi, which is the Greek letter π .

The circumference of a circle is, therefore, equal to π times the diameter.

The area of a circle is equal to π times r^2 (which means 3.1416 x radius x radius).

Since 3.1416 is very nearly $3\frac{1}{7}$, hence, unless an exact measure is required, we usually use $3\frac{1}{7}$ instead of 3.1416.

When a number is multiplied by itself, it is said to be squared or raised to the second power. This is usually indicated by placing a small 2 just above and to the right of the number. For example, 3×3 may be expressed 3^2 . This is read as three squared or the square of 3. In the same manner, radius \times radius becomes radius^2 .

Radius may be abbreviated as rad., R, or r.

Diameter may be abbreviated as diam., D, or d.

Circumference may be abbreviated as circum., cir., or C.

The rule for the area of a circle is usually expressed in abbreviated form as: $A = \pi r^2$

Example A: Find the circumference of a circle when the diameter is given.

We have seen that the circumference of a circle is π times the diameter. This is conveniently expressed as:

$$C = \pi d, \text{ which means } C = 3\frac{1}{7} \times \text{diameter.}$$

For example: Find the circumference of a circle whose diameter is 14 feet.

Solution: $3\frac{1}{7} \times 14 = 44 \text{ feet.}$

Example B: Find the diameter of a circle when the circumference is given.

Since the circumference of a circle is equal to the diameter multiplied by π , the diameter may be found by dividing the circumference by π . That is $\frac{C}{\pi} = d$, which means $\frac{\text{circumference}}{3\frac{1}{7}} = \text{diameter}$

ASSIGNMENT:

1. Find the area of a circle that is 28" in diameter.
2. Find the diameter of a circle whose circumference is 44".
3. Find the circumference of a circle whose diameter is 66 ft.
4. Find the missing values in each of the following:

	<u>Circumference</u>	<u>Diameter</u>	<u>Radius</u>
a.	88 inches	?	?
b.	?	35 ft.	?
c.	?	?	21"
d.	?	10' 6"	?
e.	154 ft.	?	?
f.	?	28 ft.	?

5. Find the areas of circles whose diameters are:

a. 56" b. 70' c. 14 yds.

6. Find the areas of circles whose radii are:

a. 7 inches b. 12 feet c. 3 yards

59

Flatter your Figure

Use vertical lines so the eye moves up and down. Self color belts will be best for your figure.

Look Taller

Both of these lines are the same length but doesn't B appear to be somewhat longer than A?

Use shirring to enhance your bosom. Soft cowl drapes, bows and pockets are also very helpful.

Enhance Your Bosom

The vertical lines A and B are parallel, but don't they appear to bulge in the middle?

Concentrate all interest above the waistline. Yokes, wide lapels and pockets will broaden your shoulders.

Taper Your Hips

Lines B and D are the same but in contrast to C which is longer than A doesn't D seem shorter than line B?

Straighten your silhouette with unbelted two piece dresses and box jacket suits. "Easy fit" is your rule.

Hide Your Middle

The horizontal lines are the same length but doesn't line A seem to be a bit longer than B?

Use vertical lines, centered or at one side. Dull surfaced fabrics and plain sleeves are for you.

Look Slimmer

These oblong diagrams are the same size but doesn't B appear to be longer and slimmer than A?

Use horizontal tucks, shoulder accents, wide belts, full sleeves. No fussiness unless you are the type.

Add Pounds

These diagrams are the same size but doesn't the area of B look larger than the area of A?

UNIT VII - GEOMETRIC FORMS

Application of Geometric Forms to
Patternmaking and Fashion Accessories

Lesson No. 7

OBJECTIVE: To gain a clearer understanding of the application of geometric forms in the needle trades.

RELATED INFORMATION:

In the creation of a garment, it is important to study the design and determine what direction the lines of the garment will have. It is the direction of the line, whether it is vertical or horizontal, straight or curved, etc., that will determine whether or not the garment will enhance the figure.

Seam lines are not the only lines that affect the way a garment looks. Other lines such as darts, tucks, pleats, and folds of fabric in the garment-- folds that result from gathers, unpressed pleats, or draping-- also affect the overall design. Pockets, a conspicuous belt, trimmings of lace, ruching, or rickrack, even the outline of the silhouette are lines that determine the style of a garment.

A tool that is frequently used to form angles is the square rule, whose shape is a right angle.

PROCEDURE:

Example A: In the making of the yoke pattern, as shown in this blouse, it is necessary to understand the principle of forming a right angle.

By using a square rule placed on the center front line, at the desired distance from the center front neckline, a line was drawn across the front of the sloper pattern that was perpendicular to the center front line. These two lines form a right angle where they meet.

Example B: In the making of a cape sleeve, the amount of flare desired determines the curve of the circular shape needed. The following diagram shows a cape sleeve with exaggerated fullness. The straight line of this pattern represents the chord of a circle.

ASSIGNMENT:

1. A pique rectangle makes a bow at the neckline of a basic dress. The pattern measures two inches wide and 28 inches long. What is its area? The bows are to be cut along the length of the fabric. How much 36" pique would be needed to make bows for 140 dresses? (Draw a sketch.)

2. A circle is the basis for a circular skirt. How much novelty braid would be needed to trim the bottom edge of the skirt if the diameter of the circle is 54 inches? How much for 60 skirts?

3. What is the area of the largest circle that can be cut from a square piece of fabric 36" on one side? What is the total number of square inches remaining in the pieces that fall out? Express both answers to the nearest tenth of a square inch.

4. This pill-box hat is made from a circle whose diameter is $7\frac{1}{4}$ inches including seam allowances. The side band measures $1\frac{3}{4}$ inches including seam allowances. How much material is needed for two dozen pill-box hats?

5. This black basic dress was trimmed with a collar-band of satin. It measures $3\frac{1}{2}$ inches wide and 15 inches long, seams included. What is its surface area? What is the total area needed for 130 dresses? These are to be cut along the length of the fabric. How many yards of 39" material would be needed?

6. The rickrack used on this blouse is running vertically. How many yards would be needed for one blouse if the length of the blouse is 22" (hem included) and there are 9 rows of rickrack? How many yards for 132 blouses? What would be the total cost of the trimming if rickrack is .025¢ a yard?

7. In the making of this clown doll, a total of 79 circles $5\frac{3}{4}$ " in diameter, are used. What is the total area of the circles? If $1\frac{1}{4}$ yards of 36" material is needed for 79 circles, how many square inches of material are wasted?

UNIT VIII - ACCOUNTS

The Fundamental Elements of Keeping Accounts

Lesson No. 1

OBJECTIVES: To learn the importance of complete financial records for a successful business.
To learn to figure proprietorship in a business.

RELATED INFORMATION:

The success or failure of a business depends upon the management of the business. The object of bookkeeping is to record business transactions in a systematic manner so as to provide information which will aid in the management of a business.

A small business does not need elaborate records but should have simple, useful accounting records. Little time is required in keeping simple records but any successful small-business man must be kept posted on the condition of his business. Bad use of accounting controls is one reason so many small businesses fail.

Much of the success of a business depends on knowing what its assets and liabilities are at all times.

PROCEDURE:

The following terms are important in the understanding of record keeping.

Assets - resources of a business consisting of such items as cash, property, merchandise, fixtures, supplies, machinery, etc.

Liabilities - claims of creditors against the assets of the business.

Proprietorship - the interest of the owner of a business enterprise in the assets.

Account - a record of the debits and credits relating to property, persons, profits or losses, collected under an appropriate title.

The balance of an account - the difference between the debits and credits.

Books of Original Entry - the blank books in which the transactions are recorded as they occur; such as the Cash Book, Sales Book, etc.

The Ledger - contains the names of the accounts to which are transferred (or posted) all the debits and credits from the books of original entry.

Merchandise Inventory - the value of goods in stock at the close of a fiscal year.

Fiscal Period or business period - the time between statements; it may be from one month in length to one year.

Trial Balance - a list of the accounts in the ledger usually made monthly to test the accuracy of the posting.

Balance Sheet - a statement of assets, liabilities, and proprietorship made at the end of each fiscal period.

Profit and Loss Statement - a report of profits and losses for the fiscal period which shows the results of the operations for the period.

Accounts Receivable - accounts kept for record of sales of goods to customers on credit.

Accounts Payable - record of things purchased from creditors.

In this lesson we will cover one of the above mentioned terms:

A. Finding proprietorship

Let us assume that Mary Smith owns the following assets and has no liabilities: cash, \$4000; merchandise, \$3,200; accounts receivable (claims against customers), \$750; office furniture, \$450. A statement of the assets owned and her resulting proprietorship might be prepared as follows:

<u>Assets</u>	
Cash	\$4,000.00
Merchandise	3,200.00
Accounts Receivable	750.00
Office Furniture	450.00
Mary Smith, proprietorship	<u>\$8,400.00</u>

Since the total value of the assets must equal the proprietorship, we have the first fundamental equation:

$$\text{Assets} = \text{proprietorship}$$

B. Finding proprietorship when there are outstanding debts

It will rarely happen that the proprietor of a business will own the assets free from all debts. The rights in the assets must be divided between the proprietor and those who have claims against the assets. Let us assume that Mary Smith has the same assets listed above but owes \$850 for merchandise purchased. This statement would be prepared as follows:

<u>Assets</u>	
Cash	\$4,000.00
Merchandise	3,200.00
Accounts Receivable	750.00
Office Furniture	<u>450.00</u>
Total Assets	\$8,400.00

<u>Liabilities</u>	
Accounts Payable (due to creditors).....	850.00
Mary Smith, proprietorship.....	<u>\$7,550.00</u>
	<u><u>\$8,400.00</u></u>

The above statement employs the complete fundamental equation, which is:

$$\text{Proprietorship} = \text{Assets} - \text{liabilities}$$

ASSIGNMENT:

1. On June 1, 19__, Ethel Jones owned \$1400 in cash and a stock of merchandise worth \$1,750. What was Miss Jones' proprietorship in her business? Prepare a simple statement to show this.
2. On January 1, 19__, B. A. Dawson owned: cash, \$325, merchandise inventory, \$1250; furniture, \$250; accounts receivable, \$103.40; his liabilities were: notes payable \$350; accounts payable, \$224.80. What is Dawson's proprietorship? Prepare a simple statement to show this.

3. The assets of The Woodbridge Dress Shop on November 1, 19__, are \$6,000.00 and the liabilities are \$2,000; three months later the assets are \$7,500 and the liabilities are \$2,500. What change has taken place in proprietorship during the three months?
4. On July 1, 19__, Jane Smith owned \$2650.25 in cash and merchandise worth \$1975.50. Customers owed her \$1,123 and she had furniture and fixtures worth \$300. She owed creditors' \$935. Prepare a statement that will show the proprietorship of the owner.
5. If Miss Smith began the business mentioned in problem 4 above with a cash investment of \$3,975 on May 1, what has happened to her proprietorship during the two months?
6. On October 1, 19__, Grace Keenan has the following assets and liabilities:

Cash	\$2,875.25
Merchandise	1,890.00
Amounts due to creditors	1,025.00
Amounts due from customers	965.00
Furniture and fixtures	200.00
Delivery truck	2,050.00
Office supplies	45.00

Prepare a statement that will show the proprietorship of the owner.

7. How would you determine the proprietorship of the owner of a business?
8. A dressmaker tells you that she has "made money" during the past year. She has kept no records. What do you think makes her believe this? Might she be mistaken?

UNIT VIII - ACCOUNTS

Financial Records

Lesson No. 2

OBJECTIVE: To learn the proper procedure for adequate control of cash received and cash disbursed.

RELATED INFORMATION:

In a modern business office it is very important to arrange details so that the large number of business transactions may be recorded efficiently and quickly. Since so many business transactions involve the receipt or payment of cash, a separate journal in which to record only cash receipts and cash disbursements (payments) is used in most businesses to save time and work in recording cash transactions. The receipts and disbursements occupy opposite pages, the receipts on the left and the payments on the right. This will make it easy to compare them.

PROCEDURE:

In using a cash journal or cashbook, such as is illustrated on the following pages, all cash receipts are recorded on the left side of the cash journal and all cash payments are entered on the right side of the cash journal. The cash receipts book can be divided into the necessary columns, such as: Cash, Sales Discount, Accounts Receivable, Sundry, Name of Bank.

The cash payment book can be divided into the necessary columns, such as: Cash, Purchase Discount, Accounts Payable, and Sundry.

It is customary to balance the cash journal at the end of each month. A careful study of the illustration of the cash journal shows that, in balancing the journal, the horizontal rulings match across the two pages and that the final totals are in alignment.

Cash Receipts

19	Cash	Sales Disc.	Accts. Rec.	Deposits

ASSIGNMENT:

1. Rule up a form for a cash receipts journal and record the following:

Oct. 1, 19__, Ruth Bien invested \$4000 cash in her dress business.

4. Received \$250 cash from Frances Paine to apply on account.

4. Received cash \$500, from Anna Smith for her note due today.

4. Fran Smith paid her account in full, \$394. 50.

21. Grace Kean paid cash for invoice of October 1, \$925. 50.

26. Received cash \$155. 75 from Ethel Green for merchandise received.

31. Received cash from Helen Elliot for invoice of October 11, \$450.

Rule and close the cash receipts journal.

2. Use a cash payments journal and record the following transactions:

May 1, 19__, Paid cash for office supplies, \$18.00, check #101.

8. Paid R. Hollins in full \$362.80, check #102.

12. Paid Helen Crawford for her invoice of May 5, \$488.25, check #103.

17. Paid note due today in favor of Matthew Hinds, \$500, check #104.

24. Helen Bjerken, proprietor, withdrew cash for personal use, \$50, check #105.

30. Paid Helen Crawford for invoice of May 22, \$471.80, check #106.

Rule and close the cash disbursements journal.

3. Use a double sheet of journal paper and write up the cashbook for the following:

June 1, 19__, Edna Adams began business with a cash investment of \$4,500.

2. Paid F. C. Elliot, landlord, rent for June, \$175.
4. Sold a lot of merchandise for cash, \$125.
6. Paid \$20 cash for office supplies.
9. Received cash from Joan Bane on account, \$390.
11. Frank Lane paid his 10-day note due today, \$450.
14. Paid office salaries in cash, \$150.
15. Mrs. Adams withdrew \$100 cash for personal use.

Close and balance the cashbook. Bring down the balance.

4. Write up the cashbook for the following:

Sept. 1, 19__, Balance \$3,250.

2. Received cash from S. E. Leslie for invoices of Aug. 22, \$923.75.
3. Purchased a typewriter for cash, \$115.
5. Paid R. C. Cummings for his invoice of Aug. 26, \$532.50.
6. Received cash, \$750, from E. Lane for his note due today.
10. Paid freight on merchandise purchased, \$17.50.
20. Betty Fordson paid her account in full, \$825.
30. W. F. Wood paid cash, \$566.75, for invoice of Aug. 10.
31. Paid salaries for the month, \$510.

Close and balance the cashbook. Bring down the balance.

UNIT VIII - ACCOUNTS

Reconciliation of Bank Balance

Lesson No. 3

OBJECTIVE: To learn how to prepare a bank reconciliation statement.

RELATED INFORMATION:

At the end of each month, banks send out a monthly statement to each depositor. The following is an illustration of a statement of account form used by banks:

<p>CHECKS CC - CERTIFIED CHECKS DM - DEBIT MEMO RT - RETURNED ITEM LST - LIST EC - ERROR CORRECT</p>	<p>Claudia Classics Inc., 335 West 38th St., New York, N. Y.</p>	<p>DEPOSITS CC - COLLECTIONS L - LOANS - DISCOUNT CM - CREDIT MEMO EC - ERROR CORRECT</p>

3551 2-51

PLEASE EXAMINE STATEMENT OF ACCOUNT AND VOUCHERS AT ONCE

The Last Amount in This Column is Your Balance

THE MAINTENANCE OF THIS ACCOUNT IS SUBJECT TO THE TERMS, CONDITIONS AND LIMITATIONS APPEARING IN THE DEPOSITOR'S CONTRACT ON THE REVERSE SIDE HEREOF. THE TRUST COMPANY DISCLAIMS RESPONSIBILITY FOR ANY ERROR IN THE ACCOUNT AS RENDERED UNLESS INFORMED IN WRITING OF IT WITHIN THIRTY DAYS OF THE DELIVERY OR MAILING OF ANY STATEMENT AND CANCELLED VOUCHERS.

OVER

This statement shows the balance at the beginning of the month, all deposits made during the month, all checks drawn and cleared by the bank during the month, and the balance at the time the statement was made.

In any business, most payments are made by check and most customers pay by check. Many of these checks are sent to distant cities and often two or three weeks elapse before the checks are returned to the depositor's bank and charged to his account. As a result, the balance of cash in the bank rarely agrees with the balance shown in the depositor's checkbook or cashbook. Most of the difference is due to the fact that some of these checks had not been paid at the time the bank made up the statement. Such checks are called outstanding checks. The difference caused by the checks outstanding is accounted for by preparing in the check book, or elsewhere, a reconciliation statement.

PROCEDURE:

In the preparation of a reconciliation statement, checks outstanding may not be the only difference between the amount of the balance as shown in the check book and the balance shown on the bank statement. Items may appear on the depositor's books which have not yet been taken up on the bank's books, such as:

Deposits not yet received or recorded by the bank.

Items may appear on the bank's books which have not yet been taken up on the depositor's books, such as:

Service charges

Charges for checks returned N. S. F. (insufficient funds)

To reconcile the bank balance:

1. You must check all deposits listed on the statement with deposits entered in the check book or cash book.
2. You must check all checks charged to your account with checks drawn on your check book.

A bank reconciliation for the Brown Company for June 30, 19__ appears below:

Bank Reconciliation
June 30, 19__

Balance, per books	\$3,625.97	
Balance, per bank statement	\$3,500.17	
Add deposit, not credited by bank	310.00	
Total	<u>\$3,810.17</u>	
Deduct outstanding checks:		
#129	\$100.00	
#130	84.20	
Adjusted balance	<u>184.20</u>	
		<u>\$3,625.97</u> \$3,625.97

This reconciliation shows that \$310 recorded by the company as a deposit in June had not been credited by the bank at the end of the month, and that checks for \$100 and \$84.20 were outstanding.

As the balance shown by the bank statement rarely agrees with the balance shown by the depositor's books, it is important to reconcile the bank statement as soon as possible after it has been received. Only in this way can errors be caught.

ASSIGNMENT:

1. Set up reconciliation statements for each of the following:
 - A. January 1, 19__ the bank statement shows a balance of \$2391.64. Checks not returned are #401 for \$75, #403 for \$101.60, #404 for \$4.80, #405 for \$1.25, and #406 for \$17.66. The check book shows a balance of \$2191.33.
 - B. The check book shows a balance of \$328.72. The bank statement shows a balance of \$417.95. Three checks have not been returned: #76 for \$32.95, #78 for \$22.85, and #79 for \$28.75. Interest item on loan for \$4.68 has not been entered in check book. Prepare reconciliation statement.

- C. On January 2, James Clark received from the bank his monthly bank statement, showing the bank's balance to be \$3961.70. On comparing the report with the checks issued, it was found that the following checks had not been returned: #301 for \$207.06, #304 for \$58.23, and #305 for \$437.10. The following items had not been recorded in the check book, but had been paid at the bank: \$25, \$30, and a note for \$125.50. What balance should Clark's check book show?
- D. On June 1, Joan Delman received her bank statement. Her check book balance is \$1242.09. The following checks had not been returned by the bank: \$40.20, \$125.68, \$75.50 and \$286.90. Miss Delman neglected to enter on the check book stub the amount of one check for \$50.60. She had also made an error by writing on the stub of one check \$78.90 when it should have been entered as \$87.90. What is the bank balance? Prepare a reconciliation statement.
- E. According to the monthly bank statement, C. M. Rader's bank balance on October 31 was \$2176.15. His check book balance was \$1838.14 on the same date. By checking off the returned checks he found the following checks still outstanding: \$215.20, \$186.01, and \$62.25. One check which Mr. Rader had deposited had been returned marked "no funds", and had been charged to his account, but no record of this charge had been made on his check book. What was the amount of the bad check? Reconcile the account.
- F. The monthly bank statement received by Claudia Classics on April 1 listed a balance of \$3594.55. The following checks had not been returned by the bank: #1072 for \$81.03, #1074 for \$277.32, #1076 for \$1.61, and #1079 for \$64.67. There was no record made of the deposit for May 31, for \$165.25. The check book showed a balance of \$3334.17. Prepare a reconciliation statement.

UNIT VIII - ACCOUNTS

Wzges

Lesson No. 4

OBJECTIVE: To learn how to compute earnings on different time or piece rates.

To learn to check the amount of deductions from your pay.

RELATED INFORMATION:

Of the many sources of income, wages are the chief source to a large proportion of people. The wage-time of employees is generally figured by the hour or by the day. However, most operators, finishers, and pressers in the needle trades are paid by piecework. A certain price is paid for each piece of work. As the worker becomes skilled and is able to complete more pieces of work in a day, he earns more money per day.

It is important for you to know how to figure your earnings and also to figure the deductions from your pay. Some of the deductions made today are: Federal income tax, State unemployment insurance, social security, union dues, hospitalization insurance, savings bonds, etc.

The amount of money that you will make will depend upon many things, such as your ambition, attendance on the job, and application to your work.

PROCEDURE:

NO. _____

PAY END _____

A. Time Cards:

Many companies use a time clock which records the days and the hours each employee spends at work. Each employee has a time card, similar to the one pictured, with his or her name or number on it. These cards are kept in a rack next to the clock. Every time a worker reports for work, goes to lunch, returns from lunch and leaves at the end of the day, she will place her card in the time clock to record the time. As you can see, this keeps an accurate record of all the working time spent by each employee.

Your weekly earnings are determined by the time stamped on the time cards. Many companies make a rule to dock a worker (deduct some of his pay) if he arrives late. The worker may be docked as much as a half-hour's pay for lateness of from one to 30 minutes.

Example: You receive \$1.10 an hour for the time you work between 8:00 a. m. and 5:00 p. m. What are your wages for the time recorded on the card above?

NAME MARY JONES
 REG. TIME HRS. 38 DAYS 1 1/2 AMT. 41.80
 OVERTIME HRS. _____ " _____ " _____
 W. T. 5.20 TOTAL EARNINGS _____
 O. A. B. 1.25
 INS. _____
 HOSP. _____
 OTHER _____
 TOTAL DEDUCTIONS 6.45
 AMOUNT DUE 35.35

8:00	5:30	38:00	TH 8:30	FR 8:00		
8:12:00	12:00	312:00	TH 12:00	FR 12:00		
8:1:00	1:00	31:00	TH 1:00	FR 1:00		
8:4:00	2:50	35:00	TH 5:00	FR 5:00		

Balance due shown above is correct and receipt is acknowledged.

Signature _____
 Form M 4800 A Printed by The Cincinnati Time Recorder Co., Cincinnati, O., U.S.A.

Solution: The total working time was 38 hours x \$1.10, which equals \$41.80. On the basis of an eight-hour day and five days a week, you had a loss of \$2.20 because you were late two days and left early another day. What per cent of your possible earnings did you lose? (5%). You can see that the loss of time can also means the loss of money.

B. Piecework:

When you work piecework, the more work you do, the more money you earn. Some operators are paid for a complete garment, others are paid for doing just one operation on a garment. They are both paid by the piece, whether in single units or by the dozen.

Example: An operator received \$1.40 for style #883, \$1.10 for style #804, and \$1.25 for style #801. During the week of July 28th she made the following:

22 dresses of style #883 @ \$1.40	=	\$30.80
27 dresses of style #801 @ 1.25	=	33.75
5 dresses of style #804 @ 1.10	=	<u>5.50</u>
Total earnings	=	\$70.05

C. Deductions withheld from employee's wages:

An individual record, as shown on the following page, should be kept for each employee, showing for each payroll period during the year: hours worked, gross earnings, and the amount of each deduction. There are certain deductions authorized by the government to be taken from your wages. These deductions are summarized as follows:

1. Employee's share of F. I. C. A. taxes. (Federal Insurance Contribution Act, which covers old age benefits and social security). The rate charged is 3% of the first \$4,800 of employee's wages (1960).
2. Employee's share of S. U. C. & T. D. B. (State Unemployment Compensation and Temporary Disability Benefits) taxes. The rate charged is $\frac{3}{4}\%$ of earnings up to and including \$3,000.
3. Income taxes withheld
The amount withheld is affected by a number of factors, such as the length of the pay period, the amount of the pay, and the number of dependents claimed by the employee. On pages 208 and 209 is a weekly withholding tax chart.
4. Other deductions such as: hospitalization insurance, union dues, savings plans, and government bonds are more or less voluntary.

50	6.80	4.40	2.10	0	0	0	0	0	0	0	0	0

You will note on the employee's individual record that the first entry, in the first quarter, shows the following deductions:

F. I. C. A.	\$1.57	=	$2\frac{1}{4}\%$	of	\$70.00	(This was the rate current at the time.)
Withholding Tax	10.50	=	amount listed on Withholding Tax chart under <u>one dependent</u> , in line with \$70.00			
S. U. C. & T. D. B.	0.53	=	$\frac{3}{4}\%$	of	\$70.00	
Union Dues	<u>3.00</u>					
Total deductions	<u>\$15.60</u>					
Net earnings	<u>54.40</u>					
Gross earnings	\$70.00					

The money received after the various deductions is known as "net pay" but it is often termed "take home pay."

ASSIGNMENT:

- Using the following schedules of rates for operators, figure the total weekly salary of the following women:

<u>Worker</u>	<u>Style #803</u> \$1.56 per dr.	<u>Style #883</u> \$1.40	<u>Style #804</u> \$1.10	<u>Style #805</u> \$1.37
a. Carr (1)*	19 dresses	22 dresses	7 dresses	11 dresses
b. Fuller (0)	14 dresses	24 dresses	11 dresses	5 dresses
c. Mason (2)	17 dresses	15 dresses	10 dresses	8 dresses
d. Paulson (0)	18 dresses	19 dresses	12 dresses	10 dresses
e. Peters (1)	21 dresses	18 dresses	9 dresses	7 dresses
f. Ward (0)	15 dresses	17 dresses	8 dresses	5 dresses

Figure the "take home pay" of each of the above workers using a deduction rate of 3% for F. I. C. A. and $\frac{3}{4}\%$ for S. U. C. Use the Withholding Tax chart on the previous page.

* The number in parenthesis signifies the number of dependents.

- Many workers are paid a special rate when they work over their regular 7-hour day. The number of hours worked over the stated number is called overtime. Usually the rate for overtime is $1\frac{1}{2}$ times the first rate.

Figure the total week's pay for each of the women listed in this table. They received overtime for work over 35 hours.

<u>Worker</u>	<u>Hourly Rate</u>	<u>Hours Worked</u>
Dunn	\$1.58	35
Bien	1.85	37
Keyes	2.28 $\frac{1}{2}$	42
Atkens	1.95 $\frac{1}{2}$	40
Dale	1.25	35

3. The "floor girl" was paid \$40.00 a week. She worked 5 days, seven hours a day. What was her rate of pay per hour?
4. The forelady received a salary of \$90.00. She worked 5 days a week, seven hours a day.
 - a. What is her rate of pay per day?
 - b. What is her rate of pay per hour?
 - c. What is her pay for the month of February?
5. Compute the net pay on the following: 35 hours @ \$1.95 $\frac{1}{2}$ per hour.
Deductions:

Withholding tax, one dependent	
Hospitalization	97¢
F. I. C. A.	2 $\frac{1}{4}$ %
S. U. C.	$\frac{3}{4}$ %

6. Figure the gross earnings for the following women who do floor work (trimmers, hemmers, pinkers, sorters, etc.) A half hour is allowed for lunch (12:00 to 12:30). They received time-and-a-half for overtime (any time over 35 hours).

<u>Worker</u>	<u>Rate</u> per hr.	<u>Mon.</u>		<u>Tues.</u>		<u>Wed.</u>		<u>Thurs.</u>		<u>Fri.</u>	
		in	out	in	out	in	out	in	out	in	out
Lewis	\$1.70	8:30	4:30	8:30	5:00	8:30	12:00	8:30	5:30	8:30	5:00
Dudec	1.25	12:30	4:30	8:30	4:00	8:30	5:00	8:30	4:30	8:30	4:30
Clark	1.58	9:00	5:00	8:30	12:00	-----		8:30	5:00	8:30	6:00
London	1.38 $\frac{1}{2}$	8:30	5:00	9:00	5:00	9:00	5:00	8:30	5:00	8:30	5:30

UNIT VIII - ACCOUNTS

Writing Invoices and Checking
Daily Sales Records

Lesson No. 5

OBJECTIVES: To learn how to make out invoices.

To understand the procedures in checking daily sales records.

RELATED INFORMATION:

Once the garments are ready for shipment, it is customary for the seller to submit to the purchaser a bill of invoice. An invoice is an itemized bill given or sent to a customer with the goods ordered. The invoice or charges are written on a special billing machine by the billing clerk for every delivery made to each individual customer.

Invoices are usually made out in triplicate. The original or first copy is sent to the customer along with the shipment of garments. The duplicate or second copy is sent to the office for the bookkeeping department. The third and final copy is kept in the shipping department for a check on all shipments. The following information should appear on the invoice:

- a. Date of shipment
- b. Customer's name and complete address
- c. Customer's order number
- d. Salesman
- e. Terms
- f. Shipping method used
- g. Quantity of dresses being shipped
- h. Style numbers of garments being shipped
- i. Price per garment
- j. Extension

An examination of the following invoice will show that it contains the information listed above.

Claudia Designs, Inc.
 152 WEST 36TH STREET
 NEW YORK 18, N. Y.

Sold To Tina Rose
748 Broad St.
Phila, Pa.

OUR NUMBER	00853
DATE	6/14/59
CUSTOMER'S ORDER	17854
SALESMAN	T.C.
TERMS	W.E.O.M.
	Railway
	P. O. B.

INVOICE

Shipped To _____
 Address _____

2	Dresses style 614 @	11 75	23 50
2	Dresses style 710 @	13 75	27 50
4			51 00

Rediform
 7H 721

PROCEDURE:

1. Check the number of garments that are ready for shipment.
2. Bill the customers for garments to be charged, remembering to include all items listed above.
3. Re-check the calculations before the invoices are sent out.
4. At the end of the day, a total of all garments charged to customers is taken, according to style and price.

Example: On April 24th, Claudia Dress Co. had total sales of \$2,028.19. In cross-checking the total garments shipped according to style and price, the bookkeeper made up the following report:

Style #883	72 dresses	@	\$9.75	=	\$ 702.00
Style #886	56 dresses	@	9.75	=	546.00
Style #884	74 dresses	@	9.75	=	721.50
Style #1066	2 dresses	@	15.75	=	31.50
Style #1073	2 dresses	@	12.75	=	25.50
			P. P. & Ins.		1.69
					<u>\$2,028.19</u>

ASSIGNMENT:

1. Make out invoices for the following shipments sent out on May 4th, 19__, terms 8/10 E. O. M.
 - a. To Jones & Co., 114 Fifth St., Detroit, Mich., 4 dresses style #803 at \$9.75; 5 dresses style #804 at \$8.75; 6 dresses style #805 at \$12.75. Package was sent by Railway Express.
 - b. To R. Armstrong, 17 Oak Rd., Norfolk, Va., 12 dresses style #805 at \$12.75; 7 dresses style #806 at \$11.75; and 10 dresses style #807 at \$9.75. Sent by Railway Express.
 - c. To J. C. Perry, 119 Lee Av., Charleston, S. C., 2 dresses style #809 at \$13.75 each. Package weighed 5 lbs., was sent by parcel post and insured. Use postal and insurance rates listed in Unit I, Lesson No. 7; consider Charleston in Zone 4.

- d. To Town & Country Shop, 75 Hillside Av., Baltimore, Md.,
3 dresses style #883 at \$9.75; 5 dresses style #809 at \$13.75;
6 dresses style #807 at \$9.75. Sent parcel post, insured.
Weight, 18 lbs.; zone 2.
- e. Conners', Hartford, Conn.; 2 dresses style #805 at \$12.75;
2 dresses style #812 at \$15.75; 1 dress style #883 at \$9.75.
Parcel post, insured. Weight, 7 lbs.; zone 2.
- f. Harold's, Inc. Cleveland, Ohio; 25 dresses style #883 at
\$9.75. Railway Express.
- g. Maggie's, New Orleans, La.; 5 dresses style #883 at \$9.75;
4 dresses style #805 at \$12.75. Parcel post, insured.
Weight, 11 lbs.; zone 6.
- h. The Parisian, San Francisco, Calif.; 1 dress style #883 at
\$9.75; 2 dresses style #809 at \$13.75. Parcel post, insured.
Weight, 5 lbs.; zone 8.
- i. Gift and Style Shop, New York, N. Y., 7 dresses style #807
at \$9.75. Parcel post, insured. Weight, 9 lbs.; zone 1.
- j. Jean's Dress Shop, New Orleans, La.; 3 dresses style #803
at \$9.75; 3 dresses style #806 at \$11.75; 1 dress style #804
at \$8.75. Parcel post, insured. Weight, 12 lbs.; zone 6.
- k. Dot's Dress Shop, Duluth, Minn.; 3 dresses style #807 at
\$9.75; 2 dresses style #806 at \$11.75. Parcel post, insured.
Weight, 10 lbs.; zone 5.
- l. Bon Marche', San Francisco, Calif.; 1 dress style #812 at
\$15.75; 2 dresses style #809 at \$13.75; 5 dresses style #883
at \$9.75. Railway Express.

After all invoices are written out and checked, make out the daily total of styles, prices, etc. What is the total of all invoices? What is the total of styles shipped?

UNIT VIII - ACCOUNTS

Purchase Orders and Requisitions

Lesson No. 6

OBJECTIVE: To learn how to make out purchase orders.

RELATED INFORMATION:

The purchasing department in most garment concerns consists of the trimmings buyer and piece goods buyer. Once the estimates are made for the fabric and trimmings needed (as in Unit I, Lesson 4), the next step is the placement of the purchase orders.

Purchase orders, like all other business papers, vary in size and form to meet the individual needs of a business. These orders are usually numbered and are made out in duplicate. The original is sent to the company with whom the order is to be placed and the duplicate is kept by the person placing the order (the trimmings buyer or piece goods buyer).

For each product that is purchased and consumed the buyer should keep detailed information with regard to sources, specifications, quantity consumed, quantity purchased in the past, prices, and price trends.

The buyer of any firm should:

1. Buy only from reputable firms.
2. Have a list of available sources from which materials can be obtained.
3. Be well informed on the specifications of all materials needed.
4. Have a knowledge of the prevailing prices of materials needed.
5. Consider his needs and avoid over-stocking.

PROCEDURE

The Trimmings Buyer should:

1. Re-check estimates of trimmings needed.
2. Check price of item with concern to which she is sending an order, before mailing order or calling in order by phone.
3. Make out purchase orders for all items needed. Be sure to state color, size, quantity, and price.

The Piece Goods Buyer should:

1. Refer to style number of garment which is being cut and check average yardage needed per dress.
2. Re-check estimate for total yardage.
3. Make out purchase order for fabric needed. Be sure to state name or type of fabric, color, quantity, and price.

Example: Following is an illustration of a purchase order issued for trimmings for style #805:

PURCHASE ORDER		
	Claudia Designs, Inc.	
	M 38ES - HALF SIZE DRESSES	
	152 WEST 36TH STREET	
	NEW YORK 18, N. Y.	
	June 20 19	
M	Belbro Bros.	
	338 W. 37th St.	
	New York, N. Y.	
TERMS:	190	
110	12" OT zipper'd	.0871
	noize 32	
	azua 28	
	Blue 26	
	Pink 24	
	110	

ASSIGNMENT:

- 1. Make out the purchase orders that would be made by the trimmings buyer to cover estimates for garments ordered by customers and recorded on cutting tickets in Unit I, Lesson No. 4; combine all notions and trimmings of the same size and color, using the style descriptions given in Lesson No. 2 of the same unit. Separate purchase orders for different items, such as zippers, buttons, etc.**
- 2. Make out the purchase orders that would be sent out by the piece goods buyer to cover estimates for the same garments as in question No. 1, combining all fabrics that are the same in type and color.**

UNIT VIII - ACCOUNTS

Inventories

Lesson No. 7

OBJECTIVE: To become familiar with computing inventories.

RELATED INFORMATION:

A merchandise inventory is the value of the unsold goods. A merchant must obtain the value of the unsold merchandise before he can know the results of operating his business. The end-of-period inventory is determined by counting and listing all merchandise on hand held for sale, pricing such merchandise at cost, and totaling the money amounts.

PROCEDURE:

There is no universal procedure for taking an inventory. Probably the simplest procedure is as follows: Two people work as a team; one person counts, weighs, or otherwise measures the merchandise and calls the descriptions and quantities to the other person, who writes the information on inventory sheets. The unit value of each article, which is generally its cost price, is written after the description, and this value is multiplied by the quantity on hand to determine the total value of such unsold articles.

Each extension is written opposite the respective quantity description and unit price. These extensions are then added to obtain the total value of all merchandise listed in the inventory. This grand total is referred to as the value of the merchandise inventory. The taking of an inventory is sometimes referred to as taking stock.

INVENTORY

Total Piece Goods Inventory					1986.74

-220-

ASSIGNMENT:

1. Prepare an inventory sheet with the headings used in the inventory illustrated on the previous page. List the following items and find the total value of this inventory:

44 $\frac{1}{2}$ yds. solid color flannel	@ 37 $\frac{3}{4}$ ¢ per yd.
75 $\frac{1}{4}$ yds. printed flannel	@ \$.375 per yd.
295 yds. percale prints	@ \$.355 per yd.
282 yds. solid percales	@ 34¢ per yd.
108 $\frac{3}{4}$ yds. organdy	@ 40¢ per yd.
36 yds. $\frac{1}{4}$ " elastic	@ 57¢ per dz. yds.
12 yds. $\frac{1}{2}$ " elastic	@ 95¢ per dz. yds.
18 yds. 1" elastic	@ 1.60 per dz. yds.
3 $\frac{1}{2}$ gross buttons Navy/30	@ 4.25 a gr.
6 $\frac{1}{12}$ gross smoked pearl/24	@ 4.50 a gr.
30 cones white thread	@ 1.33 a cone
8 boxes #50 thread	@ 2.88 a box

2. The following inventory was taken by two employees of Mara Dress Company: (dress manufacturers)

Fabrics:

335 yards of pima broadcloth	@ 97 $\frac{1}{2}$ ¢ per yd.
530 yards of powder puff muslin	@ 60¢ per yd.
1051 $\frac{1}{4}$ yards of spun rayon	@ 70¢ per yd.
567 $\frac{3}{4}$ yards of spun rayon	@ 65¢ per yd.
105 yards birdseye piqué	@ 95¢ per yd.
385 yards of Bates Discipline	@ 64 $\frac{3}{4}$ ¢ per yd.
294 $\frac{3}{4}$ yards woven denim	@ 38¢ per yd.
316 $\frac{1}{2}$ yards combed chambray	@ 57 $\frac{1}{2}$ ¢ per yd.

Trimmings:

8 $\frac{1}{2}$ gross asst'd colors/24 buttons	@ \$4.25 a gr.
7 $\frac{3}{4}$ gross /30 buttons	@ 6.00 a gr.
11 gross self-butt. flat/24	@ 1.25 a gr.

Notions:

512 12" pl. zippers	@ \$0.0891 per zip.
836 14" O. T. zippers	@ 0.0987 per zip.
425 7" sk. zippers	@ 0.065 per zip.

Completed Dresses:

135 dresses style #883	@ 5.81 each
76 dresses style #887	@ 6.13 each
33 dresses style #1074	@ 6.24 each
23 dresses style #886	@ 5.75 each
15 dresses style #885	@ 4.95 each

List the above items and find the total value of this inventory.

3. The following inventory was taken by two employees of the dress department of the Woodbridge Department Store:

36 dresses	@ \$5.75 each
24 dresses	@ 6.75 each
18 dresses	@ 7.75 each
58 dresses	@ 8.75 each
63 dresses	@ 9.75 each
32 dresses	@ 10.75 each
49 dresses	@ 12.75 each
37 dresses	@ 14.75 each

Copy the above items on an inventory sheet and find the total value of this inventory.

4. Make out an inventory sheet like the sample and list all of the supplies in the storage closets in the needle trades room. Sub-head the inventory into groups such as: fabrics, trimmings, notions, etc.

UNIT VIII - ACCOUNTS

Business Forms - Profit and Loss Statement

Lesson No. 8

OBJECTIVES: To learn the importance of a profit and loss statement to every businessman.
To learn how to prepare a profit and loss statement.

RELATED INFORMATION:

Not all business is profitable at all times. There are periods of time when profits are small, and other periods when actual losses are sustained. A business cannot be run without expense. One of the first things to consider in a business is to make sure that enough profit is made from transactions to cover expenses and have enough left to pay the owners of the business a reasonable compensation for running it. A business cannot long exist when expenses continue to exceed income.

To determine whether or not the business has been profitable, every business concern determines periodically how much the profit (or loss) has been. The proprietor is anxious to know whether there is a profit or a loss, and, from time to time, what may be the financial status. Accordingly, at least once a year, or monthly, as is the case in many lines of business, the bookkeeper prepares a profit and loss statement and a balance sheet, thus giving the owner valuable information about his business.

PROCEDURE:

To learn to prepare this important business statement, you must give careful study to the content and the arrangement of the illustrated forms of these statements.

The following terms used in the profit and loss statement must be studied:

- Gross Sales - represents the amount of goods sold to customers, without considering the goods returned by customers, or allowances made for broken or damaged goods.
- Return Sales - the term given to merchandise returned by customers. The value of the merchandise returned must be deducted from the gross sales.

Net Sales - the value of the goods actually sold and not returned. It is the difference between the gross sales and the returns and allowances.

Merchandise Inventory - the value of unsold goods.

Purchases - total cost of goods bought.

Gross Profit - the difference between the cost of goods sold and the net sales.

Operating Expenses - includes selling expenses, charges against income, and overhead expenses.

Net Profit - what is left of the gross profit after all expenses are paid. In its relation to sales, net profit indicates whether the volume of sales justifies the expenditure or not.

PROFIT AND LOSS STATEMENT

June 30, 19__

Gross Sales	\$7475.00
Less: Goods Returned	\$225.00
Damaged Goods	<u>115.00</u>
Total returns and allowances	340.00
Net Sales	\$7135.00
Merchandise Inv. May 31	\$5875.00
Purchases	<u>3143.00</u>
Total Cost of Goods for Sale	9018.00
Less: Inventory June 30,	<u>4250.00</u>
Cost of Goods Sold	<u>4768.00</u>
Gross Profit	2367.00
Selling Expense	<u>1427.00</u>
Net Profit	\$ 940.00

In analyzing the above statement you can see that the first figure needed is the net sales, which is the gross sales less any returns or allowances made during the month.

To find the cost of goods sold, this simple rule applies: beginning-of-month inventory plus purchases, less inventory at the end of the month. The gross profit is found by subtracting the cost of goods sold from the net sales. The net profit is found by subtracting all operating expenses from the gross profit.

ASSIGNMENT:

1. Find the net sales in each of the following:
 - a. In a certain store the sales for the month of May amounted to \$6892.60. In the week following, goods amounting to \$575.40 were returned.
 - b. The sales for a given period in a dress manufacturing firm amounted to \$28,921.50. Customers returned as unsatisfactory goods amounting to \$1450.75.
 - c. The gross sales of Claudia Dress Co. amounted to \$115,821.50. Due to faulty packing some of the merchandise was damaged in delivery and they allowed their customers \$1,275.00.

2. Find the cost of goods sold in each of the following:

	<u>Inventory (beg. o. m.)</u>	<u>Purchases</u>	<u>Inventory (e. o. m.)</u>
a.	\$2191.50	\$3284.63	\$1876.98
b.	5678.32	6387.29	4724.88
c.	7287.61	4159.76	3948.90
d.	1928.50	8439.62	1729.54

3. Find the gross profit on sales in each of the following:
 - a. A merchant's sales for 6 months were \$23,450.00. He had \$3245.00 worth of merchandise on hand at the beginning of the period, and he bought \$18,750 worth of merchandise during the half year. At the end of the 6 months his inventory was \$3825.00.
 - b. A man's sales for one month amounted to \$19,842.50. At the beginning of the month he had on hand merchandise worth \$4326.80. During the month he purchased merchandise worth \$14,596. and at the close of the month his inventory was \$5321.64.

- c. Inventory at the beginning of a period was \$3642.50 and purchases were \$12,367.80 for the period. The sales were \$13,210.60. The inventory at closing was \$1950.50.
4. Find the net profit in each of the following:
- If your gross profit is \$5675 and your expenses are \$1960, how much is your net profit?
 - Your gross profit from sales of goods is \$6450. Your selling expenses are: rent \$500; salaries \$1400; and other expenses \$650. How much is your net profit?
5. Set up a statement of profit and loss for each of the following:
- The net sales for a year were \$65,000. Inventory at the beginning of the year was \$13,960, and purchases were \$48,540. The overhead expenses were: rent \$3300; wages \$5400; store and office supplies \$1600; fuel and lights \$1140; delivery expense \$1800. At the close of the year the inventory of merchandise was \$17,500.
 - A clothier's inventory of merchandise at the beginning of the month was \$13,752. Purchases for the month were \$51,968. He paid for rent \$2800; light and fuel \$750; wages \$6600; delivery expense \$2400; and miscellaneous expenses \$1250. Merchandise inventory at the end of the month was \$15,720. Sales were \$71,300.

Net sales
- 65,000
- 48,540
16,460

UNIT VIII - ACCOUNTS

Business Forms - Balance Sheet

Lesson No. 9

OBJECTIVES: To learn the importance of a balance sheet to every businessman.

To learn how to prepare a balance sheet.

RELATED INFORMATION:

The balance sheet shows all the assets and the liabilities of an individual or a firm. This form of report is frequently required when a business concern wishes to borrow money from a bank. It shows whether the applicant owns sufficient assets to pay debts (liabilities); that is, whether his business is solvent or not. The present worth, also called net worth or capital, is the difference between the total assets and the total liabilities.

PROCEDURE:

When preparing a financial statement one must keep in mind two simple definitions and one equation, called the "balance sheet equation". The definitions are:

Assets are things owned which have a money value.

Liabilities are debts owed to others.

The equation is:

$$\text{Assets} - \text{Liabilities} = \text{Capital}$$

Following is a balance sheet prepared by Claudia Dress:

CLAUDIA DRESS CO.
Balance Sheet

As of June 30, 1960

Assets

Cash	\$21,130.00	
Accounts Receivable	5,500.00	
Notes Receivable	4,500.00	
Merchandise Inventory	5,600.00	
Office Furniture	850.00	
Delivery Equipment	<u>950.00</u>	
Total Assets		\$38,530.00

Liabilities

Accounts Payable	\$3,400.00	
Notes Payable	<u>2,800.00</u>	
Total Liabilities		6,200.00
Net Worth		<u>32,330.00</u>
		\$38,530.00

ASSIGNMENT:

1. Prepare balance sheets from the facts given in each of the following problems:
 - a. On August 31, 19__ , Marvin Duff has: cash \$840; debts of J. C. Smith, \$450 and of F. B. White \$360; mdse. inventory \$1870; store equipment \$350; and office equipment \$200. Duff owes R. M. Cooper \$190 and C. D. Wilson \$260. His investment at the beginning of August was \$3500, and he made a net profit of \$120 during the month.
 - b. On September 30, 19__ , L. M. Doyle has: cash \$978; debt of C. D. Moore \$550; mdse. inventory \$1310; store equipment \$175; and office equipment \$140; Doyle owes James Newman \$200 and Burns Co. \$315. His investment at the beginning of September was \$2500, and he made a net profit of \$138 during the month.

- c. On June 30, 19__ , Joan Smith, a speciality store owner, had: cash \$759; mdse. inventory \$2060; accounts receivable \$322; office equipment \$145; store equipment \$525; accounts payable \$602. Her investment at the beginning of June was \$3000, and she made a net profit of \$189.

2. Copy the amounts given below on a sheet of paper. Fill in the blank spaces.

	<u>Assets</u>	<u>Liabilities</u>	<u>Capital</u>
a.	\$2,745	\$371	-----
b.	-----	680	\$3,320
c.	-----	965	13,735
d.	2,519	----	1,632
e.	4,675	610	-----
f.	5,487	----	3,965

3. Define and give illustrations of (a) assets and (b) liabilities.
4. Who besides the owner might be interested in having a balance sheet of a business?

TRIAL EXAMINATION

Note to Teacher: This trial examination can be used as the basis for a final exam. Questions can be adjusted, added, or deleted to fit the extent of work covered.

ADDITION:

1. 27,624	2. 8,543	3. 6,535	4. 48,713
8,792	4,621	1,722	24,457
23,360	5,936	3,241	5,061
31,076	9,326	12,079	4,562
<u>49,003</u>	<u>4,434</u>	18,586	<u>58,493</u>
		<u>5,768</u>	

5. Vertical and horizontal addition:

$$\begin{array}{rcl}
 2 + 9 + 4 + 7 + 8 + 9 & = & \dots \\
 8 + 4 + 3 + 8 + 6 + 4 & = & \dots \\
 9 + 4 + 6 + 3 + 9 + 6 & = & \dots \\
 7 + 2 + 5 + 8 + 2 + 9 & = & \dots \\
 6 + 5 + 8 + 9 + 6 + 8 & = & \dots \\
 \underline{13} + \underline{9} + \underline{7} + \underline{5} + \underline{7} + \underline{7} & = & \dots \\
 ? \quad ? \quad ? \quad ? \quad ? \quad ? & = & \dots
 \end{array}$$

6. $23 + 106 + 295 + 519 + 63 + 54 + 75 =$

7. $\frac{1}{16} + \frac{3}{16} + \frac{1}{8} + \frac{11}{32} + \frac{7}{16} + \frac{19}{32} =$

8. $\frac{2}{3} + \frac{7}{18} + \frac{20}{36} + \frac{27}{36} =$

9. $0.0024 + 7.023 + 281.04 + .823 =$

10. $7.12\frac{3}{4} + .06\frac{1}{2} + 75\frac{1}{4} + 12\frac{3}{8} =$

SUBTRACTION:

1. A woman had a bank account of \$1754.20. She bought a sewing machine for eighty-nine and three-tenths dollars; material for a dress, suit, and coat cost one hundred fifteen and four-fifths dollars; scissors, yardstick, and other sewing equipment came to twenty-seven and seven-tenths dollars. How much had she left in the bank?
2. A dealer had on hand $\frac{5}{6}$ of a dozen children's rompers and bought $3\frac{1}{2}$ dozen more. He sold 41 of them. How many rompers had he left?
3. $895\frac{3}{8} - 760\frac{5}{8} = ?$
4. $71\frac{3}{4} - 6\frac{5}{8} - 7\frac{1}{4} - 18\frac{1}{2} = ?$
5. The trimmings buyer had on hand $4\frac{3}{4}$ gross navy buttons/30. She used $2\frac{7}{8}$ gross for style #304. How many gross buttons were left? How many buttons?
6. $\frac{1}{2}$ lb. - $\frac{3}{8}$ lb. + $2\frac{7}{8}$ lbs. - $\frac{3}{16}$ lbs. = ?
7. $235\frac{1}{24} - 164\frac{1}{3} = ?$
8. $\$647\frac{3}{5} - \$249\frac{3}{20} = ?$
9. $324.82 - 8.63 - 24.8 - 75.25 = ?$
10. A retail store received the following shipments of dresses: \$25.75, \$37.50, \$110.25 and \$19.50. They returned two dresses @ \$11.75 each. What was the amount due the wholesaler for merchandise received by the store?

MULTIPLICATION:

1. If the capital of a certain establishment is \$75,500 and its annual business is 3.2 times its capital, what is its annual business?

2. In a yard goods department, Mary sold the following lengths of material:

- | | |
|--------------------|---------------------------------------|
| a. 18" @ 70¢ a yd. | e. $3\frac{3}{8}$ yds. @ 72¢ a yd. |
| b. 24" @ 90¢ a yd. | f. $4\frac{1}{4}$ yds. @ \$1.10 a yd. |
| c. 48" @ 69¢ a yd. | g. $2\frac{5}{8}$ yds. @ 95¢ a yd. |
| d. 54" @ 89¢ a yd. | h. $5\frac{1}{2}$ yds. @ \$3.55 a yd. |

Figure the cost of each length of material and compute the total cost of all material sold.

3. A man worked $13\frac{1}{2}$ hours and received \$1.40 an hour. How much did he earn?
4. $\$19.13 \times 3\frac{3}{4} = ?$
5. $7.641 \times 67\frac{2}{3} = ?$
6. If one gross buttons costs \$5.25, what would 23 gross cost?
7. An operator who earns an average of \$76 a week saves 3% of her earnings. Find her yearly earnings and yearly savings, if she works 50 weeks a year.
8. A merchant paid \$45.00 for a dozen broadcloth blouses and sold them at a gain of 30% on a blouse. Find the gain and selling price per blouse.
9. Find the cost of 125 dresses made of dacron/cotton at 69¢ a yard and buttons @ \$4.75 a gross, if each dress requires seven and one-half yards and thirteen buttons. Labor cost for each dress is \$4.10. Find the gross profit and selling price of the dress at a 12% mark-up.
10. Clara is given $1\frac{1}{2}\%$ commission on all sales she makes, in addition to her regular pay of \$55.00 a week. If her sales amounted to \$1758.50, what is her pay and commission in one week?

DIVISION:

1. Five buttons were used on style #604. At what gross price must the trimmings buyer purchase buttons, if the allowance per dress is 18¢?
2. If $9\frac{1}{2}$ yards of fabric cost \$9.50, what will $2\frac{1}{2}$ yards cost?
3. If a manufacturer has 535 yards of fabric to be used for style #714, which takes $3\frac{1}{4}$ yards per dress, how many dresses will be produced?
4. At \$9.75 per dress, how many can be bought for \$244.00?
5. In the checking of her pattern, Mary found that it was $1\frac{3}{4}$ inches too long. What size tuck would she make in her pattern?
6. Joan purchased $2\frac{1}{2}$ yards of 36" material for a gathered skirt. Her waist measurement was 27" and her skirt length, including hem, was 32". She decided she wanted a 4:1 fullness. Did she have enough fabric? If not, how much did she need?
7. A firm received 255 yards of fabric. The invoice amounted to \$106.95. What was the cost per yard?
8. What was the percentage mark-up allowed on a coat selling for \$125.00, if the cost price was \$93.75?
9. How many are there in:
 - a. 12% of 10 gross of buttons
 - b. $12\frac{1}{2}$ % of 96 zippers.
10. If it costs \$458.85 to produce 95 dresses, what is the cost of one dress? What would be the gross profit earned if the dresses were sold at \$8.75 each?
11. What would be the diameter of a circular skirt if the circumference was 52"?

PUZZLE:

Arithmetic Terms Puzzle

ACROSS

- 1. To combine two or more numbers into one sum
- 2. The abbreviation for yard
- 4. The ones' product, tens' product, hundreds' product, and so on, in a multiplication problem are called _____ products.
- 6. To find the total number in a stated number of equal groups
- 7. The whole sum or amount
- 8. In the example, $\frac{1}{4}$ of $20 = 5$, 5 is a _____ part.
- 10. The number of square units in a flat surface is its _____.
- 11. .5 is a _____ fraction.
- 14. In the example, $8 - 6 = 2$, 6 is the _____.

- 15. The answer to a division problem
- 16. The answer to a subtraction problem

DOWN

- 1. The subject of this puzzle
- 3. In the example, $6 \div 2 = 3$, 2 is the _____.
- 5. The formula for finding the area is _____ = _____ \times _____.
- 8. A part of a number or object
- 9. The answer to a multiplication problem
- 10. A number to be added to another number to make the sum
- 12. The opposite of width
- 13. The answer to an addition problem

UNIT I. WHOLE NUMBERS

ACHIEVEMENT TEST NO. 1

EXERCISE I: Write the following numbers in words:

- | | | |
|----------------|------------|-----------|
| 1. 150,000,000 | 3. 62,050 | 5. 12,080 |
| 2. 4,786,221 | 4. 791,000 | |

EXERCISE II: Write the following numbers:

6. Eighteen thousand, sixteen
7. Ninety-two million, three hundred thousand
8. Seven hundred twenty-five thousand
9. One million, six thousand, forty-eight
10. Four thousand, eight hundred ninety-seven

EXERCISE III. Problems in fundamental combinations:

11. $6 \times 5 + 7 - 5 \div 8 \times 6 \div 24 =$
12. $10 \times 10 \div 10 + 10 - 10 =$
13. $7 \times 9 + 17 \div 8 + 10 \div 4 \times 13 =$
14. $8 \div 2 \times 12 + 40 - 4 \div 2 =$
15. $35 + 91 + 7 + 66 + 13 + 63 \div 11 =$
16. If the enrollments in the high schools in a city are respectively: 1751, 1892, 2634, 1052, 2445, 2109, and 1474, what is the total number of high school pupils in that city?
17. In a "lot" of 328 dresses, how many would each operator be allotted if the shop consists of 41 operators?
18. 95 is how much less than 149?
19. Find the difference of 132 and 65.
20. Find the average yardage of nine bolts of material if they measure 101, 119, 96, 112, 130, 118, 127, 114, and 136 yards respectively.
21. At the end of the season the following number of dresses had been sold: 357 in style #217, 468 in style #221, 132 in style #218, 648 in style #219, 1327 in style #220. What was the total number of dresses sold? At an average materials cost of \$5.69 each, what was the total materials cost?
22. In a lot of 239 dresses, a finisher had to sew 9 buttons on each dress. What was the total number of buttons to be sewed?

- | | | | | | | | |
|-----|--------|-----|-------|-----|-------|-----|-------|
| 23. | 8179 | 24. | 4609 | 25. | 5784 | 26. | 608 |
| | x 5469 | | - 785 | | x 906 | | x 907 |

UNIT II - FRACTIONS
ACHIEVEMENT TEST No. 2

1. In a needle trades class, $\frac{2}{5}$ of the girls did not complete the course. There were 40 girls in the class. How many did not complete the course?

2. Arrange the following fractions according to size, the largest first:

a. $\frac{1}{8}$, $\frac{3}{4}$, $\frac{6}{16}$, $\frac{1}{2}$, $\frac{3}{16}$

b. $\frac{3}{8}$, $\frac{7}{24}$, $\frac{1}{6}$, $\frac{3}{12}$, $\frac{20}{48}$

c. $\frac{2}{3}$, $\frac{6}{4}$, $\frac{5}{12}$, $\frac{5}{6}$, $\frac{1}{2}$

3. Addition of fractions:

a.
$$\begin{array}{r} 47\frac{7}{12} \\ 8\frac{3}{4} \\ \hline 16\frac{1}{4} \end{array}$$

b.
$$\begin{array}{r} 6\frac{1}{8} \\ 8\frac{7}{8} \\ \hline 19\frac{1}{4} \end{array}$$

c.
$$\begin{array}{r} 33\frac{1}{2} \\ 9\frac{7}{8} \\ \hline 3\frac{1}{4} \end{array}$$

4. If $\frac{2}{3}$ of the 180 students enrolled in a school were not interested in the needle trades, how many students made up the needle trades class?

5. In most vocational schools, 3 hours of the 6-hour school day is spent in shop. What fractional part of the school day is this?

6. If there are 20 school days in one month and a student is absent 5 days, what fractional part of the school month was she in shop?

7. Multiplication of fractions:

a. $15 \times 1\frac{1}{3}$

d. $30\frac{1}{2} \times 57\frac{1}{2}$

b. $72 \times \frac{1}{4}$

e. $40\frac{1}{2} \times 65$

c. $4\frac{1}{2} \times 50$

f. $87\frac{3}{4} \times 65$

8. Select the correct answer to the following problems:

a. $\frac{2}{3}$ of 12 equals (18) (9) (6) (8)

b. $\frac{8}{16}$ of 144 equals (24) (36) (72) (90)

c. $\frac{2}{8}$ of 36 equals (6) (9) (12) (8)

d. $\frac{5}{12}$ of 288 equals (24) (102) (60) (120)

e. $\frac{3}{12}$ of 144 equals (36) (48) (72) (90)

9. Division of fractions:

a. $11\frac{2}{3} \div \frac{5}{6}$

e. $14\frac{2}{3} \div \frac{4}{9}$

b. $196 \div \frac{3}{8}$

f. $\frac{3}{4} \div \frac{3}{8}$

c. $\frac{9}{36} \div \frac{5}{8}$

g. $1134 \div 17\frac{1}{2}$

d. $1769 \div 30\frac{1}{2}$

h. $372 \div 8\frac{1}{4}$

10. Subtraction of fractions

a.
$$\begin{array}{r} 367\frac{3}{8} \\ - 89\frac{1}{4} \\ \hline \end{array}$$

b.
$$\begin{array}{r} 309\frac{3}{4} \\ - 93\frac{3}{8} \\ \hline \end{array}$$

c.
$$\begin{array}{r} 114\frac{1}{4} \\ - 56\frac{3}{4} \\ \hline \end{array}$$

d.
$$\begin{array}{r} 612\frac{1}{4} \\ - 364\frac{3}{4} \\ \hline \end{array}$$

UNIT III - MEASUREMENT

ACHIEVEMENT TEST No. 3

1. Complete the following:

- a. _____ buttons in $\frac{3}{4}$ of a gross
- b. _____ pairs in 6 units
- c. _____ minutes in $\frac{1}{4}$ hour
- d. _____ yards in 180 inches
- e. _____ dozens in $1\frac{3}{4}$ gross
- f. _____ inches in 3 feet
- g. _____ minutes in $3\frac{1}{2}$ hours
- h. _____ ounces in $\frac{5}{8}$ of a pound
- i. _____ yards in 54 inches
- j. _____ inches in $\frac{5}{8}$ of a yard

2. State whether the following answers are true or false:

- a. _____ 1 yard = 35 inches
- b. _____ $\frac{2}{3}$ of a yard is 24 inches
- c. _____ 11 gross equals 1 great gross
- d. _____ 6 hours equals $\frac{1}{3}$ of a day
- e. _____ 4 inches are used in four 1-inch tucks
- f. _____ $\frac{5''}{8}$ is more than $\frac{1''}{2}$
- g. _____ 9 gills equals 2 pints
- h. _____ $\frac{1}{8}$ of a yard equals 6 inches
- i. _____ $\frac{6}{4}$ are found in $1\frac{1''}{2}$
- j. _____ $\frac{1''}{4}$ of material is allowed for a $\frac{1''}{8}$ tuck

3. If one yard of cotton costs 48¢, find the cost of $\frac{5}{8}$ of a yard.
4. If one gross of buttons costs \$4.50, find the cost of 6 buttons.
5. What is the cost of 10 jeweled buttons at \$3.00 a dozen?
6. Make out a bill using the following items:

$2\frac{1}{2}$ yards of dacron/cotton	@	69¢ per yd.
$14\frac{1}{4}$ yards of canvas	@	89¢ per yd.
$2\frac{1}{2}$ lbs. pins	@	\$1.10 per lb.
$4\frac{5}{8}$ yards of voile	@	62¢ per yd.
$7\frac{7}{8}$ yards of Bengaline	@	85¢ per yd.
$20\frac{3}{4}$ yards of gingham	@	44¢ per yd.
4 spools of thread	@	\$4.80 a dozen spools
$2\frac{1}{4}$ dozen buttons	@	\$4.50 a gross

7. Change each measurement to the unit indicated:

- a. 15 feet = _____ yards
- b. 8 feet = _____ inches
- c. 176 inches = _____ feet
- d. $6\frac{1}{2}$ yards = _____ inches
- e. 9 ft. 8 in. = _____ inches

8. Perform the arithmetical process required in each case:

a. $3 \text{ yds. } 9''$	b. $6 \text{ yds. } 9''$	c. $9' 10'' \div 8$
- <u>$1 \text{ yd. } 11''$</u>	x <u>28</u>	

9. What part of a yard, in lowest terms, is the same as:

a. $\frac{18}{36}$ b. $\frac{27}{36}$ c. $\frac{24}{36}$ d. $\frac{30}{36}$ e. $\frac{9}{36}$

10. How many yards of fabric does a seamstress need if she must have:

a. $\frac{17}{4}$ yds. b. $\frac{27}{8}$ yds. c. $\frac{33}{6}$ yds. d. $\frac{45}{3}$ yds. e. $\frac{18}{2}$

11. If $\frac{7}{8}$ of a yard of imported 2" velvet costs 77¢, how many yards can be purchased for \$10.12?

12. Change the following:

a. $\frac{3''}{4} = \frac{''}{8} = \frac{''}{16}$

b. $\frac{1}{4}$ yd. = $\frac{''}{8}$ yd. = $\frac{''}{16}$ yd.

c. $\frac{1}{2}$ dozen = $\frac{1}{2}$ gr.

d. $\frac{3''}{8} = \frac{''}{16} = \frac{''}{32} = \frac{''}{64}$

13. List the units of money received in change from \$5.00 for \$2.43 worth of merchandise.

14. The following is a list of cash received:

123 pennies
260 nickels
77 dimes
22 quarters
16 halves
145 dollar bills
25 five-dollar bills
12 ten-dollar bills
15 twenty-dollar bills

What was the total cash received for the day?

UNIT IV - RATIO AND PROPORTION

ACHIEVEMENT TEST NO. 4

1. A pleated skirt measures 36" around the hip, the pleats are 1" wide and 1" deep. How much extra fabric will have to be taken in for a 27" waistline? How much for each pleat?
2. Mary's hip measurement is 34". How much linen (36" wide) is needed for an all-around pleated skirt (the width between pleats is 1" and the underlay is 2", the finished length is 25" including hem?)
3. Jane plans to use a commercial blouse pattern, but discovers that the sleeve pattern is too long. If she shortens it $1\frac{1}{2}$ ", what size tuck does she take across the pattern?
4. Mary worked on a dress for 27 hours; Jane worked 3 hours. What is the ratio of Mary's time to Jane's?
5. If a length of percale is 48" long and 36" wide, find the ratio of the length to the width.
6. Of the \$4.20 paid for making a dress, \$1.05 was paid to the operator. What is the ratio of the operator's cost to that of other costs?
7. A morning class made 55 blouses, and the afternoon class made 75 blouses. What is the ratio of the work done by the former class to that of the latter?
8. The trimmings for 18 dresses cost \$9.36. \$11.96 will purchase trimming for how many dresses?
9. If 6 yards of seam binding costs 10¢, what is the price of 45 yards?
10. If 16 girls can complete an order of baby bibs in 30 hours, how long will it take 12 girls to complete the same work?
11. Twenty-six dickeys can be cut from $1\frac{1}{2}$ yards of piqué. How many dickeys can be cut from $2\frac{1}{4}$ yards of the same width piqué?
12. How much will 12 yards of muslin cost if 48 yards cost \$12.12?

13. A graduate of our school earned \$135 in three weeks. How long will it take her to earn \$1080?
14. How many yards of 40" organdy did it take to make 8 yards of finished ruffling? The allowance for shirring is twice the finished length. The ruffle has a quarter -inch hem, two $\frac{1}{8}$ " tucks, and is 5" wide when finished.
15. A piece of organdy one yard square is sent out to be cross-tucked. If the fabric is pin-tucked at intervals of one inch, how large will it be when it is completed? (Pin tucks use $\frac{1}{8}$ " of material.)
16. A length of 40" wide rayon crepe was sent out to be tucked. The tucking machine was set for $\frac{1}{16}$ " tucks with $\frac{1}{4}$ " spaces. How wide was the fabric when it was returned?
17. What is the ratio of shirring in the following garments:

	<u>Length of fabric used</u>	<u>Finished piece</u>
a.	31 $\frac{1}{2}$ "	18"
b.	4 yards	24"
c.	20"	6"
d.	90"	36"
e.	20 yards	3 $\frac{1}{3}$ yards

18. How many yards of wool (54" wide) will be needed for a skirt with full depth pleats measuring 36" at the hip line and 27" long including hem?

UNIT V - DECIMALS
ACHIEVEMENT TEST No. 5

1. In each part write only the result:

a. 10×7.75

d. $35 \div 10$

b. $100 \times .934$

e. $147.50 \div 10$

c. 1000×59.3

f. $3.7 \div 100$

2. In each part write the value correct to the nearest cent:

a. \$12.193

c. \$75.285

b. \$2.876

d. \$90.075

3. Write each of the following numbers as decimals:

a. $5 \text{ \& } \frac{5}{10}$

c. $35 \text{ \& } \frac{295}{1000}$

b. $10 \text{ \& } \frac{7}{100}$

d. $67 \text{ \& } \frac{3}{4}$

4. Subtraction of decimals:

a. $\$4.24 - \frac{3}{10}$ dollar

b. $\$6.48 - \frac{3}{4}$ dollar

c. $\$8.35 - \frac{9}{10}$ dollar

d. $25.666 - 15.289$

e. $43206.9 - 2865.7$

5. Multiplication of decimals:

a. 6.13×6

d. 158.75×62.5

b. 38.2×197.6

e. $9.16 \times .702$

c. 29.11×9

f. 352×4.372

6. Division of decimals:

a. $14.23 \div 8$

d. $4.914 \div .63$

b. $7.0925 \div .025$

e. $25.25 \div .0625$

c. $374.072 \div 8.56$

f. $604.0125 \div 309.75$

7. Addition of decimals:

a. $4.6, 35.8, 141.90, 8.17, 9145, 3.96, 38$

b. $.57, .32, 1.35, .19, .48$

c. $.379, 2.005, .876, .91, .8$

d. $24.056, 18.287, .94, 7.876, .093$

e. $.983, 15.26, 9.0, 8.264, .007, 36, 25.08$

UNIT VI - PERCENTAGE
ACHIEVEMENT TEST NO. 6

1. Write the following as decimals:

- | | | |
|--------|----------------------|----------------------|
| a. 90% | c. $72\frac{1}{2}\%$ | e. $33\frac{3}{4}\%$ |
| b. 5% | d. $67\frac{1}{4}\%$ | |

2. Solve the following:

- a. 10% of 10 dozen buttons _____
- b. $66\frac{2}{3}\%$ of 30 yards of percale _____
- c. $12\frac{1}{2}\%$ of 32 zippers _____
- d. $37\frac{1}{2}\%$ of 24 dresses _____
- e. 12% of \$12.75 _____
- f. 6% of \$12.50 _____
- g. 20% of one hour _____

3. Figure the net cost of the following bills:

- a. 6 dresses @ \$10.75
2 dresses @ \$12.75
Discount 8%
- b. 600 zippers @ \$0.11344
55 pr. of pairs @ 25¢ a pair
2 gross butts. @ \$4.25 a gr.
Discount 1%
- c. 450 yards of material @ \$0.657
212 yards of material @ \$.565
Discount 2%

4. Find the commissions earned by each of the following salesmen:

	<u>Amount of Sales</u>	<u>Commission</u>
a.	\$26,450.50	7% for earnings above \$10,000
b.	\$15,575.25	6%
c.	\$25,420.25	5%
d.	\$31,325.50	5% on the first \$8000 and 2% on the balance
e.	\$150,675.75	4½%

5. Find the interest on the following:

- a. \$625 @ 6% for 6 mos.
- b. \$3200 @ 6% for 2 yrs. 2 mos. and 2 days
- c. \$450 @ 4½% for 1 yr.
- d. \$230 @ 6% for 3 mos.

6. Doris earned \$1.25 an hour; her employer declared a 30% increase. How much is Doris earning now?
7. The labor costs of operating the shipping department amounted to \$425 a week, which represents 12% of the amount billed to the customers. What was the amount of money received from customers?
8. What is the market price of one child's romper if the original cost is \$9.00 a dozen and the markup is $33\frac{1}{3}\%$?
9. Find the per cent of profit on an article bought for \$12 and sold for \$16 if the overhead expenses are 30% of the cost. Express answer to the nearest tenth of a per cent.
10. Marie bought a dress that was marked \$25 at a reduction of 15%. What did she pay for the dress?
11. Janet bought a coat at the sale price of \$66. The shopowner told her that the original price had been reduced by $33\frac{1}{2}\%$. What was the original price?

UNIT VII - GEOMETRIC FORMS

ACHIEVEMENT TEST No. 7

1. A circular ruffle is made of seven 8" circles and is trimmed with 2 rows of narrow rickrack braid, on the edge and one inch from the edge. How much braid is needed?
2. How many square yards are there in a piece of nylon net measuring 72 inches wide and $6\frac{3}{4}$ yards long?
3. How many pin cushions can be made out of $\frac{1}{4}$ yard of felt 72" wide, if it takes a 4-inch square to make each side of the pin cushion?
4. How many chiffon scarfs 40 inches long and 20 inches wide can be cut from a piece of nylon chiffon 42" wide, if the length of the bolt is (a) 43 yards? (b) 31 yards? (c) 18 yards?
5. The following ad appeared in the Women's Wear Daily, "Contractor wanted, located within a radius of 75 miles from New York City." What is the total number of square miles covered in this area?
6. How much 39-inch cotton faille would be needed for a 12-inch square pillow with a 2-inch box edge? (Include a $\frac{1}{2}$ inch seam allowance on all edges.) Do not forget to include the length of the strip needed for the box edge.
7. A white pique' strip of material was placed vertically on the front of a dress for trimming. The length was 45 inches and the width was $2\frac{1}{2}$ inches, including seam allowances. How much 36" pique' is needed for 56 dresses?
8. If the circumference of a circular skirt is $4\frac{2}{3}$ yards, what is the diameter of the material needed to make it?
9. After cutting a pattern, Brenda finds that she has a substantial piece of material left over, as shown. How many square inches does she have?

UNIT VIII - ACCOUNTS
ACHIEVEMENT TEST NO. 8

1. Fill in the missing figures in the following:

	<u>Cash Receipts</u>	<u>Cash Payments</u>	<u>Balance</u>
a.	\$11,719.32	?	\$8,690.18
b.	8,123.25	\$2,330.15	?
c.	?	5,657.68	15,748.25
d.	20,890.19	7,819.34	?

2. Fill the missing figures in the following:

	<u>Inventory B. O. M.</u>	<u>Purchases</u>	<u>Inventory E. O. M.</u>	<u>Cost of Goods</u>
a.	\$4,159.76	\$3,929.48	\$3,150.00	?
b.	?	7,105.00	4,235.15	\$8,504.85
c.	3,284.29	?	5,463.19	2,606.10
d.	2,191.50	8,439.62	?	5,132.62

3. Reconcile the bank balance in each of the following:

- a. The check book balance was \$376.52 and the bank statement showed a balance of \$523.83. Checks for \$69.20, \$56.00, and \$22.11 were still outstanding.
- b. The bank statement listed the balance as \$375.61, but the check book showed only \$187.65. The service charge was \$1.12. The three outstanding checks were for \$29.75, \$41.98, and \$31.25. A deposit of \$86.10 had not been recorded in the check book.
- c. Ethel Martin's April bank statement for her dress shop showed a balance of \$3,721.59 while her check book balance was \$3,916.02. Three outstanding checks were for \$103.48, \$12.50, and \$76.59. A deposit of \$387.00 was not included in her statement.

4. The finishers sew buttons on style#617 at the rate of 18¢ per dozen. How many dresses, 10 buttons to the dress, must a finisher average daily to earn \$45.00 weekly?
5. How many expert pressers, averaging 40 dresses a day, are needed for a factory having a weekly output of 1,000 dresses in a five-day week? What does each worker earn weekly when he is paid 39¢ a dress?
6. In the garment trade the busy seasons cover a period of 44 weeks. How much does a cutter earn who averages \$125.00 a week during the busy season? What is his average weekly wage for the year? (Assume an 8-week lay-off.)
7. An operator earned \$75.00 weekly and her sister, $66\frac{2}{3}\%$ as much. They gave 60% of their earnings toward the family support. How much had each left for her own use?

PREFACE

During the first Joint Conference of Vocational Education arrangements were completed for the development of lesson plans for the Practical Nursing curriculum. The coordinators and instructors prepared these lesson plans.

It is hoped that the prepared lesson plans will serve as an instructional aide for the practical nursing teacher. They should be used as a guide for the teacher as she makes daily lesson plans. The lessons include objectives, references, materials, instructional aids, outline of pertinent material to be presented, application, test and summary.

PREFACE	i
CONTENTS	ii
LESSON	
1. Introduction to Psychiatric Nursing	1
2. The Mental Hospital	5
3. Basic Concepts of a Therapeutic	9
4. Observation and Recording	13
5. The New Admission	15
6. The Withdrawn Patient, the Underactive Patient	19
7. The Suspicious Patient, the Worrying Patient	21
8. Security Measures in a Psychiatric Hospital	25
9. Types of Mental Diseases	27
10. Types of Therapy	31
11. Rehabilitation of the Mentally Ill Patient	33

MENTAL NURSING

NAME OF LESSON: Introduction to Psychiatric Nursing

AIM OF LESSON: To help the student to accept the need for integrating mental health concepts into every phase of the patient-nurse relationship.

REFERENCES: Mental Health, the Nurse and the Patient - Odlum
Practical Nursing - Rapiet, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

Step I. INTRODUCTION:

No one is wholly successful in everything they wish to accomplish or achieve. Everyone meets with some frustrations. Some people are able to compensate for disappointments more than others. Our healthy state of mind assist us to achieve the ability to compensate for tensions, disappointments and the stresses occurring in our daily life. Health has three faces, body, mind and emotions. They must be considered together. Mind is the reasoning part of the individual. It is difficult to separate emotional and mental health. Mind is also the part of us that makes decisions. Individuals unable to make decisions which help them carry on as independent beings and fit into the world are mentally ill.

Step II. PRESENTATION OF LESSON

(List Points of Information)

- A. Historical Points
1. Attitudes
 2. Attitudes Changed

Key Points

(Things to Remember to Do or Say)

- a. Biblical times
Since beginning of human existence temples were built for care of the mentally ill.
- b. Greece in the Golden Age
Physicians tried to separate those with mental illness from the physically ill. There was a tolerant attitude toward the mentally ill or retarded.
 - a. During the latter part of the eighteenth century, at the time of

the downfall of the flourishing empires, the treatment underwent severe change from tolerance and care to mistreatment.

b. In Medieval times the mentally ill was looked upon as possessed by evil spirits.

3. Reform

a. Began at the end of 18th century

b. Phillipe Pinel was French physician who thought the responsibility of the mentally ill should fall on the mentally well

c. Dorothea Dix, school teacher, informed the public, especially the government of existing conditions

d. Clifford Beers wrote "A Mind That Found Itself", a story concerning his hospitalization in the early 20th Century. He was instrumental in founding the National Committee for Mental Hygiene.

4. National Association for Mental Health

a. Sponsors

Guidance clinics

Adjustment Centers

Vocational Guidance

Prison Psychiatry

b. Educates by

Radio

Television

Community panel discussions, includes lay and professional groups

Distributes printed material

B. Discussion of Terms

1. Mental Illness

a. People with difficulties that affect the mind

b. Patient is as sick as if it were a physical ailment

c. Modern medicine recognizes difficulties people meet

d. Many recover and return to normal way of life

2. Psychiatry

- a. Specialized field of medicine
- b. Constantly finding new and better ways of treating mental illness
- c. Mentally ill may be cared for in home or hospital
- d. Many kinds of mental illness
Symptoms: Usually recognizable, personality changes
Cause: May be due to shock, true cause often unknown. There may be a hereditary tendency. More often arises from inability to adjust to difficult environment

3. Psychology

- a. Definition
- b. Plays a very practical part in our everyday life in the hospital
- c. Why the nurse needs to know in daily work with people.
To understand people it is necessary that we have some idea of the way in which the human mind works.
Learn the manner in which the individual is likely to behave.

Step III. APPLICATION:

Write brief outline of "Changing Public Attitudes Toward Mental Illness".

Visit with instructor Mental Health Center

Step IV. CHECK UP OR TEST:

Write resume of field trip to Mental Health Center.

SUMMARY:

For many centuries mental illness was looked upon with dread. The mentally ill were condemned. Gradually ideas regarding behavior disorders changed with the advance of scientific medicine. Cases were explored and treatments studied and applied. Through the efforts of well known individuals as Dorthea Dix, Clifford Beers

and others dedicated to the improvement of care for the mentally ill, the mental hygiene movement came into being. Out of this beginning the National Association for Mental Health, Inc., developed and psychiatry began to play an important part in everyday activity.

No matter how unlikely the recovery of a patient may seem, no patient is neglected or regarded as hopeless. Many hospitalized patients return to their families and work in the community as better adjusted citizens.

MENTAL NURSING

NAME OF LESSON: The Mental Hospital

AIM OF LESSON: To inform the student of the types of hospitals available for the care of the mentally ill.

REFERENCES: Practical Nursing - Rapiet
The Psychiatric Aide - Robinson

MATERIALS: Chalkboard, chalk, eraser

Step I. INTRODUCTION

Current authorities in the field of mental health believe there are some 17,600,000 persons suffering from some form of mental illness. Slightly more than one out of every two hospital beds in the U. S. are occupied by mental patients. The extent of mental illness is generally underestimated because many people still think of it only as "insanity" or "craziness". Actually mental illness is very common. It can be as serious as cancer or as mild as a cold. Severe disturbances of mental health necessitate hospital care for nearly a million persons in this country. There are about 496 hospitals for mental disease in the U. S. The average daily hospital census of mental patients in 1957 was 673,115.

Step II. Presentation of Lesson

<u>(List Points of Information)</u>	<u>Key Points</u> (Things to Remember to Do or Say)
<p>A. Private Hospitals</p> <ol style="list-style-type: none"> 1. Basis for admission <ol style="list-style-type: none"> a. Ability to pay b. Facilities available 	<ol style="list-style-type: none"> a. Smaller than state owned hospitals b. May or may not operate for profit
<p>B. Public Hospitals</p> <ol style="list-style-type: none"> 1. Basis for admission: <ol style="list-style-type: none"> a. Resident of state 	<ol style="list-style-type: none"> a. Usually patients requiring longer period of treatment may be 1,000 to 10,000 patients.

- 2. Facilities
 - a. Diagnosis
 - b. Treatment
 - c. Research
 - Cause
 - Treatment
 - d. Educational programs
- C. Veterans Administration
 - 1. Federal hospitals
 - a. Basis for admission
Patients connected with
government,
Veterans
- D. Psychopathic Hospitals
 - 1. Observation and
emergency treatment
- E. Residential Treatment Center
 - 1. Children
- F. Day Care
- G. Methods of Admission
 - 1. Voluntary
 - 2. Temporary Care
 - 3. Court Commitment

Step III. APPLICATION

Read unit in textbock on care of the mentally ill.
 Read "What is Mental Illness" U. S. Department of Health,
 Education, and Welfare.
 Read "There is Something You Can Do about Mental Health"
 W. C. Menninger, M. D.

Step IV. CHECK-UP OR TEST

A. Outline briefly types of hospitals available for the mentally
 ill and basis for admission.

SUMMARY

Mental illness remains the nations number one health problem.
 Each year about 290,000 new patients are admitted to mental
 hospitals and psychiatric units of general hospitals. There are

more patients in hospitals for mental illness than all other diseases combined.

More mentally ill patients are recovering, more research is underway, more communities are providing facilities for early detection, treatment and rehabilitation than at any time in history.

There are three methods of admission to a mental hospital. Voluntary admission is the most desirable since it is acknowledged by the patient who has insight into his problem and requests care and treatment.

MENTAL NURSING

NAME OF LESSON: Basic Concepts of a Therapeutic Environment

AIM OF LESSON: To teach the student the importance of a therapeutic environment.

REFERENCES: Preview of Practical Nursing - Mosby
Simplified Nursing - Thompson and LeBaron

MATERIALS: One copy of test for each student

Step I. INTRODUCTION

The importance of the correct approach to mentally ill patients cannot be stressed too frequently, the nurses success depends on her ability to evaluate her patients and adjust her own behavior accordingly.

Step II. PRESENTATION OF LESSON

(List Points of Information)

A. Needs of the patient

Key Points

(Things to Remember to Do or Say)

1. His desires, wishes and opinions are as important to him as are those of the well person
2. Consistent, non-punitive attitudes are essential.
3. Allow patient to set own pace in working with his problem
4. Unconditional acceptance
5. Allow to express both positive and negative emotions
6. Permissiveness with consistent limitations
7. Basic needs common to all people, love, security, protection, elimination, food, clothing and shelter.

B. Essential attitudes for the nurse

1. Wholesome and constructive attitude
2. Love and esteem, matter of factness
3. Active friendliness, passive friendliness
4. Politeness, patience, truthfulness and poise
5. Tactfulness, skillful listening, confidence

C. Hygiene

Basic hygiene needs known to all persons

D. Factors preventing therapeutic environment

1. Factors which would hinder therapy in any of the above mentioned points

Step III. APPLICATION

- A. Discuss the right attitudes and compare them with effects of wrong attitudes
- B. Discuss false notions of mental illnesses that exist today
- C. Compare needs of the mentally ill with those of the well person

Step IV. CHECK-UP OR TEST

1. Essential attitudes for the nurse, to establish comfortable and agreeable relationships with mental patients would include the following:
 - A. Even temper
 - B. Noncritical attitude
 - C. Confidence in ourselves and others
 - D. Intimate friendships with patient
 - E. Hurried manner
 1. All of these
 2. A, C, and D
 3. B, D, and E
 4. A, B, and C
 5. All except E
2. Attitudes to avoid in caring for mental patients
 - A. Over-rating what patient says
 - B. Stimulating ideas of reference
 - C. Politeness and tactfulness
 - D. Superior attitudes
 - E. Friendliness
 1. None of these
 2. A, and D only
 3. All except E
 4. A, B, and C
 5. A, B, and D

3. Basic needs of the mentally ill person include all of the following except one. Select the one item that does not apply.
- | | |
|--|-----------------------|
| A. Love | 1. All except D and E |
| B. Food, clothing and shelter | 2. All except D |
| C. Security and protection | 3. B, C, and E only |
| D. Punitive measures to control behavior | 4. D only |
| E. Permissiveness without limitations | 5. E only |
4. The practical nurse's approach to the patient is determined by:
- | | |
|---------------------------------------|------------------|
| A. The doctor's orders upon admission | 1. C only |
| B. Diagnosis | 2. B, C, and D |
| C. The patient's behavior | 3. All except E |
| D. The patient's education | 4. A, D, and E |
| E. Likes and dislikes | 5. None of these |
5. The following are general principles applying to mental nursing
- | | |
|---|---------------------|
| A. Lack of orientation promotes comfort | 1. B, C, and E |
| B. Mental patients need to feel accepted | 2. All except A |
| C. Mental patients need to express emotions | 3. All except E |
| D. Mental patients need to feel security | 4. B, C, and D only |
| E. Reassurance by nurse's skill | 5. All of these |

Answer Key

1. 4
2. 5
3. 1
4. 1
5. 2

SUMMARY:

Mental patients need assistance from well-adjusted and mature persons who, by training, skill, and understanding, can provide healing and therapeutic environment.

The next assignment will cover guides for observing and recording.

MENTAL NURSING

NAME OF LESSON: Observation and Recording

AIM OF LESSON: To teach basic approaches to psychiatric behavior patterns. Guides for admission observations and ward observations.

REFERENCES: Preview of Practical Nursing - Mosby
Simplified Nursing - Thompson and LeBaron

MATERIALS: A large picture of a group of people engaged in some activity

INSTRUCTIONAL AIDS: Chalk board and chalk

Step I. INTRODUCTION:

Today we will discuss basic approaches to psychiatric behavior patterns, what to look for in caring for the mentally ill and how to record your observations.

Step II. PRESENTATION OF LESSON

Key Points

(List Points of Information)

(Things to Remember to Do or Say)

A. Admission observations

1. Physical condition is checked
2. Careful and detailed observations made about behavior, notes are taken if possible
3. Appearance as to dress and facial expression
4. Sociability, degree of
5. General behavior, cooperativeness; whether or not responsive
6. Emotional reactions
7. Speech-normal or defective
8. Conversation, whether it appears normal in amount and content. Complaints are noted in detail

B. Ward Observations

1. Purpose of ward observations
2. Patients condition from time to time .
3. Observe without patients knowledge.
Appearance, is patient neat, clean and tidy, or dirty and untidy?
4. Sociability, does the patient associate freely with other patients, or is he withdrawn?
5. Behavior, is patient orderly or disorderly?
6. Restless, quiet or noisy, friendly or indifferent
7. Interested or disinterested, destructive or violent
8. Emotional reactions, speech, complaints, sleep, appetite, and excretions.

Step III. APPLICATION:

Using these points as a guide, report your observations of someone you have been in contact with today. (Have three or four students report.) Group discussion of important points of observing, stressing points that may have been left out.

Step IV. CHECK-UP OR TEST

Show a picture to the group, preferably a group picture, for a brief period, then have each student write as many observations about the picture as they can.

SUMMARY

If a person is not naturally observant, this trait can be cultivated. One must be alert with all senses. Observe and report in detail, taking great care to be accurate. Do not draw own conclusions. Choose words carefully in writing notes. Accurate observing and recording is of the utmost importance while no report is better than a misleading one.

The next topic for discussion will be the new admission.

MENTAL NURSING

- NAME OF LESSON: The New Admission
- AIM OF LESSON: To teach the student guides to follow in the admission of a patient to a mental hospital.
- REFERENCES: Preview of Practical Nursing - Mosby
Simplified Nursing - Thompson and LeBaron
- MATERIALS: One copy of true or false test questions for each student.

Step I. INTRODUCTION:

It is important that a nurse know basic guide rules for admitting mentally ill patients. The patients initial contact with the hospital is very important, the saying "First impressions are lasting impressions" proves to be true quite frequently.

Step II. PRESENTATION OF LESSON

(List Points of Information)	<u>Key Points</u> (Things to Remember to Do or Say)
A. Guides to admission of patient to a mental hospital	<ol style="list-style-type: none"> 1. Put patient at ease, thus increasing feelings of security 2. Admission of hospital routines in relationship to the patients person and belongings. 3. No patient left alone during admission because of possible escape or suicidal tendencies. 4. Orient patient to hospital environment. 5. Introduce patient to others on the ward, at his level of acceptance. 6. Be prepared to give acutely ill patient immediate and skillful care. 7. Friendly and gracious with patient's family. 8. Observe patient and report accurately.

9. Give verbal reports away from patient's hearing .
10. Keep written reports away from patient's seeing.
11. Do not ask leading questions.
12. All new admissions are watched closely until it is determined if there are escape, suicidal, or combative tendencies present.

Step III. APPLICATION

Group discussion of how guides for admission of a patient to a mental hospital varies with the guides for admission to a general hospital. Discuss why there is a need for these variations.

Step IV. CHECK-UP OR TEST

The following statements are either true or false regarding a patient who is a new admission to a mental hospital. Select either true or false and write the word that applies in front of the statement.

1. True Any behavior which might suggest self-injury or injury to others should be reported at once.
2. False It is acceptable to leave a new admission alone if no escape tendencies are noted.
3. False A new admission patient should be introduced to all the other patients on the ward, and all the nursing personnel, even though he may act as if he would rather be alone.
4. False It is not important to spend time with the patient's family because you owe all of your time to the patient.
5. True A psychiatric nurse must be prepared to give acutely ill patients immediate and skillful care.
6. True To put a mentally ill person at ease increases his feelings of security.
7. False It usually is not necessary to acquaint the mentally ill patient with hospital routines because he already has enough to be concerned about.
8. True Nursing care should center on the patient as a person and not on control of symptoms.

9. True While admitting a new patient you remember that behavior differs in degree rather than kind.
10. True Human behavior is motivated and can be understood and interpreted.

SUMMARY

Today we have discussed basic guides to use when admitting a patient to a mental hospital, how these guides vary with the usual admission routine and the importance of having such a guide in order for the best possible care to be given to the patient. By applying these guides we are also of value in securing the cooperation of the patient, his family, as well as having an opportunity to establish a good nurse-patient relationship.

The next assignment will be: The Withdrawn Patient, the Underactive Patient.

MENTAL NURSING

NAME OF LESSON: The Withdrawn Patient, the Underactive Patient

AIM OF LESSON: To teach the student guides to nursing withdrawn and underactive patients according to behavior shown

REFERENCES: Preview of Practical Nursing - Mosby
Simplified Nursing - Thompson and LeBaron

Step I. INTRODUCTION:

Nursing success of mentally ill patients depends on the nurse's ability to evaluate various behavior patterns and adjust her nursing practices accordingly. Today we will discuss basic approaches to the withdrawn patient and the underactive patient.

Step II. PRESENTATION OF LESSON:
(List Points of Information)Key Points
(Things to Remember to Do or Say)

- | | |
|----------------------------|---|
| A. The withdrawn patient | <ol style="list-style-type: none"> 1. Show interest by warm friendly approaches 2. Use simple direct approach 3. Listen without indicating acceptance, dispute, or ridicule if hallucinations present 4. Try to not do or say things that might create suspicion 5. Anticipate changes in behavior so as to be ready to cope with it 6. Plan well for personal hygiene, the patient may forget or neglect to care for himself 7. Exercise must be planned for if patient stays in one position |
| B. The underactive patient | <ol style="list-style-type: none"> 1. Show sincere interest by attitude 2. Try to keep patient's life simple and free from confusion 3. Patient slower in the morning new activities should be used in afternoon |

4. Accept refusals to cooperate calmly
5. Do not attempt to reason away ideas of guilt, but allow to do menial tasks if not tiring
6. Provide security from suicide.
7. Be alert for signs of fatigue, and neglect of personal hygiene.
8. Be alert for physical illness, and malnutrition. Insomnia is common.

Step III. APPLICATION

Have each student plan the care for one day for each type of patient, pointing out the plans necessary to meet the patients basic needs, such as personal hygiene, exercise and nutrition.

Step IV. CHECK-UP OR TEST

Role playing: Students acting part of the patient and the nurse. Every student need not play either a patient or nurse but each one being free to offer helpful suggestions. The instructor should check to make the important points of approach to these two types of patients brought out clearly.

SUMMARY:

Today we have learned the approach to two types of mentally ill patients, these are basic guides. Each patient is an individual and their behavior patterns will change. Remember always that the successful nurse changes her nursing approach as the patient changes his behavior. It is impossible to predict all possible behavior that the patient may show at some time or other, however, with these guides, you can be sure of attending to the patients needs.

Tomorrows lesson will be "The Suspicious Patient" and "The Worrying Patient."

MENTAL NURSING

NAME OF LESSON: The Suspicious Patient, The Worrying Patient

AIM OF LESSON: To teach the student guides to nursing the suspicious patient and the worrying patient according to behavior shown.

REFERENCES: Mental Health, the Nurse and the Patient - Odlum
Practical Nursing - Rapier, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

SUPPLIES: One copy of test for each student

Step I. INTRODUCTION:

We have studied the approach to use for the withdrawn and the underactive patient, now we will discuss the approach to use for the suspicious and the worrying type patients.

Step II. PRESENTATION OF LESSON:

(List Points of Information)

A. The Suspicious Patient

Key Points

(Things to Remember to Do or Say)

1. Reduce threat by interest, tolerant attitude, and approval for work well done.
2. Accept aloofness with matter-of-fact attitude
3. Recognize conceit, sarcasm, and conceited attitudes as a part of his illness
4. Try to learn and avoid patients points of sensitivity so that he won't be offended
5. Listen without showing acceptance or arguments if false suspicions exist
6. Tactful indirect methods of feeding patient if he feels he is being poisoned

**B. The Worrying Patient
(psychoneurotic)**

7. Be alert for suicide tendencies or feelings of persecution
8. Provide contacts that offer no personal threat.
1. Accept complaints as part of illness, but plan work and play for patients comfort.
2. Matter-of-fact acceptance of patient.
3. Attend to physical problems tactfully and without undue concern
4. Observe for stealing, return stolen item with quiet unconcern.
5. Be alerted for unbearable anxiety, use tactful precautions for suicide.
6. Complaints may make him unacceptable to others in a group, support him tactfully.
7. Provide simple health program

Step III. APPLICATION:

Group discussion of items that may make an already suspicious patient even more suspicious. Discuss ways that the nurse can help to avoid bringing suspicion upon the nurses as they go about their daily activities. Using the guides that have been given, discuss ways of helping the worrying patient cope with his anxieties.

Step IV. CHECK-UP OR TEST:

Situation Questions; Please select the most nearly correct answer from the following: You have as one of your patients, a young mother of three children, she does not appear too upset, but you notice that she watches everyone about her, including you, very closely and presents other symptoms of being suspicious of her surroundings.

1. Your patient refuses to enter into ward activities because she feels that she cannot do as well as some of the other patients. You could best help by:
 - A. Insisting that she join the group.
 - B. Show disapproval because she does not cooperate.
 1. C and D
 2. B only
 3. A and D
 4. C only

- C. Be tolerant and show friendly interest in simple activities that she can do
 - D. Accept the fact that she feels superior and tell her that she will have to join the group if she hopes to get well enough to go home.
2. One morning when you carry the breakfast tray to your patient she says, "Take it away, I am not going to eat anymore of that poison." You would:
- A. Quietly remove the tray and offer food later in the morning.
 - B. Tell her that she must eat to keep her strength.
 - C. Discuss the disadvantages of tube feedings.
 - D. Tell her that the food is not poisoned and prove it by eating the food yourself.
1. D only
2. B and C
3. A only
4. B and D
3. A new patient is admitted to your unit and soon you discover that he seems to worry constantly about small items that normally do not bother most other patients. He has a lot of complaints and complains that the other patients avoid him because he is not good enough to associate with them. You should
- A. Tell him to stay away from the group.
 - B. Accept his complaint, but assure him that he is probably better than they are.
 - C. Accept his complaint matter-of-factly and avoid comment on the patients worth.
 - D. Tell him to quit worrying and join the group anyhow.

Answer Key:

1. 4, 2. 3, 3. 1.

SUMMARY:

Today we have discussed the suspicious patient and the worrying type patient. Possibly the key note in caring for these types of patients is to remember that the patient responds to a situation in relation to whatever or whoever is in it with him, illusory or real. Permissiveness with broad, consistent limitations is essential for the patient to be better able to cope with and work out his problems.

The next lesson will be on: Security Measures in a Psychiatric Hospital.

MENTAL NURSING

NAME OF LESSON: Security Measures in a Psychiatric Hospital

AIM OF LESSON: To teach the student measures that must be employed in mental nursing to offer the fullest protection to the patient, the hospital, and to the personnel.

REFERENCES: Mental Health, the Nurse and the Patient - Odium
Practical Nursing - Rapier, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

Step I. INTRODUCTION:

By the nature of mental illness, in which emotions become greatly disturbed, the patient needs protection in different ways. The tendency to harm self or others may be strong. Ideas of unworthiness or hostility may be uncontrollable at times, poor judgment and impulsive behavior is common. Security measures are a MUST in psychiatric hospitals.

Step II. PRESENTATION OF LESSON

(List Points of Information)	<u>Key Points</u> (Things to Remember to Do or Say)
A. Security in relation to keys	1. Principles in proper handling of keys . 2. Locked areas for the protection of the patient in his environment .
B. Potentially dangerous articles	1. Sharps and silverware precautions and routines. 2. Necessary and unnecessary hazards in environment. 3. Nurse's duties and routines when hazardous articles are lost.
C. Precautions for the prevention of fire	1. Well informed and constantly alert personnel.

- | | |
|---|---|
| | 2. Fire prevention routines, use and care of equipment. |
| | 3. Practice "fire drills." |
| D. Group Management | 1. Preparation of group before leaving ward. |
| | 2. Management of group off ward. |
| E. Precautions regarding elopement. | 1. Common methods used and reasons for patient elopement. |
| | 2. Nurse's responsibility in preventing routines when elopement occurs. |
| F. Preventing injury to self and others | 1. Common reasons for attempting suicide. |
| | 2. Methods of suicide, means for precautions. |
| | 3. Types of patients likely to injure themselves or others. |
| G. Restraints | 1. Principles of manual, mechanical and chemical restraints. |

Step III. APPLICATION

Student group point out both necessary and unnecessary environmental hazards in the immediate environment. Review of fire precautions for the home, hospital, or school. Demonstration of as many types of restraints as possible.

Step IV. CHECK-UP OR TEST

Return demonstration for correct use of manual and mechanical restraints. Have each student give location and procedure for using the fire equipment in the area in which he is spending the greater part of the day.

SUMMARIZATION:

Symptoms of mental illness may cause a patient to disregard his own safety and the safety of others to the degree that security measures must be observed constantly by well informed, alert personnel.

During our next meeting we will discuss: Types of Mental Diseases

MENTAL NURSING

NAME OF LESSON: Types of Mental Diseases

AIM OF LESSON: To acquaint the student with the different classifications of mental diseases

REFERENCES: Mental Health, the Nurse and the Patient - Odlum
Practical Nursing - Rapiet, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

Step I. INTRODUCTION:

There are many types of mental illnesses. Many types will lend themselves to a definite classification, other mental illnesses present symptoms of two or more of these different types.

Step II. PRESENTATION:

(List Points of Information)

Key Points

(Things to remember to do and say)

A. Organic diseases

1. Acute Brain Disorders
 - a. Associated with brain or bodily infection
 - b. Drug or poison intoxication
 - c. Alcohol intoxication
 - d. Head injury
 - (1) Brain surgery
 - e. Circulatory disturbances
 - (1) High blood pressure
 - a. "Stroke"
 - f. Brain tumors
2. Chronic Brain Disorders
 - a. Birth injury, illness, or defect
 - b. Chronic forms of the acute brain disorders that have passed the acute stage
 - c. Disorders of unknown or uncertain causes
 1. Multiple sclerosis
 2. Huntington's chorea

B. Psychotic Disorders

1. Involuntional psychotic reaction
 - a. Depression occurring at middle age
 - (1) "Change of life"
 - a. Men
 - b. Women
2. Manic depressive reactions
 - a. Manic, overactivity
 - (1) Motor
 - (2) Verbal
 - b. Depressed, underactivity
 - (1) Motor
 - (2) Verbal
 - c. Other
 - (1) Mixed overactivity and underactivity
3. Psychotic depressive reaction
4. Schizophrenic reactions
 - a. Simple type
 - b. Hebephrenic type
 - c. Catatonic type
 - d. Paranoid type
5. Schizophrenic reactions, acute and chronic
6. Paranoid reactions
 - a. Paranoia
 - b. Paranoid state
7. Psychophysiologic Autonomic and Visceral Disorders. (Psychosomatic Disorders)
 - a. Skin reaction
 - b. Musculoskeletal reaction
 - c. Respiratory reaction
 - d. Cardiovascular reaction
 - e. Gastro-intestinal reaction
 - f. Genito-urinary reaction
 - g. Endocrine (glandular) reaction
 - h. Nervous system reaction

C. Mental Deficiency

1. Defect in intelligence existing since birth, without demonstrated organic brain disease, or known cause before birth
2. Degrees of intelligence defect:
 - a. Mild-vocational impairment
 - b. Moderate. Requires special training and guidance
 - c. Severe. Requires custodial or complete protective care

D. Psychoneurotic disorders

1. Anxiety reactions
2. Obsessive reaction
3. Dissociative reactions
4. Conversion reaction
5. Depressive reaction
6. Phobic reaction

E. Personality Disorders

1. Define the following disorders
 - a. Inadequate personality
 - b. Schizoid personality
 - c. Cyclothymic personality
 - d. Paranoid personality
 - e. Emotionally unstable
 - f. Passive-aggressive personality
 - g. Compulsive personality
 - h. Antisocial reaction
 - i. Dissocial reaction
 - j. Sexual deviation

F. Transient Situational Personality Disorders

1. Different types of transient disorders
 - a. Gross stress reaction
 - (1) Combat, fire, tornado, etc.
 - b. Adult situational reaction
 - (1) Difficult situations
 - (2) New experiences
 - c. Adjustment reaction of infancy and childhood
 - d. Adjustment reaction of adolescence and late life

Step III. APPLICATION:

Classroom discussion of the types of mental diseases

Step IV. CHECK-UP OR TEST:

Matching: Classifications of Mental Illness are listed below. Select the major heading or classification and place the number in the space provided in front of the type of illness that fits the classification.

EXAMPLE: 1 Brain tumor.
Number may be used more than once

- 2 Brain infection
- 5 Schizophrenic reaction
- 7 Respiratory reaction
- 1 Gross stress reaction
- 8 Antisocial reaction
- 3 Associated with syphilis
- 6 Phobic reaction
- 5 Paranoid reaction
- 7 Nervous system reaction
- 8 Sexual deviation
- 1 Adjustment reaction of late life
- 8 Compulsive personality
- 2 Associated with head injury
- 8 Inadequate personality
- 1 Adult situation reaction
- 5 Manic depressive reaction
- 7 Skin reaction
- 2 Associated with alcoholic intoxication
- 7 Gastro-intestinal reaction
- 6 Conversion reaction

- 1. Acute brain disorder
- 2. Mental deficiency
- 1. Transient Situational Personality Disorder
- 2. Acute Brain Disorders
- 3. Chronic Brain Disorders
- 4. Mental Deficiency
- 5. Psychotic Disorders
- 6. Psychoneurotic Disorder
- 7. Psychophysiologic Autonomic and Visceral Disorder
- 8. Personality Disorder

SUMMARY:

Mental illness is being recognized as an illness, not a disgrace. The patient will require special nursing techniques to meet his needs according to the reaction pattern that he presents. It is not the nurse's responsibility to classify the type of mental illness that the patient has, but it is helpful to know these classifications in order to be better equipped to predict a patient's possible reactions in given situations.

Tomorrow's lesson will be: Types of Therapy

MENTAL NURSING

NAME OF LESSON: Types of Therapy

AIM OF LESSON: To teach the student the types of therapy used to treat the mentally ill patient, their basic principles and their value to the patient.

REFERENCES: Mental Health the Nurse and the Patient - Odlum
Practical Nursing - Rapier, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

Step I. INTRODUCTION:

Special therapies are used at different periods of a patient's illness. Today we will discuss the different types of therapy used and the principles involved as well as the benefits the patient receives from them.

Step II. PRESENTATION:
 (List Points of Information)

Key Points
 (Things to remember to do or say)

A. Occupational Therapy

1. Mental or physical activity prescribed by the physician.
2. Occupational therapist specially trained.
3. Scope and principles of occupational therapy.

B. Recreational Therapy

1. Help patient relax.
2. Learn to adjust to groups again.

C. Hydro-therapy

1. Treatment of disease by water in any of its forms.
2. Sedative type most commonly used.
 - a. Wet sheet pack.
 - b. Continuous tub bath.
 - c. Ice caps and packs.

D. Group Therapy

1. Patients with similar problems grouped.

2. Psychiatrist leads discussion.
3. Helpful to patient because others have same or similar problems.
4. Psychodrama used.

E. Shock Therapy

1. insulin shock therapy.
 - a. Therapeutic coma due to insulin.
2. Electroshock therapy.
 - a. Most common of shock therapies.
 - b. Convulsive reactions.

F. Fever Therapy

1. Therapeutic high fever.
 - a. Sterile malaria germs.
 - b. Kettering Hypertherm, fever apparatus.

G. Chemotherapy

1. Common standard drugs for hypnosis and tranquilizers

Step III. APPLICATION:

Classroom discussion of benefits of group discussion of mutual problems. Question and answer session regarding nursing care of patients in insulin shock and convulsions, also nursing care of a patient with a high fever.

Step IV. CHECK-UP OR TEST:

Oral quiz on effects of tranquilizing drugs, sedatives and hypnotic drugs. Oral quiz on bodily reactions to effects of heat and cold in relation to hydro-therapy.

SUMMARY:

Today we have discussed the special therapies used to treat the mentally ill and the expected results of these treatments. At some time during the patient's illness any one or all of these treatments may be employed. It is essential that you as the nurse who will be caring for the patients receiving these treatments understand the basic principles involved and the value of them to your patient.

Our final lesson in mental nursing will be on Rehabilitation.

MENTAL NURSING

NAME OF LESSON: Rehabilitation of the Mentally Ill Patient

AIM OF LESSON: To teach the student her role in the rehabilitation of the mentally ill and to familiarize her with some of the facilities available to help the mentally ill.

REFERENCES: Mental Health the Nurse and the Patient - Odum
Practical Nursing - Rapiet, et al
Simplified Nursing - Thompson and LeBaron
The Psychiatric Aide - Robinson

MATERIALS: Copy of final test for each student.

Step I. INTRODUCTION:

Medically used the word rehabilitation means to offer to the person who is ill an opportunity to recover from his illness as well as to become again a member of the community at the best level of which he is capable. Today we shall discuss the basic steps of rehabilitation.

Step II. PRESENTATION:

(List Points of Information)

Key Points

(Things to remember to do or say)

A. Rehabilitation Team

1. Many people involved, psychiatrist, social worker, psychologist, occupational and recreational therapists and nurses.
2. Access to all facilities for all patients.
 - a. Levels of convalescence or return to normal.
 - Participation in simple activities on ward.
 - Participation in activities in occupational therapy department.
 - Participation in recreational activities with supervision.

Extended privileges,
ground, home.
Ground parole.
Outside parole.
Discharge from hospital.

3. Counseling for discharged patient
4. Family responsibilities to the patient
5. Community responsibilities
6. Role of the nurse in rehabilitation of the mentally ill

Step III. APPLICATION:

Comparison study of the physically ill patient and mentally ill patient and the factors involved in the rehabilitation of each type of patient, using the seven steps listed in key point 2. This can be handled in the form of a classroom question and answer period. A field trip through a psychiatric hospital.

Step IV. CHECK-UP OR TEST:

Matching Test: Taken from "Simplified Nursing"

Thompson and LeBaron

- | | |
|---|--|
| <u>E</u> 1. Minor disorder which does not completely incapacitate the patient | A. Mental illness |
| <u>G</u> 2. Marked deviation from normal behavior with irregular conduct | B. Doctor |
| <u>H</u> 3. Functional disorder | C. "Talking down" |
| <u>I</u> 4. Toxic psychoses | D. Suicide attempt |
| <u>J</u> 5. System of well organized delusions or false beliefs | E. Chemotherapy |
| <u>K</u> 6. Illness borderline of psychiatry, often involved with the law | F. Psychoneuroses |
| <u>A</u> 7. Medical term for mental illness | G. Psychosis |
| <u>M</u> 8. Legal term for the psychotic | H. Schizophrenia |
| <u>B</u> 9. The person who reviews the patient's outgoing mail | I. Drug addiction |
| | J. Paranoia |
| | K. Psychopathic personality |
| | L. Mental patient requiring "specials" |
| | M. Insane |
| | N. Manic retarded |

- C 10. Aggravates feelings of inferiority
- D 11. Should be reported immediately
- E 12. Type of restraint used most often now

WHAT IS HORTICULTURE?

James Utzinger

Teacher of Vocational Agriculture

Pleasant View High School

- ED013339.
- Slide 1 - Horticulture is closely associated with the history and progress of mankind. The word horticulture is actually derived from two Latin words: hortus, meaning "garden," and colere, meaning "to cultivate." Literally then, horticulture means to cultivate or care for a garden. More broadly, horticulture can be thought of as a branch of agriculture dealing with intensively cultured plants which are used by man for food, medicines or beautification.
- Slide 2 - The horticultural industry is usually divided into various specialized areas based on the crop or plant use. One of the most beautiful and interesting areas of horticulture is that of the culture and use of flowers, known technically as floriculture. Flowers are used by people to express their emotions on various occasions such as birthdays and anniversaries, and they serve as a source of beauty both indoors and outdoors.
- Slide 3 - Customers demand flowers the year around. Thus, greenhouse facilities such as seen here are found in many communities. These greenhouses represent thousands of dollars of investment. Thus, the owner, the operator or the manager of the greenhouse must be well educated. The manager is called upon to make many important decisions concerning the crops to be grown, harvested and marketed. Instruction in horticulture can help prepare one to become a greenhouse operator or plant grower.
- Slide 4 - Flowers may be grown in the greenhouse for use as cut flowers. Pictured is a large planting of chrysanthemums growing in raised benches. This is a common sight in many floriculture greenhouses. It takes considerable horticultural and business knowledge to get results such as these.
- Slide 5 - Students in high school horticulture classes learn by doing. Forcing bulbs during the winter months is one possible activity. Many flowers are grown in pots to be used as pot plants rather than as cut flowers. Pot plant production of such plants as geraniums, chrysanthemums, Easter lilies and poinsettias represent an important phase of the floriculture industry.
- Slide 6 - Much of the floral production is marketed in attractive retail florist shops. The retail florist is a businessman as well as an artist. To be successful in this area one needs skills and abilities in floral design and business management.

- Slide 7 - No wedding would be complete without flowers. The artistic arrangements carried by the wedding party represent a considerable amount of time in the growing, handling and arranging of flowers. Floral designing represents a vocational opportunity for those with a flair for creative design. The work is regular and the working conditions are quite pleasant.
- Slide 8 - These girls are gaining valuable experience in floral arranging at school. Experience may also be obtained in the shop of a local retail florist who has agreed to work with the school in providing actual occupational experience for the students interested in preparing for careers in floriculture. The school quite often provides release time for the students to obtain very valuable and desirable occupational experience.
- Slide 9 - Vegetable production is another of the very important and interesting areas of horticulture. It is known technically as olericulture. Vegetables are extremely important to the human diet. Those engaged in the production of vegetables are rendering a service to mankind by helping feed the people of the world.
- Slide 10 - Many vegetables such as cabbage are grown under field conditions during the growing season. The crop may be sold as a fresh vegetable or processed in a plant and marketed as canned goods.
- Slide 11 - Other vegetables, tomatoes for example, are produced under greenhouse conditions during the months when it is impossible to grow vegetables out of doors. Like the operator of the floral greenhouse, the vegetable greenhouse operator has a tremendous investment in facilities, equipment, fuel and labor. It takes considerable horticultural and business knowledge to be successful.
- Slide 12 - The roadside market is still popular in many communities. Here the customer can find fresh vegetables of high quality produced by the skilled vegetable grower.
- Slide 13 - Corn on the cob makes a wonderful summer eating treat. We can thank the horticulturist specializing in vegetable production for high quality food such as represented by this corn.
- Slide 14 - The student may have a crop growing project at school where considerable learning may take place.
- Slide 15 - By working with the teacher in conducting a supervised summer project garden at home, the student can gain valuable experience which is not possible to obtain in the classroom.

- Slide 16 - Interest in horticulture developed in the classroom at school may lead to worthwhile hobbies which enable the student to use leisure time to his advantage.
- Slide 17 - Certainly an appealing and appetizing area of horticulture for the consumer is that of fruit. Wouldn't we all like to have a fruit tree such as we see here in our backyard?
- Slide 18 - Fruit production includes both small fruit and tree fruit production. The field of strawberries illustrates an important characteristic of horticulture - it is possible to obtain a high value crop from a small area of land.
- Slide 19 - Another valuable small fruit crop produced by the horticulturist is the grape, harvested from vineyards such as this one. Other small fruits include the blackberry, raspberry and cranberry.
- Slide 20 - Tree fruits such as apples are grown in larger commercial orchards. Other deciduous tree fruits include the pear, peach, plum and cherry. Due to the mobility of the labor force today, it is quite possible that one receiving instruction in tree fruit production could obtain employment in an area far removed from the original training site.
- Slide 21 - Students are actively involved in learning the subject matter of horticulture. Courses are laboratory oriented so as to enable the students to work with the tools and equipment of the industry. Often times local equipment dealers cooperate with the schools in making equipment available.
- Slide 22 - The school orchard serves as a learning laboratory where valuable experience in fruit production is obtained.
- Slide 23 - Quality as exhibited here requires good management practices. Basic horticulture instruction received at the school and university can prepare workers to assume important jobs in the fruit industry. By scheduling the proper elective courses, the high school horticulture student can prepare for college and learn a vocation at the same time.
- Slide 24 - Turf or lawn care and maintenance is an important aspect of landscape horticulture.
- Slide 25 - The golf course represents a business offering occupational opportunity at all levels of training. The student may want to take a degree program in college and become the greens superintendent, or irrigation specialist, while other students may take the high school course and become a service worker on the course by caring for the greens and fairways.

- Slide 26 - Many lawns are established by using sod rather than seed.
- Slide 27 - The turf on athletic fields requires constant care. This means that many jobs are available in the area of lawn and turf care.
- Slide 28 - In conjunction with their school work in horticulture, students work with experienced supervisors in the industry. Here a student is receiving instruction from a golf course greens superintendent on how to patch turf which has been damaged by disease.
- Slide 29 - The lawn is a source of considerable satisfaction to the home owner. The course in high school horticulture should help the student to have a lawn like this at his own home some day.
- Slide 30 - Landscaping, along with floriculture, is the area of horticulture concerned with the beautification of our homes and communities. The use of plants for beauty is a characteristic unique to horticulture and helps to distinguish it from other agricultural activities. The appeal of this area of horticulture is universal.
- Slide 31 - Many of the woody ornamental plants used in the landscape have their beginnings as cuttings which are rooted in propagating benches. The techniques and skills required to propagate plants is an area of instruction in the high school horticulture program.
- Slide 32 - A field is being prepared to receive rooted nursery stock which has been growing in a semi-sheltered environment for a period of time. The worker in landscape horticulture is often called upon to operate power equipment such as the tractor. At the school, instruction is provided in safe operation, care and maintenance of power equipment common to the landscape horticulture industry.
- Slide 33 - The woody ornamental has been in the nursery field for sufficient time and is in the process of being balled and hurlapped.
- Slide 34 - Meeting and selling products to customers is an important part of garden center work. Many high school horticulture students obtain jobs at garden centers and find the horticultural instruction obtained at the school to be a valuable asset in their work of selling and getting along with others.
- Slide 35 - The well landscaped home is a result of a well-designed and executed planting plan.
- Slide 36 - Landscaping offers many possibilities for vocational choice. Students may choose to become landscape architects, landscape consultants, landscape gardeners, maintenance foreman or groundskeepers.

- Slide 37 - Horticulture classes may install an indoor landscape in the school hall. This adds a touch of beauty to the school during the winter months. Such displays are much enjoyed by the student body and staff.**
- Slide 38 - Plants are living things and as such require constant care. In the school landscape students are afforded an opportunity to learn to prune, water, fertilize and otherwise care for plants. This is valuable knowledge for the students to have, and it will have possible application for years after graduation.**
- Slide 39 - What is horticulture? It is a specialized area of agriculture including such subject matter areas as flowers, fruits, vegetables, lawns or turf and landscaping.**
- Slide 40 - What is horticulture? It is food for a hungry world. It is beauty to the eye. It is a vocation for many people throughout the world. Can horticulture be for you or for your school?**

BUSINESS TRAINING COURSE

JOB No. 1

Reference: TEN-KEY ADDING-LISTING MACHINE AND PRINTING CALCULATOR COURSE, Third Edition, Agnew and Pasewark, South-Western Publishing Company, Cincinnati 27, Ohio.

JOB TITLE: Touch Addition

INTRODUCTION:

The Ten-Key Adding-Listing Machine is a very common office machine because of its efficiency and low cost. Its efficiency, however, is dependent on the operator. The operator should have absolute touch control and a high degree of accuracy coupled with speed.

This first job introduces the keyboard and simple addition. Here your foundation begins; build it well.

PROCEDURES:

1. Read the instructions on pages 1 to 4.
2. Study illustrations for your machine on pages v to ix.
3. You will note that step 8 on page 4 instructs you to write the answers in the book and to tear out the sheets to turn in. You will not do this. On the reverse side of each job sheet there have been provided numbered blanks for you to enter the answers to each problem. There are also special blanks for speed drills and timed drills. At the completion of the job, hand in the job sheet with your answers and timings. This procedure applies to all jobs in this course.
4. Complete problems 1 to 20, pages 2 to 4, entering your answers on the reverse side of this job sheet. Use the following procedure:
 - a. Work problem and note the answer.
 - b. Re-work problem.
 - c. If the answer is the same as in step "a" go to the next problem. If not, rework problem and record answer which proves to be correct.
5. Fill in your name, the date, and the time required to do this job.

JOB No. 2

Reference: TEN-KEY ADDING-LISTING MACHINE AND PRINTING CALCULATOR COURSE, Third Edition, Agnew and Pasewark, South-Western Publishing Company, Cincinnati 27, Ohio

JOB TITLE: Touch Addition

INTRODUCTION: This job is a continuation of Job 1. You will learn the "zero" to "3" keys and the non-add key.

PROCEDURES:

1. Read and complete the steps outlined on pages 5 and 7.
2. Complete problems 1 to 20, pages 5 to 7, using the following procedure:
 - a. Work problem and note answer on the reverse side of this job sheet.
 - b. Re-work problem.
 - c. If the answer is the same as in step "a" go to the next problem. If not, rework problem and record the answer which proves to be correct.
3. Complete timed drill on page 8, using instructions 1 to 3 on page 8.
4. Fill in your name, the date, and time required to do this assignment.

QUESTIONS:

1. What symbol must appear at the beginning of each problem?
2. Do you use your finger or an instrument to guide your eyes down the column?
3. What is stressed first, speed or accuracy?

JOB TITLE: Addition of Numbers Containing Repeated Digits and Varied Number of Digits.

INTRODUCTION:

This job is a continuation of touch addition. The numbers will now contain from one to several digits.

PROCEDURES:

1. Work Warm-up Drill "A" on page 9. Time yourself for five minutes and work the problems as many times as possible in the time allotted. Compute the number of strokes and keep a record similar to the one on page 115 of the textbook.
2. Complete problems 1 to 18, pages 9 to 11.
3. Complete Timed Drill on page 12 following instructions on page 8.

QUESTIONS:

1. Are you using the touch system?
2. Are you introducing rhythm in your stroking?
3. Are you asking the instructor for help when you need it?

JOB TITLE: Speed Drill--Addition

INTRODUCTION:

This job is designed to aid you in increasing your speed and accuracy.

PROCEDURES:

1. Complete each problem once, writing your answer in the first blank. Check the time before you start and again when you complete the 28 problems. Indicate the time required in the space provided.
2. Work the problems again, checking the first answer. If the answer disagrees, write the second answer in the second blank. Record your time.
3. Repeat the drill if the second timing is more than 20 minutes.
4. Do the Three-Minute Checkup. Start with problem No. 1 and complete as many as possible in three minutes. Record the number of problems worked.

JOB TITLE: Short-Cut Multiplication--Zeros in the Multiplier

INTRODUCTION:

Multiplication by the Short-Cut method combines repeated addition and repeated subtraction. It is used to reduce the number of machine operations in completing multiplication problems when the digits 7, 8, or 9 appear in the multiplier.

PROCEDURES:

1. Complete Warm-up Drill "A", page 10, in the usual manner.
2. Read instructions on pages 37 and 38 on Short-Cut Multiplication.
3. Work problems 1 to 15, pages 37 and 38.
4. Read instructions, page 39, for zeros in multiplier. Ask instructor for demonstration.
5. Work problems 26 to 35 on page 39.
6. Work Timed Drill, problems 1 to 20. Time yourself and be sure to use short-cut methods whenever applicable.
7. Turn in your work.

JOB No. 12

Reference: TEN-KEY ADDING-LISTING MACHINE AND PRINTING CALCULATOR COURSE, Third Edition, Agnew and Pasewark, South-Western Publishing Company, Cincinnati 27, Ohio.

JOB TITLE: Decimals, Fractions, and Percentages

INTRODUCTION:

In this job you will learn how to convert common fractions and percentages to decimal fractions. Multiplication of decimal fractions is the same as multiplication of whole numbers, therefore, all you really have to learn is how to point off in the product.

PROCEDURES:

1. Complete Warm-up Drill "B", page 27 in the usual manner.
2. Read and understand text material on pages 41, 42, and 43.
3. Work problems 1 to 42, pages 41 to 43. Be sure to use short-cut methods whenever applicable.
4. Complete Time Drill on page 44.

JOB TITLE: Fixed Decimal Point

INTRODUCTION:

The Fixed Decimal Point is a useful device for solving any arithmetic problem on any type of machine. Its use does not eliminate the need for a knowledge of the rules of pointing off, but is an aid in working problems accurately and rapidly.

PROCEDURES:

1. Work Warm-up Drill "C", page 47.
2. Read and Study text material on page 45 and 46. Careful study of the example problems will help the principles involved.
3. Work problems 1 to 30, pages 45 to 47.
4. Complete Timed Drill, page 48.

QUESTION:

1. Are you using short-cut multiplication when the digits 7, 8, or 9 appear in the multiplier?

JOB TITLE: Discount and Net Amount

INTRODUCTION:

The use of discounts to adjust list prices and to give an incentive for the prompt payment of invoices has a wide application in modern business. Working the problems in this assignment on the machine does not involve learning any new machine techniques. You should already know how to multiply decimals, fractions, and percentages.

PROCEDURES:

1. Complete Warm-up Drill "C" on page 47.
2. Study text material on pages 49 to 51. Learn the definitions of the following terms: trade discounts, cash discounts, gross amount, discount rate, discount, net amount, and net amount percentage.
3. Work problems 1 to 24, pages 49 to 51.
4. Complete Timed Drill on page 52.

QUESTION:

1. Are you using short-cut multiplication in solving discount problems, whenever applicable.

JOB TITLE: Speed Drill--Addition

INTRODUCTION:

This job is designed to aid you in increasing your speed and accuracy.

PROCEDURES:

1. Complete each problem once, writing your answer in the first blank. Check the time before you start and again when you complete the 16 problems. Indicate the time required in the space provided.
2. Work the problems again, checking the first answer. If the answer disagrees, write the second answer in the second blank. Record your time.
3. Repeat the drill if the second timing is more than 20 minutes.
4. Do the Three-minute Checkup. Start with problem No. 1, and complete as many as possible in three minutes. Record the number of problems worked.

JOB TITLE: Constant Multiplication

INTRODUCTION:

On standard 10-key adding machines these problems are completed in the customary manner. You will benefit from the new techniques in this assignment only if you are using a Printing Calculator.

PROCEDURES:

1. Complete Warm-up Drill "D", page 59.
2. Read textbook material on pages 61 to 64, studying the instructions pertaining to the machine you are using. (If you are using a standard 10-key adding machine, omit this step as the problems are worked by ordinary multiplication.)
3. Work problems 1 to 35 on pages 61 to 64, and record the answers on the reverse side of this sheet.
4. Complete Timed Drill on page 64.

QUESTION:

1. If you are using a standard 10-key adding machine, are you using short-cut method for multiplication in all assignments?

JOB TITLE: Division

INTRODUCTION:

Division can be done on the standard 10-Key Adding Machine only by multiplying the dividend by the reciprocal of the divisor. The reciprocal of a number is the answer you get when you divide that number into 1. A table of reciprocals is provided on pages 112 - 113.

PROCEDURES:

1. Complete Warm-up Drill "C" on page 47.
2. If you are using a standard 10-key adding machine, read textbook material on pages 65 and 66. If you are using a Printing Calculator, read the material pertaining to your machine on pages 66 and 67.
3. Complete problems 1 to 20 following instructions for the machine you are using. Write the answers on the reverse side of this sheet.
4. Complete Time Drill on page 68. Be sure to read the text material on page 68.

JOB TITLE: Speed Drill-Addition

INTRODUCTION:

This assignment introduces the use of hand written numbers. The speed drill is designed to increase your speed and accuracy. Since addition is about 90% of the arithmetic work done in ordinary offices, the speed drills are a very important part of your training on this machine.

PROCEDURES:

1. Complete each problem once, writing your answer in the first blank. Check the time before you start and again when you complete the 28 problems. Indicate the time required in the space provided.
2. Work the problems again, checking the first answer. If the answer disagrees, write the second answer in the second blank. Record your time.
3. Repeat the drill if time permits.
4. Do the Three-minute Checkup. Start with problem No. 1, and complete as many as possible in three minutes. Record the number of problems worked.

JOB TITLE: Division (Remainder in Quotient)
(Decimals in Quotient)
(Decimals in Dividend and Divisor)

INTRODUCTION:

You will learn valuable rules of arithmetic in the problems in this job. If the machines are available, you should work the problems on the standard machine and also on the printing calculator. For instance, working half the problems on each machine would be ideal.

PROCEDURES:

1. Complete Warm-up Drill "D" on page 59.
2. Study textbook material on pages 73 to 76. Ask your instructor to explain and demonstrate any parts that you may not understand.
3. Work problems 1 to 20 following the instructions for the machine you are using.
4. Complete Timed Drill on page 76 in the usual manner.

JOB No. 25

Reference: TEN-KEY ADDING-LISTING MACHINE AND PRINTING CALCULATOR COURSE, Third Edition, Agnew and Pasewark, South-Western Publishing Company, Cincinnati 27, Ohio.

JOB TITLE: Speed Drill-Addition

INTRODUCTION:

This assignment is designed to increase your speed and accuracy. Since addition is the most used of the arithmetic processes in business, it follows that the ability to add rapidly and accurately is the most important phase of your training on this machine.

PROCEDURES:

1. Complete each problem once, writing your answer in the first blank. Check the time before you start and again when you complete the 28 problems. Indicate the time required in the space provided.
2. Work the problems again, checking the first answer. If the answer disagrees, write the second answer in the second blank. Record your time.
3. Repeat the drill if time permits.
4. Do the Three-minute Checkup. Start with problem No. 1, and complete as many problems as possible in three minutes. Record the number of problems worked.

JOB TITLE: Prorating

INTRODUCTION:

In prorating problems it is important to remember that the sum of the prorated parts must equal to the total to be prorated. Adjust small differences to the largest amount.

PROCEDURES:

1. Complete Warm-up Drill "E", page 83.
2. Study textbook material on pages 93 and 94.
3. Work problems 1 to 35, pages 93 to 95.
4. Do Timed Drill, problems 1 to 11, in the usual manner.

BUSINESS TRAINING COURSE

JOB No. 27

Reference: TEN-KEY ADDING-LISTING MACHINE AND PRINTING CALCULATOR COURSE, Third Edition, Agnew and Pasewark, South-Western Publishing Company, Cincinnati 27, Ohio.

JOB TITLE: Payrolls

INTRODUCTION:

All businesses are concerned with payrolls. If you have not already learned how to compute gross earnings, deductions, etc., this is your opportunity to learn this important phase of your training as well as the machine applications. You will have further training on payrolls in your Business Mathematics and Accounting courses.

PROCEDURES:

1. Complete Warm-up Drill "F", page 87.
2. Read text material, page 97, and work problems 1 to 10 on page 97. Record your answers on the reverse side of this job sheet.
3. Rule a plain sheet of paper similar to the problem on page 97, and copy the figures that are given. Complete the worksheet showing all the answers, and following the textbook instructions on page 98.
4. Rule a plain sheet of paper similar to the problem on page 99, and copy the figures that are given. Complete the worksheet showing all answers, and following the textbook instructions on page 99.
5. **TIMED DRILL:** Rule a sheet of plain paper similar to the one on page 100. Copy the information that is given before beginning your timing. Complete the weekly payroll, showing all answers.

JOB TITLE: Speed Drill-Addition

INTRODUCTION:

This assignment is designed to increase your speed and accuracy. In completing this drill you should strive constantly to improve both speed and accuracy.

PROCEDURES:

1. Complete each problem once, writing your answer in the first blank. Check the time before you start and again when you complete the 16 problems. Indicate the time required in the space provided.
2. Work the problems again, checking the first answer. If the answer disagrees, write the second answer in the second blank. Record your time.
3. Repeat the drill if time permits.
4. Do the Three-minute Checkup. Start with problem No. 1, and complete as many as possible in three minutes. Record the number of problems worked.

COURT REPORTING

INTRODUCTION

Purpose of Curriculum

In North Carolina there has been an ever increasing need for trained men and women for positions as court reporter and/or conference-convention reporter. The purpose of the Court Reporting Curriculum is to outline a training program that will provide specialized training in the accepted procedures required by the profession, and to enable persons to become proficient soon after accepting employment.

The curriculum is designed to offer the students the necessary skills in typing, Stenograph shorthand, dictation, transcription, and terminology for employment as a court reporter and/or conference reporter.

Job Description

The graduate of the Court Reporter Curriculum should find opportunity for immediate employment, rapid advancement, and a good income. The duties of a court reporter may consist of: recording examination, testimony, judicial opinions, judge's charge to jury, judgment or sentence of court, and other proceedings in a court of law.

The duties of a conference-convention reporter may consist of: recording proceeding of conferences, conventions, board meetings, and informal business or committee meetings. The graduate may be employed by a reporting firm, or be employed on a free-lance basis.

ED013339

VT003014

ACKNOWLEDGMENTS

The Curriculum Laboratory of the Department of Community Colleges recognizes the valuable contributions of the following persons who served as members of the curriculum committee.

Mr. Bert M. Montague	Assistant Administrator of the Office of the Courts
Mr. William H. Stephenson	Secretary of the North Carolina Industrial Commission
Mrs. Wilda Hauer	Court Reporter - Federal
Mrs. Alma Wilkes	Court Reporter - Instructor
Mr. Royace Pipkin	Chief Court Reporter - Wake County

COURT REPORTING

COURSE DESCRIPTIONS BY QUARTERS

(Old No.)	<u>FIRST QUARTER</u>	<u>Hours Per Week</u>		<u>Quarter Hours Credit</u>
		<u>Class</u>	<u>Lab.</u>	
<u>X</u>	<u>T-ENG 101 Grammar</u>	3	0	3
	Designed to aid the student in the improvement of self-expression in grammar. The approach is functional with emphasis on grammar, diction, sentence structure, punctuation, and spelling. Intended to stimulate students in applying the basic principles of English grammar in their day-to-day situations in industry and social life. Prerequisite: None.			
BUS 302	<u>T-BUS 102 Typewriting</u>	2	3*	3
	Introduction to the touch typewriting system with emphasis on correct techniques, mastery of the keyboard, simple business correspondence, tabulation, and manuscripts. Prerequisite: None.			
<u>X</u>	<u>T-BUS 126 Machine Shorthand</u>	5	6*	7
	This course presents the basic principles and theory of Stenograph machine shorthand. Prerequisite: None.			
<u>X</u>	<u>T-BUS 185 Vocabulary Building</u>	3	0	3
	A study of specialized vocabulary which is necessary in successful performance in court and conference reporting. Emphasis on business, engineering and technical terms. Prerequisite: None.			
<u>X</u>	<u>T-BUS 114 Law</u>	3	0	3
	An introduction to law covering topics on contracts, torts, negligence, agency, and laws in general. Prerequisite: None.			

SECOND QUARTER

<u>X</u>	<u>T-ENG 102 Composition</u>	3	0	3
	Designed to aid the student in the improvement of self-expression in business and technical composition. Emphasis is on the sentence, paragraph and whole composition. Prerequisite: T-ENG 101.			
BUS 303	<u>T-BUS 103 Typewriting</u>	2	3*	3
	Instruction emphasizes the development of speed and accuracy with further mastery of correct typewriting techniques. These skills and techniques are applied in tabulation, manuscript, correspondence, and business forms. Prerequisite: T-BUS 102 or the equivalent. Speed requirement, 30 words per minute for five minutes.			
<u>X</u>	<u>T-BUS 127 Machine Shorthand</u>	5	6*	7
	A continuation of T-BUS 126 with emphasis on machine operation. The development of the ability to take dictation on the Stenograph machine at the rate of 80 words per minute. Prerequisite: T-BUS 126.			
BUS 383L	<u>T-BUS 183L Terminology and Vocabulary (Legal)</u>	3	0	3
	To develop an understanding of the terminology and vocabulary appropriate to the course of study, as it is used in business, technical, and professional offices. Prerequisite: None.			
<u>X</u>	<u>T-BUS 251 Court Procedure</u>	3	0	3
	Designed to give the student a general knowledge of courtroom procedures and practices. Emphasis on structure of the judicial system, types of courts, jurisdictions, and court room ethics. Prerequisite: None			

THIRD QUARTER

ENG 306	<u>T-ENG 206 Business Communication</u>	3	0	3
	Develops skills in techniques in writing business communications. Emphasis is placed on writing action--getting sales letters and prospectuses. Business reports, summaries of business conferences, letters involving credit, collections, adjustments, complaints, orders, acknowledgments, remittances, and inquiry. Prerequisite: T-ENG 102.			

BUS 304 T-BUS 104 Typewriting 2 3* 3

Emphasis on production typing problems and speed building. Attention to the development of the student's ability to function as an expert typist, producing mailable copies. The production units are tabulation, manuscript, correspondence, and business forms.
Prerequisite: T-BUS 103 or the equivalent. Speed requirement, 40 words per minute for five minutes.

X T-BUS 128 Machine Shorthand 5 6* 7

A continuation of T-BUS 127. The development of the ability to take dictation on the Stenograph machine at the rate of 100 words per minute on straight new matter.
Prerequisite: T-BUS 127.

BUS 383M T-BUS 183M Terminology and Vocabulary (Medical) 3 0 3

To develop an understanding of the terminology and vocabulary appropriate to the course of study, as it is used in business, technical, and professional offices.
Prerequisite: None.

X T-BUS 252 Court Procedure 3 0 3

Continuation of court procedures with emphasis on trial procedures, appellate procedures, legal documents, deposition forms, and criminal and civil procedures.
Prerequisite: T-BUS 251.

FOURTH QUARTER

ENG 307 T-ENG 204 Oral Communication 3 0 3

A study of basic concepts and principles of oral communications to enable the student to communicate with others. Emphasis is placed on the speaker's attitude, improving diction, voice, and the application of particular techniques of theory to correct speaking habits and to produce effective oral presentation. Particular attention given to conducting meetings, conferences, and interviews.
Prerequisite: T-ENG 101.

X T-BUS 201 Machine Shorthand 5 6* 7

A continuation of T-BUS 128. The development of the ability to take dictation on the Stenograph machine at a minimum of 120 words per minute on straight new matter.
Prerequisite: T-BUS 128.

<u>X</u>	<u>T-BUS 202 Dictation and Transcription</u>	3	2	4
	An introduction to the transcription of machine shorthand on the typewriter. The development of the ability to take dictation on straight new matter at a rate of 120-140 words per minute and to transcribe this dictation in an acceptable manner. Prerequisite: T-BUS 201.			
BUS 350	<u>T-BUS 205 Advanced Typewriting</u>	2	3*	3
	Emphasis is placed on the development of individual production rates. The student learns the techniques needed in planning and in typing projects that closely approximate the work appropriate to the field of study. These projects include review of letter forms, methods of duplication, statistical tabulation, and the typing of reports, manuscripts and legal documents. Prerequisite: T-BUS 104. Speed requirement, 50 words per minute for five minutes.			
BUS 384M	<u>T-BUS 284M Terminology and Vocabulary (Medical)</u>	3	0	3
	Greater emphasis on an understanding of the terminology and vocabulary appropriate to the course of study, as it is used in business, technical, and professional offices. Prerequisite: T-BUS 183M.			

FIFTH QUARTER

<u>X</u>	<u>T-BUS 203 Dictation and Transcription</u>	3	2	4
	A continuation of T-BUS 202. Development of ability to take dictation of straight new matter at the rate of 140-160 words per minute and to transcribe at the rate of 25 words per minute. Prerequisite: T-BUS 202.			

SIXTH QUARTER

<u>X</u>	<u>T-BUS 204 Dictation and Transcription</u>	3	2	4
	A continuation of T-BUS 203. The development of ability to take dictation of straight new matter at the rate of 180-200 words per minute and transcribe at the rate of 30 words per minute. Prerequisite: T-BUS 203.			

X

T-BUS 253 Court Reporting

0

10

5

A course of actual court and/or conference reporting practice. Student will spend time in various courtroom situations, and/or conferences or convention reporting situations.

Prerequisite: Ability to take dictation of straight new matter at the rate of 175 words per minute.

ELECTIVES

An appropriate list of electives for this curriculum is shown from which the institution may select courses to complete the program of study. The institution has the prerogative to develop new courses for the electives or to modify courses from the suggested list to fulfill the local objectives. It is suggested, however, that technical courses be appropriate to the major area of study; that they not change or alter the major objectives of the program nor create a false impression of proficiency in an area either related or foreign to the major.

Elective courses must be selected from an associate degree course or new courses should be developed at a comparable level. The institution may elect to require certain courses or may let the student select an appropriate course.

COURT REPORTING

MA	310	<u>T-MAT 110 Business Mathematics</u>	5	0	5
<p>This course stresses the fundamental operations and their application to business problems. Topics covered include payrolls, price marking, interest and discount, commission, taxes, and pertinent uses of mathematics in the field of business. Prerequisite: None.</p>					
SOC	312	<u>T-PSY 112 Personality Development</u>	3	0	3
<p>Designed to help the student recognize the importance of the physical, intellectual, social, and emotional dimensions of personality. Emphasis is placed on grooming and methods of personality improvement. Prerequisite: None.</p>					
SOC	302	<u>T-ECO 102 Economics</u>	3	0	3
<p>The fundamental principles of economics including the institutions and practices by which people gain a livelihood. Included is a study of the laws of supply and demand and the principles bearing upon production, exchange, distribution, and consumption both in relation to the individual enterprise and to society at large. Prerequisite: None.</p>					
<u>X</u>		<u>T-ECO 108 Consumer Economics</u>	3	0	3
<p>Designed to help the student use his resources of time, energy and money to get the most out of life. It gives the student an opportunity to build useful skills in buying, managing his finances, increasing his resources, and to understand better the economy in which he lives. Prerequisite: None.</p>					

X	<u>T-BUS 213 Office Practice</u>	3	0	3
---	----------------------------------	---	---	---

Designed to introduce the student to general office practices such as indexing, filing of notes, billing and rudimentary bookkeeping, use of dictating equipment, and other office functions.
Prerequisite: None.

SOCIAL SCIENCE

X	<u>T-SSC 201 Social Science</u>	3	0	3
---	---------------------------------	---	---	---

An integrated course in the social sciences, drawing from the fields of anthropology, psychology, history, and sociology.
Prerequisite: None.

X	<u>T-SSC 202 Social Science</u>	3	0	3
---	---------------------------------	---	---	---

A further study of social sciences with emphasis on economics, political science, and social problems as they relate to the individual.
Prerequisite: T-SSC 201.

SOC 310	<u>T-PSY 206 Applied Psychology</u>	3	0	3
---------	-------------------------------------	---	---	---

A study of the principles of psychology that will be of assistance in the understanding of inter-personal relations on the job. Motivation, feelings, and emotions are considered with particular reference to on-the-job problems. Other topics investigated are: employee selection, supervision, job satisfaction, and industrial conflicts. Attention is also given to personal and group dynamics so that the student may learn to apply the principles of mental hygiene to his adjustment problems as a worker and a member of the general community.
Prerequisite: None.

X	<u>T-SSC 205 American Institutions</u>	3	0	3
---	--	---	---	---

A study of the effect of American social, economic, and political institutions upon the individual as a citizen and as a worker. The course dwells upon current local, national, and global problems viewed in the light of our political and economic heritage.
Prerequisite: None.

X	<u>T-POL 201 United States Government</u>	3	0	3
---	---	---	---	---

A study of government with emphasis on basic concepts, structure, powers, procedures and problems.
Prerequisite: None.

PREFACE

The primary purpose of this material is to provide conference leaders with supplemental information on the principles and workings of our Free Enterprise System so they may help people acquire sufficient understanding--a layman's understanding--of these economic principles that affect their opportunities to earn a living and that regulate and govern the management of their personal business affairs.

Key Generalizations of Each Session

Session I Introduction to Free Competitive Enterprise

1. Our high standard of living in the United States is a result of the large amount of freedom which the individual enjoys in the United States.
2. Socialism and communism implicitly argue that the end justifies the mean; competitive private enterprise has high regard for the individual and seeks to accomplish its ends by means which involve only minimum interference with the individual's freedom.
3. Competition produces more abundant goods and is far more effective than centralized government planning.

Session II What Makes Our Economy Grow

1. The United States economy needs increasingly large amounts of capital to provide a rising standard of living.

2. High taxes can seriously impede the accumulation of needed capital.
3. Any increase in productivity affects the standard of living of the entire nation and not just the management and employees of the plant involved.
4. Productivity is important because of what it has brought us up to now; it also is the key to our economic future.
5. Mobility of the work force, the "economic climate," the willingness of people to save and invest their money, natural factors, competition--all influence productivity.

Session III The Role of Competition

1. Everybody in the economy benefits from competition.
2. Competition makes for freedom of opportunity to enter a business.
3. The existence of competition provides flexibility in the nation's production and distribution system so that, as time goes on, what the consumer wants is produced efficiently and at reasonable prices.

Session IV The Role of Marketing

1. Our high standard of living is due to our ability to produce in quantity and quality as well as our ability in developing the processes of distribution.
2. A major marketing problem of any firm is to determine exactly what its prospective customers will buy.

3. Marketing starts with product planning and, in many cases, follows the product into the consumer's home or office in the form of a service.
4. Modern marketing procedures allow people in other departments of a business to give consideration to customer needs and wants before making decisions.

Session V Incentives and Their Results

1. The volume of production and the level of employment are determined by the quantity of goods and services which buyers are willing and able to take at prices which yield a profit to their producers.
2. In determining the price of a product, wages paid to employees are among a company's biggest costs.
3. The price system provides a mechanism for the reallocation of resources.
4. Although the total dollar amount of profit reported by an American industry is large, the rate of profits tends to average about 3% on sales after taxes.
5. Some of the new investment for expansion purposes comes out of profit.
6. The normal operation of a competitive market is an excellent regulator of the "fairness" of profits in relation to risk.

Session VI The Role of Organization in Our Economy

1. The hope for profit stimulates the organization of resources for production; the skills of managers and employees translate the hope into achievement.
2. Freedom for the working man should mean freedom to work at any job for which he has the capability.
3. As the economy grows, the rewards of improved productivity are shared by all segments of society.
4. Proper exercise of the responsibilities which labor and management have to each other affects our national prosperity.

Session VII Governments Role in Our Economy

1. American businesses have always been, to some degree, subject to some form of regulation.
- 2.* The government's impact on our economy takes not only the form of regulation, it also makes considerable efforts to be of assistance* to the enterpriser.

INTRODUCTION

Our economic system has many different names: "Free Enterprise," "Private Enterprise," "Capitalism," "A Competitive Economy," and so on. But the name isn't important. What is important is how the system works and what it means to the individual, in this case you and the people who work for you.

Almost every adult starts with some knowledge in terms of his own personal experience of how economic principles work. Nor is this hard to understand when you stop to think that we are all a part of our economic system; whether we want to be or not. This is where our jobs and pay come from. This is where our standard of living and our old age security came from. This is where our bright hopes for the future, or the sad disappointments originate.

Every time you receive your salary, or pay your rent, or buy a pair of shoes, or repair your roof, you are taking part in some phase of the enormously complex system which governs our existence from birth to death. You're as intimately involved in economics as you are with the food you eat, the clothes you wear, or the house you live in.

In spite of the deep influence which economics has on our lives, we are often confused about how it works. This is probably in part because people who work with economics all the time have developed a sort of shorthand language of their own. It's like the family doctor putting his prescription in Latin.

8 U F
ED
333

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

You could "Say" the same things these prescriptions do in everyday language, but it would take a lot of words to do it.

Fortunately, though, in economic study it is relatively easy to get away from most of the special words and phrases of the experts. You can cover the same problems in terms of your company and yourself and your jobs.

You would be thinking of economic problems if you asked yourself questions like these:

Why is my work "Worth" a certain number of dollars every month?

Why do people pay money to my company?

How has it been able to survive as a business organization?

Will my company survive in the future?

Answering questions like these properly means understanding Economics.

INFORMATION FOR THE CONFERENCE LEADER

Sessions I through VI are outlines of the following booklets:

Session I

Booklet Number 2, "A Comparison of Three Economic Systems."

Session II

Booklet Number 3, "Capital and Economic Growth."

Booklet Number 4, "Productivity and Production in Industry."

Session III

Booklet Number 7, "The Role of Competition."

Session IV

Booklet Number 10, "The Role of Marketing."

Session V

Booklet Number 8, "Wages and Prices in an Industrial Economy."

Booklet Number 5, "Industry's Profits."

Session VI

Booklet Number 9, "Industry: Organization and Employees."

The outlines of these booklets will be found in the right hand columns of this manual.

All information found in the left hand columns is directly related to the subject but is not found in these booklets.

Session VII can be presented any way the leader thinks will best suit the needs of his group.

This National Association of Manufacturers' eleven booklet economic series, "Industry and the American Economy" will be made available to every conference leader. These booklets are available from the Education Department, National Association of Manufacturers, 2 East 48th Street, New York 17, New York.

While it is felt that the information included is complete, the leader should add or remove such material as he deems advisable.

To secure the best use of the information, care must be taken in planning and arranging the material to fit the needs of the specific groups that will receive such training. The information must be fitted to meet the needs of the group.

Very few graphs or charts were included in this material because they tend to become dated in such a short time. I suggest that the leader use as many charts and graphs as possible for illustration purposes. Many good charts and graphs are to be found in a series of conference board sheets entitled Road Maps of Industry.¹

¹National Industrial Conference Board Incorporated, 460 Park Avenue, New York 22, New York.

SESSION I

INTRODUCTION TO FREE COMPETITIVE ENTERPRISE

Objectives

- I. To explain the purpose of these economic discussions.
- II. To explain the major differences between our economic system and the collectivist economies of Socialism and Communism.

INDUSTRIAL ECONOMICS

Introduction to Free Competitive Enterprise

I. INTRODUCTION

- A. An Explanation of the Conference Procedure
- B. The Importance of an Objective Approach to Economics

Workers who blame capitalism for our "boom and bust" past, do not understand what a free enterprise economy is, nor "the profit system." "Economics" is one of those mysterious subjects, like psychology, which one reads or studies about and then forgets about as soon as possible. Yet, we live and work under some kind of economic system no matter where we are, and it is important that, without becoming entangled in theory, we understand the differences between the principal economic systems such as capitalism, socialism, and communism.

When an employee understands what is meant by "free" economy and a competitive enterprise system, he is not apt to believe all he hears about the virtues claimed for communism and related Marxian theories. More to the point, an employee who realizes what makes a competitive economy "tick" and how he benefits from profit making is usually a more understanding and stable worker.

(I, continued)

One way to understand how our system operates and the advantages of our system is to compare it with those in which other people live and work. The purpose of this first session is to show the differences between our American economic system of competitive private enterprise and the economic methods that are a part of the collective systems of socialism and communism. In our democracy, the people own and control individual competitive enterprises, whereas under communism the government owns and controls all means of production. In a socialized state such as Sweden and England, all forms of production are socialized. Most forms of production are owned by individuals, but controlled by the government.

C. Introduce First Session

Page 5¹

II. WHY WILL THIS BUSINESS BE STARTED?

A. Competitive Private Enterprise

1. Wants to be his own boss
2. He has an idea for new produce
3. People expect to make a profit.

B. Socialism and Communism

1. Because it fits into a government "plan"

¹National Association of Manufacturers, Industry and the American Economy, New York, N. Y., Fourth Printing 1962, Booklet 2, "A Comparison of Three Economic Systems," Page 5.

(II, continued)

IN SHORT:

Under competitive enterprise, manufacturers are free to produce something people want or need at a price they are willing to pay, the hope for a profit provides the incentive.

Under collectivism people may want or need the product but they get it only if some group of government planners approve.

Page 7²

III. WHO WILL OWN THE BUSINESS?

A. Competitive Private Enterprise

1. Private individuals
 - a. invest voluntary savings
 - 1) buy stock

B. Socialism and Communism

1. Socialist economy
 - a. may be privately owned but has a "silent partner"
 - 1) the "state"
 - a) controls indirectly or directly savings
 - b) approves investments
 - c) control over credit

²National Association of Manufacturers, op. cit., page 7.

(III, 1) continued)

- d) controls foreign exchange
- e) allocates labor and materials
 - (1) natural resources

There are approximately 275,000 industrial enterprises in the Soviet Union; 92 per cent of these are owned by the state outright, and all profits from them go to the state; the other 8 per cent are co-operatives. Factories, mines, farms, mills, workshops, apartment buildings, turn their revenues over to the state, and the state alone determines to what use these shall be put.

2. Communism

- a. the state builds and owns all means of production

IN SHORT:

In our economy, private individuals own most of the means of production. What people want determines what is produced.

Under collectivism, the state controls or owns the means of production and the planners decide what should be produced. Their decisions are often based on political, military or propaganda considerations.

Page 10³

IV. WHO TAKES THE RISK?

A. Competitive Private Enterprise

- 1. Investors

³National Association of Manufacturers, op. cit., page 10.

(IV, continued)

B. Socialism and Communism

For many years, citizens were encouraged to invest in state bonds; in the case of many, a proportion of their pay was deducted automatically, and put into state loan certificates. The certificates paid 4 per cent interest and could be cashed in after 20 years. When they were reaching maturity, the government postponed payments for 20 or 25 years and interest payments were frozen. The investor gets no return and cannot regain any of his capital until 1978, if then. The life savings of many citizens were wiped out.

1. "Risk is shared"
 - a. everybody loses in the form of
 - 1) fewer goods
 - 2) higher prices
 - 3) higher taxes

IN SHORT:

In our economy, if one business fails, those who have taken the risk lost their investment. As individuals, they have the opportunity to try again. The successful risks more than offset the losses and the economy as a whole continues to expand.

"Sharing the risk" under collectivism eliminates the advantages to an economy of successful risk-taking by enterprising individuals.

Page 11⁴

7. HOW WILL THE FACTORY BE RUN?

- A. Competitive Private Enterprise

⁴National Association of Manufacturers, op. cit., page 11.

(V, A, continued)

1. By professional managers. Experts in such fields as:
 - a. production
 - b. labor relations
 - c. purchasing
 - d. research
 - e. advertising
marketing
2. Some functions of management are:
 - a. anticipate customer wishes
 - b. know availability of raw materials and the competitive advantages of these materials
 - c. Know the labor market
 - 1) set attractive wage and salary scales
 - d. make arrangements with retailers
 - e. develop advertising and sales campaigns

B. Socialism and Communism

1. Socialist economy
 - a. managers, chosen by the "plan" and controlled by the "plan"
 - 1) the "plan" is specific as to:
 - a) quantity
 - b) quality
 - c) style
 - d) amount of working capital
 - e) selling price
 - f) number of workers
 - (1) their pay
 - g) profit for the state

No Soviet plant has a public relations department or advertising department office for employer-employee relationships, or even a salesmanager and staff. Salesmanship does not exist in our sense at all.

A considerable number of executive officers, in a Russian industrial organization, even engineers, are women.

Failure for the plant manager--for whatever reason--is likely to mean more than losing that particular job. It may mean demotion to the rank of a worker or, even prison.

IN SHORT:

In our economy, factory managers must effectively meet the challenge of a competitive market. They have great leeway in deciding how to discharge their responsibilities to the owners, the employees, and the customers. In collectivist economies, the factory is managed to meet the demands of an arbitrary plan. Management has little leeway in how to discharge its responsibility to the state.

Page 14⁵

VI. WHO WILL WORK IN THE FACTORY?

A. Competitive Private Enterprise

1. Individuals who are free to choose type of work and company

B. Socialism and Communism

1. Socialism
 - a. "Planners" control the labor supply. They would determine who works where and when.
 - b. communism
 - 1) workers are assigned to jobs, with little or no chance of changing

About 50 million men and women have jobs in Soviet industry. Many workers are

⁵National Association of Manufacturers, op. cit., page 14.

not skilled and are employed wastefully. The average productivity per man is far less than for a comparable American man. Workers not only lack skill; they lack interest in their job.

A Russian's average wage is 300-350 rubles a month (75 to 90 United States dollars). Their work week was cut to 46 hours a week with two hours off on Saturday.

IN SHORT:

Under competitive private enterprise, businesses must compete for workers, since a worker is always free to seek another job if he thinks that by doing so he can better himself.

Under collectivism, regulations and restrictions limit the worker's freedom to choose--or to change--his job.

Page 16⁶

VII. WHO WILL BUY THE PRODUCT?

A. Competitive Private Enterprise

1. People needing or wanting this product
2. People attracted to this product because of:
 - a. price
 - b. better product
 - c. advertising
 - d. beauty

⁶National Association of Manufacturers, op. cit., page 16.

(VII, continued)

The government sets prices with the deliberate intention of absorbing as much of the consumer's purchasing power as possible; the amount of goods released to the public depends not merely on production, but on the amount of money estimated to be in the hands of the public. High prices, set by the government, act as a form of rationing.

There is a waiting list of approximately 100,000 for the small Russian auto at a cost of \$5,000 U.S. dollars.

In 1957 the United States had 3.1 persons per passenger car compared to 500.5 persons per car for the USSR.

IN SHORT:

In our economy, with many competing brands, people who want or need a radio would buy the one best suited to their requirements.

In socialist or communist economies, the product would be put on the market at a controlled price. People who want or need a radio would be faced by a "take it or leave it" situation.

Page 19⁷

VIII. WHY IS THE PRODUCT IMPROVED?

A. Competitive Private Enterprise

⁷National Association of Manufacturers, op. cit., page 19.

(VIII, A, continued)

1. To meet competition

B. Socialism and Communism

1. Socialism

- a. theory - research and improvement for the benefit of the people
- b. practice - Management in a Socialist economy can ignore new ideas indefinitely.
 - 1) Competitive incentive is missing.

2. Communism

- a. no competition to force concern of improvement of consumer goods
 - 1) research is done on problems important to the state.
 - a) heavy machinery
 - b) armaments

IN SHORT:

In our economy, competition continually forces the use of science and technology to improve consumer goods, as well as for national defense.

Under collectivism, the lack of competitive incentive has limited the use of science and technology in improving the standard of living.

Films

The Secret of American Production, 16mm, Sound, Black and White, 13 minutes, by the National Education Program, 815 East Center Avenue, Searcy, Arkansas.

This film discusses the five freedoms of our American economy that make possible our high rate of production. These are:

1. Freedom to work
2. Freedom to dream
3. Freedom to compete
4. Freedom to advance
5. Freedom to invest.

SESSION II

WHAT MAKES AN ECONOMY GROW

Objectives

- I. To study capital and discuss its relationship to the growth of our economy.
- II. To analyze production and productivity for the purpose of studying its effects on our economy growth.
- III. To visualize what lies ahead if our economy continues at its present rate of growth.

INDUSTRIAL ECONOMICS

What Makes An Economy Grow

The story of the growth of American industry is the story of improvement in the American standard of living. Both have come about because of saving and investing of capital combined with increased productivity.

Sometimes the capital needed to start a business may be only a few hundred dollars, or may even reach several millions of dollars. Whatever the need and the willingness and ability, of our people, to "lay it on the barrel head" is the keystone of our economic growth.

Page 4¹

I. INTRODUCTION

II. CAPITAL

A. Definition

1. Money, goods, and equipment, used in producing more wealth

B. Function of:

1. Provides all the tools, machines and buildings now used in production.
2. Provides all the stocks of raw materials without which industry cannot operate.
3. Provides our transportation and utilities systems.

¹National Association of Manufacturers, Industry and the American Economy, New York, N. Y., Booklet Number 3, "Capital and Economic Growth," Third Printing, 1962.

(II, A, continued)

4. Means more jobs, higher pay, better and less costly products.

Equity capital: Personal savings used to purchase common stock is called.

"Equity capital." Those who put up equity capital take the biggest risk. They may not get dividends, if their company does not make a profit.

Not all of the capital needed by companies is necessarily raised through the sale of common stock.

Debt Capital:

Bonds which pay a fixed rate of interest are "debt capital," as are monies loaned by banks. Debt capital represents much less of a risk to the investor than equity capital.

If the interest on debt capital is not paid, or if the company goes out of business, those who put up this capital take over the ownership of any assets of the company. These fixed interest payments are usually far less than is earned by common stocks.

Companies, except in rare instances, need more equity than debt. Usually, the ratio is 3 to 1. Debt capital generally cannot be obtained unless there is

C. How Capital is Obtained

1. Form a corporation
 - a. sell stock
2. By a sole proprietor forming a partnership
3. By going into debt
 - a. short-term loan
 - b. long-term loan

sufficient equity capital invested to provide bond holders and banks with adequate security.

New capital is needed to keep companies going, to make them expand and grow and prosper.

Capital is needed to replace worn out equipment or to buy new and better machines for doing old jobs. Some tools, machinery and entire manufacturing processes are rendered obsolete. Many millions of dollars are required to keep certain industries "up to date" with recent discovered advances in science and management.

When corporations net under \$25,000 the tax rate is 22%.

D. New Capital for Old Companies

1. To replace facilities that are worn out or obsolete
2. To provide for new products and processes
3. To provide for expansion

E. What Limits Capital

1. Tax rates on
 - a. corporations
 - 1) The top corporate rate today is 48 per cent.
 - b. individuals
 - 1) Tax rates start at 14 per cent and go on up to a top of 70 per cent.
 - c. double taxation
 - 1) First, the income is taxed when it is earned by the corporation.

Second, it is taxed again when the individual pays his income tax on the dividends he gets from the corporation.

III. PRODUCTION AND PRODUCTIVITY

A. Definition

1. Production - our total "output"
2. Productivity - Efficiency of output is usually described in terms of units of human labor put into production and is called productivity.

B. Rate of Growth

1. In 1850
Seven and one-half million Americans (about 1/3 of the population of slightly more than 23 million) worked an average of 72 hours a week. They produced goods and services that would have been worth about 12 billion dollars in 1955.
2. In 1955
Sixty-four million people (about 37% of our population worked an average 40 hour week. They produced, in 1955 dollars, \$400 billions of goods and services for 174 million people.

BETWEEN 1850 AND 1950

C. Factors Entering into Increased Productivity

²National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 4, "Productivity and Production in Industry," Second Printing 1961.

(III, C, continued)

Future progress lies in raising our output per man-hour though increasing use of machine power.

1. Machine power
 - a. Back in 1850 men and animals supplied most of the energy for our work. By 1960 machine power supplied 96 per cent of the energy we used. This meant that we could turn out six times as much per man-hour of work.

MACHINE POWER The Secret of Productivity

2. Innovations that save labor
 - a. new and improved machines

(III, C, continued)

In 1850 there were about 110,000 inventions, but in 1960 the number of inventions registered in the U. S. Patent Office was approximately 3,000,000.

- b. the development of new procedures
 - 1) the development of the "line" method of production (assembly line)
 - 2) mechanical conveyors
- c. new materials
 - 1) plastics
 - 2) aluminum
 - 3) etc.
- 3. Imagination
- 4. Money
 - a. The United States spent approximately \$120 billion on research and development in 1960.
 - b. capital for putting these innovations into use
- 5. Work force
 - a. human factors
 - 1) employee's experience
 - 2) attitude toward work
 - 3) his skill
 - 4) his morale
 - b. mobility of the work force
- 6. Favorable economic climate
 - a. efficient transportation systems
 - b. willingness of people to save and invest their money in industry
 - c. willingness of the customer to accept new products.
- 7. Nature
 - a. abundance of oil
 - b. abundance of coal

(III, C, continued)

- 8. Governmental Policies
 - a. anti-trust policies
 - 1) protected competition

D. Looking Ahead

In 1960 we had a population of 179.3 million.

From 1955 to 1960 we increased our employed work force by 4.5 million.

Our production of goods and services increased from 392 billions in 1955 to 504.4 billions in 1960.

Per capital personal income is found by division of total personal income by total population.

Our per capita income increased from \$2,000 in 1955 to \$2,223 in 1960.

- 1. By 1975
 - a. population of 220 million people as compared to 164 million in 1955
 - b. 20 million more people working than in 1955
 - c. We should produce about \$700 billions of goods and services as compared to 392 billions in 1955.
 - d. The average per capita income should be about half again as large as it was in 1955.
- 2. By 2050
 - a. We should be able to support twice the population of 1950.
 - 1) Population in 1950 was 151.3 million.
 - b. We should enjoy eight times the income of 1950
 - 1) Average per capita income in 1950 was \$1,740.
 - c. This would allow those next-century Americans counted together to spend:
 - 1) 8 times as much on food and nutrition.

(III, D, continued)

- 2) 16 times as much on shelter and home maintenance.
- 3) 20 times as much on clothing and personal care.
- 4) 30 times as much on health and education.
- 5) 33 times as much on clothing and travel.

Films

1. The Basic Elements of Production, 16 mm, sound, Black and white, 14 minutes, by Encyclopedia Britannica Films, Inc., 1414 Dragon Street, Dallas 2, Texas.

This film defines and explains the factors necessary for the production of goods and services in the community.

Discusses the four essential elements of production and how they are handled.

1. Natural Resources
2. Labor
3. Capital
4. Management

2. The Story of Creative Capital, 16 mm, sound, Technicolor, 14 minutes, by Audio Visual Service Department, Chamber of Commerce of the United States, 1615 "H" Street, N.W., Washington 6, D. C., rental \$5 for 3 days.

Films (Cont'd)

This film shows you the progress--through the years--of America's standard of living. What's been the key to this steady improvement in our way of life? The free enterprise system, fed by the invested dollars of millions of Americans.

Here's the vital story of risk capital in our business system--the drama of our profit-and-loss economy, and the part that all Americans play in keeping that system free to expand and improve our standard of living. You will learn how invested dollars create new products and new jobs.

SESSION III

THE ROLE OF COMPETITION

Objectives

- I. To show the importance of competition to our American economy.
- II. To explain the many ways that companies compete.
- III. To discuss business size and competition.
- IV. To take a look at foreign competition and its effects on our American economy

INDUSTRIAL ECONOMICS

The Role of Competition

In the U.S. there are about four million individual separate business establishments outside of agriculture, and six million more in agriculture, producing some eight million different items. This provides ten million centers of initiative and enterprise, ten million places where experiments may be tried, usually without any outside authorization or control. Out of this vast, divergent effort, the more aggressive and enterprising are constantly stumbling upon, designing or inventing the new.

On the economic side it is difficult to imagine this great technical development and expanding output of goods of the last century or so without the presence of a high spirit of rivalry, of keen competition.

Page 3¹

I. INTRODUCTION

II. COMPETITION

A. Definition

We also have some regulated monopolies; gas and electric companies; railroads, telephone companies; and occasionally price controls, which set the maximum prices allowed on various goods.

1. The effort of two or more parties, acting independently, to secure business by offering the most favorable terms.

¹National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 7, "The Role of Competition," Third Printing 1962.

(II, continued)

B. Importance of Competition

1. Competition is the basic regulator of our economy.
 - a. The forces of competition direct valuable manpower and material resources (capital) to industries where they are used to the best advantage.
 - b. Competition is also the means whereby the public is protected against unfair treatment by business.
2. Competition Protects Individuals
 - a. In a competitive labor market the individual finds that, in effect, several employers are bidding for his services.
 - b. The employer knows that he faces competition and needs the most competent help he can find to meet it.
 - c. Competition also makes for freedom of opportunity to enter a business.
 - d. The customer's interests are also safeguarded by competition.
 - 1) Costs and prices are held down
 - 2) wider choices and improved quality

C. How Companies Compete

1. Technical innovations

(II, C, continued)

- a. new products
- b. new processes
- c. new uses for an existing material
- 2. Product differentiation
 - a. Each producer tries to add some feature to his product that will make it different from competing products.
- 3. Marketing
 - a. advertising is part of the economic function of marketing
 - b. consulting services
 - 1) producers of paint render advisory service to the sellers of paints
 - 2) the manufacturers of agricultural machinery and chemicals help the farmer improve his practices
 - 3) the makers of production machinery help their customers to make decisions about automation

D. Local Service

- 1. Delivery service
- 2. Parking lots
- 3. Storage boxes
- 4. Price competition
 - a. the traditional, and very often the most convincing, way to compete is by giving the customer a product for the same price

(II, continued)

Film number 1 may be shown here.

E. Business Size and Competition

1. Big business, small business and competition
2. Size or concentration

F. Foreign Competition

1. In recent years, foreign competition has caused major problems for important sections of the United States competition.
 - a. foreign wages are lower
 - b. Economic aid--including instructions in "industrial know-how"--has been one of our chief exports.
 - c. Certain foreign countries have done a better job of controlling inflation than we have.
 - d. "Exporting" capital by building plants in foreign countries.
2. What this means for the American economy
 - a. prosperity of other parts of the world is a good thing
 - 1) means potential markets
 - 2) easing of the burden on the American taxpayer
 - b. What action must be taken to keep foreign competition from becoming a major threat to our economy
 - 1) Industry must strive to maintain--or increase-- the technological advantages that make for increased productivity and lowered prices.

(II, F, continued)

- 2) Labor must show restraint to keep wage costs from mounting, although American wage rates will remain high.
- 3) Government can help by controlling inflation and by re-examining tax policies and tariffs.
- 4) need for negotiations that will increase the volume of exports by removing the barriers to American products in some countries

References

National Association of Manufacturers, Industry and the American Economy, Booklet Number 7, "The Role of Competition," pp. 3;14.

Films

1. Competition and Big Business, 16 mm, sound, color, 22 minutes, by Encyclopedia Britannica Films, Inc., 1414 Dragon Street, Dallas 2, Texas.

This film deals with the following major issues: Is Economic Competition Really Working? Is Industrial Concentration--Big Business--Compatible With a Free, Competitive Society? Do Competitive Practices Differ With Size and Type of Business?

2. Competition In Business, 16 mm, sound, color, 14 minutes, by Coronet Films, Coronet Building, Chicago 1, Illinois, 60601.

This film illuminates competition, first by introducing the vast variety and scope of competition, and then by dramatizing one firm's experience in creating, manufacturing, and marketing a competitive product.

One of the major points in the film is that the customer benefits most from competition.

SESSION IV

THE ROLE OF MARKETING

Objectives

- I. To study marketing functions and their relationship to the consumer.
- II. To look at the cost of distribution to see why the "tail is wagging the dog."
- III. To examine laws that affect our marketing system.
- IV. To summarize the importance of marketing for the present and the future.

INDUSTRIAL ECONOMICS

The Role of Marketing

How would you, as a consumer, like to go to a farmer to get the wheat you need for your bread, invest your money in enough wheat to last you for a year, store the wheat in your basement, take the wheat to a mill as you need it made into flour, and then use the flour to make bread? If you contemplate these problems, you will realize the valuable functions performed by the marketing system. The marketing system is just one further evidence of the advantages of specialization.

Entirely too few people know anything more about the marketing system than they have learned through their experience in buying goods in retail stores. Since marketing affects every consumer directly, he should know what functions it performs and how it operates so that he may get the most benefits from the marketing system.

Page 3¹

I. INTRODUCTION

II. THE ROLE OF MARKETING

- A. The Role of Marketing is to Get Goods and Services to us in the Right Form and Amount, at the Right Time and at the Right Price.

¹National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 10, "The Role of Marketing," First Printing 1961.

III. MARKETING FUNCTIONS AND COSTS

A. Introduction

1. A major marketing problem of any firm is to determine what its prospective customer will buy.

B. What Customers Want

1. Market research
 - a. The aim of market research is to collect, analyze and disseminate to the rest of the company facts concerning the market, customers needs, reactions to products and the outlook for the company's products.
 - 1) follows census bureau data on population shifts
 - 2) makes economic analyses
 - 3) interviews customers
 - 4) goes through the information transmitted by salesman
 - 5) measures the effectiveness of current and past programs
 - 6) estimates the sales outlook for the future
 - 7) it includes research on:
 - a) costs
 - b) economic trends
 - c) market areas
 - d) types of outlets for sales
 - e) income distribution

(III, B, continued)

- 8) inquires into the reasons why people buy various things.
- 9) studies who is likely to buy the firm's product:
 - a) housewives?
 - b) mechanics?
 - c) children?
 - d) professional people?
- 10) Are their customers city people, country people, suburbanites?
- 11) Helps determine the feasibility of introducing a new product.

2. Product planning

- a. management responsibility involving the evaluation and modification of all ideas for new products

- 1) Those involved in marketing must consider for each product idea such matters as:
 - a) function
 - b) appearance
 - c) promotional features
 - d) cost
 - e) selling price
 - f) quality level
 - g) service features
 - h) standardization and special adaptations

- 3. Advertising and selling
 - a. salesmanship and advertising help us to choose among competing products.

In our form of economic system selling and advertising are necessary. They have helped to create a large demand.

(III, B, continued)

There are two general methods of stimulating demand. The first method is to pass on to each member in the distributive system the responsibility of selling the product at a particular stage in production. Under this method the manufacturer may sell to the wholesaler, the wholesaler sells to the retailer, and the retailer sells to the consumer. The retailer has the final responsibility of selling the product to the customer.

b. It stimulates us to an awareness of the variety of things we want.

The second method is to create consumer demand. Under this plan the manufacturer buys advertising space in newspapers, magazines, uses time on T.V., and employs various other means of mass advertising to tell customers about his goods, thus causing them to want his goods in preference to others. Under this method, the function of selling is partially reversed. The customer demands the product from the retailer; the retailer buys it from the wholesaler, who buys it from the manufacturer.

In actual practice, the two methods are almost always intermingled; the manufacturer advertises to the public, but he also has salesmen to call on wholesale dealers. The wholesaler or manufacturer, in turn, may advertise to the public; but he will also send salesmen to call on retailers.

(Unit III, continued)

Great sums of money are expended annually for advertising.

New York City's sources of fresh fruits and vegetables during the winter and summer months

C. Other Marketing Functions

1. Transportation

The transportation costs take an average of 20 cents from each dollar that the customer spends for these foods.

Without storage many products could not be enjoyed. The fact is especially true of such products as meat, eggs and fresh vegetables. These foods are available as the result of cold storage. The introduction of quick-freezing methods of storage brings to our tables fresh fruits and vegetables in all seasons, preserved with their original flavors.

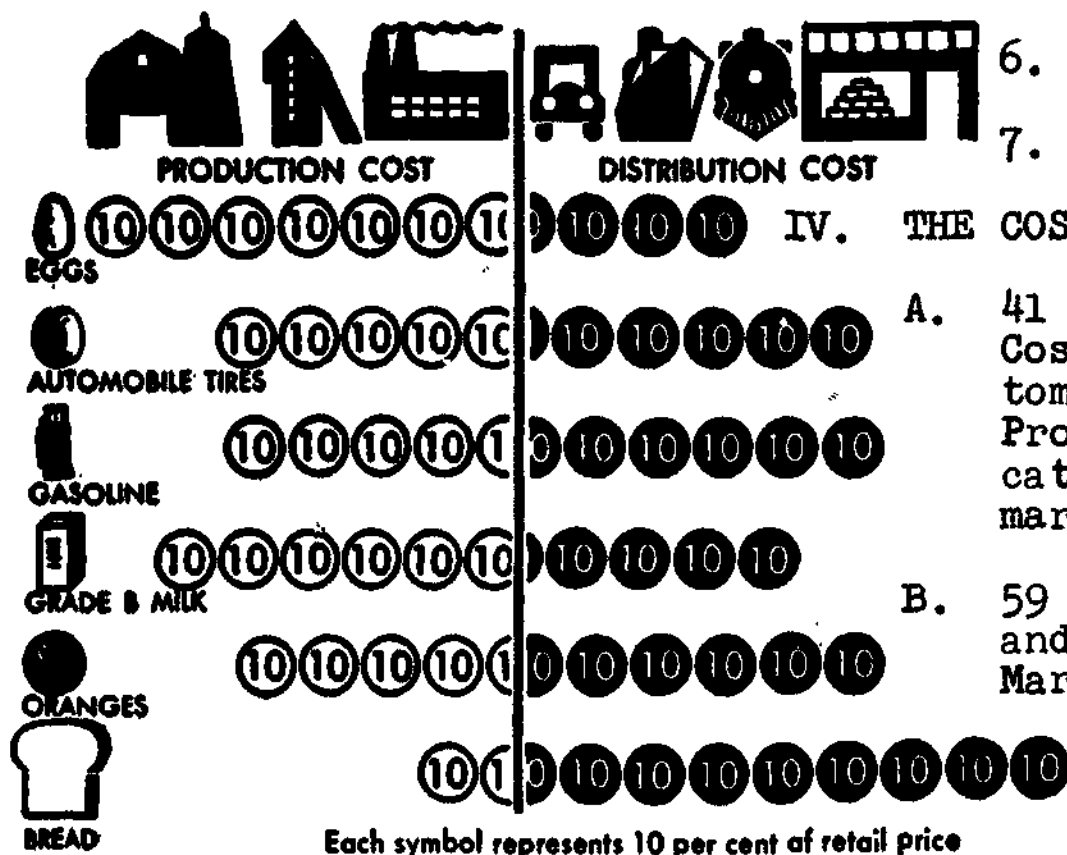

2. Storage

(III, C, continued)

Many individuals and businesses must carry an inventory of goods. For example, manufacturers assemble raw materials for manufacture. Wholesalers assemble many types of manufactured goods from many different manufacturers located in many different places and make those available for the retailer. The retailer assembles a considerable variety of goods from different wholesalers and makes these goods available for the consumer.

3. Inventory

- 4. Breakdown of bulk
- 5. Assembly of related products
- 6. Financing of goods in exchange
- 7. Servicing of products

IV. THE COSTS OF DISTRIBUTION

- A. 41 Per Cent of the Total Costs of Products to Customers is the Cost and Profit Involved in Fabrication or Other Non-marketing Operations.
- B. 59 Per Cent was the Cost and Profit Involved in Marketing.

Each symbol represents 10 per cent of retail price

This will be covered more thoroughly in Session VII.

V. MARKETING, THE LAW AND GOVERNMENT

A. Federal Anti-Trust Laws

1. Sherman Act
2. Clayton Act
3. Federal Trade Commission Act
4. Robinson-Patman Act

B. Many Other Federal Laws Affect Sales and Distribution

1. One group of these includes the statutes designed to protect property rights in trade-marks, trade names, and copyrights.
2. The pure food and drug laws

C. Local and State Laws and Regulations Offer Remedies Against Deceit and Fraud.

VI. INDUSTRY'S POINT OF VIEW

A. Industry Supports Legislation Which is Designed to Curb Monopoly Power. However, Industry Opposes Legislation Which has the Effect of Unnecessarily Restricting Competition and, Therefore, Limiting its Good Effects on Our Whole Society.

B. Problems Arising Out of the Enforcement of Anti-Trust Laws

1. Differences of opinions in the interpretation of anti-trust laws
2. The change in the nature of competition over the past half-century
3. Identical pricing

VII. MARKETING AND OUR ECONOMIC FUTURE

A. Summary of The Importance of Marketing for the Present and Future

1. Marketing performs certain indispensable economic functions.
2. Marketing in the United States is organized within the framework of a free competitive system.
3. A large part--perhaps the largest part--of the cost of goods to their final purchasers is the cost involved in marketing them.
4. America's past economic growth was accomplished by a continuous increase in the importance of marketing effort related to the total economic effort.

References

National Association of Manufacturers, Industry and the American Economy, Booklet Number 10, "The Role of Marketing," pp. 3-14.

Films

1. It's Everybody's Business, 16mm, sound, technicolor, 22 minutes, by Chamber of Commerce of the United States, 1615 "H" Street, Washington 6, D.C., rental \$5.00 for three days.

The opening of this film traces the career of an immigrant hat maker, from his arrival in colonial America to the time he becomes a successful individual businessman. In operating his own business--financed partly by his own capital, partly by investor--he learns that competition demands better products, advertising is necessary, and he learns that he must give a fair return to the people who invested their savings in his business.

Films (Continued)

The path of invested savings is traced through their roles in advertising, research and product development. Special note is made of the practice of "plowing back" part of the profits into the business for expansion, and the payment of dividends to those who have invested their savings in the business.

This film outlines the services provided by the taxes we pay, emphasizing the need to keep our economy free of unnecessary tax burdens.

2. Distributing America's Goods, 16 mm, sound, black and white, 11 minutes, by Business Education Films, 5113 16th Avenue, Brooklyn 4, New York, rentals \$2.50.

This film shows distribution costs of producer, wholesaler, retailer, and ways distributors and consumers can cooperate to reduce these costs.

This film also discusses some of the marketing functions such as; advertising, transportation, storage, inventory, etc.

Much of the material covered in this film is also discussed in this session.

SESSION V

INCENTIVE AND ITS RESULTS

Objectives

- I. To analyze wages and prices in an industrial economy-- what they are, how they are related and what happens when they are out of balance.
- II. To look at industrial profits--their importance and their size.

INDUSTRIAL ECONOMICS

Incentive and Its Results

Every person is affected by prices. Prices affect wages, profits, the buying of commodities, the making of investments and many other activities. This session will, for instance, show how a person may receive an increase in the prices of goods although he may not be able to buy as much with his new wages as he formerly was able to obtain.

Page 2¹

I. INTRODUCTION

II. EARNING AND SPENDING

A. Introduction

1. Everyone--as a spender--wants lower (or, at least, stable) prices. Every one--as an earner--wants to be able to buy more of the goods and services he and everyone else produces. This part of this session is about wages and prices in an industrial economy--what they are, how they are related and what happens when they are out of balance.

B. Customers and Jobs

1. Introduction
 - a. The volume of production and the level of employment are

¹National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 8, "Wages and Prices in an Industrial Economy," Third Printing February, 1962.

(II, B, Continued)

determined by the quantity of goods and services which buyers are willing and able to take at prices which yield a profit to their producers. More simply, when people buy a lot of things, a lot of people are kept at work making them.

2. Example of buying behavior with respect to a single product--a clock.
 - a. If clock costs \$20, he might buy one.
 - b. If cost was only \$5, he might buy two.
 - c. If cost was only \$1, he might buy one for every room in the house.
3. Hypothetical industry
 - a. customers
 - 1) The potential behavior of all consumers of Wambots might be summarized in the following way:

Let us generalize and trace through this situation in a hypothetical industry--say the manufacture of "Wambots."

<u>Price</u>	<u>Number of Wambots Sold per Year</u>	<u>Total Dollar Sales</u>
\$10	100,000	\$ 1,000,000
5	10,000,000	\$ 50,000,000
4	40,000,000	\$160,000,000
3	60,000,000	\$180,000,000
2	80,000,000	\$160,000,000
1	100,000,000	\$100,000,000

- b. jobs
 - 1) Facts concerning the number of jobs this Wambot industry can generate.

(II, B, continued)

- a) The number of persons the Wambot industry can employ depends on the number of Wambots the industry can make and sell.
- b) The price at which the Wambot industry can afford to sell its product depends--among other things--on the wages it must pay its employees.

C. "Raises" Are Not The Solution

- 1. General wage increases do not--and cannot--result in people having more money, much less more goods.
 - a. We do not create money by our activities in buying and selling goods, or in paying wages to each other.

III. THE ECONOMIC FUNCTIONS OF PRICES

A. In This Discussion We Are Primarily Interested in The Function of Prices in the Economy as a Whole. From That Point of View--

- 1. Prices are an expression of choice.
- 2. Prices reflect changes in preference and the need to reallocate resources.

(III, A, continued)

3. The price system is an efficient regulator of production and distribution.

B. Free Market Prices vs. "Just" or "Fair" Prices

1. Free market prices

a. From the point of view of the effective functioning of the economy, the most desirable price is that which results from competition in the free market.

2. "Just" or "fair" prices

a. prices regulated by government bodies such as public utility rates.

b. risk of government intervention in a price system

1) The control of the price of one commodity may require the control of the prices of others until a free market economy is displaced by a direct or controlled economy.

c. example of this type system

1) farm program

IV. WAGES AND EMPLOYMENT

A. As Has Already Been Indicated Wages are Among the Biggest Costs of Industry and Arbitrary Attempts to Raise Wages May Result in a Contraction of Business Activity.

(IV, A, continued)

1. Does this mean that we can have either high level employment or good wages--but not both?
2. Does it mean that any attempt to raise the standard of living of American employees must be paid for by unemployment?
3. Fortunately, this is not the case at all, the workable level of wages does not have to remain the same year after year.
 - a. It can be, and has been in terms of "real wages."

B. Productivity

1. The reason why arbitrary increases in the general wage level do not benefit even those who receive them is that the price of goods is closely tied to the wages of the people who produce them.
 - a. example
2. Productivity growth is the only way the general wage level--in terms of the standard of living wages buy--can be raised.

Film number 3, Why Play Leapfrog, can be shown at this point.

V. THE RELATIONSHIP BETWEEN WAGES AND PRICES

- A. Prices and Wages Do Not, of Course, React Upon Each Other Independently of Other Economic Factors. Each of Them Affects, and is Affected by a Host of Other Economic Variables: Productivity, Competition, Profits, Money Supply, the Availability of Credit, the State of Confidence, Fears of Future Shortage, Foreign Competition, etc.

(V, A, continued)

1. One theory is that wage increases are automatically followed by roughly proportional price increases.
2. At the opposite extreme is the argument that there is room for substantial wage increases out of profits and, therefore such wage increases need not be followed by any price increase at all.

Have Charts II, "Trends in Unit Labor Cost," and Chart III, "Trends in Unit Profit," drawn up large for illustrations. (see charts below)

B. Wage Costs and Profits

1. The two charts (Charts II and III) show the trends in unit labor costs and in unit profits for the output of the private economy since 1939.
 - a. Profits--whether before or after taxes--have had their ups and downs.
 - 1) The after tax trend has been downward since 1948.
 - b. Labor costs leveled off during some periods but have not shown a downward trend since 1939.
 - 1) Unit labor costs more than doubled between 1939 and 1959.
 - a) These labor costs reflect increases in both wages and fringe benefits.
 - b) The increase occurred in spite of substantial gains in productivity during that period.

VI. INFLATION AND ECONOMIC GROWTH

A. The General and Continuing Increase in Prices Indicates that Our Economy is Faced by the Problems of Inflation. Our Dollars are Worth Less From Year to Year. Since the End of World War II we have Suffered From Two Different Types of Inflation.

1. "Demand pull"
 - a. too much money chases too few goods
 - 1) wartime or postwar
2. "Cost push"
 - a. when prices remain high, and the backlog of demand for consumer goods are pretty much satisfied and people begin to resist further rises
 - 1) 1951-1952

Film Number 1, Your Money Is What You Make It, can be shown here.

B. The Desire for Better Pay in Relationship to the Hope for a Higher Standard of Living Cannot be Satisfied by Inflationary Wage Increases Which are Matched by Equal Increases in the Cost of the Things the Wage Earner Buys.

Page 3²

VII. PROFITS AND OUR BUSINESS SYSTEM

A. Profits are Vital to Our Business System as a Whole and, Therefore, to Each and Every Individual--No matter How He Earns His Living. A Business is Started in Our Economy With the Expectation of a Profit.

²National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 5, "Industry's Profits," First printing September, 1959.

(VII, Continued)

- B. Profit is the Return--
After Cost--to the Enter-
priser Who Takes the
Responsibility and the
Risk Involved in Organizing
and Managing a Business.
 - 1. Individual
 - 2. Partnership
 - 3. Corporation
 - a. stockholders

- C. Once a Business Has Been
Started, it Becomes Im-
portant to People Other
Than Those Who First Thought
of it.
 - 1. Employees
 - 2. Tax revenue for city,
state, federal government
 - 3. Retailers and their
customers
 - 4. People who have invested
their money in the
company
 - 5. Suppliers of machines
and materials have a
new customer

VIII. WHAT COMES BEFORE PROFITS

- A. We can Only See Where
Profits Come in When We
Consider All the Costs.
The Figures We Will Use
are Typical of The Actual
Business Costs of Manufac-
turing Companies in the
United States.

- B. If We Look at What Happens
to Each Dollar the Company
Gets for Selling its Product
We Find That:
 - 1. 54 cents goes to other
businesses for supplies
 - a. raw materials

(VIII, B, continued)

- a. raw materials
- b. fuel
- c. electricity
- d. boxes, crates
- e. office supplies
- f. telephones
- g. many other products and services

2. 32 cents go to employees

- a. wages
- b. matching each employee's payment for social security tax
- c. compulsory state programs

- 1) workmen's compensation and unemployment insurance

d. fringe benefits

- 1) group life insurance
- 2) pensions
- 3) hospitalization
- 4) paid vacations

3. 4 cents are put aside to replace machinery and equipment

- a. obsolete machinery
- b. worn out machinery and equipment

4. 7 cents goes for taxes

- a. local
 - 1) property taxes
- b. state
 - 1) state income tax
 - 2) various fees and taxes such as the charge for incorporation
- c. federal
 - 1) up to \$25,000 net 22%
 - 2) over \$25,000 net 48%

(VIII, B, continued)

5. $1\frac{1}{2}$ cents as payment to the owners in the form of dividends

6. $1\frac{1}{2}$ cents to grow on
- make more and better products
 - expand operations
 - create more and better jobs

- C. Could the Last 3 Cents be "Saved?"

1. If this 3 cents were deducted from the price or paid out in wages would anyone benefit?
- A company's profits are necessary to expand the economy; to make new jobs; to raise living standards to attract and reward investors.

IX. DOES INCREASED OUTPUT NECESSARILY MEAN INCREASED PROFITS?

The total real private output per man hour, during the period 1948-1960, has increased at the rate of about 2.8 per cent per year.

- A. "No." On the Whole, the Period Since World War II Has Been One of Dynamic Growth in Manufacturing. But Corporate Profits in Manufacturing Industries Have Shown a Marked Decline During the 1948-1960 Period.

(IX, A, continued)

PROFITS AFTER TAX

1. Labor costs have gone up.
2. Amount put aside to replace machinery and equipment is usually insufficient because of continuing inflation.

B. In Spite of Increased Output, The Profit Margin in American Manufacturing Declined Between 1948 and 1960 because of increasing costs.

PROFITS PLUS

A. During This Session We Have Been Discussing Profits as They Related to the Operation of Business and Industry. But Profits Have Other Significance to Every One of Us.

1. Profits earned in one industry have been used to help start or expand others.
 - a. increased job opportunities
 - b. increased our standard of living
2. Profits make possible support of charitable and educational organizations and institutions.
3. The hope for profit has helped to develop our country.

B. The Profit System Has Brought and Will Continue to Bring us Better Jobs, More Leisure, Better Schooling, More and Better Goods and Services.

Film Number 2, Everybody Knows, can be shown at the end of session.

References

National Association of Manufacturers, Industry and the American Economy, Booklet Number 8, "Wages and Prices in an Industrial Economy," pp. 2-10.

National Association of Manufacturers, Industry and the American Economy, Booklet Number 5, "Industry's Profits," pp. 2-10.

Films

1. Your Money is What You Make It, 16 mm. sound, color, 20 minutes, by National Association of Manufacturers, Education Department, 2 East 48th Street, New York 17, N.Y., Rental \$3.50.

This film demonstrates that when the quantity of money increases faster than the goods available for purchase, the value of money is reduced, while prices go up.

Also when production increases, without an increase in the quantity of money available to purchase goods, prices go down as more goods are made available.

Explains how our economy is thrown off balance during war time.

Also shows how the value of the dollar was cut almost in half between 1939 and 1950.

2. Everybody Knows, 16 mm, sound, live action, color, 15 minutes, by Audio-Visual Services Department, Chamber of Commerce of the United States, 1615 "H" Street, N. W., Washington 6, D.C., Rental \$5.00.

In the town where Bill Richards works is a factory which has recently closed down--the business failed. This closed factory is an enigma to Bill, who had worked there until the final layoff and then had been forced to find another job. The unanswered question in Bill's mind is: "Why did this factory close?"

Bill seeks the answer to this question through conversations with five key individuals. First is the grocer who knows firsthand the problem of profit-and-loss, rising costs and consumer resistance to price rises. Second is the ex-president of the union local in the closed plant, who makes it clear to Bill that the union did exactly what the members wanted in going after larger and larger wage increases each year. Third is a stockholder, a widow who had relied on income from her stockholdings as a principal source of income. Fourth is former

Films (Continued)

company salesman who can explain meaningfully the customers' reaction to cost and price rises. Finally, Bill discusses his question with the former president of the closed plant.

Everybody Knows spotlights vital facts about wages, prices, profits, the cost of living, productivity, and jobs.

3. Why Play Leapfrog?, 16 mm, color, 10 minutes, sound, by Business Education Films, 5113-16th Avenue, Brooklyn 4, N.Y., Rental \$2.50.

This film shows through an animated cartoon how increases in wages result in increased prices, points out that wage prices based on increased productivity increase without corresponding increase in productivity, force prices higher so that the two can, and frequently do, "play leapfrog."

SESSION VI

THE ROLE OF ORGANIZATION IN OUR ECONOMY

Objectives

- I. To study the functions of owners, managers, and non-managerial employees within an industrial organization.
- II. To explain their responsibilities and relationships in achieving the economic goal--a successful business enterprise.

INDUSTRIAL ECONOMICS

The Role of Organization in Our Economy

The last step in promotion of a commercial venture, organization, is one of the most important considerations that must be faced. Every organization, no matter what its size, must be properly set up or it will not run efficiently.

This session deals with the responsibilities and relationships of people-owners, managers, and non-managerial employees in American industry.

Page 3¹

I. INTRODUCTION

II. OWNERS, MANAGERS AND EMPLOYEES

A. Introduction

1. At the initial stage in the formation of an enterprise, a person or a group of people pool their savings and establish a company. They are the owners. If they decide to form a corporation, they get a charter from the state. They then hire people who represent them and who manage the company on a day-by-day basis. They are the managers. They are responsible to the owners who may discharge them if they are not satisfactory. Frequently the same people are owners and managers. This would be true in a

¹National Association of Manufacturers, Industry and the American Economy, New York, N.Y., Booklet Number 9, "Industry--Organization and Employees," Third Printing, February, 1962.

(II, A, continued)

small retail store or a small family service business. It is also true in larger enterprises where the president of the company is often a large stockholder. As a matter of fact, in many corporations, employees at all levels are shareholders.

When the decision on what business to enter has been made, it is the managers who guide the business in a competitive market, organize the physical resources and human skill, supervise employees, try to satisfy customers, meet the payroll and other costs, and earn a profit. Management organizes the activities and resources of the enterprise in order to satisfy all these objectives.

In a corporation, everyone below the Board of Directors--from the president to the newest man on the production line and the youngest file clerk in the accounting department--is an employee.

B. Owners

1. Some American companies have hundreds of owners, others are owned by a few people or only one person. Many companies are owned by individuals; A few have more than one million owners each. More than 12.5 million people own stock in American companies.

(II, B, continued)

These owners provide the money for the tools and other necessary capital for the production and distribution of goods and services. They do so in an attempt to make a profit; and to do so they take the risk of loss.

C. Managers

1. The major function of management is to organize resources so that the enterprise can function effectively. The type of managers needed vary with the objectives of the enterprise.

In general usage, management is ordinarily considered to include those employees who have a responsibility for making decisions and supervising others, this would include, for example, the foreman in the factory.

D. Other Employees

1. In the United States, manufacturing provides employment for a wide variety of people, in addition to those traditionally thought of as "working in a factory."
 - a. Between 1952 and 1957, the number of professional and technical workers rose by 45 per cent.

(II, D, continued)

- b. In 1960, 44 per cent of the employed worked in the production industries, 56 per cent in the service industries.
- c. In 1940, 54 per cent were employed in production industries; 46 per cent in service industries.

E. The Economic Goal

- 1. The responsibilities of owners, managers, and other employees are complementary. Each group has a function in achieving the economic goal--a successful business enterprise.
 - a. Production--the output of goods and services--is the purpose of the American economy and the hope for profit stimulates the organization of resources for production.
 - 1) The skills of managers and employees translates the hope into achievement.
- 2. The joint achievements of the productive team are impressive. A recent study by the United States Department of Labor summarizes a 50-year change:

(II, E, continued)

- a. With but 6% of the world's population and 7% of the land area, this nation produces more than one-third of the world's goods. The individual American worker's output today in a 40-hour week is 3 times that of his grandfather in a 70-hour work span.
3. Basic causes of this production record:
 - a. high rate of power application
 - b. development of tools and techniques
 - c. a mobile and adaptable work force
 - d. the experimental bent of the American businessman in a free enterprise economy, his surprising freedom from tradition and custom
 - e. inventive genius in production methods and devices
 - f. the vast stores of accessible raw materials (supplemented by synthetics).

III. MANAGEMENT AND THE INDIVIDUAL EMPLOYEE

A. Introduction

1. It is natural and right for each individual working in a company to be concerned about finding his place in the organization and developing his fullest

(III, A, continued)

potential. The employer is equally desirous of having each employee develop to the best of his ability.

These needs can only be met by management through sound personnel and human relations policies and practices.

In other words, good human relations--like good organization--help the enterprise to satisfy its economic objectives.

B. Classrooms in Industry

1. Education--including training in specific on-the-job skills is one area of employer concern that brings the employee the satisfaction of improving his competence and his earning potential and, at the same time, make him more valuable to the company. These training and education activities are very extensive and varied.
 - a. apprentice training
 - b. specialized training in new skills to keep up-to-date
 - c. management training

C. The Safest Place To Be

1. There was a time when some manufacturing

(III, C, continued)

activities were considered hazardous. Today, employees in manufacturing industry are usually safer on the job than they are off the job.

2. Progress in safety has resulted from efficient machinery (good engineering and on-the-job safety education.)

D. A Pleasant Place to Work

1. Attractive working conditions increase the moral of the work force and contribute to maximum efficiency. These include:
 - a. good physical working surroundings
 - 1) air-conditioning
 - 2) fluorescent lighting
 - 3) landscaped grounds
 - 4) background music
 - b. good personal relationships
 - 1) Recreational and social activities are provided for families.
 - 2) information designed to give the families first hand experience with the company
 - a) special letters
 - b) plant tours
 - c) booklets
 - c. evaluation of personnel programs by the company
 - 1) by polls taken by the company

(III, continued)

E. The Universal Incentive

1. A universal incentive among employees is financial reward.
 - a. Wages or salary is the basic financial reward.
 - b. Fringe benefits are an important part of the economic reward of employees.
 - 1) paid vacations
 - 2) paid holidays
 - 3) profit-sharing payments
 - 4) health and medical protection
 - 5) bonuses
 - 6) pension plans
 - c. Extra benefits, over and above wages or salary, constitute a substantial cost to the employer.
 - 1) It was estimated in 1959, fringe benefits cost the employer \$1,132 per employee or 22.8% of total payroll.

F. The Employees Share

1. The increase in productivity resulting in this standard of living is essentially an achievement of owners and managers. The rewards of the increased productivity achieved have been fully shared by the employees.

IV. MANAGEMENT AND ORGANIZED LABOR

A. Introduction

1. Conditions of work are determined on an individual company basis or in negotiations with unions.
 - a. Of 53 million non-agricultural wage and salary workers in the United States, 18,080,567 are members of Trade Unions.

B. "Unions and Labor's Share"

1. Employees have shared in the economic gains due to improved productivity.
 - a. Unions are unable to obtain gains for employees for which there is no sound economic basis unless it does so at the expense of other people--including other wage earners.
2. Unions have grown in power and influence through special protection and exemptions provided for them in the law.

TAFT-HARTLEY LAW

Industrial relations of firms engaged in the interstate commerce are thoroughly regulated by the Labor-Management Relations Act of 1947, more commonly known as the Taft-Hartley Law.

Some legislation, such as the Taft-Hartley Act, has imposed restrictions on unions.

C. The Power of Unions

1. The power of unions is reflected in compulsory unionism in industry.

(IV, C, continued)

The Law covers four major subjects as follows:

1. Guarantees labor the right to organize and requires collective bargaining.
2. Prohibits interference with, or discrimination against, union activity.
3. Sets up a board to hear complaints of violations of the law and to provide for election and certification of unions as qualified representatives of employees.
4. Provides for governmental action in strikes that endanger national health or safety.

1. The power of unions is reflected in compulsory unionism in industry.
 - a. The union shop, agency shop, maintenance of membership, and preferential hiring are forms of compulsory unionism.
 - b. Unions have the power to exploit their members and limit the freedom of the working man.
 - c. The power of unions can seriously affect the well-being of the economy by forcing it into inflation or unemployment.
 - 1) "Featherbedding" is an example of excessive union power that reduces productivity and economic growth through restricted work practices, the two essential characteristics of featherbedding are that they require the employer:
 - a) pay for work not done in order
 - b) to spread the available work or make more jobs.
 - 2) The railroad industry has seen some starting examples of these practices in recent years. Estimated costs of "featherbedding" runs about \$500 million a year to the railroads.

V. SUMMARY

- A. No Matter How Important Machines Become, People Are the Key to Our Progress.
- B. As the Economy Grows, the Rewards of Improved Productivity are Shared by All Segments of Society.
- C. Because of the Importance of People, Industry Makes Every Attempt to Provide a Good Place to Work and to Help the Individual to Develop His Abilities.
- D. Unions are Accepted by Many as an Integral part of Our Economy Today. The Majority of People in Every Walk of Life Believed That Abuses of Power Should be Curbed.
- E. Owners, Managers and Employees have One Vitally Important Goal in Common-- a Satisfactory Profitable Business. Such Businesses are Necessary if Individuals-- and the Nation as a Whole-- are to Prosper.

SESSION VII

GOVERNMENT'S ROLE IN OUR ECONOMY

Objectives

- I. To discuss government policies affecting the enterprise that is related to the conferees.
- II. To look at and discuss some government agencies and laws that affect our industrial economy.

INDUSTRIAL ECONOMICS

Government's Role In Our Economy

This session may be handled by the leader in any fashion he or she thinks best. It can be lecture, discussion or a combination of both.

I recommend that the first part of this session be discussion.

You could find out from the group what regulations or restraints the government places on the enterprise they are associated with, why these regulations or restraints are placed on this enterprise? Are they helpful to this enterprise? Why?

Make up your questions to fit your particular group.

I. INTRODUCTION

A. One of the basic principles of capitalism is that the individual should be allowed to pursue his own interests, free from government interferences, or restraint. Early economists believed so strongly in this economic liberty that they urged a policy called "laissez-faire," meaning that the government should "leave alone" businessmen completely and not watch or regulate them in any way. Our country has never applied the "laissez-faire" idea fully, for American business has always, to some degree, been subject to some form of regulation. Today even the strongest advocates of free and private enterprise generally concede that the economy must have at least some governmental control to operate efficiently.

B. Whether one believes strongly in absolute freedom from business regulation and controls, or leans equally far in the opposite direction toward a "planned economy," he is faced with the fact that the government plays an important role in the drama of American business. The businessman must take measures to see that his own enterprise operates within the boundaries of

(I, B, continued)

the Law, and He Also Takes Full Advantage of Government Services, For the Government's Impact on Our Economy Takes Not Only the Form of Regulation; it Also Makes Considerable Efforts To Be of Assistance to the Enterprise.

The following is a list of government agencies and laws that affect our industrial economy.

II. FEDERAL COMMUNICATIONS COMMISSION

- A. Regulates the Field of Communications, Which Includes Telephone, Telegraph Cable, Radio, and Television
- B. Supervises and Regulates The Competition, or the Government-granted Monopolies in This Field

III. FEDERAL POWER COMMISSION

- A. Supervises the Electrical-power and the Natural-gas Industries.
- B. Regulates the Competition, or the Government-granted Monopolies, in This Field

IV. FEDERAL TRADE COMMISSION

- A. Is Charged With the Surveillance of Unethical Practices in Many Fields
- B. The F. T. C. Act was the outgrowth of a demand for protection of competitors by the prevention of unfair methods of competition.

BOUF
ED
333

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

(IV, B, continued)

The Protection of the Consumer Was Not Originally the Expressed Purpose of the Act, Although the Consumer Did Benefit Indirectly. The Original Federal Trade Commission Act Provided Only "That Unfair Methods of Competition in Commerce are Hereby Declared Unlawful." Revision of the Law and Acts Pertaining to the F. T. C. Provide That "Unfair Methods of Competition in Commerce and Unfair or Deceptive Acts or Practices in Commerce are Hereby Declared Unlawful." Hence It is Not Necessary for Competition to be Involved in Order for an Act to be Unlawful.

- C. Some of the Unethical Practices, Under the Surveillance of the Commission, Include False and Misleading Advertising, Exaggerated Medical Claims, or Fraudulent Claims of Official Approval in Advertising and Selling; Using False and Misleading Trade Names; Misbranding; False Statements About a Competition or His Products; or Unethical Tactics Used to Embarrass or Harass Competitors.

1. Sherman Antitrust Act and the Clayton Antitrust Act
 - a. These acts declare that "combinations in restraint of trade" are illegal;

69

(IV, C, continued)

and the F. T. C. has been given the responsibility for enforcing these laws. The regulations did not set a standard of size above which a company could grow. Rather they prohibited business enterprises from combining together, or even cooperating with each other, if the effect of such combination is to make competition in the industry unduly difficult, or if the companies agree among themselves to stop the free movement of prices.

- b. Public utility companies like those in the electrical-power, communication, and transportation fields, however, are permitted by the government to be monopolies. These public-utilities companies are, however, closely watched and regulated by the federal and state governments, so that they cannot take advantage of the public with reference to the services they render or the prices they charge for such service.
- c. These antitrust laws are aimed not only at mergers, consolidations, holding companies, and other forms of business combinations. They also prohibit separate,

(IV, C, continued)

independent firms from making agreements among themselves to control prices or to throttle competition. Such informal contracts among competitors to cooperate and not fight each other for business are called "pools." When these agreements are on an international level, they are called "cartels."

V. FAIR-TRADE LAWS

A. Miller-Tydings Act

1. This is where state laws permit a manufacturer to set a retail price for his branded or trademarked goods. Giving him the protection of the law in enforcing the price and making all retailers charge only that price and no lower. These laws have been subject to considerable attack by consumer groups and retailers who wish to sell the manufacturer's goods at lower than the fair-trade price. Fair-trade laws have received many set-backs in the courts because of their doubtful constitutionality.

(V, continued)

B. Robinson-Patman Act

1. Under this act it is unlawful for a manufacturer, wholesaler or any other type of distributor to discriminate among his outlets as regards price, discount, or services. For instance, it is not lawful for a manufacturer to sell to one distributor at a lower price than he does to another, provided the conditions of the sale are the same.
2. Under this act the buyer and the seller are equally guilty if the seller discriminates.

VI. INTERSTATE COMMERCE COMMISSIONS

- A. Regulates the Railroad and Overland Transportation Industries
- B. This Commission Establishes rates for the Transportation of Products and Groups of Products Between Specified Points.
- C. It is Evident That Railroads Have a Partial Monopoly in That no New Roads can be Constructed Without Permission, but They Still Have to Compete on the Basis of Services and Conveniences.

VII. TAXATION

- A. Through the Assessment of High Taxes, the Government Has Become, to all Intent and Purposes, a Partner in Every Enterprise. Businessmen Often Must Give Primary Consideration to the Influence of Taxation Upon The Net Profit They Produce From Their Enterprise. An Estimated Adequate Profit May be Decreased by Taxation to Such an Extent that a Particular Enterprise May Not be Worth the Risk Involved.
- B. Whereas Other Expenses are Generally Encountered at Only One Stage of Business Operations or Need Only be Dealt With by One Particular Department, Taxes Pervade all Business Activities. Taxation, in One Way or Another, Affects Almost Every Move the Company Makes.
- C. The Costs and Annoyances That Taxation Entail Have Many Secondary Effects on Business Enterprises. A Company, For Instance, Often Finds It Difficult to Obtain "Equity" Financing, That is, More People to Invest Money in That Firm. This Shortage of Investment Capital is Due to the Fact That the Company Must Pay High Corporate Taxes and, in Addition, the Stockholders are Taxed on The Dividends they Receive From the Corporation. The so-called "Double-Taxation" of Corporate Investors May at Times Discourage People From Buying Stock.

(VII, continued)

- D. The Federal Government is Trying to Relieve This Shortage of Investment Capital by Passing a Tax Bill That Cut Corporate Taxes From 52% to 48% on Net Earnings Above \$25,000. In 1963 Approximately 28¢ Out of Every Federal Tax Dollar Came From Taxes on Business Enterprises.

INTRODUCTION

This training course--"Introduction to Management for Industrial Supervisors"--strives to meet two important objectives: (1) to provide training in basic management fundamentals and concepts for those supervisory personnel who have had little or no previous supervisory training, and (2) to provide training for supervisory personnel who have had previous courses in supervisory training, but who may not have had a basic management course.

Both of these objectives have purpose. Every supervisor, whether he is a new member of management, or whether he has had experience but no training, must have knowledge of how management developed, its current status, and how he must use principles of management and leadership for doing an effective job of supervising. Many supervisors, who have had previous organized training courses, were no doubt in classes devoted to various segments of management skills. Actually, management fundamentals, such as this program, should have been the first course taken in the series of supervisory training courses.

The nature of the contents of such a course as this necessitated the preparation of a large quantity of material. The five sessions contained in "Introduction to Management" were planned so that each should take two hours for presentation, or a total of ten hours for the entire course. Because much of the material is of an informational nature, the lecture method will have to be employed; however, the contents include charting techniques, handout material, discussion techniques, and visual

INTRODUCTION (Continued)

aids. By no means should the sessions be conducted in a formal manner, as participants should be allowed much freedom in discussion and individual contributions.

It will be found that ample material is given in each session; this will allow the instructor to tailor the material to fit his individual desires. The outline form is predominantly used, but in Session IV the text form is used. In all cases, the arrangement of the material on the pages is such that will allow the instructor to insert notes or additional points in the left-hand margin or between the entries on the outline. A 10-minute recess should be given midway in each session to break the time interval of the two-hour session. Experience in pacing the material will allow for fitting it into two-hour sessions and arranging for a logical stopping place for the recess without difficulty.

It is extremely important that the entire course be read through for familiarization before attempting to conduct the training for the first time. Also, the Code presented on Page iv should be learned so that there will be no difficulty encountered in using the material as prepared.

The twenty handout sheets will serve well as supplements to the basic course material. There should be a set of these 20 handout sheets available for each trainee who takes the course. These are not to be given out all at once; only when the outline indicates that a handout is to be given out. The trainees should be told at the start that these handouts will serve as a good source of reference material which they can take with them at

INTRODUCTION (Continued)

the conclusion of the training. They can use a letter-size manila folder to retain these in. In addition, trainees should be encouraged to take notes of important material during the sessions, as these notes will provide additional reference material that they can take with them back to their jobs and use.

Sessions II, III, and V have recommendations for the use of visual aids. These visual aids will require the use of a 16 mm. film projector for Sessions II and III, and a 35 mm. sound filmstrip projector for Session V. It is very important that these films be previewed before they are shown at the sessions. The leader's guide, which accompanies each film, should be used for guidance in presenting the films and discussion which follows.

Session IV, "Organized Labor," has about twice as much material as the other sessions. This is because of the nature of the subject matter. Also, no visual aid is used for this session, and only two handout sheets supplement the outline and text material. In addition, if this training course is used in states other than Louisiana, the section which pertains to organized labor in Louisiana, will no doubt be omitted.

If additional readings are required for any of the subject material, sources may be obtained from the bibliography.

Although no tests have been prepared for purposes of evaluating each trainee's understanding and retention of the material presented, the course lends itself well to the preparation of tests without difficulty.

- Handout 18 Qualifications for Leadership
- Handout 19 Leadership Self-Appraisal Test
- Handout 20 Principles of Effective Human Relations

SESSION I
HISTORY OF MANAGEMENT

I. Introduction

- A. (If possible, have management representative of the company open the session; this procedure will definitely have good results by a show of management's interest in the training program.)

Make sure that the management representative has been given an outline of the course and has had an opportunity to review it before such introduction is made.)

B. Getting Acquainted

1. (Tell something about your own background, giving brief outline of your industrial or business experience. Indicate what your present position is; tell the trainees that you will serve as instructor for the sessions.)
2. (Have each member of the class identify themselves; ask them to tell something about the work they perform, department which they work in, number of persons they supervise, etc.)
3. (Name cards for each trainee may be prepared-- this will allow for easier acquaintance and a change in seating arrangement for following sessions, if desired.)

- C. (Give time, place, etc. where and when meetings will be conducted.)

- D. (Stress that attendance at all sessions by all trainees is very important. Management may require a copy of your attendance records; therefore, be prepared to submit this upon request. In addition, management may institute its own attendance requirements at the sessions, in which case, these requirements should be discussed.)

- E. (If certificates are to be awarded at the conclusion of the sessions, this should be mentioned. If attendance requirements or other standards must be met before certificates are awarded, this should be mentioned.)

- F. (Discuss the techniques which will be used in conducting the sessions: lecture, discussion, visual aids, handout material.)

Stress the importance of individual participation; how each person will get much more from the training sessions if he takes an active part in the discussion, asks questions, and maintains an interest in what is going on. Encourage each person to take notes.)

- G. *** Handout 1 ***

1. (Give a copy of Handout 1 to each trainee. This is to be used to give an introduction to the course and what each session consists of.)
2. (Read through the material in Handout 1; answer any questions raised by trainees concerning the sessions or objectives of each.)
3. (Ask the trainees to retain this handout as it will provide a handy reference to each session's contents and will better prepare them for participation for forthcoming sessions.)

II. Objectives for Session 1

- A. (These objectives may be charted before the first session begins for convenience and a saving of time.)

Objectives

1. To trace briefly the history of management
2. To relate the history of management to current management concepts
3. To study the work of Frederick W. Taylor, the areas of scientific management, and evolution of such
4. To examine current management practices and procedures

III. Management Concepts

- A. It first must be understood that management prevails in all undertakings and endeavors; i.e., in the fields of business, industry, government, education, and other areas.

- B. The term "management" should not be confused with the identification of one type of person or group, rather it should be thought of as an activity or function.
1. It must also be pointed out that persons in a business or industry who have "management" status are those who carry out the management function.
- C. MANAGEMENT HAS MANY FACETS; IT IS EXTENSIVE; AND CERTAINLY DIFFICULT TO DEFINE BY USING A FEW WORDS. IN ANY ENTERPRISE, HOWEVER, THERE ARE SIX BASIC ELEMENTS WITH WHICH MANAGEMENT DEALS--THESE ARE FREQUENTLY REFERRED TO AS THE "SIX M'S":

- | | |
|-------------|--------------|
| 1. Men | 4. Markets |
| 2. Machines | 5. Methods |
| 3. Money | 6. Materials |

(Discuss these six elements as they relate to the economics of any organization in its efforts to meet objectives set.)

- D. BECAUSE MANAGEMENT IS AN ACTIVITY, SUCH ACTIVITY IS USUALLY DIVIDED INTO CERTAIN AREAS CALLED:
1. PLANNING
 2. DIRECTING
 3. CONTROLLING
 4. CO-ORDINATING
 5. ORGANIZING

(Discuss the foregoing only briefly, as they will be taken in more detail in Session III)

- E. FROM THE PREVIOUS DISCUSSION, ONE DEFINITION OF MANAGEMENT MIGHT BE:

"MANAGEMENT IS AN ACTIVITY WHICH PLANS, DIRECTS, CONTROLS, CO-ORDINATES, AND ORGANIZES THE BASIC ELEMENTS OF AN ENTERPRISE TOWARD THE ACHIEVEMENT OF THE OBJECTIVES AS SET BY THE ENTERPRISE."

1. (After charting this definition on the board, give time to trainees to record this in their notes; answer any questions pertaining to this definition.)

F. PLEASE BEAR IN MIND, AND ESPECIALLY BASED ON THE DEFINITION DEVELOPED THAT IT IS NOT ONLY THE PRESIDENT, OR VICE-PRESIDENT, OR SUPERINTENDENT OF AN ORGANIZATION WHICH MUST BE CONSIDERED AS PERSONS WITH MANAGEMENT STATUS; BUT ANY ONE, THE SUPERVISORS, FOREMEN, OR OTHERS WHO PERFORM THE MANAGEMENT FUNCTIONS.

1. (Be sure that the above information is clearly understood by the trainees, as many times the word "management" is misunderstood to mean only persons in the top echelon.)

G. Management makes possible the following:

1. Management gives a degree of effectiveness to human activity
2. A degree of order is given to endeavors
3. Efforts are guided more directly toward stated objective
4. The determination of a proposed method of action is possible
5. Activities are so arranged so that they are carried out in a uniform manner
6. Determination is made of possible solutions to problems or objectives

H. Objectives of Management

1. As with any endeavor or undertaking, management also has certain objectives which it must meet.
2. Management actually serves three groups and these groups are unified by the activity of management.
3. THESE OBJECTIVES AND THE UNIFICATION OF THE THREE GROUPS CAN BETTER BE SEEN BY A DIAGRAM.
4. *** Handout 2 ***

(Discuss the handout with trainees, taking sufficient time for this discussion. The list of objectives under the three main areas do not constitute a complete list--you may want to develop additions to this list.

Also, in your discussion bring out the unification principle involved in these three areas brought about by management.)

IV. Relationship Between History of Management and Present-Day Concepts

- A. The art of managing a business in this country has changed greatly during the past years to reach the level it now is.
- B. To get a better understanding of the changes which have taken place, it is necessary to review briefly the history of the economic structure of our country:
 1. The first types of businesses to develop in the country after the original colonies and settlements grew along the eastern seaboard were basically agriculture and home enterprises.
 2. Persons were self-sustaining in that the family usually made or grew everything that it consumed.
 3. During the period of colonization of this country, the people here depended upon the few hard goods and manufactured items which could not be produced in the home, from England which was engaged in the large-scale manufacturing economy brought about by the Industrial Revolution.
 4. Also, the political ties of the colonies with England made for a strong dependence upon the mother country for many necessities of life.
 5. During this period of home enterprises, the head of the family was the one who managed the affairs--devoting time to both production work and the management of the business and personal affairs of the family.
 6. After some specialization of work developed in this country, one person, called the proprietor managed the business; he being responsible for investing capital; supervising the work of employees, the sale of the products, and all other related activities.
 7. The era of the one-man owner and manager system remained in effect for many years; in fact, we still have many such businesses operating today.
 8. The population growth in the infant United States; the demands of the people for better goods and services; the winning of independence by the

colonies from England; the War of 1812 which made the country dependent upon its own resources for military equipment and supplies; and the opening of new trade opportunities for this country were all responsible for the Industrial Revolution developing rapidly in the United States.

9. With the coming of the Industrial Revolution to this country in about 1807, new processes for doing work were initiated and more and more reliance was placed upon machinery and equipment.
 - aa. Industry completely moved from the home and the small shop into the factory.
 - ab. Workers in industry became skilled in certain areas of work, such as woodworking, or printing, or machine shop, etc.
10. With the development of factories and large enterprises, the nature of business ownership and management changed also.
11. It was not possible for one person to manage such a large and complex organization, with all its problems, objectives, personnel, and specialized work activities.
12. In addition, large enterprises needed investments of capital for plant establishment, expansion, etc.; thus no one person could be expected to finance an entire industry.
 - aa. The corporation, the type of business organization which makes it possible for many persons to invest capital, became necessary.
13. Persons trained in the skills of supervision and management became responsible for the operation of the business and who in turn were responsible to the investors or owners of the business.
14. The techniques of supervision and management became important to this type of business; and such techniques were acquired through training, education, and experience.
15. From the foregoing brief history, it can be clearly seen that management has developed with the nature of business itself; but that today, it is a specialized segment which is the guiding force in meeting the organization's objectives.

V. Relationship Between Our Economic System and Present-Day Management Concepts

- A. A better understanding of our present-day management concepts can be had by a discussion of the important principles of our economic system.
1. Our American economic system performs two basic functions:
 - aa. It must decide in some way what and how much is to be produced.
 - ab. It must provide a means of allocating or distributing among its citizens the goods and services produced.
- B. Our American economic system is referred to in one sense as a free-enterprise system; this means that the decisions of what and how much to produce and the manner in which goods and services are to be allocated are made by the free actions of the businesses and industries in the economy.
- C. Sometimes, the American economic system is also referred to as a capitalistic system; this means that the capital goods or the investment in the business are owned by stockholders who are individuals rather than by governmental agencies.
1. Free-enterprise capitalism implies further that individuals and businesses must be free to obtain and use capital; therefore the ownership of private property is essential to such a system.
- D. Consumer demand for a product or service is the primary reason why such products or services are produced; of course, the opportunity to make profits serves as an incentive for businesses to produce these goods and services.
- (It is necessary to bring to the attention of the group that the profit incentive is of much importance in the American economic system; without such, investors would not be willing to risk capital, nor would businesses be able to expand and grow.)
- E. There are usually six broad goals of the American economy:
1. High level of employment
 - aa. There is a labor force in the United States of about 73 million people (1961 figure);

there will always be some unemployment due to change in jobs, retirements, etc.; however, for purposes of practicability, the economy is considered to have full employment when there is less than 2.5 million persons or 4 per cent of the work force unemployed.

2. Stable Prices

- aa. The purchasing power of money depreciates when prices continue to rise and spiral.
- ab. Persons who put money into insurance policies, pension funds, or savings will find that the value of these amounts will deteriorate greatly as a result of substantial increases in prices over a period of time--thus, a great need for stability of prices.

3. Economic Growth

- aa. Once a level of prosperity has been reached, there must continue to be healthy economy.
- ab. More workers are being added to the work force each year due to population increases; therefore, if the economy doesn't increase, additional unemployment is at hand.
- ac. The productivity of the labor force increases each year; thus the same level of output can be produced with fewer and fewer workers, and additional unemployment will result unless offsetting forces take place.

4. Rising Standard of Living

- aa. A growth in the American economy means a rising standard of living, usually in the form of increased purchasing power of the individual.

5. Economic Security

- aa. The American worker desires security against the loss of his job; or if such happens, unemployment benefits until he can again become employed.
- ab. The American worker also desires to have economic security when he reaches the age that he must retire or cannot work.

6. Economic Freedom

aa. The preservation of economic freedom is of the utmost importance--the freedom in the choice of a job or business, freedom to spend or to save money, freedom to buy from one business rather than another, and freedom to support or to oppose various economic and political measures.

F. A knowledge of economics is essential for a proper understanding and appreciation of the business and industrial elements of our country's make-up; before a complete understanding of the management aspects can be had, these basic economic principles must be clearly viewed; as basic principles so close to management objectives include:

1. The economics of production
2. The economics of distribution
3. The economics of consumption

(Discuss these basic principles of economics in relation to scope and objectives of management philosophy.)

VI.. Development of Scientific Management

A. The terms "scientific management" have different meanings to different people and are not widely understood; as:

1. Some think that scientific management is the activity of getting work accomplished in the most effective way.
2. Some think that scientific management is the modern, latest, and best kind of management.
3. Some think of scientific management as a complex system of time and motion studies with some type of statistical evaluation.

B. SCIENTIFIC MANAGEMENT IS NOTHING MORE THAN APPLYING PRESCRIBED PRINCIPLES OF MANAGEMENT BASED UPON EXPERIMENTS WITH ACTUAL PROBLEMS IN THE SOLVING OF CURRENT PROBLEMS--A DEPARTURE FROM THE HIT OR MISS, OR TRIAL AND ERROR METHODS OF EARLY MANAGEMENT TECHNIQUES.

1. MUCH MORE WILL BE SAID LATER ABOUT WHAT PRINCIPLES ARE INVOLVED IN SCIENTIFIC MANAGEMENT AND PERHAPS A CLEARER DEFINITION CAN BE DEVELOPED IN OUR SESSION TODAY.

- C. It is necessary to view briefly again the history of the Industrial Revolution so that it can be seen why this revolution or change also brought about a change in management techniques and principles.
1. The Industrial Revolution, as we have seen, changed greatly the industrial activities in a short period of time.
 2. This Revolution brought a greater utilization of machines, the centralization of production activities, and new worker-management relationships.
 3. Principles of operating businesses which had been used for centuries had to be altered or changed drastically in a short period of time to deal with the enormous changes in industry taking place.
 4. From the new industrial complex, there had to arise a new concept in management--based upon some tried and proven principles which could be geared to the factory system which was spreading rapidly.
- D. In the early 1800's, a professor of mathematics at Cambridge University in England, Charles Babbage, pioneered some principles based upon a systematic approach to the techniques of management--these were:
1. Recommended that accurate data, obtained as a result of careful investigation and testing be used in the management of an enterprise.
 2. Stressed the importance of determining the number of times each operation is repeated each hour; so as to set standards.
 3. Pointed out that work can be divided into units or segments; both physical and mental.
 4. Advocated that it is proper to pay a bonus to a worker in proportion to his efficiency and has good results with the output of the worker.
- E. FREDERICK WINSLOW TAYLOR, HOWEVER, WAS THE MOST INFLUENTIAL OF THE MANAGEMENT PIONEERS IN THE APPLICATION OF SCIENTIFIC METHODS TO THE SOLUTION OF FACTORY PROBLEMS; TAYLOR IS REFERRED TO AS "THE FATHER OF SCIENTIFIC MANAGEMENT."
1. Frederick W. Taylor was a production man, executive, and consultant; He was born in Germantown, Pennsylvania in 1856; he died in 1915.

2. Taylor's general approach to management is widely accepted; but 50 years or so ago it was a challenge to the established ways of doing things; so controversial a subject that the House of Representatives in 1911 appointed a special committee to investigate it and other systems of shop management.
3. Appearing before several hearings and presenting testimony which Taylor hoped would clear up any misunderstanding about what he believed scientific management to be, he stated:
 - a. "...it is not only practicable, but comparatively easy to obtain through a systematic and scientific time study, exact information as to how much of any given kind of work either a first-class or an average man can do in a day."
 - b. "Information received from studies used as a foundation, workmen of all classes are not only willing, but glad to give up all idea of soldiering, and devote all of their energies to turning out the maximum work possible, providing they are sure of a permanent reward."

(The above quotations were taken from a paper presented by Frederick W. Taylor to the American Society of Mechanical Engineers; June, 1903.)
4. From study and observation, Taylor believed that one of the major difficulties in an effort to increase production was the lack of a precise standard by managers of what they expected workers to produce.
 - a. It was upon this premise that Taylor carried out experiments and studies to determine if such a standard could be developed; and if so, this would serve as a basis for better management techniques.
5. The work involved in Taylor's approach to a scientific solution to management problems included:
 - Made studies of machines, equipment, tools, methods, and skills.
 - b. Analyzed the sequence of steps taken in performing a job.
 - c. Studied information on the operating time of a machine and the operations required to perform certain jobs on the machine.

- d. Studied various degrees of skills required to do a job based upon machine operation.
- 6. From the studies he made, Taylor was able to establish a standard of expected quantity and quality of output.
 - a. Most important, too, from the management standpoint, to designate the procedure to be followed in order to obtain the desired quality and quantity of output.
- 7. IN SUMMARY, FREDERICK W. TAYLOR BELIEVED THAT MANY OF THE PROBLEMS OF MANAGEMENT COULD BE SOLVED BY THE USE OF SCIENCE, THAT USEFUL KNOWLEDGE COULD BE OBTAINED BY MEANS OF EXPERIMENT AND TESTING, AND THAT MANAGEMENT COULD RELY UPON METHODS WHICH WERE NOT BASED UPON CHANCE OR GUESSWORK.
- 8. Taylor advocated that effective management was based upon the scientific approach; and that it was necessary for the manager to:
 - a. Develop a science or recommended procedure for each phase of the employee's work.
 - b. Select and train workers in a prescribed manner.
 - c. Establish friendly co-operation with employees.
 - d. Assume the responsibilities for getting the job done and over-all managing activities.
- F. A DEFINITION FOR SCIENTIFIC MANAGEMENT WOULD BE:

THE USE OF STUDY, CONTROLLED EXPERIMENTATION, AND CAREFUL EVALUATION OF BUSINESS PROBLEMS RESULTING IN PRESCRIBED METHODS USED IN MANAGEMENT ACTIVITY.

- G. THERE ARE SOME PRINCIPLES OF SCIENTIFIC MANAGEMENT WHICH ARE WELL TO CONSIDER. THESE ARE PRESENTED IN HANDOUT 3.

***Handout 3 ***

(Take necessary time to discuss the twelve principles of scientific management. You will find these principles based greatly on modern management practices of today.)

- H. Additional Points Concerning Scientific Management

1. Management practices today incorporate many of the features advocated by Frederick W. Taylor.
 - a. Especially true is the setting of standards; the prescribing of good communication channels, the scientific selection and training of workers; and the setting of objectives and goals.
2. Scientific management principles, as we know them now, will be advanced and improved; management has not reached the point of perfection.
 - a. There is no doubt that new means will be developed for discovering and correcting errors of management.
3. Scientific management can be applied to every field of management; although easier to apply in some than others.
 - a. The foreman who is supervising a production worker has just as much opportunity to practice scientific management as does the corporate executive whose management duties differ greatly from the foreman.
 - b. The office manager, the sales manager, the industrial superintendent, the first-line supervisor, or whatever the management level may be, opportunities are available for the practice of scientific methods in the management techniques.
4. Scientific management tells what is efficient, decides exactly how efficient it is, and explain the why.
 - a. These consist of applying measurement to management and studying results.

VII. Human Relations Development in Management

- A. The development of the human relations aspect--that is, the stress upon the worker as an individual--brought about important changes in management concepts.
- B. FRANK GILBRETH WAS AN EARLY ADVOCATE OF HUMAN RELATIONS AS IT APPLIED TO MANAGEMENT PRACTICES.
 1. Frank Gilbreth, 1868-1924, played an important part in management development.
 2. Gilbreth advocated the interest in human beings and human effort, applying to this interest an enormous capacity for organizing detail.

3. Both Frank Gilbreth and his wife, Dr. Lillian Moller Gilbreth worked as a team in this field of management; the result being the development of motion study as a basic management technique.
4. The basis for the Gilbreths work in management was the emphasis on the employee as an individual whose productivity depended on attitude, opportunity, and physical environment as much as on the use of correct methods and ideal equipment.

(Stress this point as it will make the principles of Gilbreth as listed later more meaningful to trainees.)

5. As Gilbreth developed his ideas on improving methods, his interests broadened and he became a consultant in management engineering, although his early career was in the construction trade.
- C. One feature of the Gilbreth's work proposed in 1916 and referred to as "One Best Way To Do Work" anticipated by almost 50 years of what is called now systematic management development.
1. Systematic management relies upon systems as base guides in directing managerial thinking and operations.
 2. Policies, procedures, and assistance in decision making are incorporated in established systems which automatically take care of most problems as they arise and which furnish follow-up reports on what has taken place.
 3. As would be indicated from the basis of systematic management, there does exist static features.
 - a. Systems of management, like any other systems, have a tendency to remain in force once they are established.
 - b. Rigid habits in the way of doing work is in evidence when a system is established.
 - c. Attitudes toward the means of solving problems tend to become fixed and to follow a set pattern in a system.

(From the foregoing discussion, it is evident that systematic management techniques are used today to some degree and supplement the dynamic types of management methods.)

If time permits, it would be well to ask trainees to contribute examples for discussion of how or where such systematic techniques are used.)

D. Selected principles of the Gilbreths' theory of management:

(Only a few selected principles will be presented in statement form; they should be self-explanatory for discussion purposes or to answer questions.)

1. It is necessary not only to observe present conditions carefully, but to think things through, and to ask not only what is efficient, but how and why it is efficient.
2. Management cannot properly be compared, rated, or judged without measurement.
 - a. Units of measure, which should be able to measure the quality of management, should be applied consistently for as much accuracy as possible.
3. The science of management may not determine standards of right and wrong, it can, and actually does determine standards of efficiency.
4. To determine standards of just and ethical procedure, management must:
 - a. First, conserve the best of the past.
 - b. Second, organize the present.
 - c. Third, forecast and plan for the future.
5. The best way to do a job is always the simplest way after it is learned.
 - a. Many jobs are handled in a complicated way because there is no system set up in detail for maintaining the simplest way.
6. Past and present measurements indicate the trends of similar events in the future, as
 - a. A man should be able to estimate what he will do if conditions remain the same as they are at present.
 - b. A man should be prepared to meet almost any emergency by some planned-for approach in his program.

7. How long it takes to do work is not so important as How to do it in the one best way.
8. Too little attention is given to the great waste of unnecessary fatigue.
 - a. A great waste as borne out by time and motion studies is attributed to unnecessary fatigue-- the elimination of unnecessary fatigue pays in actual money savings.
9. Workers will co-operate in every respect in the advancement of scientific management if they are assured a fair deal.
10. Enforcing repetitive unproductive and uninteresting motions spoils employees for real work later.
11. Management should be so geared to where it will run along scientific lines, and that it should adjust itself to adhere to predetermined plans based on past and present experiences.

E. Hawthorne Experiment

1. The Hawthorne Experiment is one of the most famous industrial relations studies in the field of management and the human relations aspect.
2. The Hawthorne Experiment was conducted at the Western Electric Company--the experiment was a series of studies aimed at finding the relationship to production of employee working conditions such as rest pauses and length of work day.
3. These studies, which probably had the most influence in the field of human relations and the science of getting work done through people were called the "Hawthorne Experiment" because they took place at the Hawthorne, Illinois works of Western Electric Company, starting in 1929.
 - a. The experiment provided the basis for much of what we know about getting along with all employees and with problem employees in particular.

(The following text material will go into detail of the Hawthorne Experiment. If additional reading is required, refer to: "Hawthorne and the Western Electric Company," pages 417-436, Classics in Management, American Management Association.)

4. The Hawthorne Experiment was conducted by George Elton Mayo and F. J. Roethlisberger of the Industrial Research Department of Harvard University and William J. Dickson of the Western Electric Company.
 - a. FROM THESE STUDIES OF INDUSTRIAL WORKERS ON THEIR JOBS, IT WAS CONCLUDED THAT A SENSE OF PARTICIPATION AND A FEELING OF BEING A MEMBER OF A TEAM ARE STRONGER MOTIVATING FORCES THAN ECONOMIC SELF-INTEREST, LIGHTING, REST PERIODS, AND SIMILAR MATERIAL INFLUENCES.

(It is well that the Hawthorne basis for management be contrasted with those of Taylor and Gilbreth so that the trainees will have this distinction clearly understood.)
5. The Hawthorne Experiment was brought about by the team of Harvard consultants (names previously given) and the willingness of the president of Western Electric Company to have such an experiment conducted even though it seemed that the workers would benefit more than management from the results of the studies, if accepted.
 - a. In addition, the engineers at Hawthorne excelled in matters of applied science and of organized industrial operation, but who wished to find out why human co-operation could not be as exactly and precisely determined by the administrative organization.
6. Early stages of the studies demonstrating the effect of illumination at Hawthorne proved frustrating to those skilled in the physical sciences.
 - a. All conditions of a scientific experiment were in good order, but results were confusing.
 - b. Lighting was improved in the experimental room and production went up; but it also rose in the control room.
 - c. When lighting was decreased in the experimental room, production again went up; and in the control room with lighting held constant, production also rose.
 - d. It had at first seemed so simple that an improvement in working conditions always brings about improvement, this illumination experiment proved not so.

- e. It became apparent that not only the physical environment must be controlled and studied, but the physiological changes of personnel must be studied.
7. In the first phase of the experiment at Hawthorne, a test room was used; a group of workers were assigned to this project and allowed to become closely associated with each other in an informal team.
- a. In the test room, the conditions of the work changed, one at a time; rest periods of different numbers and length, shorter working day, shorter working week, food with soup or coffee at recess periods.
- b. Production of the workers rose to a very high level; workers claimed less fatigue and that they were not making any special effort.
- c. DURING THIS PHASE, THE WORKERS HAD BEEN CONSULTED WITH RESPECT TO ALL PROPOSED CHANGES AND THEY HAD ARRIVED AT A POINT OF FREE EXPRESSION OF IDEAS AND FEELINGS WITH MANAGEMENT.
- d. After a certain period of time, the workers returned to the original conditions of work--no rest periods, no midmorning lunch, no shortened day, etc.
- e. THE IMPORTANT PART OF THIS EXPERIMENT, BUT WHICH AT THE TIME WAS CONFUSING TO THE CONSULTANTS, WAS THAT AFTER THE RETURN TO THE ORIGINAL CONDITIONS OF WORK--NO REST PERIODS, NO LUNCH SERVED DURING BREAKS, NO SHORTENED WORK PERIOD--DAILY AND WEEKLY OUTPUT ROSE TO A POINT HIGHER THAN AT ANY OTHER TIME.
- f. THIS WAS CONCLUSIVE EVIDENCE THAT THE CHANGES INTRODUCED IN EXTRA BENEFITS AND COMFORTS WERE NOT RESPONSIBLE FOR INCREASED PRODUCTION--A SITUATION VERY SIMILAR TO THE ILLUMINATION EXPERIMENT.
8. WHAT HAD ACTUALLY HAPPENED IN THIS FIRST PHASE EXPERIMENT WAS THAT THE WORK FORCE BECAME A TEAM EFFORT AND EACH MEMBER GAVE WHOLEHEARTEDLY TO CO-OPERATE IN THE EXPERIMENT.
- a. THE RESULT WAS THAT THE WORKERS FELT THEY WERE CONTRIBUTING INDIVIDUALLY AND FREELY; THAT THEY WERE WORKING WITHOUT FORCE FROM ABOVE OR BELOW; THAT THIS FEELING OF WORKING UNDER LESS PRES-SURE THAN BEFORE RESULTED IN THE PERFORMANCE THUS MEASURED.

9. In order for the consultants to note the exact differences between conditions in the test room and the departments of the plant, they turned to the interview program to provide this information.
 - a. They found out very early that the question-and-answer type of interview was not effective, as the workers wished to talk freely, but did not want to be abused for what they said.
10. Interviewers were trained for this phase of the experiment, and they were instructed to:
 - a. Give their whole attention to the person being interviewed.
 - b. Listen and don't talk unless necessary.
 - c. Never argue or give advice.
 - d. As the interview proceeds, plot out tentatively the pattern being set so that a later summarization could be made.
 - e. Make it clear to the worker that everything that is said is considered a personal confidence and will not be given to management except as a compiled report.
11. The interview program had much success and the workers participated freely in their comments by expressing their ideas and feelings, something which management had not understood clearly in the past.
12. THE HAWTHORNE INTERVIEW PROGRAM HAD DEVELOPED MUCH SINCE ITS BEGINNING--WHERE IT WAS ORIGINALLY DESIGNED TO STUDY THE COMFORT OF WORKERS IN THEIR WORK AS A GROUP, IT HAS COME TO THE CLEAR UNDERSTANDING OF THE RELATION OF WORKERS TO MANAGEMENT AS ONE OF THE FUNDAMENTAL PROBLEMS OF INDUSTRY.
13. THE HAWTHORNE EXPERIMENT ENABLED THE UNDERSTANDING THAT MANAGEMENT MUST BE CONCERNED WITH ORGANIZING TEAMWORK AND THAT CO-OPERATION AMONG WORKERS IS IMPORTANT TO THEIR EFFECTIVENESS.
14. BECAUSE OF THE IMPORTANCE OF THE HAWTHORNE EXPERIMENT AND ITS CONTRIBUTION TO PRESENT-DAY MANAGEMENT PRACTICES, LET'S TAKE A SUMMARIZATION OF THIS EXPERIMENT.
 - a. SO THAT YOU CAN HAVE A REFERENCE OF OUR DISCUSSION RELATIVE TO THIS EXPERIMENT, MAJOR SUMMARIZATION POINTS ARE COVERED IN HANDOUT 4.

*** Handout 4 ***

(Many of the points in the summarization are those already gone over. However, take any questions; discuss any points if time permits.)

VIII. Management and Organization Progress

- A. Management today is faced with many diverse and complex problems--owners, stockholders, the general public and government regulations bring many pressures to bear.
- B. However burdensome the problems which faced management in the past and which now are always present, much progress has been made over the years in the development of organization unity.
- C. It is safe to say that the success of any organization depends upon having an adequate number of human beings in the right job at the right time, all producing at their highest capacity--this has been an achievement of competent management.
 1. Many persons define management as "getting things done through the effort of other people."
 2. Of course, it is the combined efforts of persons in an organization working toward a common goal which management must control, direct, and supervise.
- D. Certainly every organization does not grow just because the entire economy is expanding--the growth of any one particular organization will have to be earned.
 1. Progressive management is the requisite for organizational growth; creative management persons have contributed to such growth.
- E. The organization to prosper and grow needs the right type of leadership found in its management.
 1. Usually the proportion of managers relative to all employees is about 10 to 1; this means that about 90 per cent of the people in an organization look to the top 10 per cent for guidance, support, and leadership.
- F. Some of the characteristics which management has demonstrated it must possess to chart the organization on a course of progress include:
 1. Assumes and shoulders management responsibilities

2. Stresses good communications, both downward and upward
3. Directs the work of subordinates in an objective manner
4. Displays organizational ability with reference to personnel
5. Realizes financial profits on operations
6. Has a thorough knowledge of the organization and its personnel
7. Practices highest degree of professional ethics
8. Has understanding of basic business economics and finance
9. Possesses emotional maturity and objective viewpoint
10. Possesses leadership qualities

(The list is by no means complete; additional characteristics may be added by the trainer, or by contributions from trainees.)

IX. The Identity of Management Today

- A. Through the definitions developed in the session and from the historical approach to management which has been presented, it is evident as to where management stands today.
- B. America's economy is expanding at a tremendous rate, and it is predicted that the total production of all goods and services will reach new marks in the not-too-distant future.
 1. Management will continue to be the guiding force in this economic growth; decisions will continue to be made from the management level; and leadership will continue to be exhibited at the management level.
- C. Management in today's businesses and industries might be thought of as representing three distinct levels.
 1. Policy management--this level includes the presidents, vice-presidents, chairmen of the boards, executive vice-presidents in charge of various functions, etc.
 - a. Normally these management persons are elected and are held responsible under certain company bylaws to stockholders (owners), customers, and public.

2. Executive management--this level of management is that group of persons who are charged by the policy management with the administration of the organization's work within some broad scope.
 - a. Persons in this group usually include plant superintendents, sales managers, personnel manager, industrial relations manager, chief engineers, etc.
3. Supervisory management--this level is represented by foremen, supervisors, department heads, first-line supervisor, etc.
 - a. It is usually these management persons who directly supervise and manage workers.
 - b. A foreman or supervisor is in charge of on-the-job activities and as a member of line management exercises authority delegated by management.

D. It is interesting to note that from federal statutes, a legal definition for the "supervisor" is given; such definition as prescribed by the National Labor Relations Act is:

1. "The chief distinguishing feature of a supervisor is his power to hire and fire employees, or to recommend such action with every reason to expect that his recommendation will be followed; to be exempt from the overtime provisions of the Wage-Hour Law, he must direct the work of at least two persons and must receive a salary of \$80 a week for week in which he does any work at all.

(The purpose of the foregoing has been to again emphasize the status of supervisors as members of the management team.)

X. Functions of the Manager of Tomorrow

- A. It is always difficult to predict just what economic conditions will exist in the years to come; however, based upon a study of the past, and a serious look at present trends, much factual information can be had--such information constitutes a reliable base for projections into the future.
- B. First, it is ever evident that the trend of economic development will affect the role of management more than any other single factor.

- C. Next, the action of government through regulatory practices will play an important part in determining the make-up of future management.
- D. From the foregoing comments, it can be concluded that the functions of the manager of tomorrow indicates that:
1. The manager of tomorrow might well find himself in the corporation-type or large business organization, rather than a small or medium-sized organization.
 - a. This type of situation will tend to increase the need for more management functions, because big business needs management for the various functions always present.
 - b. Even if big business decentralizes, as has been the case in many instances, more managers will be needed; because when a company divides itself into several self-containing parts, each of these parts must be headed by a group of managers.
 2. The manager of tomorrow will assume a more professional role, which will include more reliance on a prescribed code of management ethics.
 3. The manager of tomorrow will find the management objective toward the community and public an important part of his total functions.
 - a. This is in evidence today, as more and more managers and supervisors are taking a more active part in community fund drives, projects, etc.
 4. Functions of management in the future will come more and more under the watchful eyes of government regulations and the manager must gear his actions to comply with these edicts.
 - a. Examples of such include the Wage & Hour Law, Food and Drug regulations, Security Exchange Commission, Congressional investigations of various kinds, and more recently the Civil Rights Act of 1964.
 5. Managers will rely more on scientific principles of management than they have in the past.
 6. With the coming of big business and the diversification of various segments of business, management will be called upon to improve and deal more so with communications in the organization.

7. It also seems that management functions will be involved with social problems more so than in the past; this being brought about by the emphasis on human relations and the desire to afford personal security in the economic society.
8. The era of automation will also give additional problems of personnel to management; and on the other hand will add additional areas of organizational supervision based on machine technology.
9. In summary it appears that every organization in the United States will be reshaped by social changes, economic shifts, government policies, new management theories, labor revolution, and innovations in production machinery and techniques--these all represent new horizons which management must recognize as its tomorrow's challenges.

(This completes Session I. Announce the topic for Session II, "Organizational Structure," before adjournment.)

SESSION II
ORGANIZATIONAL STRUCTURE

I. Objectives for Session II

- A. (These objectives may be charted before the session begins for convenience and a saving of time.)

Objectives

1. To study types of business organizations; legal aspects, financial aspects, and control
2. To study organization types and their functions
3. To study departmentation and functions of departments
4. To present a clear understanding of department relationships within the organization

(Read through objectives; take questions, add any additional comments concerning these objectives, or for the introduction to Session II.)

- B. THESE OBJECTIVES ARE PRESENTED IN HANDOUT I WHICH I HOPE YOU HAVE REVIEWED PRIOR TO COMING TO THIS SESSION.
- C. THESE OBJECTIVES OF SESSION II WILL BE COVERED DURING OUR TIME TOGETHER TODAY; AND I AM SURE YOU WILL SEE HOW OUR MATERIAL FOR THIS SESSION TIES IN VERY WELL WITH THAT COVERED IN SESSION I.

II. Forms of Business Organizations

- A. FROM THE HISTORICAL APPROACH TO MANAGEMENT DEVELOPED IN LAST SESSION'S WORK, YOU WILL RECALL REFERENCES MADE TO DIFFERENT TYPES OF BUSINESS ORGANIZATIONS; HOWEVER, WE NOW WANT TO TAKE A MORE INTENSIVE LOOK AT THESE ORGANIZATION TYPES.
- B. MANAGEMENT IS RELATED TO ORGANIZATION TYPE, SO IT IS WELL TO UNDERSTAND THIS RELATIONSHIP BETTER AND FROM THIS STUDY WE SHALL ACCOMPLISH OBJECTIVE I OF OUR SESSION.

- C. When this country was young, our economy was simple compared to what it is now.
1. Capital was scarce; but with hard work and determination on the part of the American people, the economy grew and developed.
 2. With determination and a certain amount of leadership qualities, a person could start his own business; with just a small amount of money needed to buy a few simple tools and a small amount of materials.
 3. What the infant industries could not provide for the people of this country, the average family made at home, or did without.
 4. There were a limited number of companies during this early period of American history--those in the shipping or trading business were relatively big for that period, but business for the most part was small, identified with the family unity or the sole owner.
 5. As the population grew and the natural resources began to be developed and used, industry flourished and became increasingly more complex.
 6. This growth pattern has not ceased, and today the country is enjoying its greatest economic prosperity in history with business and industry continuing to expand and grow.

D. THE QUESTION, OF COURSE, WHICH NEEDS TO BE ANSWERED HERE IS: WHAT IS THE MAKE-UP OF THIS COMPLEX ECONOMY AS FAR AS THE TYPE OF BUSINESS ORGANIZATION IS CONCERNED?

1. Sole proprietorship

- a. The sole proprietorship, sometimes called the single proprietorship, is a business unit owned by a single person who receives all the profits and assumes all the risks of ownership.
- b. The sole proprietorship has been a popular type of business organization in this country; being the only type which was in use during this early period of economic history previously mentioned.
- c. The sole proprietorship is probably the simplest type of business organization, as all management functions emanate from one person, the owner.

- d. The sole proprietorship is in a limited sense popular today, but this popularity seems to be limited to certain types of businesses.
- e. In an analysis of Statistics for the number of business organizations functioning in our economy today, the percentage represented by sole proprietorships in manufacturing or heavy industrial plants is comparatively small.
- f. On the other hand, the number of business organizations functioning in the economy as personal service enterprises and retail establishments represented by sole proprietorship is large.
- g. Usually a sole proprietorship is considered "small business," but this distinction does not always hold true; many large business organizations are owned and operated solely by one person.
- h. In some cases, large organizations can be found whereby the owner delegates certain management responsibilities to others--this type of organization is still classed as a sole proprietorship.
- i. In the sole proprietorship, the owner has the responsibility of raising additional capital if needed; he must do this in his own name based upon his business and personal character.
 - aa. If the owner does not have personal funds to turn to, he must borrow from some type of financial institution.
- j. The sole proprietor must stand legally responsible for all debts of the business; property of the proprietor may at any time be levied upon regardless of whether it is among the business assets or the owner's personal assets.

(It is well to stress this point--that the owner's personal property becomes subject to the satisfying of a debt incurred by the business.)
- k. A sole proprietorship type of business begins at the will of the owner--it also ends with the will of the owner.
 - aa. Death of the owner, of course, ends the business under the ownership of the person.

- ab. Heirs or others may continue to operate the business after the death of the proprietorship; but in this case, ownership interests have changed.
- ac. Court or legal action may dissolve the sole proprietorship type business; such as a proceedings of bankruptcy.
- 1. The sole proprietorship is not subject to extra taxes or excessive rates which other business organizations must pay; However, the owner must report the income of the organization as personal income to him, regardless whether it is withdrawn from the business or not.
- m. In some respects, the sole proprietorship is at an advantage in ease of functionalizing management in relation to other forms of organizations; the individual proprietor is the sole judge of his business affairs and does not have to be concerned with others in the organization misrepresenting him in legal or other matters.
- n. The sole proprietorship does not suffer any disadvantage from undue government regulation based upon the organization structure.
- o. In the transfer of ownership of the sole proprietorship, the owner can sell or transfer his interest easily, but subject to the claims of existing creditors against him.

2. Partnership

- a. The partnership form of business organization has many of the same features as the sole proprietorship in that two or more persons carry on as co-owners of the business for profit.
- b. The Uniform Partnership Act, adopted by a large number of the states, calls the partnership "an association of two or more persons to carry on as co-owners of a business for profit."
 - aa. This definition states clearly the nature of a partnership from the legal point of view.
- c. Partners contribute their property, services, and business experience, or a part of them, for the purpose of engaging in, and sharing the profits or losses of a legal enterprise.

- d. The partnership form of organization is also usually found in a reasonably small business where only a few partners are required in order to secure the needed capital, and in the professions where the relations of the firm to its clients involve a personal responsibility.
 - aa. Partnerships are very common in the personal service enterprises or professions, such as doctors, lawyers, business services, consulting engineers, etc.
- e. In the partnership, each partner is the agent of the partnership; if one partner enters into an agreement, the other partner is bound by this act if the goods or services contracted for are such as the business uses or might use in its operation.
- f. A partnership, because of its personal nature is short lived.
 - aa. It may be dissolved as the result of the death, incapacity, or withdrawal of one of the partners.
 - ab. If a partner sells his interest, the partnership terminates; if the members admit another partner, the old partnership ends, and a new partnership is brought into existence.
- g. Each member of a partnership is jointly and individually liable for the debts of the partnership; therefore, a partner may not only lose what he has invested in the partnership, but also be required to use his private property to pay the debts of the partnership if the business becomes insolvent.
- h. Suits of law cannot be brought by or against a partnership as a firm, but must be by or against the individual partners, either severally or jointly.
- i. There is no legal limitation on the purpose for which a partnership may be organized (except for illegal business operations), or on the length of time for which it may be organized, or on time or conditions of dissolution.

- aa. Legal notice must be given, however, of the dissolution of a partnership, or of the withdrawal of a partner, or partners, to avoid liability for further debts incurred in the partnership name.
- j. The property invested by a partner in a partnership is no longer his own personal property, but is jointly owned by all partners.
- k. Disputes, misunderstandings, and difficult situations are liable to arise in the partnership because of the peculiar relationship existing between the partners.
 - aa. To prevent these from occurring, a contract is usually prepared, known as the "articles of copartnership" which spells out in definite terms such provisions as: rights of partners, provision for dissolution, duties of each partner, sharing of profits and losses, etc.
- l. The partnership form of organization has an advantage over the sole proprietorship form in that a greater accumulation of capital is possible; this usually being the chief reason for the formation of a partnership.
- m. The partnership form also permits the combining of skills and experience of two or more people, where the sole proprietorship has only the one person.
 - aa. A specialization of duties is also possible; one partner may supervise production, the other assume supervision of the office.
- n. It must be pointed out that the chief disadvantage of the partnership form of organization is the fact that friction frequently develops between the partners, each of whom has equal powers and rights in the management of the business.
- o. However, many successful partnerships are in existence today; their operation based on sound management principles which prescribe integrity, trust, and business competence on the part of each partner.

3. Corporation

- a. The corporation or corporate-type of enterprise is the most important organization form currently in use--with the growth of large business units and a demand for more capital, the corporation through its unique features satisfied this demand.
 - aa. Without question, the corporation has become the dominant form of business organization in the United States.
- b. The historical roots of the American corporation were in England from where this type organization was inherited.
 - aa. At first, the king in England granted the right to a group to incorporate.
 - ab. Later this right came to be invested in Parliament which granted charters to certain enterprises which met prescribed requirements.
 - ac. This early granting of rights to incorporate was usually a political favor and was subject to objections by many who felt that such political patronage was not equitable.
 - ad. Finally, enabling acts were passed in England which granted any group the privilege of incorporating a business by filing an application showing conformity with the law.
 - ae. The distinguishing feature of the English corporation and the term still used today is "Limited." This term, sometimes abbreviated "Ltd." follows the company name, meaning "limited liability."
 - af. Some corporations in this country still carry the "Ltd." identity, as these were incorporated under early American statutes which followed closely to those laws of England.
- c. The popularity of the corporation type of organization spread from England to this country and in 1811 the first of the general incorporation acts was passed by the state of New York.

- aa. The chartering of business corporations, with the exception of the national banks, has been almost exclusively the function of the states, rather than the federal government.
- d. The Supreme Court of the United States has defined a corporation as "an association of individuals united for some common purpose, and permitted by the law to use a common name, and to change its members without the dissolution of the association."
- e. BECAUSE OF THE IMPORTANCE THAT THE CORPORATE STRUCTURE HAS IN BUSINESS ORGANIZATIONS TODAY, AND BECAUSE THE CORPORATION HAS CERTAIN FEATURES THAT DISTINGUISH IT FROM OTHER TYPES OF BUSINESS ORGANIZATIONS, A CLOSER LOOK MUST BE TAKEN OF THE CORPORATION.
 - aa. HANDOUT 5 HAS BEEN PREPARED TO GIVE YOU A BRIEF SUMMARIZATION OF THE CHARACTERISTICS.

*** Handout 5 ***

(Cover the 10 characteristics in Handout 5, taking any questions for discussion.

The characteristics of limited liability, increased capital accumulating abilities, and taxation are those which should be stressed greatly, as they relate directly to management principles.)

- f. The corporation is managed and operated under a system of delegated authority and definite lines of responsibility.
- g. The corporation maintains centralized control over its activities, even though it may have thousands of stockholders.
- h. A simple organizational chart showing this delegation of duties is found in Handout 6.

*** Handout 6 ***

(Discuss this handout with trainees. It must be made clear that this is not a complete organizational chart; only an illustration showing a basic diagram of the corporate structure. The following points may be of some value while discussing this material:)

1. In a corporation, the proprietorship is vested in the stockholders--the ownership of the stockholders is evidenced by shares of stock.
2. Although the ownership and control of the corporation is vested in the stockholders, such control and management is delegated to the board of directors.
 - a. The board of directors is directly responsible to the stockholders for the supervising and controlling of the operations of the business.
3. The board of directors select the president and the corporate officers (usually vice-presidents, secretary, and treasurer) who determine the operating policies of the corporation.
 - a. Although the corporate executives are selected by the board of directors, they act under the authority and control of the president.
4. The executive staff is selected by the president and corporate officers and include department heads.
5. The executive staff selects the supervisory staff which includes all types of supervisors and management personnel; this staff is directly responsible to the department heads.
6. Last on the chart are the workers who are supervised and directly under the department foremen and others on the supervisory staff.
7. Delegation of authority begins at the top and goes down through the entire organization; while responsibility goes from the bottom up, each segment of personnel responsible to that segment above it.

4. Business Trust

- a. This type of organization is not as popular in use as the other three types discussed; however, it is used primarily for:

- aa. the business of real estate
- ab. temporary situations which make it desirable to fix the control of a business in the hands of trustees for a short period of time.
- b. Although the trust has certain desirable features as: freedom of owners from liability to creditors, transferable shares, easy division of managerial functions, and ease in raising capital, it has not had the widespread use as does the corporation.
- c. Because state laws are not uniform in relation to the creation and operation of trusts, there has been reluctance to use this form in operations which are not confined to just one state.
- d. Trusts do not have long lives; in most states the duration of a trust is limited to a certain number of years.
- e. Historically, the trust has not been popular as it has been associated with monopolies, i.e., oil trust, steel trust, etc.

(As the business trust does not seem to give promise of becoming an important type of business organization, only a limited amount of material was thus given.)

5. Joint Venture

- a. This type of organization is sometimes spoken of as a "syndicate."
- b. The joint venture is limited to a single deal or undertaking as opposed to operating a business on a permanent basis.
- c. The joint venture has centralization of authority in the manager--usually the business operates in the manager's name.
- d. Today, the joint venture has wide usage in financial operations, whereby a group or syndicate, acting through a manager purchases and sells securities, stocks, bonds, etc.
- e. In joint ventures, those who participate or contribute personal efforts are paid a certain

amount, and profits or losses are divided among the participants in the ratio of their capital contributions.

(As the joint venture is not as popular and not used as widely as the sole proprietorship, partnership, or corporation, only a limited amount of material was given.)

III. Principles of Organization

A. Definition of organization:

1. An organization is a grouping of persons together so that they can work effectively toward a goal which members of the group want to achieve.

(In discussing this definition with trainees, the additional following points can be made:)

1. The goal of a business organization, which has been pointed out previously, is to earn profits, to satisfy the needs of customers and community, and to provide employment for a certain number of persons.
2. There are other satisfactions of the organization, in addition to material ones; such as sense of accomplishment, contribution to need of economy, maintaining full employment, etc.
3. The organization provides unity to the persons in the group, as well as to the activity of the group.
4. Without the organized grouping in business and without the unity of action, havoc and confusion would result, with little or no accomplishments.

B. Reasons for Organization

1. The basic reason for organization is found in the need for effective and efficient co-operation.
2. If an organization has no objectives or goals, there would be no reason for it to organize.
3. With some type of organization structure, co-operation toward certain objectives can be more productive and less costly with the reason of economy in attainment of objectives must be considered.

4. Organization provides that every segment of it is contributing toward the attainment of organization objectives.
5. The organization maximizes the satisfaction of individuals while at the same time strives toward meeting the enterprise's objectives.
6. The organization makes it possible to evaluate and study the results of the enterprise's activities.

C. Authority, Responsibility, and Delegation

(These areas will be treated only as they apply to the organization structure; their function as a responsibility of management will be discussed in Session III.)

1. Authority is defined as:

a. The power or the right to act, command, or prescribe action by others.

2. Authority may be given by:

- a. the position as indicated in the organization structure of the enterprise.
- b. acceptance of a custom or way of doing things over long periods of time.
- c. a skill or special knowledge of the situation.

3. Authority is usually handed down to a person from someone above him; this person in turn hands down authority to someone below him.

4. For the supervisor to be held accountable for results, he must be given adequate authority to handle the situations he encounters.

5. The areas of authority must be communicated and made clearly known; such to be effective must be expressly stated, not just implied.

6. Responsibility is defined as:

a. The obligation of a person to carry out assigned tasks and duties to the best of his ability.

7. Responsibility and loyalty to the organization and its objectives are very much related.
 - a. Responsibility can be to a person, a cause, a certain job, or to the organization in general.
8. Usually, responsibility is represented from the bottom of the organization chart upward; just as authority is handed downward from the top executive to the supervisor to the worker; responsibility must be exhibited from the worker to the supervisor to the top executive.
9. It is well to have within the organization the duties, authority, responsibility, and relations of everyone clearly and completely prescribed in writing.
10. WHEN CONSIDERING BOTH AUTHORITY AND RESPONSIBILITY, IT MUST BE MADE CLEAR THAT THEY BOTH SHOULD BE EQUAL; AUTHORITY MUST BE MATCHED WITH RESPONSIBILITY, JUST AS RESPONSIBILITY MUST BE MATCHED WITH AUTHORITY.
 - a. A person without the proper authority to get a certain job done cannot be responsible to a person above him for this action; he may know what is to be done and how to do it, but he is helpless in not being able to make decisions or to take a decisive hand.
 - b. A person with the proper authority to get a certain job done, but without responsibility to someone is ineffective, with his authority being of little or no value and with authority decreasing to the level of responsibility.
 - c. In summary, authority and responsibility go together, one without an equal amount of the other is ineffective.

(This discussion of the coequality of authority and responsibility may at first seem confusing to trainees; stay with the topic; give additional examples, if necessary, until it is understood.
11. Delegation is defined as:
 - a. The granting or conferring of equal portions of authority and responsibility from one person in the organizational structure to another.

(In discussing this definition with trainees, these additional following points can be made:)

1. Usually, delegation is thought of as being from a higher position to a lower position; however, it can also be upward or sidewise.
2. A person delegating always retains his inherent authority and responsibility for the task delegated, as delegation does not mean the permanent release from these obligations.
3. The one who delegates always remains accountable for what is or what is not accomplished.
4. It must be remembered that delegation sets up levels of authority and responsibility throughout the organization.
5. An outstanding characteristic of a good management person is his willingness to delegate authority and responsibility to others.
 - a. The manager must recognize that no matter how good of a supervisor he is, there will always be more responsibilities than he can carry out himself.
 - b. LET'S TAKE A SUMMARIZATION OF AUTHORITY, RESPONSIBILITY, AND DELEGATION. HANDOUT 7 HAS BEEN PREPARED TO HELP US WITH THIS REVIEW.

*** Handout 7 ***

(Discuss the 12 principles of authority, responsibility, and delegation; stress that delegation will be taken again in more detail in Session III.)

IV. Organization Types

- A. In this section, three basic organization types will be discussed. These are:
 1. Line Organization
 2. Staff Organization
 3. Functional Organization

- B. In addition, combinations of the above will be discussed where it will be seen that characteristics are present in organizational structures which present other unique features.
- C. Each type of organization structure has certain advantages and certain disadvantages; one type may suit only one kind of business.
- D. IT MUST BE STATED HERE AT THE BEGINNING THAT IT IS UNCOMMON TO FIND ORGANIZATION STRUCTURES CONSISTING PURELY OF ANY ONE OF THE THREE TYPES MENTIONED; USUALLY A COMBINATION OF SEVERAL TYPES IS USED.
1. ALSO, AS WILL BE NOTED LATER, THERE IS A TENDENCY TO INCORPORATE STRUCTURES THAT WILL BEST FIT THE NEEDS OR OBJECTIVES OF THE ENTERPRISE.
 2. THE MANAGER OR SUPERVISOR, REGARDLESS OF WHAT TYPE ORGANIZATIONAL STRUCTURE HE MAY FIND HIMSELF IN, WILL PRACTICE OR USE FUNCTIONS PECULIAR TO SEVERAL TYPES OF ORGANIZATIONAL FRAMEWORKS.

(Following will be a discussion of the three major organization types)

E. Line Organization

1. The lines of authority and responsibility in the line organization are direct from top management, to the executive staff, to the supervisory staff, to the workers.
2. This type of organization structure is called "line" because the lines of authority and responsibility are fixed and go from top to bottom and from bottom to top of the organization chart.
3. The line organization is probably the simplest form that is used; it has great acceptance in many enterprises today, but finds its greatest popularity in the small company.
4. The line functions of the organization have direct responsibility for accomplishing the objectives of the enterprise; this is why the line organization is said to be made up of people who get things done.
5. The line supervisor has direct authority over a certain number of persons; these persons' responsibilities are definitely fixed whereby they report directly to the supervisor.

6. A SIMPLE LINE ORGANIZATIONAL CHART IS PRESENTED ON THE HANDOUT WHICH WILL BE GIVEN YOU. TAKE A FEW MINUTES AND STUDY IT IN VIEW OF THE COMMENTS WE HAVE MADE THUS FAR CONCERNING FEATURES OF THE LINE ORGANIZATION.

*** Handout 8 ***

(Discuss the line-type organizational structure as presented in this handout. This diagram, of course, is quite simplified and a great deal more symmetrical than actually exists in most organizations; however, this is for illustration purposes only. The following points may be discussed with the trainees in relation to the diagram:)

1. It can be clearly seen that lines of authority are direct from the top, or general manager, to the rest of the personnel in the organization.
2. The general manager represents the source of authority in the illustration; the sales manager, the maintenance superintendent, and the production superintendent are directly responsible to him.
 - a. In turn, the sales supervisors, the maintenance, plant, and field foremen are responsible to their respective supervisor; and of course, the workers are directly under the foremen and sales manager.
3. This illustration represents only a small organization or a segment of a large one; as the number of persons increase, the span of control becomes more difficult and more supervisors will be needed.
4. Subsequently, as the organization further develops, additional personnel will be needed, whereby the organizational structure will change considerably.
5. Each part of the organizational structure is separate as shown in the illustration; members in one department of the organization are independent from others and report only to that supervisor directly above.
 - a. Each person's responsibility is definitely fixed and he reports and is accountable only to that person above him.
 - b. Each person receives whatever authority he may have from the supervisor directly above.

6. The sales activities, the maintenance department, and the production phase of the organization, as shown in the illustration, are separate; however, each department head is accountable to the general manager.

(As a matter of review, have one or two members of the class take the illustration and explain it; correct any errors in their presentation.)

F. Line Organization--Advantages and Disadvantages

1. Advantages

- a. The line organization can be used in both small and large organizations.
- b. The line organization is quite simple and not as complex as other type organizational structures.
- c. Each person knows to whom he is responsible and who is responsible to him.
- d. There should never be any question as to whom should be consulted in the chain of command.
- e. Better control over personnel is assured, as each area in the organization is independent of the other.
- f. Action can be taken quicker in regard to various matters of management, as the organizational structure is not complicated with interlocking personnel arrangements.

2. Disadvantages

- a. Co-operation among the members of the organization seems to be limited, as each segment is interested in only their particular problems and work.
- b. Supervisors and executives tend to become overloaded with routine work of supervision and thus have little time for planning and research.
- c. As the organization grows, it becomes difficult to integrate other units effectively.
- d. The organization structure is of a fixed or rigid nature, thus leaving little room for progressive changes.

G. Staff Organization

1. The term "staff" refers to advisory--the staff organization counsels, advises, and assists other segments of the organization.
2. It must be understood that staff functions do not in themselves represent a distinct and separate type of organization; but are part of another type structure, usually line.
3. Staff functions have the responsibility for getting the facts upon which decisions can be made.
4. In the true line-type organization, supervisors see to it that the work is completed; however, where staff components are involved, line management receives plans, advice, and suggestions from staff management.
5. Line organizations are usually supplemented by staff organizations; the line manager has authority over personnel, while staff management has authority over ideas.
6. Production departments, sales departments, and sometimes purchasing departments are the most common line activities; while engineering, maintenance, research, accounting, and industrial relations are examples of staff activities.
7. Some refer to line management as the "doers" and to staff management as the "advisors."
8. The main responsibilities of the staff organization are:
 - a. Formulating policy for the organization
 - b. Planning for the organization
 - c. Evaluating the operations of the organization
 - d. Advising and counseling line management
9. From the foregoing points discussed, it can be clearly seen that the staff organization does not exist in a pure form or exclusively in any organization.
 - a. No organization which has the normal activities going on and the usual objectives is purely advisory in nature.

- b. It can be concluded, however, that the staff function does and must exist in most organizations.
10. Often it is said that line functions are represented vertically on the organizational chart, while staff functions are represented horizontally.
11. HANDOUT 9 WILL GIVE US AN ILLUSTRATION OF AN ORGANIZATIONAL STRUCTURE WHICH HAS STAFF DEPARTMENTS.

*** Handout 9 ***

(Discuss the handout; again, this handout serves only as an illustrative example and does not represent an actual business enterprise. The chart was purposely drawn in symmetrical form and kept as simple as possible. The following points will prove helpful in the discussion:)

1. The horizontal rectangles represent the staff organizational segments; specifically, accounting, purchasing, personnel, and research.
2. The other parts of the diagram represent line structures which have been taken prior to this presentation.
3. It can be seen that the general manager does have authority over the accounting and purchasing departments; but not line control; these act as a service arm of general over-all operations.
4. Note the distinction in the general manager's relationship on the chart to the plant manager and to the accounting and purchasing departments; he exercises line authority over the plant manager.
5. The same is true of the personnel and research departments which provide counsel and assistance to the plant manager, but the plant manager has direct line of authority over the plant supervisors.

(In any one organization, the departments represented in the illustrative example will more than likely take different positions-- it is possible that purchasing in some companies be a staff function of the plant manager, or that personnel be a function of general manager, and so on. These are matters

which general policies will dictate based upon the inherent characteristics of the organization--no two organizations are precisely alike.)

6. It must also be remembered that line functions will be practiced within the staff organization; that is, the accounting department head will have line authority over his accountants; the purchasing department head will have line control over his clerks and purchasing agents, etc.

(As a matter of review, have a trainee go through the chart for the entire class, explaining and describing as it is presented.

If time permits, have another trainee compare and contrast the charts on Handout 8 and Handout 9.)

H. Staff Organization--Advantages and Disadvantages

1. Advantages

- a. The staff organization furnishes valuable assistance, counsel, and activity which are needed in the organization, especially the large organization.
- b. Staff organization types allow line personnel to devote their time and energies to line activities.
- c. Staff functions assist the organization in control.
- d. There seems to be increased organizational balance among the activities of the organization when staff departments are present.
- e. The over-all effectiveness of management is increased when counseling, planning, research, and other service departments are used.

2. Disadvantages

- a. Staff functions sometimes give confusion to the organization when those persons, especially at the lower levels, do not have a clear concept of the entire organizational structure.
- b. Those performing line functions may become too dependent upon staff for all planning and creative suggestions.

- c. There can be a feeling of mistrust or a failure on the part of both line and staff to accept fully the work of the other; line may have the belief that the recommendations of staff are not necessary; staff may feel that line is not utilizing the data supplied to good advantage.

3. Additional considerations of staff and line organizations

(Here it will be pointed out some techniques which can be used to increase the effectiveness of organizations which have both line and staff functions.)

- a. It is important that staff members of an organization know and understand the work which line is doing--understand their problems and the organizational relationships existing.
- b. When staff understands more clearly the work of line, misunderstanding and conflicting viewpoints can be held to a minimum.
- c. Much damage can be done to the organization by staff trying to force certain plans or proposals upon line.
- d. Line must be shown how such ideas and proposals can benefit the organization, and how these are workable and practical to line.
- e. Staff proposals should not be put into actual use until they have been approved by both the supervisor of staff and supervisor of line where they will be used.
- f. Staff should always inform line management of any action it has taken affecting line subordinates--a common rule that should always be remembered is: authority must be exercised only through the line supervisor.
- g. If line disagrees with staff, then staff should continue to try to get agreement, rather than assume authority through others and cause hard feelings.
- h. If an accepted policy of staff is violated, staff should go through channels and call this to the attention of the line supervisor concerned.

- i. A spirit of agreement and trust, friendship, and tolerant actions on the part of both staff and line will do much in co-ordinating the activities of each for a more effective organization.

I. Functional Organization

(The functional organization is not used extensively; consequently, does not rank in importance in relation to line and staff and will not be given detailed attention here.)

1. The functional-type organization normally applies to managerial levels only.
2. Functional organization means that the functions or duties of supervisors deal with specialization of work; that is, each supervisor is a specialist in a certain line of work and he deals with every member of the organization, no matter where he may be, who is doing this specialized work.
3. Similar tasks are grouped together, such as machine work, or carpentry work, or accounting, etc.; persons with these special skills supervise the activities being done by workers, no matter where the work may be going on.
4. The functional organization theory was introduced by Frederick W. Taylor, who believed that supervisors who possessed special skills could strengthen the organization by dealing with workers whose activities were grouped in specialized units.
5. The functional organization does possess some difficulties--these include:
 - a. Discipline is rather difficult to have throughout the organization as no line authority is used.
 - b. A person, many times in the functional organization, has too many supervisors--for example, if the foreman is supervising workers who perform two or three different types of skill work, he (the foreman) will have that many functional supervisors over him.
 - c. It is often times difficult to fix responsibility for happenings, as the responsibility for each specialty is not always clear.

(If additional information is needed concerning the functional organization, refer to Principles of Management by George Terry, Richard D. Irwin, Inc., pp. 189-191.)

J. Formal versus informal organizational channels

1. The question is often asked: "Are all organizations formal?"
 - a. The answer, of course, is "no."
 - b. Even in large organizational structures, in addition to the formal lines of authority and responsibility, some people just naturally assume responsibility and exercise authority without anyone ever spelling it out.
2. The chances are that in any group of persons working at the same level, some sort of informal organization exists--a person who does not have formal authority may be found to exercise considerable weight among the others.
3. The formal organizational structures are those which are prescribed and set down in detail on an organization chart; whether they be line, staff, functional, or a combination of these.
 - a. Organization charts are prepared and used by enterprises as these charts are extremely useful to management to visualize the structure as a whole.
 - b. The handouts, Numbers 8 and 9, which were presented are examples of organization charts; however, in addition to the position or department, many enterprises insert the names of those people in their respective place on the chart.

(The trainees may be asked to discuss their company's organization chart if they are familiar with it.)
 - c. The established relationships of the various activities, departments, lines of authority and responsibility are easily seen in the organization chart.
 - d. The organization chart shows these formal organizational relationships; especially formal responsibility and authority make-up.

4. The informal groups which do exist in almost every organization affect in some way the operation of the enterprise.
5. Many times the groups are bound together by social relationships, or by common interests, or by some other interests.
6. Informal organizations are not bad in themselves; as in some cases, these informal groups work effectively toward the attainment of the enterprise's objectives.
 - a. On the other hand, informal organizational structures can undermine good principles of management.
7. Prudent management should recognize that informal organizations exist within the framework of the formal organization chart--both in the workers' group and in the supervisory group.
 - a. Through experience and a study of informal organizations versus formal organizations as they exist, the necessary criteria will be provided to management to use both effectively in the pursuit of meeting objectives of the enterprise.

V. Basic Departmentation

- A. The general term "department" refers to a distinct area, division, or branch over which a manager or supervisor has authority for the performance of a specified group or activity.
- B. Departmentation is the same as organizing or grouping of activities and the assignment of authority for the purpose of gaining efficiency and co-ordination.
 1. This objective of gaining efficiency is the basic reason why organizations have departments.
- C. Departments are necessary in the organization because the span of management is certainly limited; a human being is incapable of managing an excessive number of persons.
- D. Not only do departments exist because of the limitations of human ability, but also because of the limitation of time; no person would have enough time to do all the things necessary to operate an effective organization.

- E. Without departments, the top executive would have to be sales manager, production manager, etc. and every employee would be required to report directly to him.
- F. Studies indicate that a supervisor can manage four to eight persons effectively at the upper levels of management and eight to 15 persons at the lower levels; without departments, this type of supervisor-to-subordinate ratio could not be had.
 - 1. As a result of the lack of balance in this ratio, poor managements practices would come about.
 - 2. Not only does the effective span of control for management result in more effective supervision, but it reduces the cost of organizational operation.
- G. Departments may be any division of the organization, whether it be called branch, section, unit, sub-unit, or department.
- H. Every department in order to operate effectively must have a responsible head.
- I. Process of Departmentation
 - 1. There are various activities, such as planning, delegation of authority and responsibility, etc., which are needed for the accomplishment of organizational objectives.
 - 2. The following steps are those needed for organization and department completeness:
 - a. The enterprise's objectives need to be clearly established and stated.
 - b. Next, there should be the formulation of plans and policies for the accomplishment of the objectives.
 - c. The determination of the activities necessary to carry out the plans and objectives should be made.
 - d. A grouping of these activities would be the next step--each group becomes a department or unit.
 - e. Each group or department should be assigned the authority necessary to carry out its activities.

- f. The groups or departments must then be tied together, both horizontally and vertically by authority relationships.
- J. Departmentation in the organization is not, in itself, the answer to all questions or problems of organizational efficiency.
- 1. In an organization, levels are expensive and as these increase, more and more of the efforts and cost of the enterprise is devoted to managing.
 - a. Not only is there the expense of additional managers, but there are extra staff members needed to assist in management.
 - 2. The real production in an enterprise is work done by persons in direct labor categories; departments always carry staff personnel.
 - 3. The existence of different levels of organization complicate the problem of communications.
 - a. Organizations with several levels have greater difficulty communicating objectives, plans, policies, etc. than those with limited levels.
 - b. Omissions and misinterpretations are likely to occur, as there are more chances of this when information is passed through several levels.
 - 4. Departments and levels complicate the problems of managerial planning and control; plans which may be definite and clear at the top of the organization structure, may not be so as they are filtered down through the various levels and departments.
- K. Although departments and levels of work have disadvantages in the organization structure, they do exist, and will continue to exist because of the necessary part they exercise in the principle of management organization and control.

VI. Visual Aid in Organizational Structure

(The visual aid recommended for this concluding phase of the second session is:

16 mm motion picture
"Internal Organization"
Time for showing: 10 minutes

This film contains: an illustration of the fundamental purposes of business organization and basic organizational principles. areas of division of labor and assignment of responsibility. types of organizations which can be adapted to the needs of the enterprise.

The film is a McGraw-Hill Management Film; cost, \$70. Available through Industrial Education Film Library, 195 Nassau Street, Princeton, New Jersey. It may also be rented.

The film contents relate exceptionally well to the material covered in the session. It is well to follow suggestions in the guide which accompanies the film for showing and discussion.

Preview the film before showing; have all equipment set up before the session starts to conserve time.

Discuss the film with the trainees after showing.)

(Session II will conclude with the showing and discussion of the visual aid; before adjournment, announce the topic for Session III, "Major Responsibilities of Management.")

SESSION III

MAJOR RESPONSIBILITIES OF MANAGEMENT

I. Objectives for Session III

- A. (These objectives may be charted before the session begins for convenience and a saving of time.)

Objectives

1. To make an intensive study of management responsibilities--planning, organizing, directing, controlling, co-ordinating
2. To study relationships between management responsibilities and the organization's objectives
3. To note the effectiveness of each major responsibility of management in current practice.

(Because Session III will deal exclusively with the major responsibilities of management, each responsibility as it is taken will be presented so as to cover all three objectives as listed. The film at the very end of the Session will summarize to a great extent the functions of management.)

II. Planning

- A. Planning will be the first major responsibility to be discussed in this session, because it logically is one of the first functions of management.
1. In fact, after the objectives of the enterprise are definitely determined, then management must get busy planning how these objectives will be accomplished.
 2. In management, just as in any other activity, if action is to take place in an orderly manner, some plan or approach must be established.
 3. Modern management today emphasizes a great amount of planning, or predetermination of what will be done and how.

4. It was pointed out in Session II that staff functions add greatly to the planning phases of management.
5. Old management methods of "hit or miss" tactics have disappeared; because persons charged with carrying out the tremendous responsibilities of operating a business cannot afford to just hope for the best to happen and do nothing.
6. The job of looking ahead, of using past experiences for mapping out proposed avenues of action must be done by competent management.
7. Every manager, no matter what his duties may involve, finds that planning is an important part of his job.
8. Unless all persons within the organizations are working together in accordance with some definite plans, there cannot be efficiency of operation, nor the achievement of organizational success.

B. Definition of Planning

1. There are many definitions which adequately define the term "planning."
2. A short, but inclusive definition of "planning" is:

Planning is organized forethought

(Additional points which can be discussed concerning the meaning of "planning" include:)

- a. Planning is organized forethought to take care of proposed action.
- b. Sometimes planning is thought of as study or research which becomes the base from which courses of action can be taken toward reaching a certain objective.
- c. Planning takes into consideration a projection of the future based on a study of present and past situations.
- d. Planning can be done on both the individual and group levels; however, the planning of the individual within the group must be coordinated with the planning of others within the group.

- e. Often times, planning is said to determine:
 - aa. what is to be done
 - ab. how the thing is to be done
 - ac. who will take the proposed action
 - ad. when the thing is to be done
 - ae. where the action will take place
- f. Planning takes into consideration expected difficulties, as well as orderly steps to be used in the accomplishment of the objectives set.
- g. Planning is not only thinking ahead of what is to be done, but the putting of such thoughts in an organized manner.
- h. Planning involves a great amount of skill--such skill coming from experience and a conscientious study of results and events within the organization.
- i. Planning may constitute complex work and research--such must depend upon the nature of the organization and the activities it is involved in.

C. Reasons for Planning

1. The reasons or justification for planning are obvious from the introduction and definitions developed.
2. If planning had no merits, it would not be used as extensively as it is.
3. Large organizations, and many small ones, too, provide a great amount of expenditures with the necessary personnel to carry out the functions of planning.
4. Although, many times thought of as a staff function, planning must be done in line organization relationships--the line manager, supervisor, etc., cannot perform line functions effectively without planning, no matter what these functions are.
 - a. Planning is a requirement of every supervisory job, no matter what it consists of, or how it is classified on the organizational chart.

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS - 1963

- b. Any supervisor who has definite plans for his work and personnel will get much more done and have a more productive department, than a supervisor who just lets things go as they will from day to day.
5. Although planning is said to be time consuming and expensive, the results which come from planning outweigh any disadvantages attributed to time and expenses.
 - a. Those who usually complain about planning being expensive and time consuming are the ones who do not understand, nor take time to evaluate results of organized endeavor.
 - b. Many persons do not think that planning is efficient, because most of it involves mental, rather than physical work and they fail to associate mental activity with production activity.
 6. Without planning, objectives for the organization would not be definite and with purpose.
 7. Planning has much force in making known information, instructions, and courses of action which the group or organization will take.
 8. Planning definitely fixes lines of authority and responsibility within the organization.
 9. Planning actually saves time and effort by doing away with non-productive work.
 10. Without planning there would be little order or specific system used in the work carried on.

D. Essential of Planning

1. As pointed out previously, careful planning takes time--this time must be taken by management--if not--the organization will find itself unable to compete with others and stay in business.
2. As planning involves looking into the future, experience of the planner must be relied upon heavily for this type activity.
 - a. After plans are made, they should be analyzed before putting into effect.
 - b. After plans are used, they need to be reviewed--did the results fall short of expectations? If so, why?

- c. Experience will provide management with the ability to analyze the planning function much better.
3. As planning involves future activities, the supervisor or manager must become skilled in forecasting ability and the use of sound judgment.
 - a. Forecasting for the short-term is not as difficult as forecasting for distant future expectations.
 - b. The use of judgment in forecasting ability is important--recognizing a mistake and applying the lesson to future decisions will eliminate major mistakes.
 - c. The use of facts, rather than unproved information, aids in the ability to forecast accurately.
4. Planning requires resourcefulness and the willingness to use the imagination.
 - a. These elements are required in planning because of the fact that many times untried techniques or areas of work are involved.
5. Finally, an essential of planning which should never be overlooked is careful follow-up--the evaluation of results and corrective action, if needed.

E. Steps in Planning

1. It is impossible to list steps in the planning process which could be used for every organization and every possible situation.
 - a. The peculiar characteristics of the enterprise, the type of operations of the organization, the philosophy of management, and other related factors make it extremely difficult to have a prepared list of planning steps which would work in every case.
2. There are, however, some basic steps which most planning work follows:
 - a. The first step in planning is the obtaining and study of necessary information about the organization and its activities.

- aa. This first step takes into consideration the study of the organization structure and makeup, personnel, and practices and procedures within the organization.
- b. The second step in planning involves the intensive study of the data obtained in Step 1.
 - aa. The organization is studied as a whole, but also how the various components of the organizational structure are related.
 - ab. Current planning which is being done must also be studied.
- c. The third step is determining possible plans.
 - aa. This determination is based on the material and the study completed in Steps I & II.
 - ab. However, additional factors such as cost, time, and quality must be considered.
 - ac. The determination of a proposed plan must, of course, be within the broad objectives as set by management.
 - ad. The determination of a proposed plan must include possible adjustments which can be made after the plan is put into effect.
- d. The fourth step is the adoption of a proposed plan.
 - aa. The adoption of the proposed plan may be made by an individual, or by a group-- this being determined by the policy of management.
- e. The next step in planning takes into account the proper time schedule and sequence of details for effecting the plan.
 - aa. Such items as the detailed activities; who will execute the activities; and the proper order of activities are taken.
- f. The last step in planning is the evaluation and follow-up of results.
 - aa. The use of adequate records for evaluation purposes is important.

- ab. Plans for corrective action are important.
- 3. In considering the steps to planning and the effectiveness of planning, it must always be remembered that the success of any plan is greatly affected by the manner in which employees do their work.
 - a. The human element need always be given much consideration in whatever plans are formulated.

F. Kinds of Planning

1. Planning can be classified in many different types or kinds, and is done so by various management groups.
2. An over-all classification as to kinds of planning include:
 - a. New Planning
 - aa. The name itself suggests the type of planning this classification consists of.
 - ab. New planning is concerned with initial or original operations of the organization.
 - ac. New planning may also be the result of new objectives or goals which the organization has established.
 - b. Operative Planning
 - aa. Operative planning is the type of planning necessary to keep the present actions of the organization progressing effectively.
 - ab. Operative planning is the routine planning which takes care of current operations, but which is based on predetermined objectives or goals.
 - c. Remedial Planning
 - aa. Remedial planning is that type planning instituted to provide corrective action to plans which may have become deficient.
 - ab. Changes may become necessary when it is found that weaknesses in the plan exist, errors in judgment are noted, changes in the objectives are made, or new information affecting the original plan is existing.

d. Long-term Planning

- aa. Long-term planning may constitute any of the three previous kinds of planning noted, i.e., new, operative, or remedial.
- ab. Long-term planning is more difficult to do than short-term planning, consequently, a more experienced person is needed for long-term forecasting and planning.
- ac. A careful study of the organization and its activities is a prerequisite for long-term planning; also adequate follow-up is required.

e. Short-term Planning

- aa. Short-term planning does not require as much skill as long-term planning; however, corrective action is often needed on the short-term basis.
- ab. There is no definite time period which distinguishes long-term from short-term planning--it may be stated, however, that short-term planning normally is concerned with the current operating year or fiscal period, while long-term planning goes beyond this time period.

G. Planning as a Necessary Function of Management

1. The basic difference between a supervisor who is just a supervisor and the supervisor who also manages is the degree of knowledge and the use of judgment in acts performed.
2. Planning is a necessary function of management--this is a responsibility which is part of the manager's job.
3. There are also leadership qualities which planning tends to bring out in supervisory personnel.
 - a. Unless the supervisor is doing some planning and is contributing sufficiently to this function, he is simply following in someone else's footsteps.
4. **THERE ARE SOME ADDITIONAL POINTS WHICH SHOULD BE TAKEN BEFORE LEAVING THE TOPIC OF PLANNING.**
 - a. **THESE ARE PRESENTED IN HANDOUT 10 AND ARE CONCERNED WITH PLANNING AS A FUNCTION OF MANAGEMENT.**

- b. IT MUST BE REMEMBERED THAT ONE OF THE OBJECTIVES OF GOOD MANAGEMENT IS TO PROVIDE SOUND AND ADEQUATE PLANNING AND TO EVALUATE THE RESULTS TO DETERMINE ITS VALIDITY.

*** Handout 10 ***

(Discuss the material in the handout with trainees. If time permits, additional items can be listed for No. 10, "ways in which planning can save the company money." Have trainees contribute these, and chart.)

III. Organizing

A. Definition of Organizing

1. A definition for organizing is:

Organizing is the orderly arrangement of jobs, people, and machines to accomplish an objective efficiently.

2. (It must be remembered while discussing the definition with the group that "organizing" will be taken here only as it applies as a function of management. It may be necessary to review briefly the factors relating to organization types covered in Session II to note differences in organizational types and the function of organizing.)

B. Purposes of Organizing

1. After the plans for the organization have been formulated, it becomes necessary to decide upon a certain combination of people, jobs, and facilities to fit the plan.
2. The function of organizing has as its main function to unite individuals into an effective team.
3. More specifically, organizing is concerned with the assignment of responsibility and authority so that individuals can work together in large numbers as effectively as they can alone.
4. Organizing is directed toward the work of making sure that the efforts of the enterprise are directed toward the attainment of the objectives as stated.

5. Organizing makes for a better understanding by each person in the organization of exactly what his responsibilities and authorities are; also these same characteristics of others in the organization.

C. How to Organize

1. The organizational structure of any enterprise will be determined mainly by the objectives which have been established.
2. The organizational structure, however, must be simple enough to be understood, accepted, and used by all persons concerned.
3. Because conditions and events change very quickly at times in the business world, organizing must provide for a flexible structure which can be adjusted to meet these changes.
4. Steps in the organizing process include:
 - a. The first step in the organizing process is to make known the job which is to be done--in other words, have the objective clearly defined.
 - b. Step 2 is concerned with a determination of the activities which are necessary to meet the objectives of the enterprise.
 - c. Next, the activities should be grouped into similar units--this is the departmental division of functions.
 - d. Step 4 deals with the definition and clarification of duties--each activity or group of activities to be performed must be clearly made known, and the persons who will carry out these activities must be made equally definite and clear.
 - e. Personnel must then be placed in positions for carrying out the defined activities.
 - aa. Areas of responsibility and authority must be provided to personnel selected and placed in the organizational structure.
 - f. Training of personnel selected should be administered initially and then continually covering such topics as:

- aa. understanding of the organization's objective
- ab. organization arrangement
- ac. relationships among personnel on the organizational chart
- ad. responsibility and authority relationships
- ae. understanding of the major functions of the organization and how these relate to objectives

D. Basic Considerations in Organizing

1. There are several basic considerations or principles of organizing which are important.
2. These principles give additional light to those items already discussed.
3. HANDOUT 11 LISTS THESE PRINCIPLES OF ORGANIZING; LET'S TAKE A LOOK AT THEM.

*** Handout 11 ***

(Discuss these principles of organizing after the trainees have had an opportunity to read them.)

IV. Directing

- A. What is directing? It may be defined as:

Directing is the guidance of efforts and activities toward a stated objective.

1. Directing points out the course which is to be followed in achieving the goals of the enterprise.
2. There may be a complete and adequate organizational structure, but unless there is a force which prescribes certain avenues through which activities must pass, much of the good advantages of organization and planning will not materialize.
3. Oftentimes, there can be much activity going on in the organization, but unless it is controlled and directed, there is never full realization of its efforts.

4. Directing does not suggest simply the executing of orders or rules, but the guiding of activities in a manner based on set standards of management procedures.

B. Responsibility for Directing

1. Management has several areas of responsibility based on getting certain work done through subordinates
2. Management is very extensive and its functions numerous.
 - a. The manager must deal with people, human relations, situations, and procedures.
 - b. All of these functions which management must perform require skill and knowledge.
3. If management were negligent in any one of the many functions it is responsible for, the entire job being done would be ineffective and without good results.
 - a. This is true because all phases of the work management does is integrated and related so that each phase depends upon the other for success.
4. The manager or supervisor has people who work under his direction; these people are responsible for the production of goods and/or services.
 - a. The responsibility for getting a certain amount of work done in the department or in a group rests with the supervisor--he, therefore, must know how to control and direct group activities.
5. Directing actually involves communications, counseling, training, motivating, and delegation.
 - a. Each of these constitutes a means for carrying out the job of governing the activities of persons.
 - b. Each of these also, is a vast area in the field of human relations and management principles.
 - c. These items are not concerned exclusively with directing, but are found in most areas of human relations and management concepts.

- d. The last item mentioned in the list, delegation, is more related to directing than the others and for this reason, some discussion of it will be taken.

(It must be noted that delegation was discussed in Session II. This discussion was centered around the organizational structure and the relations among authority, responsibility, and delegation. In this session, delegation will be discussed as to how it serves as a function of directing.)

c. Delegation

1. Delegation was defined in Session II as: "The granting or conferring of equal portions of authority and responsibility from one person in the organizational structure to another."
 - a. From this definition it can be seen that delegation is a prime function of directing.
 - b. No one person can assume all responsibility and authority; some must be granted to others so that the necessary work of the organization can be done and in this manner, an act of directing has taken place.
 - c. When a supervisor or manager directs a person to perform certain activities, he extends his area of operations because without delegation his actions would be confined to what he could do himself.
2. The supervisor who delegates effectively has more free time to do more actual supervisory work and over-all planning.
3. The function of delegating places greater trust in subordinates which in turn develops qualities of leadership.
4. Delegation enables the supervisor to organize the department's work more effectively as channels of communication are more frequently used.
5. Delegation as a function of directing should not be used as a "once in a while" activity, but should be a part of every supervisor's routine tasks.
6. Because the supervisor can never delegate ultimate responsibility for the job delegated, proper delegation is always based on a system of direction and control.

7. A simple process of delegation, whereby direction and control are used is:
 - a. The job or activity is broken down into clearly defined tasks.
 - b. Next, the supervisor determines which of his people can do each task the best.
 - c. The task is assigned to each person based upon the supervisor's study of the job; he answers questions for clarification; gives necessary authority and defines responsibilities.
 - d. When the task is completed, or during the performance of the tasks, evaluations are made by the supervisor--such points in the evaluation may cover:
 - aa. Time required to do the job
 - ab. Quality of the work performed
 - ac. Reasons for failure
 - ad. Quantity of work completed
 - ae. Attitude of the person performing tasks
 - e. When the evaluation is completed, if it is favorable, recognition should be given; if unfavorable, honest criticisms of the task delegated should be given.
8. Delegation is a true test of a supervisor's skill as when he delegates, he must bring into this activity everything he knows about organizing work and directing people.
9. Although delegation is one of the most rewarding of supervisory skills, it is at the same time the most difficult to use and get good results each time.
10. It is usually found that where the supervisor is having difficulty with delegation, it is the way this management technique is being used and not necessarily delegation itself at fault.
11. There are some mistakes which the supervisor can make when delegating--here are some:
 - a. A supervisor often finds it difficult to give a job to a subordinate which he (the supervisor) thinks he can do better.

- b. A supervisor may under-delegate because he simply overlooks things he is responsible for which can be delegated to subordinates.
 - c. Many supervisors try to use some type of formula or set pattern for delegation-- this is not possible, because people react differently to changes in circumstances.
 - d. A most common fault in delegation is that the supervisor does not give enough authority to do the job properly.
 - e. Supervisors delegate certain jobs and assignments, but many times do not make it clear just how or what is to be done.
 - f. In any delegation, there must be good communications between supervisor and subordinate-- delegation is most ineffective when the subordinate can not come back to the supervisor for additional instructions, help, or clarifications.
 - g. Delegation involves risk and chance of mistake on the part of the subordinate; many supervisors fail to consider this factor.
12. THERE ARE SOME ADDITIONAL CHARACTERISTICS OF DELEGATING AS A FUNCTION OF MANAGEMENT WHICH NEED TO BE TAKEN. SO THAT YOU WILL HAVE A REFERENCE FOR THESE; A HANDOUT HAS BEEN PREPARED COVERING THESE POINTS.

*** Handout 12 ***

(Discuss the material in Handout 12. Remember that a film will be shown later in the session on delegation and many of the points discussed on the handout will be portrayed in the film.)

D. Communication and Direction

- 1. Too often supervisors delegate jobs or direct employees to perform certain tasks, but fail to find ways to control the work.
 - a. Such a situation tends to make for ineffective supervisor-employee relations in meeting production schedules.
 - b. A lack of proper communications between supervisor and employee is often the cause of this inefficiency.

2. Some ways to get better control from directing through proper communication techniques include:
 - a. Make sure that the subordinate knows what is expected of him.
 - b. The subordinate must know what he is to do, how he is to do it, and within what time limit he may be working.
 - c. The subordinate must be told and he must understand what his limits are as far as company policy, regulations, and personal responsibility are concerned.
 - d. The subordinate must know what authority he may exercise in order to get the job done.
 - e. The supervisor must make sure the channels of communications are open upward; that is, the subordinate should have the feeling of freedom of communication with his supervisor concerning problems encountered.
 - f. If changes occur to affect initial plans of delegation, the subordinate must know what course of action he is to take.
 - g. The language of directing must be kept on a plane which the subordinate understands.

E. Evaluation of Directing

1. Directing, like any other management function, can be evaluated to determine its effectiveness in doing the job it is supposed to do.
2. Formal criteria are good to have; that is, certain standards stated and prescribed to measure success or failure of directing.
 - a. Of course, formal standards do not have to be established to evaluate effectiveness of directing.
3. A few simple measuring devices are all that are needed for the evaluation of directing.
4. If answers to the following questions are positive, good results from directing are being gotten; if the answers are negative, some strengthening must be done:

- a. Do subordinates understand fully the nature of the work or other activities which they have been directed to do?
- b. Can the supervisor entrust the work to the subordinate with only occasional inspection?
- c. Does the worker appreciate the opportunity to show that he can do the work assigned?
- d. Is there respect shown by the supervisor for the subordinate's ability to do the job?
- e. Is there respect shown by the subordinate for the supervisor's position in getting work done through his workers?
- f. Does the worker have proper authority to go with the work he has to do?
- g. Does the worker know to whom he is responsible?
- h. Does the worker understand why the work he is entrusted with is important to the total organization's work?

(This list of questions is by no means complete; if time permits, additional ones may be developed.)

V. Controlling

A. Controlling may be defined as:

Controlling is the process of checking and restraining efforts and activities within prescribed limits.

1. Controlling is certainly an important function of management as the activities of the enterprise must proceed within certain desired channels.
2. Controlling aids in the process of making sure that the activities of the enterprise takes the proper direction.
3. Controlling also involves the motivating of persons so that activities are carried out as desired.
4. Controlling is very much related to other management functions and actually is dependent upon these other functions for smooth operation.

5. As has been noted in all management functions, changes and adjustments are always necessary to handle current problems--the same is true with controlling in that it must be flexible and dynamic.
6. The management function of controlling and the qualities of leadership are very much related; however, not all leadership techniques are considered to be controls or restraints of human activity.
7. The degree of control necessary in any organization or in any activity will be dependent upon many factors; management ability, efficiency of workers, morale of persons involved, communications, etc.

B. Types of Controls

1. Controls are not ordinarily classified in a set manner as their use in specific cases will be determined by the type of problem.
2. The degree of control will also be determined by the nature of the problem or situation.
3. Such factors as efficiency of work force, types of leadership needed to supervise personnel, and related items are, in effect, going to govern the types of control exercised by management.
4. Management does, however, exercise control through the following control types:
 - a. Orders
 - b. Rules
 - c. Instructions
 - d. Organization Structures
 - e. Policies

(The latter two items have been discussed in Session II; considerable time being given to organization structures. The relations between organizational structures and control can readily be seen. Policies were discussed in terms of management's broad and comprehensive outlines for guiding and directing the enterprise.)

Therefore, only the first three items will be taken here.)

5. Orders

- a. Orders are important in the controlling of activities of others.
- b. Orders tell or command others what to do; these may be written, oral, or by gesture.
- c. Orders are usually given when a directive must be acted upon within a short period of time.
- d. Orders should be issued only by a person who has the authority and the responsibility to see that they are carried out.
- e. Orders should not be made unless they are intended to be enforced--it is very ineffective to issue orders and then do nothing about violations of such.
- f. Orders which are issued should be fully understood by the person who is to carry them out.
- g. An order should not be given a subordinate if he is not capable of carrying it out.
- h. An overuse of orders is not good--an excess of orders tends to weaken authority of the supervisor.
- i. Greater co-operation from the person receiving the order will be had if he understands the importance or reasons why the order is to be carried out.

6. Rules

- a. Rules are definite and exact guides for action.
- b. Rules must come from those with authority in the organization, as authority is recognized through the setting and enforcement of rules.
- c. Rules must be applied the same to each similar situation; as the basis for a rule is that it must be specific and cover exact situations.
- d. Rules inform personnel as well as control their activities.
- e. Rules should be stated in language simple enough to be understood by everyone in the organization.

7. Instructions

- a. Instructions form another important way in which management controls activities.
- b. Instructions are information, either in writing or in oral form, which indicate the proper way for doing a certain job or activity.
- c. Instructions give the "how-to-do" information so that the correct procedure may be followed.
- d. Instructions which are given to workers cover much of the routine work or that work which follows standard procedures.
- e. Instructions tend to give uniformity to the procedure for doing work--this gives more value to quality control and standardization.

(Now, have two or three of the trainees contrast the differences among rules, orders, and instructions. This will aid in a better understanding of these management controls; as often times, confusion does exist concerning differences.

Guide the discussion and clear up any misunderstandings.)

C. Considerations in Gaining Effective Control

1. Considerations in gaining effective control must be emphasized.
2. These considerations are summarized in Handout 13.
3. HANDOUT 13 HAS BEEN PREPARED TO GIVE A SUMMARIZATION OF THE USE OF CONTROLLING AS A FUNCTION OF MANAGEMENT AND THE CONSIDERATIONS FOR GAINING EFFECTIVENESS IN ITS USE.

(Read through and discuss contents of Handout 13.)

D. Standards and Controls

1. Although a standard is not thought of as a type of control, it does provide a basis upon which controlling can be guided.
2. A standard is thought of as an accepted or established instrument of measure.
3. Standards are important as tools of management as they provide bases for the determination of the qualifications required to perform a certain activity satisfactorily.

- a. Standards involve personnel, materials, machines, and procedures for doing the work.
4. Standards assist greatly in the controlling function as they make clear the performance levels for the work being done and the evaluation of the results of the work.
5. Standards are used to determine the qualifications for improving work procedures, as a degree of measurement is always present when standards are applied to current work practices.
6. Standards provide for better control and co-ordination by management in that a measure or criterion determines the exact quality of factors within the organization.

VI. Co-ordination

A. Co-ordination is defined as:

Co-ordination is the blending together of the activities of the organization which result in a united and common activity.

1. Much of the work of management is making sure that all the efforts being put forth in the organization are blended together in the direction of a common goal.
2. Management must strive to synchronize and hold together the actions of the organization so that a common effort aimed in the direction of the organization's objectives is had.
3. The proper balance among the personnel of the organization must be maintained--this is a function of co-ordination.
 - a. Each person must know what he is to do and when he is to do it so that the effort of each will be in unison with the total efforts of the group.
4. For greater organization efficiency, the work of each person or unit must be taken not only from the viewpoint of the individual or unit, but from that of other elements which also contribute toward the common objective.

B. Types of Co-ordination

1. Normally co-ordination within the organization is classified as:
 - a. Vertical co-ordination
 - b. Horizontal co-ordination
2. Vertical co-ordination is that co-ordination which links together the components of the various different levels of the organizational structure.
 - a. This co-ordination goes from top to bottom, and vice versa, in the organization.
 - b. There must be co-ordinated activities between top management levels and all other levels below down to workers.
3. Horizontal co-ordination is that co-ordination which links together the components within a level of the organizational structure.
 - a. This co-ordination goes across horizontally on the organizational structure; such as that between same level departments, between department heads, and among personnel within each unit or department.

C. Co-ordination and its Effects

1. Certainly, co-ordination as a function of management has many good effects.
2. Without the use of co-ordination, activities of the organization would be done in a manner not necessarily consistent with keeping the individual work unified and dovetailed together toward a common goal.
3. LET'S TAKE A CLOSER LOOK AT SOME OF THE EFFECTS OF CO-ORDINATION.

*** Handout 14 ***

(Read through and discuss principles in Handout 14)

D. Techniques of Co-ordination

1. Co-ordination must start within the department or unit; that is, efforts and activities must first be geared to the objectives of the unit.

2. Next, each department or unit should be studied in relation to how it fits into the over-all organizational structure.
3. The dependence of one department or unit on the other must be clearly stated and shown so that the blending together of activities can be done.
4. A charting system can be used to show visually the interrelationship among departments; or a graph can be prepared to show how a function or activity is to be shared by those persons or departments designated.
5. In applying any technique of co-ordination, it must be remembered that the objective of the enterprise must always be the basis for plans of action.
6. The function of co-ordination requires a follow-up periodically to determine the effectiveness of techniques used; adjustments may be needed to bring about desired changes.

VII. Visual Aid in Major Responsibility of Management

(The visual aid recommended for this Session is:

16 mm motion picture

Title: "Breaking The Delegation Barrier"

Time for showing: 30 minutes

This film shows how supervisors prevent or overcome the normal tendency of their people to oppose new ideas and procedures. It helps avoid serious drop in efficiency and morale by showing how to deal with emotional factors which breed resistance to change.

Note that the running time for the film is 30 minutes; the session should be paced so that this amount of time plus a few minutes for discussion will be available.

The film may be purchased from: Roundtable Productions, 275 South Beverly Drive, Beverly Hills, California; cost, B/W, \$175; Color, \$300; or it may be rented for a nominal fee.

Preview the film before showing; have all equipment set up before the session begins.

There is a Discussion Leader's Guide which accompanies the film; this should also be reviewed for additional suggestions on how the film contents can best be discussed.

The film contents and objectives portray exceptionally well the management function of delegation and its related aspects.

Show the film; discuss.)

SESSION IV

ORGANIZED LABOR

(This material to be presented in Session IV will strive to satisfy two objectives: (1) To acquaint management, in situations where organized labor does not exist, with background and general information concerning the part organized labor plays in this country's economic system; and (2) To present additional information concerning organized labor for the benefit of those trainees who are in situations where organized labor currently exists.

In both cases, much can be gotten from the material to be presented in this session. It must be pointed out, that an objective, impartial approach will be given; that such an educational process as this training conference will not attempt to take either a pro-management or a pro-labor position. You as the conference leader must make this condition known, as management-labor relations can result in misunderstandings and resentment on the part of the trainees, depending upon which stand their respective company or organization may take. However, the session's discussion must be approached from the viewpoint of how management can make better use of the material presented.

Because some of the information presented will be rather detailed, the previous arrangement of using the outline form will not be followed exclusively here, and the text form will be used considerably.

It may be better to pace this session somewhat slower, so that the text material will be understood. Allow ample time for questions from trainees.)

I. Objectives for Session IV

- A. (These objectives may be charted before the session begins for convenience and a saving of time.)

Objectives

1. To trace the history of labor movement in the United States
2. To present an understanding of union activities
3. To study union-management relationships
4. To trace the history of unions in Louisiana and note present status.

II. History of Labor Unions in America

With about 18 million workers organized in labor unions in the United States today, much of the personnel relations activities in business and industry are affected by unions. Because this country is a democracy, the right to organize by labor has long been a right which workers have enjoyed. More recently, however, legislation was passed declaring that workers had constitutional rights to organize and bargain collectively; a closer look at this legislation will be made later in the session.

Labor unions had their beginning several centuries ago, as it may be recalled from history that absolute national monarchies were unable to check the increasing power of the people in their endeavors to get better representation. Since 1689, the English Bill of Rights has served as a basis for the granting of religious and political freedom. This freedom and opportunity for democratic action spread to the fields of commerce and industry. The Industrial Revolution and the conditions which workers had to endure in the factories had much to do with the organization of free and independent labor unions.

The labor movement in England had a decided effect upon the attitude of the workers in the United States. The American organizations were modified from those of England; however, the early labor activities in this country were influenced greatly by the character of the colonies, the newness of the settlements, the free public lands, the large role which agriculture played, and the scarcity of labor. These factors actually slowed up the organization of labor and prevented a united front by labor.

Prior to 1800 there were several local trade unions in the United States. The first of these was an organization of carpenters, which was founded in Philadelphia in 1791; in 1794 two more unions were formed--the Federal Society of Journeymen Cordwainers in Philadelphia and the Typographical Society of New York.

These early organizations showed some degree of aggressiveness and from time to time in disputes with management, strikes were resorted to. The early labor unions, however, for the most part confined their activities to matters relating to the business of unions and the welfare of the members. The organizations maintained benefits for sickness of their members and in some cases expenses for burial purposes. These early unions enforced rules for apprentices and did all they could to get agreements with management on hours of work, wages, and working conditions. It was probably during this early period of American history that unionism became firmly rooted in labor's objectives and philosophy.

In the early 1800's, manufacturing and transportation industries developed rather rapidly. In the factory towns and cities, there arose many inequalities in living conditions, educational opportunities, and working conditions favored the development of co-operative action by economic groups. Workers came to feel the need for organization so that a united effort could be had. The number of local unions which were organized increased. In addition, there were many who advocated the formation of regional and national labor organizations so that more bargaining power could be had. A start in the direction of national unions and union federation was made in 1827 when the Mechanics' Union of Trade Associations was formed in Philadelphia. This was the first labor movement that affected more than a single trade. This formation came about when the carpenters at Philadelphia had a strike for a ten-hour day--at first, the strike was unsuccessful, but other trades came to its support. This organization went into politics to gain its end and found that such political action could be used to bring pressure to bear.

In 1834 the National Trades Union was formed which had about 26,000 members. This labor organization was instrumental in obtaining a ten-hour working day for government employees. Other national unions followed and all types of co-operative plans were being discussed by labor organizations. The demands which these early labor organizations made were: shorter working hours, free schools, equal taxation, abolition of laws which required imprisonment for debts, and direct election of public officials.

The first permanent national labor organization, the International Typographical Union, had its beginning at the convention of journeymen printers in 1850. The name which this union adopted in 1852 was the National Typographical Union; the union was made international in 1869. This union, which is in existence today, set an example that was followed by unions of stonecutters, molders, machinists, blacksmiths, and locomotive engineers. The principal aim of these organizations was to control the supply of workers in the industries represented by unions.

The panic of 1857 which affected the economic condition of the country weakened the union movement and some of the labor organizations became local in nature again. With the coming of the Civil War, business and manufacturing activities increased; in the North, especially with its factory centers, wartime production of military goods demanded more and more workers. These wartime conditions were very favorable to the development of union activity and there were rising prices, a greater demand for goods, and a shortage of workers. As a result of these conditions, unions grew in number and strength.

The wartime conditions brought about by the Civil War and the resulting favorable conditions for the formation of unions continued even after the war had ended. There developed a feeling on the part of many workers for the need of a single great union of all industrial workers--skilled and unskilled. Under the leadership of W. H. Sylvis, head of the Iron Molders' Union, a new organization was formed in 1866 known as the National Labor Union. It was composed of various types of labor and trade organizations. This union functioned for six years during which time it became identified with political movements and philosophies. It was chiefly concerned with securing laws that would restrict the working day to eight hours, establish a national bureau of labor by the government, and the exclusion of the Chinese coolies from the United States. A number of industrial congresses were held for the purpose of unifying the political aims and efforts of organized labor. In the 1870's there were some destructive strikes; but during this period of time, business depressions occurred again, causing the labor movement to lose considerable ground in its development.

The National Labor Union ceased to function in 1872; however, another organization began to make its appearance--this organization was known as the Knights of Labor. Actually this organization had its start in 1869 as a secret organization, known then as the Noble Order of the Knights of Labor. Prior to 1880 the organization had made little progress as a labor influence. However, it subsequently abandoned its secret meetings and began to enlist membership from all laborers. The Knights of Labor had as an objective the establishment of a co-operative society that would replace the existing capitalistic and competitive economic system. The organization's slogan was "An injury to one is the concern of all." The Knights' of Labor immediate objectives were: (1) increased wages for workers, (2) a reduction in the length of the working day, (3) the abolition of child labor. For several years, membership in the Knights of Labor increased rapidly and by 1886, membership totaled about 700,000. However, the organization failed because of several sympathetic strikes which it took part in were unsuccessful; its activities in political affairs; and because of the overcentralization of power in its general officers.

The labor organization which next was to come on the scene and one which is now presently in existence was the American Federation of Labor (A.F. of L.). The American Federation of Labor dates back to 1881 when several union leaders met at Pittsburgh, Pennsylvania in an attempt to unite existing unions on a nation-wide scale. This meeting resulted in the formation of the Federation of Trades and Labor Unions of the United States and Canada. In 1886, the Federation

of Trades and Labor Unions through a meeting of its union executives, formed a new organization, the American Federation of Labor, which provided for a real federation of unions with revenue-collecting powers, under the guidance of a full-time executive. Samuel Gompers was elected president, and Canada and the United States were included in the jurisdiction of the Federation.

The growth of the Federation was slow because it was difficult to convince workers in some cases of the value of unified efforts on the part of labor to better their circumstances. The Federation survived a number of major obstacles in its earlier years. The panic of 1893 halted union expansion, several strikes had some bad effects upon the Federation, and other labor movements started by the American Labor Union, the Socialist Trades and Labor Alliance, and the Industrial Workers of the World provided competition for membership growth. The Federation weathered the storms of organization and initial growth, and today still has as its primary purpose the advancement of labor through unions banded together in an international association. It seeks to increase the economic strength and political and social influence of the member unions through organization, collective bargaining, legislation, and education.

It is well to discuss briefly, the philosophies of one of the labor organizations which had its beginning some years after the Federation, but which competed against the Federation for membership. This organization, which has been mentioned by name in a preceding incident was the Industrial Workers of the World. This organization brought together many conflicting elements--socialists who believed in political action, the socialists who believed in promoting the economic organization of industry, and the extreme "leftists" who believed in direct action wholly instead of political action. This organization, commonly known as the I.W.W., was formed in Chicago in 1905 and the common ground which its membership believed in was a hatred and distrust of capitalism. The philosophy of the I.W.W., as announced in 1908, was that the working class and the employing class had nothing in common, that the struggle between the two must go on until the workers of the world take possession of the means of production and abolish the wage system. In 1912 the I.W.W. carried on more than 30 successful strikes and its membership increased greatly. At the height of its popularity, its membership reached approximately 500,000. During World War I, opposition to the I.W.W. arose because of the lack of patriotism of its members as it opposed the production of war materials and tried to hinder the draft. Because of this and other reasons such as: extreme radical elements within the organization, suppressive regulations by the government, and the high rate of unemployment, the I.W.W. began to decline.

Industrial unionism did not cease with the decline of the I.W.W., but a more conservative aspect of it continued strongly in the individual unions such as the United Mine Workers of America among the coal miners, the unions of the brewery workers, the Amalgamated Clothing Workers of America in the garment industries, the United Textile Workers in the textile industries, and the Railway unions. Revolutionary unionism had subsided to a great extent; however, communistic tendencies continued to spring up and developed the policy of gaining control from within the labor unions. The Trade-Union Educational League, later called the Trade Union Unity League was organized in 1920 and by 1931 it claimed a membership of 100,000. In all of its characteristics, it was communistic--during the depression of the 1930's it lost strength and by 1938 had disbanded.

The American Federation of Labor in contrast to the unions just previously discussed had a somewhat different philosophy of organization and activity. The Federation and the four brotherhoods of the railroad workers (engineers, conductors, firemen, and trainmen) advocated a continuation of the fundamental institutions of free enterprise and did not question the ethical foundations upon which these institutions existed. The American Federation of Labor gave public notice of its philosophy when it issued its war labor policy at the outset of World War I in 1914. This policy contained: (1) a no strike policy for all war and defense material production, (2) recommendation for the establishment of a National War Labor Board, (3) the settling of grievances by mediation, conciliation, and voluntary arbitration through the War Labor Board, (4) the broadening of government mediation and conciliation services, and (5) due regard for the health, safety, and welfare of workers. Throughout its history, the American Federation of Labor has opposed numerous groups promoting ideals of socialism and communism.

The American Federation of Labor grew in number and strength from its beginning, although the rate of growth in some years was not very high. During the years of war prosperity from 1915 to 1920, membership rose to about five and one-half million workers; membership decreased by one and one-half million from 1920-1923; by 1930, membership in the Federation was approximately three and one-half million.

For some years, there had been a division of opinion among leaders in the American Federation of Labor over the question of the desirability of promoting the growth of unions on an industry-wide basis. The policy of the Federation had been to organize and further the interests of skilled workers in certain specific occupations--in other words, the organization of trades and crafts. There were those

leaders in the Federation, however, who held an opposing theory--they felt that in the organization of unions, the nature and characteristics of an industry, and not the workers with certain skills, should be the guiding considerations. For example, in the automotive industry, it was said that the organizing activity should not be directed to forming separate unions made up of machinists, toolmakers, molders, etc.; rather there should be one union made up of all the workers in the automotive industry. This difference in opinions by the craft unions versus the industrial unions within the American Federation of Labor proved to be a heated and bitter controversy. The failure of the labor leaders in the Federation advocating industrial unionism to persuade the American Federation of Labor to give more attention to the organization of industrial unions led to the formation of a self-appointed committee to organize the mass-production industries.

In November, 1935, apparently without the official knowledge of the executive council of the A.F. of L., eight union leaders met in Washington and formed the Committee for Industrial Organization (C.I.O.). In brief, the Committee's purposes were to: (1) to encourage and promote the organization of the unorganized workers in mass-production and other industries upon an industrial basis; (2) foster recognition and acceptance of collective bargaining in such industries; (3) bring industrial organizations under the banner of the American Federation of Labor. After considerable correspondence between C.I.O. and A.F. of L. officers, the executive council of the A.F. of L. in January, 1936 rendered an opinion that the Committee for Industrial Organization should be immediately dissolved. As the C.I.O. did not carry out the recommendations of the executive council, charges against the Committee were preferred with the result of the charges being that the members of the C.I.O. were suspended by the executive council of the A.F. of L. The suspension became effective in September, 1936, in spite of the fact that the C.I.O. held that it was an illegal ouster, since the executive council had assumed powers reserved for full convention membership. In the same year, at the A.F. of L. convention, at which the C.I.O. unions were not permitted representation, the convention confirmed the split ordered by the executive council.

Numerous meetings of reconciliation by the representatives of the A.F. of L. and the C.I.O. failed to effect a compromise and both organizations began organizing campaigns which had success. After the C.I.O. established an independent federation, it became known as the Congress of Industrial Organizations. The C.I.O. became stronger through increased membership and increasing success in gaining recognition and collective bargaining agreements in the mass-production industries. The C.I.O. was victorious, in the first great test of its strength on a

national scale, when it gained recognition from the General Motors Corporation despite opposition from the A.F. of L. This brought new gains in membership, not only in the automobile industry, but wherever the C.I.O. was carrying on its organizing activities. In 1937 it was noted that almost four million workers were affiliated with the C.I.O., a remarkable growth from its small beginning. Peak membership in the C.I.O. was reached in 1940 when almost seven million workers were members. The C.I.O. organizing campaign swept through a number of industries with considerable success. Workers in many types of industries went into C.I.O. membership--textile workers, oil workers, shipbuilders, transport workers, retail employees, and others. The United Mine Workers under the leadership of John L. Lewis did much in organizing of workers in new industries. In fact, John L. Lewis was elected president of the C.I.O. at its first convention in Pittsburgh in 1938.

The split in the organized labor movement that resulted from the formation of the C.I.O. had several important effects, both on the labor movement and on the public. It caused some of the craft unions in the A.F. of L. to make requirements for admission easier. Rivalry between the A.F. of L. and the C.I.O. caused the leaders of unions identified with each of the two federations to compete with each other in winning concessions from their respective employers. On certain occasions, it resulted in jurisdictional disputes that led to strikes, even though no issue between a union and the employer was involved. The rivalry often led to disunity in political matters such as the support or opposition of a candidate, which weakened the over-all political power of organized labor. Both sides recognized that this split in labor unions was not giving full strength to the purposes and progress of organized labor. There finally started some discussion and negotiations to bring the two federations together into one unit. After a long period of talks and negotiation, a merger of the American Federation of Labor and the Congress of Industrial Organizations was brought about on December 5, 1955. The president of the A.F. of L. became the president, and the president of the C.I.O. became vice-president and director of the A.F.L.-C.I.O. Department of Industrial Organization. The total membership of the new organization was estimated at about 16 million persons. The new organization through its constitution establishes: (1) membership shall be chosen regardless of race, creed, color, or national origin, (2) raiding of members from one union by another and jurisdictional disputes are to be discouraged, (3) protection of labor movement from corrupt influences and practices of all kinds, including the efforts of Communists to gain control of member unions, (4) a Code of Ethical Practices which controls the issuance of charters to local unions, the handling of health and welfare funds, labor racketeers and communists and fascists in unions, investments and business interests of union officials, and the practice of democracy in union affairs.

Besides the A.F.L.-C.I.O., there are the Railway Brotherhoods and the independent unions. Coming into existence as mutual benefit and insurance groups, the railway unions multiplied with overlapping jurisdiction. These many unions did not present a unified front until the Brotherhoods began to co-operate more closely under a federal act of 1934. The railroad unions supplemented collective bargaining to their benefit plan and today they are looked upon as good business unionism. Besides the railway unions, there are independent unions in other industries--news-paper, printing, clothing, steel, etc. Which have developed with the growth of these industries. Even though some independent unions did originate as employee representation plans, many had from their start, and still have, no connection with such a plan or with the management. Many of the independent unions contend that they could and wanted to deal with their employers themselves; that they knew the conditions in the companies and could do a better job of bargaining themselves without any interference or domination by an outside union. In 1958, out of 186 national and international labor unions in existence, 49 were unaffiliated. Most of these unaffiliated unions were in the 1,000 to 5,000 membership range size.

(This concludes the "History of Labor Unions in America." It will be well for you to summarize this material before going to the next section. In your summarization, be sure to cover the explanations for types of labor organizations, as:

Labor Union--refers to any organization of employees that acts as a bargaining agency for its members.

Craft or Trade Union--the membership is comprised of workers in a single occupation or in closely related occupations; The Knights of Labor and the American Federation of Labor advocated this type union organization,

Industrial Unions--composed of all classes of workers in a given industry; The Congress of Industrial Organizations advocated this type union organization.

In the summarization, also cover major points of development of both A.F. of L. and the C.I.O., including the split in 1936 and the merger in 1955.)

III. Character of Labor Unions

A. Labor unions are classified not only as trade or industrial unions, but also as local, national or international, and federated unions.

B. The Local Union

1. Individual members of labor organizations belong to local unions, and only indirectly to national and federated unions.
 - a. Some of the large local unions include most of the workers in a number of different plants in the same industrial community.
2. Officers of the small local unions do not receive any pay for serving as an official, but simply continue to work in their regular jobs.
 - a. In the larger local unions, however, officers receive so much pay for conducting each meeting.
3. In the large local unions, clerical help is provided on a full-time basis and an office is maintained.
 - a. In such a situation, a business agent is employed who is a full-time employee of the local.
 - b. A business agent serves as manager of the local union and in general administers the affairs of the union.
4. Shop stewards are elected by the departments in a company which is unionized.
 - a. The shop steward is not an employee of the local union, but his main functions are:
 - (1) handle grievances of members of the local union with the management of the company;
 - (2) make sure that the conditions as defined in the union agreement with management are carried out.
5. Dues are paid by members to an officer of the local union, usually the treasurer.
 - a. The amount of dues paid by each member is determined by many factors and the benefits members are entitled to.
 - b. Dues normally paid once a month; can range between \$2 and \$20 a month, depending upon conditions which have been set and benefits members have agreed to be assessed for.

- c. Dues which are collected by the local union are divided between the local and the national union--a percentage of the dues are sent to the national union.

C. National and International Unions

1. Most local unions join together in national or international unions.
 - a. The national unions, however, often direct the organizing of work groups into local unions.
2. The constitution, rules, and regulations of the local unions must observe the general organizational policies and procedures as prescribed by the national unions.
3. The functions of the national unions are:
 - a. To assist local unions in negotiations with employers.
 - b. To promote and extend union organizations on the local level.
 - c. To take active part in the conventions and other meetings of the national federation with which they are affiliated.
4. The Department of Labor reported that in 1958 there were 186 national and international unions; 137 of these affiliated with the A.F.L.-C.I.O., and 49 unaffiliated.
5. The distinguishing feature of the international unions in contrast to national unions is that the former include locals in the United States, Canada, Puerto Rico, and other territories outside the United States.
6. The size of the national unions, as reported by the United States Department of Labor range from less than 1,000 members to more than 1,000,000.
7. The national unions hold conventions every year, or at some other time interval when the business of the organization is discussed by the delegates.
 - a. All of the local unions send delegates to the conventions.
8. The affairs of the national unions are handled by an executive board.

- a. The executive board executes the rules and instructions which the convention adopts.
- b. The executive board may issue or withdraw characters of local unions.
- c. The executive board actually supervises all of the business of the organization, including business of the local unions.

D. National Federations of Unions

1. For most part, the national unions are affiliated with the A.F.L.-C.I.O.
 - a. An exception, however, is noted in the case of the Railway Brotherhoods (Engineers, Firemen, Conductors, Trainmen) and a number of unions composed of government workers who are not affiliated with the A.F.L.-C.I.O.
 - b. The Teamsters Union was expelled from the A.F.L.-C.I.O. in 1958 for conduct which did not keep with the intent of the constitution the activities of the members of the union and especially its executives in corrupt practices were made public.
 - c. A total of 15 unions with memberships ranging from 28,000 to over 1,600,000 do not belong to the A.F.L.-C.I.O.
2. The general objectives of the national federations of unions (A.F.L.-C.I.O.) are:
 - a. Promote the labor movement among local and national labor organizations that make up the federation.
 - b. Assist all organizations in the federation on matters pertaining to the legislative, judicial, and executive branches of government.
 - c. Expanding union membership.
 - d. Providing information of various kinds to members.
 - e. Providing of guidance in all matters pertaining to labor to unions in the federation.

E. Structural Organization of the A.F.L.-C.I.O.

1. A better understanding of the structural organization of the three types of unions can be had by studying the organizational structure of the A.F.L.-C.I.O.
2. Such an organizational structure, presented in chart form will be utilized for this discussion.

*** Handout 15 ***

(Handout 15 should be discussed with trainees in relation to the basic union structure and organization of the A.F.L.-C.I.O. Points which may be mentioned in the discussion include:)

- a. Holders of residual power in most unions are the national and international unions, as they charter most of the local unions.
- b. Although not mentioned in the chart, it is significant to note that in 1958, there were well over 60,000 local unions which were members of the national unions in the A.F.L.-C.I.O. compared to about 500 local unions directly affiliated with A.F.L.-C.I.O.
- c. Also, the local unions, both those directly affiliated with the A.F.L.-C.I.O. and those affiliated through membership in the national unions may also be members of local and state federations and councils.
- d. As can be noted, the organizational structure of the A.F.L.-C.I.O. is rather large and complex--in addition to the basic chart drawn, there are also represented in the structure, many departments at each level, standing committees, and a large staff which work under the officers at the Washington, D.C. office.

IV. Laws Affecting Labor Unions

- A. There are several laws which affect the activities of labor unions.
 1. These laws have been the outgrowth of attempts to maintain industrial peace and prevent controversies which cause very bad situations.
 2. It is a basic right that the American worker have individual freedom and that businesses and industries have the same freedom in the conducting of operations without being subjected to acts of unlawfulness and coercion.

3. One of the ways that the basic rights of the worker and the employer are protected is through the enactment of laws.
4. There must be proper respect shown for both the worker and the employer; and even though in many cases, peaceful relations between workers and employers are maintained, not through the compulsions of law, but by a willingness on the part of the people to concede that these rights exist, laws are still needed to prevent misunderstandings or misinterpretations.
5. The important laws and doctrines which affect organized labor are best classified as: (1) Common law doctrines, (2) State laws and agencies, and (3) Federal laws and agencies.

(Pace the following section slowly. Write the name of each law or agency being discussed on the chart or board.)

B. Common Law Doctrines

1. American common law, unwritten law, is predicated on the ideals of the right of the individual and the right to hold and own private property.
2. This philosophy of common law is the basis for the doctrines presented which attempt to apply legal restraints and solutions in the settlement of industrial disputes.
3. **The Conspiracy Doctrine**

The basic theory of the conspiracy doctrine is that a lawful act when done by an individual may be unlawful when it is the result of combined effort. For example, it has been held that an individual worker asking for an increase in pay is legal, but when individuals combine for the purpose of demanding a wage increase, courts during the early history of trade unions often ruled that a combination of workers in itself was a violation of the law. For many years the courts tended to outlaw all union activity; then, in 1842, the Supreme Court of Massachusetts ruled that a combination of workers as such was not illegal unless it used some criminal or unlawful means. This ruling resulted in a departure from earlier decisions. Now, according to common law,

courts tend to hold that a combination of individuals is legal if the purpose is the benefit of the members of the group, but if the purpose is the injury of the employer, the organization is illegal. This results in sometimes rather close study by the courts since a union may feel that it can gain its point only by inflicting financial loss to an employer. The court must decide whether the loss to the employer or the benefit to be gained by the workers is of the greater importance.

4. **The Restraint-of-Trade Doctrine**

According to this doctrine, any contract that restrains trade is against public policy and is unenforceable. Also, when persons combine in an agreement to restrain trade, the combination may be a criminal conspiracy. At common law, a combination for the purpose of peacefully persuading an employer to grant an increase in wages was usually allowed to be legal; but if the purpose was to coerce him by using unreasonable means such as a strike, boycott, etc., such was held to be a conspiracy in restraint of trade. What was reasonable in any case depended upon the judgment of the court.

C. State Laws and Agencies

1. Each state has its own statutes which apply to industrial disputes.
2. There is a degree variety noticeable among the states in the laws which apply to union activities; however, most state laws declare that conspiracy is a criminal offense and that combinations to restrain trade are illegal.
3. A closer look at these legal aspects in Louisiana will be taken later in the session.

D. Federal Laws and Agencies

1. **Norris-LaGuardia Act**

This federal statute enacted in 1932 limited the power of federal judges to issue injunctions in connection with disputes between employers and employees. The general purpose of the act was:

to exempt labor unions from injunctions in response to employers; requests in connection with labor disputes. It specifically accorded to labor the right to strike, to belong to a union, and to engage in other practices, many of which rendered union members liable to prosecution under common law.

2. National Labor Relations (Wagner) Act

This federal law was enacted in 1935. It provided that employees have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively, and to engage in organized activities for their mutual aid or protection. The law also stated that it would be an unfair labor practice for an employer to interfere, restrain, or coerce employees in the exercise of rights guaranteed by the act; that the employer must not discriminate in regard to hire or tenure of employment or any term or condition of employment to encourage or discourage membership in any labor organization; and that it cannot refuse to bargain collectively with the representatives of his employees. Provided by the law also, was the creation of a National Labor Relations Board, which was charged with carrying out the provisions of the Act.

3. Labor Management Relations (Taft-Hartley) Act

Opposition to the Wagner Act resulted in 1947 in the passage by Congress, over the President's veto, the Labor Management Relations Act, commonly known as the Taft-Hartley Act. The Wagner Act was not repealed; but the Taft-Hartley Act nullified or modified many provisions which had been objectionable to employers. The law put into operation certain restrictions on labor organizations and practices that businessmen and employers had advocated so as to place management on an equal footing with the unions. Just as the act was highly acclaimed by management, it was denounced by labor unions which called it the "slave labor" law.

In general, the provisions of the Taft-Hartley Act were:

- a. The law required that both labor unions and management respect the right of individual workers to join or not to join a union.
- b. Annually a union that has been recognized by management may be required to prove that it represents a majority of the workers in the company.
- c. A union may be sued by an employer, another union, or an employee for the acts of any one of its officials, including shop stewards.
- d. Featherbedding, which is the practice of compelling employers to pay for unnecessary services, is prohibited.
- e. The law prohibits the closed and preferential shops, but permits the union shop provided the state does not have a law against it.

(The types of shops mentioned may not be familiar; therefore, definitions of each is given:)

Union Shop -- a union shop agreement requires any nonunion worker who secures employment in the company to become a member of the union at the end of a specified time.

Closed Shop -- is an establishment that operates under a collective-bargaining agreement not to employ nonunion workers.

Before nonunion workers are employed, they are required as a condition of employment to become and remain members of the union which the company has an agreement with.

Preferential Shop -- This type of shop exists when the union contract requires that the company give preferential treatment to union employees. In hiring additional workers, preference is given to hiring union members; or in case of layoffs, union members are given preferential treatment.

- f. The act provides that, if the President of the United States believes that an impending strike or a strike that is in progress might endanger the national health and safety, he may appoint a board to study the facts of the case. After the report by the Board, the President may ask the Attorney General to file a petition for a court injunction restraining the calling or the continuation of a strike--such an injunction may run for 80 days.
- g. The law prohibits secondary boycotts and jurisdictional strikes.

(These terms will be defined.)

Secondary Boycott -- A secondary boycott is an action by a labor union whereby the union prohibits its members from working for or having any dealings with a concern whose employees are on strike.

Jurisdictional Strikes -- These are strikes which arise due to disputes between rival unions and not due to a demand upon the company.

- h. Unions are required to report to the Secretary of Labor: (1) qualifications for admission to the union, (2) manner in which elections are conducted, (3) amount of compensation of its principal officers, (4) amount of initiation fees and annual dues, and (5) sources of receipts and amount of assets.
- i. Unions are not permitted to contribute money directly to political party organizations for the purpose of influencing the election of federal officials. Unions are able to get by this provision by setting up a group or unit composed of individuals favorable to the candidates approved by the union.
- j. The law provides for the creation of a position of General Counsel of the National Labor Relations Board. This officer investigates complaints under the statute and decides whether or not these may be presented to the Board.

4. **Labor-Management Reporting and Disclosure
(Landrum-Griffin) Act**

This act was passed by Congress in 1959 and came about because there were uncovered some unethical union practices by a Senate investigation committee. This act has become an important amendment to the Taft-Hartley Act. The law is directed toward preventing unscrupulous union leaders from taking unfair advantage of workers, employers, and the public. The law specifically gave state courts and labor agencies jurisdiction over certain union-management cases; requires annual detailed reports to the Secretary of Labor as to union finances, and bars communists from union office. Labor unions were opposed to the Landrum-Griffin Act as they felt it would hamper the growth of unions. The provision which they especially objected to was that which gives state courts more jurisdiction in dealing with labor disputes which the unions claim might result in an increase in the use of court injunction in the control of union activities.

5. **The Federal Mediation and Conciliation Service**

In 1915 the United States Labor Department started a conciliation service which has been since that time effective in helping to settle industrial disputes. The Taft-Hartley Act changed the name of the Service to the Federal Mediation and Conciliation Service (FMCS) and provided that the Service was to be an independent federal agency. Under the law the FMCS is required to give its services whenever it decides that a dispute may cause a substantial interruption of commerce. In case the director cannot bring parties together, he must urge both to submit the employer's last offer to a secret vote by the employees.

The National Railroad Mediation Board and the National Railroad Adjustment Board each has jurisdiction over the different classes of employees of the railway industry. If a dispute arises and neither board can offer a settlement and a threat is apparent which may tie up transportation, the President is notified. The President then appoints an emergency board of persons who attempt to find facts for a settlement; the report of the situation is then due in thirty days, during which time a strike is illegal.

V. Organized Labor's Objectives

- A. The first objective which organized labor promotes is the right to bargain collectively with management in an attempt to reach certain agreements relative to labor matters.

Collective bargaining is the agreement as to wages and working conditions which representatives of organized labor makes with management.

1. The purpose of a labor organization is to form a union that has power to act for the group.
2. It must be remembered that early efforts of unions to bargain collectively were declared illegal.
 - a. Even after the legal right was given to workers to bargain collectively with management, the right of workers to enforce collective agreements with employers was uncertain for many years.
3. The Wagner Act, passed in 1935, as has been noted, gave unions definite rights to bargain collectively.
4. Organized labor feels that it is only through collective bargaining agreements between employers and employees can workers enjoy equal bargaining power with employers.

B. Union Security

1. So that workers may deal effectively with employers in collective bargaining, they feel that they must organize and maintain an entity which must be accepted and recognized by the employer.
2. Several methods for achieving union security have been employed; these are:

- | |
|--|
| <ol style="list-style-type: none">a. Closed Shopb. Union Shopc. Preferential Shopd. Maintenance-of-membershipe. Check-off System |
|--|

3. The first three methods have been previously defined when the Taft-Hartley Act was discussed.

(It may be necessary to again repeat the definitions and discuss briefly.)

4. As has been seen, the Taft-Hartley Act prohibits the Closed Shop and the Preferential Shop; but does permit the Union Shop provided the State does not have a law against it.
5. Maintenance-of-membership arrangements require that employees who voluntarily become members of a union must remain as members for the duration of the union contract with the company.
6. Checkoff System--this is an agreement between the union and the employer whereby the employer deducts union dues from the pay of union employees and turns over the money collected to the union treasurer.

The Taft-Hartley Act permits the use of the check-off system, provided the worker has given his written permission to have such done.

C. Standardized Wage Rates

1. Labor unions demand that the rate be the same for each employee in a given class of workers.
 - a. Unions do not believe that the total wages of a worker in a given class be the same, as some workers earn more through overtime.
2. Generally labor does not accept the idea of incentive wages, whether they take the form of piece rates or bonuses for faster work.
 - a. Unions normally take the position that it asks only for a fair wage for a standard day of work.
 - b. In cases where incentive plans have been opposed, unions contend they are protecting the workers from overwork and safeguarding workers from exploitation.

D. Increasing and Maintaining Wages

1. The attitude of labor unions today has been that because of improvements in organizations and techniques of production, real wages should rise.
2. The labor unions also advocate that wage rates should be adjusted to rises in the cost of living.
3. The unions have stated that the requests for wage-rate increases because of an increase in the prices of rent, food, and clothing have been justified because:

- a. Wage-rate increases should be such so as to offset decreases in the value of money wages.
- b. Only through the maintenance of consumer purchasing power can goods produced find buyers.

E. Hours of Work

1. Organized labor advocates the gradual decrease in the work day and work week based on several reasons:
 - a. Mass production makes it possible to produce more goods with less work.
 - b. Workers need to have more time for recreation and cultural improvement.
 - c. A reduction in the work period would result in an improvement to the health of workers.
 - d. More leisure time creates more demand for different types of goods.
2. Sometimes it is argued that a shorter work period would create more jobs; however, in the long run this reasoning is not valid as there is just so much work to be done and no more.
3. As a rule, employers have opposed any reduction in the work period as this situation always turns to the question of productivity.
 - a. Management questions whether workers can produce enough goods in a shorter period of time which would allow the maintenance of the same wage or the increase sought by labor.

F. Use of Machinery and Laborsaving Processes

1. Ever since the advent of machines, workers have seen in their use a threat to their jobs.
2. Labor unions are not as hostile to machines and laborsaving devices as they were years ago, but they still recognize the fact that the loss of jobs and unemployment will result when laborsaving devices are used.
3. The unions argue that if certain jobs are done away with by the use of machines, then the employer has the responsibility to find jobs for the displaced employees at no reduction in wages.

4. The union position concerning finding work for displaced workers got some support when in 1960 the Commission on National Goals stated that some measures would have to be taken to solve some of the problems brought about by technological growth, especially in regard to technological unemployment.

G. Control of the Labor Supply

1. Craft unions insist that new workers be required to meet standards as set by the unions.
2. The objectives of the unions have been to control the number of apprentices who may be trained and admitted for work.
3. Some companies set up their own training programs to train apprentices, but such moves are objected to by the unions.
 - a. The unions contend that training given by the employer is too narrow in scope to prepare the apprentice for all types of jobs in the craft.
 - b. In some cases, craft unions undertake to spell out the time apprentices shall serve, the qualifications of the instructors, and the conditions under which the training will take place.
4. Unions also limit the number of helpers who may be employed in certain jobs because the helpers after a while on the job become proficient and constitute an additional supply of journeymen.
 - a. Because of this factor, several unions have established a journeyman-helper ratio to limit the number of trained workers.
5. Unions also use a licensing practice in order to limit the number of persons who can work in a certain trade.
 - a. The requirement of having persons obtain licenses are usually found in the plumbers, barbers, and electricians trades.

H. Regulation of Output

1. This practice of regulation of output refers to the withholding of a certain amount of effort on the part of workers.
2. A painter's union may place a limit on the width of the brush its members may use; a bricklayer's union may set a limit on the number of bricks a worker may lay each day.

3. The unions contend that their policy of regulating output is justified because:
 - a. Standards of work performance are used in setting requirements of such.
 - b. It is a natural tendency that a worker does not want "to work himself out of a job" by completing his work in less time than is necessary.
 - c. Regulation of output which the union sets is considered to be within "reasonable" limits.
4. Employers consider the practice of regulation of output very bad practice and the union takes unfair advantage of them.

B. Because there does arise cases of where agreement cannot be reached by either unions or management, actions by one or the other result.

C. Methods Used by Organized Labor

1. Strikes
2. Picketing
3. Boycotts
4. Political Pressure
5. Sabotage

D. Strikes

1. Strikes are a stoppage of work by a group of employees for the purpose of compelling an employer to meet its demands.
2. Members of unions do not feel that by stopping the work and not performing their duties that they in any way forfeit the right to the job when the dispute has ended.
 - a. Management, however, often feel that when an employee leaves his job, he has voluntarily vacated the job.
 - b. Any attempt to fill the jobs of those persons on strike by other persons is resented by the unions.

3. The Department of Labor points out that the causes of strikes are from:
- a. Wage and hour disputes
 - b. Union organization, wages, and hours
 - c. Miscellaneous working conditions

4. Types of Strikes

- a. Jurisdictional strikes--these arise because of a dispute with a rival union and not because of a demand upon the employer. These strikes are prohibited by the Taft-Hartley Act.
- b. Direct strike--a strike between the union and the employer.
- c. Sympathetic strike--this is a strike, the purpose of which, is to assist other workers who have a dispute with their employer. Those workers who go on a sympathetic strike have no dispute with their employer; their action of strike is in sympathy for other workers.
- d. General strike--this is a strike that involves the workers in all industries in a city or region.
- e. Wildcat Strike--a strike which only the members of a local union participate in and this is done without authorization of the national union with which the local is affiliated.
- f. Sit-down Strike--this is a strike in which the workers sit down at their jobs and do no work with the purpose being to prevent other non-union workers from taking their places.

Although the sit-down strike has been used, it no longer is employed as the United States Supreme Court has declared it unlawful.

- g. Slowdown--this is a form of a strike; however, the workers remain on the job, but purposely withhold the amount of work they are doing.

The Taft-Hartley Act gives the government the right to decide in any situation in question when there is a slowdown in an establishment which amounts to a strike. The National Labor Relations Board and the courts determine the speed of production and study the conditions to see if workers are guilty of striking.

E. Picketing

1. A union picket is a member of the labor union posted near the entrance of the company or place of employment to inform other workers and the general public that a dispute exists.
2. Picketing is done to discourage other workers from entering the company for the purpose of working.
3. The objective which picketing has is to see that all employees and others observe the strike; for if some workers remain at their jobs, or if other workers take their places, the effectiveness of the strike is weakened considerably.
4. To accomplish the purpose for which it is intended, only a number of pickets sufficient to conduct peaceful picketing is maintained.
5. Sometimes, when workers persist in crossing the picket line and not honor the strike, violence can and does occur.
6. Types of Picketing
 - a. Legal Picketing--picketing in peaceful manner with only the necessary number of persons needed to carry out duties.
 - b. Mass Picketing--picketing done with large numbers of persons who attempt to block entrances to place of employment--such picketing is held to be illegal.
 - c. Secondary Picketing--this is picketing of an employer who does business with the company which the workers are striking.

F. Boycotts

1. A boycott is the activity of withdrawing and inducing others to withdraw from any business relations with certain groups or persons.
2. The purpose of the boycott is to bring economic pressure on a producer or seller of goods.
3. Types of boycotts
 - a. Primary Boycott--this is a situation where the workers, who are usually on strike, agree not to patronize a firm because of its dispute with management.

- b. Secondary Boycott--this is action taken by a labor union in that it prohibits its members from working for or having any dealing whatsoever with a concern whose workers are out on strike.

The Taft-Hartley Act ruled that the secondary boycott is illegal.

G. Political Pressure

- 11 1. In any labor-management dispute, the weight of public opinion plays an important part in determining the outcome.
 - a. Because labor unions recognize this aspect, they do all they can to create an atmosphere where they will receive favorable public opinion.
2. Labor unions do have groups which work toward getting laws passed which are favorable to the unions.
 - a. The federal and state laws which were passed giving labor unions the right to organize and bargain collectively of conspiracy and restraint of trade did much to foster union growth and development.
3. With the passage of the National Labor Relations Act in 1935, many desires of organized labor were met.
4. The A.F.L.-C.I.O. maintains lobbyists who work in Washington to secure the passage of laws which benefit organized labor.

H. Sabotage

1. The term "sabotage" is used to identify those actions by workers intended to restrict production or cause damage to the employer's property.
2. No important labor group today advocates the use of sabotage in the sense of causing physical damage to property.
 - a. However, the resentment of workers with grievances has resulted in acts of destruction.

(Before proceeding with methods used by employers in labor-management relations, take a few minutes and review and summarize the preceding section--methods used by organized labor.)

I. Methods Used by Employers

1. It seems that employers have just as many methods at their command as organized labor during labor-management disputes.
2. Some of the methods which employers have used in the past are now prohibited by law; however, they will be mentioned for informational purposes.

J. The Methods Used by Employers include:

1. Lockouts
2. Injunctions
3. Blacklists
4. Yellow-dog contracts
5. Strikebreakers.
6. Company Unions
7. Political Pressure

K. Lockouts

1. The lockout is an action by the employer to stop his business operation in an attempt to win a dispute with his employees.
2. The lockout has not been used extensively, as employers do not want to close their business in order to try to win a point with labor.

L. Injunctions

1. An injunction is an order from a court commanding an individual or group of individuals from doing a certain act.
 - a. The injunction is granted to prevent damage which could result from proposed action.
 - b. When a court issues an injunction, the labor unions must obey it or be held in contempt of court--if found guilty of contempt, a fine or imprisonment could result.
2. As was noted earlier, the Norris-LaGuardia Act now limits the power of federal judges to issue injunctions in labor disputes.

3. The Taft-Hartley Act, however, provided for the use of the injunction in certain cases.
 - a. Should a labor dispute, in the opinion of the President of the United States, imperil the health and safety of the nation, procedures are set up so that an injunction which can last 80 days be granted.
 - b. This 80-day cooling-off period allows for certain other procedures to be followed so that the dispute can be allowed opportunities to be resolved.

M. Blacklists

1. A blacklist is a list of the names of union members which is secretly kept and exchanged by employers for the purpose of preventing certain workers from obtaining other employment after having been discharged for some type union activity.
2. Prior to the passage of the National Labor Relations Act, there was no legal question as to the right of employers to maintain and exchange such lists.
 - a. The National Labor Relations Act now prohibits the use of blacklists.

N. Yellow-dog Contracts

1. Yellow-dog contracts were contracts which the worker signed and agreed to; such contract specifying that as a condition of employment, the worker during his period of employment was not to belong to a union, nor to engage in collective bargaining or striking.
 - a. The term "yellow dog" came from usage by fellow workers to name those workers who agreed to such contracts.
2. Yellow-dog contracts were formerly enforced in the courts; however, the Norris-LaGuardia Act of 1932 made such contracts unenforceable.

O. Strikebreakers

1. A strikebreaker is an individual hired by the employer to replace a striking worker.
2. There are state laws which give the conditions under which employers may hire strikebreakers.
 - a. Federal statutes make it illegal to transport strikebreakers across state boundaries.

P. Company Unions

1. A company union is an organization of workers in a company that is not affiliated with an outside labor group.
2. Passage of the National Industrial Recovery Act in 1933 gave rise to the company union movement as the Act guaranteed labor the right of collective bargaining and stated that employers might not discriminate against employees because of their union activities or membership in a labor organization.
3. Many employers fearing that their workers would join locals that were affiliated with national unions, encouraged their employees to form company unions.
4. The National Labor Relations Act prohibits employers from giving financial aid to encourage company unions, or to dominate or attempt to control company unions.

Q. Political Pressure

1. Employers, like labor unions, realize the importance of public opinion in the settlement of industrial disputes.
2. Employers, through associations and lobbying interests, seek to secure the passage of laws favorable to them.
3. In the case of a strike that may affect an entire community, employers very often appeal to the public for support by placing newspaper advertisements which state their position.

VII. Collective Bargaining

- A. When representatives of an employer and the representatives of workers bargain together to establish wages, hours, and working conditions the process is called collective bargaining.
- B. As has been noted, legislation provides many of the rules guiding collective bargaining at the present time.
 1. Such legislation as the Labor Relations Act of 1935 and the Labor-Management Act of 1947 set the pattern for such procedures in collective bargaining.

2. There are also some states with laws governing collective bargaining practices.
- C. The laws which set up and regulate collective bargaining clearly indicate that the American public favors this system and insist upon free collective bargaining.
- D. Collective bargaining usually starts with the negotiation of the union agreement and the signing of the labor contract, but it doesn't end there.
1. Management and labor must live with the agreement as long as it is in effect; the contract like any other contract is rarely changed during its life.
 2. There are usually many occurrences, however, which take place between labor and management where differences of opinion exist on what the meaning of the contract is.
 3. It is this difference of opinion and differences in interpretation which brings about controversy.
- E. Neither an employer nor a union may refuse to bargain if requested to do so by the other party.
1. IT IS IMPORTANT TO NOTE, HOWEVER, THAT NEITHER PARTY DOES NOT HAVE TO AGREE TO THE OTHER'S DEMANDS.
 - a. Several factors will determine the final disposition of the matter subject to bargaining:
 - aa. Reasonableness of the union demand
 - ab. Desirability of the demand by management
 - ac. The ability of the company to pay the cost
 - ad. The bargaining strength of weakness of the union or the company.
- F. Many union contracts provide that either the union or the company can initiate proposals for changes; in the contract when such is undertaken, the party must notify the other from 30 to 90 days before the termination date.
- G. No standard rules dictate who will be employer or union negotiators; negotiations may be carried on by a single representative or by a committee.

1. Usually a large committee is created for planning negotiations by each group; then, a small sub-committee is designated to carry on the actual negotiations, and a single spokesman is named as chairman.
 2. For the employer, the large planning committee usually includes representatives from each of its divisions, including several first-line supervisors.
 - a. The labor-relations director is normally designated to do the bargaining for the company.
 3. For the union, the business agent, local president, or international representative may be chairman of the bargaining group.
 4. In the bargaining talks, each side usually has a person who has authority to make commitments.
 - a. Bargaining is much slower if each minor concession and adjustment has to be referred to a higher authority for approval.
- H. Where adequate facilities on the employer's premises are available, there are usually no objections by unions to hold negotiation sessions at the company.
1. Also, in many companies, negotiations are held in large part on company time, as employee members of the negotiating committees are excused for the time lost away from their jobs.
 - a. If the negotiations run into lengthy sessions, the company usually only pays a part of the total wages.
- I. Even the most carefully negotiated and worded agreement may be found to be inadequate for some situations; bargaining may take place to effect a change in the contract.
1. This is an important feature of bargaining, as most agreements run for one year, although some contracts run for two, three, or five years and within these time intervals, changes are often desired.
- J. There are several areas which are considered management prerogatives and not subject to bargaining. These are:
1. The right to determine sales policies, organization structures, areas, etc.

2. Location and structure of plants.
 3. Selection of machines, equipment, and tools.
 4. Determination of production schedules.
- K. Some items are considered controversial with no clear-cut policy as to whether they are subject to negotiation if not included in the contract. These are:
1. Right to hire, discharge, transfer, promote, and discipline.
 2. Granting of leaves.
 3. Employee classifications and merit wage increases.
- L. Legislation and public opinion have long held that public employees do not have the right to strike or bargain collectively.
1. The reasons for this is that funds for wages and salaries must come from legislative action; and that public agencies are not given power to create or enforce such contracts.

VIII. Grievance Procedure

- A. Most union contracts establish grievance procedures as experience has shown to both management and labor that it is best to have some systematic method of handling complaints.
1. It is not uncommon for companies which do not have a union contract to still insist on the establishment of a grievance procedure.
- B. Where a union contract is involved, grievances are adjusted through an orderly process known as the grievance procedure.
1. In most cases, grievances are based upon workers' resentment of some decision made by management or some action taken by foremen or supervisors.
 2. The grievance may be a large issue, or it may be a small one; it may be concerned with a worker's refusal to do a certain type of work, or the right to smoke in a certain area, or the length of a rest period, etc.
 3. Most companies follow the practice of permitting grievances on any subject, but limiting arbitration to disputes over interpretation or application of the contract.

4. Wise management knows that any unsettled grievance, whether it be real or imaginary, is always a potential source of trouble--the grievance machinery helps uncover the causes and get the grievance out into the open.
- C. There is no standard grievance procedure set down by law and each company must tailor grievance procedures to fit its own situation, but based upon what union and management have agreed upon and written into the contract.
- D. Typical Grievance Steps (Initiated by the Employer)
- Step 1 -- The foreman discusses a complaint with the worker and the union steward.
 - Step 2 -- The superintendent of the company or his representative discusses the complaint with the union grievance committee.
 - Step 3 -- General company management discusses the issue with national union representative and union grievance committee.
 - Step 4 -- Dispute is referred to impartial arbitrator for decision.
- E. Typical Grievance Steps (Initiated by the Union)
- The same four steps as above are followed, except that the union personnel initiate the discussion rather than company personnel.
- F. The contract provides that the decision of the impartial arbitrator is binding.
1. Many times, differences and disputes are settled before it reaches arbitration.
 2. Both the employer and the union usually prefer settling their own disputes without having to depend upon a third party; however, when needed, peaceful arbitration is far better than strikes or lockouts.

IX. The Supervisor's Role in Labor Relations

- A. The first-line supervisor plays an important part in management-union relations.
1. The supervisor is a representative of management, and in the eyes of the law, supervisors and foremen are held to be agents of the company.

- B. Since the company is held responsible for any action which the supervisor may take in dealing with workers who belong to unions, it is very important that the supervisor become familiar with the labor contract and all its ramifications.
- C. Of foremost importance, the foreman is primarily responsible to his company to protect its interests in labor matters.
1. In most companies, the first-line supervisor is usually the first contact between workers and management and between union representatives and management.
 2. The actions and words of the supervisor in such dealings can have important consequences.
 3. Actions which the supervisor takes can cause the company to be charged with breaking the union contract.
- D. The Supervisor's role under the Wagner Act
1. As the foreman and supervisor are directly affected by the unfair labor practices of the Wagner Act, there are some things which should be avoided:
 - a. A foreman should never use threat or take action that would affect a worker's job or pay when the union is organizing a drive for membership or during a National Labor Relations Board representation election.
 - b. The supervisor or foreman should avoid any action such as discharge, layoff, demotion, or difficult job assignment on account of the worker's union membership activities.
 - c. The foreman or supervisor should not discuss union matters with employees, or to express an opinion for or against a union.
- E. As previously pointed out, supervisors are many times expected to participate in collective bargaining negotiations; therefore, a keen and alert understanding of labor practices in the company must be developed.
- F. The supervisor must know the rights of the shop steward; but more important what the limitations are to the steward's activities.
1. The steward does not manage the department, this is the supervisor's job.

2. The main activity which the steward has, in addition to doing his assigned work, is to look out for the rights of the workers as prescribed by the union contract.
 - a. For this reason, often a steward will advise the foreman concerning something which he thinks is in violation of the contract.
 - b. The foreman needs to be just as informed about the contract as the steward, so that an equal footing is had when such matters are discussed.
3. Responsibility for managing and supervising the department is never shared with the steward, and the steward has no right to tell a worker what to do.

G. The general approach which the supervisor should take in regard to labor relations is to become as well informed on these matters as possible--this information will be needed for the job the supervisor will be expected to do.

X. Laws Affecting Terms and Conditions of Work

A. In addition to those laws previously discussed in reference to labor-management relations, there are important laws used in maintaining conditions which meet legal requirements.

B. Federal Wage and Hour Law (Fair Labor Standards)

1. This law regulates methods of wage payment and hours of work for any company engaged in interstate commerce; (commerce between two or more states).
2. This law restricts the employment of children over 14 and under 16 to non-manufacturing and non-mining jobs.
3. Children under 18 years of age are restricted by the law from taking employment in a hazardous job, as defined by the law.
4. The law sets a minimum wage; \$1.24 per hour since September 3, 1963, and prescribes that time and one-half must be paid for all hours worked over eight hours a day and 40 hours a week.

C. Walsh-Healey Public Contracts Act

1. This act sets the conditions for any company which works under government contract.

2. Boys under 16 years of age cannot be hired; girls under 18 years of age cannot be hired.
3. Time and one-half rates must be paid for work in excess of eight hours per day and 40 hours per week.
4. The act also sets standards for working conditions, and establishes a minimum wage for a particular industry.

XI. Labor Unions in Louisiana

A. History

The history of labor unions in Louisiana paralleled to some degree the labor movement on the national level. Of course, labor unions did not come to Louisiana as soon as they did to the eastern manufacturing centers. The reason for this is apparent when the economic make-up of the State is compared to other regions of the country during the period of colonization. As factories sprang up along the eastern coast of the United States where labor was plentiful and available water power to run the machines was ample, the South, including Louisiana, turned to an agricultural economy. Because of this predominant economic base built upon agriculture, the early union movements which drew membership in New York, Philadelphia, Boston, Pittsburgh, and other eastern cities, did not find groups of factory workers in Louisiana to enlist.

As there developed some metropolitan centers in Louisiana after the Civil War, national unions came in to organize the workers in the infant industries. The A. F. of L. and the Railway Brotherhoods were forerunners in the organization of local unions. The local unions organized were in the larger cities and towns of the State, as the possibility of securing union members from the agricultural ranks was not feasible. Even today, the agricultural labor force of Louisiana is approximately 10 per cent. Early unions which were organized in the State were affiliated with national and international unions. Such unions as the International Typographical Union, Street, Electric Railway and Motor Coach Employees of America, Maritime Union of America, Horseshoers of the U. S. and Canada, International Union of Journeymen, etc. were some of the early unions noted in the State.

It must be stated that all of the incidents occurring within the A. F. of L. federation, the formation of the C.I.O., and the subsequent merger of the A.F.L.-C.I.O. had the same effects in the State as in other areas where the federations had membership.

B. A.F.L.-C.I.O. Structure in Louisiana

This federation is well represented by Louisiana locals and their membership. There are approximately 130,000 members in the A.F.L.-C.I.O. structure in Louisiana; these members belong to approximately 800 local unions which are affiliated with national and international unions.

THE STRUCTURE OF THE A.F.L.-C.I.O. IN LOUISIANA HAS BEEN PREPARED IN CHART FORM. THIS WILL BE GIVEN IN HANDOUT 16.

*** Handout 16 ***

As noted in the chart, Louisiana workers are members of the A.F.L.-C.I.O. only through the local and national unions to which he belongs. Membership of Louisiana workers in the city central bodies, city building trades councils and the state council is based upon membership in the national unions. The city centrals function as agencies to advance the position of organized labor in the various communities. They are oftentimes active in local political affairs and seek labor representation on the local level.

The top A.F.L.-C.I.O. organization within the state is the Louisiana State Labor Council. This body resulted from the merger of the Louisiana State Federation of Labor, A.F.L., and the Louisiana State Industrial Union Council, C.I.O. in 1956. Offices are maintained in Shreveport and Baton Rouge for the Council; however, the headquarters are in Baton Rouge. The functions of the Louisiana State Labor Council are political and educational and does much in the lobbying of legislation favorable to labor in the state legislature. The Louisiana State Labor Council is represented on Handout 15, "Structural Organization of the A.F.L.-C.I.O." in the section--State Federations. It is well to note that 85 per cent of those persons holding membership in unions in Louisiana are with unions affiliated with the A.F.L.-C.I.O. Federation.

C. Independent Unions in Louisiana

In contrast to the A.F.L.-C.I.O. federation, membership in the independent unions in Louisiana is not large. In fact, it constitutes only about 15 per cent of the total union membership in the State. Of course, there are represented in Louisiana independent national union organizations, independent federations, and independent locals. Some of the independent nationals include: Railway Brotherhoods, United Mine Workers of America,

International Longshoremen's Association, and others. There are three independent federations--Confederated Unions of America, the Engineers and Scientists of America, and the National Independent Union Council. There are approximately 25 independent local unions in the State located primarily in New Orleans, Baton Rouge, Lake Charles, Shreveport, and Bogalusa; representing such workers as bus drivers, oil refinery employees, sugar company personnel, marine engineers and pilots, and longshoremen.

D. Union Membership in Louisiana Industries

There are three basic groups in Louisiana which provide the basic source of labor union membership. These groups are: (1) manufacturing, (2) non-manufacturing, and (3) government. These groups, of course, exclude agricultural employment. In Louisiana, approximately 25 per cent of workers are engaged in manufacturing activities, while the national average is approximately 30 per cent engaged in manufacturing jobs. The distribution of employment in Louisiana by groups as given above is: manufacturing, 25 per cent; non-manufacturing, 60 per cent; government, 15 per cent.

When the distribution of union membership is looked at in these three groups, however, it is found that it is not in the same proportion as the distribution of workers. Union membership among the groups is: manufacturing, 35 per cent; non-manufacturing, 60 per cent; and government, 5 per cent. The non-manufacturing group includes construction, transportation, public utilities, wholesale and retail trade, finance and real estate, and mining. The bulk of the union membership found in the government group is accounted for by post office workers. It will be noted that 15 per cent of workers in Louisiana are employed in the government group, but this group (government) comprises only five per cent of total union membership. The absence of union membership is because state and city employees do not belong to unions; also, the large number of teachers in Louisiana for the most part do not belong to unions, although there is a small number of teachers who belong to unions in the metropolitan areas.

E. Distribution of Union Membership in Louisiana

There are six metropolitan areas of Louisiana in which union membership is concentrated. These areas are: New Orleans, Baton Rouge, Lake Charles, Alexandria, Shreveport, and Monroe. These six areas comprise only nine of the State's 64 parishes. The A.F.L.-C.I.O. Federation accounts for most of the membership in the metropolitan centers, although independent unions

are also present in the areas. There are some unions located in Louisiana in the smaller cities and towns; Bogalusa has over half its non-agricultural employment represented by union membership making it the most highly unionized city in the state. Although New Orleans has the largest number of union members, this accounts for only about 25 per cent of its total non-agricultural workers.

The early labor movement in Louisiana which witnessed beginnings in the metropolitan areas still seems to be confined to this pattern. However, it is now noticeable that with the heavy industrialization of the Louisiana Gulf Coast and the area along the Mississippi River between Baton Rouge and New Orleans, this present picture may change. Many of the industries establishing plants in these areas have had histories of union activities and it is expected these will continue.

F. Political Activity of Unions in Louisiana

Just as the national unions and federations have as one of their objectives the using of political influence and pressure to secure legislation favorable to their cause, this same procedure has been carried on in Louisiana. Perhaps the most controversial issue in recent years in which unions in the state have brought political pressure concerns the "Right-to-Work" law. When the Taft-Hartley Act was passed in 1947, one section of this act permitted the union shop in states which did not have laws against it. This section of the Taft-Hartley Act led to a wave of state right-to-work laws, which made it illegal for an employer to require a worker to join a union as a condition of employment. This right-to-work law provision led to bitter controversies in many of the states--Louisiana was no exception. In the 1954 legislative session in Louisiana, the "Right-to-Work" issue became an important matter; the A.F.L.-C.I.O. in Louisiana stated that it spent over \$100,000 in a public relations and lobbying campaign to defeat the measure. However, the "Right-to-Work" measure did become a law on the books--an occurrence which labor unions in the State say came about because the Manufacturers' Association had much influence in electing the legislature.

As a result of the passage of this legislation, the positions of unions in the state were weakened considerably when workers did not have to join unions in companies which in the past required membership. This was hailed as a great victory for anti-labor forces who could see the defensive situation this put the union in.

The American Federation of Labor and the CIO State Industrial Union Council in Louisiana began to take steps to bring about a repeal of this law. One of the first steps it took was an intensive registration campaign to qualify union members, their families and friends to vote. When the "Right-to-Work" law was passed in 1954, less than 25% of the union membership in the State was registered to vote; by 1956, 50% were registered to vote. Another measure which the unions took was to raise funds for lobbying and political purposes. The unions raised over \$100,000 between 1954 and 1956; with some locals levying direct assessments on members, while other locals took funds from the union treasury. In the 1956 state elections, 22 senators elected out of 39, pledged to repeal the "Right-to-Work" law; 51 of the 101 members of the House who were elected had also made pledges to vote for the repeal of the law. As a result, the Louisiana Legislature in June, 1956 voted and passed a measure for the repeal of the "Right-to-Work" law. On June 21, 1956, the Governor signed the repeal into law; making Louisiana the first southern state to effect a repeal.

Unions in Louisiana have been active in other political issues. They have lobbied for increased unemployment insurance benefits and other worker benefits.

General Outlook

The general outlook for union activity in Louisiana is that it will continue to increase with the movement of industries to the State from other sections of the country. Since unions in the State which now exist are closely tied in with national federations, much of what will come about will be the result of the nationwide union activities. Whatever the results may be, the objectives of both the employer and the union must be directed toward peaceful solutions to labor relations problems and let collective bargaining function in the manner it should.

(Because of the large volume of material presented in this session, time may not permit a summarization; however, if there is any time remaining, take questions which the trainees may have.)

Before closing the meeting, announce the topic for Session V, "Leadership.")

SESSION V
LEADERSHIP

I. Objectives for Session V

- A. (These objectives may be charted before the session begins for convenience and a saving of time.)

Objectives

1. To point out how effective leadership is related to good supervision
2. To study theories, types, and patterns of leadership
3. To make a self-analysis of each supervisor for leadership qualities
4. To note carefully how supervision, leadership, and productivity form close relationships

II. Importance of Leadership

- A. The importance of leadership qualities in individuals has been given close study by today's business and industrial executives.
1. The new quality of leadership and supervision necessary in modern management is an essential element.
 2. No longer can it be said that the office boy in the company has an opportunity of becoming its president; more and more is required of persons today than just success in completing routine jobs.
 3. In days gone by, it was very likely that a person could rise from the lowest rung on the ladder to a position of importance in the company based solely on his ability to master successive routine jobs.
 4. In today's competitive world where technology and educational competence exist, more is needed in the person who is expected to lead than just a working knowledge of day-to-day activities.

5. Even though we have come through periods of great change in recent years, there seems to be periods ahead which will witness even greater changes-- these changes will no doubt bring forth new demands and opportunities for supervisors who must possess broad leadership skills.
- B. It has previously been noted that management is concerned with the organization of group activities and getting work done through a competent work force.
1. It can definitely be said that leadership has a great deal of effect upon group effort.
 2. Group effort is the way by which accomplishments of the organization are made.
 3. Whatever group activity is present, effective leadership is a requirement for motivating and giving direction.
 4. The role of the leader in any group is primarily the responsibility for developing effective teamwork.
 5. Because management now recognizes the necessity of obtaining desired results through organized group efforts, added emphasis is being placed on the human element as a role in leadership.
 6. In many cases, even though the organizational structure of an enterprise may be basically weak, effective leadership can bring together individual activities within the group to the achievement of a goal.

III. What Leadership Is

- A. The question now needs to be answered: "What is Leadership?"
- (Have the trainees give what they believe to be the definition of "leadership." It would be good to chart these.)
- B. There are many definitions for leadership which management experts give; however, a simple definition which defines the term adequately is:

Leadership is the activity of inspiring others to follow and do willingly the work requested.

(Compare the contributions of the trainees with this one given. There is surely to be similarities; however, the key word in the definition should be "willingly.")

- C. A point which is sometimes argued is: "Are good leaders born or made?"
1. The question can be answered very easily.
 2. Most leaders are good leaders because they have worked hard to attain the characteristics of good leaders.
 3. This reasoning applies to the current situation of developing leaders for today's challenges; certainly leadership is an art that is and can be developed.
- D. Leadership is present and is needed at all levels of management; it is needed just as badly at the lower levels of the organizational structure as at the top levels.
- E. Leadership, of course, is not confined only to business--government, schools, hospitals, community organizations, and any group where individuals must be organized, leadership is needed.
1. It is very evident that without a leader in any group, the actions of that group would become without direction, organization, or purpose.
- F. The art of inspiring and leading people to do things willingly takes a great amount of skill and a deep understanding of human nature.
1. This does not mean that the leader must be skilled in the principles of psychology, but it does mean he must understand and be able to use common sense reasoning based upon the principle that every person wants to be treated as an individual.
- G. Leadership, as we know it today, is very often contrasted with the old-time tough foreman or supervisor who used fear as the chief means of motivating workers.
1. IT WILL BE WELL TO LOOK AT A FEW OF THESE POINTS WHICH HAVE BEEN CONTRASTED BETWEEN THE LEADER AND THE OLD-TIME BOSS, USUALLY REFERRED TO AS THE "DRIVER."
 2. THIS IS PRESENTED IN THE HANDOUT WHICH WILL BE GIVEN YOU.

*** Handout 17 ***

(Read through and discuss the contrasts with trainees.)

3. Additional points which can be used in this discussion include:
 - a. There were some conditions responsible for the "old boss" type of supervisors and foremen-- the ones who drove their men instead of leading them; these were:
 - aa. This type of supervision took place during an era of rugged individualism; conditions today are much different from the past.
 - ab. There was a supply of cheap labor in the country at one time; this is no longer true with the rise in the standards of living and development of skilled workers.
 - ac. The early factory system evolved into conditions which were very bad for the worker, the supervisor, and even top management.
 - ad. In the early history of management concepts, there was no knowledge available of how to deal with people; especially so before the advent of scientific management and the Hawthorne Experiments.
 - b. Those factors which contributed to the new type of leadership as represented by the right-hand side of the handout were:
 - aa. Higher educational standards.
 - ab. The rise of organized labor movements.
 - ac. The passage of labor laws protecting the rights of the worker from abuse and economic threats.
 - ad. Changes in the social and economic standards.
 - ae. Advent of scientific management and the human relations aspects of management.
4. The days of the old time "boss" with the crude methods of handling workers have been replaced in most cases with effective leadership.

- a. The use of threat and force in order to get workers to do something is not the trait of good leadership.
- b. This does not mean that leaders do not take firm, positive action when necessary.
- c. Nor, does this mean that the effective leader let part of his authority slip away from him to his subordinates.
- d. The leader can be stern; use methods of discipline and still win the respect of the group he leads.

IV. Types of Leadership

- A. There are usually considered to be three distinct types of leadership:

1. Autocratic Leadership
2. Democratic Leadership
3. Free-Rein Leadership

- B. Autocratic Leadership -- In this type of leadership, the leader assumes full command and bears full responsibility for everything he does. The leader demands obedience from his workers in following his directives and seeks no advice or suggestions from his workers in getting the job done. He sets policy and procedures based upon what he thinks they should be.
- C. Democratic Leadership -- In this type of leadership, the leader gets ideas and suggestions from the group he supervises. The spirit of teamwork is advocated with subordinates encouraged to take part in setting policies.
- D. Free-Rein Leadership -- In this type of leadership, the leader assumes the role of "one of the group" and uses little control or direction in dealing with the group. He, more or less, lets things go as they will with the subordinates making many of the decisions necessary to further the progress of the work. He does provide the wide guides for action by the group.
- E. Which Type of Leadership is the Best?
1. The question arises as to which type of leadership is the best to use.

2. Very often it is thought that the democratic type of leadership is the best to use; however, this is not always the case.
 3. The truth of the matter is that all three types are the best to use; that is, each has advantages over the others in different situations.
 4. Autocratic leadership, in certain situations, will be the most effective and successful, while democratic and free-rein would not be effective at all.
 5. Free-rein leadership, in certain situations, will produce far more successful results than either the democratic or autocratic types of leadership.
 6. Democratic leadership, also under the right conditions, will be more effective than either autocratic or free-rein leadership.
- F. From the foregoing statements, it must be made clear that there is not "one best method or type" or leadership to use for all situations.
1. It is the situation which the leader finds himself in and the types of persons he is dealing with which will be responsible for the type of leadership best to use.
 2. It must also be noted that the leader is not to be thought of as the democratic, or the autocratic, or the free-rein leader; rather, he should be identified with having all three of these types at his command to use as the situation demands.
 3. The typical supervisor may use all three types in his day-to-day activities; he must be able, however, to choose the appropriate type to get the action he desires.
 - a. In some cases, he will consult with fellow-supervisors on matters relating to their mutual problems; if he assumes the leadership of the informal discussions, he certainly would not expect to be autocratic.
 - b. If the supervisor has an assistant who needs only occasional help or direction, a democratic type of leadership would get the best results with this assistant.
 - c. The supervisor must be autocratic, if for example, a rather stubborn type of worker is told to do a certain job.

4. Because the leader must choose appropriate types of leadership to use in certain situations or in dealing with certain types of persons, it is well to discuss some of these items which give indications as to the type to be used.

V. Use of Types of Leadership

A. Personality of Followers

1. Perhaps the most important characteristic which dictates the type of leadership which should be used is the personality of the subordinate.
2. There is a strong relationship between leadership methods and types of personality of subordinates.
3. The hostile, stubborn type of person must be dealt with in a stern manner; therefore, the use of any other type of leadership than the autocratic would be very ineffective.
 - a. The hostile individual would have little to contribute if allowed free-rein leadership; in fact, such an individual can do much harm to a group, if allowed to have too much freedom of action.
4. The individual who tends to lack the capacity to make decisions or act for himself would also do better with the autocratic type of leadership.
 - a. Such an individual finds assurance in authority and firmness.
5. The person who can do his best work when given only minimum direction and supervision would do better under the free-rein type of leadership.
 - a. When a person can work alone, can produce more when he's on his own, and requires little supervision does better when he's allowed to work at his own pace.
 - b. Such a person, if autocratic leadership is applied, would in all probability slow down considerably because limitations have been placed on his capacity to produce.
6. A person who gets along well with the group and who is interested in contributing what he can toward the work goal must be placed under the democratic type of leadership to get the best results from such an individual.

- a. Persons who are co-operative and who want to do all they can toward contributing their share to the work load will make many suggestions and recommendations to the leader that can be useful.
- b. Some subordinates can and do contribute much to assisting the leader in getting the work done in the most efficient and effective manner; not taking advantage of these suggestions does not make for good democratic leadership.

B. Job Knowledge

1. The knowledge of the job by the worker or by the person being dealt with by the leader relates very much to the type of leadership which is to be used.
2. If the worker has technical knowledge of the job being performed, the democratic method would be used by the leader.
 - a. Very often, a worker is more familiar with the details of the job than the supervisor; for this reason, the worker's suggestions or recommendations for planning work activities can be extremely helpful.
 - b. Leaders can learn much from their followers and the opportunity for learning by leaders from workers who know what they are doing should not be passed up.
 - c. The leader who assumes the autocratic type of leadership in certain situations causes excess time to be consumed or costly errors to be made because he doesn't have the job know-how and refuses to listen to advice from his subordinates.
3. When the leader is dealing with new workers who do not possess the necessary knowledge initially to do the job, he must use autocratic leadership-- the other two types would result in a disorganized group action that had no real purpose.
 - a. In training situations as well, where workers are there to gain certain information, the autocratic leadership type must be used.
4. When persons of equal rank in the organizational structure get together to work out the solutions to problems concerning the group, the person

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

serving as leader for the group cannot be autocratic; he must be democratic by allowing those with just as much job knowledge as he has to contribute to mapping the course of action.

C. Situation

1. The particular type of situation the leader finds himself in will indicate the type of leadership to be used.
2. For example, in times of emergency, autocratic leadership must be used.
 - a. Person must be told what to do quickly.
 - b. There are no opportunities for getting reactions from the group, as time and speed are of the essence.
3. In routine matters of work, the leader will direct certain orders to subordinates as a matter of speeding up normal work schedules; such situations call for direct orders using autocratic leadership.
 - a. There are many routine matters which the supervisor must direct workers to do and such matters are not open to suggestions or discussion from the subordinates.
4. In situations, however, where there may be a problem to solve, the leader then wants to have subordinates to help solve it and will then use the democratic leadership type.
 - a. There are, of course, some problems which subordinates can not contribute toward solving; such would not be subject to the democratic approach.
 - b. In such situations of problem solving, especially where persons of the same job status are involved a free-rein or democratic process is best to use.

D. Type of Group

1. It is possible to identify groups which have certain characteristics as certain group types.
 - a. Certainly, in every group there are some individuals who do not have the same make-up as the majority.

- b. The majority of persons in the group which exhibits certain characteristics identifies the group as a whole with these qualities.
 2. A group that is untrained or not well disciplined cannot function well under democratic leadership.
 - a. Just as the individual who is not disciplined, a group can be wholly undisciplined and disorganized.
 - b. A firm control is necessary with this type of group and such firm control is found only in the autocratic type of leadership.
 - c. Rigid directions and supervision in such cases must be exercised until the group becomes disciplined and organized into a productive unit.
 3. A group made up of professional persons represents just the opposite from the untrained and undisciplined group.
 - a. Persons in such a group are well trained, are competent in their respective fields, and if they weren't good leaders in their own right, they would have never attained professional rank.
 - b. When such a group of professional persons has an objective to complete, the only types of leadership which can be used and still retain all the characteristics of good human relations, are the democratic or free-rein types.
 - c. The leader of a group of persons who have professional standing does not have to provide a great deal of guidance.
 - d. Only occasional conferences are needed by the leader to bring up to date the accomplishments made by the individuals.
 4. In a group of persons who work well together, the democratic type of leadership is to be used.
 - a. Where persons within the group understand the work of the other, have little or no misunderstandings, communicate freely among themselves and with the supervisor, and who try to settle their own problems, the democratic type of leadership is bound to succeed.

- b. In a group of this type, the democratic type of leadership tends to make the best use of the brainpower which the group possesses.
- c. Also, the democratic type of leadership in such a group brings out the best capabilities of the individuals within the group.

VI. Flexibility of Leadership Types

- A. As has been pointed out, the successful leader must master the use of all three types of leadership-- autocratic, democratic, and free-rein.
- B. The job of the leader is to be able to shift techniques effectively to meet the needs of changing situations, problems, and workers within the group.
 - 1. There must be flexibility in the use of the types of leadership, and this flexibility must be mastered so that there is never a question in the mind of the leader that he must fit a choice of technique to the situation at hand.
 - 2. Certainly, there will be times when the leader may have some doubt as to what technique to use in a particular situation.
 - 3. However, by applying a conscientious effort to evaluate each experience encountered, the mastery of type to use will become easier.
- C. It must be stated in conclusion that leadership is an art and skill which can be developed.
 - 1. Good leaders are not just endowed with leadership abilities, they must through hard and diligent work acquire such.
 - 2. There must, however, be that desire present to want to learn to be a good leader before a person ever has a chance to become a good leader.

VII. Patterns of Leadership Behavior

- A. There are several patterns of leadership behavior which relate to the types of leadership to be used in certain situations.
 - 1. These patterns are based on the functions of the leader rather than an identification of the type or kind of person.

- a. It can be easily seen from the foregoing material presented that it is not so much what makes a good leader or the personality factors of a good leader, as what the effective leader does.
 - b. Also, it must be remembered that a leader is responsible for group action and that his relationships with the group are of the utmost importance.
2. The leader of any group has certain powers which will affect the outcome of group action; it is the use of this power which will determine the effectiveness of the leader.
 3. Some leaders feel that the group should share in the power of the leader, thus resulting in having the group contribute to the decision making of the leader.
 4. Other leaders feel that they should handle most of the power, thus resulting in little freedom for decision making of the group.
- B. Where the leader has certain choices in the leadership patterns he chooses, he still must be concerned with the principle of flexibility; the patterns which are normally used include:

- | |
|---|
| <ol style="list-style-type: none">1. Telling2. Selling3. Testing4. Consulting5. Joining |
|---|

- C. Telling -- this type of leadership pattern is based on the leader's decision to simply tell the members within the group what to do and does not consider having them participate in any way in the activities of the leader.
- D. Selling -- This pattern of behavior is used by the leader when he wants to use persuasion in getting the group to accept his decision.
1. The leader, many times for psychological reasons, may want to convince his group of the advantages of the idea or plan he wants to put into effect.

2. If the group is sold on what the leader advocates, the job of implementing these ideas or plans will not be near as difficult as if the group is simply given instructions.

E. Testing -- In this behavior pattern, the leader is desirous of getting his group's reaction to solutions to a certain problem.

1. He presents the solutions to them and gets their reaction on which they believe to be the best.
2. This brings into play the democratic process.
3. After the leader gets the reactions of the group, he will be able to know which of his solutions will be the best received by the group.

F. Consulting -- In this behavior pattern, the leader has a certain problem to solve, but instead of mapping out solutions himself, he gets the group to give their ideas for solution.

1. He then can choose the best one presented by the group.

G. Joining -- The leader here simply joins in with the members of the group in seeking solutions to problems pending and agrees in advance that whatever decision the group makes will be the one carried out.

1. This pattern works better with professional persons, or persons who have equal rank in the organization.

H. Influences on Patterns of Leadership Behavior

1. There are many influences which will determine which of the patterns of leadership behavior will be used.

2. These influences are found in:

- a. The leader
- b. The group
- c. The situation

3. First, looking at the influences in the leader himself and how these will decide which pattern will be followed:

- a. If the leader has a great amount of confidence and trust in the members of his group, he is

apt to use one type of pattern; on the other hand, if he distrusts his group or feels they are limited in their capabilities, he will use another.

- b. Of course, it must be pointed out that the confidence he shows in his group may or may not be justifiable.
 - c. Also, leaders show a tendency to differ greatly in the amount of trust and confidence they place in their workers.
 - d. There are some leaders who tend to have their own ideas about what the leader is supposed to do; some do not believe in sharing their functions with members of the group, while others believe in sharing leadership with the group.
 - e. Many leaders have the feeling of wanting a certain amount of security in the jobs being done; and consequently are more inclined to "tell" or "sell" than to "consult."
 - f. In conclusion to the influence that the leader has in the pattern used, it must be remembered that the leader has certain ideas and ways peculiar only to himself and much of what he will do will be related to these inherent beliefs.
4. Next, the influence of the group will be discussed:
- a. The leader knows that each member of the group is an individual; that each individual has perhaps a different type personality make-up.
 - b. Also, the leader knows that each member of the group has certain beliefs and ideas, just as he does himself.
 - c. The leader, who can understand his group better, can use the type of behavior pattern which will produce the best results.
 - d. The patterns of "consulting" and "joining" can be used when:
 - aa. The members of the group are ready to assume responsibility for decision making.
 - ab. The members have the knowledge and experience to deal with the problem.

- ac. The members of the group can tackle the challenges given with only a minimum amount of direction and guidance.
 - e. When the conditions do not exist as just enumerated, the leader must then use the "telling" and "selling" techniques.
5. The situation has influence as to the type of leadership behavior that will be used.
- a. The pressure of time is very often a common occurrence which makes it necessary that the leader use a high degree of authority by "telling."
 - b. If the problem is of a complicated nature, such as that which is beyond the knowledge requirements of the workers, then he cannot expect to use the pattern of "consulting."
 - c. On the other hand, if a problem exists whereby persons in the work force have the knowledge to contribute to solving the problem, then it is expected that the "consulting" pattern could be used.
 - d. The type of organizational structure will influence the type of leadership--for example, the size of the departments or work units may require the leader to exercise more control or less control as the situation may be.
 - aa. Large work units under the control of a supervisor usually require tighter controls than if he were in charge of a small and unified group.
6. Even though the leader is influenced by the three factors discussed, he must continually strive to keep in mind the objectives which he is leading his group toward.
- a. The manner in which he reaches these goals and develops his group while leading it will determine the effectiveness of the leadership behavior patterns used.

VIII. Leadership Characteristics

- A. It has been pointed out rather vividly that every organization and every organized effort needs managerial techniques and leadership.

- B. The leader's success in any endeavor depends upon the influence he is able to exert upon the people whom he leads.
- C. There are some broad characteristics which a leader must possess; these are:
1. The leader must have the ability to analyze a problem, or a situation, or a set of circumstances and arrive at a satisfactory conclusion.
 2. The leader must have the ability to select and assign people properly in the organization.
 3. The leader must have the ability to make the organization function by transmitting to those in the group the objectives of the organization and get these objectives accepted by the group.
- D. Leadership is interested in how people can be brought together to work together for a common end so that the individuals may better share in realizing group accomplishments.
- E. Qualifications for Leadership
1. What are the qualifications for leadership?
 - a. Certainly there are qualifications which leaders must possess and these are summarized in Handout 18.

*** Handout 18 ***

(Discuss these qualifications listed on Handout 18 with trainees.)
- F. The Importance of Teamwork
1. Closely related to leadership is teamwork, as leadership must promote teamwork.
 2. Even though teamwork is required in every progressive organization, this does not mean that there should not be room for individual initiative on the part of individuals in the group.
 3. The leader, in the interest of teamwork, must many times subordinate his personal desires to the interest of the group.
 - a. If the group is not ready to move in a certain direction, the leader may have to adjust his plans for action.

b. Certainly, the members of a group need the support of the leader; however, the leader needs the support of the group just as well.

4. A supervisor's success as a leader depends to a great extent upon his success in developing the leaders under him.

a. These are the people whom the leader comes to rely upon and the people who will be developed into leaders within the organization in their own right.

G. The Leader's Philosophy of Growth

1. The leader must have certain beliefs of growth for for himself, his workers, and the entire organization.

2. The growth factor is important, as every organization must grow and progress if it is to compete favorably with others.

3. There should never be a question as to the growth pattern which the leader becomes responsible for, as actually this is a part of the leader's make-up.

4. The real key to the leader's philosophy of growth lies in his belief that his organization and his group are to grow and develop; this belief must be real and sincere, because if not, the leader can never hope to fulfill any ambitions which he may only think he believes in.

5. The job of the leader is a difficult one, but there are rewards which go to the person who develops and continues to exhibit leadership characteristics.

a. There is increased prestige and status; but the feeling of personal accomplishment is perhaps the greatest reward of all.

6. The leader who plans for personal growth as a leader knows what he wants to accomplish--at the present time and in the future.

a. The formulation of such a plan unifies the leader's thinking on what is to be accomplished and in what manner.

b. The leader is important in this phase of his job, not because of his own production, but because he leads people toward their objectives-- objectives that must be channeled toward an over-all, planned result.

H. Self Analysis of Leadership

1. How can an individual measure his leadership abilities?
2. Without an evaluation of actual conduct in dealing with people and situations encountered, a self-appraisal analysis is probably the best way.
3. SUPPOSE YOU WERE ASKED TO MAKE A SELF-APPRAISAL OF YOUR LEADERSHIP ABILITIES, WHAT WOULD BE YOUR REACTION?
 - a. LET'S GO THROUGH A SIMPLE SELF-APPRAISAL OF LEADERSHIP QUALITIES; THIS WILL ENABLE YOU TO JUDGE FOR YOURSELF JUST WHERE YOUR WEAKNESSES LIE AND HOW THESE CAN BE STRENGTHENED.
 - b. REMEMBER, THIS LEADERSHIP INVENTORY WILL BE FOR YOUR PERSONAL USE ONLY AND WILL NOT BE TURNED IN, OR SHOWN TO OTHER MEMBERS OF THE CLASS.
 - c. I SHALL NOW GIVE YOU THIS LEADERSHIP SELF-APPRAISAL TEST SHEET; READ THE INSTRUCTIONS AT THE TOP OF THE PAGE, BUT GO NO FURTHER.

*** Handout 19 ***

(Give each trainee a copy of Handout 19 and permit them time to read the instructions.)

- d. ARE THERE ANY QUESTIONS BEFORE WE BEGIN?

(Answer any questions raised.)

- e. YOU MAY NOW PROCEED WITH THE SELF-APPRAISAL TEST; REMEMBER THAT NOBODY BUT YOU WILL SEE THE RESULTS, SO BE HONEST WITH YOURSELF AND AS OBJECTIVE AS POSSIBLE.

(Permit necessary time for all trainees to complete the test.)

- f. FIGURE YOUR SCORE IN THIS MANNER:

FOR EVERY "YES" ANSWER, GIVE YOURSELF 2 POINTS
 FOR EVERY "SOMETIMES" ANSWER, GIVE YOURSELF 1
 POINT FOR EVERY "NO" ANSWER GIVE YOURSELF 0
 POINTS

NOW, ADD THE SCORES FOR EACH QUESTION TO GET
 YOUR TOTAL SCORE FOR THE TEST.

(Allow time for this.)

g. NOW LET'S EVALUATE THE TOTAL SCORE:

<u>Score Range</u>	<u>Interpretation</u>
0 - 5	Superior leadership qualities
6 - 10	Average--some improvement necessary
Over 10	Weak leadership qualities; much improvement needed.

(There will probably be some discussion among trainees after the score ranges and interpretation are charted. If there is worthwhile discussion, or questions which trainees would like to ask, take time for such.)

Point out to trainees that the appraisal test certainly is not to be considered 100 per cent valid in every case; that there is substantial chance of scores being made which deviate from the interpretations given because of the human factor. It is never possible to evaluate precisely qualities which relate to the human efforts, ideas, and personality.

However, the test is a fairly good indication of the measurement of leadership qualities. Indicate to trainees that they should strive to improve any weaknesses scored on the test.)

IX. Responsibilities of Leadership

- A. Leaders must carry certain responsibilities in view of the big job which they do.
 1. Leaders are identified with the group or company which they belong to; therefore, the impression which they present must be favorable at all times and of the highest professional caliber.
 2. A leader cannot be one type of person on the job or when he is working with the group and then become an entirely different individual when he is somewhere else.
 - a. The high qualities of leadership cannot be cast off whenever the leader feels that he

doesn't have to present a "good front," but must always be present irregardless of where the leader may be, or what he may be doing.

B. A large responsibility of the leader is to motivate the members of his group and keep them as contented and productive as possible.

1. More will be said about this motivation responsibility later in the session.

C. Other key responsibilities which the leader has include:

1. Responsibility to his group for fair and impartial treatment of all members.
2. Responsibility to his group for a fair assignment of duties and work assignments.
3. Responsibility to his group that there is no disorder or serious personnel conflicts within the group.
4. Responsibility to his group that its individual members receive their rights and privileges accorded by the policy, rules, and regulations of the company.
5. Responsibility to management that the group is productive and meets its production schedule.
6. Responsibility to management that the group shows loyalty to management and the company.
7. Responsibility to management that communications downward and upward flow in free channels through his department.
8. Responsibility to management that rules, orders, instructions, etc. are carried out.
9. Responsibility to management that co-operation with fellow supervisors and department heads is in effect.
10. Responsibility to individual members of his group that he will strive for their personal development and growth.

X. Human Relations and Leadership

A. The area of human relations and leadership go hand-in-hand.

1. Every organization depends upon human beings and there is not any phase of work which is not affected by people.
 2. Sooner or later every relationship, every problem, and every decision involves the human element.
 3. The function of leadership has to be accomplished through people, and all the things which the leader does must affect people.
- B. There is a great amount of material available in the field of human relations; textbooks, publications, studies, etc.
1. At the University of Michigan at Ann Arbor, Michigan there has been established the Foundation For Research on Human Behavior.
 2. This Foundation For Research on Human Behavior conducts various studies in the field of human relations; these studies are published and are available at moderate prices.
 3. The Foundation also conducts seminars and study sessions for management personnel who are concerned with assessing their organization's performance with behavioral measurements of its people.
- C. Some of the principles of effective human relations which the Foundation For Research on Human Behavior and other sources have advocated may be summarized in several major categories.
1. These principles of human relations must be understood and used by the leader if he is to be a successful one.
 2. THESE PRINCIPLES OF EFFECTIVE HUMAN RELATIONS HAVE BEEN SUMMARIZED IN HANDOUT 20.

*** Handout 20 ***

(Read through the principles with trainees. Take any questions which may be asked.)

XI. Leadership and Productivity

- A. Leadership in management holds the key to increased productivity; and, of course, increased production is a factor which must be dealt with.

1. No company can long compete in the open market unless it can solve its problems of production--the problems of improving machines, materials, and methods.
2. In order to solve these problems, management must have the support of its workers--this is where the leader comes into the picture.
3. The leader has more to do with the effectiveness of the work group than any other factor.
 - a. He is at the point of action as he is with the people who do the work.

B. High productivity reflects good supervision and leadership

1. High productivity is important to the supervisor because:
 - a. The efficient use of employee ability and energy is one of the major responsibilities of the supervisor.
 - b. Management judges a supervisor largely in terms of the productivity of his unit.
 - c. A good work unit can be developed which will attract and hold good workers.
 - d. There is a feeling of pride and personal satisfaction when workers do well.
 - e. A supervisor's chance for advancement will be judged a great deal on his ability to get good work done through his workers.
2. Obtaining High Productivity
 - a. Obtaining high productivity is a matter of good management which displays leadership qualities.
 - b. The way in which the work is planned, how subordinates are supervised, how materials and equipment are used, and how efficiently the factors of production are utilized determine productivity standards.
3. As a leader, high productivity can be obtained from the work group by:
 - a. Helping workers build their skills through training

- b. Allowing workers to participate in the planning of their work
 - c. Giving the more experienced workers the more important assignments
 - d. Giving recognition for work well done
 - e. Allowing some employees to become informal leaders of the group; thus utilizing leadership qualities of the subordinates
 - f. Setting of work goals which are realistic and attainable
 - g. Allowing workers to participate in the setting of realistic work goals
 - h. Organizing all elements of the department to meet production schedules
 - i. Planning and scheduling the flow of work
 - j. Co-ordinating the activities of the department with others in the company
 - k. Controlling costs and eliminating unnecessary operations
 - l. Promoting safe working conditions
 - m. Assigning and distributing work on a pre-arranged plan
 - n. Communicating clearly with workers
 - o. Setting a good example himself for others to follow
4. The foregoing principles and methods of increasing productivity through better supervision and leadership qualities are good to know and every leader needs to have a working knowledge of them as they apply to his particular situation.
5. Of more importance, however, is that every supervisor must consider how these can be put into effect; that is, the using of them will give the answer of how well the supervisor knows them.
- a. It has been pointed out many times in this session that there are many types of leadership; what the results will be from the use of each will depend upon how each is used and under what conditions and circumstances.

- b. The same holds true for productivity--productivity depends greatly upon how the supervisor will use his tools of leadership in work he is responsible for.

XII. Leadership and Motivation

- A. There are many things which can be used to motivate workers in the jobs they are doing.
 1. The knowledge of motivation is of prime concern to the leader who must know how to stimulate his group to standards necessary to meet their obligations.
- B. Usually, motivating factors include:
 1. Good salary or wages
 2. Good working conditions
 3. Fringe benefits
 4. Good management-employee relations
 5. Recognition of good work
 6. Job security
 7. Impartial treatment
 8. Opportunity to grow in job
 9. Physical safety
 10. Favorable work schedules
- C. In regard to the foregoing items, the supervisor has no control over many of the items as they are set by top management.
 1. There are some of these, however, which the supervisor becomes involved in and does have an opportunity to affect.
 2. The use of leadership qualities can have a decided effect upon the results obtained from the use of motivating factors.
- D. In studies conducted concerning motivating factors, it has been discovered that "more money" is not the chief incentive or major desire of most employees and it is not this item which motivates workers the most.

1. Wages are an important item, but it alone does not constitute what employees want most in their jobs.
 - a. By providing or attempting to provide some of the things wanted most by workers, the job of motivating them to do their best work is much easier.
 - b. It is also surprising to know that many of these motivating factors do not include material advantages, but concern the relations between the supervisor and the worker.
2. Basically workers want:
 - a. Recognition for work which they perform which is of outstanding quality or quantity.
 - b. To be consulted about things which affect them.
 - c. Enjoyment in the work they are doing.
 - d. Good working conditions which are clean and safe.
 - e. A salary or wage which will give them financial security.
 - f. Opportunities to talk things over--to suggest improvements, to share in making decisions, and the discussion of grievances.
3. It can be seen that the effective leader has many opportunities for motivating workers by his sincere desire to meet the basic wants of workers.
 - a. As pointed out, most of these wants are non-financial and most of them are within the limits of authority which the supervisor possesses.
 - b. An interested and satisfied worker is the type desired; but unless such worker has some of his basic wants satisfied, it will be impossible to motivate such a worker.
4. When the workers are highly motivated through the satisfaction of their basic wants, many good results to the supervisor and to the company are noted:
 - a. Productivity rises
 - b. Labor unit costs are lowered

- c. Fewer grievances from workers arise
- d. Less labor turnover
- e. Fewer accidents
- f. Better management-employee relationships

XIII. Management vs. Leadership

- A. Management is concerned with operation while leadership is a function.
- B. Management is concerned with:
 - 1. Delegating responsibility and authority
 - 2. Co-ordinating, planning, accounting
 - 3. Establishing organizational structure
 - 4. Supervising
 - 5. The economics of production and marketing
- C. Leadership is concerned with:
 - 1. Developing morale
 - 2. Motivating those in the work group
 - 3. Developing a keen understanding of human relations
 - 4. Developing aims and purposes
 - 5. Striving to bring the whole enterprise into harmony with teamwork
- D. The function of management is not easy; nor is the function of leadership.
 - 1. The leader, as we have seen, is important in the function of management because he leads people toward their objectives.
 - a. These objectives must be guided by leadership toward an over-all, planned result as established by management.
 - b. Oftentimes, the ability to administer, lead, or manage is not rated or considered as important as it really is.
 - c. Leadership ability is important--a commodity which competent management is willing to pay the price for.

- d. There is no doubt that leadership will be needed in even increasing amounts in the future to meet the needs and challenges of tomorrow's times.

XIV. Visual Aid in Leadership

(The visual aid recommended for this Session is:

35 mm. Sound Filmstrip

Title: McGraw-Hill Sound Filmstrip Series on
"Supervisory Problems in the Plant"

This film series contains several cases; the case to be used here is:

Case No. 3 -- "The Case of Tim's Three Choices" -- (Leadership)

This case deals with all three types of leadership discussed: (1) autocratic, (2) democratic, (3) free rein.

Showing time for the sound filmstrip is less than five minutes; however, because the nature of the filmstrip is the solving of a problem in leadership type, much discussion from the trainees will follow; therefore, time to allow for about 15 minutes of discussion should be arranged.

It is suggested that the Leader's Manual which accompanies the series of filmstrips be reviewed before the session. If you have not worked with filmed cases before, it is recommended that the Leader's Manual be studied thoroughly, especially that beginning section which gives recommendations on how to use the filmstrips and conduct the discussion.

The filmstrip, Case No. 3, "Tim's Three Choices," of the McGraw Hill Sound Filmstrip series on "Supervisory Problems in the Plant" may be purchased from Text-Film Department; McGraw Hill Book Company, Inc.; 330 West Forty-Second Street; New York, New York.

Show the sound filmstrip. Use the Leader's Manual as a guide in the discussion which will follow. Before the discussion ends, make sure that the problem cited in the film has been given some workable solutions.)

(The visual aid concludes the fifth and last session of "Introduction to Management.")

XV. Closing the Conference

- A. (Briefly summarize the contents of the five sessions; this can be done by referring to Handout I which contains the session titles and objectives for each session.)
- B. (Answer any questions which may be asked by trainees concerning the brief summarization.)
- C. (Thank the members of the group for their participation in the discussions; their interest shown and the co-operation given.)
- D. (Remind the trainees that the handout sheets and the notes which they took during the sessions will serve as valuable reference material when they get back to their respective jobs and want to put some of this to use.)
- E. (Also, remind trainees that much of the material presented constituted basic management principles which apply to any organization or company and that by putting such to use will improve greatly their effectiveness of supervision.)
- F. (If certificates are to be presented and if such is planned for this final session; certificates should now be presented.

If certificates are to be presented at a later time, give whatever information is necessary for the trainees to know concerning this.

In either case, if certificates are to be awarded, have a management representative of the company for which the training was given, present the certificates to the trainees.)

- G. (Thank the trainees again for the part they played in the training conference; adjourn.)

HANDOUT 1

COURSE CONTENTS

Session I History of Management

- Objectives:
- To trace briefly the history of management
 - To relate the history of management to current management concepts
 - To study the work of Frederick W. Taylor, the areas of scientific management, and evolution of such
 - To examine current management practices and procedures

Session II Organizational Structure

- Objectives:
- To study types of business organizations; legal aspects, and control
 - To study organization types and their functions
 - To study departmentation and function of departments
 - To present a clear understanding of department relationships within the organization

Session III Major Responsibilities of Management

- Objectives:
- To make an intensive study of management responsibilities--planning, organizing, directing, controlling, coordinating
 - To study relationships between management responsibilities and the organization's objectives
 - To note the effectiveness of each major responsibility of management in current practices

Session IV Organized Labor

- Objectives:
- To trace the history of labor movement in the United States
 - To present an understanding of union activities
 - To study union-management relationships
 - To trace the history of unions in Louisiana and note present status

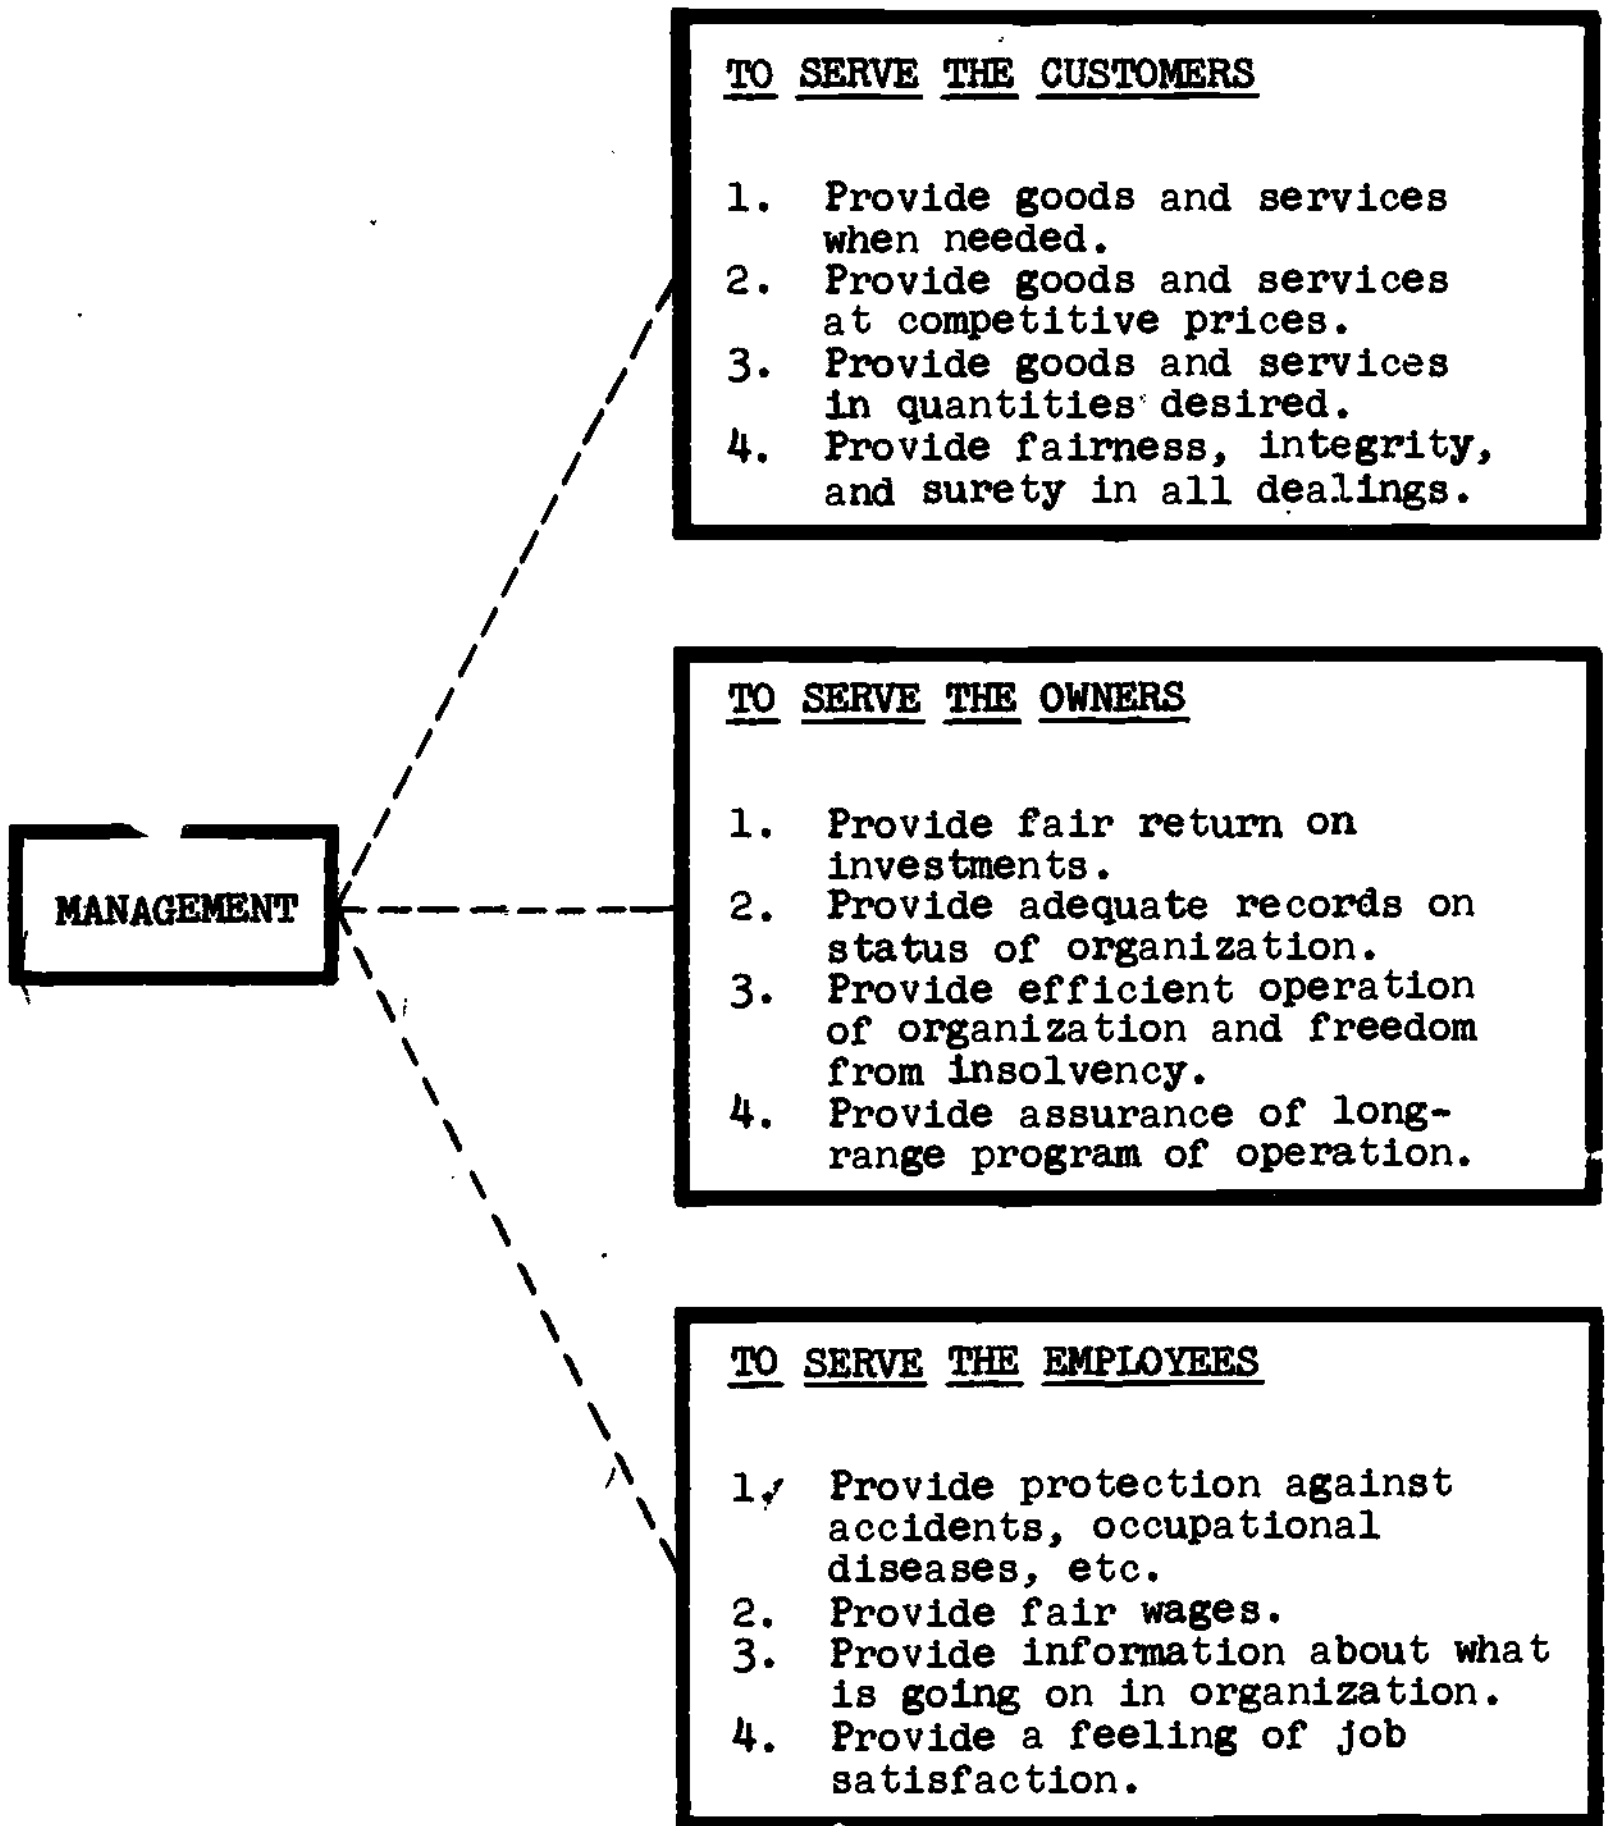

HANDOUT 1 (Cont'd)

Session V Leadership

- Objectives:
- To point out how effective leadership is related to good supervision
 - To study theories, types, and patterns of leadership
 - To make a self-analysis of each supervisor for leadership qualities
 - To note carefully how supervision, leadership, and productivity form close relationships

HANDOUT 2

OBJECTIVES OF MANAGEMENT

HANDOUT 3

PRINCIPLES OF SCIENTIFIC MANAGEMENT

1. The scientific study of management is relatively young and it is certain that more advancements will come.
2. Scientific management can be practiced in every field of management and is not restricted to only one type business.
3. Scientific management is not a "true science" because the human element is an important part of management; the exact behavior of a human being under stated conditions can not be precisely determined, only approximated.
4. Scientific management as a method is only a tool for management; management must know how to use it for it to be effective.
5. The scientific management approach to problem solving cannot be expressed by a certain set of formulas; however, it does have a defined pattern which should be followed.
6. The scientific method involves a clear statement of the problem and the collection and recording of data and facts previously discovered about the problem.
7. In every case, the effectiveness of the scientific method is limited by the manager's understanding of it.
8. Scientific management aims toward the motivation of both worker and manager.
9. There must be a level of understanding and mutual trust between the worker and manager for scientific management to be effective.
10. Scientific management stresses that the initiative and hard work of employees must be recognized by management.
11. A scientific selection and training of workers rather than a rule-of-thumb method is necessary for effective management.
12. Scientific management advocates good lines of communication between manager and worker.

HANDOUT 4

SUMMARIZATION OF THE HAWTHORNE EXPERIMENT

1. The Hawthorne Experiment conducted at the Hawthorne, Illinois Division of the Western Electric Company was one of the most famous industrial relations studies in the field of management and the human relations aspect toward workers.
2. The experiment provided the basis for much of what we now know about getting along with employees and understanding employee problems.
3. The experiment was conducted by the Industrial Research Department of Harvard University and a group of Western Electric Company personnel.
4. An early phase of the experiment proved that an improvement in the physical environment of the place which the work is being done does not always bring about improvement.
5. Another early phase of the experiment concluded that improvement in working conditions and the giving of extra worker benefits does not necessarily result in increased productivity.
6. The Hawthorne Experiment showed that management must understand human motivations and group reactions in getting things done through people.
7. The Hawthorne Experiment introduced the interviewing technique so as workers were given an opportunity to discuss with management their reactions to changes during the experiments.
8. Through the interview technique, regardless of the mechanical or physical changes made in the working arrangements, productivity continued to increase--a realization that when the workers were asked for their opinions and were able to register their complaints, these workers became more co-operative with management in general and consequently produced more.
9. The Hawthorne Experiment through the interview program found that the interview aids the individual to get rid of useless emotional problems and aids the worker to associate more easily, more satisfactorily with other persons--both fellow workers and supervisors.
10. The Hawthorne Experiment had several phases of development since its beginning in 1929; originally designed to study the comfort of workers as a group of individuals, it resulted in realization of management that one of the fundamental problems in large-scale industry is the developing and sustaining of co-operation in the work force.

HANDOUT 5

CHARACTERISTICS OF THE CORPORATION

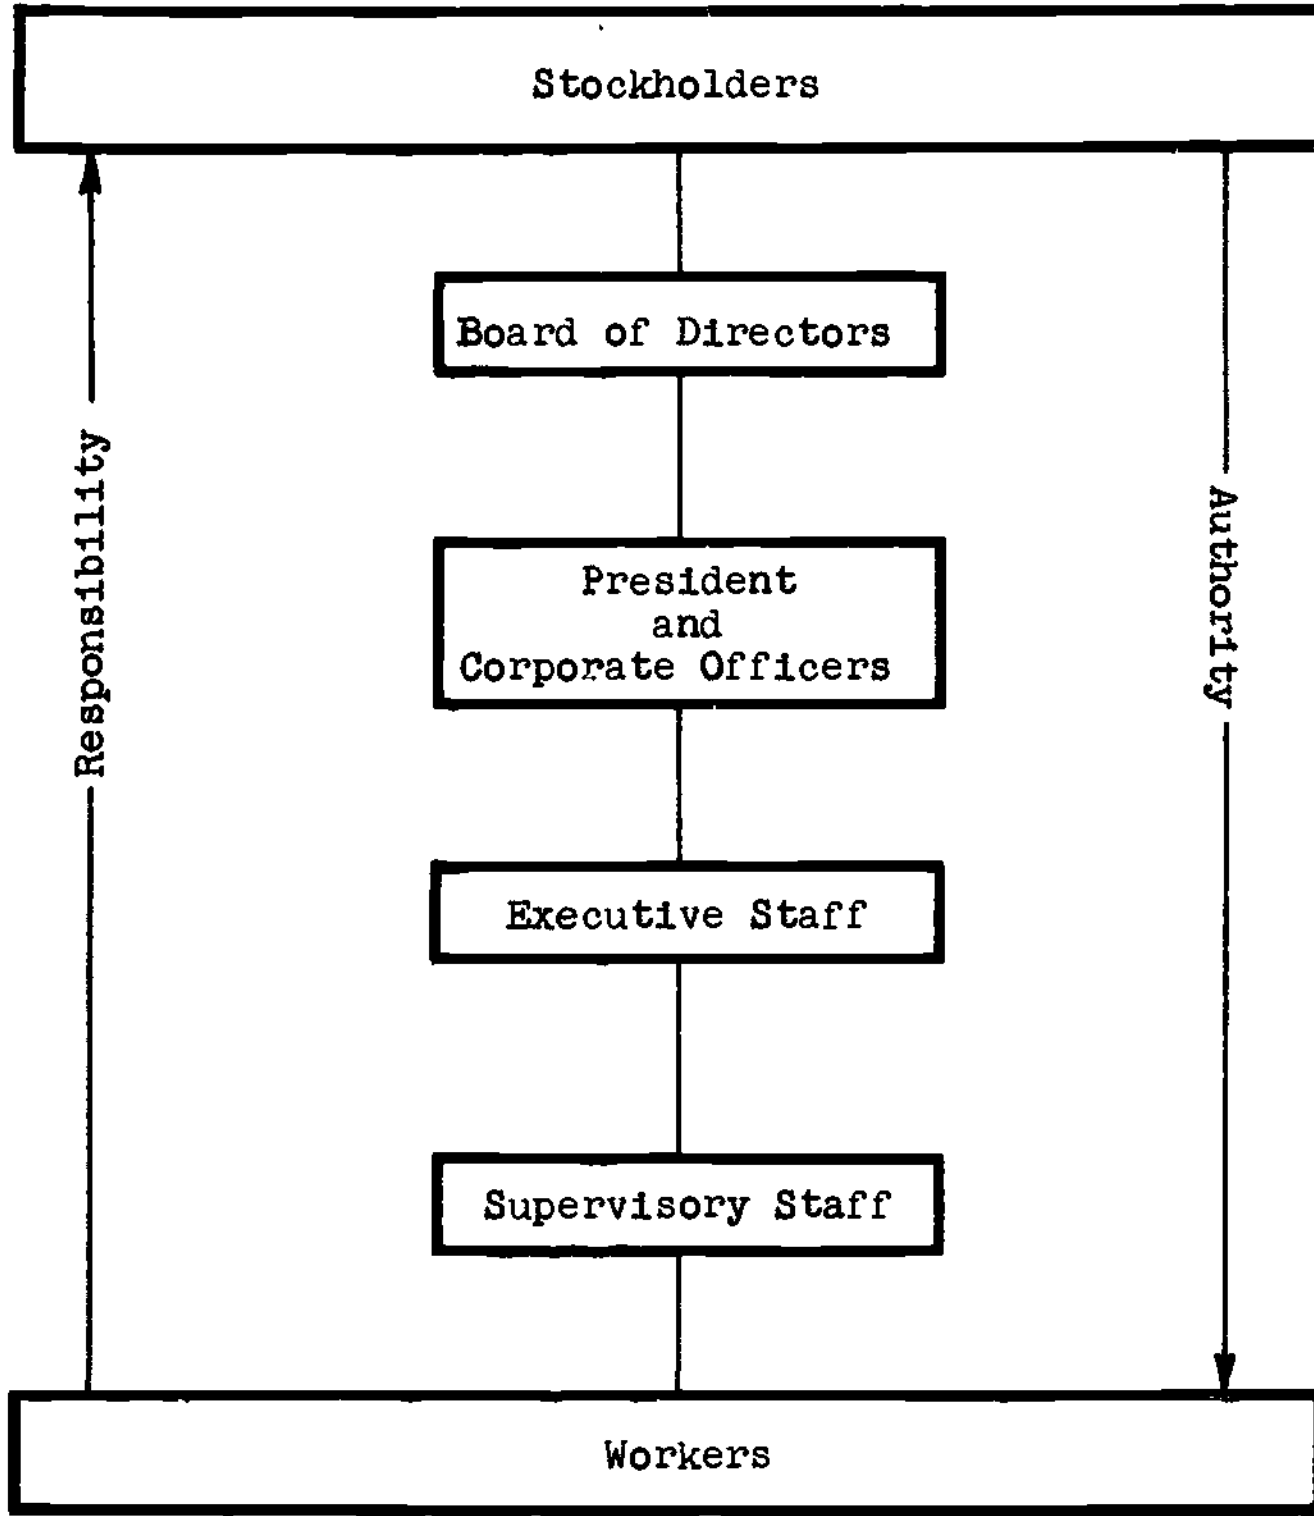

1. The corporation is a distinct entity, separate and apart from its members; it exercises its rights and bears its obligations in its own name and not in the name of its members.
2. The corporation holds title to property in its own name, and may sue or be sued in the courts in its own name.
3. The interests in the ownership of a corporation are divided into transferable units known as shares of stock; the owners of the corporation are known as stockholders; they may sell this stock without interfering with the operation or nature of the corporation.
4. Since a corporation is a legal being in its own name, it is responsible for its own acts and obligations; therefore, creditors of a corporation may not look beyond the assets of the corporation for satisfaction of their claims.
 - a. The loss that a stockholder may suffer is limited to the amount of his investment--his personal property is not subject to judgment by creditors.
 - b. This feature of only the stockholder's investment in the corporation being liable for the satisfying of a debt is referred to as "limited liability of stockholders."
5. The life of a corporation depends upon the terms of its charter; it may be perpetual or it may continue for a specified period of years; it is not affected by the death or the incapacity of its stockholders.
6. As the corporation is a legal being, it is subject to federal income taxes in its own name; these earnings are again subject to income taxes when distributed to stockholders as dividends.
 - a. Although there is an income tax credit given to stockholders when filing income tax returns, this tax situation is referred to as "double taxation of corporation income."
7. Under the corporate form, accumulation of business capital may be done by selling shares of stock to many different individuals.
8. The corporation is given legal form by the state to which it applies for its charter; the secretary of state is the office where this procedure is done.

HANDOUT 5 (Continued)

9. The corporation organized under the laws of a state is known in that state as a "domestic corporation."
 - a. The corporation must secure a permit to transact business in other states, where it would be referred to as a "foreign corporation."
10. A stock corporation is organized for profit, has its capital stock divided into shares, and is authorized to distribute portions of the profits to the shareholders; a nonstock corporation is not organized for profit, and includes religious, charitable, civic, and similar organization.

HANDOUT 6

CORPORATE FORM OF ORGANIZATION

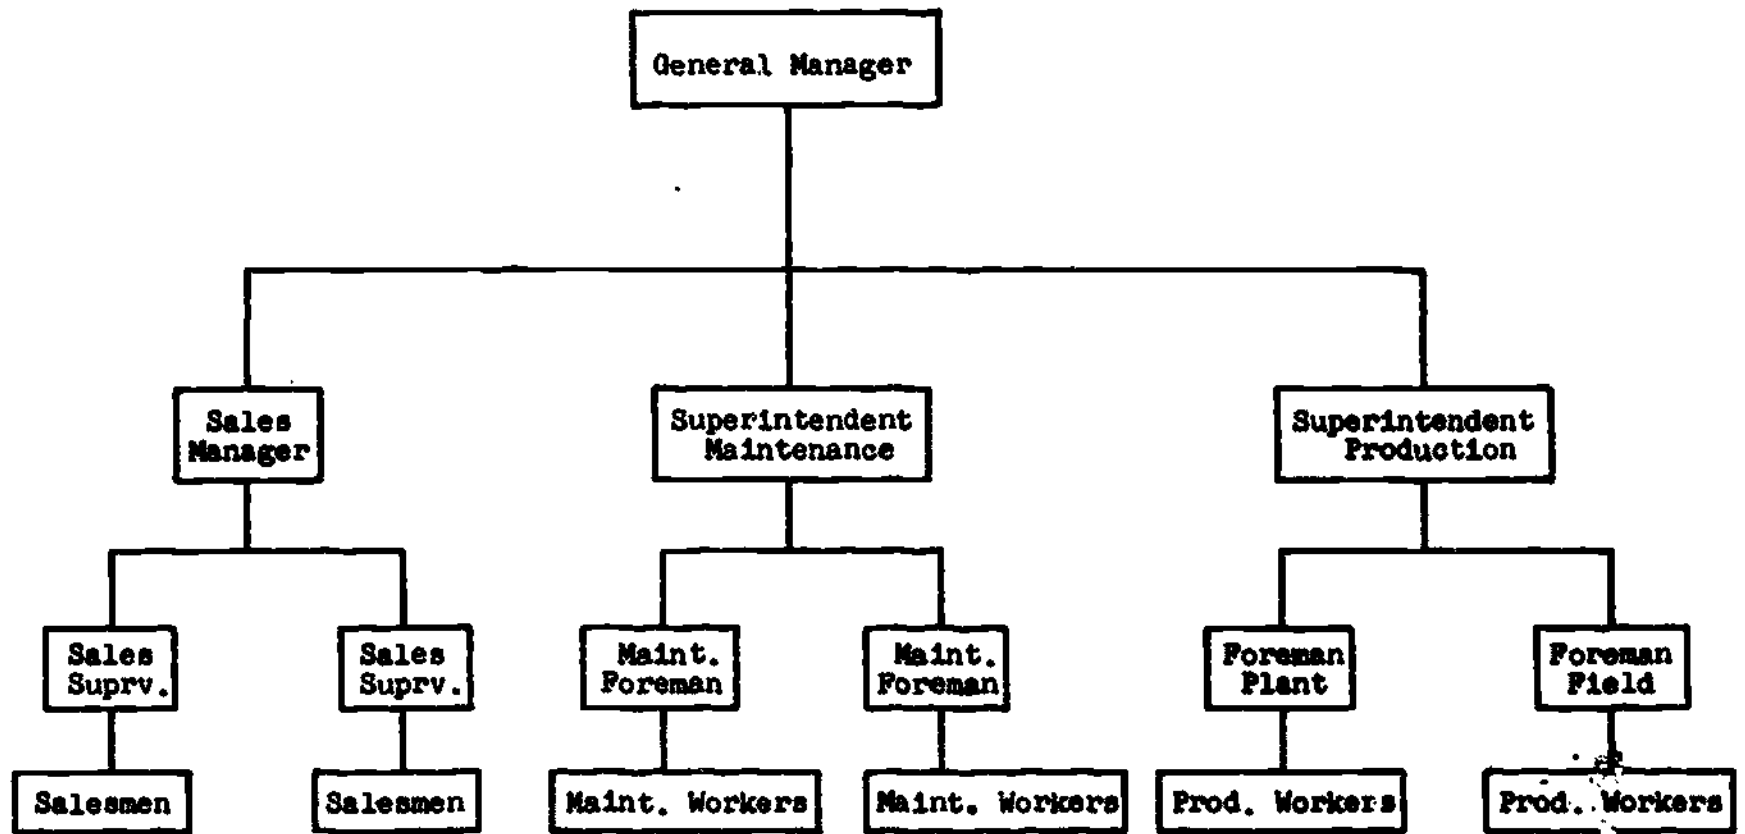

HANDOUT 7

AUTHORITY, RESPONSIBILITY, AND DELEGATION

1. Authority is handed down from someone at an upper level to someone at a lower level in the organization.
2. If a person is to be held accountable for results, he must be given adequate authority to get the job done.
3. Unless lines of authority are communicated and made clear, such authority is ineffective.
4. Lines of responsibility must be communicated and made clear, otherwise such a situation becomes detrimental to an organization.
5. The axiom "a person should not be given a responsibility without authority to carry it out" has considerable merit.
6. Authority should not be without responsibility, nor should responsibility be without authority--both must be coequal to be effective.
7. A person should know at all times to whom he is accountable--to whom his responsibilities lie for the performance of his duties.
8. Delegation involves the granting of an equal portion of authority and responsibility from one person in the organization to another so that certain activities can be performed.
9. It is impossible for one person to perform all duties, be responsible for such activities, and have all authority in the organization--such have to be given to others.
10. Delegation extends the capacity of a supervisor when he can no longer perform his responsibility alone--the supervisor is relieved of many of the routine tasks.
11. There can be resistance to delegation by some supervisors who are reluctant to admit their limitations or because of their desire for personal power.
12. The supervisor who delegates authority and responsibility always remains accountable for what is or what is not accomplished.

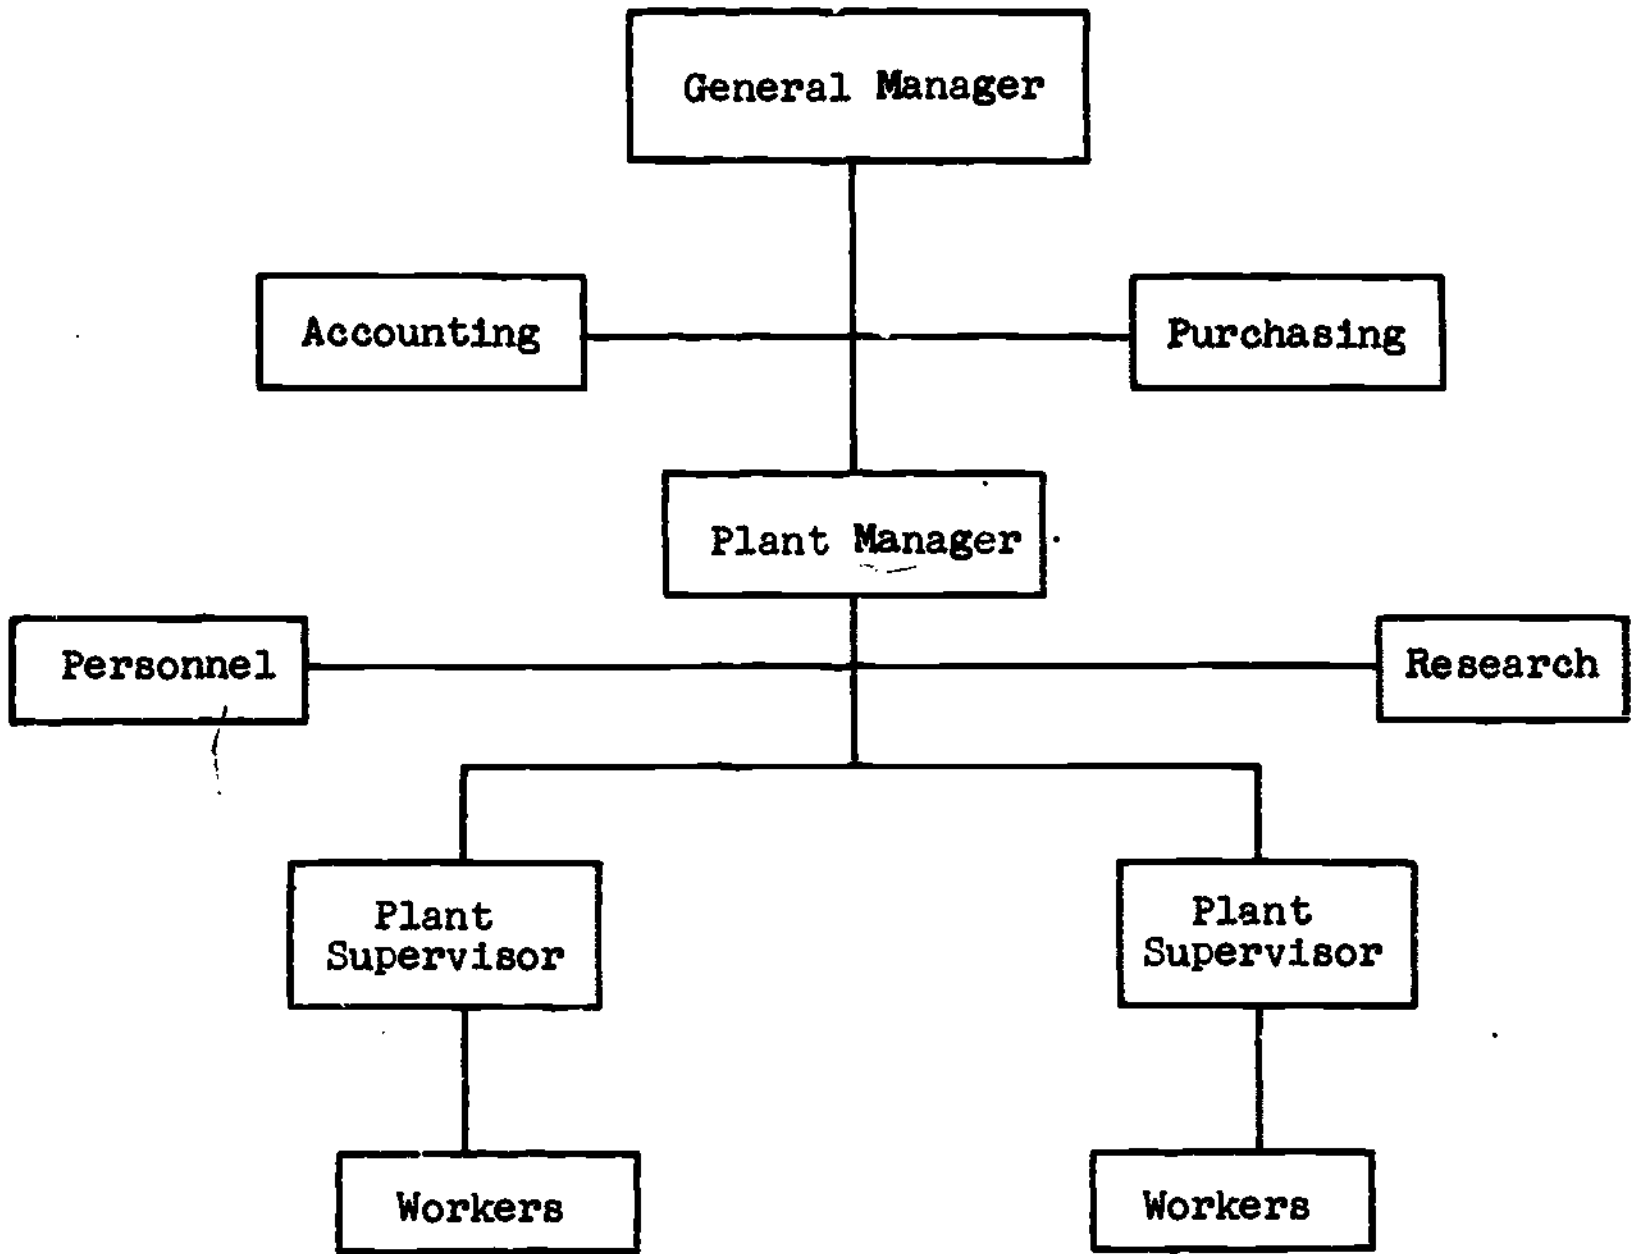

HANDOUT 8

LINE-TYPE ORGANIZATION

HANDOUT 9

LINE AND STAFF ORGANIZATIONAL STRUCTURE

HANDOUT 10

PLANNING--A FUNCTION OF MANAGEMENT

1. Planning is related to all managerial actions--every problem, situation, or activity requires some degree of planning.
2. The planning which each supervisor does must fit into the planning for the over-all organization.
3. The function of planning requires some sacrifices on the part of management--time and extra effort are needed for planning.
4. Since planning means the anticipation of future events, it varies from one situation to the next.
5. Experience is a prime factor in the improving of planning ability.
6. No plan is better than the judgment that goes with it--such judgment can be developed by recognizing and correcting weaknesses in previous planning activities.
7. Planning requires careful follow-up to evaluate successes or failures of proposed activities.
8. All managers must do planning for their respective work areas with such involving factors as "who, what, when, where, why, how" questions.
9. Before the supervisor can do effective planning, he must know his job and responsibilities.
 - a. Unless the supervisor fully understands the job--processes, machines, personnel, services or products, customers, etc.--any planning which may be done will be the "hit-or-miss" type.
10. The supervisor who knows how to plan and does so can save his company money:
 - a. Poor planning is the most common cause of unnecessary overtime.
 - b. Scrap and waste are items which result in large costs--such can be reduced with good planning.
 - c. Costly equipment and machine breakdowns can be eliminated with preventive maintenance planning.
 - d. Lack of planning can result in poorly trained employees which results in lowered productivity and other related problems.

HANDOUT 10 (Cont'd)

- e. A work schedule which is not planned will not keep employees productively employed for the full course of the day--this results in higher unit costs.

HANDOUT 11

ORGANIZING--A FUNCTION OF MANAGEMENT

1. Good organizing requires planning because an organization is constantly changing to keep pace with changing events.
2. People in the organization play a vital factor in its functions--principles of organizing must always consider the human element.
3. Organizing which has been done based on sound management concepts must still be subject to study and constant adjustments to meet the dynamic role it plays.
4. The function of organizing can not be done "overnight"--it requires sufficient time for the many phases of work necessary in the organizing process.
5. Organizing requires that provision be made for the supervision of all essential activities in the organization.
6. Responsibilities assigned and authority given to personnel must be clearly defined in the organizing function.
7. Organizing stresses the organizational structure--that is, the relations between management and workers, the relations between co-workers, and the relations between workers and management--such need to be spelled out in the organizational charts and manuals.
8. Staff and line functions must be differentiated and clearly defined in the organizing function.
9. The principle of organizing, which is often foremost in the minds of management, is that the work of the enterprise must be accomplished through the organized efforts of many persons and groups.
10. Organizing provides unity to the enterprise, as well as to the actions of the groups.
11. Without the function of organizing being performed effectively, much energy, effort, and material would be wasted.
12. Many problems which exist in management are direct results of improper or poor exercise of the organizing function.

HANDOUT 12

DELEGATING--A FUNCTION OF MANAGEMENT

1. The supervisor who delegates and directs work effectively is free to do more supervisory work and over-all planning.
2. Without delegation, a person is limited by what he alone can effectively control.
3. The practice of delegation enables the supervisor to organize the department's work more effectively.
4. The line of communication between supervisor and subordinate must be kept open when delegation is done.
5. A lack of ability to direct is a definite barrier to successful delegation.
6. Delegation requires: (a) that the supervisor be able to think ahead and visualize the work situation, (b) formulate objectives and plans of action, (c) communicate directions to subordinates.
7. Subordinates will hesitate to accept responsibility when they believe that they lack the necessary information and resources to do a good job.
8. Many supervisors fail to delegate because they have the "I can do it better myself" attitude.
9. It is a generally accepted principle that the supervisor must believe that his job requires that work must be done through other people before he will make full use of delegation.
10. The supervisor who fails to delegate duties to his subordinate because he lacks confidence in him should either train the subordinate or get another one.
11. Delegation is a two-sided relationship; the supervisor who is accountable for achieving certain results; and the subordinate on the other hand who is expected to carry out the assigned delegation.
12. The supervisor must always follow up on a delegated job with an appraisal of the employee's performance; pointing out weaknesses and giving praise for good work.

HANDOUT 13

CONTROLLING--A FUNCTION OF MANAGEMENT

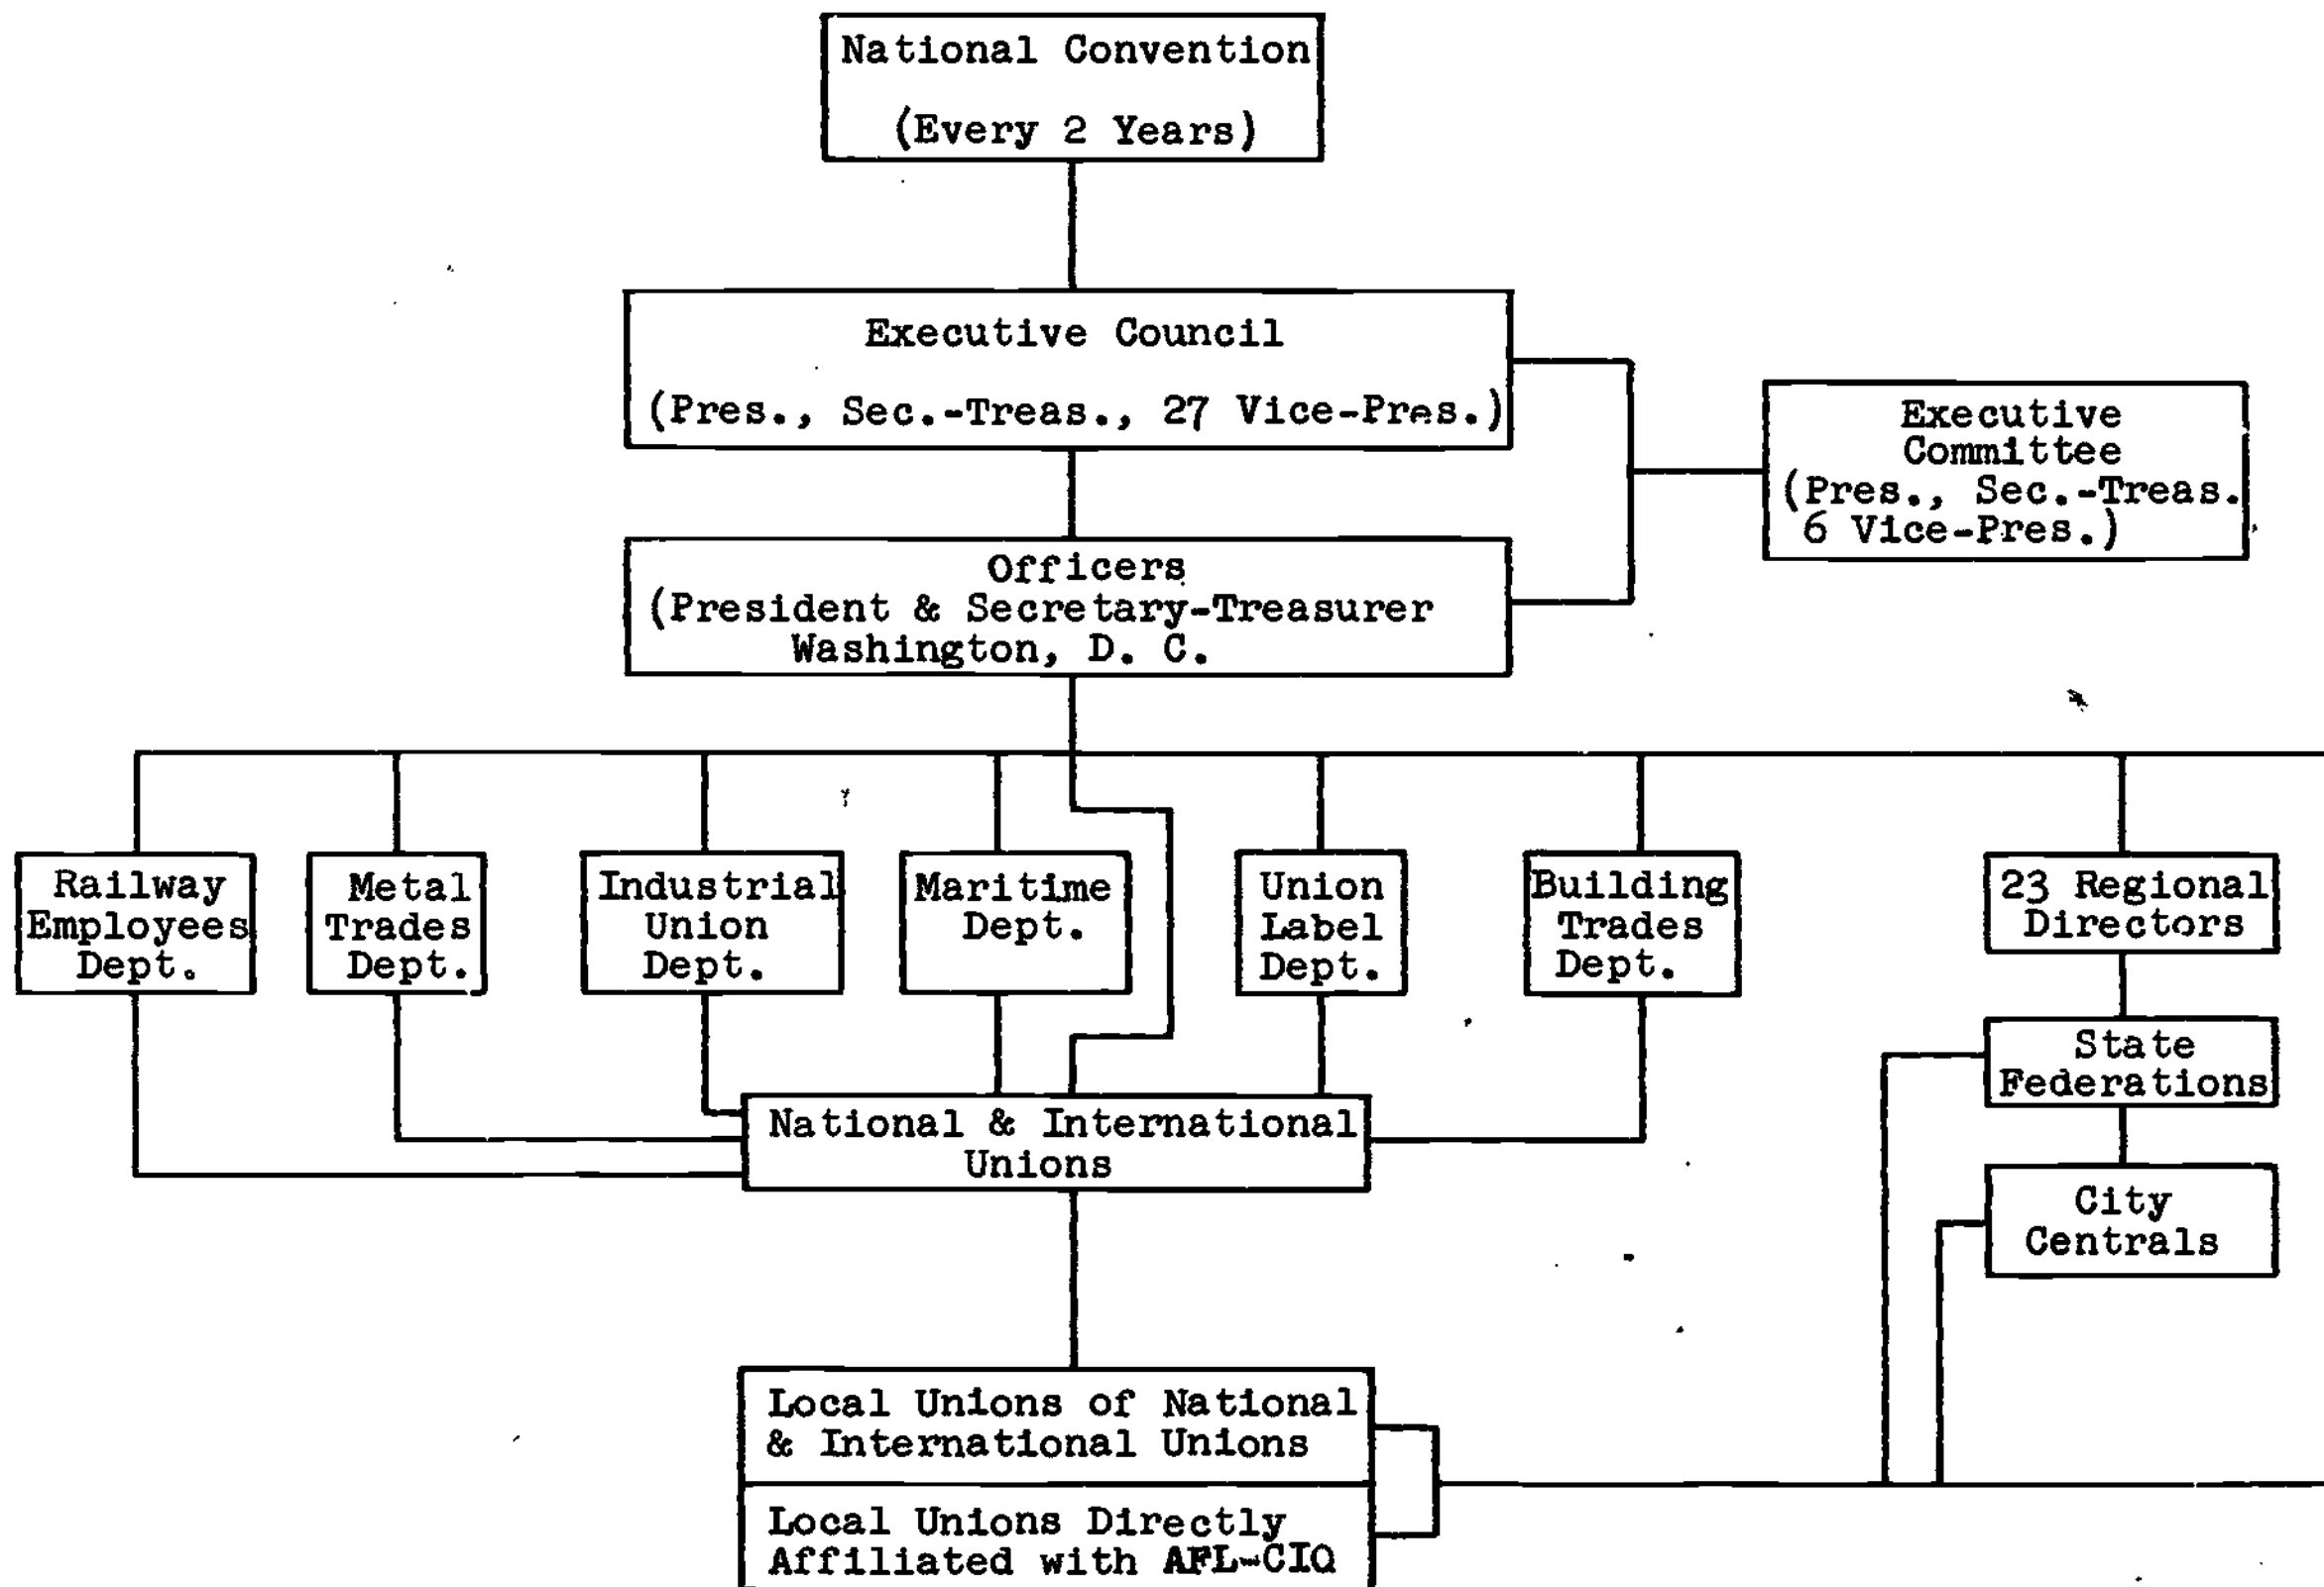

1. Controlling constitutes an important function of management as the activities of the enterprise must proceed within certain desired channels.
2. Control efforts on the part of management become easier when each member of the organization knows what the objectives and goals are of the organization, section, and department.
3. Controlling the activities of personnel in the organization by management necessitates the use of good channels of communication.
4. Having each person in the organization with fixed responsibility is effective in achieving good controls.
5. The organization structure has much to do with how effective the control of activities by management will be.
6. Policies which outline clearly the broad and comprehensive outlines for guiding the directions of the enterprise have much to do with control.
7. The use of orders, rules, and instructions aid greatly in controlling the activities of personnel in the organization.
8. An evaluation of control based on expected results must be made to determine the effectiveness of current control techniques.
9. Effective control requires the delegation of authority to those persons responsible for getting work done.
10. The degree of control which the supervisor must exercise is dependent upon several factors--efficiency of workers, morale of workers, motivation needed for effective work, leadership capabilities of subordinates, etc.

HANDOUT 14

CO-ORDINATING--A FUNCTION OF MANAGEMENT

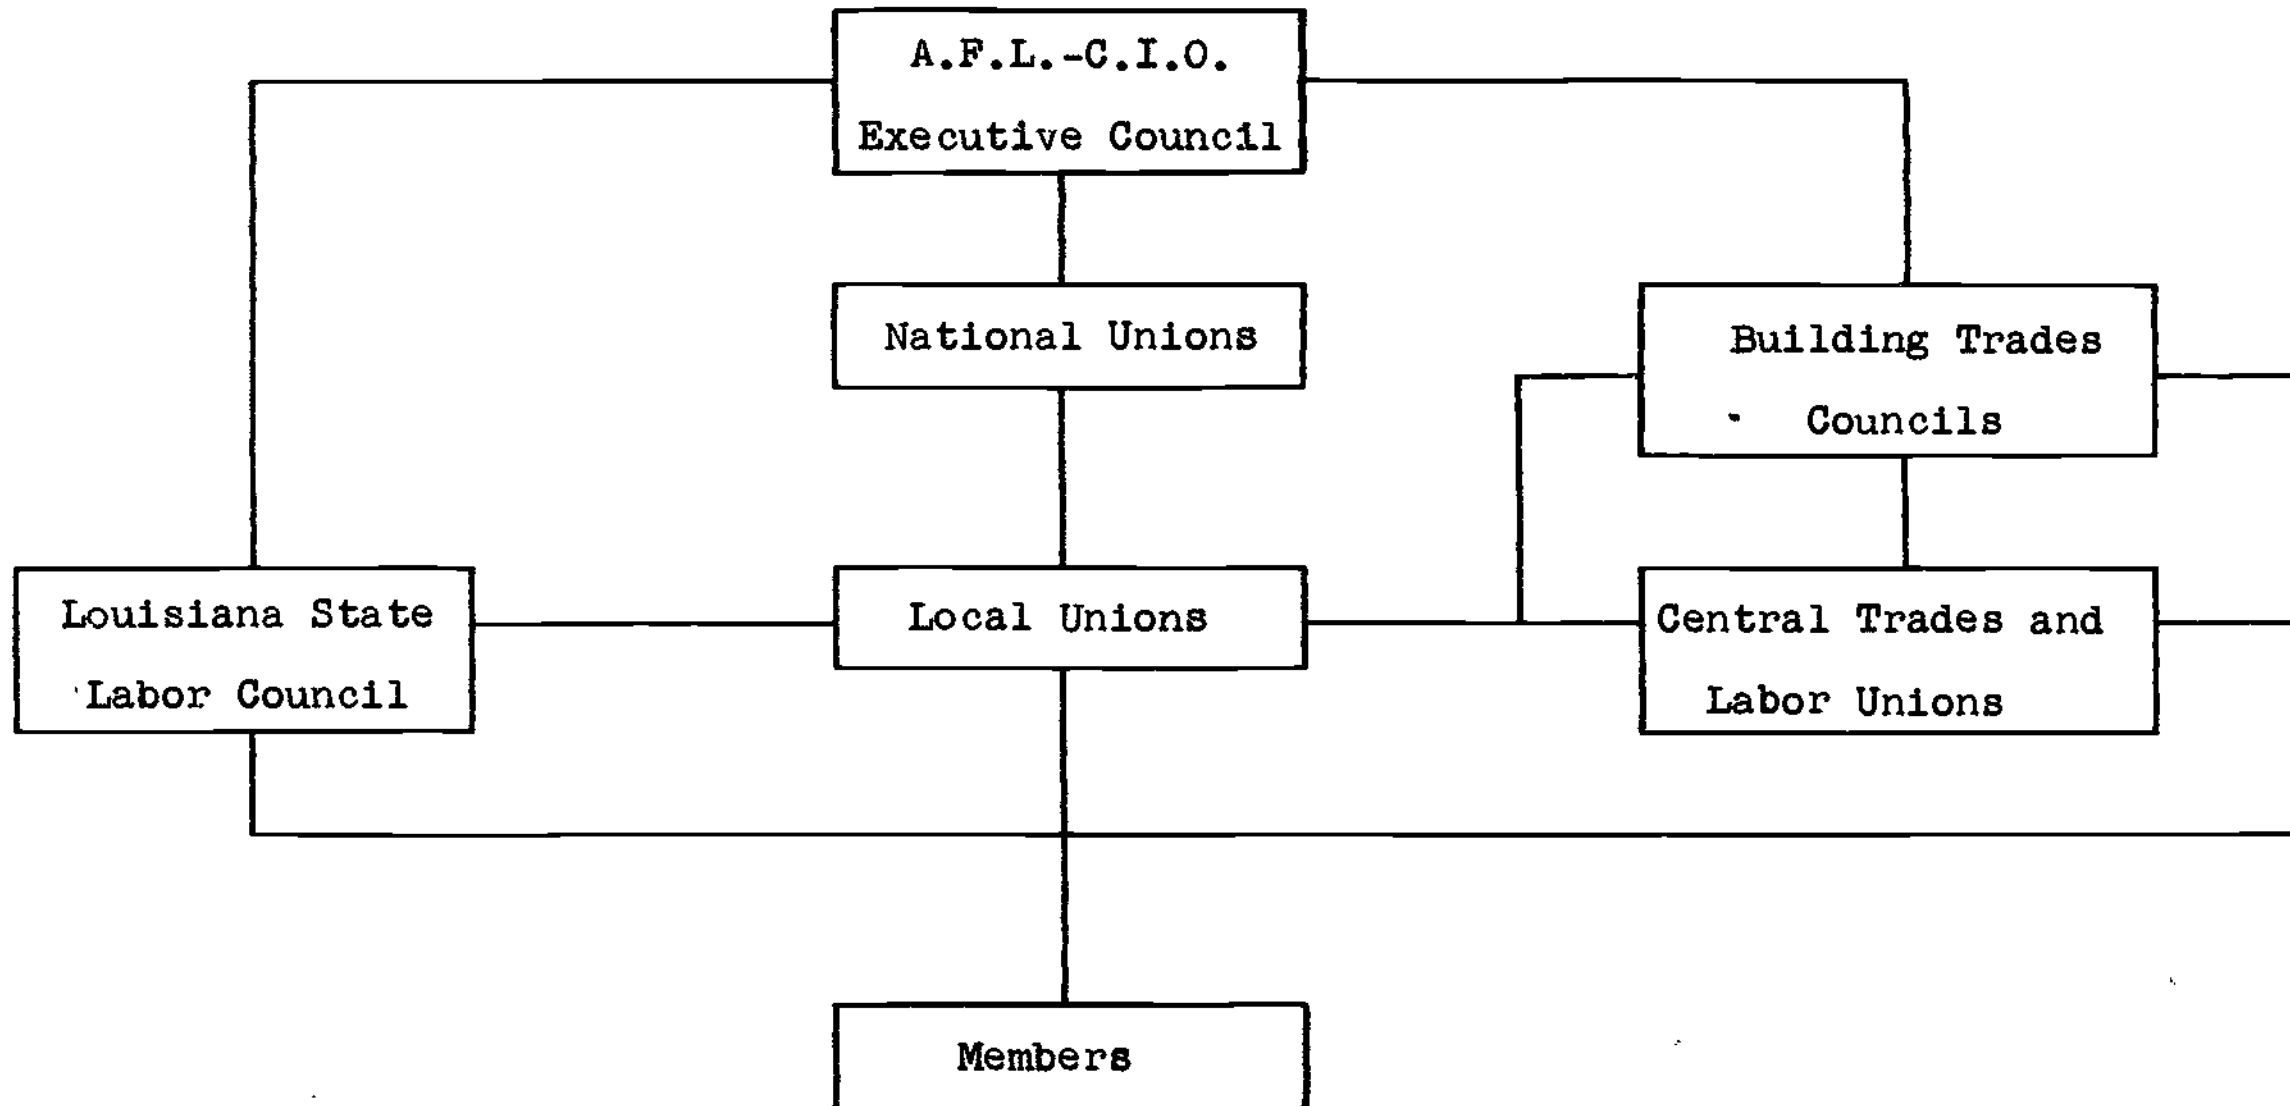

1. Co-ordination makes possible a greater total accomplishment than that evidenced by individuals working along independently.
2. A better understanding of organizational principles is possible where co-ordinating of activities is stressed.
3. Co-ordination results in a minimum of waste of material and worker efforts.
4. Greater competency and skill by workers in relation to their jobs is evidenced when they know exactly what is to be done.
5. Co-ordination results in a better utilization of the elements of human relations--the working together aspect unites individuals toward common goals.
6. Co-ordination results in a better organized work force based on the division of functions which blend together into a united effort.
7. Many of the problems normally encountered in the area of communications are not present when effective co-ordinating is practiced.
8. The function of co-ordinating gives management an opportunity for further developing their skill for getting work done through other people.
9. When the function of co-ordination is practiced, management has the opportunity to view the entire structure or balance of work being done.
10. Co-ordinating results in a degree of orderliness to operations which would not be evident otherwise.

STRUCTURAL ORGANIZATION OF THE AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS

HANDOUT 16

THE STRUCTURE OF THE A.F.L.-C.I.O. IN LOUISIANA

HANDOUT 17

THE SUPERVISOR--DRIVER OR LEADER?

DRIVER

1. Drives the worker
2. Uses threats and intimidation
3. Completes work at the expense of workers
4. Desires to dominate every person and activity
5. Is found in the back of the group "driving"
6. Blames others for failures or setbacks
7. Always takes personal credit for the success of any job
8. Does not give workers a chance to make suggestions
9. Stresses getting the job done by whatever means are necessary
10. Shouts insults at workers who make mistakes.

LEADERSHIP

1. Inspires and impresses the worker
2. Uses principle of mutual understanding and recognizes the right of the individual
3. Completes work, but develops workers in the process
4. Desires to share and delegate authority and responsibility
5. Is found in front of the group "leading"
6. Assumes blame; but evaluates situation so it will not happen again
7. Gives workers recognition for success of a job
8. Welcomes suggestions from workers
9. Stresses teamwork in getting the job done
10. Trains and coaches workers so that they know how to do the job

HANDOUT 18

QUALIFICATIONS FOR LEADERSHIP

1. Knowledge of human relations--a leader's job is to develop people.
 2. Ability to communicate without misunderstandings.
 3. The ability to exercise good judgment in all matters, both business and personal.
 4. Persistence in driving toward goal or objective.
 5. The ability to inspire confidence in people.
 6. A leader must understand people and know their weaknesses and strength.
 7. A knowledge and understanding of the broad policies of the organization.
 8. Capacity for doing work which requires both mental and physical energy.
 9. Willingness to listen to subordinates with a sincere desire to understand the person's point of view.
 10. Free from bias in dealings with others.
 11. Ability to control emotions and refrain from show of temper.
 12. Knowledge of the operations he is responsible for supervising.
 13. Teaching and training abilities.
 14. Reputation for honesty and forthrightness.
- Acceptance of responsibilities for getting work accomplished through a group of people.

HANDOUT 19

LEADERSHIP SELF-APPRAISAL TEST

Instructions: Read the questions carefully and answer them honestly. Nobody but you will see the results so be frank and objective. Before answering a question, think back and consider several incidents related to the question that involved you with subordinates, co-workers, or supervisors. There are three possible answers to each question; put a check under the answer appropriate to you for each question.

	Yes	Some- times	No
1. Do you enjoy the feeling that you have more knowledge of the job than anybody else in the department?			
2. Do you believe that all people are basically alike?			
3. Are your suggestions sometimes turned down by your supervisor because you have failed to consider all possible factors?			
4. Do you discard a new idea when you get opposition to it?			
5. Do you feel that the work in your department would slow down considerably if you were absent for two or three days?			
6. Do you feel that your subordinates do not show enough respect for you?			
7. Have you ever disliked someone because he reminded you of someone else you didn't like?			
8. Do you think there is any harm in letting subordinates know when you're angry?			
9. Do you believe you can just about judge a person's character by his appearance?			
10. Have you found it difficult to speak up in meetings and discussion talks with your supervisors?			
11. Do you feel that it is better to smooth things over with workers than to use authority in personnel problems?			
12. Do you feel that you're doing a good job only when your boss tells you so?			

HANDOUT 20

PRINCIPLES OF EFFECTIVE HUMAN RELATIONS

1. An individual wants to know what is going on in the department and company which he works--he needs to be informed.
2. Every person likes to feel important.
3. There are no two people who are exactly alike in their personalities, interests, dislikes, or likes.
4. A person likes to know that the other person is listening while he is talking.
5. Persons like to be asked their opinions on matters.
6. Most persons like to talk about the subjects which they are interested in.
7. Persons do not like to be criticized while others are present.
8. Most persons are sentimental about personal achievements, experiences, and feelings.
9. A person who is performing under a threat of fear will not put forth his best efforts.
10. When a person makes a mistake, he likes to have a chance to "save face."
11. A person likes to be recognized for a job well done.
12. The one thing which motivates a person more than anything else in his work is his feeling of importance in doing the job.
13. A worker will not show interest in his work unless he gets some personal satisfaction from doing it.
14. Persons want to be accepted as part of the work group or the department.
15. Every person wants those things which he believes he is rightfully entitled to.

THE CURRICULUM FOR A MODEL BUSINESS EDUCATION PROGRAM

INTRODUCTION

In this scientifically automated age of ours when space flights and news of population explosions are continuously in the headlines, much emphasis has been placed on the "college bound" student. Parental and administrative pressures have been applied to such a great extent that guidance personnel in our public schools must go through great pains in conducting nationwide college placement programs. In the meantime, what is being done by the public schools for the "business education" student? Are the high schools really as concerned about preparing him for suitable employment and life as they are about preparing the college bound student for entrance to college?

It appears that over the years the ambitions and desires of American youth have little relationship to the occupational structure of the world of employment. In 1964, over one-half of our high school graduates went on to institutions of higher learning¹ to prepare for occupations which involve a small fraction of our labor force. This seems to indicate that the national attitude of high school students has not changed. While the number of high school graduates is increasing, the number of students going to college is increasing even more.² From this, one can justifiably suggest that more and more students are embarking on college programs which tend to widen the gap between individual ambitions and collective reality.

PURPOSE

The purpose of this study will be to establish a business education curriculum to serve as a guide for implementing and/or improving business education programs in the State of New Jersey.

SCOPE

This study concerns itself primarily with the business education student and what can be done to prepare him for the world of work. An attempt will be made to establish a model* business education curriculum to encompass the entire realm of business career planning and preparation from guidance to job placement.

¹U S. Office of Education, Digest of Educational Statistics, 1964, OE 10024-64.

²Blackstone, Bruce I., "Functional Patterns for Guidance and Manpower Structure in Office Occupations," EBTA YEARBOOK, Vol. 39, 1966, P-161.

*model--an illustration to serve as a guide.

DEFINITIONS OF TERMS

Before this task is undertaken and in order to meet on common ground, it is necessary to define the following terms used throughout this study.

A Business Education Student, sometimes referred to as a Business Student, shall be considered to be a high school student who intends to enter employment in the office occupations upon graduation from high school.

Office Occupations shall be considered as office jobs that are normally found in practically any business which has a clerical activity--for example: general clerks, clerk typists, stenographers, bookkeepers, statistical clerks, file clerks, key-punch operators, business machine operators, administrative assistants, etc.

A Distributive Education Student, sometimes referred to as a DE Student, shall be considered as a high school student who intends to enter employment in the areas of merchandising, marketing, and management.

Skill Subjects shall be referred to as the subjects of typewriting, shorthand, bookkeeping, record keeping, business mathematics, business English, salesmanship, and related activities such as filing, business machine operation, electronic data processing, office practice, telephone techniques, etc.

General Business Subjects shall be referred to as the subjects of introduction to business, exploratory business, business occupations, business law, consumer economics, business organization and management, economic geography, etc.

Work Experience Programs shall be considered as coordinated programs of on-the-job learning which have been made part of the student's schedule.

Job Placement Programs shall be considered as carefully designed and coordinated services offered to all students for the purpose of assisting them in obtaining full-time employment in their fields of endeavor after graduation from high school.

Vocational Guidance shall be referred to as a full-time guidance activity designed to help a student choose, prepare for, enter, and make progress in an occupation which is appropriate for the student.

Exploratory Courses or Programs, sometimes referred to as Career Courses or Programs, shall be considered as scholastic activities which enable students to become aware of the various occupational opportunities that exist for the high school graduate.

The Secretarial Sequence shall be considered as the pattern of skill subjects and general business subjects necessary in a high school student's schedule in order for him to enter the secretarial field upon graduation.

The Bookkeeping and Accounting Sequence shall be the pattern of skill and general business subjects necessary in a high school student's schedule in order for him to enter the bookkeeping and accounting field upon graduation.

The Clerical Sequence shall be the pattern of skill and general business subjects necessary in a high school student's schedule in order for him to obtain a routine clerical position upon graduation.

The Distributive Education Sequence, referred to as the DE Sequence, shall be the pattern of skill and general business subjects necessary in a high school student's schedule in order for him to enter the fields of merchandising, marketing, and/or management.

The General Business Sequence shall be the pattern of general business subjects which are interwoven throughout the secretarial, DE, bookkeeping, and clerical sequences.

Slow Learners shall be considered as those students who do not progress as rapidly through the sequences as they should.

BASIC CONSIDERATIONS

Practically every business educator will agree that business education serves two major purposes. First, it is concerned with the preparation of students for entrance into business careers, for rendering efficient service in their careers, and for the advancement to higher levels within their careers. From this, one can conclude that business education is one of the divisions of vocational education.

The second purpose of business education is concerned with those principles and practices of everyday business relationships that aid in conducting one's personal business. The need for this type of education arises from the fact that everyone, regardless of occupation or economic status, engages in many activities of a business nature. In this light,

general business education is a form of education that every citizen should have.

To achieve the first purpose of business education--the vocational objective--the business educators, guidance personnel, and school administrators need to know the occupations available to students in their communities, the duties and specialized knowledge required of the workers, and the attitudes, habits, personal characteristics, and human relation skills that will contribute to the development of an acceptable employable personality. Further, they must know the skills and knowledges necessary for workers to advance on the job, once the initial job has been obtained.

To achieve the second purpose of business education--the general business objective--business educators, guidance personnel, and school administrators need to know the business activities in which all citizens of their community engage and the kind of knowledge these citizens need to possess.

The big problem in achieving these objectives is informing business educators, guidance personnel, and school administrators of what they need to know and use in order to implement a sound curriculum in business education. Further, it is necessary for all of these educators to get "off their backsides" and do a little business community research by means of personal involvement, surveys, follow-up studies, and job analyses.

A sample business education survey of a New Jersey school in Morris County is attached as ANNEX "A" along with a sample follow-up study form attached as ANNEX "B". Before any sound program can adequately be improved or revised, a follow-up is necessary.

Such surveys and follow-up studies can easily determine course content for the specific occupational opportunities and requirements. Determining the general business content--those things all citizens should know--is very difficult, however. Some means of determining general business content are offered by H. G. Enterline.³ He suggests using newspaper analysis, analysis of child and adult life, and analysis of the writings of frontier thinkers.

³Enterline, H. G., "Trends of Thought in Business Education,"
Monograph 72, South-Western Publishing Company, 1947, P-13.

Another means is seeking out advice from the experts. Such examples of expert recommendations can be obtained from such sources as the National Task Force on Economic Education,⁴ Gratz's "Major Issues in Business Education,"⁵ Warmke's "Distributive Education Issues,"⁶ National Business Education Association, New Jersey Business Education Association, and the New Jersey State Departments of Business and Distributive Education.

Role of the Skill Subjects

The primary role of the skill subjects in business education is to develop vocational competency.

Role of the General Business Subjects

The primary role of the general business subjects in business education is to give depth and understanding of our economic society in order that the student can become a productive and informed worker, citizen, and consumer.

Role of Work Experience Programs

The primary role of work experience programs is to provide the student with practical on-the-job learning which is coordinated with his high school business and/or distributive education taking into consideration the student's career objective. Attached as ANNEX "C" are proposals for work experience programs at a New Jersey high school in Burlington County which were completed in 1966.

Role of Job Placement Programs

The primary role of Job Placement programs is to place high school students in full-time jobs leading to their career objectives upon graduation. Attached as ANNEX "D" is a summary and report of the Business Education Job Placement Program at Randolph High School, Randolph Township, New Jersey, which was completed in 1966. Further, attached as ANNEX "E" is an illustration of the duties and responsibilities of a business education job placement coordinator.

⁴Committee for Economic Development, Economic Education in the Schools, 711 Fifth Avenue, New York, 1961.

⁵Gratz, Jerre E., "Major Issues in Business Education," Monograph 106, South-Western Publishing Company, 1962.

⁶Warmke, Roman F., "Distributive Education Issues," Monograph 102, South-Western Publishing Company, 1960.

Role of Exploratory Programs

The primary role of exploratory programs is to provide the student with an opportunity to experiment with skills and knowledges which are encountered later in the student's curriculum. Attached as ANNEX "F" is a brief outline of an experimental exploratory course in business and mathematics. Notice how career and occupational information was integrated.

Role of Occupational and/or Career Programs

The primary role of occupational and/or career programs is to acquaint the student with the various occupational and career opportunities available in or near the employing community. Refer to ANNEX "F".

Role of Distributive Education

The primary role of Distributive Education is to prepare students to enter the fields of merchandising, marketing, and management. Attached to ANNEX "G" is a statement of distributive education in New Jersey according to Mr. Robert B. Joy, Director of Distributive Education for the State of New Jersey.

CRITERIA FOR A CURRICULUM IN A MODEL BUSINESS EDUCATION PROGRAM

In 1965, the Vocational Division of the New Jersey Department of Education enlisted the services of Dr. William Polishook of Temple University to form a committee and establish criteria for a model business education program. Further, fifteen high schools were selected throughout New Jersey to participate in reacting to the criteria. The participating schools were:

Barringer High School - Essex County
Bridgewater-Raritan High School - Somerset County
Dickinson High School - Hudson County
Ewing High School - Mercer County
Hunterdon Central High School - Hunterdon County
Linden High School - Union County
Manchester Regional High School - Passaic County
Moorestown High School - Burlington County
New Brunswick High School - Middlesex County
New Milford High School - Bergen County
Oakcrest High School - Atlantic County
Pennsauken High School - Camden County
Red Bank High School - Monmouth County
Salem High School - Salem County
Vineland High School - Cumberland County

Twenty-six statements of criteria were given:

1. It is assumed that the general aims of education at the high school level shall be the aims of business education at this level. In view of this criterion, only such further assumptions as apply especially to business education in secondary schools will hereinafter be presented.
2. Local conditions, not only within a community but often within a single school in that community, must be taken into consideration in setting up and administering a program of business education.
3. Regardless of the type of school organization which prevails in any community there are two distinct, but articulated, periods of training in the field of business education. For the purposes of our study one may be called the pre-vocational period, and the other may be called the vocational period. The pre-vocational period should be given over largely to exploration, try-out, personal use, and general education.
4. The vocational period should be given over largely to training in preparation for well-defined types of business occupations.
5. During the pre-vocational period, each pupil should decide under guidance which of the office, store, and other initial-contact occupations he wishes to prepare for.
6. In the business career of any pupil, the ultimate goal job is more important than the initial-contact job since it has been demonstrated that any type of clerical or other business work may be used as a stepping stone to higher levels of employment.
7. In view of the greater importance of ultimate goals, try-out courses in business should be so constructed as to reveal the aptitudes, abilities, and interests of pupils with respect to such goals as well as with respect to the more immediate initial-contact jobs.
8. Vocational skill-training should form a part of the training for practically every boy or girl in the business department, but such skill-training should be confined to a single skill or a closely related group of skills--stenographic, bookkeeping, selling, office machine operation, etc., in order to make room for an adequate general education program.

9. The largest possible amount of general education consistent with sound vocational training should accompany all business education, but such general education should, wherever possible, be adapted to the needs of business pupils.
10. Since continuity of practice is essential to the development of skills of all sorts, as far as is practicable, short, intensive courses in skill subjects should replace longer courses with intermittent practice on alternate days.
11. Such skills as are essential to any particular business occupation for which a pupil is training should be developed as nearly as possible to the time when the pupil will leave school and enter upon such employment.
12. The core of the business curriculum should be general education instead of bookkeeping, shorthand, or any business subject or groups of such subjects.
13. Preparation for college cannot be accepted as a major objective of high school business education since the large majority of graduates of a high school business department do not go to college. Preparation for college and training for business positions require different programs.
14. Since the aim of vocational business education is to prepare for the performance of specific office or store or other business duties, the tests of achievement in the technical or skill subjects in this field should square with the requirements of occupational life instead of with the usual academic standards.
15. Since the initial-contact positions and promotional opportunities open to boys are likely to be different from those commonly open to girls, the high school program of business education should be so constructed as to meet the apparent needs of both sexes through specialized or differentiated curriculums.
16. Boys and girls who lack the personal, mental, and physical characteristics which suggest the possibility of advancing beyond the initial-contact job should be encouraged to seek some other form of vocational training since the clerical level of business employment is unsatisfactory as a permanent goal because its financial rewards are inadequate to the needs of adult family life.

17. Since the degree of success in business which may be attained by any individual is dependent upon many factors such as "business ability," "personality," "social qualities," "mental ability," "natural intelligence," "training," "family connections," etc., no pupil should be barred from the business program because his I. Q. is average or even somewhat below average.
18. Since the conventional and traditional subjects of bookkeeping and shorthand require a high degree of "mental ability," or "student ability," or "scholastic ability," it is clear that only those who rate high in this type of ability should be encouraged to pursue training for entrance into business through the medium of a bookkeeping or stenographic position.
19. Since selling (retail or outside) requires what may be called an alert mind and pleasant personality, it is clear that persons who do not possess these qualities should be discouraged from seeking training for selling positions.
20. The high school business program must contain the best possible provision for such pupils as are not likely to succeed in stenographic, bookkeeping, and selling positions.
21. All business courses should be offered with the needs of business pupils in mind and pupils outside the business department should be permitted to elect these courses only when it is clear that they will do the work required exactly as if they were taking such courses with definite vocational intent.
22. The development of vocational skills and occupational understanding is accomplished most expeditiously and satisfactorily when the trainee has an opportunity to establish contact with actual business during the period of training; hence, it is desirable to make provision for some form of cooperative training whenever feasible.
23. The syllabus for each subject in the business curriculum should contain for that subject (a) statement of aims, (b) essential content for use in achieving those aims, (c) suggestive methods for using that content, (d) definite testing procedure for determining whether or not aims have been achieved, and (e) helpful bibliography.

24. Businessmen should be consulted in the organization of any high school business curriculum which is expected to train boys and girls for employment; hence, an advisory committee should be organized and used freely in consultive capacity.
25. The outcomes of a vocational business education program can be improved by providing (as a joint responsibility with guidance personnel) a placement service and continuous follow-up procedures.
26. It must be assumed that the instructional staff is competent from the point of training and experience in the business world and is also up-to-date by maintaining professional as well as business contacts.

Attached as ANNEX "H" is a copy of the report to the Vocational Division of the New Jersey Department of Education, submitted by Ewing High School, Mercer County, in 1966, which indicates very favorable reaction to the criteria.

DESCRIPTION OF CURRICULUM FOR A MODEL BUSINESS EDUCATION PROGRAM

From what you probably have determined, the curriculum for a model business education program would include all the criteria set forth by the Polishook Committee. It is a curriculum designed for meeting the vocational and personal needs of the business education student in order that he may become an effective worker, citizen, and consumer in our society. The curriculum must be established through cooperative effort on the parts of the business teachers, other teachers, guidance personnel, administrative staff, board members, business community, students, and parents within the community. The curriculum must be flexible enough to meet the needs of all business students and be able to provide the resources necessary for students who are not likely to succeed in stenographic, bookkeeping, and selling positions. The core of the curriculum should be general education--those things all students should know--and not merely the skill subjects.

In keeping within the criteria as established by the Polishook Committee and keeping in mind the major objectives of business education, the following model business education subject sequences are offered--one plan without cooperative work experience for those schools who find it impossible to establish cooperative work experience, and one plan with cooperative work experience for those schools that have the community resources at their command. A brief description of each business and distributive education subject at each grade level, along with reasons for implementation, will be given on subsequent pages in this booklet.

Further, it must be realized that a minimum seven period day is necessary and that split or double sessions would be completely undesirable. In addition, it may be assumed that in the sequences for high schools without a co-operative work experience program that an in-school work experience program be established and operated during the later phases of the student's learning.

DESCRIPTION AND JUSTIFICATION OF SUBJECT MATTER

General Business Subjects

As was mentioned earlier, the primary role of the general business subjects is to give depth and understanding of our economic society in order that the student can become a productive and informed worker, citizen, and consumer. With this role in mind, the following brief course descriptions are offered for the general business subjects, along with justifications for grade placement.

Exploratory Business - a survey course for all ninth grade vocational students, designed to provide the student with an opportunity to experiment with business subjects which are offered later in the curriculum and to acquaint the student with the various career opportunities available in the fields of business and distributive education. Exploratory business is pre-vocational. Therefore, no standards of vocational competency should be used for grading purposes. The course is offered in ninth grade because it leads to all business and distributive subjects taken later.

Economic Geography - a general education course fundamental to developing an understanding of economics and of trade and industry in the local community, nation, and the world. The course should emphasize Man's way of earning a living. The course is offered in ninth grade (or tenth) because it is basic in understanding our economic society and the worker's role in this society. What has happened to economic geography over the years is, indeed, a shame. Business teachers, feeling highly incompetent in teaching the subject, have shoved it over to social studies departments, where for the most part, economic geography has either been dropped entirely or taught from a historical view rather than a current view. Economic geography is living, current, and dynamic if properly taught from up-to-date materials.

Introduction to Business - (General Business) - As the title implies, this course provides an introductory study of business. The course is truly general education for all students who will become active members of our business economy. The main objectives should be business education for personal use and developing an understanding of how businesses operate.

Further, the course can be used for developing occupational explorations if a course in exploratory business is not offered. Applied business mathematics should be integrated, but the emphasis should be on the general education objective rather than on developing a vocational mathematics. Introduction to business should be taught on the ninth or tenth grade level because it is a basic course in how business operates, and it is fundamental to the general business courses that follow.

Business Organization - a one-semester course, offered normally in eleventh or twelfth grade, but can be taught as early as tenth grade, dealing with why businesses are organized as they are. Opportunities are given to students to exercise judgements on such things as the role of the employer, employee relations, management, budgets, and government regulations pertaining to businesses. Potential workers should certainly know how businesses are organized in order to more fully understand their roles in business and everyday life.

Consumer Economics - a one-semester course which can be taught on the tenth, eleventh, or twelfth grade level, dealing with the general principles of buying as applied to various classes of consumer goods. Emphasis should be placed on economic problems that are encountered by the consumer such as installment buying, determining prices, personal budgeting, and agencies designed for the protection of the consumer. Teenagers have more money in their possession than ever before. It is imperative that they learn how to spend wisely in order to prepare for life in our economic society.

Business Law - a one-semester course in general business education normally offered in grades eleven or twelve. The primary emphasis should be on the basic principles of law which apply to the student in dealing with others in his everyday activities as a citizen and worker. The course is not designed to serve as a training ground for lawyers, but is designed to develop an understanding on the part of the individual of knowing one's rights according to the law and respecting the rights of others.

As you can readily see, the core of a model business education program is general education--those things all students should know; namely: general economic principles of our society (economic geography); career information and experimentation (exploratory business); the operation of business (general business); the organization of business (business organization); problems of the consumer (consumer economics); and the role of the citizen and the law (business law).

The Skill Subjects

The primary determining criteria of the grade placement of the skill subjects should be the nearness to the application of that skill to the work situation. You probably noticed earlier that where a work experience program is part of grade 12, the skills are offered earlier in the curriculum. Where there is not a work experience program, the skills are offered later in order that vocational competency will be obtained immediately before the student enters employment.

Typewriting I - (Beginning Typewriting) - Typing is basic to almost all business dealings. Practically all business correspondence and reports are typed or printed. Forms of typewriters are used as input devices for the most complicated types of electronic data processing equipment. All students with career objective in business should be encouraged to take at least one full year of vocational typewriting, with two years strongly recommended to develop adequate vocational competency. Typewriting I should serve as an introduction to vocational typing and typing for the personal use of the business student. Therefore, a separate course in personal typewriting should be offered to non-business students without emphasizing the vocational objective. Typewriting is normally begun in the tenth grade because it is the basic tool of the office worker. In Typewriting I, the student should learn the keyboard, including the numbers, by touch. He should learn how to type routine vocational and personal materials such as letters, simple tabulations, simple reports, and develop proper typing techniques. Emphasis should be placed on developing proper typing techniques rather than on developing complete vocational competency in production speed and accuracy.

Typewriting II - (Advanced Typewriting) - a full-year advanced course in typewriting designed to develop vocational competency as applied to the individual students of stenography, bookkeeping, clerical, and DE occupations. For the stenographic student, typewriting forms the finished product in transcription. For the bookkeeping student, it serves as a tool for preparing bookkeeping reports. For the clerical student, it serves as the primary tool of the office. For the DE student, it serves as a tool for preparing sales reports and correspondence. Emphasis should be placed on actual production rather than on words per minute.

Bookkeeping I - (Beginning Bookkeeping) - a full-year course designed to introduce the student to the principles and applications of bookkeeping as applied to business and personal use. Not every student who takes bookkeeping will become a bookkeeper, but the knowledge he obtains will serve

as part of the total knowledge he needs. Bookkeeping is basic to all financial business records; therefore, it will be valuable not only to the bookkeeper, but to the typist, stenographer, clerical worker, and sales clerk. Complete mastery of Bookkeeping I is necessary to succeed in Bookkeeping II.

Bookkeeping II - (Advanced Bookkeeping) - a full-year course in advanced bookkeeping, designed to be wholly vocational in nature. With the rapid influx of automated accounting equipment, the student must not only learn how to keep neat and accurate records through the principles of the bookkeeping cycle, but he should understand the bookkeeping cycle through the eyes of automation and be familiar with the types of equipment used in the process.

Shorthand I - (Beginning Shorthand) - a one-year course designed to introduce the student to vocational shorthand. The primary emphasis should be placed on learning the principles and techniques of reading and writing shorthand effectively enough to progress on to advanced shorthand and transcription. Before progressing to advanced shorthand, the student should possess the necessary English skills and abilities and satisfactory typing achievement which would indicate the potential to succeed in producing mailable transcripts.

Shorthand II - (Advanced Shorthand) - an advanced, full-year course in vocational shorthand, designed to develop vocational competency in taking and transcribing shorthand. It should be understood that taking dictation well in itself does not develop proficiency in transcription. The student must know how to use the skills and knowledges acquired in typewriting and English communication. Emphasis should be placed on taking and transcribing shorthand rapidly and accurately.

Sales - (Salesmanship) - a one-semester skill subject, designed primarily for the DE student; but can apply to all business students as a general business course in the eleventh or twelfth grade. Emphasis should be placed on the principles and techniques of selling as applied to the retail sales clerk, service station employee, restaurant waitress, wholesale clerk, producer, etc. As most business educators will agree, all of us are salesmen in one respect or another. Being able to sell one's skills and abilities is just as important as selling another one's products. Opportunities for demonstrating sales techniques should be fully provided for in class.

3
3

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963

Advertising - a one-semester course, offered in conjunction with sales and of primary interest to the DE student. Emphasis should be placed on the principles and techniques of advertising. This course is offered prior to starting DE work experience. Students should be taught the various media through which advertising is disseminated and be provided with career information about this dynamic field. Opportunities for demonstrating advertising techniques should be provided for in class.

Record Keeping - a one-year course, designed primarily for the clerical student who does not have the interest or potential to pursue the formal Bookkeeping I course. Emphasis should be placed on such topics as cash records, merchandising, payroll, banking, and personal income tax. Record Keeping should provide the student with an elementary knowledge of the simple recording activities and mathematics of business and personal life.

Secretarial Office Practice - the final course on the high school level which prepares the stenographic student for work. Emphasis should be placed on real work situations and the student should be completely vocationally competent as a beginning stenographer upon completion of the course. The instruction should include the use of office appliances, care of office supplies, and the development of proper work habits and personality. Where possible, the class can serve as the coordinating headquarters of the work experience and job placement programs. Standards of achievement should be based upon the standards of the employing community.

Clerical Office Practice - the final course on the high school level which is designed to prepare the clerical worker for beginning employment. The instruction should include the use of office equipment found in the employing community, care of supplies, and the development of proper work habits and personality. Some schools provide the bookkeeping student with the opportunity to enlarge his knowledge through the use of special materials obtained from the employing community. As in secretarial office practice, the class may serve as the headquarters for the work experience and job placement programs.

Distributive Education with Work Experience - designed as the coordinating class for DE students. Occupational information is provided, development of work habits and business personality, use of cash register and other sales appliances is learned, and special individual and group instruction is given to coordinate the work experience and job placement programs.

Other Subjects

English Skills - It might seem elementary to mention that English is the major method of communication in our society--oral and written. Yet, with four years of "English" in the high school curriculum, it is a well known fact that employers constantly complain that their office personnel cannot spell, punctuate, make sense in writing business correspondence, or speak effectively. Perhaps, English instruction for the business student should be more vocationally oriented with separate classes for the business student for the entire four years. It may be that emphasis should be placed on writing effective business communications rather than on theme writing. It is possible to have the student read the works of businessmen and economists and make oral and written reports rather than emphasizing other forms of literature. Maybe, grammar, spelling, and sentence structure can be developed through constant use of a vocabulary that is inherent to the businesses within the employing community. It is strongly recommended that business teachers and English teachers work together to formulate a fruitful program of English instruction for the business student

Social Studies - In the social studies courses, the student should develop an understanding of political institutions, economic systems, cultural ideals, and the duties and obligations of good citizens. Social studies should deal with the past, present, and future. Although the past of our society is important, perhaps more emphasis should be placed on the present and the future as this is when our students are living and going to live. Business teachers and social studies teachers should work cooperatively to establish courses of study which reflect current concepts of political and economic systems.

Physical Education - should be a well organized program of physical activity which will help the student develop physically, mentally, socially, and emotionally. Opportunities for expressions of good citizenship should be reflected in such things as sportsmanship, school spirit, and fair play.

Music, Art, & Crafts - should be culturally oriented courses that can lead to appreciation, participation, and self expression in creative activity. Instruction in these courses should be developed so that the student is made aware of some of the occupations available to talented individuals in the fields of retailing, merchandising, and advertising.

As you can see, the above subjects all contribute to a student's general knowledge and well being. Each is as important as the next if the emphasis is kept in line with the objectives.

ELEMENTS OF A SOUND BUSINESS EDUCATION PROGRAM

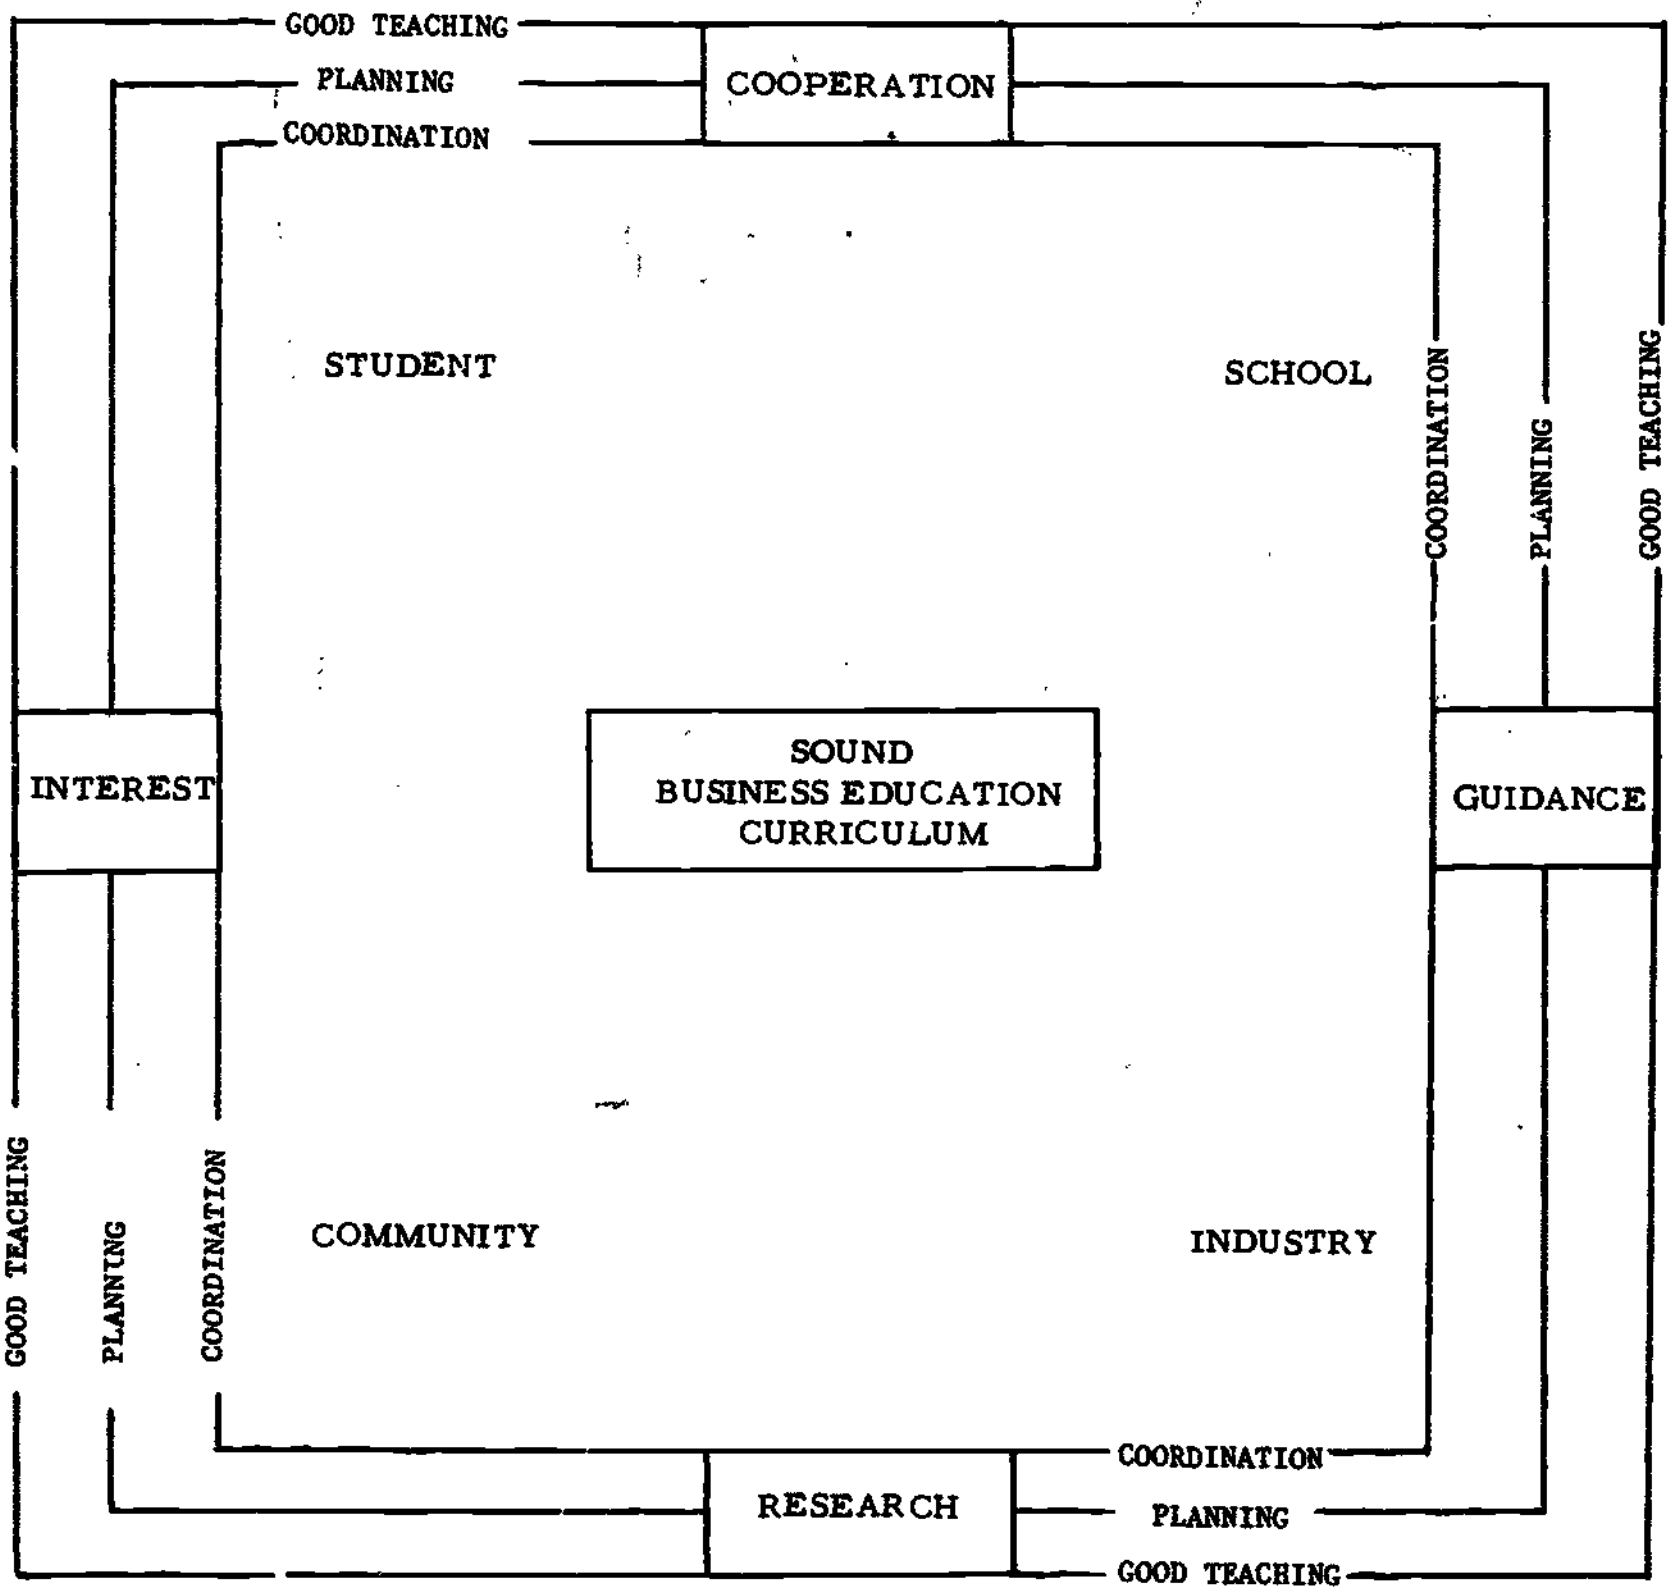

The elements of a sound business curriculum must take into consideration the student, community, industry, and the school: the student, because he and his career objective are of primary importance; the community, because that is where the student is going to live; industry, because that is where the student is going to work; the school, because that is where the student is going to learn how to live and work.

In order to make the elements of a sound business curriculum effective, the school must have the interest and cooperation of the student, community, and industry. Industry must have the interest and cooperation of the student, community, and school to obtain effective workers. The community needs the interest and cooperation of the school and industry to train and employ its youth. The students need the interest and cooperation of the community, industry, and school because that is where they are going to live, work, and learn how to live and work.

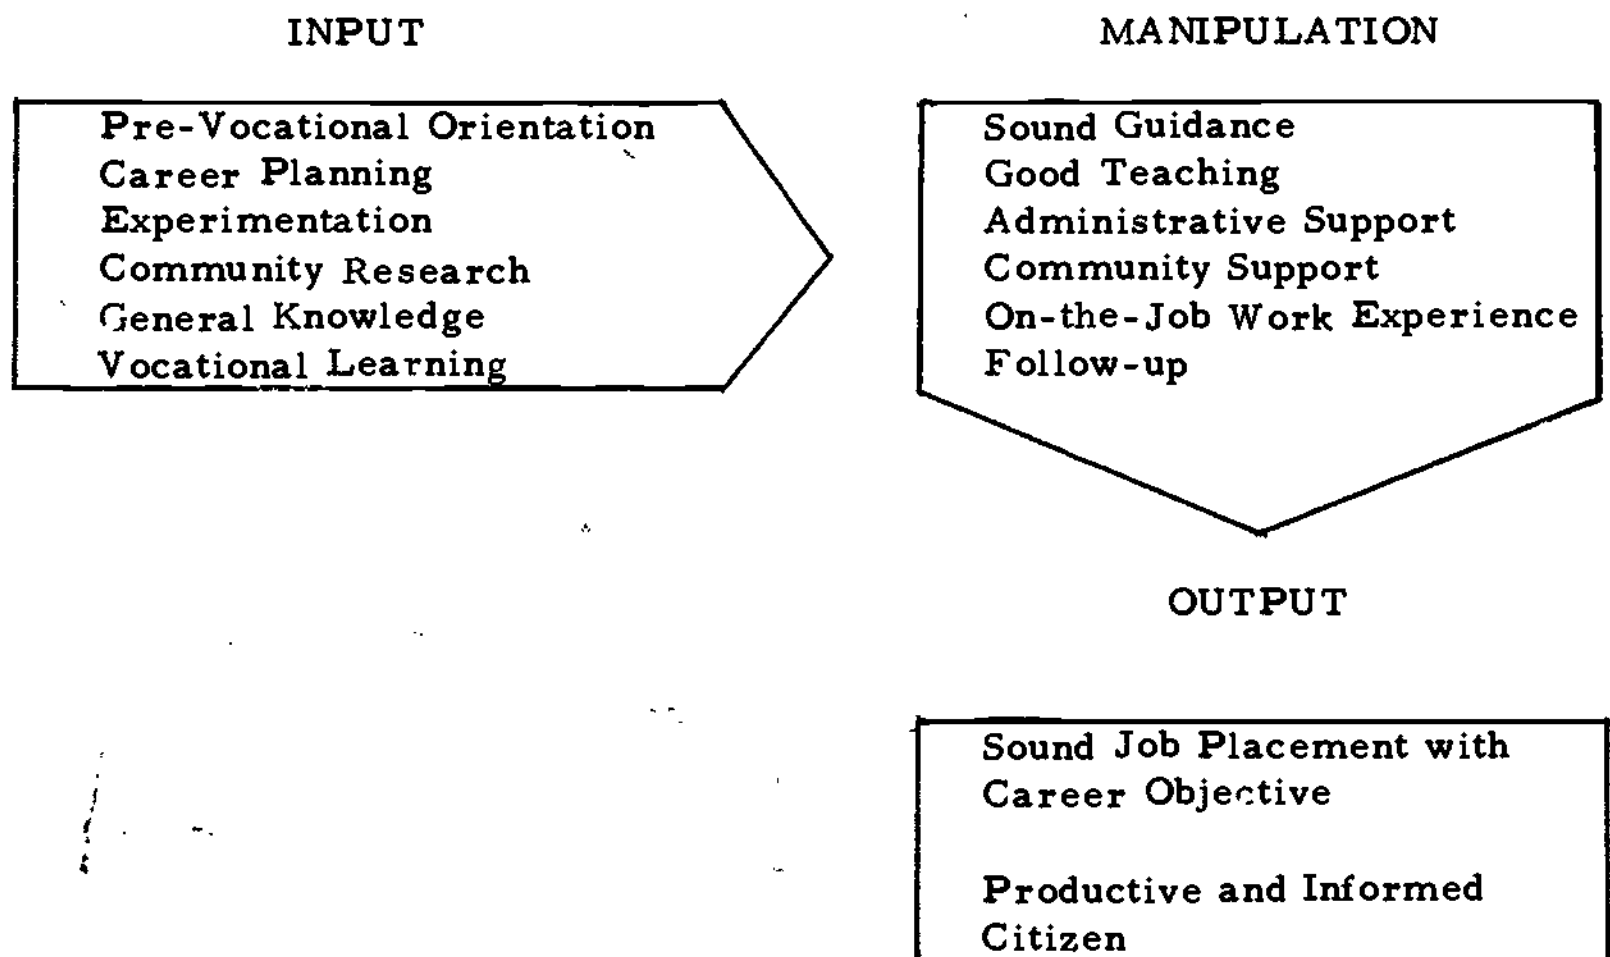

All of these elements require a well-coordinated plan of guidance and community research. The curriculum must be accomplished through the planning of all concerned and held together with a sound balance of good teaching. (See Illustration 3 on page 22)

ELEMENTS OF CAREER PREPARATION

Business educators must realize that the most important product of the school is its students. Sometimes, in the course of supply requests, budget defeats, equipment orders, and collecting milk money, there is a tendency to forget the student--particularly the business student--except when administrators or other teachers need a wide variety of materials typed and duplicated. Expressed in the following illustration is simply what the school should be striving for in student career preparation.

(Illustration 3)

(Illustration 4)

THE SLOW LEARNER

Throughout this booklet, it appears that the primary area of concern has been with the "normal student." What about the slow learner? Is there a place in vocational education for him? The answer is obviously, "yes."

First of all, slow learners may be slow learners for a number of reasons--for example: illness, absence, home problems, physical limitations, mental limitations, just plain lack of interest, etc. Perhaps the best step would be on the part of the school to determine what the individual's reason for slow learning is and work from there. After the individual's reason is determined, special individual and/or group instruction can be given through remedial classes, special laboratory classes, or home instruction. If it is determined that it will be impossible to attain the student's original career objective, a reevaluation of this objective must be made and more realistic goals established. Many jobs in business do not require the mind of Einstein or the physical dexterity of Hercules. Students who are slow learners should be directed toward occupations which they can handle. Attached as ANNEX "I" is an example of a special program designed for the slow learner in a school system in Morris County, New Jersey, developed in 1966.

BUSINESS EDUCATION PROGRAMS FOR SMALL HIGH SCHOOLS

Obviously, the small high school that offers business education (one or two teacher departments) cannot possibly provide all the business education offerings and services which would be inherent to a large school, and it is very doubtful that complete vocational competency could be achieved. Limitations such as space, time, equipment, enrollment, teaching personnel, expenses, etc. mean that the business education program to be offered would include only those offerings which appear practical to most students. Therefore, the emphasis would be more on general education rather than on business education. Perhaps it would be practical to offer introduction to business (general business) and consumer economics as the general business education subjects and typewriting as the skill subject. As was mentioned earlier, introduction to business is fundamental to understanding how business works and that it serves as a primary introduction to understanding our economic society. Probably the most active part of a citizen's life is working for his earnings and spending those earnings. In this light, consumer economics would seem most practical. Typing is the basic tool for practically all business offices. Therefore, it would seem desirable to offer typewriting as the major skill subject. The nature of the employing community would determine the other general business and skill subjects.

The business education subject offerings for a typical one-teacher department might include:

<u>Grade 10</u>	<u>Grade 11</u>	<u>Grade 12</u>
Intro. to Business	Consumer Economics* Typing I Sales*	Typing II Office Practice

The business education subject offerings for a typical two-teacher department might be:

<u>Grade 9</u>	<u>Grade 10</u>	<u>Grade 11</u>	<u>Grade 12</u>
Intro. to Business	Consumer Econ. * Sales* Typing I Bus. English	Bus. Organization* Bus. Law* Typing II Short. I	Off. Pract. Short. II Bkkg. I

*one-semester courses

Notice that the teacher (s) involved would have five separate lesson preparations per day, and that any other subject offerings would render preparing for such a day practically impossible, or at least raise a question as to the quality of instruction

BUSINESS EDUCATION AND THE COLLEGE STUDENT

All business educators will agree that the primary purpose of a business education program is not to prepare students for college. However, provision must be made for those business education students, who possess the desires and abilities, to meet the necessary requirements for entrance into higher learning in order that they may major in business or distributive education. In reviewing the model business education sequences illustrated previously, one can see that the social studies, physical education, and English subjects are required by all business students as well as all college preparatory students. If college requires some form of advanced mathematics and foreign language, up to two years of each can be worked into the business student's schedule as late as grade 11. The student may also be enrolled in the regular college preparatory history and English classes. Further, due to the fact that the student plans on attending college, it would not be necessary for him to participate in work experience.

On the following page is an illustration of a high school subject sequence for business education students which can meet the minimum requirements for many colleges.

For those colleges that require only one year of a foreign language and one year of advanced mathematics, the student's schedule would be much more flexible and the student could decide as late as grade 12.

It must be mentioned here that even if the student followed the entire model business education program without any advanced mathematics and foreign languages, there would still be opportunities for him to attend college and eventually be enrolled in a degree program. Many colleges will initially enroll the business graduate as a special student until he meets the necessary minimum requirements. This generally means that the student enrolls in the evening division and attends college part time. After the minimum requirements are met, it is possible to attend full time and be matriculated in a degree program. Further, some students may not desire to take a full four-year college program. Good business students are readily accepted into two-year business education programs in colleges and junior colleges which can lead to an Associate of Arts Degree.

*one-semester courses

In New Jersey, many businesses and industrial organizations will pay part or all of the costs involved in post high school learning. This is particularly true of the "Equal Opportunity Employers" in the State. Reimbursement for tuition, books, and/or transportation ranges from 25 to 125 per cent depending upon the organization and the courses pursued. Business students must be made aware of the opportunities that exist for them within their own employing community.

SUMMARY

The effectiveness of any business education program can be measured only by seeing how its students prosper as effective workers, citizens, and consumers in our society. In order that this effectiveness can be achieved, it must be realized that there are two major objectives for business education:

1. to provide the student with the general business knowledge which is inherent to his everyday living;
2. to prepare the student to be vocationally competent in his business career.

To attain these objectives requires the combined resources and cooperation of the school, community, student, and industry. Patterns and sequences of study must be designed to meet the needs of the individual student, as well as all students, regardless of how high or low his intelligence and ability ratings may be, while keeping in mind the nature of the community and the requirements of industry. Provisions must be made and maintained to educate as fully as possible all students in the business education program. This requires continuous study of the school, student, community, and industry; expert planning, teaching, and guidance; provision of up-to-date facilities; job placement and follow-up of all graduates; and the interest and cooperation of all parties involved. To deprive the business student of proper business education is to deprive him of the essentials of everyday living.

SAMPLE

BUSINESS EDUCATION CURRICULUM PLANNING QUESTIONNAIRE

PURPOSES OF SURVEY

1. To become better informed to trends in the local business community.
2. To become acquainted with the desires of industry in relation to the curriculum of our school.
3. To assist the school in developing a program of Business Education which meets the needs of the employing community.
4. To provide a guide for assisting our students in developing a sense of direction and guidance toward the desirable traits which may assist them in being successful in the business world.
5. To provide one of several guides for our future plans in the development of our Business Education Program.

RANDOLPH HIGH SCHOOL
Millbrook--Mt. Freedom Road
Dover, New Jersey

BUSINESS EDUCATION CURRICULUM PLANNING QUESTIONNAIRE

Please answer the following questions in the manner indicated.

1. What is the nature of your business? _____
2. What designated positions do you normally have in your business office?

3. Please rank in the order of their importance to your business office the following English language skills: (1, 2, 3, 4, 5)
_____ a. Grammar _____ c. Written Composition
_____ b. Spelling _____ d. Oral Usage _____ e. Vocabulary
4. Do your new employees who have recently graduated from high school possess the basic arithmetical and computational skills needed for success on the job in your business? (Check one)
_____ a. Yes
_____ b. No
5. Please rank in the order of their importance to your business office the following arithmetical concepts: (1, 2, 3)
_____ a. Common Fractions
_____ b. Decimal Fractions
_____ c. Percentage
6. Indicate how these arithmetical concepts are applied in your business. For example: discounts, interest, commissions, etc.

7. Please check: Does your office mainly use electric typewriters _____
manual typewriters _____?
Do you want your new office employees to know how to type on the electric typewriter? _____ a. Yes _____ b. No

**RANDOLPH HIGH SCHOOL

RESULTS AND CONCLUSIONS
BUSINESS EDUCATION SURVEY

1. That generally speaking, businessmen in this area feel that spelling and grammar are the most important language skills.
2. That most new employees possess the basic arithmetic and computational skills.
3. That computing percentages is the arithmetical process most important and that this process is applied primarily in computing discounts and commissions.
4. That business in this area uses primarily electric typewriters and that the majority of employers prefer that new employees be trained in the use of electric typewriters.
5. That the minimum speed requirements for shorthand and typewriting were so varied that the results could not be justifiably computed.
6. That the business machines most commonly used are the rotary calculator, simple bookkeeping, ten-key adding, dictating machine, keypunch, mimeograph, and spirit duplicator.
7. That new employees need more training in the use of the telephones.
8. That a knowledge of alphabetical and numerical filing is necessary.
9. That there is a need for a new approach to business education in regard to automation.
10. That neatness, personality, alertness, and job knowledge are the four most important traits looked for in an interview.

INTRODUCTION

The author's introduction to this report shall serve a two-fold purpose. The first is to briefly explain the history of work experience since 1900. The second will be to explain the limitations of the report.

The first work experience program was started by Herman Schneider in 1906 at the University of Cincinnati. This program was open to students in the Trades and Industries curriculum. Students enrolled in this program would attend classes at the University for one week and then work in cooperating industries for one week.

Work experience appeared in the secondary public school in 1908. York, Pennsylvania, initiated a cooperative program in trades and industry patterned after the one at the University of Cincinnati. Students attended school two weeks and worked in cooperating businesses for a two week period. A similar program was introduced in Fitchburg, Massachusetts, the same year. Work experience was limited to one week in school and one week on the job.

Federal legislation has played an important part in the development of cooperative work experience programs. The Smith-Hughes Act of 1917 provided federal funds for vocational programs in Trades and Industries, Home Economics, Agriculture, and Diversified Commercial Occupations.

The George-Deen Act of 1936 amended the Smith-Hughes Act by changing the name Diversified Commercial Occupations to Distributive Occupations. A specific appropriation of 1.2 million dollars was made for Distributive Education. Funding was continued for the other three programs.

In 1946 the George-Deen Act was superseded by the George-Barden Act. This act continues funding the four programs covered in the George Deen Act, but increased to 2.4 million dollars the funds available for Distributive Education.

Congress passed the Manpower Development Training Act in 1962 and provided federal funds for:

- a) Unemployed
- b) Partially employed
- c) Persons with obsolete skills
- d) Persons displaced because of automation
- e) Persons 16 years old but not 22 and in need of occupational training and further schooling

These funds are available in the following areas; Trades and Industries, Distributive Education, Business Education office occupations, and any vocational education program.

In 1963, the public high school received funds under the Vocational Education Act of 1963. Funds were provided under this act to pay for buildings, materials, equipment, grants, salaries, and state administration of the program.

This is the history of work experience, but our needs are here in the present. We are faced with a drop-out problem which is important to us all. The need for unskilled workers is declining while business demands for skilled workers is increasing. We as educators must be aware of this change and prepare our students accordingly.

If we are able to do this we will better meet the needs of the community and the student. We should also be better able to control the drop-out problems in our school.

The authors included in the original survey, questions pertaining to the Trades and Industries curriculum and Vocational Home Economics curriculum. Since the authors lack the vocational knowledge necessary to develop and evaluate these two programs, this information has been delimited from the report.

It is believed, by the authors, that students in Vocational Home Economics and students in the Automotive Shop could possibly be employed in a cooperative work program through the Distributive Education program.

March 7, 1966

Dear Sir:

This survey is being conducted to establish the need for an expansion of the curriculum of Rancocas Valley Regional High School to include a Cooperative Work Experience Program. Such a program requires the combined efforts of the school, its students, and you, the local businessman.

Students enrolled in the proposed program will attend school part time and work in cooperating businesses part time at an actual job. A member of the high school faculty will plan and supervise this on-the-job training program in cooperation with the employer.

This study is being conducted to determine the feasibility of such a program. To assist us in this survey, will you please complete the enclosed forms and return them to us. A self addressed envelope is enclosed for your convenience.

Respectfully yours,

BUSINESS EDUCATION DEPARTMENT

RESPONSIBILITY OF THE ADVISORY COMMITTEE

The cooperative program is a joint understanding on the part of the school and the businessman. An advisory committee, composed of school and business people, serves to bridge the interests of the school and the business community. It is the purpose of this committee to assist in establishing a desirable and proper environment for the cooperative program. It could be helpful in developing the interest, support and cooperation of the businessman. The responsibility the committee may assume could include the following:

- a. Aid in the development of standards for both school and on-the-job training.
- b. Aid in developing course content.
- c. Aid in setting up school-employer agreements.
- d. Aid in developing new training stations.
- e. Aid in developing a sound public relations program.

WORK EXPERIENCE SURVEY

Please Check the Appropriate Answer

Yes No

TABULATION OF RESULTS ON ORIGINAL SURVEY

On March 7, 1966 the survey was sent to 285 businesses and industries within a 15 mile radius of Mount Holly. The tabulation of these results was completed March 31, 1966.

The results of the survey are as follows.

- a) 157 questionnaires were returned. This represents 53.3% of all those sent.
- b) 62 of these questionnaires indicated that the firm involved had gone out of business or moved, therefore the tabulation is based on 95 respondents.
- c) 48% or 45 of the remaining businesses displayed an interest in the cooperative work experience program.
- d) 21 firms indicated they would employ either male or female employees or both. 25 indicated they would employ female only and 23 stated male only.
- e) The areas of interest were as follows.
 - 1) 21 businesses in Clerical areas
 - 2) 14 businesses in Stenography areas
 - 3) 9 businesses in Distributive Education areas
 - 4) 9 businesses in Trade and Industry areas
- f) 12 employers agreed to form an Advisory Council.
- g) 66% or 30 indicated they were willing to pay minimum wages required.
- h) All indicated they wished additional information

Those businesses saying no to cooperative work experience had the following reasons.

- a) age requirements for employment
- b) insurance problems
- c) business was too small

PURPOSE

The fundamental purpose of the cooperative work experience program in Rancocas Valley Regional High School is to adequately prepare each student for successful employment in an occupational field of his choice. It is hoped the trainee will develop vocational competence in the type of work in which he has an interest, and will have the opportunity to explore related occupations. Occupational intelligence developed as a result of his part-time work should favorably affect his future employment.

Engaged in such a program, the student should learn to develop a new sense of responsibility as he becomes cognizant that his role is an integral part of the total operation of the employing organization. The trainee will recognize that tasks are assigned to be completed within a reasonable period of time--often within established deadlines. Just as important for the student to learn, is the concept of developing a harmonious relationship between himself and his fellow employees, as this is usually essential for maximal production.

It seems apparent that related classroom instruction would be most beneficial for the trainee, as this would permit the student to resolve all problems raised in relation to his on-the-job training. Thus, students are presented with additional incentives to complete this schooling as the need for skills and knowledge becomes more evident.

Likewise, the school is also a benefactor of the values derived from the cooperative education program as business and industry place their facilities at the school's disposal. Consequently, mutual community benefits and improved relationships between the school, business, and industry are also provided. This places the school in a more favorable position to meet the needs of the young men and women of the community, through a functional, cooperative work-experience program.

OPINION SURVEY FOR HIGH SCHOOL TEACHERS

A work experience program is a cooperative work training program worked out jointly by the school, its students, and local business men. It would mean that students would be attending school part-time and working downtown in a business or industrial position part-time. Only non-academic seniors would be qualified for enrollment in this course and it would be supervised not only by the employer but also by a high school work experience supervisor. A well-rounded training program would be afforded enrollees to enable them to be better prepared for a job upon completion of high school. Each trainee will have contained in his schedule the required courses of physical education, history, and English along with the specialized courses in his major field. The student would spend a minimum of 15 hours per week at an established training station after completing his morning classes.

1. Do you feel that a program of this type would be beneficial to the students involved? YES ___ NO ___
2. Would you be willing to cooperate in an advisory capacity? YES ___ NO ___
3. Would you like to see such a program initiated into the school curriculum at Rancocas Valley Regional High School
YES ___ NO ___
4. Please make any comments or suggestions that you might have in the space below:

TABULATION OF RESULTS ON TEACHER SURVEY

On March 28, 1966 the survey was sent to 91 teachers in Rancocas Valley Regional High School of Mount Holly. The tabulation of these results was completed April 1, 1966.

The results of the survey are as follows.

- a) 65 questionnaires were returned. This represents 71.3% of all those sent.
- b) 98.4% or 64 respondents feel that a program of this type would be beneficial to the students involved.
- c) 78.4% or 51 members would be willing to cooperate on an advisory committee.
- d) 98.4% would like to see such a program initiated into the curriculum at Rancocas Valley Regional High School.

PLEASE READ AND COMPLETE THE ATTACHED QUESTIONS

(The questionnaire need not be signed.)

A work experience program is a cooperative work training program worked out jointly with the school, student and businessman. It would mean that you would be attending school part-time and working down town in a business position part-time. Your work would be supervised by your employer and a high school work experience supervisor. A well-rounded training program would be afforded you to be better prepared for a job upon completion of high school.

STUDENT SURVEY

1. In the event such a program were to be established at Rancocas Valley Regional High School, would you enroll in the course?

YES _____ NO _____

2. Do you think your parents would give permission for your enrollment in such a course?

YES _____ NO _____

3. In which area would you be interested?

BUSINESS EDUCATION _____
DISTRIBUTIVE EDUCATION _____
TRADES AND INDUSTRIES _____
HOME ECONOMICS _____

4. MALE _____ FEMALE _____ AGE _____

5. Would transportation be available for you in order to get to work and return home?

YES _____ NO _____

TABULATION OF RESULTS ON STUDENT SURVEY

On April 4, 1966, 154 non-academic sophomore students were surveyed in their homerooms. The results of this survey are as follows.

- a) 154 questionnaires were returned. This represents 100% of those sent.
- b) 142 or 92% of the students indicated they would enroll in a program of this type if it were established in the school.
- c) 95% or 147 students thought that their parents would be in favor of such a program.
- d) Students were interested in the following areas:
 1. Business Education-49% or 74 students
 2. Trades and Industries-27% or 41 students
 3. Distributive Education-13% or 20 students
 4. Home Economics-5% or 8 students
 5. 6% or 9 students were undecided about an area of interest.
- e) There were 76 male and 78 female students surveyed.
- f) The average age of the students surveyed was 16.
- g) 58% or 89 students had transportation provided for them.

RESPONSIBILITIES
AND
DUTIES

DUTIES AND RESPONSIBILITIES OF THE PARENTS

Parental interest and cooperation is a vital part of this program. Parents therefore must understand the purpose and the value of such a plan.

The parent can be utilized in this program by impressing upon his son or daughter the importance of regular and faithful attendance not only in school but on the job. The parent should also understand the importance of this program and be consistent in his encouragement of good trainee participation. As a result, the parent is an integral part of the cooperative work program.

All trainees must present written parental permission to participate in the cooperative work program before the application can receive final approval.

DUTIES AND RESPONSIBILITIES OF THE EMPLOYER

When the trainees are placed by the coordinator the following duties and responsibilities of the employer should be clearly outlined and reviewed once again:

1. The employer must ensure that the trainees have fulfilled all legal requirements, i. e. , social security, working papers, etc.
2. The employer should understand that the trainee will be paid for his services at the going wage.
3. The amount of time that the trainee will devote to his job must be understood by the employer. The minimum amount required by the school will be fifteen (15) hours per week. Any additional hours can be decided between the employer and trainee with proper notification to the coordinator.
4. The employer must be willing to grant the trainee the same employee benefits as are available to other part-time employees.
5. The employer must be willing to keep the minimum records needed by the coordinator.
6. The employer must be able to devote sufficient time to develop trainee potentials.
7. The employer must be willing to assist the coordinator in making periodic appraisals of the student's performance on the job.
8. The employer must be willing to orient the trainee to his new job. This should include explanation of time and place for work, where personal articles may be kept, introduction to co-workers, how to locate other departments, company rules and the method of salary payment with an explanation of payroll deductions.

SELECTION OF WORK STATIONS

Selection of appropriate employment opportunities for the trainees in the cooperative program should be made on the basis of the following criteria:

1. Only progressive business establishments should be considered.
2. The business should provide a well-rounded learning experience for the trainees.
3. The work station should feature employees of high moral character.
4. It should be a clean place to work.
5. It should provide the maximum safety measures.
6. The work station should be conveniently located to the school and home of trainee.
7. The employer should be able to devote sufficient time to give proper supervision.
8. The work station should be able to prepare trainees for full time responsibilities and contribute to career preparation.
9. The employer should be one of understanding with a definite interest in the training program and should not exploit the trainee.

**BUSINESS / DISTRIBUTIVE EDUCATION
WORK EXPERIENCE PROGRAM**

**Rancocas Valley Regional High School
Mount Holly, New Jersey**

**GENERAL CRITERIA FOR SELECTION
OF
STUDENT LEARNERS FOR WORK EXPERIENCE PROGRAMS**

1. The prospective trainee must be a senior enrolled in the business / distributive education department.
2. He must be at least 16 years of age and be eligible for a working permit.
3. He must have his parents' consent to participate in all phases of the program.
4. He should express a career interest in the work experience field, with a willingness and an aptitude for studying the related course content.
5. He should be employable from the standpoint of having the personality traits and skills, with adequate health and school achievement records, for reasonable probability of success on the job assigned.
6. He should have the potential for making a good representation for the school in the business community.
7. The prospective trainee must not be involved in extra-curricular activities such as football, basketball, track or baseball, or any other activity that would make it difficult for the trainee to undertake part-time work.

RANCOCAS VALLEY REGIONAL HIGH SCHOOL

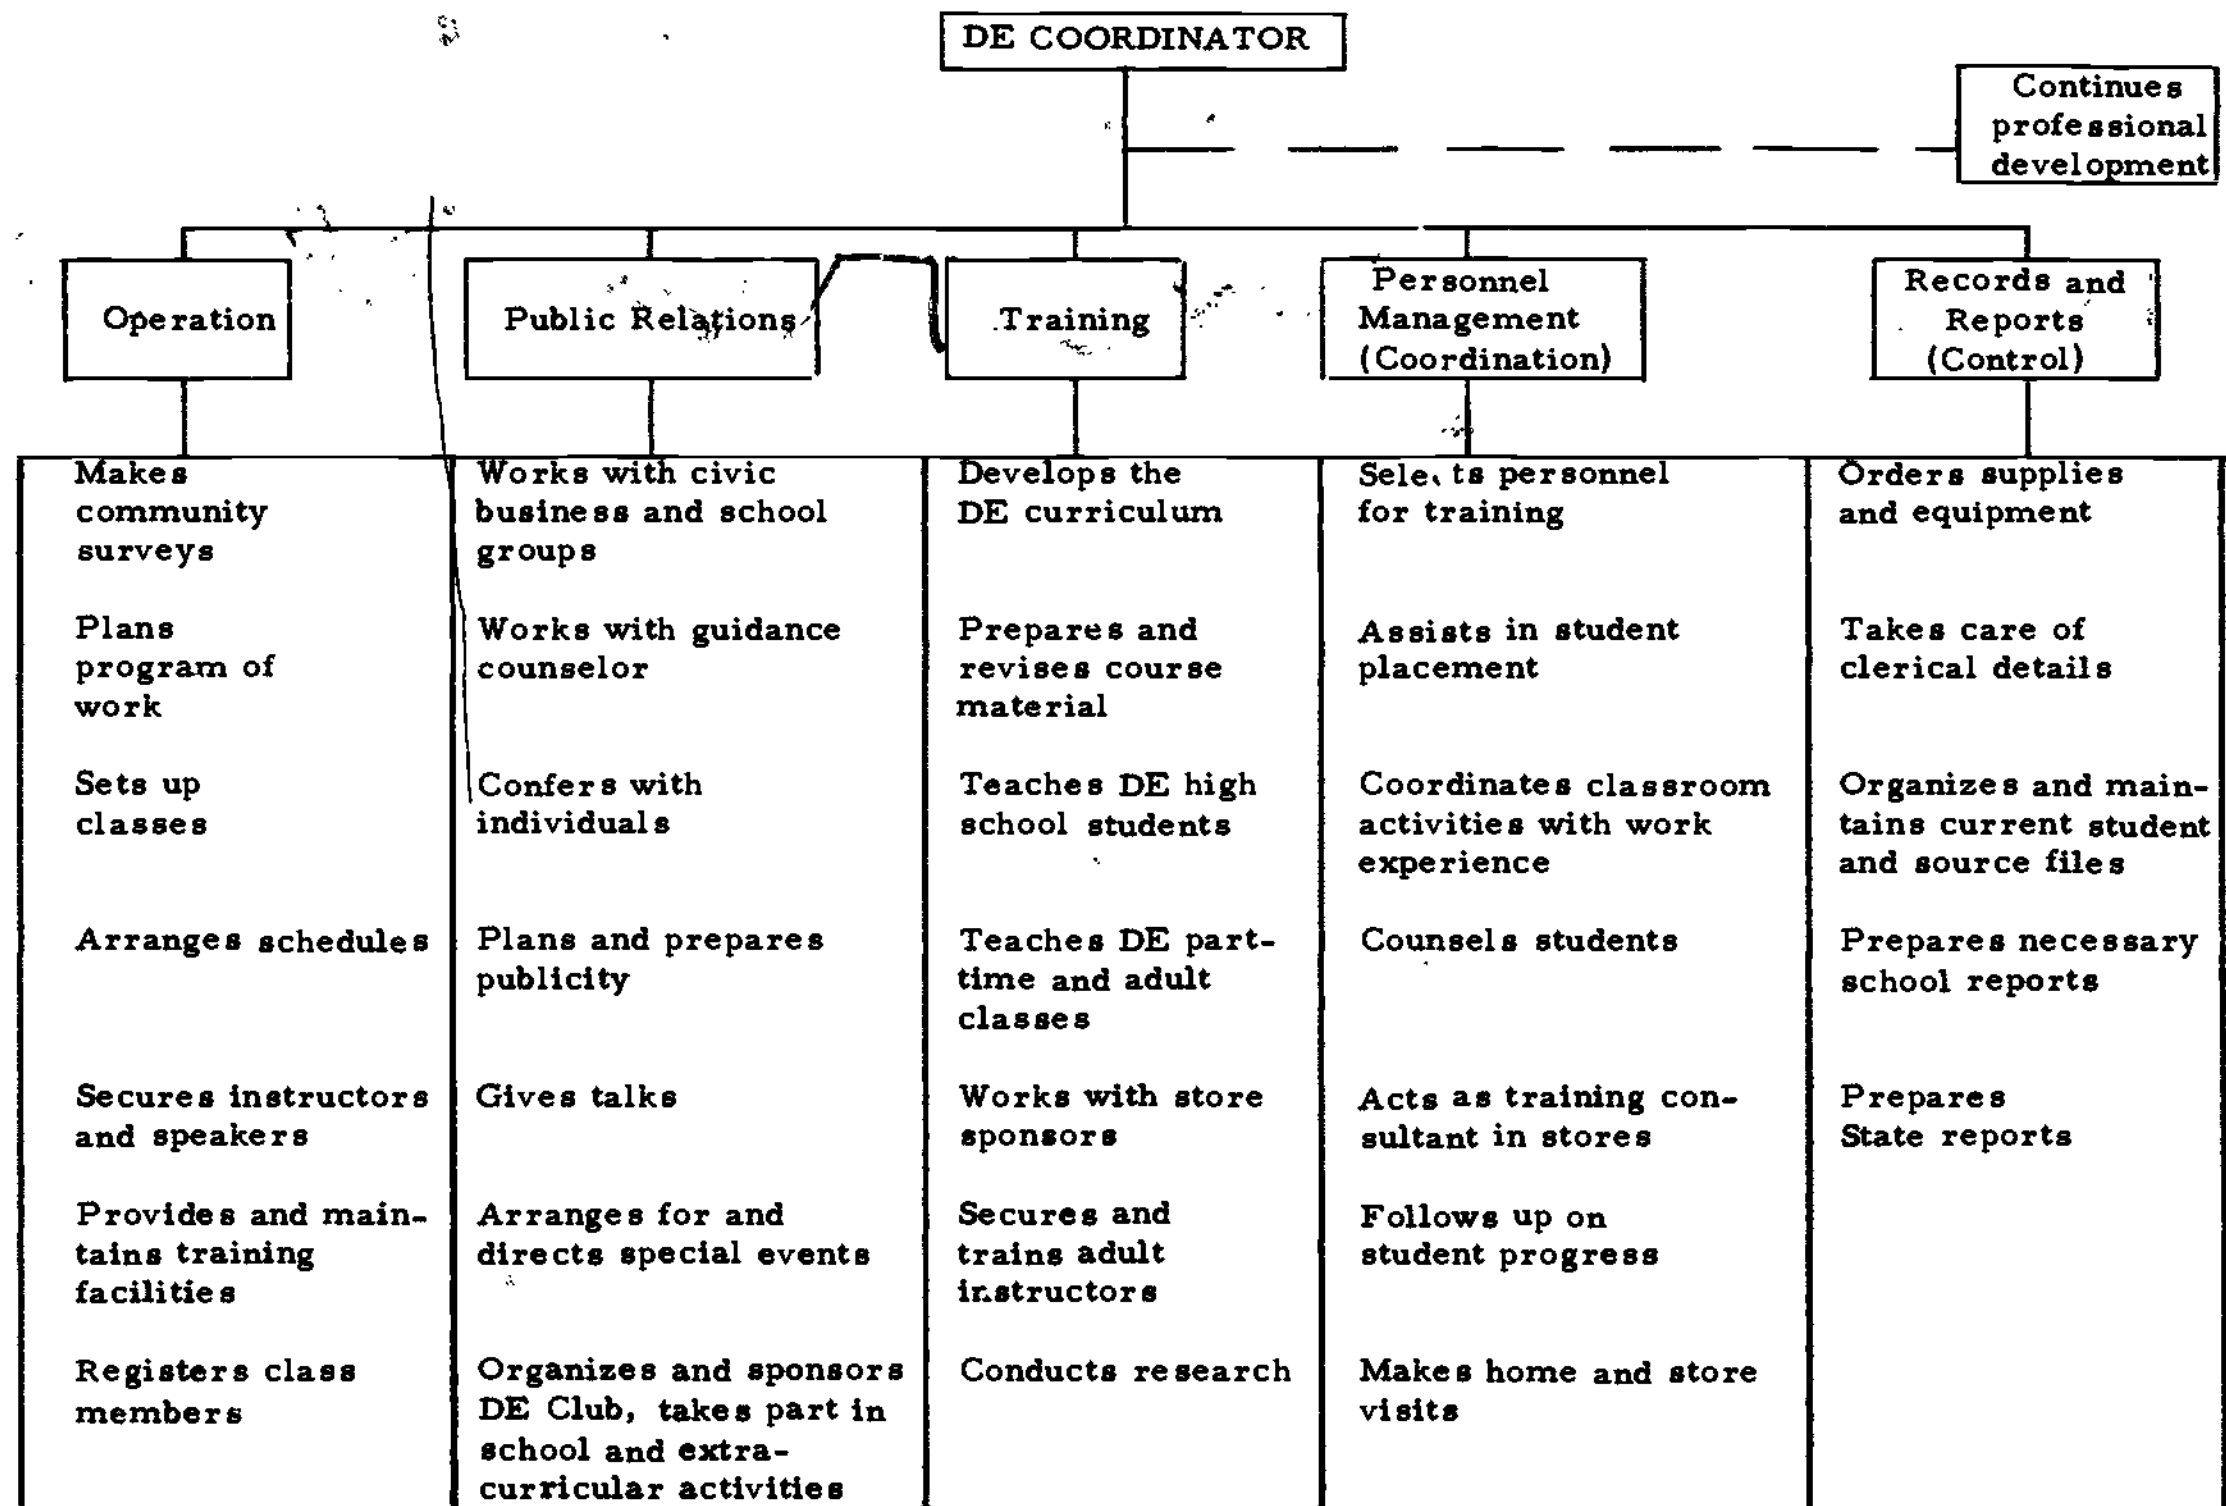

Mount Holly New Jersey

DISTRIBUTIVE EDUCATION PROGRAM

OBJECTIVES

1. To increase skill, technical knowledge, occupational information understanding, morale, appreciation, and judgment of workers in the field of distribution.
2. To provide the student with a well-rounded practical education in school and on the job.
3. To develop an understanding of the importance of distribution in our economic organization and to appreciate its services.
4. To provide the student with the opportunity to learn the basic principles of merchandising.
5. To train students according to their abilities to become occupationally established in the field of distribution.
6. To develop qualities in students which make for personal efficiency and success in working with other people.
7. To assist students to develop into active and effective members of business and community life.
8. To prepare the students for initial employment in the field of distribution and to provide them with the knowledge to advance on the job.

RANCOCAS VALLEY REGIONAL HIGH SCHOOL
 Mount Holly, New Jersey
 FUNCTIONS AND DUTIES OF A DISTRIBUTIVE EDUCATION COORDINATOR

**Proposed Distributive Education Curriculum
For Those Students in Work Experience**

Distributive Education is a cooperative program designed to give students practical training in the fields of distribution, marketing and service. Students of the 11th and 12th grades interested in a career in these fields may take part.

Students may elect to participate in this program but are selected by the teacher-coordinator only after a thorough screening process has taken place.

Each student must spend a minimum of 15 hours each week at work in an approved work station for the entire 12th school year.

In 9th and 10th grade a student may pursue any curriculum. However, if he or she is decided it is recommended they take the following schedule.

Tentative Schedule

<u>9th</u>	<u>Credits</u>
English I	5
Gen. Science	5
Civics and Geography	5
Math	5
P. E. & Health	1
Art or Shop	2½

Electives:

Home Economics I	2½

BUSINESS EDUCATION JOB PLACEMENT PROGRAM

JOB PLACEMENT AND BUSINESS EDUCATION

By Rodney G. Jurist, Business Education Job Placement Coordinator

Randolph High School, Randolph Township, New Jersey

February, 1966

Randolph High School, Randolph Township, New Jersey, has established a formal Business Education Job Placement Program which boasts a 100% record for its first year of operation. Before any explanation of the plan is made, however, it is necessary to say that this plan is designed specifically for those schools that find it extremely difficult to institute out of school work experience programs. The duties and responsibilities of the Business Education Job Placement Coordinator at Randolph High School are strictly for coordinating job placement and not for coordinating an out of school work experience program.

OBJECTIVES

1. To assist business students obtain full-time employment in the office occupations upon graduation from high school.
2. To establish and maintain liasion between potential employers and the high school by means of an employer advisory committee and through scheduled visits to business and industry.
3. To coordinate classroom activities with those occupational activities found in the employing community.
4. To keep the Business Education and Guidance Departments informed of the latest developments in the employing community in order to improve or modify guidance and instruction.

OPERATIONAL PLAN

The operational phase of the Business Education Job Placement Program at Randolph High School takes place during the student's senior year. Students are informed of the program through the office practice classes.

At the beginning of the school year, students are asked to fill in the Job Placement Record (see illustration "A") on which they indicate their career desires. These desires normally fall into the following categories:

1. Office position with a large firm.
2. Office position with a small firm.
3. Office position in a specialty such as legal, medical, or technical.
4. Further education in a business school, special school, or college.
5. Interested in other fields such as nursing, military, beautician, etc.
6. Positions in the field of retailing and merchandising.
7. Undecided.

After the students' desires are known by the Job Placement Coordinator, a sincere attempt is made to acquaint the individual student with all the information about his anticipated career. Through the Coordinator's Employer Lead File (see illustration "B") arrangements are made during the school year for the student to actually visit the places in which he would like to work. Office manuals are obtained from these concerns; personnel managers are invited to the school; and the student is counseled by the Coordinator, Guidance Director, and the Employer Advisory Committee. Further, the student is provided with realistic training in the field or endeavor through a unique office practice program, the content of which has been determined by a survey and follow-up study of the employing community. Students are also given the opportunity to participate in an informal, but well supervised, work experience program within the school by working for such people as the Job Placement Coordinator, Curriculum Coordinator, Librarian, Guidance Director, and Administrative Staff. The type of work is of such a nature that it is not merely "busy work" but the type of work that challenges the students' knowledges and skills--for example: direct dictation at the typewriter, shorthand transcription, machine transcription, letter composition, telephone usage, etc.

Starting in April, the students are scheduled for interviews with the business concerns for which they would like to work. Before the student reports for an interview, he has been informed of the proper manners, attire and procedures. Further, no student is sent out for an interview unless the Job Coordinator and Business Department feel that the student is qualified for the job. The student's qualification is determined by comparing the student's scholastic record with that which is expected by the employer. Specific job vacancies and qualifications are obtained by the Job Placement Coordinator in advance of any interview and the students are informed of the requirements which are expected. Many times students are so well known by their participating in demonstrations at Employer Advisory Committee Meetings that they are hired without taking an employment test. Most of last year's business graduates were hired solely upon the recommendation of the school. Prior to the interview, employers are mailed a summary of the applicant's scholastic and job placement records (see illustration "C").

If the student is given a promise of employment before graduation, specific training for his job begins immediately by close coordination with the business involved. Shortly after graduation, the student begins work with the company.

During the next school year, the Job Placement Coordinator visits all companies where business graduates were hired. Here, he discusses with the supervisors how the students measure up to what is expected. Further, he discusses what can be done jointly to improve instruction for future business students. A follow-up study is made of each class of business graduates every first, third, and fifth year to determine whether or not the school is meeting the needs of these students-- not only in their obtaining initial office jobs, but whether the instruction adequately provided them with the skills and knowledges to advance on the job.

A follow-up study taken of last year's business graduates, used in conjunction with job placement records, indicated:

1. 44 business students were among the diploma recipients.
2. 22 business students elected to secure an office position of some sort through the Job Placement Program.
3. 22 business students elected not to participate in the Job Placement Program; but to obtain employment on their own, attend post high school business training, enter the service, go on to college, or enter other fields of endeavor such as nursing and beautician training.

SUMMARY OF FOLLOW UP

(Students non Participating in the Job Placement Program)

1. Employed full time - 6 students (2 clerks and 4 clerk typists)
2. College - 2 students
3. Beautician School - 2 students
4. Business School - 5 students
5. Marriage - 2 students (not employed)
6. Art School - 1 student
7. Unreturned questionnaires - 4

(Students Participating in the Job Placement Program) (and employed full time)

1. Clerks General - 4 students
2. Clerk Typists - 10 students (none in pools)
3. Stenographers - 6 students (none in pools)
4. Bookkeepers - 1 student
5. Librarians - 1 student

COMPARATIVE ANALYSIS

(Follow-up study with job placement records)

1. 77.2 per cent (17 students) who participated in the Job Placement Program were given written promises of employment in the jobs of their choice before graduation.
2. 100 per cent (22 students) who participated in the Job Placement Program were actually employed in the jobs of their choice by September 1.

3. Students who obtained their jobs through the Job Placement Program received a mean salary of \$9 per week higher than those students not participating in the program. Average salary for participating students was \$71 per week. Average salary for non-participating students was \$62 per week.

INCIDENTAL OUTCOMES OF THE FOLLOW UP

1. 22.7 per cent (5 students) who participated in the Job Placement Program are directly involved in electronic data processing to some degree.
2. 13.6 per cent (3 students) who participated in the Job Placement Program are attending evening college classes through company paid benefits.

CONCLUSIONS

1. The Job Placement Program at Randolph High School for school year 1964-65 was successful in that all students gained employment in the jobs of their choice within 90 days after graduation.
2. Students who obtained employment through the Job Placement Program are earning higher salaries than those who did not obtain employment through the Job Placement Program.
3. Electronic data processing is becoming a significant factor in beginning office employment in our area.
4. Some Business Education students can go to college.

RECOMMENDATIONS

1. More emphasis should be given to Business Education Job Placement Programs in the public high school.
2. More emphasis should be placed on the role of electronic data processing as applied to beginning office jobs.
3. Better liaison between the school and business and industry should be established and maintained in order to operate a successful Job Placement Program.

DUTIES AND RESPONSIBILITIES

OF A

BUSINESS EDUCATION JOB PLACEMENT COORDINATOR

BUSINESS EDUCATION JOB PLACEMENT COORDINATOR

I. **PURPOSE:** The primary purpose of the Business Education Job Placement Coordinator at Randolph High School shall be to establish and maintain liaison between potential employers and the school in order to determine and meet the needs of the employing community.

II. DUTIES:

- A. To seek out potential full-time employers of our business graduates and part-time employers for business students currently in school and acquaint them with our educational program in Business Education.
- B. To arrange for conferences between the business leaders of the employing community and the school in order to keep both parties abreast with the latest developments, trends, and projections in the field of business.
- C. To coordinate all job placement activities through the guidance department in order to insure proper student scheduling, counseling, and placement.
- D. To conduct periodic surveys and follow-up studies as part of the guidance service regarding our graduates to determine whether or not the Business Education program has provided adequate initial job preparation.
- E. To visit former Randolph High School students and graduates on the job to see first hand whether or not their jobs are commensurate with their training in high school.
- F. To contribute to the development of a central employers' file in the guidance office.
- G. To identify and assist potential Business Education drop-outs and aid them in obtaining employment.
- H. To assist Business Education students in arranging for job interviews.

III. ADMINISTRATION:

- A. The Business Education Coordinator will have several unassigned periods to carry out his duties and responsibilities.
- B. The Business Education Coordinator will develop his own schedule for leaving the high school building and returning.
- C. The Business Education Coordinator will submit a monthly report to the Guidance Department regarding the job placement program.

IV. RESPONSIBILITIES:

- A. Keeping records of meetings, conferences, surveys, and studies.
- B. Contributing to student personnel records in cooperation with the Guidance Department.
- C. Making reports to and meeting with the Business Department, Guidance Department, and concerned employers regarding job placement.
- D. Talking to students, business groups, clubs, and organizations regarding job placement.
- E. Bringing Business Education graduates back to the school to speak about work experiences.
- F. Evaluating the job placement program.

V. AUTHORITY:

- A. Recommending potential employers to students in cooperation with the Guidance Department.
- B. Recommending students to potential employers in cooperation with the Guidance Department.
- C. Recommending changes in the curriculum to meet the needs of the employing community.
- D. Recommending the use of new and or revised equipment, supplementary materials, and supplies to meet the needs of the employing community.

S A M P L E
EXPLORATORY AND CAREER PROGRAM

Randolph High School

Randolph Township, New Jersey

INTRODUCTION TO BUSINESS AND MATHEMATICS

A G B - 1

A business survey course for all ninth grade vocational students, designed to provide the student with a sampling of business subjects which are offered later in the high school curriculum and to acquaint the student with the various career opportunities available in the fields of business and distributive education. This course is a one semester course to be offered in conjunction with A G B - 2. Students must take both A G B - 1 and A G B - 2 to receive credit--either course may be taken first.

Topics to be offered include:

1. Salesmanship
2. Recordkeeping
3. Bookkeeping
4. Shorthand
5. Business Machines
6. Business Communications
7. Business Organization
8. Notehand
9. Occupational Information

Each unit will be a separate entity lasting approximately two weeks.

Textbook: Dame, Patrick & Grubbs, Exploratory Business, Gregg, 1965 to be supplemented.

Schedule: 1 period per day
5 periods per week
18 weeks
2½ credits

Randolph High School

Randolph Township, New Jersey

INTRODUCTION TO BUSINESS AND MATHEMATICS

A G B - 2

A survey course for all ninth grade vocational students, designed to develop the student's understanding and appreciation of the various branches of mathematics. Further, the course is designed to provide the students with information regarding careers in trades and industries. This one semester course is to be offered in conjunction with A G B - 1. Each student must take A G B - 1 and A G B - 2 to receive credit -- either course may be taken first.

Topics to be offered include:

1. Career and Occupational Information
2. Properties of number systems
3. Open sentences in one variable
4. Graphs and applications
5. Fractions and decimal fractions
6. Verbal problems
7. Percent with applications
8. Direct and inverse variations
9. Geometrical constructions
10. Experimental Geometry
11. Indirect measurement
12. Empirical probability and statistics
13. Exact and approximate numbers
14. Logical thinking

Each unit will be a separate entity lasting approximately one week.

Textbook: Current text used in Algebra I to be supplemented.

Schedule: 1 period per day
5 periods per week
18 weeks
2½ credits

The following representatives have volunteered their services for the 1966-1967 Ninth Grade Vocational Career Program to be used in conjunction with A G B - 1 and A G B - 2.

Mr. Frank Mastromano - R. C. A.
Topic: "The World of Accounting"

Mr. Joseph Bell - G. E. Installation at Bell Telephone
Topic: "Careers & Opportunities in Electronic Processing"

Mr. Ralph Fancher - Picatinny Arsenal
Topic: "The Apprentice Program" (Boys)

Topic: "The Future at Warner-Lambert and You - a high school graduate" (Boys)

Small Business Panel Discussion

Mr. Kirby Park: Heating and Air Conditioning - Randolph

Mr. Willard Hedden: Hedden Oil - Dover

Mr. Archie Nichols: Baker Real Estate - Randolph

Mr. Rodney Jurist: Job Coordinator - High School - Moderator

A series of speakers from neighboring industries and businesses will address our vocational students in grade nine.

The purpose of this program is to expose these students to current job opportunities after high school graduation, in order that better career planning can take place. It is felt that this first-hand learning will result in immediate meaning in the student's current course of study.

The second purpose of this program is to create more articulation between school and industry and business. Randolph High School vocational teachers feel the need for further communication on this level.

The third purpose of this program is to establish a "starting off" point in which a more intensified program can be continued in each of the additional high school years.

The fourth purpose of this program is to establish more rapport between the vocational student and his teacher - (as seen through the vocational student's eyes.) This will be achieved through teacher-student evaluation of the various programs throughout the school year.

The fifth purpose of this program is to unify the thinking among the vocational teachers in the high school through discussion and exchange of ideas. This is achieved through grade-level meetings with the guidance counselor in addition to their own subject area meetings.

S T A T E M E N T

DISTRIBUTIVE EDUCATION IN NEW JERSEY

State of New Jersey
Department of Education
Vocational Division
Trenton, N. J., 08625

DISTRIBUTIVE EDUCATION IN NEW JERSEY

Robert D. Joy, Director

The growth of the Distributive Education cooperative programs may be attributed to the fact that the program supplies a superior type of training for youths. Such a program, if organized properly, is realistic and provides motivation which encourages learning.

The controlling purpose of the cooperative Distributive Education program is that the vocational training shall be in business of service occupations under actual working conditions for those youths who have selected distribution as their ultimate career. The Distributive Education classes for the high school youth are set up under our State Plan. The practical training and experience are given under an agreement between the employer, the school authorities, and in some cases the parents of the trainees.

This agreement insures that a progressive training program is conducted and that the trainees supplement their practical training with a program of related instruction.

Methods of instruction in the cooperative classes depend for their efficiency upon the motivation and the ability of the teacher-coordinators to adjust themselves to the varying needs of the trainees. The inductive methods of instruction, such as conferences and discussion based on working experiences of the trainees, is preferred to deductive methods based on textbooks and lectures.

We believe that the Distributive Education Work Experience program has many advantages for our school youth.

1. Guidance Values. It offers him an opportunity to get firsthand work experiences and to explore an occupational field.
2. Social Values. The student has personal contacts with co-workers in the field and customers. This gives him practical experience in working with and dealing with people.
3. Educational Values. The student receives a combination of theory and practice, thus relating instruction to life situations.

4. Disciplinary Values. Areas for exhibiting and using responsibility and initiative are ever present.
5. Economic Values. The student has an opportunity to earn while learning and to appreciate the meaning of financial independence.
6. Personal Values. The student has an opportunity for entrance into business a full year before others in his graduating class.

Work experience is a very valuable part of the experience that young people need if they are to mature properly. A great majority of our youth are so constructed that their social, emotional and mental health and growth urgently require work responsibilities. To deny these demands is just as dangerous as to deny the demands of the body for essential minerals and vitamins.

R E P O R T
REACTIONS TO THE CRITERIA
OF
MODEL BUSINESS EDUCATION PROGRAMS

A REPORT TO THE VOCATIONAL DIVISION

of the

DEPARTMENT OF EDUCATION

New Jersey

REACTIONS TO CRITERIA

Ewing High School

February, 1966

Submitted by Mary Paparone

For the Business Education Department and With Their Approval

1. It is assumed that the general aims of education at the high school level shall be the aims of business education at this level. In view of this criterion, only such further assumptions as apply especially to business education in secondary schools will be hereinafter presented.

Secondary education at Ewing High School attempts to develop in each student the attitudes, understandings, appreciations, and skills necessary for present and future accomplishment. To achieve this, all youth should be considered in the light of their individual differences, interests, aptitudes, capacities, needs and background. Recognized capabilities within the child should be developed toward an eventual true self-realization. The attainment of these goals presumes a staff well versed in subject matter, alert to the nature of adolescence, and aware of methods based on knowledge of the learning process.

Business education in our school truly serves the ideas and attitudes of general education at the high school level. A single curriculum allows ample digression from a traditional approach to education. The curriculum has been designed and developed to meet the individual needs of not only the business student but the needs of the entire school population.

2. Local conditions, not only within a community but often within a single school in that community, must be taken into consideration in setting up and administering a program of business education.

The program of business education has been developed to meet the requirements of Ewing Township and its surrounding areas. The highly diversified businesses located in that area offer varied occupational opportunities. The curriculum of our school offers a sequence of courses leading to absolute skill development for those employment opportunities in the community that demand skill performance at various levels. It also provides for lesser skill development for those students who cannot or are not capable of attaining absolute skills. These students are directed to seek employment in the many clerical positions available in this community. Finally, it offers a general education background enabling all business students to become better citizens and intelligent consumers in our community.

3. Regardless of the type of school organization which prevails in any community there are two distinct, but articulated, periods of training in the field of business education. For purposes of our study one may be called the pre-vocational period, and the other may be called the vocational period. The pre-vocational period should be given over largely to exploration, try-out, personal use, and general education.

Business training I and Business Mathematics I are offered in the ninth grade as the primary pre-vocational subjects in the field of business education. The pre-vocational period is exploratory in the general sense because all potential ninth grade boys and girls may elect Business Training I and/or Business Mathematics I without any prerequisites, formal or informal. They are specifically exploratory in the sense that several major business and economic units are explored throughout the year. For example, the business community, banking services, spending plans, uses of credit, the sharing of economic risks (insurance), savings plans, and other similar units are introduced throughout the year. Try-out is emphasized in opening a checking account, writing checks, preparing budgets, buying on credit, making out insurance applications, opening savings accounts, etc. The personal-use phase is particularly evident in keeping personal records and information such as addresses, gift lists, letters, clippings and photographs, and birthday and anniversary lists. The correct use of the telephone, and mail services also has direct personal application. The travel service unit actually includes plans for auto trips which may be applied for an actual family outing in the Delaware Valley. The units on our business community, successful economic citizenship, and our business and economic world provide a basic understanding of elementary economics which certainly enhance a student's general education.

4. The vocational period should be given over largely to training in preparation for well-defined types of business occupations.

The students in the Ewing High School business department may choose from the curriculum the program best suited to their abilities and goals. He can elect to take courses that will specifically prepare him for proficiency in the following career opportunities:

Typist (including the use of the dictaphone)
Bookkeeper
Stenographer
File Clerk
Key Punch Operator
Verifier Operator
402 Accounting Machine Operator
82 Sorter Operator
Operator of Ten Key Machines
Operator of Calculators
Operator of Burroughs Sensimatic Bookkeeping Machine
Operator of Duplicating Machines

Upon the mastering of these skills, the students are given an opportunity to participate in the Cooperative Office Work Experience Program. In this program, theory and realism are brought together. Students are given an opportunity to assume responsibility and are introduced to requirements of the various business careers.

5. During the pre-vocational period, each pupil should decide under guidance which of the office, store, and other initial-contact occupations he wishes to prepare for.

A unit on planning your future and preparing for employment enables students to investigate particular careers in business. The boys and girls are encouraged to learn about the various office, store, and other initial-contact occupations so that an intelligent career choice can be made. The guidance counselor has several sessions with each student, and tries to help the student to make a realistic career choice. There is frequent exchange of notes between the Business Training teacher and the guidance counselor as well as other subject matter teachers in helping to establish realistic career goals for the student.

6. In the business career of any pupil, the ultimate goal job is more important than the initial-contact job since it has been demonstrated that any type of clerical or other business work may be used as a stepping stone to higher levels of employment.

In Ewing High School we have made every effort to incorporate in the program of studies an adequate theory background coupled with a related work experience to enable the student to take advantage of every opportunity that is presented to him in reaching his highest level of employment.

The business curriculum contains a variety of experiences and the use of many different types and models of equipment. Special stress is given to the personal qualities that lead to promotion plus emphasis on good office procedures, which include working well with others and increasing speed and efficiency in the operation and handling of equipment.

Federal and State Civil Service tests are administered to all seniors in the secretarial and clerical areas. Employment tests are also given to senior business classes. We constantly encourage all of our students to continue with their formal education. There is evidence through follow-up studies made by our Guidance Department that several students have continued their education.

7. In view of the greater importance of ultimate goals, try-out courses in business should be so constructed as to reveal the aptitudes, abilities, and interests of pupils with respect to such goals as well as with respect to the more immediate initial-contact jobs.

The Business Training I and Business Mathematics I courses are constructed to reveal the aptitudes, abilities, and interests of pupils with respect to bookkeeping and clerical careers by providing realistic units on preparation of payrolls, computing interest, discounting notes and drafts, property and income taxes, keeping a petty cash book, preparing purchases and sales records, preparing a profit and loss statement, and preparing a balance sheet. (Simplified bookkeeping forms are used.) Potential success in shorthand can be revealed through an examination of the many reports prepared by students as well as the Turse Shorthand aptitude test. Some of the students also have opportunities to operate business machines in the school office and work in the school store. Some students also volunteer to work in charity organizations during vacation periods.

8. Vocational skill-training should form a part of the training for practically every boy or girl in the business department, but such skill-training should be confined to a single skill or a closely related group of skills--stenographic, bookkeeping, selling, office machine operation, etc., in order to make room for an adequate general education program.

Students may choose one of three areas according to interest and abilities. The areas are: clerical, bookkeeping and stenography. Our single track curriculum allows ample opportunity for business students to develop a salable skill along with a broad, practical background of general education.

9. The largest possible amount of general education consistent with sound vocational training should accompany all business education, but such general education should, wherever possible, be adapted to the needs of business pupils.

In Ewing High School, the curriculum includes many subjects that help to develop the general education that is so necessary to help the student to be well prepared for his place in the business world. In both society and business or professional life a person is often judged by his ability--or lack of it--to handle his native language with fluency and effectiveness. To this end the English courses stress the constant development of the pupil's ability to express himself well orally and in writing, to read with ease and understanding, and to strive for an ever-increasing vocabulary. A great deal of stress is placed on correct spelling, accuracy, and neatness in the preparation of all this work.

In the Social Studies courses, the student develops an understanding of our political institutions, our economic systems, our cultural ideals and our duties and obligations as good citizens--in short, our whole social and economic environment.

In the Practical Science course, emphasis is placed upon the practical application of physical science principles of everyday life, industry and commerce.

In Social Psychology the students learn about themselves and their behavior so that they may better understand and get along with other people.

Our Physical Education program from grades 10 through 12 includes activities for the students which will benefit them physically, mentally, socially, emotionally, and help make them better citizens.

Our curriculum includes the minor subject of Public Speaking. This course is designed to train the student in the development of poise and good speech habits.

The cultural aspect of the students' development is brought out through our many courses in art and music. In the art classes some emphasis is placed on art that can be used in future occupations such as retailing, merchandising and advertising.

10. Since continuity of practice is essential to the development of skills of all sorts, as far as is practicable, short, intensive courses in skill subjects should replace longer courses with intermittent practice on alternate days.

The Business Education Department in its effort to develop skill achievement offers concentrated practice in as short a period of time as is practicable. Our courses offer a continuity of practice in the development of skills by meeting every day of the week. In addition, our students are encouraged to work with tapes and records on their own time.

11. Such skills as are essential to any particular business occupation for which a pupil is training should be developed as nearly as possible to the time when the pupil will leave school and enter upon such employment.

Second-year skill courses (such as Typewriting II, Shorthand II, Bookkeeping II, and Business Math II) are taken in the 11th and 12th grade as close as possible to the date of graduation and subsequent application of these skills. The highly developed skill courses such as Secretarial and Clerical Office Practice are taken in the 12th grade during the semester preceding the Cooperative Work Experience Program.

12. The core of the business curriculum should be general education instead of bookkeeping, shorthand, or any business subject or groups of such subjects.

Although we, as business teachers, are aware of the importance of the skills, we are also cognizant of the fact that in order to have well-rounded business students we must not only help them to develop those personal and vocational traits that are so essential, but we must also provide them with a well-rounded general background.

The core of each business subject in our curriculum stresses general education areas, such as the following: Good English (vocabulary, spelling, grammar, etc.), quality of work (neatness, legibility, and accuracy), and consumer knowledge.

13. Preparation for college cannot be accepted as a major objective of high school business education since the large majority of graduates of a high school business department do not go to college. Preparation for college and training for business positions require different programs.

Our main objective is to prepare students to enter the business world equipped with the necessary skills, basic business knowledge, and an understanding of business to live in an everyday business world which will help them achieve success commensurate with their ability.

Since Ewing offers the single track curriculum, many academic students take beginning business subjects (Typewriting I and Shorthand I). Business students who feel that they want to continue their education after high school are directed toward the necessary elective academic subjects along with their business subjects.

14. Since the aim of vocational business education is to prepare for the performance of specific office or store or other business duties, the tests of achievement in the technical or skill subjects in this field should square with the requirements of occupational life instead of with the usual academic standards.

The business curriculum unlike the academic program cannot be bound by static requirements. Its standards must constantly be reevaluated to keep abreast of current business requirements. It is our responsibility to have a program that is elastic in nature, for it is only by keeping our program up to date that we can have a realistic one.

The business teachers enhance the realism of this program by relating the subject matter and testing program to actual business requirements. These requirements are gathered through employers' reports prepared during our Cooperative Office Work Experience Program. Our business education coordinator is actively engaged in visiting offices and brings back to our department any important information relating to current business standards. In this way we are also able to make our goals realistic in nature.

15. Since the initial-contact positions and promotional opportunities open to boys are likely to be different from those commonly open to girls, the high school program of business education should be so constructed as to meet the apparent needs of both sexes through specialized or differentiated curriculums.

Ewing High School does not have a differentiated curriculum for boys and girls as such. Each business student is helped to construct his business program to meet future needs and goals depending on the type of business work desired after high school.

16. Boys and girls who lack the personal, mental, and physical characteristics which suggest the possibility of advancing beyond the initial-contact job should be encouraged to seek some other form of vocational training since the clerical level of business employment is unsatisfactory as a permanent goal because its financial rewards are inadequate to the needs of adult family life.

As business educators we are well aware that all boys and girls do not have the personal, mental, and physical characteristics that are commensurate with the obtaining and keeping of a good-income job. With this in mind, we do everything possible to guide these students into an area of study where they will receive the best possible education and the one that will best equip them for the outside world.

Beginning with the eighth grade, various tests are administered to the students with the purpose of enabling them to learn more about themselves and their own personal capabilities. Two of these well-known tests are the "Differential Aptitude Test" and the "Kuder Preference Record."

Once it has been established that a student is a slow learner, he is further helped in his selection of a career through intensive guidance. He is given personal guidance by his subject teacher and also his assigned guidance counselor. (We are fortunate in our school inasmuch as we also have a business guidance counselor who assists our students.) A permanent folder is kept on each student which enables the teacher to learn valuable information concerning the background, grades, personal attitude, etc., of the student he is helping.

Of further assistance to the student is the extensive "Career Library" which is maintained by the guidance department and which is available to all interested students.

Throughout the entire junior year, all juniors receive the benefit of a planned career program. The school engages speakers from all professions and businesses who come and speak to the students. In this way, the student can get first-hand information about any job opportunities that appeal to him personally.

17. Since the degree of success in business which may be attained by any individual is dependent upon many factors such as "business ability," "personality," "social qualities," "mental ability," "natural intelligence," "training," "family connections," etc., no pupil should be barred from the business program because his I. Q. is average or even somewhat below average.

No student is barred from the business program at Ewing because his I. Q. is average or below average. Such a student is encouraged to take business courses in which he will see some measure of achievement. Students of average or low I. Q. take Typewriting I and achieve some skill in relationship to their ability. Those not able to master Bookkeeping I principles because of lack of adequate comprehension of the subject matter are directed toward Record Keeping. The students who will never be highly skilled because of ability take Clerical Problems which helps broaden their business knowledge of office procedures.

In all the courses geared for the "slow learner," his personality traits are developed and good work habits stressed. For good citizenship is an integral part of the student's total business education, along with his business skill or knowledge.

18. Since the conventional and traditional subjects of bookkeeping and shorthand require a high degree of "mental ability," or "student ability," or "scholastic ability," it is clear that only students who rate high in this type of ability should be encouraged to pursue training for entrance into business through the medium of a bookkeeping or stenographic position.

The business education student may choose one of three areas of study, namely: Clerical, Bookkeeping, and Stenography. In the ninth grade, the student is first guided into one of these three areas with the help of his business teacher who uses as his guide the results of the Turse Test plus the actual grades received by the student (especially his English grade). These enable the teacher to steer the student into the proper field of study. Only the most capable students are encouraged to take either shorthand or bookkeeping.

Once the student enters the high school and begins to pursue his chosen field, the teacher is constantly alert to the way in which the student is grasping the subject matter. The first "screening" takes place in December at which time the student is required to fill out a tentative subject election schedule for the following year. If the teacher teaching the first-year subject does not feel the student will be able to successfully complete the three-year program he has set

for himself, the teacher will then, with the aid of the guidance department, guide the student into a different area. It can be said, therefore, that the first year of Shorthand, Bookkeeping, and Typing is a "trying-out period."

The subsequent years of study are further controlled by prerequisites which have been set up for the various courses and which must be met before the student is allowed to continue.

19. Since selling (retail or outside) requires what may be called an alert mind and pleasant personality, it is clear that persons who do not possess these qualities should be discouraged from seeking training for selling positions.

Through the channels of our Guidance Department, the primary screening processes are performed. Aptitude tests, interest inventories, personality and behavior descriptions, and individual counseling interviews help the counselor, teacher, and student to recognize the feasibility of selling as a career. If a student erroneously passes these preliminary criteria, he will be detected and re-directed through his teachers' thorough screening each year as they give their recommendations at subject election time.

20. The high school business program must contain the best possible provision for such pupils as are not likely to succeed in stenographic, bookkeeping, and selling positions.

Although Ewing's Business Department can boast of its success in training proficient future office employees, its curriculum is not limited to these skills. Key punch training is available in conjunction with other unit record equipment such as the verifier, sorter, and accounting machine. A proficiency is developed in the operation of other office machines, including ten-key adding machines, printing and rotary calculators, full-keyboard adding machines, bookkeeping machines, duplicating machines, and dictating equipment. Another course encompasses areas such as filing, routine typing, a variety of office machines, and other clerical chores. In addition, general business subjects are available for those individuals pursuing positions in which skills are not involved or seeking higher education upon high school graduation.

21. All business courses should be offered with the needs of business pupils in mind and pupils outside the business department should be permitted to elect these courses only when it is clear that they will do the work required exactly as if they were taking such courses with definite vocational intent.

Most courses offered by the Business Department of Ewing High School have a dual objective--vocational and personal use. Vocationally, the student is trained to become an efficient and proficient office employee with a pleasing personality and of sound character. Personally, both the academic and the business student are acquainted with skills, concepts, appreciations, and understandings that will enable them to become upstanding citizens and intelligent consumers in our business world today and tomorrow. Whether they are skills or general business subjects, these courses are taught with the business student in mind.

22. The development of vocational skills and occupational understanding is accomplished most expeditiously and satisfactorily when the trainee has an opportunity to establish contact with actual business during the period of training; hence, it is desirable to make provision for some form of cooperative training whenever feasible.

A cooperative work experience program is in operation at Ewing High School. Participants are engaged in typing, secretarial, bookkeeping, key punch, and clerical duties in the community. Mornings are spent in the classroom and afternoons on the job. Students receive wages comparable to those of employees performing similar duties. Opportunities for vacation and full-time employment are prevalent for students participating in this work experience program. The coordinator works closely with the business community to find for each individual the most meaningful employment situation. With the addition of training on the unit record equipment (made available through funds under the Vocational Act of 1963), the number of students participating in the on-the-job training has more than doubled.

23. The syllabus for each subject in the business curriculum should contain for that subject (a) statement of aims, (b) essential content for use in achieving those aims, (c) suggestive methods for using that content, (d) definite testing procedure for determining whether or not aims have been achieved, and (f) helpful bibliography.

Attached are the courses of study for Ewing's Business Department. The five criteria suggested above are met as can be evidenced by merely reading the subheadings of each subject's course of study.

24. Businessmen should be consulted in the organization of any high school business curriculum which is expected to train boys and girls for employment; hence, an advisory committee should be organized and used freely in consultative capacity.

The suggestions and evaluations of businessmen participating in the Cooperative Work Experience Program are solicited annually. These are thoroughly analyzed and implemented when found to be practical and in conformance with our philosophy. These businessmen are also consulted periodically by the work experience coordinator concerning all phases of our vocational business curriculum. An advisory committee per se is not in existence; however, the close relationship between school and community and particularly between the work experience coordinator and participating employers is sufficient to make our program a successful one.

25. The outcomes of a vocational business education program can be improved by providing (as a joint responsibility with guidance personnel) a placement service and continuous follow-up procedures.

Placement and follow-up are the joint responsibility of the Guidance Department and the business education faculty. One of the four guidance personnel is responsible for the counseling, placement, and follow-up of business students both in and out of school. Employment opportunities are channeled through her office and are made known to interested and qualified students. Periodic follow-up surveys are conducted to determine the whereabouts of business graduates, the role of the Business Education Department, and the importance of guidance and placement services. Through her close contacts with the business community, the Cooperative Work Experience Program coordinator is also in a position to offer placement services. She works in conjunction with the Guidance Department in placing not only students participating in the work experience program but also others who meet the qualifications specified by job descriptions of office vacancies.

26. It must be assumed that instructional staff is competent from the point of training and experience in the business world and is also up-to-date by maintaining professional as well as business contacts.

The instructional staff consists of eight members who are educationally, professionally, and personally qualified in their fields. Educationally, all have a teaching certificate, three hold a masters degree, two are currently in pursuit of it, and three have successfully completed training at IBM institutes. Professionally, members have engaged in various activities to enhance their professional standing:

- a) all staff members have been employed in office-related occupations,
- b) active participation in conventions,
- c) membership in professional organizations,
- d) attendance at workshops and conventions, and
- e) in-service activities aimed at the improvement of the business education curriculum.

A. Identify these improvements

1. The most significant improvement resulting from the funds obtained by Ewing High School's Business Department under the Vocational Act of 1963 is the expansion of our Cooperative Office Work Experience program. This year we have been able to more than double the number of students participating in on-the-job training.

Seniors enrolled in Clerical Office Practice and Clerical Problems were given training in the use of data processing equipment (unit record equipment, wiring panels, Burroughs Sensimatic Bookkeeping machine, and calculating and adding machines.) This training enabled them to be placed in positions operating unit record or closely related equipment.

Fortunately, plant facilities made it possible to house the unit record equipment in a room which has been wired at school board expense of \$1260.00. Supplies for this training was also paid by the school board.

The Norelco Steno-Trainer equipment, also acquired through the pilot program, has enabled the students of stenography to receive individualized instruction while simultaneously develop additional skill in the taking of dictation.

2. The content of a course entitled data processing developed this school year will be offered to qualified twelfth-grade students beginning in September, 1966. A course of study has been prepared and instructional materials have been selected to satisfy the needs of this subject.
3. Three high school instructors have been trained in the area of data processing. They attended IBM Institutes in New York and Philadelphia during the summer of 1965 at school board expense of \$2435.26 and have been enrolled in weekly workshops during the school year. Their training has enabled them to become not only proficient in the operation of unit record equipment, but better able to develop this skill in their students. They are presently making plans for additional training this summer at the IBM Institute.

Application has been made by the two stenography teachers for enrollment in the State-sponsored course in the use of the Norelco Steno-Trainer equipment.

4. A course for adult training in IBM keypunch is being offered two evenings a week. In addition to keypunch training, this course devotes time to the analyzation of punched cards, introduces the principles underlying automated record keeping, and develops an acquaintanceship with other unit record equipment.
5. In December, the Business Department of Ewing High School sponsored a workshop to acquaint Mercer County Business teachers with its offering in data processing. Lectures were given followed by actual application; i. e., designing card programs, keypunch operation, machine verification, sorting panel wiring, and report preparation on 402 Accounting machine. Our aim was to initiate interest in the development of similar programs in the Mercer County secondary schools.
6. On numerous occasions we have been visited by teachers in the surrounding area. The purpose of these visitations was to observe our program in operation and to seek advice in the establishment of pilot programs in the field of data processing and of Cooperative Office Work Experience programs.
7. We are presently in the process of planning a program to acquaint the other members of our Business Department with the automated equipment acquired through the Vocational Act of 1963. This fall we participated in an in-service program on the operation of the Alpha-Numeric bookkeeping machine by Mr. Jack Shevillo, Burroughs representative.

B. Additional Improvements

1. Our emphasis on improvements has been directed toward the area of data processing. Our experience in this area reveals a strong indication that facilities should be expanded in order to enable more students to take advantage of this training. Because our improvements are based primarily on the availability of rented equipment, we are very much concerned with the continuation of our first-year requests with limited expansion of rental equipment. In addition, we can develop a salable skill in adding machine operation for the slower business students.

2. Our experience also reveals many opportunities for billing machine operators and, therefore, we are proposing the purchase of a second bookkeeping machine. A definite salable skill in billing machine operation can be developed in the slower students.
 3. The purchase of an additional five electric typewriters will enable us to bring advanced typewriting courses to full capacity.
 4. The installation of a telephone made available to the business education coordinator will enable her to more efficiently perform the tasks of placing students on the job.
- C. Priority list of items which would help to implement these additional improvements.

Priority #1

One year rental of following equipment

8 Key punch 026	\$5,760.00
1 Card Verifier 056	600.00
1 Sorter 082	540.00
1 Accounting 402	2,760.00

Purchase equipment

1 Burroughs Automatic form aligning Sensimatic Bookkeeping machine	3,015.00
5 Electric typewriters @\$353.20	1,766.00
1 Burroughs Full-Keyboard Adder Style P2208 List 10 Total 10 with credit balance	281.25
Installation of telephone in business wing	75.00
Second year rental of keypunch tapes	100.00
20 Reinforced Learning Systems Operators manuals	40.00
10 Boxes of Continuous Form Stock Paper	154.50
100 Pads Planning Charts & Wiring Diagrams	22.00

2 boxes Carriage Control tapes for 402 accounting machine	6.00
332 M IBM Cards	300.00
Ledger, journal, check supplies for Burroughs Sensimatic Book- keeping machines	1,011.60
Tapes for Norelco Steno-Trainer	135.00
Training at IBM Institute for 2 instructors	500.00

Priority #2

1 Burroughs Series C1303 Duplex Calculator	648.75
1 Burroughs Series C1203 Simp- lex Calculator	457.50
1 tape recorder (sony)	125.00
4 F-6-C-N Chairs @ \$25.00	100.00
1 Model 3M (Secretary) copier	379.00

TOTAL	\$18,776.60

S A M P L E
WORK EXPERIENCE PROGRAM
FOR THE
MENTALLY RETARDED AND SLOW LEARNER

WORK EXPERIENCE PROGRAM
FOR
MENTALLY RETARDED STUDENTS
AT
RANDOLPH HIGH SCHOOL

Although Randolph High School is in a somewhat rural area and is handicapped because of this, our school is attempting to set up a vocational work experience program for the mentally retarded.

This paper is written for laymen and educators to understand the general nature of the employment orientation program for pupils in special education classes in secondary schools.

It must also be recognized by the local Board of Education that the employment orientation program depends upon the willingness of industry to accept such a program.

This work experience program is designed specifically for retarded students and differs greatly from other cooperative education programs both in objectives and operational procedures.

RANDOLPH HIGH SCHOOL

**MILLBROOK - MT. FREEDOM ROAD
DOVER, NEW JERSEY**

FOXCROFT 1-2400

Dear Employers:

The Randolph School District is currently engaged in a study of job qualifications and curriculum needs for certain of its students. This study will yield information which will make it possible for the schools to provide a program tailored to the needs of these students as indicated by the qualifications required by employers.

The students who are the subject of this study will rank below average in college preparation ability. They can do well in certain types of jobs. In fact, with training and job placement tailored to their capabilities, they have a high potential as hard working, trustworthy employees. It is our hope that this study will make possible training and job placement opportunities to fill the needs of this group. It will be appreciated if you will assist us in this study by completing the following questionnaire and returning it in the enclosed stamped, self-addressed envelope.

Sincerely yours,

**David J. Petrosky
Work Experience Supervisor**

RANDOLPH HIGH SCHOOL

MILLBROOK - MT. FREEDOM ROAD

ADVISORY COMMITTEES AND DUTIES

A representative advisory committee composed of outstanding persons from labor and management and representing the major business and industrial establishments to be included in the employment work experience program may be appointed by the supervisor from those returning the questionnaires.

They will meet periodically as long as the program is in operation. This committee can advise in the following areas:

1. Student Qualifications
2. School-Employer Agreements
3. Related Instruction
4. Safety instruction in school and on-the-job.
5. Possible job placement opportunities and the development of sound public relations.

INTERVIEW GUIDES

Normally a survey by mail is sufficient in other work experience areas. However, because we are attempting to provide a curriculum specifically tailored to the needs of these students as indicated by the qualifications required by employers, a personal interview is required.

Your firm has completed a questionnaire which gave us basic information about your business and personnel placement. We would appreciate an hour of your time to explore further your business operations as it relates to our work experience program for mentally retarded students.

To conserve your time and to be certain that important points are covered, we will follow this guide.

1. Review the term non-academic as used in this study.
2. What is your most simple job?
3. How many of your job descriptions do you find suited to the non-academic?
4. What specific qualifications would your firm demand of applicants for jobs suited to non-academic?
5. Do you now have employees with high qualifications on jobs which might be filled by trained non-academics?
6. Have you found that workers with limited academic ability tend to remain satisfied with beginning jobs?
7. What per cent of your workers are
(a) men _____? (b) women _____?
8. What is your chief source of supply for employees?

"WHY" THIS PROGRAM AT RANDOLPH

-122-

PURPOSE

Building personal qualifications so that the retarded adolescent can think, feel and act appropriately in the many situations of everyday life is one of the chief responsibilities of the school. Development of such qualities requires more painstaking guidance on the part of those who work with the retarded pupil if he is to achieve status. One real test of the efficiency of a program is its ability to provide opportunities for the mentally retarded to develop socially acceptable behavior.

The high school provides terminal education for mentally retarded students. Consequently, it must concern itself with the important problems of vocational guidance, occupational guidance, occupational orientation, and work experience of a pre-vocational nature.

STAFF

Education of mentally retarded pupils at the secondary level is a team job requiring the understanding and cooperation of several members of the school staff. It is not enough to organize a special class for these youth.

In addition, the special class teacher has to have the solid support of parents, regular classroom teachers, special service personnel such as counselor and school nurse, and the chief administrator of the school.

EMPLOYMENT WORK EXPERIENCE
PROGRAM AGREEMENT

(Name of School)

I The employer _____
(name and address)

agrees to employ _____
(name and address of student-trainee)

on an alternate in-school and on-the-job training program. Not more than forty hours per week shall be spent in employment. If the student devotes time to in-school training during any week, the hours of employment shall be reduced. In no case shall the time at school and the time at work exceed a total of forty hours per week.

II The employer will offer the following work experience during the training period and will follow a rotation plan that provides basic training in each of the experiences listed.

JOB EXPERIENCES

- | | |
|----|-----|
| 1. | 6. |
| 2. | 7. |
| 3. | 8. |
| 4. | 9. |
| 5. | 10. |

III The employer will assign some member of his organization, a qualified employee, who will have a continuing responsibility for the training and supervision of the student trainee. The person responsible for this training on the job is _____

(name and title)

IV The schedule of compensation to be paid the employment orientation student while at work will be at least \$ _____ per hour. If the student is employed in an occupation in which non-handicapped employees in the establishment are paid at piece rates, he shall be paid at least the same piece rates. The named worker or trainee must be paid his full piece rate earnings or the earnings based on the hourly rate specified above, whichever is the greater.

- V The employer agrees that where a union or bargaining agency is involved, he will obtain union approval of the program.
- VI The student, while in the process of training, will have the status of student-trainee, neither displacing a regular worker now employed, nor substituting for a worker that ordinarily would be needed by the employer.
- VII The employment orientation course student will be covered by Workmen's Compensation Insurance and any other benefits to which he is legally entitled as a worker. The student, while working in the employer's establishment shall be subject to all regulations applying to other employees.
- VIII Since the employment orientation education program is under school supervision, the teacher-coordinator will be admitted to the employer's premises at such times as the coordinator deems it necessary to observe the student at work and evaluate his progress. The coordinator will conduct his observation in such a way as to cause a minimum of interference with the employer's business.
- IX At regular intervals (not less than two weeks) the coordinator will consult with the employer or his representative for the purpose of evaluating the student's progress so that an accurate school record can be maintained.
- X The student agrees to report for work punctually and regularly. He also agrees to follow the orders and instructions of his supervisors at all times.
- XI The parent or guardian shall be responsible for the personal conduct of the employment orientation course student during his period of training.
- XII All complaints shall be made to and adjusted by the teacher-coordinator.

XIII The employment of the employment orientation course student, shall be in accordance with federal, state and local laws and regulations.

XIV This agreement may be terminated by the employer at any time after consultation with the teacher-coordinator. The teacher-coordinator may terminate this agreement at any time after consultation with the employer.

CATEGORY OF WORK POSSIBILITIES

CATEGORY OF WORK POSSIBILITIES FOR THE SLOW LEARNER

1. Apprentice painters
2. Barber
3. Bookbinding helpers
4. Box boys (supermarket)
5. Carpenter helpers - apprentices
6. Clean-up and mechanical helpers
7. Common labor
8. Construction helper
9. Cooks helper
10. Cosmetology
11. Delivery and related work
12. Dishwashing
13. Dry cleaning helpers
14. Elementary electricity helpers
15. Fabrication
16. Fire protection work
17. General tire work helpers
18. Greenhouse and plant care
19. Janitorial helpers
20. Loading trucks
21. Machine operators
22. Main service
23. Mechanical work on cars and machinery
24. Nursery assistant
25. Nursing home helper
26. Plumbing helper and apprentice
27. Processing and canning fruit
28. Running electric power
29. Service Station attendant
30. Sheet metal workers
31. Simple filing and general office work
32. Stockroom work
33. Upholstery work
34. Utility floor covering work
35. Waitress
36. Warehousing
37. Yard work

Parents:

Since the nature of the special education program is one that aims at developing the social, emotional, and vocational attitudes of the students, it is important that the parents understand what we are doing. By gaining an understanding, they can better evaluate the program of their children.

It is also necessary that the parents give their written approval before students are placed in a work study or work experience program.

COORDINATOR

EMPLOYMENT ORIENTATION WORK EXPERIENCE TEACHER-COORDINATOR RESPONSIBILITIES

1. Surveying local employment opportunities.
2. Arranging interviews for trainee applicants.
3. Assisting in organizing the advisory board.
4. Publicizing the cooperative aspects of the program.
5. Interviewing and selecting prospective pupils.
6. Approving establishments for employment orientation training. Consult with the N. J. Rehabilitation Commission and arrange for the establishment of cooperative employment planning for each student.
7. Working out training schedules with employers.
8. Certifying the qualifications of employees assigned by employers to train student-trainees.
9. Assisting in the scheduling of classroom programs for pupils.
10. Developing adequate records and reporting systems.
11. Preparing courses of study in related instruction.
12. Teaching the classes in related instruction.
13. Arranging adequate classroom facilities and requisitioning necessary teaching materials.
14. Counseling pupils regarding placement with respect to appropriate employment objectives.
15. Maintaining contacts with local employers.
16. Carrying out follow-up studies of graduates.
17. Assisting pupils to obtain work permits, social security cards, health certificates, and special certificates for employment of handicapped workers.
18. Checking with employer to make sure student has filed all required permits, certificates, etc. before actual placement of student on the job.
19. Visiting pupils working at training establishments to:
 - a. Observe the type of work being done.
 - b. Arrange with employers for rotation of pupils through a wide range of activities to achieve the training objectives.
 - c. Analyzing the jobs of the pupils to secure information for work-theory coordination.
 - d. Determining how related instruction within the school effectively supplements the on-the-job training.
 - e. Adjusting any problems arising between pupil and employer.

RESPONSIBILITIES AND DUTIES OF THE EMPLOYER

RESPONSIBILITIES AND DUTIES OF THE EMPLOYER

Following are some of the employer qualifications that are evaluated in approving him and his establishment for employment of participating students in the work experience program.

1. He must accept a training responsibility.
2. He must show evidence of safety consciousness and provide properly guarded equipment for his workers.
3. He must be willing to assign a qualified employee who will be responsible for the training function and whose qualifications are certified by the teacher-coordinator.
4. He must be a party to a written agreement with the school indicating the specific nature of the job experiences to be offered and his acceptance of the conditions of the training plan.
5. He must agree to regular supervision of the program by a teacher-coordinator employed by the school, and other details which will safeguard the participating student and insure the orderly progress of the training program.

CURRICULUM

GENERAL SCOPE AND SEQUENCES

A student entering the secondary program for the retarded, will take a curricula that covers four years. Each year is a sequence of cores in order to develop the child's potential and prepare him to meet the world. Students progress through cores on an individual basis.

Core I serves as an orientation period during which the student learns to adjust to his surroundings. At this time he learns to follow the school rules and regulations; to discipline himself and follow a rigid schedule; gain poise and self control; be generally familiar with the "World of Work"; gain more competence in the basic skills; know and accept his problems without shame; know job opportunities available and how to apply for them; know importance of getting along with other students.

Core II serves a dual purpose. It is basically an extension of Core I, but also includes an in-school work program as an introduction to further work experiences. At this time the student will use his basic tools to help him in various job situations. He will receive training so that he will be able to support himself in the "World of Work". Functioning independently is the underlying philosophy of this curricula. Therefore most of the concepts and activities develop from these factors.

Core III moves the student from a school situation into the community for various job experiences. At this time he will also receive classroom experiences coinciding with the community jobs. Also he will be given further training in the tool subjects. Half of the student's time will be spent in school and half in the community. The time in school will be devoted to facing and solving problems met in work experiences. The aim of this core is to prepare the student to gain the proper skills to retain a job after completion of our four year program.

Core IV is the last phase of a four year program. At this time, the student will use all his past experiences to cope with this core. The student will have work experiences outside the community as an extension of Core III. He will learn to solve household chores, take care of his income, and earn money to act independently. Since this is the last phase of a four year program, the student will fill out more job applications and have job interviews. If possible he will have part time employment with a company for which he will eventually work. Problems he meets will be solved in school.

SPECIAL EDUCATION

IN SCHOOL WORK EXPERIENCE PROGRAM

GENERAL STATEMENT AND INTRODUCTION

The basic idea behind our in-school work experience program is to introduce special education students to work situations before they reach the age of 16. This will be accomplished through a program of a part-time nature; from one to three hours a day. The other four school hours will be spent in various subject areas. Since students will be at varying levels of readiness to participate, it is possible that only one or two students will be taking part each semester. We are also limited by the number of in-school work experiences available.

OBJECTIVES

1. To introduce the students to the world of work.
2. To enable students to develop personal responsibilities necessary to hold a job.
3. To provide actual work experiences and simple skills related to positions students might enter after leaving school.
4. To integrate work experience as part of the regular Special Education curriculum.

PROGRAM PLAN

1. The School Work Experience Program should be designed to combine actual job learnings within the school, and on the job discussions and demonstrations to the other members of the class of the skills he has learned.
2. Time Allotment: One to two marking periods per year depending upon the development of the individual student. One to three hours will be spent each day.
3. Areas of Assignment:
Area A--Work with head custodian.
Area B--Work with maintenance man.
Area C--Special Work Assignment.

COMMUNITY WORK EXPERIENCE PROGRAM

COMMUNITY WORK EXPERIENCE PROGRAM

OBJECTIVES

1. To broaden background and preparation for work initiated in the school program.
2. To assist the student prepare for working through part-time experience while still in school.
3. To increase student independence and ability to secure and retain a job after leaving high school.

4. To gain understandings:

jobs contain many skills; each is important
characteristics of a good worker
how to secure a job, to keep it
job opportunities and requirements

5. To gain through supplementary classroom activities information about the world of work:

local job families - kind of workers - job requirements
self-analysis related to jobs
general picture of abilities
factors in securing a job
factors in holding a job

ADDITIONAL COMMENTS :

PERFORMANCE AND ADJUSTMENT RATING

Name _____ Rating for period _____ to _____

Rating by _____ Assignment _____

To the rater: Evaluation of a trainee's progress and of the training program depends upon information provided by supervisors. Your careful rating of this trainee will be greatly appreciated.

In making your ratings, consider the descriptions and assign for each a number as follows: using as your basis for comparison, persons at the same level of training:

1. Poor in the characteristic described.
2. Below average in the characteristic described.
3. Average in the characteristic described.
4. Above average in the characteristic described.
5. Very good in the characteristic described.

<u>Characteristic</u>	<u>Rating</u> (Please Circle)
<p><u>Punctuality</u> Arrives at assignment on time; returns promptly from "breaks"; indicates awareness of, and concern for promptness.</p>	1 2 3 4 5
<p><u>Work Readiness</u> Settles down to work readily; is interested and does not have to "warm up" to it, or have to be urged or reminded to begin work.</p>	1 2 3 4 5
<p><u>Appearance</u> Wears clothing suitable for the job, is clean and neat; well-groomed.</p>	1 2 3 4 5
<p><u>Sanitation and Health</u> Avoids spread of germs or unnecessary exposure to health hazards; uses handkerchief to cover coughs and sneezes; uses washroom facilities; keeps self clean.</p>	1 2 3 4 5

Accepts Directions

Does not resist being told what to do; listens to and attempts to understand directions.

1 2 3 4 5

Able to Follow Directions

Performs tasks as directed; does not need instructions repeated frequently; does not do tasks in ways other than directed; adapts easily to changes in directions.

1 2 3 4 5

Seeks Assistance

Recognizes need for assistance, and asks for it; requests assistance from appropriate person.

1 2 3 4 5

Accepts Assistance

When given assistance, accepts readily; interprets assistance as helpful rather than as adverse criticism.

1 2 3 4 5

Perseverance

Continues with assigned task until completed or until quitting time; does not leave assignment or change from one task to another.

1 2 3 4 5

Effort

Works up to best ability, enthusiastic and takes pride in work; degree of effort is fairly constant and does not vary from task to task or from time to time.

1 2 3 4 5

Concern for Materials

Appreciates value of and conserves materials; avoids unnecessary waste; discards only unusable materials.

1 2 3 4 5

Safety Consciousness

Is aware of and avoids safety hazards; keeps work area clean; uses tools and equipment appropriately.

1 2 3 4 5

Disposition

Even-tempered; pleasant; not disturbed by changes in assignment or work conditions. 1 2 3 4 5

Self-Control

Takes frustrations with little difficulty; controls behavior well; behaves appropriately in the work situation. 1 2 3 4 5

Relation with Co-workers

Friendly with co-workers; not overly dependent upon them; initiates conversation; gets along well; doesn't become involved in arguments. 1 2 3 4 5

Relation with Supervisor

Accepts supervisor's authority; gets along well with supervisor; is not overly dependent upon supervisor or try to be overly friendly; respectful. 1 2 3 4 5

Politeness

Uses expressions "thank you," "please," and so on; is considerate of others; waits turn in conversation; not loud or profane. 1 2 3 4 5

Rater's estimate of trainee's general performance and adjustment. 1 2 3 4 5

Any additional comments on the trainee will be appreciated.

3. Students who obtained their jobs through the Job Placement Program received a mean salary of \$9 per week higher than those students not participating in the program. Average salary for participating students was \$71 per week. Average salary for non-participating students was \$62 per week.

INCIDENTAL OUTCOMES OF THE FOLLOW UP

1. 22.7 per cent (5 students) who participated in the Job Placement Program are directly involved in electronic data processing to some degree.
2. 13.6 per cent (3 students) who participated in the Job Placement Program are attending evening college classes through company paid benefits.

CONCLUSIONS

1. The Job Placement Program at Randolph High School for school year 1964-65 was successful in that all students gained employment in the jobs of their choice within 90 days after graduation.
2. Students who obtained employment through the Job Placement Program are earning higher salaries than those who did not obtain employment through the Job Placement Program.
3. Electronic data processing is becoming a significant factor in beginning office employment in our area.
4. Some Business Education students can go to college.

RECOMMENDATIONS

1. More emphasis should be given to Business Education Job Placement Programs in the public high school.
2. More emphasis should be placed on the role of electronic data processing as applied to beginning office jobs.
3. Better liaison between the school and business and industry should be established and maintained in order to operate a successful Job Placement Program.

TO THE STUDENT

"The first step in learning
is learning how to learn..."

There are more bakery workers than baking craftsmen because it is easier to learn the HOW of baking than to learn the WHY of baking.

Learning HOW involves learning manual skills, mainly. Learning WHY involves understanding difficult concepts and acquiring many new facts.

This book is more than a collection of baking facts, however. It is part of a method of learning. The method tries to make the process of learning a pleasant experience.

In the first place, the student is not required to struggle through each new unit at home by himself. Instead, all study it together in class. Seated around a large workbench, facing his classmates, a student reads a single paragraph under the leadership of the teacher.

Often, one student's personal experience helps clarify a point for the entire class. The group proceeds together, only as rapidly as each of you understands the new word, new concepts, and new relationships.

In the second place, you know for every topic what is expected of you, for each unit is accompanied by a test, which you grade yourself. You find out for yourself just what your weak points are. The test becomes a learning device, for its only purpose is self-evaluation. Of course, mid-terms and final exams are graded by the teacher, but they are based on the tests you have already taken.

Finally, the most important part of this workbook is the part that you will write yourself. Each page provides a space for your notes. Use it. Don't trust your memory. The good student seldom does. That's what makes him a good student.

Far more will be said in class than I can put down in skeletal paragraphs, so write down each new fact that you learn in class. And build up your fund of information by referring to the recommended readings and references at the beginning of each unit.

In addition, get in the habit of reading trade brochures. Share your new knowledge with your class mates. When they do the same, you will find that you get more than you give. And you will find yourself on the road to craftsmanship.

FLOUR

I. INTRODUCTION

NOTES

Flour is the most important ingredient in baking. It is logical that you should want to know as much as possible about it. When you have completed this unit, you will know a great deal about (1) the growth of wheat, (2) the milling of flour, and (3) the different characteristics of various types of flour.

Let's begin with a kernel of wheat. On the opposite page is an enlarged drawing of a cross-section of a single wheat kernel. The actual size of a wheat kernel is about $\frac{3}{8}$ of an inch.

It is not necessary to know all of the technical terms to be a good baker. But in order to understand the chemical process called GROWTH, and the physical process called MILLING, you will find that some knowledge of the vocabulary related to the processes is helpful. Make it a point to underline any new words in the text, and use the "Notes" section on the right-hand side of each page to fill in meanings and definitions as soon as they become clear to you.

II. A BRIEF HISTORY OF THE GROWTH AND MILLING OF WHEAT

NOTES

Historians have expressed the opinion that the dawn of civilization began with the cultivation of grain -- for when primitive man learned that wild grains were edible and that they grew each season in the same place, he stopped roaming in search of food.

Among the early peoples who knew the use of grain as food were the Swiss Lake Dwellers, who lived during the late stone age, some 8,000 years ago. Millet, a form of grain, was probably the first used, but barley and early varieties of wheat were also used. When it occurred to some cave man to grind the grain between stones to separate the more tender inner portion from the branny outer covering, milling was invented. Perhaps by accident, it was discovered that wheat was more palatable when first moistened. Later, it was discovered that it tasted even better when heated by fire.

For some 3,000 years, hard sheets of baked meal served as man's primary food. This was the only type of "bread" known to the Assyrians, Babylonians, and early Egyptians. In the valley of the Nile, where the land was rich and well watered, the cultivation of grain was practiced extensively as an affair of the state. All the grain belonged to the Pharaohs. Planting was administered by the priests. Part of the crop was turned over to the royal household, and the remainder went to the public granaries. There it was crudely ground into flour in a "saddlestone," something like a mortar and pestle.

The first real step forward in milling was made by the Greeks, who developed quern mills, in which wheat was milled by a continuous motion. The quern was made by fitting two large, flat stones together. Wheat was poured through a hole in the upper stone to sift down between the upper and lower stones. A stick served as a lever to turn the upper stone against the lower one, grinding the grain. Until the development of water power to turn the millstones, there was no other important development in milling.

The next great step forward came with the invention of the steam engine in 1789, which made possible the development of the roller mill. The steps in the milling of flour in a modern mill are described in the chart on the next page.

HOW WHEAT IS MILLED INTO FLOUR

Wheat, like many products of nature, has an outer protective coat. Milling breaks away this husk, separates the endosperm, and divides wheat into different grades of flour and various products.

A series of corrugated and smooth rollers, with sieves and sifters of increasing fineness, crush and separate parts of clean wheat until 72% is finely ground into white flour, and 28% is made into by-products.

HOW FLOUR IS DISTRIBUTED AND USED

COMMERCIAL 68%
(approximate)

HOUSEHOLD 27%
(approximate)

DURUM PRODUCTS 5%
(approximate)

III. CLASSIFICATIONS OF WHEAT

NOTES

Although there are more than 200 varieties of wheat grown in the United States, most of them can be grouped into five main classifications:

Hard Red Spring Wheat
Durum Wheat
Hard Red Winter Wheat
White Wheat
Soft Red Winter Wheat

Hard wheat and white wheat varieties are used mainly for making high-quality, yeast-leavened bread.

Soft wheats are best for chemically leavened baked products such as cakes, pastries, cookies, etc.

Durum wheats are used for noodles, macaroni, spaghetti.

Note that the five classifications above refer to two things -- a season and relative hardness or softness. When wheat is planted in the spring and harvested during the summer, it is called spring wheat. When wheat is planted in the winter and harvested in the spring, as it is in sections of the country where winters are mild, it is called winter wheat.

Winter wheat kernels have a softer outer covering. The flour milled from such wheat is called soft winter wheat. Most cake flours are milled from soft wheat. That's why cake flours have a characteristically soft feel to the touch.

Spring wheat kernels have a hard outer covering. The flour milled from such wheat is called hard spring wheat.

Most bread flours and all-purpose flours are milled from these hard kernels. That's why all-purpose flour is called hard flour. It is also called strong flour because the hard kernels contribute qualities of "strength" to the dough. (See the glossary for the definition of "strength" in flour.)

As in all living processes, the final product is affected by everything that contributes to its growth. For example, how strong your teeth are depends to a great extent on the kind of food you ate as a child. Heredity also enters into the picture. If your parents had strong teeth, you are also likely to have strong teeth.

Similarly, the amount of nourishment wheat gets during the growth process determines the quality and quantity of wheat that an acre will yield. There is also a direct relationship between the amount of rainfall and the wheat yield. Even wind velocity influences yield.

IV. THE OBJECTIVES IN MILLING

After wheat is grown and harvested, it is ready to be processed into flour. This process is called milling.

Not all wheat is the same. Wheat grown in the west -- even though grown from the same seed -- will be different from wheat grown in the east because the climate, soil, and all other conditions concerned with growth are different. If you were the miller and you found that the bread baked from a particular type of flour was too white, and the bread baked from another type of flour was too creamy-colored, how would you correct the condition? You would blend both flours, of course, just as a painter might blend two shades of a color to get the exact shade he wants.

This may be an over-simplified illustration, but it tells what the miller's function is in the baking industry.

The machinery the miller uses is costly and complicated. But the process of milling is basically the same as it was thousands of years ago when the cave-man crushed grains of wheat between stones to extract the white "dust" that lay hidden beneath the outer covering of the wheat grains that grew wild in the fields.

By blending a "hard" flour with a "soft" flour, the miller produces a flour with just the right characteristics for a specific product. In bread baking for example, these are the most important characteristics that the baker looks for in a flour:

1. Color (whiteness)
2. Strength
3. Absorption
4. Tolerance
5. Uniformity

In other words, the five qualities listed above are the objectives in milling flour that is to be used for white bread. The objectives in milling flour for cake making are different.

Color

While all flours appear white at first glance, there are really a number of different shades of flour. In white bread, the color of the flour is important because it affects the brilliancy of the finished loaf. To get this color it is important that the miller select the right variety of wheat. It is also important that he extract only the center portion of the wheat kernel because the "heart of the wheat" contains none of the coloring matter that is present in the outer portion of the kernel.

Most flour has a naturally creamy color, rather than pure whiteness. Flour can be whitened by bleaching however. It is also possible to whiten flour by aging it. In fact, that's the way it used to be done before chemistry speeded up the process. Now, the bleaching process is usually performed by mixing the flour with a gas (nitrogen peroxide, nitrogen trichloride, or chlorine with nitrosyl) in an agitator.

Strength

Strength in a flour means the ability to be made into large, well-piled loaves. Strength also means the ability to hold in the gas that is created during fermentation.

High Absorption

To understand the idea of absorption, think of flour as a sponge. Some types of sponges will take up more water than others. Some flours, when mixed into a dough, will absorb more water than others. When 100 pounds of flour can absorb 56 pounds of water, that flour is said to have 56% absorption. However, "true" absorption means the total of all liquids, such as eggs, milk, etc., that can be taken up by all floury ingredients, such as milk powder, dry malt, etc.

**SCHEMATIC BREAKDOWN SHOWING
EXTRACTION AND SEPARATION
FROM 100 POUNDS OF CLEANED WHEAT**

The more moisture contained in a dough, the more moisture will be retained in the baked product--and the longer it will stay fresh. Also, it will be cheaper to produce bread from high-absorption flour. Absorption is defined as the ability of a flour to carry the maximum amount of moisture in the dough and still produce a quality loaf. Absorption is higher in strong flours than in weak flours because strong flours contain more of the outer covering, the absorbent portion, of the wheat kernel.

Tolerance

Tolerance in a bread flour means the ability to produce satisfactory results over an extended fermentation period. This does not mean total fermentation period. It means that time after the normal fermentation period for the best bread has passed, but in which a satisfactory product can still be produced.

Uniformity

Not only must the baker be able to depend on the strength, absorption, and other qualities of the flour; he must also be able to depend on specific flours' having the same strength, absorption and other qualities from season to season. In other words, even though wheat differs from crop to crop, the miller must rectify the difference so that each year's supply of flour will be as much like the previous year's flour as possible.

V. EXTRACTION AND SEPARATION

It is important to understand the difference between extraction and separation if the student is to understand the milling process. On the opposite page is a chart in which the difference is graphically shown.

Extraction

When a load of wheat (let's say 100 pounds) comes to the mill, it is cleaned and a certain portion taken off for feed. If 28 pounds are taken off for feed, 72 pounds are left to be milled into flour. This is called 72% extraction flour. The chart shows the breakdown of the various kinds of flour milled from the 72 pounds of wheat.

You should understand this: The higher the extraction, the lower the quality of the flour. Look at the chart a moment. Suppose instead of 72% extraction, the miller got 80% extraction. To do so he would have to use part of the wheat that is normally used for feed. Since this is the branny outer hull, he would be lowering the quality of the flour from the standpoint of color and other baking characteristics. This was done during World War II when it was necessary to stretch our supply of wheat to help feed our allies.

Separation

Separation is concerned with that portion of the chart in the dotted box. After the flour is extracted from the wheat, the miller separates it into various types of flour. For example, when he divides the 72 pounds of flour (that he extracted from the 100 pounds of cleaned wheat) into patent flour and clear flour, this process is called separation. As you can see by referring again to the chart, there are various grades of patent and clear flours. In other words, separation means first dividing the flour into two kinds of flour (patent and clear) and then dividing the two kinds of flour into various grades. Each kind of flour is suited to a different purpose, but on the whole, patent flour is of a higher quality than clear flour.

Note that, in processing whole wheat flour, the entire 100 pounds of wheat is used. There is no extraction and no separation. The entire kernel is ground up to make a flour that has all the portions of the wheat kernel and therefore all the nutrients of the wheat. That is why whole wheat flour is more healthful than white flour.

VI. THE CHEMISTRY OF WHEAT FLOUR

The composition of almost every strain of wheat differs from that of every other strain; naturally, this results from the fact that the conditions that went into their growth differed. On the whole, this is the approximate composition of the average of all types of wheat:

Protein	12.6%
Fat	1.9%
Ash	1.6%
Carbohydrates	70.4%
Moisture	13.5%

Protein in Flour

If there were no proteins there could be no animal life, for proteins make living tissue. Proteins are found in all substances in greater or lesser degree. Proteins cannot be stored up (as fats can) in the human body, and therefore a daily supply of proteins should be included in the diet.

Just as proteins form tissue in humans, they also form structure in leavened bread. The cell walls hold in CO_2 created during fermentation are built of protein. But the baker seldom uses the term protein. Instead he speaks of GLUTEN, a substance formed out of the constituents of protein when water is added to the dough. The quantity and quality of gluten determine how well a bread will rise and keep its shape in baking.

Fat in Flour

Although fat constitutes about 2% of the flour, cereal chemists have shown in laboratory experiments that its presence can have noticeable effect. For one thing, wheat fat is subject to rancidity. Therefore, in milling, an effort is made to reduce the fat content of flour and thereby increase the period of storage during which flour will remain sound.

Because certain chemical reactions take place in fats at high temperature and moisture levels, flour stored for long periods under these conditions deteriorates and loses its baking quality.

Doughs made from such deteriorated flours lack extensibility and tear easily.

It has been shown in laboratory tests that such doughs will not handle satisfactorily and that their gas retention is poor. It has also been proven that the volume, flavor, and palatability of the bread made from flours with excessive fat are inferior.

Ash in Flour

Ash indicates the quantity of mineral matter in wheat. We find out how much ash a flour contains by heating a small sample of flour until all organic matter, such as the starch, sugar, proteins, etc., is burned away, leaving white ASH as a residue.

It has been found that the minerals of wheat are not evenly distributed throughout the kernel. Higher concentrations occur in the bran portion than in the endosperm portion.

Whole wheat bread, which is known to be more healthful than white bread, contains more of the bran than bread made from white flour. One can easily draw the conclusion as to where in the wheat kernel the most healthful constituents are.

Unfortunately the health-giving constituents are not necessarily those most sought after in the production of popular white bread. It is WHITENESS and MACHINEABILITY that are more important to the automatic-production bakers. However, with enrichment, the baker can return to the flour the nutrients that have been taken out in the milling process.

It is important to remember that the bran portions of wheat contain approximately 20 times as much ash as does the endosperm. Thus, a high ash content usually indicates a high proportion of bran, such as occurs in low-grade flours. It is also important to remember, however, that low grade flour doesn't necessarily mean low in nutritional value; it means low in tolerance, or strength, or color, etc.

Many bakers believe that the quantity of ash present in flour is an inverse guide to flour quality - the lower the ash, the higher the quality of the flour. However, it has been found that ash content alone is not a reliable guide to baking quality. In general, soft-wheat flours contain a lower ash content than hard-wheat flours, yet hard-wheat flours possess superior baking characteristics for bread baking.

Carbohydrates in Flour

CARBOHYDRATES constitute one of nature's three great classes of organic compounds. The other two are FATS and PROTEINS.

You will recall that flour contains about 70% carbohydrates; this is in the form of STARCH. Starch is involved in the process of fermentation. It forms the structure, with gluten fibers of other protein, in all baked products.

In the mixing process, the starch in flour combines with about one-third its weight of water. Since there is so much more starch than gluten, the combined water in the dough is held equally by the starch and the gluten.

In the baking process, as the temperature rises, gluten gradually loses its ability to hold water, and begins to lose the water it combined within the dough. At the same time starch gains in ability to absorb water, and the granules gelatinize, taking up the water released by the gluten.

The change that takes place when starch is heated with water is called gelatinization. The starch granules absorb the available water and swell to several times their own size. This water is retained in the starch granules, so that the the baked loaves contain a structure consisting of a concentrated starch gel bound together by gluten fibers.

Moisture in Flour

As you probably know, water constitutes a large portion of all foods. The legal limit for moisture in flour is 15%.

One of the disadvantages of having too high a moisture content in flour is that moist conditions make for infestation by weevils and other insects.

• Another disadvantage is that the higher the moisture content when the flour arrives at the plant, the lower the absorption the baker can expect in mixing the dough.

VII. ENRICHMENT

During the 1930's, surveys showed that 33% of American families had poor diets. Although we were the best fed nation in the world, malnutrition was evident.

• Recognizing the need for correcting the condition, the Food and Nutrition Board of the National Research Council proposed in 1936 that the nutritional elements most lacking in the diet be restored through the addition of thiamine, riboflavin, niacin, and iron to white flour.

To some extent, these are the nutrients lost in the milling process. The baker restores these nutrients by enriching his bread in one of three ways:

1. By using ENRICHED flour.
2. By adding a powdered mixture of vitamins and iron to the dough during mixing.
3. By dissolving an enrichment wafer in water and adding it to the dough during mixing.

During World War II, War Food Order No. 1 made the enrichment of white flour and bread mandatory. This order was withdrawn in 1946, but most of the states have enacted enrichment laws of their own.

The flour of wheat is rich in vitamins of the B group. But what are vitamins?

We can best approach understanding the answer to this question by first understanding that foods may be divided into two classes: energy foods and non-energy foods.

There are three classes of energy foods:

1. Carbohydrates
2. Fats
3. Proteins

The energy stored in these foods is changed in the body to other forms of energy, such as body heat and motion.

The non-energy foods:

1. Water
2. Vitamins
3. Minerals

supply no energy but are as necessary to life as those that do.

Vitamins are complex chemical compounds found in nature or manufactured chemically. Each functions in one or more of the following ways:

To prevent or cure some particular disease, such as rickets or scurvy.

To cause the digestive organs and other structures to function effectively.

To promote good health, usually in one or more ways in addition to those mentioned.

Vitamin B₁ is called Thiamine. This is one of the vitamins replaced in flour by the process of enrichment. It is necessary for a healthy nervous system, for good appetite and digestion, and to help the body convert energy foods into energy and heat.

Riboflavin (B₂) and Niacin (K), two other vitamins necessary to maintain good health and prevent such diseases as pellagra, are also added to flour -- in some cases, in larger quantities than are considered adequate.

Iron (a mineral rather than a vitamin) is the fourth nutrient added to flour. It is needed by the body in the formation of hemoglobin, the red substance in the blood that carries oxygen to the cells.

IX. MISCELLANEOUS FLOURS

Rye Flour

While most flour is milled from wheat, it is important for the baking student to know that there are other types of flour besides wheat flour.

Although only 2.5 percent of the world rye crop is grown in the United States, rye is the second most popular type of flour consumed in America.

Rye is grown principally in colder regions, where it will thrive under climatic and soil conditions which are unsuitable for wheat.

There is practically no difference between rye and wheat flour from a nutritional viewpoint. Contrary to the opinion of some people, there is very little difference in digestibility.

One of the chief differences between wheat and rye is the difference in gluten. Rye flour cannot form a definite gluten structure during mixing. Very small, compact loaves result when the baker makes bread from pure rye flour. In "rye" bread as we know it, about 60% wheat flour is used as the structure builder.

Soybean Flour

Although the soybean, or soyabean, is one of the oldest agricultural crops cultivated by man, very little of this flour is used in American bakeshops.

The soya crop is grown extensively here, but its principal uses are for the production of oil and meal rather than for baked foods.

Soya is exceptionally rich in oil and protein -- but the protein is of a somewhat different type and produces a gluten that lacks elasticity.

While soya can produce a superior bread from a nutritional standpoint, the crumb color would be noticed and probably objected to by many consumers.

Adding soya to white flour for bread making provides certain advantages. It

1. Prolongs shelf life
2. Cuts down rancidity
3. Provides a more even crumb structure
4. Improves evenness of browning in toast
5. Improves nutritional qualities

Potato Flour

Potato flour, which is different from potato-starch flour, is sometimes used in the production of white bread because it helps bring about some of the characteristics sought by white-bread bakers. For one thing, potato flour helps retard staling.

Potato flour also adds to the flavor of white bread. True, it adds a distinctive flavor, but it is flavor, which is something many white breads do not seem to have.

From a nutritional standpoint, potato flour is superior to white flour in thiamine, riboflavin, and niacin.

From a production standpoint, fermentation is speeded up by the addition of potato flour.

Potato flour is also widely used in the production of yeast-raised doughnuts.

Wheat Germ Flour

Although there is no doubt about the nutritional value of wheat germ, it has been found that the addition of more than 3 percent wheat germ to dough has a harmful effect on both the dough and the bread. Dough will be sticky and hard to handle. Bread will have an open grain and poor volume.

Self-Rising Flour and Prepared Cake Mixes

Self-rising flour is different from prepared cake mixes in that the former contains only baking powder and salt in addition to regular white flour; the latter may contain milk powder, dried eggs, shortening, and other baking ingredients.

In preparing self-rising flour, the miller doesn't add baking powder as such. Instead, he adds those chemicals which make up baking powder, namely, sodium bicarbonate and an acid reactant. Self-rising flour is a household flour and is not used in commercial bakeries.

X. STORAGE OF FLOUR

The flour storage room should be well ventilated, clean, rodent-proof, and odorless. The temperature should be about 65°-75° F., with a relative humidity of 55-65%.

Flour should never be stacked directly on the floor, but should be placed on skids, far enough from the walls to permit free circulation of air.

Bleached flour will improve steadily in quality and keep well up to approximately five months from the time it is milled. Unbleached flour will keep up to about eight months. Rye flour, corn meal, whole wheat flour are subject to more rapid deterioration and should be bought in the smallest quantities practical.

Ash -

The mineral residue left after complete burning of a substance. In the milling and baking industries, the substance is burned under certain specified conditions.

Aging -

A natural process of oxidation which flour undergoes during storage and which results in improved baking characteristics and whiter color.

Absorption -

The amount of liquid that a flour will absorb or take up. "True absorption" is the amount of water and other liquids that a flour will take up. The percent of absorption is found by dividing the total amount of flour into the total amount of water.

Bran -

The coarse outer covering of the wheat kernel, as separated from cleaned and scoured wheat in the usual process of commercial milling. Essentially, the epidermis and other outer coverings of the wheat kernel.

Bleaching -

A process of treating flour with certain chemicals to remove yellow pigments. The effect of bleaching is similar to the effect of aging.

Bucky -

A dough condition usually resulting from too much CO₂ in the dough, which makes it too elastic to machine or roll out by hand.

Baking test -

An actual baking in shop or laboratory under controlled conditions to determine the baking qualities of a new shipment or a new crop of flour.

Bromated flour -

White flour to which potassium bromate has been added, in a quantity not exceeding 50 parts to each million parts of the finished bromated flour. This chemical is added only to flours whose baking qualities can be improved by such addition.

The addition of bromate to a flour has a strengthening action on the gluten quality of the dough and improves gas retention. Baked products produced from doughs with such an oxidizing agent normally have a close and silkier interior, in addition to a whiter crumb color and larger loaf volume.

Climate -

One of the important factors determining what strains of wheat to plant. That is, winter wheat will be planted only in those areas where winters are relatively mild. Seed planted prior to the onset of cold weather germinates in the fall, becomes dormant during winter, resumes growth in the spring, and is harvested in early summer.

Classification -

Usually a reference to the hardness, softness, or time of planting. There are five major time-hardness classifications of wheat used for bread and cake making: hard red spring wheat, hard red winter, soft red winter, winter white, and spring white wheat. Wheat may also be classified according to a color and botanical variety, e. g., common or durum wheat.

Clear flour -

The flour remaining after the patent portion has been removed. It is darker in color, but higher in ash and protein than the lower ash flours, such as short and fancy flours made from the same wheat.

Color -

Usually determined by Pekar Test, in which samples are pressed smooth and dried in a special oven to bring out color differences more clearly. Natural color of unbleached flour is creamy in appearance, due to presence of color pigments. These are usually de-colored by bleaching.

Durum -

A type of hard wheat consisting of grains that are particularly long, rather transparent, and very yellow. It is used chiefly for the production of semolina. There are several varieties of durum wheat which are characterized by color names, such as red durum, amber durum, etc.

Endosperm -

Nutritive tissue formed within the embryo sac in a seed plant. It is that part of the cereal grain that goes to make up flour.

Enriched flour -

White flour which contains the following amounts of ingredients per pound of flour: not less than 2 mg. thiamin, 1.2 mg. riboflavin, 16 mg. niacin, 13 mg. iron. It may also contain 250 - 1,000 U. S. P. units of vitamin D and/or 500 - 625 mg. calcium, and/or not more than 5% by weight of wheat germ or partially defatted wheat germ.

Enrichment -

In bread, enrichment means the addition of enough vitamin B complex (thiamine, riboflavin, and niacin) and iron to bring the level of these nutrients in the bread to at least the level they would have had if 100 percent whole wheat had been used as the only flour in the bread formula.

Enzyme -

A biological catalyst of a protein nature elaborated by living tissue. There are great varieties of enzymes and they are essential to the functions of living organisms.

Extensograph.

Baking volume depends on a balance between the extensibility and the resistance to extension of dough. The extensograph is a device used to measure this balance. In baking laboratories it helps to determine fermentation tolerance of the dough as well as relative fermentation time.

Extraction -

The percentage of wheat that is to be milled into flour, after a fixed percentage is taken off for feed.

Family flour -

Also known as blend flour and all-purpose flour. It is frequently produced by blending flours made from both hard and soft wheat. It is milled with a view to serving all-round household uses.

Fancy clear -

Portion of flour remaining after removal of fancy and first patents. Clear flours are darker in color, but higher in ash and protein than the lower-ash flours, such as short and fancy patent flours made from the same wheat mix.

Fancy patent -

Flour made from purified endosperm millings; 40-60% separation.

First patent -

Portion remaining after separation of short or medium patents.

Farinograph -

A dough-testing machine that incorporates a high speed mixer and is designed so that the force required to turn the mixing blades is measured with a dynamometer system connected to a recording mechanism which produces a graph showing a record of the mixing process. It is used to check the uniformity of flour, as far as mixing strength and tolerance are concerned; to determine absorption and mixing requirements of a flour before it goes into one uniform blend of desired characteristics; to check the dough consistency at various stages of production.

Grain.

In reference to flour, grain refers to the wheat kernel itself, which is differentiated from other grains such as rye or oats.

Grinding -

One of the basic processes in the milling of flour from wheat grains, i. e., the grinding of the grain between rollers to separate the endosperm - the internal, floury portion of the grain - from the branny outer covering.

Granulation -

The degree to which flour particles have been broken down, as sugar is granulated, to various degrees of fineness. Flour that has been finely granulated will be softer to the touch and appear to be whiter than flour that is not finely granulated in the milling process.

Gluten -

The protein fraction of wheat flour obtained by separating the starch and protein. This separation is accomplished by gentle washing of a flour-water dough. The gluten itself is that portion which forms the elastic, rubbery substance which results when flour is mixed with water.

Hard flour -

An actual feeling of hardness of the flour to the touch. The hardness is in proportion to the portion of wheat kernel, besides the endosperm, that has gone into the flour. The baking characteristics of hard flour will incorporate the characteristics of this outer portion of the wheat kernel.

Humidity.

Flour is sensitive to humidity, i. e., the amount of water vapor contained in the air. Flour is a hydroscopic substance. In a very moist atmosphere it will pick up moisture and gain weight; under average conditions it loses weight, and this loss is due to loss in moisture.

Iron -

A silver-black, lustrous, magnetic, metallic element. The presence of an adequate amount of iron, along with copper, in the diet prevents nutritional anemia. The iron content of flour is increased by the addition of reduced iron and iron salts, such as sodium iron pyrophosphate and ferric phytate.

Kernel -

The individual wheat grain itself, as illustrated at the beginning of this unit.

Niacin -

Also known as nicotinic acid. Occurs in all living cells in small amounts. Is necessary for growth, normal functioning of the gastro-intestinal tract and skin, and for normal cell respiration. Niacin is not destroyed during baking or cooking.

In wheat, most of it is located in the germ. About 85% is destroyed in milling; this is replaced when flour is enriched.

Patent -

The term was first used to refer to any flour milled on certain patented equipment. There are actually various grades of patent flour, the finest being extra short or fancy patent, in which up to 55% of the wheat is taken off for clear flour -- and only the remainder is milled into extra fancy patent. When all of the extracted wheat is milled into flour (with little or none taken off for clear flour), the lowest grade of patent flour is produced. It is called straight flour.

Protein -

A complex nitrogenous substance made up of different amino acids. Proteins are found in all animal and vegetable matter. Of all cereals, wheat flour alone has the unique quality of being able to be formed into a dough that will retain the gas evolved during fermentation. This quality is imparted to wheat by its proteins which, on combining with water, result in gluten, the actual substance that confers on dough the property of gas retention.

A difference may exist between the quality of protein contained in two flours having the same percent of protein.

Riboflavin -

Also known as vitamin G or vitamin B₁₂. It promotes growth and general health and is essential to nerve functioning. Lack of riboflavin causes cell weakness, loss of weight, nervous disorders, loss of hair. Riboflavin is found in many foods, including bran.

Screening -

Part of the milling process in which bran is separated from flour by passing the flour through a series of screens and bolting cloths in order to obtain flour of finer granulation.

Seed covering -

The outer covering of the wheat kernel, which is structurally differentiated into three parts: the outer branny covering, or seed covering, the germ or embryo, and the endosperm.

Semolina -

A flour prepared by grinding and bolting clean durum wheat to such fineness that it passes through a No. 20 sieve; but not more than 3 percent passes through a No. 100 sieve. It is almost entirely free from bran-coat and germ. Its moisture content is not more than 15%.

Separators -

Machines to remove foreign matter (seed, etc.) from wheat.

Sieving -

A method of separating different sized particles by sifting through screens of a certain mesh.

Soft flour -

A type of flour low in protein and used for cake and pastry, as differentiated from that which is used for bread baking. It is made from a type of wheat with mealy and opaque endosperm. There are many varieties of soft wheat. For example, there are at least 66 varieties of soft and red winter wheats alone. Soft flours are soft to the touch.

Soft wheat -

A type of wheat with mealy and opaque endosperm.

Spring wheat -

Wheat that is planted in the spring. It may be hard or soft and is usually grown in the northwestern and northern parts of the United States.

Strength -

A quality of flour made from "a wheat which yields flour capable of making large, well-piled loaves." The resultant loaves must therefore not only be large, but possess also a smooth, silky texture as implied by the word "pile" - a term borrowed from the textile industry. A flour giving a large volume but coarse texture would, according to this definition, not be considered a strong flour. Thus, strength refers to the quality of flour as well as to other characteristics.

Separation -

The process that begins after extraction is completed, i. e. , after the greatest portion of the branny covering has been removed. The remaining flour is separated into various portions of patents and clears.

Straight flour -

Flour milled without separation. All of the wheat remaining after extraction.

Starch -

Comprises about 70% of wheat flour. It is a white, odorless, tasteless material, insoluble in cold water, alcohol, and other liquids. It is considered that the loaf potentialities are determined by the gluten quality and quantity, and that these potentialities are set in the loaf by the starch during the baking process.

Tolerance -

In bread flour, tolerance means the ability to produce satisfactory results over an extended fermentation time - the period after the best bread can be produced during which the dough will still yield a satisfactory product. Tolerance is bound up with the quality of the gluten.

Thiamine -

Also known as vitamin B. Essential for normal metabolism of carbohydrates in the animal body. It promotes growth, stimulates appetites, and aids digestion. It is present in many foods, including bran.

Uniformity -

One of the important characteristics of flour, sought after in the production of quality bread. Shipments from the same mill are expected to be uniform in quality.

Winter wheat -

Wheat planted in the fall. This may be either hard or soft wheat and is typical of the wheat planted in the south central and southwest regions, where winters are generally mild.

Whole wheat -

Flour made from the entire wheat kernel without extraction. Standards are set as to how coarse and how fine it may be.

YEAST AND FERMENTATION

I. INTRODUCTION

NOTES

The study of yeast as an ingredient of baking is important only in its relation to an understanding of the process of fermentation. For that reason, the emphasis in this unit will be more on fermentation than on the ingredient yeast itself.

Fermentation is part of an even larger subject--leavening. Leavening is defined as a process of producing gas in a dough or batter. This may be done in one of four ways:

1. By micro-organisms, as in bread, by the action of yeast.
2. By the action of chemical leavening agents, such as baking powder, used in cakes, and ammonium carbonate, used in certain types of cookies.
3. By mechanical means, that is, by aerating a batter by beating or whipping, as is done in the production of pound cakes and sponge cakes.
4. By the use of heat, to produce steam in breads and cakes, in which case moisture is changed in vapor, which expands and causes products to rise.

In this unit we will study only the first of these leavening with yeast.

II. A SHORT HISTORY OF FERMENTATION

NOTES

Although wheat and other grains have been used as food since the days of the cave man, it was not until the time of the Egyptians that the first kinds of leavened bread as we know it today, came into existence. Perhaps some Egyptian baker allowed a dough to stand overnight and yeast cells in the air caused the dough to ferment. In some way, perhaps part of this fermented dough was used in another dough, and it was discovered that this caused the bread to rise and become lighter and tastier. Thus leavened bread became a staple of the Egyptian diet.

Not until more than a thousand years had passed, did scientists come to understand exactly what was happening during the leavening process. Yeast cells were first made visible to the human eye when Leeuwenhoek constructed the first microscope in 1630. However, he failed to recognize them as living organisms associated with fermentation.

In 1803, Thenard claimed that yeast caused fermentation but his claims were not universally recognized. Not until Louis Pasteur demonstrated positively that yeast was a living organism, capable of growth and reproduction, was the true nature of yeast recognized. Since then, Pasteur has been called the Father of Fermentology.

III. THE MANUFACTURE OF YEAST

The growth of yeast is exponential. That is, each time it reproduces, the entire batch doubles in the progression of 1, 2, 4, 8, 16, 32, 64, etc. Its growth depends, of course, on ideal conditions, namely, the right temperature and the right food.

The production of yeast begins in a test tube in which there are a number of strains of yeast. Each of these strains has been found to have some desirable quality, such as the ability to produce a maximum quantity of yeast in a given time. Another quality might be fermentation strength, that is, the ability to produce gas for leavening.

These test tubes are kept in a refrigerator under sterile conditions to prevent propagation and prevent the strains from becoming contaminated.

When it is decided to make a batch of yeast, few yeast cells from the pure culture stock are added to a test tube containing sterile molasses. In a short time, the yeast cells multiply and are transferred to a flask; there they continue to multiply and are transferred to a jug. Molasses provides carbon and sugar as food for the yeast and supplies calcium, potash, and other elements also.

The jug of budding yeast cells is then used to seed a small tank.

After the yeast has grown to a quantity large enough for starting growth in a bigger tank, it is transferred to a 20,000-gallon fermenting tank.

At the same time that the process of growing stock yeast is going on, yeast food is being continuously mixed for the continued growth of the yeast. This food is called wort. Wort consists mainly of molasses. This is delivered simultaneously with water and the stock yeast to the fermenting tank. Nitrogen and phosphorous are also added at this time.

For about 10 hours this mixture is aerated continuously while it is being fed into the fermenting tank. From time to time the foam which is created is cut back by the addition of vegetable oil defoamers, such as soy bean oil.

The temperature of the fermenting tanks is maintained at 85°F. Because fermentation is exothermic (releases heat), a cooling system is used to maintain the proper temperature. Near the end of the cycle, the temperature is lowered to slow the yeast reproduction rate and allow yeast cells to mature fully.

At this point (about 9 days have elapsed from the time the first yeast cells were removed from the refrigerator), the yeast is ready for harvesting. The first thing to be done is to separate the yeast from the used wort. This is done in centrifuges, after which the yeast is diluted in a cold-water washing process and re-separated. The resulting yeast slurry is cooled in a refrigerated tank.

From the refrigerated tank, it is pumped into hydraulic presses where water is forced out.

From the hydraulic presses, it is scraped into huge troughs and then wheeled to a mixing machine where it is plasticized - that is, made into an even mass similar in consistency to soft shortening. Shaved ice is added to the mass in the plasticizer, in order to improve its handling qualities and adjust its moisture level.

From there, it is compressed and extruded in a continuous square "ribbon" and cut off into the one-pound cakes with which we are familiar.

After that, compressed yeast is wrapped, boxed and stored under 40°F. refrigeration, ready for shipment to the baker.

Active Dry Yeast

In the preparation of ACTIVE DRY YEAST, the process is identical up to the point where the yeast is pressed in the hydraulic presses. From there it is extruded into thin ribbons and fed into a huge revolving barrel, called a Roto-Louvre, where for 12 hours it is tumbled as warm air is passed through. The resulting dry granular material is then packaged for shipment.

To rehydrate active dry yeast (ADY), use water having a temperature of 100-110°F. The amount of water should be at least 4 times the weight of the ADY. Time required 3-5 minutes. In substituting ADY for compressed yeast, the only formula adjustment necessary is that an extra 2 pounds of water should be added for each pound of ADY, to compensate for the water contained in compressed yeast but missing from the dry product.

IV. THE IMPORTANCE OF YEAST TO FERMENTATION

NOTES

Fermentation is a highly complex process, involving many chemical and biological actions and reactions. Many of the reactions that take place during fermentation are not fully understood even by scientists. Yet, even though the good baker is capable of turning out good bread without being able to explain why certain changes come about or are necessary, it is desirable to have some knowledge beyond that of the "feel" of a good dough.

We know, for example, that as fermentation progresses and a dough rises to several times its original size, certain changes are taking place in the gluten. Outwardly, it becomes more elastic and springy. This happens because it is being acted upon by enzymes, particularly a yeast enzyme called zymase.

Like any other living organism, yeast requires food and favorable conditions before it can function properly. The favorable conditions required by yeast are:

1. Moisture.
2. Moderate temperature.
3. Proper degree of acidity.
4. Adequate supply of fermentable carbohydrates.
5. Other basic mineral foods.

When yeast has all of the above foods and conditions, fermentation will progress and the dough will develop. Proper dough maturity is that point in fermentation at which the dough will yield the best bread that the flour is capable of producing.

The two main end products of yeast fermentation are alcohol and carbon dioxide. Most of the alcohol is volatilized and driven off during baking, yet it is interesting that a very small portion of alcohol has been found in freshly baked bread.

The carbon dioxide created by the yeast does not all remain in a gas state. Some of it combines with water to form carbonic acid, which contributes to lowering the pH of the dough. Also, enzyme action contributes toward lowering the pH of the dough.

Thus, the pH of a freshly mixed dough has an approximate value of 6, which may be reduced to as low as 5 at the end of fermentation, as a result of the various reactions whose end products are acids of various kinds and strengths.

Correct mixing of a balanced dough is the key to proper fermentation. This means that we cannot set a definite mixing time for each dough, for each flour is different and requires its own definite time for best development.

When a balanced dough is allowed to ferment, two forces begin to operate: gas production and gas retention.

Gas production is principally the result of enzymes at work in flour and yeast. The following factors can result in increased gas production:

1. More yeast.
2. Addition of sugar or diastatic malt to flour which is deficient in these.
3. The use of yeast food (in the proper amounts).
4. High temperature (up to 95°F.)

Gas retention is governed by the action of enzymes too. Other factors, such as the presence of minerals, the amount of moisture in the dough, the presence of bleaching agents, and other chemical factors also influence gas retention.

In addition, mechanical factors govern gas retention. In fact, anything that has to do with the stretching of the dough affects its ability to hold in gas. Among these factors are punching, dividing, rounding, and molding.

The student should have in mind the fact that just as there are factors that increase gas production, there are also factors that can decrease gas production. Among them are:

1. Additional salt.
2. Too much yeast food.
3. High temperature (over 95°F.)
4. Too much diastase.

The above is only an outline and gives only a suggestion of the activity that goes on during fermentation. However, it should serve to indicate to the student how really involved and complicated the fermentation process is.

V. SOME ADDITIONAL INFORMATION ABOUT YEAST FERMENTATION AND DOUGH

Yeast can be frozen without killing it. Cell walls, however, will be weakened and fermentation action decreased. Frozen yeast should be thawed before using. The amount used should be increased about 10% to compensate for loss in strength due to freezing.

The following statistics are approximate and indicate the reaction of yeast to temperature changes:

45-65°F.	No activity
65-94°F.	Some activity
95-98°F.	Optimal fermentation
99-140°F.	Fermentation weakened
140°F.	Thermal death point. Enzymes killed. Production of CO ₂ stops.

Characteristics of a "Young" Dough

Feels sticky. Breaks short with resistance.
 Has tendency to stick to divider.
 Will flatten in pan during proof. Will require more time to proof.
 Bread colors quickly in oven and takes on reddish-brown color.
 Small oven spring.
 Crust will be thick but will have good, sweetish taste.
 Loaf will be heavy.
 Bread will have sharp corners with smooth, glassy sides.
 Crumb will be dark, coarse, open.

Characteristics of an "Old" Dough:

Breaks short without resistance.

Has strong odor.

During proofing, surface of dough will start to break.

Bread colors slowly and is usually very pale.

Grain is open, cell walls thick, bread crumbles easily.

Odor of bread is sour.

Requires long proof, has poor oven spring.

Yeast Foods

Yeast food is also known as dough improver. The need for a dough improver was recognized when it was found that even when doughs were made with identical ingredients under similar conditions, identical results were not always obtained. It was found that the water used in various localities contained different amounts of mineral salts, and this was a cause of the different results noted. It was also found that even in the same locality, the water contained different amounts of mineral salts at different times of the year. Dough improvers were developed to correct such conditions.

Yeast foods stimulate desirable enzymatic activity. They provide the mineral and nitrogen necessary for proper yeast activity and help bring about the pH necessary for good fermentation.

These are some of the advantages of using yeast foods in dough:

1. Better flavor.
2. Greater volume and oven spring.
3. Better bloom, or crust color.
4. Finer grain.
5. Silky texture.
6. Improved crumb color.
7. Greater uniformity.
8. Increased yield.

VI. SPONGE DOUGHS VERSUS STRAIGHT YEAST DOUGHS

NOTES

At this point, some information about the difference between sponge doughs and straight doughs is in order.

Most students are familiar with straight doughs: these are doughs in which all of the ingredients are blended together, more or less at the same time, and then mixed to the desired consistency and temperature. Although fermentation is known to begin at once, full "proof" may take about two hours, more or less, depending on the amount of yeast, temperature of dough, etc. Shortly after full proof, the dough is ready to be taken to the bench for make-up.

Sponge dough is quite different. Sponges are used very little in the handcraft shop but they are used almost exclusively in the production of white bread in wholesale bread bakeries.

A sponge dough is a two-stage dough in which all of the yeast and most of the flour and water are first mixed into a soft dough, which is then allowed to ferment, usually about four hours. This is the first or "sponge" stage of the dough. In the second, or "dough" stage, the sponge is returned to the mixer, where it is combined with all of the remaining ingredients, including salt, milk, sugar, shortening, additional flour, water, and any other ingredients that the particular recipe calls for. After mixing, the completed dough is then allowed final proof, after which time it is ready for make-up.

The advantages of a straight dough are:

1. Because it is a one-stage process, it requires less labor.
2. Because the total fermentation time is shorter, fermentation loss is less.
3. Many bakers believe that better flavour can be developed in straight-dough products.

The advantages of the sponge dough are:

1. Sponge doughs require about 20% less yeast.
2. Bread produced from sponge dough tends to have greater volume and a more desirable texture and grain.
3. The sponge method is more flexible. Sponges can be held longer without noticeable deterioration of the final product, in contrast to straight doughs, which must be "taken" when ready.

VII. PUNCHING A YEAST DOUGH

The student should learn why, how, and when to "punch" a dough. The first thing to understand is that while we use the word "punch" we don't really punch the dough at all. We merely fold the sides well into the center, then turn the entire dough over.

Here's the why of "punching" a dough: Remember, our aim is maximum gas production and maximum gas retention. Laboratory experiments show that gas production is not constant. It starts fast and then slows down. Gas retention varies too.

In the beginning, the dough can hold in all the gas that is being produced. After a while, the dough becomes "weaker" and much of the gas that is being produced is allowed to escape. However, if the dough is folded back at the right time, the ability to retain gas is increased, and practically no gas loss occurs.

When we observe a dough that has been punched, we notice that it now begins to rise more rapidly. This gives the impression that the yeast is now working better and is producing more carbon dioxide. This is actually not the case. What is happening instead, is that, after being punched the dough is strengthened and is retaining the gas better.

A good baker knows when to turn a dough. All he does is touch the dough with the tips of his fingers, withdraw them quickly, and observe the dough's behavior. If the dough is firm and springs back immediately and does not show the finger marks, it is not yet ready to be turned. However, if it recedes slightly, it is ready. If it falls in completely, then the dough is overproofed. In this case, there is nothing to do but "take" the dough and make it up at once and try to prevent it from becoming further overproofed.

How long a dough should be given this primary proof is something else the student should understand. As a rule, the point at which the dough is first ready to be folded over constitutes 60% of the total fermentation time. In other words, if a dough is ready for the first "punch" in an hour, it will be ready for the second "punch" in about another half hour. Ten minutes after that it will be ready to be taken to the bench for make-up - a total of 100 minutes in this particular case.

All of the above information deals only with the fermentation aspects of doughs that are to be mixed, proofed, and made up for baking when ready. This information does not apply to doughs that are to be retarded or refrigerated.

VIII. THE EFFECT OF CERTAIN INGREDIENTS ON FERMENTATION

YEAST: Good yeast begins its action slowly and speeds up in vigor toward the end of the fermentation period.

FLOUR: Much of the nutrition for the yeast is in the flour. Stronger flours require more vigorous fermentation. Different flours require different fermentation periods, to be determined only by baking test.

SALT: In a dough, salt works in two ways to control fermentation: (1) it checks the growth of undesirable yeast, and, (2) it strengthens the gluten. By this latter action, it counteracts the natural softening of the gluten by fermentation.

WATER: In the ordinary sense, water is not considered a food for the yeast, but since the other nutrients for yeast must be supplied in solution, water is indispensable for the activity of yeast.

SUGARY AGENTS: Sugary agents furnish yeast with the necessary carbohydrate food. At the same time it is the sugar which is broken up into CO_2 .

There is not sufficient sugar in flour for the production of good white bread. Sugary agents must be added. Malt sugar is excellent, because it also furnishes proteins and mineral salts, which further stimulate yeast activity.

Too great an amount of sugary agents will retard fermentation. Six percent is recommended for bread. Over 10% will retard fermentation.

Doughs Containing Little or No Sugar Must Be Given a Shorter Fermentation Period so That There Will Be Sufficient Sugar Left at the End of the Fermentation Period to Support Vigorous Yeast Activity and to Impart Crust Color and Caramelization of Loaf During Baking.

SHORTENING: Exerts no influence on yeast activity.

MILK: The presence of milk in dough favors the development of a small amount of acidity, which softens the gluten. Slightly more fermentation is required in milk dough - hence more yeast will be required.

EGGS: The effect of eggs on fermentation is not significant, although their presence does add to the ability of the dough to rise.

YEAST AND FERMENTATION GLOSSARY

NOTES

Budding -

The process of reproduction in yeast. In this process, the mature yeast cell forms a small bud, similar to a small bubble growing out of a larger bubble. Cytoplasm and nuclear material migrate from the original cell, called the mother cell, into the bud. The bud continues to increase in size, forms a wall between it and the mother cell, and breaks off. Then the process repeats.

Catalyst -

A substance which initiates or speeds up a chemical reaction without undergoing change itself.

Diastase -

An enzyme found in flour and malt products. Its action is to liquefy starch and convert it into fermentable sugar (maltose).

Diastatic extract - (Malt flour)

which has been dried or kilned at low temperature. It is pale in color and is used chiefly for white doughs. When it is kiln dried at high temperature, the sugars in the malt are caramelized and the enzymes killed. Non-diastatic malt flour or extract is dark brown in color and is used widely in dark breads.

Enzyme -

A biological catalyst of a protein nature elaborated by living tissue. Enzymes are usually specific, that is, they perform a single step and act upon a specific ingredient. They are sensitive to high temperatures. The enzymes in yeast are:

Invertase, which converts sugar into dextrose and levulose. In the form of these simple sugars, sucrose can be assimilated by yeast as food.

Maltase, which converts malt sugar (maltose) into available dextrose.

Zymase, which changes dextrose and levulose into carbon dioxide gas and alcohol.

Proteolytic enzymes, which act upon complex proteins, converting them into simpler, more soluble forms, thus aiding in conditioning the gluten.

Exothermic -

Having the ability to generate and give off heat. In the process of fermentation, heat is generated and given off.

Extrude -

To force out steadily, as compressed yeast is extruded from the mass of yeast in a long bar or ribbon.

Fermentable -

Capable of being fermented. Fermentable sugars are invert sugars. Although sucrose can be fermented by yeast, it is not a fermentable sugar in the strict sense of the term. It must first be inverted before it can be fermented to alcohol and carbon dioxide. This is done outside the yeast cells by the enzyme invertase, the sucrose being changed to dextrose and levulose.

Fermentation -

The chemical changes of an organic compound due to action of living organisms (as yeast), resulting in the formation of the leavening gas, carbon dioxide.

Fermentation loss -

A term used to describe the loss in weight of the dough during the fermentation period. In other words, a piece of dough weighs less at the end of a period of fermentation than the total weight of the ingredients used in its manufacture. Some of the loss is the result of the conversion by yeast of some of the flour solids to carbon dioxide, which is kneaded out of the dough. Other losses are due to evaporation. In the production of bread from sponge doughs, an allowance of about 7 pounds per 100-pound sack is made during a six-hour fermentation period.

Fermentation room -

A room in which humidity and temperature are carefully controlled so that fermenting sponges or doughs will be uniformly fermented.

Fermentation tolerance -

A term used to describe the ability of a dough to handle well and make a good product even though the fermentation period is extended beyond the normal time.

Fermenting tank -

A large tank used in the manufacture of compressed yeast, usually about 20,000 gallons in capacity. After yeast has been started, it is transferred from the small seeding tank to the fermenting tank, where it is fed and aerated.

Gluten -

A mixture of proteins characteristic of wheat flour. It is gluten that makes the framework for a bread dough. The gas-retention qualities of a dough are largely dependent on its gluten development.

Hydraulic presses.

In the manufacture of yeast, hydraulic presses are used to press out spent wort after the yeast leaves the fermenting tank.

Leaven -

A noun meaning a portion of dough reserved from one day's baking and used to aerate the next day's dough. During waiting, the dough becomes very sour. A certain amount of yeast is produced in the dough. This is able to initiate fermentation when mixed with fresh flour and water. The term is often used synonymously with "sour" or "sponge."

Leavening -

The process of producing gas in a dough or batter. This may be done (1) by micro-organisms, or (2) through the action of chemical agents to produce carbon dioxide, or (3) through the use of heat to produce steam in baking breads, cakes, etc., or (4) by mechanical means.

Leavening agents -

Substances used to raise a dough by producing carbon dioxide. Yeast is a form of biological leavening. Baking powder is a form of chemical leavening.

Malt -

The name given to barley, wheat, or other cereal grains that have been induced to germinate and commence growing by being moistened and slightly heated. Malt has a high diastatic activity and thus finds use in baking.

Maltase -

An enzyme that can change maltose into glucose by hydrolysis.

Maltose -

A colorless, crystalline disaccharide, soluble in water and alcohol. It may be obtained from the interaction of malt and starch.

Micro-organism -

An organism (living animal or plant) of microscopic size, applied especially to bacteria.

Plasticizer -

A machine used in the manufacture of compressed yeast. After yeast is drawn off from the fermenting tank and separated from the spent wort, it is mixed in the plasticizer until it comes together in a plastic mass.

Proof -

The degree of aeration imparted by the action of yeast before baking. Most yeast products require proof at each stage of production. First, a dough requires proof, (aeration by yeast action) immediately after mixing. After the dough is scaled into small units, short proof is required. Finally, after the units are made into specific products, final proof before baking is required.

Sour (or sough dough)

A dough that has fermented for a sufficient period to enable acetic, lactic, or other acids to be developed. Fermentation of a sour usually is allowed to take place without the addition of yeast. The resulting fermentation imparts desirable flavors to the final product. Rye and pumpernickel breads are usually made with sour dough.

Sponge dough -

A two-stage dough in which, in the first stage, most of the flour and water and all of the yeast and yeast food are allowed to ferment for about three hours. After that, the dough is returned to the mixer with the remaining ingredients and mixed at a temperature of 72-75°F. It is used largely in the production of white bread in large bakeries.

Straight dough -

A dough mixed by a single-step process in which all of the ingredients are incorporated at nearly the same time.

Trough -

Large, rather shallow containers, usually on wheels, used for holding large masses of rising dough.

Wort -

A fermenting liquid, thus, a mixture of sugars and yeast.

Yeast -

A microscopic, one-celled plant belonging to the fungi group, which multiplies mainly by budding, and under suitable conditions carries out fermentation. The types used in baking are:

Active dry yeast (ADY) is prepared from yeast-press cake by controlled drying at moderate temperatures. When suspended in warm water it will reconstitute into a material whose fermentation activity is the same as the original press cake from which it was made. Contains only 8% moisture (compared with 70% moisture for compressed yeast).

Compressed yeast - moist, living cells of the yeast plant combined with a filler, which may be a starch or other absorbent base, and pressed into a cake. This is the yeast commonly used in most bakeries where delivery is not a problem.

Yeast food -

A term applied to a mixture of inorganic salts which are necessary for best yeast growth. It serves to speed fermentation and helps to achieve maximum gas production from a given quantity of yeast.

I. INTRODUCTION

Most people prefer leavened to unleavened baked products. The advantages of leavening in baked products are:

1. Good volume.
2. Improved eating quality as a result of a tender crust.
3. Better appearance due to uniform cell structure, brilliance of crumb color, softness of texture.

You may recall that, in the chapter on yeast, we defined leavening as a process by which dough is raised or lightened. It was pointed out that this may be accomplished in a number of ways:

1. by micro-organisms, as in yeast-raised bread,
2. by mechanical means, as in pound cake that is creamed to incorporate air,
3. by heat, as all products are caused to rise by the vaporization of moisture when exposed to oven heat, and
4. by chemical means, i. e. , baking powder.

In this unit we are concerned only with leavening by chemical means.

II. FOUR IMPORTANT LEAVENERS

The four most important chemical leaveners that we shall study are:

1. Baking soda
2. Baking powder
3. Baking cream
4. Ammonium carbonate

Baking Soda

Baking soda is known chemically as sodium bicarbonate and has the formula NaHCO_3 . This is the "bicarbonate of soda" with which you are all familiar.

When heated, baking soda liberates carbon dioxide. It can also liberate carbon dioxide when it is mixed with an acid, at either hot or cold temperatures.

When used alone, baking soda will not only produce CO_2 , but it will also leave a residue of sodium carbonate (or washing soda) as a result of the chemical action involved. When present, this gives cake a dark color and unpleasant taste. This taste is actually the taste of soap, which is formed when the sodium carbonate acts on the shortening in the cake.

It is for the above reason that when the baker uses baking soda, he also uses an acid to produce an edible residue in addition to the CO_2 . The acid need not be a chemical, as such. It may also be an acid ingredient such as :

1. sour milk
2. honey
3. molasses
4. invert sugar
5. sorghum
6. lemon juice
7. buttermilk

While all of the above acid ingredients are excellent "neutralizers" of soda, they have been found to be impractical to use in commercial production because they vary in their acidity. For example, sour milk may have a certain degree of "sourness" on one day and, after standing for a time, become considerably more sour. Can you see how it would be impossible to work out dependable formulas under such circumstances? It was as a result of the search for a dependable neutralizer or reactant of the baking soda that baking powder was developed.

Baking Powder

Baking powder was first produced in this country in 1865. According to government definition, baking powder must conform to the following standards:

"Baking powder is the leavening agent produced by the mixing of an acid-reacting material and sodium bicarbonate, with or without starch or flour. It yields not less than 12% available carbon dioxide. The acid-reacting materials in baking powder are: (1) tartaric acid or its acid salts; (2) acid salts of phosphoric acid; (3) compounds of aluminum, or (4) any combination in substantial proportions of the foregoing."

Note that sodium bicarbonate is the only alkaline ingredient permitted. In classifying the various types of baking powders, classification is made according to the acid-reacting ingredient. Thus, we have:

1. Tartrate baking powders (made of tartaric acid, cream of tartar, baking soda, corn starch).
2. Phosphate baking powders (made of calcium acid phosphate or sodium acid phosphate, baking soda, corn starch).
3. Sulphate baking powders (made of sodium aluminum sulphate, calcium acid phosphate, baking soda, corn starch).

Baking Cream

In some baking powders sodium pyrophosphate is used as the acid reactant. Normally, this product is used in what is known as 72% strength. However, it is also available on the market in a weaker strength: 50% strength. In this form it is called baking cream.

The chief advantage of baking cream is that it can be combined by the baker, in the proportion of two parts baking cream to one part sodium bicarbonate, to form a slow-acting baking powder.

Its chief disadvantage is that it has a tendency to leave a residue of sodium pyrophosphate in the cake, which produces an unpleasant aftertaste.

Ammonium Carbonate

The advantage of this leavening is that it decomposes into two gasses and does not leave a residue.

Ammonium carbonate is usually called baker's ammonia. While it does not leave a solid residue, it does leave a slight excess of ammonia gas, which imparts a disagreeable taste and odor.

The use of ammonium carbonate is usually restricted to small or porous products so that the ammonia fumes can bake out.

III. USE OF STARCH IN BAKING POWDER

In the earlier paragraphs of this unit, it was pointed out that baking powder consists of three parts:

1. sodium bicarbonate (baking soda)
2. an acid salt
3. a filler (starch or flour)

The filler is necessary for the following reasons:

1. To keep the baking soda particles and the acid particles from intimate contact and thus help avoid premature action.
2. To act as a medium to absorb free moisture incorporated during manufacture or in storage.
3. To improve handling and measuring.

IV. SLOW-ACTING, FAST-ACTING, AND DOUBLE-ACTING BAKING POWDERS

Not all baking powders act with the same speed. Their speed depends on the acid-reacting ingredient, not on the bicarbonate of soda. If the acid ingredient is soluble in cold water, the baking powder will be fast acting; if the acid ingredient is not soluble in cold water and requires heat to release carbon dioxide, it will be a slow-acting baking powder.

"Double action" powders use two acid reacting ingredients in addition to the bicarbonate of soda: one is cold-water soluble and the other is soluble only at high temperatures. This type of baking powder offers the combined advantages of aerating the batter during mixing and handling, thus facilitating handling, and in addition, its greatest leavening action takes place in the oven.

Examples of acid salts that are used in slow-acting powders are:

1. Calcium pyrophosphate
2. Sodium pyrophosphate

Examples of acid salts that are used in fast-acting powders are:

1. Tartrate (This type is too fast for use in commercial bakeries.)
2. Calcium acid phosphate (This type will release about half of the gas at room temperature. It is often used as the fast-acting member of a double-acting team.)

Action During Panning

Bakers are inclined to overlook a function of baking powder that has little to do with its power to raise a batter during baking: that is, its power to make the batter easier to handle before baking. A heavy batter is difficult to handle. A proper amount of carbon dioxide gas set free in the batter makes it smooth flowing and helps in scaling, depositing, and panning.

V. AMOUNT OF BAKING POWDER TO USE

NOTES

It is important that baking powder be very carefully scaled. Too much or too little results in lack of volume, poor grain and texture, and poor eating quality.

Some types of cake, such as sponge cake, angel food cake, and pound cake may require little or no baking powder, perhaps $\frac{1}{4}$ of 1% of the weight of flour is sufficient. In other types of cakes, the amount of baking powder used may be from 1% to 5%.

A word may be said about the change necessary in the quantity of baking powder to be used at higher altitudes, although for practical purposes bakers on the eastern seaboard are not concerned with the problem. At higher altitudes, atmospheric pressure is reduced, that is, less pressure is pushing down on the cake as it is rising; thus, less leavening power is required to raise the cake to a desired height.

When too much leavening is used in a cake mix, any or all of the following may happen:

1. Cell walls will become over-extended and the cake will have a coarse grain.
2. Cake will dry out quickly because of the above.
3. Cell walls may be ruptured and cause the cake to shrink and collapse after rising in the oven.
4. Crumb will be dark.
5. Taste will be salty.

When too little leavening is used, any or all of the following may result:

1. Cake will be heavy and lack volume.
2. Cake may pull away from sides of pan.
3. Poor eating quality.

There is a relationship between the amount of baking powder and the other ingredients in the cake. For example, in a cheaper cake, where the minimum quantity of eggs is used, more baking powder will be needed than in a cake that has a high quantity of eggs. Also, if the eggs are beaten before being added to the mix, a slightly smaller amount of baking powder will be required than when the eggs are creamed in without preliminary beating.

With harder flours or more milk, an additional quantity of baking powder is required.

A shortening that has a high creaming value carries more air into the cake and often makes it necessary to reduce the amount of baking powder slightly -- not to save the cost of the baking powder -- but to obtain the best results in the finished cake.

VI. STORAGE OF BAKING POWDER

All baking powders deteriorate with age. When they stand for any length of time, they absorb moisture from the air and slowly give off gas, dissipating their strength.

Baking powder should be purchased in the smallest practical quantity. It should be stored in a clean, dry room and kept in a tightly covered can.

Acid -

Organic compound which is sour and has the property of neutralizing alkalis.

Acid reacting component -

The salt part of baking powder, which causes sodium bicarbonate to react.

Aeration -

The act of incorporating air, as by beating or whipping. Charging with carbon dioxide.

Aerator -

A substance such as baking powder, capable of inducing aeration.

Baking cream -

Sodium pyrophosphate, reduced in strength to 50% and often used to make baking powder by combining two parts baking cream with one part baking soda. Although not identical with cream of tartar, it is often used in place of it in recipes that call for cream of tartar.

Baking powder -

A leavening agent produced by mixing an acid-reacting material and sodium bicarbonate, with or without starch or flour as a filler. By government standards baking powder should yield not less than 12% of available carbon dioxide.

Bicarbonate of soda - Baking soda -

A sodium salt of carbonic acid having the ability to combine with acid to produce carbon dioxide. It is alkaline in nature. In cold water it is slightly alkaline and on standing or as the temperature rises, it attains a pH of 8.2.

Biological leavening -

Leavening which takes place as a result of the activity of micro-organisms. Leavening resulting from the fermentation of yeast is biological leavening.

Carbon dioxide -

A colorless, tasteless, edible gas obtained during fermentation or from a combination of soda and acid.

Chemical leavening -

Leavening which takes place as a result of the reaction of various chemicals on each other, as the reaction of sodium acid pyrophosphate with sodium bicarbonate in baking powder, to produce carbon dioxide.

Cream of tartar -

A chemical substance (potassium bitartrate) which, when used as the acid-reacting component in baking powder, results in a fast-acting baking powder. The reaction between the components occurs at low temperature in the presence of moisture, to liberate carbon dioxide.

Creaming process -

A form of mechanical leavening in which aeration results from the action of the beater on the various ingredients of the batter.

Double action -

Referring to the liberation of carbon dioxide in a batter in both the early stages of mixing (when moisture is added) and the later stages (during baking - when subjected to heat).

Fast acting -

Referring to baking powder that begins to liberate carbon dioxide as soon as subjected to moisture as tartaric acid powders. A typical formula of this type of baking powder contains 26.73 percent sodium bicarbonate, 5.97 percent tartaric acid, 44.90 percent sodium bitartrate (cream of tartar), and 22.40 percent corn starch.

Inert filler -

A substance such as flour or special starch, added to baking powder. While the filler does not contribute directly to leavening, it serves to keep the acid and soda particles apart and thus improves leavening by preventing them from reacting on each other before being incorporated into the batter.

Leavening -

The process of producing gas in a dough or batter by chemical or other means.

Slow acting -

Referring to a baking powder that does not liberate carbon dioxide until the temperature of the batter is increased. Sodium acid pyrophosphate as the acid-reacting component in baking powder makes a slow-acting baking powder because it is relatively insoluble in cold water. A typical formula for such a baking powder

contains 30.59 percent bicarbonate of soda, 40.38 percent sodium acid pyrophosphate, and 29.03 percent corn starch.

Soda - Sodium carbonate, Na_2CO_3 .

Not sodium bicarbonate (baking soda). Sodium carbonate is common washing soda, and is the residual salt produced when sodium bicarbonate is heated in water.

Sodium bicarbonate - NaHCO_3 .

The acid salt produced by passing carbon dioxide under pressure into brine saturated with ammonia gas. On heating it decomposes to sodium carbonate, liberating carbon dioxide.

Tartaric acid -

An acid that occurs in vegetable or fruit juices. The potassium salt of this acid is known as cream of tartar.

World Book, Chapter on Salt

I. INTRODUCTION

Although there are many salts in nature, the baker is concerned only with the use of common table salt, which is chemically known as sodium chloride. The chemical symbol for salt is NaCl. An aqueous solution of salt has a pH of 6.7 - 7.3. In addition to its function to make all foods palatable, salt also provides the human body with sodium and chlorine, ingredients essential to life itself.

This aspect of the use of salt becomes clear in the study of biology. How salt is formed and processed for our use is part of the study of chemistry. How it functions as a bakery ingredient, however, is our chief concern here.

II. EFFECT ON FERMENTATION

The baker who forgets to put the salt into a yeast dough learns very quickly what its effect is on fermentation when he sees the dough "running wild." Salt retards fermentation by keeping the growth of yeast under control.

Salt also has a strengthening effect on the gluten. The baker who forgets salt in the dough will also notice that the loaves are considerably larger. Only in part is this growth the result of yeast activity.

III. EFFECT ON FLAVOR

The taste of salt is not in itself the reason for its use. It has the ability to bring out the flavor of other ingredients. You might even say that it is salt that makes vanilla custard taste like vanilla custard.

In bread, salt not only has an effect on fermentation, it also brings out the wheat flavor. In cake, salt brings out the flavor of the eggs, milk, butter, etc.

Indeed, "the best flavored bread is obtained by the maintenance of cool dough temperatures, the liberal use of salt, and sufficient yeast to bring about the necessary softening of the dough and the production of a light loaf in a reasonably short fermentation time."

IV. EFFECT ON COLOR AND TEXTURE

Salt has an indirectly beneficial effect on the color of baked products in this way: by controlling the activity of yeast (which feeds on sugar in the dough), sufficient sugar is retained in the dough to promote crust color.

Although salt does not have a direct bleaching action, as some bakers believe, it does help promote a fine grain and thin cell walls. This results in a texture (feel to the fingertips) that is smoother. It also seems to give the crumb a whiter appearance.

V. AMOUNT OF SALT TO BE USED IN BAKERY PRODUCTS

In the small bake shop, the amount of salt used is one of the most haphazard judgments the baker makes. In many mixes, he merely takes a pinch or a handful of salt without knowing exactly how much he has used or how much he should have used.

The quantity of any ingredient used is usually figured in relation to the flour weight or to the number of quarts to be mixed. But to be correct, the quantity of salt used should be figured in relation to the total weight of the dough.

The reason for this is that the quantity of enriching ingredients (sugar, eggs, milk, shortening, etc.) has a bearing on how much flour will be required. It also has a bearing on what ingredients need to have their flavors brought out.

NOTES

According to a laboratory study, these are the recommended average amounts of salt to be used in various products:

Sweet dough	$1\frac{1}{4}$ ozs. per qt. of water
Danish pastry	$1\frac{1}{2}$ ozs. per qt. of water
Cookies	1 oz. per 10 lbs. dough
Rich icing	$\frac{1}{2}$ oz. per 10 lbs. sugar
Lean icing	$\frac{1}{4}$ oz. per 10 lbs. sugar
Pie dough	$\frac{1}{2}$ oz. per pound of flour

I. INTRODUCTION

The average baker takes water for granted. He knows it is an essential ingredient in bread and cake making. He knows that if it is pure enough to drink it is pure enough to use in mixing. He knows that the temperature at which he uses it makes a difference in the finished product. He also knows that the quantity of water he uses in a dough or in a batter affects its quality. But he knows little else. He knows little about the quality of the water itself.

The baker whose knowledge of his trade is better than that of the average baker does know something about the quality of the water he uses. He also knows something about how water is formed and how the presence of minerals in it can affect the quality of his finished products.

In this unit you will learn something about how water is formed, and about the different kinds of water. And while the emphasis is on the everyday use of water in baking, you will also learn something about the chemistry of water.

II. HOW WATER IS FORMED

About three-fourths of the surface of the earth is covered with water. Most of it is in the ocean; this is not pure water but contains a great deal of dissolved material, mostly common salt. This salt comes from the minerals in the earth, which are picked up by the rainwater as it filters through the earth on its way back to the ocean.

About $\frac{1}{3,000}$ of all the water on the surface of the globe is evaporated each year. This seems to disappear into constantly moving air as water vapor. Later, this vapor forms into clouds and eventually falls back to earth as rain.

Some of the rain water runs into streams, lakes, ponds, and rivers. This is known as surface water and contains considerable amounts of organic, inorganic, and microbiological impurities.

The rest of the rain (and melted snow) is soaked up by the ground. It may stay locked up in the ground for thousands of years. Eventually, it filters through the rock and forms wells and springs. This is known as ground water. It is usually practically free from organic impurities but it is high in mineral matter.

This entire movement of water from the earth, up into the clouds, then down to earth again as rain or snow, and finally into the waters of rivers and oceans is known as the natural water cycle.

III. THE PURITY OF WATER

For normal baking use, it can be taken for granted that the water that comes from the tap is pure. It usually comes from a dependable source, has been filtered by the local water system, and has been treated to kill harmful bacteria when necessary. But in a chemical sense, natural waters are never "pure." They contain dissolved impurities of the earth itself. Although the water that comes out of the tap is pure enough to drink and use in the preparation of foods, we must remember that the minerals remaining in the water may cause a chemical reaction with some of the other ingredients used in the manufacture of bread and cakes.

IV. THE EFFECT OF WATER ON DOUGH

The formation of yeast dough would be impossible without water.

In a yeast dough, water works mainly in two ways:

1. When water is mixed with wheat flour, it combines with the proteins to form the elastic product called gluten. This is known as hydration of the gluten.

2. Water also combines with the starch of flour, wetting and swelling it to make it soluble. When wetted starch is incorporated into the gluten and thoroughly mixed, the result is dough.

Both of the above combinations are thus responsible for the formation of dough.

Such dough properties as consistency, pliability, extensibility, and stickiness are all controlled by the quantity of water used. To some extent, they are also controlled by the quality of the water too.

The quantity of water used in a dough also affects fermentation. Slack doughs ferment faster than stiff doughs. However, slack doughs cannot be handled at the bench or machined properly. Doughs that contain too little water and are therefore stiff will ferment very slowly and will be difficult to make up, either by hand or by machine.

Within reasonable limits, the keeping quality of bakery products depends on the quantity of water that is incorporated into a dough or batter. For all practical purposes, freshness is moisture. In other words, the more water the baker can get into a dough, the longer the baked products will stay fresh.

There is a legal limit as to how much water may be incorporated into a dough, however. According to government standards, the maximum amount of moisture that may be contained in a bread one hour after baking is 38%. As for the practical limit, a dough should only contain as much water as it can hold without adversely affecting the other desirable characteristics of the dough.

V. ABSORPTION OF WATER IN DOUGH

NOTES

How much water a given type of flour will absorb depends largely on the age and strength of the flour. Total absorption also depends on some of the other ingredients in the dough. For example, according to studies by the Milk Institute, each pound of non-fat milk solids will absorb an additional pound of water without affecting the dough consistency.

According to literature distributed by the American Sugar Company, the addition of Nulomoline (their trade name for invert sugar) will make possible the addition of more water than a dough would normally take.

The reason invert sugar makes possible the absorption of additional water into a dough, is that invert sugar is hygroscopic -- that is, it has the ability to attract and hold water. It even pulls moisture from the air after the product is baked.

The percentage of absorption is figured by finding the percentage of water that can be taken up by a given flour. Thus, if 100 pounds of a flour can absorb 56 pounds of water, that flour is said to have an absorption of 56%.

VI. CLASSES OF WATER

Water -- other than salt water -- is generally classified in three categories: hard, soft, and alkaline.

Hard water is water that contains considerable amounts of carbonate or sulphate of magnesium or calcium. Hard water is difficult to form into a lather. When it is hard because it contains carbonates (rather than sulphates) it is called "temporary" hard water because it can be made into soft water by boiling.

When water is hard because it contains sulphates, it is called "permanently" hard water, since the sulphates do not boil out when the water is boiled.

Soft water is water that is relatively free of carbonates and sulphates of magnesium or calcium. It forms a lather freely with soap.

Alkaline water is water that contains substances such as sodium carbonate. Alkaline waters also possess a degree of hardness.

VII. SOME ADDITIONAL FACTS ABOUT WATER

The degree of hardness is expressed by a numerical value representing the hardness-forming minerals present in the water. Since the amounts of dissolved substances in water are very small, the results of a water analysis are expressed in parts per million (p. p. m.) On this basis, water is classified as follows:

<u>Hardness</u>	<u>Classification</u>
0 to 15 p. p. m.	Very soft water
15 to 50 p. p. m.	Soft water
50 to 100 p. p. m.	Medium hard water
100 to 200 p. p. m.	Hard water
Greater than 200 p. p. m.	Very hard water

Listed below are some of the substances that commonly occur in natural water. The student is not expected to learn them. They are listed only to give him some idea of how complex simple-looking water really is:

Acids:	carbonic, sulfuric, and others
Aluminum:	oxide and sulphate
Calcium:	carbonate, chloride, and others
Iron:	carbonate, oxide, sulphate, others
Lithium:	carbonate, sulphate, others
Magnesium:	sulphate, nitrate, others
Potassium:	carbonate, chloride, others
Silicon:	as silica or silicon dioxide
Sodium:	chloride, carbonate, nitrate

VIII. THE EFFECT OF THE THREE CLASSES OF WATER ON BREAD MAKING

NOTES

Hard water is generally best for dough making. Hard water contains mineral salts which tend to strengthen the gluten. However, excessively hard waters may contain so many minerals that they toughen the gluten to the point where fermentation is retarded. In such cases, it becomes necessary to use considerably more yeast.

Soft water has a tendency to soften the gluten. The result is a very sticky dough. The solution in this case is to use a yeast food to supply the minerals lacking in the water. Additional salt is also helpful.

Alkaline waters reduce the desirable dough acidity brought about by fermentation. By doing so, fermentation is retarded and gluten weakened. To overcome the harmful effect of alkaline water, a small amount of vinegar may be used in the dough batch.

Sometimes water is found to contain large amounts of chlorine. Doughs made with such water often do not develop properly -- but the reason is not the presence of chlorine but the presence of excessive impurities that made the use of chlorine necessary.

IX. USE OF WATER TO CONTROL TEMPERATURE

Because it has been found that for the most part, cool doughs and cake batters yield the best bakery products, every effort should be made to keep ingredients cool. Sometimes this is difficult during the summer months, when flour and other ingredients are at room temperature.

Since the temperature of water can be more easily controlled by the addition of ice or by refrigeration, it is this means that the baker most often uses to keep dough down to around 78°F. after mixing. This is known as the optimum dough temperature.

In large bakeries, dough mixers are often water-jacketed. That is, coils containing water at about 35°F. surround the mixing bowls to counteract the heat generated by the action of the revolving mixing arms.

WATER GLOSSARY

NOTES

Absorption -

Refers to the amount of water that can be taken up by flour. Usually expressed as a percentage of the flour by weight.

Alkaline water -

Water that contains in solution basic substances such as sodium carbonate. Alkaline water may also possess some degree of hardness.

Carbonate hardness -

Temporary hardness of water caused by the presence of carbonates that decompose upon heating to form insoluble carbonates that can then be precipitated out.

Evaporation -

Although water appears to be static, it is actually in a very active state. Water molecules are constantly leaving the surface of the water and going into the surrounding atmosphere. These molecules become water vapor as they change from a liquid to a gaseous state. This process of losing molecules from the liquid is called evaporation.

Filtering -

The process of purifying water by allowing it to trickle through some material such as sand or charcoal. In some baking plants, special filtering tanks filter all of the water that is to be used in baking.

Ground water -

Water from springs and wells. This water is usually purified by passage through layers of porous rock, so it is practically free from organic impurities. Ground waters are high in mineral matter.

Hard water -

Water that contains considerable amounts of carbonate or sulphate of magnesium or calcium. In hard water it is very difficult to form a lather with soap. Some hard waters can be made soft by boiling; others are "permanently" hard.

Hydration of gluten -

Taking up of water by the proteins in flour.

Hydrosopic -

The ability of a product to attract and hold water.

H₂O -

The chemical formula for water. Each molecule of water contain two atoms of hydrogen and one atom of oxygen.

Permanent hardness -

Hardness of water caused by salts or sulphates that will not boil out but, instead, will remain in solution. Permanent hardness is also known as noncarbonate hardness.

Pure water -

In a chemical sense, natural waters are never "pure," since they contain some dissolved impurities. Even snow which has not yet fallen to the ground and therefore contains no dissolved salts or minerals, contains some dissolved gasses from the atmosphere.

p. p. m. -

Part per million of dissolved hardness - forming minerals present in water. In our context, it is a means of classifying water as to hardness, based on the number of p. p. m. of calcium carbonate as a standard.

Solution -

The mixture that results when a substance is dissolved in water, as yeast dissolved in water is called a "yeast solution."

Soft water -

Water that is relatively free of the carbonates of calcium or magnesium. Soft water forms a lather freely with soap.

Surface water -

Water from streams, ponds, lakes, and reservoirs are the principal sources of surface water. Such water may contain considerable amounts of organic, inorganic, and microbiological impurities.

Temporary hardness -

Hardness of water caused by the presence of carbonates of magnesium or calcium, that can be removed by boiling. Also known as "carbonate hardness."

I. INTRODUCTION

Sugar is one of man's most important foods. It acts in the body the way gas acts in an auto. It provides man with heat and energy. Table sugar has a fuel value of 1,800 calories per pound. According to statistics, Americans like sugar so well that they eat their weight in sugar yearly.

Sugar is classified as a 100% carbohydrate food, which means that it contains the chemical elements carbon, hydrogen, and oxygen. Its chemical formula is $C_{12}H_{22}O_{11}$.

In this unit we shall not go deeply into the chemistry of sugar. However, it will be necessary for the student to become acquainted with a number of new terms in order to better understand how sugar works in baking.

For the most part we shall be concerned with how sugar works in bread and cake baking. To some extent we will consider its use in confectionery work. But first let's find out something about the manufacture and refining of sugar.

II. THE MANUFACTURE OF SUGAR

The most important of commercial sugars is sucrose. It is obtained principally from sugar cane and sugar beet. While the methods are similar for extracting and processing sugar from the different plants, there are naturally certain differences due to the nature of the plants. In order to simplify our study, we shall deal here only with cane sugar. There is actually no significant difference in the two sugars.

At harvest time, cane sugar contains from 16 to 20 percent sucrose, in addition to small amounts of other types of sugar, mineral and organic matter, and coloring and flavoring substances.

The woody stalks of the sugar cane are delivered to the sugar mill, where they are cut into small pieces, crushed, and their juice extracted.

The liquid obtained is then passed through strainers and run into settling tanks, where the coarser materials settle out. The juice is then transferred to mixing tanks, where more of the impurities are removed.

From there the clear juice is run into evaporators, where it is concentrated into a thick and viscous syrup.

The thick syrup is then further thickened by evaporation in vacuum pans until the syrup is saturated with sugar and crystallization sets in.

The crystal-syrup mass is then transferred into centrifugal baskets, which separate the crystals from the mother liquor, yielding raw sugar and first molasses. The raw sugar obtained at this stage is a brown, coarse-textured product containing 97 percent sucrose and other minerals and impurities. At this point it is sent to the refinery, where the raw sugar is converted into pure sucrose and the many varieties of sugar are produced to suit the needs of industry.

The molasses is treated further to remove the remaining sugar. After all sugar is removed, the remaining molasses is called "blackstrap" molasses, which is a non-edible product. Blackstrap molasses is used mainly by industries other than the food industry.

III. THE REFINING OF SUGAR

Although the processing of cane sugar and of beet sugar are different up to the time the raw sugar reaches the refinery, there is very little difference from this point on. The raw sugar is first purified by a series of treatments which remove the molasses adhering to the raw sugar crystals. This results in a water-clear syrup, from which a huge variety of sugars, varying mainly in their grain sizes, is obtained after careful processing. The most common varieties offered to industrial sugar users include the following.

Granulated Sugars

"Coating Sugar" -- an extremely finely granulated sugar used principally for coating pan goods in the production of confectioneries.

"Bakers Special" -- a sugar of very fine grain consisting of whole crystals and therefore better suited for cake making than powdered sugar.

"Fruit Granulated" -- a very finely granulated sugar designed for dry mixing with finely dispersed substances. It is also highly suitable for cake making.

"Extra Fine Granulated" -- a general purpose industrial sugar, intermediate in fineness of grain between fruit-granulated and fine-granulated sugars.

"Fine Granulated" -- a sugar of uniformly fine crystal size. It is the type used primarily by bakers and confectioners as a sweetening agent.

"Standing Sugar" -- a sugar of unusually uniform grain size and brilliant luster, suited especially for sprinkling on cookies and sweet goods.

"Medium Fine Granulated" -- a sugar of somewhat larger grain size than fine-granulated sugar. It is preferred by many as a general purpose sugar.

"Medium Granulated" -- a sugar of exceptionally pure color, having a grain size larger than medium-fine granulated sugar but smaller than standard-granulated sugar.

"Standard Granulated" -- a sugar which is readily soluble, especially where heat can be applied to the solution. It is also used for grinding purposes.

"Coarse Granulated" -- a sugar of very large grain, used in specialty products in which the original sugar crystals contribute to the special effect of the finished item, such as sugar-sprinkled cookies and cakes.

Confectioner's Sugar

"Confectioner's XXXXXX" -- a pulverized sugar of extremely fine texture, especially suited for sugar fillings.

"Confectioner's XXXX" -- a fine textured, pulverized sugar used principally for uncooked icings and for dusting purposes on pies, pastries, and similar products.

"Standard Powdered" -- a sugar less finely ground than confectioner's XXXX and suitable for use where extreme fineness is not essential.

"Coarse Powdered" -- a sugar of coarser texture than standard powdered and used when too fine a texture is undesirable as, for instance, in coating doughnuts.

Soft Sugars

The so-called soft sugars are brown sugars, which can range in color from white to dark brown. They readily absorb and retain moisture and possess a very pleasant flavor. They are graded according to color, #1 being nearly pure white and #15 having the color of roasted coffee.

The grades used in baking range from #6, which has a light yellow shade and is used in lighter colored bakery products, to #13, a dark brown sugar used in such products as gingerbread, etc. Unless a bakery produces large quantities of products requiring the different soft sugars, it usually uses a single grade -- usually #8 - for all its brown sugar items.

IV. SUGAR IN BREAD BAKING

In bread baking, sugar performs six major functions, each of which will be considered here separately:

1. It supplies food for yeast during fermentation.
2. It increases fermentation tolerance.
3. It develops an appetizing crust color.
4. It provides sweetness and flavor.
5. It contributes to initial softness.
6. It controls baking time and yield.

1. Sugar Supplies Food for Yeast During Fermentation

Yeast feeds on sugar to produce the carbon dioxide necessary for leavening. In bread making, the basic ingredients are flour, salt, yeast, and water.

Notice that sugar is not listed as a basic ingredient, and indeed many breads, such as Italian and French breads often contain no added sugar. Yet fermentation is possible because yeast feeds on the small amount of sugar contained in the flour.

In the baking industry, fermentation refers specifically to alcoholic fermentation -- the conversion of sugars into carbon dioxide and alcohol by the action of the yeast. During fermentation, the carbon dioxide produced by yeast action is trapped in the gluten and raises the dough.

Of course, this action is not so simple as it is made to sound. Actually, a number of almost instantaneous activities are taking place. One of these activities that must take place before even the carbon dioxide is formed is one called inversion.

Inversion is the result of breaking down sugar ($C_{12}H_{22}O_{11}$), a complex disaccharide, into a simple carbohydrate ($C_6H_{12}O_6$).

The break-down process is called inversion, or hydrolysis. It results from the action of a powerful enzyme in yeast called invertase, which is a complex carbohydrate.

When sugar is inverted, each sugar molecule splits to form two simple sugars -- dextrose and levulose, each with the same formula, $C_6H_{12}O_6$. It is only after this action has taken place that fermentation can begin, for it is these simple sugars -- dextrose and levulose -- that are directly fermentable by yeast.

The student should bear in mind that inversion does not take place only in bread making. In fact, the product called Nulomoline is a ready-made invert sugar for use in baking and confectionery where the sugar is not naturally inverted (as in bread baking) but where the advantages of an inverted sugar are desirable.

Students who have seen and used Nulomoline know that it has a tendency to separate into two parts: a clear, liquid substance which rises to the top and a thick, fondant-like substance which settles on the bottom. The top part is the dextrose and the bottom part is the levulose.

Although both have the same molecular formula, they differ in structural formula and properties. Levulose is sweeter than sugar and roughly twice as sweet as dextrose. When both are present, the dextrose portion is fermented more rapidly than the levulose portion. Since not all of the sugars are consumed in fermentation, it is the levulose, the sweeter portion, which remains to give sweetness to the baked bread. It is this that accounts for the fact that when products are baked with commercial dextrose (made from corn sugar) they are less sweet than when made with sugar. This is referred to as the residual effect of the sugar.

2. Sugar Increases Fermentation Tolerance

Fermentation tolerance is the range of time during which a properly developed and fermented dough will produce bread of good quality. It is affected by two factors: a) depletion of sugars, and b) physical condition of the dough resulting from mechanical, chemical, and enzymatic action.

In other words, the first factor that influences fermentation tolerance is whether or not the yeast consumes all of the fermentable sugars. Naturally, when all of the food is consumed which makes possible the production of carbon dioxide, which in turn makes possible the continued rising of the bread, fermentation simply stops.

The other factors are grouped together in the above definition. They refer to how much or how little the dough is mixed, what other ingredients go into the dough besides the basic ingredients, and the conditions that make possible or impede enzyme action in the dough.

3. Sugar Develops Appetizing Crust Color

To a baker, a rich crust color is evidence of a properly fermented dough baked into a loaf of pleasing flavor. Crust color is largely due to the caramelization of sugars present in the dough at the time of baking. In other words, it is not enough that sugar be present at the time of mixing; in an over-fermented dough most of the sugars may be consumed by the yeast before the time of baking, with the result that the crust color will be pale, no matter how long the loaf remains in the oven.

While bread can be made with commercial dextrose (dextrose hydrate) as a sweetener in place of sugar, and commercial dextrose will caramelize at a lower temperature than sugar, here's why bread baked with sugar will give better crust color than bread baked with commercial dextrose:

You will recall that the yeast enzyme invertase acts on sugar and splits it into two simple sugars -- dextrose and levulose. The levulose portion of the sugar is even more heat sensitive than the dextrose portion. Furthermore, yeast consumes these simple sugars in sequence; first it consumes the dextrose, then it consumes the levulose. Since considerable levulose remains in the loaf at the time it goes into the oven, caramelization results. On the other hand, where only commercial dextrose is used as the sweetening agent, no levulose is present in the sweetening agent, with the result that the same degree of caramelization is not possible.

It is also a fact that caramelization and browning reactions contribute important flavoring substances. Baking laboratory experiments in which bread was baked with no crust, show that such bread is also without flavor, so it is clear that, to a great extent, the flavor depends on the crust and the crust depends on the sugar.

4. Sugar Provides Sweetness and Flavor

There are two aspects of the use of sugar in bread baking: first, there is the aspect of improved palatability that the sweetness of sugar itself gives to bread, and second, there is the improvement in flavor that results from the reaction of sugar with other ingredients. The following chart shows the relative sweetness of table sugar compared with various other sugars. Following the general practice of baking authorities, sugar is given a value of 100.

RELATIVE SWEETNESS RATING

<u>Ingredient</u>	<u>Relative Sweetness</u>
Sugar (cane or beet)	100
Levulose	175
Invert sugar	130
Dextrose hydrate	70
Corn syrup (enzyme)	60
Corn syrup (acid)	30

In addition to the sweetness it contributes of itself, sugar also acts as a vehicle or carrier of other flavors, such as butter aroma and other volatile aromas. These volatile aromas are absorbed in the bread when it cools. Hence, a well-mixed dough will have a richer crust color and more flavor than an undermixed dough. And a short-baked bread baked at a proper temperature will retain more flavor because it will retain more moisture (to hold in the volatile flavors) than an over-baked or slow-baked loaf in which the volatile flavors are given a chance to become dissipated.

The important thing to remember is that it is the generous use of sugar which makes possible the type of oven heat which results in the retention of more moisture.

5. Sugar Contributes to Initial Softness

Sugar is not a miracle ingredient and the student must be careful not to attribute to it qualities it does not possess. For example, it is generally believed that the increased use of sugar in bread contributes to its softness, but since sugar is not in itself a softening agent, there must be another explanation why sugar seems to contribute softness.

The explanation lies in the previous paragraphs, in which it is pointed out that sugar makes possible the use of an oven heat that contributes to the retention of moisture in the loaf.

Tests have shown that increasing the sugars in bread from 4 percent to 12 percent has little effect on the rate of change in crumb firmness. Tests have also shown that, as sugar content is increased, baking time is decreased. Rapid baking results in softer crumb and higher moisture content. This, of course, is reflected in longer shelf life. Thus, it is because sugar contributes to initial softness that its value in bread baking is increased.

6. Sugar Controls Baking Time and Yield

It should be clear to the student from the above that there is a direct relationship between the quantity of sugar used and the baking time. Indeed, in many bakeries, where there is continuous production, and a faster bake becomes necessary, the dough mixer continually adjusts the quantity of sugar used to meet the need.

V. SUGAR IN CAKE BAKING

In cake baking, sugar performs these functions:

It increases tenderness.

It contributes volume.

It improves texture and reduces the danger of tunneling.

It develops a pleasing crust color.

It creates a balance between liquids and solids, thus forming a stable structure.

It acts as a vehicle for other flavors.

It assists in the retention of moisture.

It gives cake its attractive finish and sales appeal.

Although there are many similarities between the functions of sugar in cake baking and in bread baking, there are also many differences. The chief difference is that in bread baking, CO_2 is produced by the action of yeast on sugar; in cake baking, CO_2 is produced by one of three other ways. These are three ways in which CO_2 is produced in cake baking:

1. By chemical means, i. e., by the action of baking powder or other leavening agents.
2. By the production of steam from the moisture in the cake.
3. By mechanical means, i. e., by the incorporation of air by mixing.

At this point in our study of the use of sugar in cake baking, it becomes necessary to understand something about the relationship of sugar to other ingredients. This is part of a larger study called Formula Balance. We shall deal with formula balance only to the extent that it involves sugar.

You will recall that in bread baking, the basic ingredients are flour, salt, water, and yeast. The basic ingredients in cake baking are sugar, flour, water and/or milk, salt, eggs, and/or shortening. Notice that leavening is not listed as a basic ingredient because it is possible to leaven a product by incorporating air in the mix.

VI. FORMULA BALANCE

The basis of formula balance is the idea that each ingredient in cake making is either a tenderizer, a toughener, a moistener, or a dryer. To obtain a stable structure, therefore, each ingredient must be balanced against all the other ingredients. By "stable structure" we mean that the cake structure formed by combining the various ingredients must be capable of retaining the gas formed in the leavening process.

Here are the formula-balance rules for the use of sugar in cake baking:

In Pound Cakes and Layer Cakes

1. The weight of the sugar should exceed the weight of the flour.
2. The weight of the eggs and other liquefying agents should exceed the weight of the sugar.

In Angel Food Cakes

1. The weight of the sugar should equal the weight of the egg whites.
2. The weight of the flour should be approximately one-third the weight of the sugar or of the egg whites.

In Sponge Cakes

1. The weight of the sugar should equal or exceed the weight of the eggs.
2. The total weight of liquids (including eggs) should exceed the weight of the sugar.
3. The weight of sugar or of eggs should exceed the weight of the flour.
4. The total weight of eggs and flour should exceed the weight of sugar and liquids.

Notice that in every one of the above rules, the use of sugar is involved. It should be evident that the correct use of sugar in cake baking is more critical than in bread baking.

VII. INVERT SUGAR IN CAKE BAKING

Just as benefits accrue to bread when sugar becomes inverted in the fermentation process, benefits also come to cake if part of the sugar is inverted. In cake baking, however, the sugar must be inverted before it is even incorporated into the product.

You may recall that invert sugar consists of two simple sugars. These simple sugars result when the complex disaccharide sucrose is split into almost equal parts of levulose and dextrose.

One of the important properties of invert sugar is that it attracts and holds moisture. This is called a hygroscopic property. Because of this hygroscopic property, cakes made with invert sugar stay fresh longer.

Although the retail baker seldom prepares his own invert, the formula is given below to show how simple it is:

70 lbs. sugar
30 lbs. water
1 oz. tartaric acid

Dissolve all ingredients, bring to a gentle boil in steam kettle, hold at low boil for 30 minutes, shut off steam and run cold water through jacket while cooling is in progress.

VIII. CORN SYRUP IN CAKE BAKING

Corn syrups are used in cake and confectionery making, not primarily as a sweetener, but to introduce bodying effects which act to retard crystallization of sugars. It is called corn syrup because it is prepared from maize, commonly known as Indian corn. It is also commonly (but incorrectly) referred to as glucose.

Corn syrup is defined as "a thick, syrupy, colorless product made by incompletely hydrolyzing starch, or a starch-containing substance, and decolorizing and evaporating the product. It contains, on a basis of 41 degrees Baume, not more than one percent of ash, consisting chiefly of chlorides and sulphates."

Baumé -

A unit of measure for the density of cooked sugar syrup. The word is derived from the name of the man who invented the Baumé Saccharometer, an instrument similar to a hydrometer. Accurate readings are secured at 60°F.

Decolorize -

A process involved in the manufacture of sugar whereby the natural, dark-molasses shade of sugar is eliminated, so that the final product is seemingly pure white.

Dextrose -

A white, powdery substance derived from corn, somewhat similar in appearance to confectioner's sugar. It is used in baking as a supplement to or replacement for sugar.

Dextrose is not so sweet as cane sugar, having a relative sweetness of 66. It crystallizes more slowly than sugar and is less soluble in water. It is directly fermentable by yeast. It caramelizes at a lower temperature and pH than sugar and thereby contributes to good toasting qualities and crust color.

In chemistry, dextrose is also known as glucose. It is one of the simple sugars into which sucrose is split by inversion.

Disaccharide -

A complex sugar formed from the condensation of two molecules of a monosaccharide with the elimination of one molecule of water. Disaccharides are converted into monosaccharides during the process of digestion. Table sugar is a disaccharide.

Caramel color -

The black, soluble material obtained by heating sugar or molasses to about 392°F., or from starch conversion to glucose and then heating the syrup. This product is used as a food coloring in pumpernickel and other dark bakery products.

Caramelization -

The process by which sugar components are caused to color, particularly at the crust, on exposure to heat. Different sugars will caramelize at different temperatures.

Carbohydrate -

One of nature's three great classes of organic compounds, the other two being fats and proteins. No matter what their complexity, carbohydrates contain only carbon, hydrogen, and oxygen, the latter two in the proportion in which they exist in water, that is two to one (as in H_2O). Starch and sugar are examples of carbohydrates.

Corn syrup -

Also known as glucose among bakers, although by correct definition the two terms are not synonymous. According to the Pure Food and Drug Administration, corn syrup is "a thick, syrupy, colorless product made by incompletely hydrolyzing starch, or a starch-containing substance, and decolorizing and evaporating the product. It contains, on a basis of 41° Baumé, not more than one percent of ash, consisting chiefly of chlorides and sulphates."

Crystallization -

The change from a dissolved, molten, liquid, or gaseous state to a solid state of definite ordered and characteristic shape. In the refining of sugar, crystallization takes place immediately after the syrup is placed in evaporating pans, that is, when moisture is evaporated from a saturated solution. Crystals grow in size depending on temperature, rate of cooling, and amount of stirring. Also, syrup can be "seeded" with crystals of a definite size so that similar crystals will be developed out of the sugar in the syrup.

Enzyme -

An organic catalyst, generally a protein, which is capable of bringing about a specific chemical reaction. Each enzyme has its own name and can generally be recognized by the ending ase. Thus, the enzyme which converts sucrose into dextrose and levulose is called invertase.

Perhaps because of their complexity, efforts to isolate enzymes have not been very successful, thus, their structure is not well known.

Evaporation -

The process of withdrawing moisture from a given substance.

Fermentable sugar -

Although sucrose can be fermented by yeast, it is not a fermentable sugar in the strict sense of the term because it cannot be directly fermented by yeast. Before sucrose can be absorbed into yeast cells and fermented to alcohol and carbon dioxide, it must first be inverted. This is done outside the yeast cells by the enzyme invertase and the resulting invert sugar is the fermentable sugar. In other words, invert sugars are sugars which are capable of being directly fermented.

Fondant -

Fondant is made when 80% sugar is cooked with 20% water to a definite temperature (238-248°F.). It is stirred before boiling to prevent the formation of crystals, but is not stirred again until it has cooled to a desired temperature -- the exact temperature depending on the size of the crystals desired.

Because special equipment is needed and particular care must be taken to control temperature, this product is almost always purchased by the baker. According to accepted standards, fondant should be snowy white, the crystals so small that they are imperceptible. Fondant should not be gritty to the palate but soft and plastic.

Glucose -

A solution of dextrose made from corn by conversion of the starch into sugar. Has approximately two-thirds the sweetening power of cane sugar. Has a lower caramelization point than cane sugar.

Inversion -

The changing of sucrose to invert sugar. The reason for the name is that, before the change occurs, a solution of sucrose is dextra-rotatory -- that is, it has the power to twist or rotate a ray of polarized light to the right. Invert sugar, however, twists the ray of polarized light to the left. Actually, dextrose bends the ray to the right and levulose bends it to the left; the levulose being more powerful, the mixture bends the ray to the left.

Invertase -

The enzyme naturally present in yeast which acts on sugar and splits it into two simple sugars, levulose and dextrose.

Invert sugar -

A simple sugar; a combination of both dextrose and levulose. It is produced when sugar is subjected to prolonged heating or when sugar is heated in solution with acids or mineral salts. It is also produced by the action of an enzyme naturally present in yeast. "Nulomoline" is the trade name for such a sugar manufactured by the American Molasses Company. Other companies produce similar invert sugars under their own trade names. See the word "inversion" above for further explanation.

Hydrolysis -

A chemical process of decomposition involving the elements of water. In many cases it is induced by the presence of a small amount of an enzyme, a dilute acid, or other agent. Thus, cane sugar boiled with dilute hydrochloric acid yields a mixture of dextrose and levulose. Similarly, diastase hydrolyzes starch into maltose and dextrine.

Levulose -

Also known as fructose or fruit sugar. A monosaccharide or simple sugar, found naturally in company with dextrose in honey and in the juice of many sweet fruits. It can be prepared from cane sugar in association with dextrose by hydrolysis, that is, by boiling with a small quantity of acid, the mixture being known as invert sugar. Levulose is a fermentable sugar.

Maltose -

The chemical name for malt sugar. It is not so sweet as cane sugar. It is produced by enzyme action on starch and is thus the principal sugar in bread fermentation. Maltose is changed into dextrose by the action of maltase - an enzyme found in yeast.

Molecular -

Pertaining to, consisting of, or connected with molecules. A molecule is one of the minute particles of which material substances consist. It is the smallest portion into which a substance can be divided without losing its chemical identity.

Monosaccharide -

A simple sugar such as levulose, dextrose, galactose. All monosaccharides are soluble, crystallizable, diffusible substances, unaffected by digestive enzymes.

Nulomoline -

An invert sugar manufactured by the American Molasses Company. It is a simple sugar consisting of equal parts of levulose and dextrose. Used in bakery products, it has the ability to promote better browning, because invert sugar has a lower caramelization point than sucrose. It also promotes moisture retention because of its hygroscopic properties, that is, its ability to attract and hold moisture.

Stable structure -

Not a barn for horses, but a mixture with a proper balance of liquids and solids, which when baked produce a cake of good contour, proper tenderness, and good handling qualities.

Syrup -

According to official specifications, "sugar syrup" is a product made by dissolving sugar to the consistency of a syrup and contains not more than 35% of water. Note that syrup is made from sucrose and is different from "corn syrup" which is made by incompletely hydrolyzing starch.

Sugar -

A term applied to carbohydrates having a sweet taste. They are generally of vegetable origin, from such materials as barley, beets, sugar cane, corn, fruits, etc. Brown sugar is cane sugar which has received little or no refining. The caramelization of sugar in a dough during baking accounts in large part for the brown color of the crust.

Viscous -

Said of substances having a thick or gluey character. Resistant to stirring.

Volatility -

The quality of being susceptible to evaporation and diffusion at ordinary temperatures.

Wihlfhart, J. E., A Treatise on Cake Making.

World Book, Chapter on Eggs

Eggs are one of the most important baking ingredients from the standpoint of quality, nutrition, and cost. In many cakes, the cost of the eggs alone comprise about half the total cost of ingredients. In sponge cakes, the cost of eggs may amount to as much as 70% of the total ingredient cost.

Eggs are available to the baker in four forms: shell eggs, liquid eggs, frozen eggs, and dried eggs. At present, dried eggs are not as important as the other forms, so they shall be dealt with only summarily here. Regardless of which form of eggs the baker buys, the egg is the same. We shall therefore first learn something about the egg itself.

II. STRUCTURE OF AN EGG

The shell constitutes about 10% of the egg by weight. This, of course, serves only as a protective container for the edible egg material. When the egg is newly laid, it is covered with a gelatinous coating which serves to seal the pores. If eggs are washed, this coating is washed away, and bacteria can enter.

The outer shell membrane is next to the shell.

The inner shell membrane is next to the white and holds it in.

An air space exists between the inner and outer shell membranes, but is most noticeable at the top. This air space increases in size as the egg cools and ages.

The watery portion of albumen is the thin, white fluid, next to the inner shell membrane. This portion is just as nutritious and important to the baker for its cell-building qualities as the thicker portion of the white. The total white portion constitutes about 65% of the edible egg.

The dense layer of albumen is the somewhat smaller portion of the white surrounding the yolk between the watery portion and the jelly-like portion.

The jelly-like portion of albumen is a thin layer immediately surrounding the yolk.

Chalaza is the name for either of the pair of rope-like masses of thickened albumen at each end of the yolk. These provide anchorage for the yolk in the white.

The yolk is the yellow portion of the egg. It is enclosed in a sac called the vitelline membrane, which holds the yolk in its normal ball-like shape. The yolk constitutes about 35% of the edible egg.

Germ. This appears on the surface of the yolk. It is a small disk of protoplasmic material from which the embryo develops.

III. BACTERIOLOGY OF EGGS

Eggs are highly perishable and should be kept under refrigeration to prevent the growth of bacteria and molds. To some extent, eggs have certain built-in sanitation factors.

One of the built-in sanitation factors is the change in pH that takes place within 24 hours after the egg is laid. Newly laid eggs have a pH of 7.6. Ordinarily, within 24 hours this changes to 9.0 -- a level which is beyond the tolerance of many bacteria.

Another built-in sanitation factor is the presence of a substance called lysozyme in the white. This substance has been found to prevent the development of a number of types of microorganisms which gain access into the egg liquids. However, lysozyme loses its strength when eggs are stored for long periods. That is one reason why ideal storage conditions are essential.

When shell eggs are held in commercial storage for six months or more, the temperature is usually maintained at about 30°F., which is slightly above the freezing point of the egg liquids. In the bakery they should be kept at 40°F. and, most important, they should be kept dry at all times.

A common defect in eggs is the appearance of blood spots in the yolk. The small blood clot usually is a blood vessel fragment that has become detached from the hen's ovary. Although this does not affect the edibility of the egg, it is unpleasant and affects salability. However, the large blood ring that results from germ development is definitely inedible.

Eggs are a potential source of two types of food poisoning: salmonella and staphylococcus.

Salmonella infections cause acute gastro-intestinal disorders. The symptoms are generally abdominal cramps, diarrhea, and, in some instances, vomiting. The period of incubation, that is, the period which elapses before the onset of illness, ranges from a minimum of 7 to 8 hours to a maximum of 72 hours, with the average being 12 to 24 hours.

Staphylococcus is the more common type of food poisoning. This disease is of short duration and usually results in rapid recovery. Symptoms usually appear within 3 or 4 hours after the food is eaten. Increased salivation is usually the first symptom, followed by nausea, vomiting, cramps, and diarrhea. In mild cases, no treatment is necessary since the poisons are thrown off in the vomiting and diarrhea.

In order to prevent outbreaks of staphylococcus food poisoning, perishable foods should be refrigerated. People who have sinus infections, continual colds, or boils, should not handle custards, meringues, or other foods subject to bacteria growth.

IV. FUNCTIONS OF EGGS IN BAKERY PRODUCTS

Binding Action. You may recall that in the study of flour, we learned that protein was the structure-building material that made leavened bread possible. To some extent, the presence of protein in eggs performs the same function, for egg proteins form the skeleton capable of acting as a framework for the support of other ingredients.

Leavening Action. Eggs provide a leavening action not only in sponge cakes and angel food cakes where the foam provides a skeleton for air cells, but also in heavier types of cakes where their protein films, distributed throughout the batter, help to retain the gas liberated by baking powder. While eggs do not help create any gas as does baking powder, they do contribute toward leavening in this indirect way.

Emulsifying Action. Egg yolk contains lecithin, which is an emulsifying agent. Not only does the emulsifying property of the yolk balance the toughening quality of the whites, but the overall effect of the whole egg is that of tenderizing rather than toughening.

Flavor. Fresh and frozen eggs have a desirable flavor which improves the eating qualities of cakes.

Color. While there is no difference in the food value of eggs with deep-colored yolks and eggs with a light-yellow-colored yolks, bakery products are, for the most part, more attractive when eggs with deep-colored yolks are used.

Food Value. Eggs are rich in proteins, fats, minerals, and vitamins essential to growth, particularly vitamins A and D. There is no difference in the food value of brown-shelled and white-shelled eggs.

V. FRESH EGGS VERSUS FROZEN EGGS

Before frozen eggs were introduced, bakers used mostly shell eggs. There are many advantages of frozen eggs over fresh eggs, however:

- Easier handling
- Higher and more uniform quality
- No waste
- Less price fluctuation

The amount of time saved by using frozen eggs instead of fresh eggs is a most important factor to the baker. But time alone is not the only factor. No matter how carefully the baker cracks fresh eggs, about 3% of good egg material is lost.

In general, the quality of frozen eggs is higher than the quality of fresh eggs, provided, of course, that the eggs are purchased from a reliable packer. Better packing plants confine their packing season to the cool spring months, since eggs laid from February through May are superior to those laid during the summer.

Many bakers contract for their total yearly supply of frozen eggs when prices are lowest, thus insuring themselves against any price rise due to a fluctuating market. This cannot be done with fresh eggs.

VI. DRIED EGGS

Although dried eggs are not widely used in small-bakery production, their use is increasing in packaged mixes and in large-scale production. In some products, such as meringues, the use of dried egg whites has been found to be superior to fresh whites.

Dried eggs are prepared by breaking high quality eggs, mixing them in a churn, screening to eliminate shells and membranes, spraying them under high pressure into a drying chamber (temperature 160° - 170°F.), where they are dried almost instantly. The resulting product is an egg powder known as whole dried eggs.

Dried egg whites are handled somewhat differently. Since the whites consist of thick and thin matter, this must first be made into a mass of uniform consistency. This is done because the thin part possesses superior whipping qualities to the thick part. Thus, the whites are first allowed to ferment for about 72 hours. Then they are dried and powdered and are ready for packaging.

Whites can also be dried without first being fermented. In this case, the thick portion of egg whites is liquefied by pumping and straining and by acid or enzyme hydrolysis.

VII. RECONSTITUTING DRIED EGGS

Whole dried eggs. Whip 1 pound of dried eggs on top of 3 pounds of water. Allow mixture to stand 4 to 5 hours, or until normal liquid egg consistency is obtained.

Dried yolks. Whip 1 pound of egg yolks on top of 3 pounds of water. Allow mixture to stand 1 hour.

Unfermented albumen. Whip 1 pound whites on top of 6 to 7 pounds of water. Allow mixture to stand 3 hours.

Fermented albumen. Whip 1 pound of whites on top of 10 pounds of water. Allow mixture to stand for 3 hours.

VIII. HANDLING FROZEN EGGS

Frozen eggs stored at 0°F . can be held for about two years. At -10°F to -15°F . they can be held almost indefinitely.

The best method for defrosting eggs is to set the can in a tank of running water at 50° - 60°F .

The next best method is to transfer the eggs to a refrigerator at about 35°F . , but this requires at least a couple of days for defrosting a 30-pound can.

The least satisfactory method of defrosting eggs is to allow them to stand at room temperature (usually about 70° - 80°). It takes 18-24 hours for a 30-pound can to defrost in this manner. Although the result is seemingly satisfactory to the naked eye, the fact is that the eggs at the outer edge of the can will approach room temperature while those at the center of the can will be considerably cooler.

Eggs are very perishable and should not be re-frozen after thawing, since this impairs the effectiveness of the eggs in a batter.

When eggs are frozen, there is a migration of solids toward the center of the can. Therefore, after the can has been defrosted, the entire contents should be thoroughly mixed before any is used.

Thawed eggs should be used promptly. As a rule, it is best if they are not held in the refrigerator longer than 24 hours.

IX. GENERAL INFORMATION REGARDING EGGS IN BAKING

Good quality frozen eggs are every bit as good for baking as fresh eggs. In most cases, frozen eggs are better than fresh for bakery use.

Eggs are capable of leavening five to six times their weight of other ingredients.

Egg yolks have high emulsifying power which helps impart a definite shortening action.

Eggs improve the cell structure of the product, maintaining it during baking, and reduce the evaporation of moisture from the baked product, thereby extending freshness.

Egg whites lend little flavor but produce a mellowing effect.

The whipping quality of egg whites is harmed by even the least bit of egg yolk or any kind of fat.

The thin portion of whites can be whipped more readily to the proper consistency and can thus make a better cake than the thick portion. Thick egg whites can be improved for angel food cake by the addition of water.

Spring-laid eggs produce larger cake volume than summer-laid eggs.

Egg whites can be whipped better at room temperature than when whipped directly from the refrigerator, because the surface tension of egg whites is lowered when the temperature is raised.

GLOSSARY ON EGGS

NOTES

Acid stabilizer -

Certain acids, such as cream of tartar, calcium acid phosphate, lemon juice, -and even salt- which improve the ability of egg whites to form into a foam. This happens because the protein coagulates more rapidly upon addition of limited amounts of certain acids at the foaming stage of the whites.

Albumen -

The white of an egg.

Check -

An egg with an open crack or break in the shell but with the shell membrane unbroken and with no leakage.

Coagulation -

The process by which liquid egg materials solidify and form structure in a product. This is accomplished by the yolks as well as by egg whites. On baking to 126°F., yolks coagulate to a more stable structure than the whites. They also form thinner cell walls.

Cohesiveness -

One of the properties of eggs, that of holding together various ingredients in a mix.

Chalaza -

A rope-like mass at each end of the egg which anchors the yolk in the egg white.

Curdle -

To form into a curd. (A curd is the coagulated substance formed from milk by the action of acids.) When eggs are added to a mix in too large a proportion, a curdling action takes place.

Elasticity •

One of the properties of eggs, that of being able to stretch and form into cell walls that can hold air. This property is impaired when eggs are stored at too high a temperature and become "thin."

Emulsifier -

A compound which allows a relatively permanent suspension of oils and fats to be mixed with water. For example, egg yolks contain lecithin and cholesterol, which give it its characteristic emulsifying value.

Yolk is the most stable emulsion known in nature.

Foam -

A dispersion of air or other gas into a medium stabilized by a suitable agent. For example, the foam in beer consists of CO₂ in a liquid stabilized by protein materials.

Gas Retention -

The ability of a substance to hold CO₂ within the cell walls developed by mixing or creaming.

Lecithin -

A yellowish-brown, waxy solid occurring in various animal and vegetable tissues, especially brain, egg yolk, soy bean, and wheat-germ oil. It is insoluble in water and is used as a fat extender, emulsifier, and stabilizer.

Leavening -

As applied to eggs, it is the ability of eggs to hold in air created during mixing and creaming and thus help to raise the product.

Leaker -

A grade of eggs that has an open break or crack in the shell membrane so that the contents are flowing or free to flow.

Low surface tension -

The relative "softness" of the surface of egg matter. For example, one of the reasons older egg whites can be whipped to a foam more easily than fresh, firm whites is because they have lower surface tension. (That older whites may not be able to retain the air that is whipped into them is another matter.)

pH -

The relative acid-base relationship in organic matter, 7 indicating neutral, above 7 indicating base or alkaline, and below 7, acid. The pH value of newly laid eggs is 7.6. At normal room temperature this will rise to 9.0.

Porous -

Full of pores or tiny holes. Describes the surface of egg shells. That is, there are tiny holes in the surface, through which bacteria may enter.

Protein -

Complex substance found in the cells of plants and animals and necessary to life. Eggs contain approximately 13% protein.

Salmonella -

Food poisoning that may result from certain bacteria grown in eggs that are subject to high temperatures and unsanitary conditions.

Staphylococci -

All micro-organisms having a spherical shape are called cocci. Those that exist in pairs are classed as diplococci. Those that exist in clusters are classed as staphylococci.

Shell membranes -

Two membranes directly next to the shell of the egg. The outer membrane is next to the shell; the inner shell membrane is next to the egg liquids.

Yolk -

The rich, yellow portion of a shell egg. It is enclosed in a membrane and floats in the whites. It consists of approximately 50.6% water, 16.2% protein, 31.75% fat, and 1.09% ash.

I. INTRODUCTION

Of the various fats used in baking, shortening is the most important. Shortening is defined as "an edible fat from plant or animal sources, which may or may not be hydrogenated, used in baked products to produce tenderness and enhance flavor and texture."

When shortening is made from the fatty tissue of hogs it is called lard. When shortening is made from the fatty tissue of other animals it is simply called animal shortening. When it is made from oils which are extracted from such plant sources as cotton seed or peanuts or soya beans, it is called vegetable shortening.

Corn oil is seldom used in the manufacture of shortening because it is difficult to process into a plastic form. Until very recently, all shortenings were in a plastic form, that is, they were solid at room temperature. However, shortenings have now been developed that are semiliquid.

II. THE MANUFACTURE OF SHORTENING

The difference between an oil and a fat is merely the difference in the physical state of the same substance at room temperature. An oil is liquid at room temperature; a fat is solid at the same temperature.

When oil is heated and combined with hydrogen in the presence of a catalyst such as nickel, it becomes solid and turns white. It is then known as a "plastic" shortening.

When all the oils or fats are hydrogenated, the resulting shortening is called all hydrogenated shortening. When only part of the shortening is hydrogenated, the resulting product is known as compound. Compounds may be either all vegetable, all animal, or a combination of both.

Compound shortening is HARD shortening in which the degree of desired hardness is obtained by varying the amount of either oleostearine or edible tallow, which are two of the constituents of vegetable and animal fats. Hardness is also achieved by additional hydrogenation. Hard fats are desirable in the production of puff pastry.

Originally "lard compounds" were merely 80 percent cottonseed oil and 20 percent oleostearine and were designed as lard substitutes. When the process of hydrogenation was developed about 1910, it became possible to harden vegetable oils completely without the use of oleostearine.

When an emulsifier is added to a hydrogenated shortening, it is called an emulsified shortening. Emulsified shortenings are necessary for the production of "high ratio" cakes, that is, cakes which have a high ratio of sugar and liquids to flour. The addition of the emulsifier to the shortening makes it possible for the shortening to be more widely dispersed through the batter.

The entire process of shortening manufacture is called refining. In the manufacture of shortening, almost all of the impurities are refined out of the raw materials - just as in the refining of sugar, - almost all of the impurities are removed and the finished product is called refined sugar.

In the refining processes by which edible fats and oils are made from the crude oils and fats taken from animals or plants, the first step is to treat the raw oil with an alkali. When this combines with the free fatty acid, a soft soap is formed. The soap particles, on settling, carry down with them the various impurities. This results in a clean, light-colored, and practically neutral oil on top.

If a high-grade shortening is to be produced from this oil, a bleaching process follows. After that, the oil is again filtered to remove further impurities.

This purified oil is now ready for hydrogenation. The oil is treated with purified hydrogen gas under pressure. Because of the presence of the catalyst nickel, the liquid oil changes into solid form.

After the oil is hydrogenated, it is deodorized. This is done by blowing it with superheated steam under a high vacuum.

Finally, it is solidified by chilling and forcing through valves to give it a smooth consistency.

In summary, the steps in the manufacture of shortening are:

1. In animal shortenings, the fat from fatty tissues is rendered. In vegetable shortening, the raw oil is obtained by pressing or other means.
2. The raw fat or oil is treated with an alkali to separate impurities.
3. The purified oil is hydrogenated to convert it into a plastic form.
4. The hydrogenated shortening is then deodorized.
5. Finally, the plastic white shortening is chilled and smoothed.

III. THE FUNCTION OF SHORTENING

Why use shortening in baked foods?

1. To improve eating qualities.
2. To improve appearance.
3. To improve keeping qualities.
4. To improve food value.
5. To improve volume (except in sponge and angel cakes).

Fats do not blend chemically with other bakery ingredients; instead, they are dispersed throughout the entire mix. Thus, the addition of shortening serves to tenderize the finished product, and eating qualities are improved.

Eating qualities are also improved because the films of fat break down gluten structure and starch structure to some extent and prevent the formation of a hard, tough mass.

The dispersion of fats may also be increased by the addition of emulsifiers. Greater quantities of air are more evenly entrapped. The result is greater volume.

Because the creaming ability of shortening serves to trap air into the mix in the form of tiny cells or bubbles, and because these bubbles hold the air that is later generated by baking heat and leavening, tenderness is also improved.

Although most shortenings are bland-- that is, they have no taste in themselves-- the use of emulsified shortening can improve the sweetness and keeping quality of cake indirectly. Here's how it does it.

Remember, sugar and liquids help keep cakes tasty and moist. Now, with regular shortening, the most milk and sugar that a mix will take and still remain in balance is 40%. But with emulsified shortening, milk and sugar can be increased to 55%. Thus, sweeter (and more tasty) cakes can be made with emulsified shortening. And since more liquid can be added to the mix if emulsified shortening is used, the cake will remain moist longer.

There are three types of emulsifiers: lecithins, monoglycerides and diglycerides, and polyoxyethylenes. You will probably learn about these in your chemistry class.

IV. PROPER STORAGE OF SHORTENING

All conditions connected with the production of baked foods are important, and storage is just as much a part of production as the actual baking of a product. That is why it is as important to know how to store raw materials properly as it is to know how to bake the finished product.

It is simple enough to understand that the quality of baked foods is directly related to dough or batter temperature. Therefore, it should not be difficult to understand that the temperature of the finished product can be controlled, to a great extent, by controlling the temperature of the ingredients that go into it.

Experience has shown that for most bakery products, shortening gives best results when used within a temperature range of 60-80°F.

In studies conducted by Proctor & Gamble, it was found that it takes 17 days for the center of a 400-pound drum of shortening to effect a 27-degree temperature change. This is shown graphically below:

Top View of a 400-Pound Drum of Shortening

The time required for shortening to come to the new temperature would be the same regardless of whether the shortening in the drum cooled down 27° or warmed up 27°F.

The baker who buys in quantity in order to obtain the best possible price and take advantage of seasonal price fluctuations, is faced with a serious storage problem. Improper storage can result in a quality loss that would more than offset any price advantage he might gain by quantity buying.

Shortening refiners change their formula with the seasons. In the summer they process "summer shortening" -- that is, the shortening is harder and will hold up better under warm storage conditions. In the winter they do the opposite: they process the shortening so that it will not become too hard if exposed to cold for long periods of time. They do this either by varying the amount of oleostearine or the degree of hydrogenation.

V. THE COMPOSITION OF FATS

You will recall that there are three large classes of organic compounds: carbohydrates, minerals, and fats. Although fats, like carbohydrates, are composed solely of carbon, hydrogen, and oxygen, their molecular structure is different and their properties are different.

In comparison with carbohydrates, fats have a very low oxygen content. One of the fat molecules is glycerol (commonly known as glycerin), which has the ability to take up moisture. To some extent, this is one reason why fats will keep bakery products from drying out.

Besides the glycerol molecule, fats contain molecules of the fatty acid known as palmitic acid. This is a so-called saturated fatty acid. Generally, natural fats are classed as glycerides containing three fatty acid radicals, or tryglycerides.

Fats differ from each other because they have different quantities of the various fatty acids of which they are composed.

Among these fatty acids are:

Butyric acid
Palmitic acid
Oleic acid
Lauric acid
Myristic acid
Stearic acid
Linoleic acid

Of course, these are pretty frightening names, but fortunately, only the chemist is required to know and understand them. It is enough for the baking student to understand that the different qualities of the different fats are determined by the quantities of the various fatty acids that different fats contain. For example, the more stearic acid a fat contains, the harder it will be. Since most of these acids can be separated out of the fat, it is possible to add stearic acid to a fat to make it harder than it is in nature, or to remove some and make it softer if the occasion or the product demands.

VI. NUTRITIVE VALUE OF SHORTENING

Shortening, as one of the three major food substances (fats), represents the most valuable of the energy-producing substances known to man. Fats contribute more than 40% of the total food energy to the American diet, according to a government report.

Of all the natural foods, fats represent the most concentrated of all food materials.

From a caloric standpoint, fats contain more than twice the quantity of energy contained in the second most concentrated food -- sugar. Fats contain more than three times the energy contained in such staples as rice and bread.

The chart on the following page shows the average caloric value of some common foods. Note particularly the relative value of fats to bread.

Food	Caloric Value per pound
Lard	4,000 cal.
Vegetable shortening	4,000 cal.
Butter (80% butter fat)	3,250 cal.
Sugar	1,800 cal.
Cake	1,550 cal.
Bread	1,200 cal.
Potato (boiled)	375 cal.

The vitamins A, D, and E occur only in fatty foods. Without these essential vitamins, human health would not be possible. To the extent that baked foods contain these fats so necessary for health, they contribute to the well-being of the nation.

VII. CREAMING POWER OF SHORTENING

Creaming power is the ability of a shortening, when mixed, to entrap and retain air cells.

When the solid fat content of the shortening is too high, shortening loses its ability to cream. When the solid fat content is too low, shortening also loses its ability to cream. In the latter case, however, creaming ability is lost because the shortening itself becomes too soft; more than the quantity of solid fats in a shortening is involved in creaming power.

Temperature is another of the factors involved in creaming power. The best creaming temperature for shortening is between 65° - 75°F. However, shortening that has been exposed to extremely high temperatures and then brought back to 65-75°F. will not cream well because certain changes in crystal arrangement have taken place.

The opposite is not true however: shortening that has been chilled but which is brought back to room temperature before use, will cream perfectly. In other words, no change in crystal arrangement takes place during chilling, but a harmful rearrangement of the crystals does take place when shortening is exposed to heat.

Emulsified shortenings are more sensitive to heat than regular hydrogenated shortenings. This is because emulsified shortenings contain monoglycerides which cause a thinning out of the batter, thus lowering creaming peak.

VIII. SHORTENING POWER

The ability of a fat to lubricate or weaken the structure of a baked product is known as its shortening value.

In bread made without shortening, gluten particles stick to each other and give the sensation of toughness when the bread is chewed. If shortening is present, the gluten particles are lubricated. This makes them slip by each other and produces a sensation of tenderness.

There are four factors that affect shortening power. They are:

1. Melting point
2. Plasticity at temperature when used
3. Degree of unsaturation
4. Crystal size of the fat

Shortening in the middle range of melting points is considered best. If the melting point is too low (as in a very soft fat, or in oil), the shortening is simply too oily. Instead of existing as flakes, it exists as globules.

If the melting point is too high, the shortening is simply too hard to be distributed through the dough properly.

It is important to realize that melting point alone does not determine shortening value. For example, coconut oil can be prepared to have the same melting point as butter, yet it is inferior to butter in shortening properties.

Plasticity is the workability of a shortening at the temperature at which it is used.

You will hear shortening salesmen talk about the plastic range of their shortenings. That means the temperatures between which it will have suitable workability.

For example, lard has a wider plastic range than hydrogenated shortening. Coconut oil has practically no plastic range at all; at 70°F. it is like tallow, and at 75°F. it becomes liquid.

Butter has a very good plastic range. Oleomargarine, on the other hand, has a rather narrow plastic range.

IX. BUTTER AND MARGARINE

Butter

Legal definition: "A food product made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter, and containing not less than 80 percent by weight of milk fat. . ."

Composition of Butter

Fat	80.47%
Moisture	16.34%
Salt	2.35%
Casein	0.84%

Air will vary from 1 to 5 percent. The item listed as casein includes the protein, mineral substances, and lactose derived from the buttermilk.

Butter is used in baked foods primarily for flavor. Because of its high price, the baker can afford to use it only in higher priced products. Compared with other plastic shortenings, it is not as uniform, has a rather narrow plastic range, and does not keep well at normal temperatures. Nevertheless, it continues to be the choice of bakers for the production of superior baked products.

Margarine

Margarine was developed in France about 100 years ago as a substitute for butter. Originally, it was produced from beef fat and milk and was called oleo-margarine. At present, most high grade margarine is produced only from vegetable oils, with butter flavor, vitamin A and color added. It is just about as nutritious as butter. In many bakeries, margarine is used wherever the recipe calls for butter.

In the production of puff-pastry, a special type of margarine is used. It is called puff-paste and usually contains about 35% oleostearine and 65% cottonseed oil, emulsified with about 6% milk. Its melting point is higher than 118°F ., which makes it particularly suitable as a "roll in" for puff pastry. It is usually priced just a few cents higher than regular vegetable shortening.

X. FRYING FATS

As you know, the boiling point of water is 212°F . At that point, water rapidly boils away in the form of a steam vapor. But did you know that oils cannot boil? Instead, when heated to comparatively high temperatures, they start to decompose. At 600°F . fats and oils burst into flames. This is called the flash fire point.

All shortenings used for frying darken and decompose. That is why doughnuts darken and taste bitter when they are fried in burned fat. Decomposition of frying fats can be controlled by (1) careful temperature control, (2) removal of foreign material, (3) addition of fresh fat.

Emulsified shortening is not satisfactory for deep fat frying, mainly because it has a lower smoke point due to the presence of monoglycerides. Hydrogenated shortening is best for frying. Not only does it have a higher smoke point than emulsified shortening, but it also gives a drier, less greasy taste and does not gum up when cooled.

Doughnuts fried in hydrogenated fat will also be better than doughnuts fried in oil. Even after frying, oil is still oil, and it will soak up sugar more rapidly than will hydrogenated fat. That's why doughnuts fried in oil will tend to taste more greasy.

Smoke Point of Frying Fats

The smoke point of a fat or an oil is dependent on the percentage of free fatty acids present, as these are decomposed most readily by heat. The greater the percentage of free fatty acids, the lower the smoke point.

The chart below shows the initial smoke point of various fats:

<u>Kind of fat</u>	<u>Smoking Temperature</u>
Cottonseed oil	451
Crisco	448
Leaf lard	430
Corn oil	406
Butterfat	406
Bulk lard	381
Olive oil	347
Peanut oil	323
Suet	242

When frying doughnuts, you've probably noticed that the fat starts smoking at lower temperatures than those shown above. Free fatty acids, which are the cause of smoking, are increased by high temperature. Thus, even the slightest use of the fat causes the smoke point to be lowered.

In frying, different qualities are sought in fats to be used for bread or cake baking. Plasticity is not important in frying, but high smoke point and resistance to rapid hydrolysis is. In general, frying fats should meet the following requirements:

1. They should permit the normal development of the fried product while it is being fried.
2. They should impart no undesirable odors.
3. Absorbed fat must congeal and not remain oily.

4. They should continue to fry consistently even though used-up fat is being continually replaced.

It has been found that deep frying with fresh shortening does not yield the highest quality doughnuts. Not until there is an increase in the free fatty acids, as a result of prolonged heating, does the quality period begin. For that reason refiners have developed special frying shortening calculated to produce the desired fatty acid content. These shortenings eliminate the pre-quality period almost entirely.

SHORTENING GLOSSARY

NOTES

Adsorption -

A gathering of a gas, liquid, or dissolved substance on a surface in a condensed layer

Alkali -

A substance capable of neutralizing an acid. An alkali turns red litmus paper blue and reacts with acid to form a salt. Caustic soda, potash, and limewater are common alkalies. Used in refining edible fats and oils from crude animal fats.

Antioxidant -

A substance which retards oxidation. Added to fats and other food products to prevent rancidity.

Bland -

Having the quality of tastelessness, desirable in shortening in many kinds of baked products. Recently, shortenings have been introduced containing butter flavor. These are not bland.

Bleaching -

Part of the refining process in the manufacture of edible fats and oils. Among the methods used are exposure to air and light and the use of oxidizing agent.

Butter -

Food product made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter, and containing not less than 80% by weight of milk fat.

Butterfat -

The fat of milk.

Butyric acid -

A fatty acid occurring principally in butter.

Calorie -

A unit used to express the heat output of an organism and the fuel or energy value of food. One gram of fat when burned in the body yields 9 calories -- more than twice as much as is produced by carbohydrates or proteins (about 4 calories for either).

Casein -

The main protein compound found in milk; it is the principal protein ingredient of cheese.

Catalyst -

A substance which, when added to a reaction mixture, will initiate or speed the rate of reaction without itself being appreciably changed in nature or amount, or appearing as an end product of the reaction.

Compound -

A hard shortening, either animal or vegetable, only part of which has been hydrogenated.

Congealing point -

The temperature at which a liquid or solution is changed to the solid state. The congealing point has been determined for shortening, lard, etc., and has specific significance in various processes of food manufacture.

Corn oil -

Oil that is pressed from corn.

Cottonseed oil -

Edible vegetable oil, obtained by pressure from cotton seeds. When hydrogenated, the fat is widely used in making bakery products.

Creaming peak -

That point in the creaming process of fats where the maximum amount of air is incorporated consistent with a satisfactory product.

Creaming power -

The ability of a shortening to combine with sugar and entrap air. Creaming power varies with many factors, including the temperature of the shortening.

Deodorize -

To remove odor, particularly offensive odors, in crude animal margarine, or vegetable oils and fats. Usually done by steaming.

Diglyceride -

Two molecules of a fatty acid combined with one molecule of glycerin. Used in mixtures with monoglycerides as bread softener or emulsifier.

Dispersion -

The state of being widely distributed throughout a mix, as, globules of emulsified shortening are more widely dispersed throughout a cake batter than they would be if the shortening had not been emulsified.

Emulsifier -

A compound which allows a relatively permanent suspension of oils and fats to be made with water. When monoglycerides are used as emulsifiers in regular hydrogenated shortening, the fat globules are broken down into smaller globules and are dispersed more uniformly through the entire mix.

Emulsified shortening -

Shortening to which a compound has been added to break down the fat globules into relatively small globules. Mixtures of monoglycerides, diglycerides, and triglycerides serve this purpose. Also, lecithin is an emulsifier.

Ester -

Chemically, a compound formed by the interaction of an alcohol and an acid. Some of the more complex esters are responsible for the typical odor of white bread.

Fat.

Natural fats are triglyceride esters of fatty acids and are closely associated in nature with phosphatides and other fat-like substances. Fats are insoluble in water but soluble in such fat solvents as ether, benzene, and chloroform. They may be utilized by living organisms.

Fatty acids -

A general term referring to any organic acid found to be present in combination with glycerol in natural fats. They may be either saturated or unsaturated. Examples: palmitic, stearic, oleic acids.

Filtering.

Although some oils can be distributed to the consumer after a preliminary settling out of foreign matter, almost all fats are filtered, either through fuller's earth, or the blowing of air, etc.

Filtration -

The process of separating a solid from a liquid by means of a porous substance through which the liquid passes. In refining edible oils, one of the filtering materials used to remove impurities is fuller's earth.

Flash fire point -

In frying fats, about 600°F. -- the temperature at which boiling oil will burst into flame. Bakery equipment is built so that this much heat cannot be generated.

Free fatty acids -

Fatty acids which are found in fats and oils and which are formed by the hydrolysis. The commonest are oleic, palmitic, and stearic.

Hard fat -

Animal or vegetable fat to which additional stearin has been added, or which has been exposed to additional hydrogenation. In bakeries, hard fat is particularly used in the production of puff pastry.

High-ratio cake -

Cake containing unusually high percentage of sugar and moisture. To produce such cakes, specially hydrogenated-emulsified shortenings and flours are needed.

Hydrolysis -

The breaking down of a large molecule into smaller molecules in the presence of water by the action of enzymes or chemicals.

Glycerol -

Also called glycerin. A thick, oily, colorless, odorless hygroscopic liquid compound, with a sweet taste, soluble in alcohol and water. Used as a preservative in foods. It is produced by the hydrolysis of fats into fatty acids and glycerol and is also obtained as a by-product in the soap industry.

Hydrogenated shortening -

A shortening prepared by hydrogenating all the constituents of the shortening.

Hydrogenation -

The process of combining with hydrogen in the presence of a catalyst. For example, oils are hydrogenated in the presence of the catalyst nickel and changed to solid fats.

Iodine number -

The number of grams of iodine which will be taken up by 100 grams of fatty acids or other fatty substances or any unsaturated compound. It is a measure of the degree of unsaturation.

Kettle lard -

That obtained from the residue of tissues from which top grade No. 1 neutral or leaf lard has been rendered.

Lard -

The rendered fresh fat from hogs in good health at the time of slaughter. It is free from rancidity and contains not more than one percent of substances other than fatty acids and fats.

Lecithin -

A yellowish-brown waxy solid, occurring in various animal and vegetable tissues, especially brain, egg yolk, soy bean and wheat germ oil. It is insoluble in water and soluble in alcohol, ether, and chloroform. It is used as a fat extender, emulsifier, and stabilizer.

Lipase -

A fat-splitting enzyme found in the pancreatic juice. It splits the fats into their component fatty acids and glycerol. Sometimes called steapsin.

Lipid -

Any one of a group of fat-like substances, which includes the fats and esters, having analogous properties. They are organic substances insoluble in water but soluble in fat solvents.

Margarine -

Also known as oleomargarine. A substitute for butter. Composed of hydrogenated vegetable or animal fats or oils churned with soured milk, and with bacteria added to give butter flavor. Cake margarine is different from pastry margarine in that the latter is stiffer and has a higher melting point. Margarine may not contain more than 16 percent water.

Melting point -

The temperature at which different fats will melt. Since fats are a combination of tiny individual crystals enmeshing a considerable proportion of liquid oil -- and since the quantities of crystals and oil vary with different fats -- each fat has a different melting point. To some degree, the melting point of a fat or oil is a general indication of its degree of unsaturation. Fats that are firm at room temperature consist mostly of saturated fatty acids; fats that are soft or liquid at room temperature consist mostly of unsaturated fatty acids.

Molecule -

The smallest physical unit of a substance, containing one or more atoms. A molecule may be very simple - for example, a molecule of table salt consists of an atom of sodium and one of chlorine - or it may be extremely complicated - for example, the proteins, starches, and fats are all large, complex molecules containing many different atoms.

Monoglyceride -

One molecule of a fatty acid combined with one molecule of glycerin. Mixtures containing monoglycerides are used as bread softeners or emulsifiers.

Oil -

Of the same composition as a fat, but is liquid at room temperature. Both are triglycerides made up of three molecules of a fatty acid and one molecule of glycerin.

Oleic acid -

One of the four principal acids commonly found in most fats, the others being stearic, linoleic, and palmitic. It is one of the unsaturated fatty acids.

Oleo -

The oil derived from beef fat. Still widely used in the preparation of pastry margarine.

Oleomargarine -

See margarine.

Powdered or dry shortening -

A composition of shortening, protein material (milk, soybean, etc.) which has been homogenized and spray dried. The protein mass surrounds the fat particles and causes the shortening to behave like a powder.

Palmitic acid -

One of the four principal acids commonly found in most fats, the others being stearic, oleic, and linoleic. It is one of the saturated fatty acids.

Plastic range -

One of the most important considerations in evaluating the suitability of a fat. It is the range of temperatures between which a fat will cream well, or serve the purpose for which it is intended. Each fat has its own plastic range.

Plastic shortening -

Any fatty composition used for shortening purposes, which has been properly treated to control the crystal size and to incorporate a definite amount of air or other gas. A plastic shortening is a "workable" shortening.

Puff paste -

A paste made of dough interleaved with hard butter or pastry margarine and given sufficient turns to give hundreds of alternating layers of dough and fat. Handled properly, it will rise very high in the oven and when the pastries are out, the many layers will be noticeable.

Pre-quality period -

In doughnut frying, that period of time when the fat is very fresh and does not yet produce the best quality doughnuts.

Rancidity -

A form of fat deterioration, caused either by the breaking down of fat into glycerin and free fatty acids or mono and diglycerides, or by oxidation. It is evidenced by objectionable odor. Antioxidants delay the onset of rancidity.

Refining -

The process of manufacturing edible oils and fats by melting, filtering, deodorizing, bleaching, etc.

Rendering -

The process of melting down animal fats in the production of lard or shortening. Various parts of the animal yield different grades of fat. There are various methods of rendering fat, including steam and open kettle rendering.

Saponify -

To hydrolyze a fat to form a soap and glycerol. This is what can happen to frying fat in the bake shop when eclair mix containing ammonium carbonate is used for making French crullers.

Saturated.

Fatty acids in which all carbon atoms are combined with two hydrogen atoms and which therefore contain no "doublebonds", are called saturated.

Shortening -

Any edible fat, from plant or animal sources, which may or may not be hydrogenated, used in baked products to produce tenderness and enhance flavor and texture.

Shortening power -

The ability of a shortening to impart tenderness or shortness to the cake crumb.

Smoke point -

The temperature at which a frying fat will begin to smoke. A high smoke point is particularly desirable for frying. Because emulsified shortening will smoke at a lower temperature, it is not considered good for frying purposes.

Specific volume -

The volume of a unit weight of a substance expressed, for example, as cubic feet per pound.

Specific gravity -

The weight of a particular volume of substance compared with the weight of an equal volume of water. The specific gravity of most fats is approximately 0.86.

Stearine -

The solid portion of any fixed oil or fat. It can be separated out of melted fat and added to other fats to increase their hardness.

Stearic acid -

One of four principal acids commonly found in most fats, the others being palmitic, oleic, and linoleic. One of the saturated fatty acids.

Summer shortening -

Shortening that has been processed to make allowances for usually unfavorable storage conditions. Summer shortenings may be hardened with the addition of hydrogen or by formula changes that will raise its melting point and widen its plastic range.

Tallow -

Name applied to harder types of fats such as suet, cocoa butter, etc. after clarification.

Texture -

The feel to the fingertips of the surface of a slice of a baked product. To the extent that shortening is creamed, helping to incorporate air, and is distributed throughout the mix, it helps to promote desirable texture.

Triglyceride -

A compound composed of one molecule of glycerin and three of some fatty acid or combination of different acids.

Unsaturated -

Fatty acids which contain "doublebonds" are called unsaturated. Doublebonds provide points in the molecule for the addition of oxygen, hydrogen, iodine, or other reactive substances, which accounts for the term "unsaturated." An unsaturated fatty acid may be monounsaturated (one unsaturated linkage) or polyunsaturated (more than one unsaturated linkage).

Vitamin -

Specific organic substances, much like the various carbohydrates and proteins. Vitamins have the basic characteristics of organic compounds, e. g., they contain carbon as an essential constituent, have complex molecular structures, and appear in animal and plant tissue. Some vitamins can be made by chemical synthesis. Vitamins A and D are prevalent in fats. All vitamins are essential to health and growth, although in very small amounts.

World Book, Chapter on Milk

I. INTRODUCTION

Milk is one of the standard ingredients of baked foods. In this unit we shall learn something about the various kinds of milk and how milk is processed. We shall learn how milk functions in bakery products and why milk is used in breads and cakes. We shall also learn a little about the chemistry of milk.

We take for granted that milk comes from cows, but in other parts of the world people drink milk from goats, sheep, buffalos, llamas, reindeer, and camels.

The Department of Agriculture has set the standard for what we shall call milk. According to their definition, "Milk is the whole, fresh, clean lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept, excluding that obtained within 15 days before and 5 days after calving or such longer period as may be necessary to render the milk practically colostrum-free."

II. CLASSIFICATION OF FORMS OF MILK

Milk is graded according to standards established by the U. S. Public Health Service on the basis of bacteria count and fat content.

Pasteurized milk is milk that has been heated to 140°F. for 30 minutes and then quickly cooled to 50°F. or lower. This assures the destruction of certain forms of bacteria. Another method is to heat milk to 160°F. for 16 seconds.

Homogenized milk is pasteurized milk that is forced through a tiny orifice under high pressure. This brings about a reduction in the size of fat particles, so that they remain dispersed and no longer form a cream layer.

Vitamin D milk is milk in which the vitamin D content has been increased. This is done either by irradiating the milk with ultraviolet light, by feeding cows irradiated yeast, or by adding the vitamin directly to the milk. This type of milk is sold mostly in liquid form and is not used in bakery productions except under special conditions.

Skim milk is fresh milk from which nearly all the fat has been removed.

Condensed milk is produced by heating the milk to higher than pasturization temperatures and then evaporating part of the water. During the process, about 16 pounds of sugar is added to each 100 pounds of milk. The final product contains about 42% sugar, which serves as a preservative.

Evaporated milk is produced in a similar fashion, but no sugar is added.

Dry or powdered milk, made from either whole milk or skim milk, is used more than any other type of milk in the bake shop because of its many advantages. Among them are:

1. A higher proportion of necessary milk solids in dry milk than in liquid.
2. Ease of handling.
3. Improved baking qualities when used in dry form.
4. Lower cost.

Buttermilk originally was the liquid remaining after the removal of fat from the milk or cream in the process of churning butter. If the butter was made from sweet cream, the resultant buttermilk was very similar to skim milk in its composition and characteristics. If sour cream was used for butter making, the buttermilk contained lactic acid, which imparted to it its characteristic sour taste. Most of the buttermilk on the market nowadays, however, is made directly from skim milk; a culture containing micro-organisms is used to develop the desired flavor and consistency.

Whey is the product which remains after the removal of most of the casein and fat from milk in the process of cheese making.

III. FUNCTIONS OF MILK IN BAKERY PRODUCTS

In Bread

From a nutritional standpoint, read what Dr. Collum of John Hopkins University said, as long ago as 1923: "So far as we know, the simplest, cheapest, and most effective way to improve the quality of bread is to introduce more milk solids in its composition." Mainly, the protein, calcium, and vitamin content are increased.

From a physical standpoint, milk is valuable in bread because it improves aroma, flavor, color, grain, texture, and keeping quality. This is particularly noticeable when it is added to the dough in the form of nonfat milk solids, in a percentage of about 6% of the flour.

The golden brown crust color is brought about through caramelization of the sugar in the milk during the baking process. Smooth, velvety texture--that is, the feel of the surface of a slice of bread--also results because of the presence of milk in the dough. It has also been shown that bread made with milk stays fresh longer because the combination of milk proteins and flour proteins tends to keep the bread soft.

In Cake

Laboratory workers as well as practical bakers found that, when the milk solids were increased in cakes, an improvement in cake quality was observed. Milk imparts richness, flavor, eating, and keeping qualities.

Like eggs and flour, nonfat dry milk solids is a structure-building material. In the bake shop, milk is used more in the nonfat dry form than in any other form.

Nonfat dry milk solids may be used in dry form or re-liquefied, that is, combined with the original amount of water to make liquid skim milk.

Nonfat dry milk solids can be used to reconstitute all forms of milk, including fresh whole milk.
(See Unit IV to learn how the latter is done.)

IV RELIQUEFYING DRY MILK

While dry milk does not "turn sour" as fresh liquid milk does, it must be kept in mind that, as soon as dry milk is liquefied, it is subject to bacterial action just as is fresh fluid milk. For this reason, all containers must be kept scrupulously clean.

After washing, if the containers are not to be used immediately, they should be rinsed with hot water and placed upside down

To reliquefy dry milk, do not use water that is too hot or too cold. About 70°F. is just right.

Always place dry milk on top of the water. Stir immediately, or lumping will result. If the milk is to stand for any length of time, it should be placed in the refrigerator

To reliquefy nonfat milk, the exact proportion of water to nonfat milk solids is:

7 lbs. 13 oz. water
to
13 oz. nonfat milk solids

However, in everyday shop practice, we use 1 gallon of water (8 lbs 5 oz) to 1 pound of nonfat milk solids.

To reliquefy one gallon of whole milk from nonfat dry milk solids, use:

7 lbs. 7 oz. water
13 oz. nonfat milk solids
6 oz. butter

To make 10 pounds of sweetened condensed milk, use:

2 lbs. 14 oz. water
2 lbs. nonfat milk solids
4 lbs. 3 oz. sugar
15 oz. butter

V. THE MANUFACTURE OF DRY MILK

Dry milk is produced by one of two methods: spray-process drying or roller-process drying.

In the spray process, whole milk or skim milk is drawn from a holding tank to a preheating tank, where its temperature is raised to 180°F. for 30 minutes. It is then pumped into a chamber where the heated milk is aerated at high temperatures. In this process the milk loses a great deal of its water, and a highly concentrated product is obtained.

This product is then pumped into a drying chamber in the form of a fine mist. The mist is met by a blast of hot, sterilized air which dries the sprayed milk almost instantaneously. The dry milk then drops to the bottom of the drying chamber and is removed on a continuous belt. Although there are many intermediate steps, the above outline covers the most important ones.

When whole milk is used, the result is whole dry milk. When skim milk is used, the result is nonfat dry milk, also known as nonfat milk solids.

In the roller process, the milk is dried on steam heated rolls or drums. A thin layer forms and is then scraped off by stationary knives.

Spray-process dry milk is better for most bakery products because it is more soluble.

Variations of both processes are constantly being developed. On the following page is a diagram of all of the steps in spray-process drying.

Diagram of Swenson-Grey-Jensen spray drying installation.

B

VI. CHEMISTRY OF MILK

From the chemist's standpoint, milk is defined as "an emulsion of tiny globules of fat in a water solution of protein, sugar, and minerals."

The composition of milk varies somewhat depending on a number of factors. However, the average composition will be approximately that given below:

Composition of Milk

Water	87.75%
Total solids	12.25%
Total	100.00%

Composition of SOLIDS in Milk

Fat	3.50%
Protein	3.25%
Minerals (or ash)	0.75%
Lactose (milk sugar)	4.75%
	12.25%

Fat

The fat in milk is known as butterfat. It is rich in vitamins A and D and has a high caloric value.

When milk is agitated, there is a tendency for the fat globules to clump together, because their specific gravity is lower than that of the rest of the milk. This is what happens when milk is churned: The result is butter. The same thing happens in making whipped cream -- provided the cream is high enough in butterfat (between 28 and 44%). The clumped fat globules and the air bubbles in whipped cream are both surrounded by stabilizing films of protein. Too much clumping, however, will cause butter to form.

Milk Protein

There are two principal proteins in milk:

1. Casein. About 80% of the protein in milk is casein. It is easily coagulated to a thick curd by acid. It is not easily coagulated by heat.

2. Lactalbumin. About 20% of the protein of milk is lactalbumin. This protein is not readily coagulated by acid but is readily coagulated by heat (beginning at 150°F.). At 212°F., about 85% of the lactalbumin is coagulated.

Minerals

Milk contains a number of mineral elements. The most important are calcium and phosphorus, which are important for the growth of bones and teeth. Milk is low in iron.

Lactose (or milk sugar)

Lactose is the only sugar in milk. It is a disaccharide, made up of glucose and galactose. It is only slightly sweet. It is not fermented by yeast. Lactose is acted on by bacteria to form lactic acid. This causes milk to sour.

Vitamins and Enzymes

Milk contains all known vitamins to some extent and is a good source of vitamin A, riboflavin, and the other B vitamins. Many enzymes are also present in milk. Among them are:

1. Protease (which breaks down proteins)
2. Lipase (which breaks down fats)
3. Oxidizing enzymes

VII. STORAGE OF LIQUID MILK

Fresh or pasteurized milk should be stored under refrigeration at 38-40°F. before use, to prevent changes due to bacterial growth. The table on the following page shows the value of refrigeration in preventing bacterial growth, and shows how rapidly bacteria increase at higher temperatures.

<u>Temperature of Milk</u>	<u>Hours of Storage</u>	<u>Bacteria per ml*</u>
32°F.	10	3,000
50°F.	10	11,000
60°F.	10½	15,000
70°F.	11	190,000
80°F.	11	2,600,000
90°F.	11	4,400,000

* approximately 1/1000 of a quart

VIII. APPROXIMATE COMPOSITION OF MILK AND MILK PRODUCTS

	<u>% Water</u>	<u>% Milk Fat</u>	<u>% Solids Not Fat</u>
Liquid whole milk	87.75	3.50	8.75
Dry whole milk	2.0	28.0	70.0
Liquid skim milk	91.0	.1	8.9
Nonfat dry skim milk	3.0	1.0	96.0
Evaporated milk	73.7	7.8	18.5
30% milk-fat whipping cream	64.0	30.0	6.0
Liquid buttermilk	90.5	.5	9.0
Dry buttermilk	9.0	5.0	86.0

MILK GLOSSARY

NOTES

Butterfat -

The fat of milk; sometimes called milk fat.

Buttermilk -

Originally, the liquid remaining after the removal of the fat from the milk or cream in the process of churning butter. Now made by inoculating skim milk with a culture. It contains not less than 8.5% milk solids.

Colostrum -

A thick, viscous fluid differing greatly in composition from that of normal milk. It is secreted for a short period after the birth of a calf and is thought to be unsuitable for human consumption.

Coagulate -

To change from a fluid state to a thickened jelly, curd, or clot.

Condense milk -

A concentrated form of milk in which much of the water is evaporated and sugar is added.

Casein -

The principal protein of milk. It is present in milk in the amount of 2.7%.

Certified milk -

Milk produced under exceptionally exacting conditions of sanitation and which therefore has a very low bacteria count. It may be sold either raw or pasteurized.

Cream -

The fat part of cow's milk. That portion of milk which rises to the surface on standing or is separated from it by centrifugal force. Sweet cream contains not less than 18% milk fat and may contain as much as 45%.

Curd -

The coagulated substance formed from milk by the action of acids.

Evaporated milk -

Unsweetened canned milk from which water has been removed before canning.

Homogenized milk -

Milk which has been forced through a very small opening by high pressure so that the fat particles are so reduced in size that they no longer form a cream layer. According to the U.S. Public Health Service definition, fat globules must be broken up to the extent that there is no visible cream separation after 47 hours' storage.

Lactose -

The sugar in milk, having a relatively low sweetness - a rating of about 16 as compared to 100 for sucrose. Lactose is the principal carbohydrate in milk (about 4.8% of the weight of the milk). It is not ordinarily fermentable by baker's yeast. Also known as milk sugar.

Milk -

According to the Federal Food, Drug and Cosmetic Act, milk is defined as "the whole, fresh, clean lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept, excluding that obtained within 15 days before and 5 days after calving or such longer period as may be necessary to render the milk practically colostrum-free."

Nonfat dry milk solids -

Also known as defatted milk solids. The product resulting from the removal of fat and water from milk. It contains the lactose, milk proteins, and milk minerals in the same relative proportions as in the fresh milk from which it is made.

Pasteurized milk -

Milk which has been heated to 140°F. for 30 minutes and then quickly cooled to 50°F. or lower. Pasteurization may also be carried out by heating milk to 160°F. for a very brief period of 15 to 20 seconds.

Reconstitute -

To re-form dry milk solids and water back to liquid milk, either whole or skim.

Roller process -

A process by which dry milk powders are prepared. In this process, either fluid or condensed milk is fed into a reservoir formed by two drums about 0.02 inches apart and closely fitted end dams. The milk dries rapidly, is scraped from the surface and is ground and bolted. Roller-processed dry milk is only 80% soluble in water.

Skim milk -

Liquid milk from which all or part of the cream has been removed.

Spray process -

By this process, condensed milk is sprayed into a moving stream of heated air within an enclosed vessel. The moisture in the milk is evaporated rapidly and the dry milk falls to the bottom as a fine powder. It is 100% soluble in water.

Vitamin D milk -

Milk in which the vitamin D content has been increased to approved levels, either by irradiation of the milk with ultraviolet light, or by feeding cows irradiated yeast, or by adding vitamin D directly to the milk.

Whey (fresh) -

The serum, or watery part, of milk, separated from the more thick or coagulated part, or curd, especially in the process of making cheese. The whey contains solids consisting mostly of the lactose, some of the protein, and a fairly large proportion of the B vitamins that were present in the milk originally.

Whey (dried) -

According to U. S. Department of Agriculture standards, "whey is the product resulting by spray-drying sweet, fresh cheese whey which has been pasteurized either before or during the process of manufacture at a temperature of 143° F. for 30 minutes, and to which no alkali or other chemical has been added."

The Story of Starches, National Starch Products, Inc.

I. INTRODUCTION

Starch is produced in abundance by all vegetable life. Each plant produces its own distinctive starch granules, whose characteristics differ from those of other plants. In some plants starch is produced mostly in the seeds, in some, in the roots, and in others, in the trunk itself.

Starch is insoluble in alcohol, cold water, and most other solvents. When cooked in water, however, it gelatinizes to form a thickened, viscous solution. The particular plant from which the starch is manufactured determines the clarity, texture, and jelly strength of the solution.

In dry form all starches look alike. They are all white and powdery. Under the microscope, however, each has a different appearance, as you can see by studying the diagram below.

WHEAT

RICE

Microscopic Appearance of Various
Starch Molecules
(Magnified 400 times)

In food processing, each starch behaves differently too. Some starches jel after cooking. That is, they form a firm, semi-rigid, jelly-like body. Others only set moderately that is, they are less firm than those that jel. The three most important starches in use in bakeries are:

1. Cornstarch.

This is the most widely used starch. When cooked it is cloudy and noncohesive. Upon cooling, it sets up a more or less jelly-like body, depending on the amount of starch used. It is the cheapest to produce, most abundant, and is often used as a base for specialty starches.

2. "Amioca."

This starch is made from a unique type of corn known as waxy maize. In the field, waxy maize looks the same as ordinary corn. But when used in the preparation of fruit, the starch made from waxy maize-- Amioca-- is very different from cornstarch. Paste made from Amioca is clear, cohesive, and nonjellifying. Another very important characteristic is that it has less cereal flavor than cornstarch.

3. Tapioca is a starch processed from the root of a tropical plant which grows about 10 feet high. In many ways it is a superior starch for bakery use. It has a bland, noncereal taste. Its cooked pastes are clear, cohesive, and stable. Because it is expensive to process and ship from South America, it is not so widely used as cornstarch or Amioca.

There are many starches including sago starch, potato starch, rice starch, and others, but we shall be concerned in this unit mainly with cornstarch.

11. THE ORIGIN OF CORNSTARCH

Cornstarch is derived from corn -- the same corn that has been used as a staple in man's diet for thousands of years.

Corn is native to the Western Hemisphere, and Columbus brought it back to Spain from his first voyage to America. It is believed to have been developed by the Indians from a native cereal grass. It is now a highly developed, cultivated plant whose growth depends on careful seeding and cultivating. It is a sturdy plant that can flourish in almost any kind of climate. It is the largest crop in America, outranking wheat 3 to 1 and cotton 26 to 1.

Depending on the climate, field corn is planted any time from March to late May. The farmer drops two or three seeds every 30 or 40 inches in straight rows, sometimes half a mile long. These grow rapidly and in a few weeks, the field is covered with tiny shoots of green leaves.

The next job is to cultivate, by removing the weeds and loosening the earth between the lines of young corn. Under average conditions it will be "knee-high by the fourth of July" and by August, it grows so fast that farmers say they can "hear it grow." After the first hard frost it is harvested.

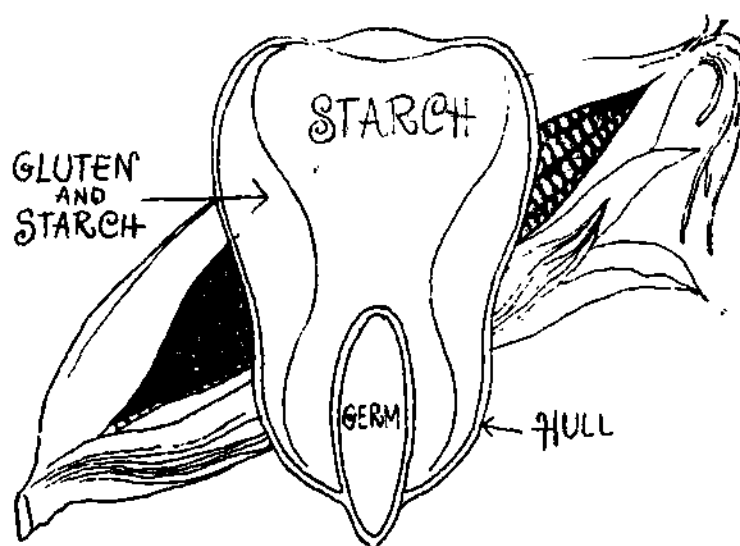

III. THE MANUFACTURE OF CORNSTARCH

There are four principal dry substances in a corn kernel:

1. Soft starch
2. Hard starch(starch and gluten)
3. Germ
4. Hull

The gluten referred to is not at all the same as the gluten which is found in doughs made from wheat flour. When the word is used in connection with starch, it is merely a trade term. The location of the gluten in relation to the other portions of the corn kernel is shown graphically in the following diagram.

Dry Substances in a Corn Kernel

Eighty-five percent of all corn grown in the United States is used for cattle feed. The remainder is used for food and industrial purposes. This includes the relatively small proportion of "sweet corn," consumed as grown-on the cob-or canned or frozen.

In processing starch from corn, the first step is to remove the kernels from the cob. Then the kernels go through the following steps:

1. Cleaning. Giant vacuum cleaners suck away dust, chaff, husks, and pieces of cob. A large magnet draws out nails and bits of metal.
2. Steeping. The corn is soaked in a continuous flow of warm water for 36 hours or more. This loosens the hulls and softens the kernels so that they can be separated more easily into their principal parts. The steepwater is saved, because it is rich in minerals and vitamins.
3. Degerminating. As the kernels flow along in a stream of water, they go on to a "degerminating mill" where the kernel is rubbed between flat stones and the germ is gently removed. Since the germ contains fat, it floats to the surface, where it is skimmed off and sent to the "germ separators."

4. Separating. Here, the kernels are dried, ground, and heated, and run through presses where the oil is pressed out. The ground kernels, consisting of hulls, gluten, and starch, continue on to a different type of mill called a "buhr" mill, where huge stones rub the starch and gluten from the hull.
5. Final Separating. After the hulls are removed, the mixture of starch and gluten flows into centrifugal machines, where the gluten, which is heavier than the starch, is taken off to be used for feed and other uses. Finally, the end product -- starch-- is ready to be washed, filtered, and dried and then made into various starch products. Part of the starch is to be changed by cooking and other means, into corn syrup and corn sugar.

IV. THE COMPOSITION OF CORN

The approximate composition of corn, depending on the variety, weather, fertility of the soil, and method of cultivation, is:

Moisture	11.00%
Starch	70.50
Protein	10.00
Fat	4.50
Fiber	2.50
Ash	1.50

A bushel of corn weighing 56 pounds, when wet milled will yield approximately 33 pounds of starch, 15 pounds of gluten feed, and $1\frac{1}{2}$ pounds of oil.

V. COOKING WITH STARCH

There are a number of factors that affect the finished product when fruits are cooked with starch. They are:

1. Cooking temperature
2. Cooking time
3. Intensity of agitation
4. pH of the mix
5. Effects of other ingredients

All starches do not gelatinize at the same temperature. Large granules swell at a lower temperature and in a shorter time. When the granules swell, viscosity increases. However, once peak viscosity has been reached, further cooking, even at constant temperature, thins out or breaks down the viscosity, because the granules rupture. Higher temperature also speeds breakdown.

Laboratory tests show that, even if the temperature is kept constant, gelatinization is accelerated when the starch paste is stirred in with greater agitation. Similarly, the entire mix will break down more rapidly if the starch is stirred more rapidly once peak viscosity has been reached.

The fourth factor that affects cooking and breakdown of starches is acidity. This is most noticeable when a baker attempts to use the same proportion of starch in cooking different fruits. For example, 2-3 ounces of starch is sufficient for 1 can of apples with 2 pounds of juice and water. But when the same amount of starch is used for the preparation of 1 can of cherries, a much thinner mix results. This is because of the greater acidity of cherries. The measure of relative acidity is the pH value. The lower the pH, the more acid; the higher the pH, the less acid.

The addition of other ingredients alters the pH, and thus indirectly, affects the gelatinization of the starch. It is interesting that most starches gelatinize more quickly at both high and low pH values. At intermediate pH's (about 4 to 7), gelatinization takes place more slowly. Thus, the addition of vinegar lowers the pH and speeds up gelatinization, the addition of sugar brings the pH into the intermediate range and retards gelatinization.

VI SOME ADDITIONAL INFORMATION ON THE COOKING OF STARCH

As you may have observed in class, when starch-water is added to cooked juice or water, it immediately forms into a paste. How this paste is handled affects its properties. In general, starch solutions should be

kept only as hot as required and stirred thoroughly but no more than necessary to bring them to the desired consistency.

"Weeping" and retrogradation are two different results of improper handling of cooked fruits. Weeping is the result of undercooking the starch. As the starch granules cook, they absorb water and swell. But if the granules are not sufficiently cooked, the water is held so loosely that on cooling and aging, the water is easily released. This is called "weeping" or "watering," or to use a more technical term - syneresis.

Retrogradation is sometimes confused with syneresis. However, retrogradation refers to the change that takes place in cooked solutions of starch when they are held for any length of time at room temperature or lower, and part of the starch changes form and precipitates from the solution.

VII. BASIC RULES FOR COOKED FRUIT FILLINGS

Except when fruits are very firm - as in the case of certain varieties of firm apples, it is best to cook the juice, thicken it with starch, add the remainder of the sugar, and finally, fold in the fruit.

The amount of sweetener present before the starch is pasted is of primary importance. Starches will not paste in a concentrated sugar solution. Similarly, large amounts of egg, fat, or dry milk solids, if present during the pasting of the starch, may hinder the swelling of the granules.

Starches do not have a sharp pasting or gelatinization point, but in pure water corn starch changes noticeably at 165°F. to 168°F. The temperature would be about 10° lower for tapioca starch. If sugar is present, the pasting point would be raised.

If one pound of starch is cooked in the average amount of water in the presence of seven pounds of sugar, the resulting gel will be dull and thin and will have a definite starch taste. However, if the same amount of starch is cooked in the presence of only three times its weight of sugar, and the remaining 4 pounds of sugar are added after the pasting of the starch is completed, the result will be a clear, glossy gel with no trace of a starch taste.

The safe rule to follow is not to have more than $3\frac{1}{2}$ times as much sugar as starch present at the time the starch is being cooked. When this rule is not followed, examination under the microscope show the presence of numerous unswollen starch cells.

But the baker should not go all the way and try to cook starch without any sugar. Some sweetener should be present to prevent the mixture from becoming too stiff after the starch is pasted, thus causing lumps to form which will not smooth out easily after the addition of the balance of the sweetener.

For this reason it is a general practice to have sweetener present in an amount of at least twice the weight of the starch.

VIII. THE STEPS IN COOKING FRUIT FILLINGS

Prepare "starch milk" by dissolving very thoroughly two parts of water to one part of starch. The water -- or juice -- should be part of the total liquid to be used in preparation of the filling.

The above starch milk should be added to the juice, water, and sweetener just as it begins to boil -- 190°F . is the recommended temperature. The starch should be added gradually but should be stirred in vigorously. When all the starch is in, gently stirring should be continued until the starch thickens and clears.

After the starch is clear and the mixture thickens, the remaining sugar should be added and again stirred in vigorously. The mass should then be heated only long enough to dissolve the sweetener. The filling should then be removed from the fire.

After the completion of cooking, the fruit is added to the hot syrup. In some cases it may be desirable to heat the mixture slightly to soften too-firm fruit or to prevent possible "freezing" due to uncooked juice's remaining in the fruit. Additional cooking after the fruit is added also helps prevent possible fermentation, but it does soften the fruit somewhat.

IX. RULES FOR MILK FILLINGS

All of the above suggestions for the proper pasting of starch in fruit fillings are also applicable in the preparation of custards and soft pie fillings. In plain water or milk fillings, 2 ozs. of starch is usually used to thicken 1 quart of liquid.

The addition of eggs to this product would permit a reduction of starch. The ratio is 4 ozs. of starch less for each pound of eggs added. Note that this ratio is for plain water. Where sugar and other ingredients are added- and they usually are- an additional amount of starch or eggs is needed to offset the sugar.

Rapid Cooling Is Important

Most bakeries are not equipped with proper devices for the rapid and proper cooling necessary to safeguard against loss of flavor or color, as well as protection for the starch gel. Fast cooling is necessary, but low-temperature storage is not recommended for starch fillings except for short periods of time.

X. THE USE OF INSTANT STARCH

Many of the difficulties associated with the use of starch in cooked fillings may be avoided by the use of "instant" starch. This is a pre-gelatinized starch which eliminates cooking. During the baking process the starch thickens, and the final product is found to be the same as that made from cooked fillings. The use of instant starch is not recommended for open-face pies or similar items which are not baked.

Slightly different proportions of this starch are recommended by the various companies that process it. In general, the recommended methods for its use are the same. In practice, we have found the following method best:

1. Blend sugar with starch and other dry ingredients with wire whip or machine. (At least 4 parts of granulated sugar should be used with 1 part of instant starch to prevent lumping.)
2. Add water and whip thoroughly.
3. Gently fold in fruit.
4. Refrigerate until used.

STARCH GLOSSARY

NOTES

Acid*-

The quality or state of being sour, tart, sharp to the taste. Below 7 on the pH scale.

Agitation -

The vigorous stirring of a solution.

Amioca -

Starch made from waxy maize. Looks like ordinary cornstarch even under the microscope, but has properties more nearly like tapioca. Its pastes are clear, fluid, and cohesive. It is nonjelling and has less cereal flavor than cornstarch but somewhat more than tapioca.

Breakdown -

Any form of separation of a cooked starch-paste resulting from undercooking, overcooling or any other cause.

Cereal flavor -

Starchy taste found in cooked fruit fillings thickened with starch where the starch granules are not fully gelatinized.

Cloudy -

Unclear appearance of fruit fillings. Occurs most in fillings cooked with cornstarch, or when starch is not sufficiently cooked.

Cohesive -

Gummy, rubbery texture of starch-paste.

Consistency -

Often used interchangeably with viscosity. Refers to resistance to stirring of liquids.

Cornstarch -

(See definition of starch.) Starch processed from the kernels of corn. When cooked in water, the solution is cloudy, and noncohesive. Upon cooling, it has a tendency to paste, set, or jel, depending on the concentration.

Fluidity -

The ease with which a liquid can be stirred. Opposite of viscosity.

Gel -

Technical term referring to the process involved in forming a firm, semirigid-textured cooled starch-paste, resembling a jelly.

Gelatinization temperature -

Amount of heat required (in cooking fruit filling or custard) to cause starch cells to swell. This is not a fixed point as in the boiling of water, where the boiling point is 212°F. Different starches gelatinize at different temperatures and the larger cells swell first- at lower temperatures. Cornstarch granules begin to swell at 140°F. and become completely gelatinized at 190°F.

Gelatinize -

To cook or swell starch granules in water to obtain a viscous solution.

Gloss -

Desirable, shiny surface of cooked fruit filling.

Heavy -

of a higher viscosity.

Hydrolysis -

Process of splitting a molecule into small parts by chemical reaction with water.

Intermediate pH range -

Between 4-7 on pH scale. It is in this range that starches gelatinize more slowly.

Jel -

Firm, semi-rigid-textured cooled starch-paste, resembling a jelly.

Paste -

Short-textured, smooth starch-paste with slight or sluggish flow. Used as a noun and a verb .

pH -

A measure of the acidity of alkalinity of a solution, the neutral point being pH 7. Lower values indicate increasing acidity. Higher values indicate increasing alkalinity.

Retrogradation -

This occurs when starch solutions are held for a prolonged period of time at room temperatures or lower. The paste breaks down and part of the starch precipitates from the solution in the form of liquid.

Set -

To form a nonfluid starch-paste without a firm jel - as a custard pie thickened without starch is said to "set" after cooling.

Stable -

Characteristic of a starch-paste that does not change much in viscosity, clarity, or texture with age.

Starch -

A white, granular material that comes from the seeds, piths, or roots of plants. It is insoluble in alcohol, cold water, and most other solvents. It may be cooked in water to form viscous solutions. Chemically it is a combination of carbon, hydrogen, and oxygen atoms.

Starch milk -

Starch dissolved in cold water, used to thicken cooked juice into a paste.

Starch slurry -

Same as starch milk.

Starch-paste -

A term used to designate a cooked and cooled starch solution.

Starch taste -

Noticeable cereal taste in cooked fruit filling, the result of incompletely swollen starch granules.

Starch-water ratio -

Ratio of starch to water for cooking custard or fruit filling. Approximate custard ratio: 2 ozs. starch to each quart water. Approximate fruit ratio: 3 ozs. starch to each quart of water -- with some variation for different fruits.

Sugar-starch ratio -

The amount of sugar in a mix in proportion to the amount of starch. For example, $3\frac{1}{2}$ pounds of sugar to 1 pound of starch is called a $3\frac{1}{2}$ to 1 ratio. At this ratio, starch will gelatinize and the solution attain the proper consistency. But if the ratio is increased to about 6 to 1, the starch will not gelatinize completely, and the resulting paste will be thin and watery.

Syneresis -

Weeping and watering of cooled starch-paste due to undercooking of starch. Also accelerated by prolonged low temperatures. Syneresis is accompanied by a drop in consistency or viscosity.

Thin -

Low in viscosity or consistency. High in fluidity or more highly converted.

Texture -

Smoothness to the touch of the cooked paste.

Tapioca -

A form of starch that comes from the root of a tropical plant called cassava. Its cooked pastes are fluid, clear, cohesive, stable, and have a noncereal taste.

Tightly bound water -

Water taken up and held by starch.

Viscosity -

Term used to indicate the resistance to stirring of liquids.

The Story of Chocolate, The Chocolate Manufacturers Association
of the U. S. A. , 1960

I. INTRODUCTION

Although chocolate is generally considered one of America's most popular flavors, it is not a flavoring material in the sense that vanilla or mace are flavoring materials. Besides flavor, chocolate has food value. It also contributes definite substance and color to bakery products.

Chocolate and cocoa come from the same source -- the seed of a tropical tree. These seeds, which are about the size of almonds, are found within large Pods, about the size of a long cantaloupe. They are called cacao beans before they are processed; after they are processed, the product is cocoa.

The first white man to taste cocoa was Hernando Cortez, the Spanish explorer and conqueror of Mexico. It was he who brought to Europe the secret of preparing cocoa which he had learned from the Aztec Indians.

II. HOW CACAO IS GROWN, PROCESSED AND SHIPPED

The cacao bean thrives only in equatorial countries. Those beans grown nearest to the equator are best. South and Central America, the East and West Indies, and the West Coast of Africa are sources of cacao beans.

The trees on which the cacao beans grow are about 25 feet high. At the tops of the trees are large, thick leaves. Directly attached to the trunk and main branches are small clusters of pink flowers. As many as 6,000 of these flowers may bloom on a single tree. If fertilized, each flower might produce a cacao pod; however, only about one percent ripen into pods. Thus, each tree yields about 60 pods a year. Since each pod yields about two ounces of dried cacao beans, the total annual yield of cacao beans is less than eight pounds per tree.

At harvest time, the natives cut the pods from the trees by means of knives attached to long poles. The women cut the pods open and scoop out the beans. The beans are allowed to dry in the sun or are conveyed to drying houses.

Oxidation of the beans begins almost immediately. They change from white to brown. Fermentation also begins as soon as the temperature rises and the natural sugars turn to acetic and other acids.

After a few days, any remaining dried pulp which may still adhere to the cacao bean is removed and the beans are ready to be bagged and shipped.

III. THE MANUFACTURE OF CHOCOLATE

The first step in the manufacture of chocolate is to remove any foreign substances which may still be present. The beans are then roasted by currents of air heated to 400°F. in revolving cylinders. At exactly the right moment, they pass from the roaster and are quickly cooled to prevent further change by the heat they have absorbed.

The beans are then conveyed to changers where they are shattered into fragments called nibs. At the same time, the shells are lifted away from the nibs by air currents, and removed. When freed from their shells, the dry nibs are ready for milling.

In the milling process, the nibs pass between three sets of grinding stones. Here the cocoa butter is released from the cells, and a dark, rich liquor flows from the grinders, giving off a heavy aroma. This is the basic ingredient from which chocolate is made. Cocoa and cocoa butter are also made from the basic chocolate liquor.

The chocolate liquor which results after the nibs are ground is utilized in a number of ways. The first way is to allow it to harden into 10-pound blocks for commercial use. These are used by bakers and candy makers. Even though solid, the blocks are referred to as chocolate liquor or baking chocolate. Baking chocolate is also produced in small blocks for household baking.

Another way in which the chocolate liquor is utilized is in the manufacture of sweet chocolate. For sweet chocolate, granulated sugar is pulverized and mixed with chocolate liquor in rotating bowls called melangeurs. Additional cocoa butter is added, and there are additional steps in the refining process. One of these steps is called conching, in which the chocolate is ground with still more cocoa butter. The resultant semi-liquid sweet chocolate is poured into molds. Here again, the mold produces a 10-pound block of sweet chocolate, which will be used by the baker and the candy maker in the production of chocolate-coated candies and other chocolate products.

In the production of milk chocolate, the basic ingredients are the same: chocolate liquor, cocoa butter, and sugar. The other ingredient is, of course, milk. The process begins with mixing milk together with the sugar. After that, part of the liquid is evaporated. Then chocolate liquor is added. During this operation moisture continues to evaporate and the mass is changed to solid and then to a powder form.

As in the manufacture of sweet chocolate, cocoa butter is added. The grinding process begins in the conches, and the end product is a semi-liquid product that is poured into molds. Much milk chocolate is made into chocolate candy bars. A great deal of it is formed into 10-pound blocks to be made into candy coating by confectioners. Very little milk chocolate is used by the baker.

Government standards are specific in their definition of the various types of chocolate. For example, milk chocolate must contain "not less than 12% milk solids." Chocolate liquor must contain "not less than 50% cacao fat."

IV. THE MANUFACTURE OF COCOA

When most of the fat has been pressed out of the chocolate liquor in hydraulic presses, the pressed cake remaining -- still containing some of the fat -- is pulverized. The result is cocoa.

The fat which is extracted, called cocoa butter, is creamy white or yellowish in color and is neutral in flavor. By extracting the cocoa butter from the chocolate liquor, the flavor of the remaining product, cocoa, is intensified. That's why cocoa contains about one and a half times as much flavor as chocolate.

Cocoas are either "natural" or "dutched." The process of dutching originated in Holland. The purpose of dutching cocoa is to make it more soluble and also to darken it. This is desirable because the removal of fat and fine grinding leaves the cocoa much lighter in color than chocolate.

The dutching process consists of adding a watery alkali solution to the partially roasted cacao beans. When the water evaporates, the beans darken. From then on they are treated exactly the same as natural cacao beans; the beans are roasted and shattered into nibs, the cocoa butter is released, and chocolate liquor is produced. The liquor is pumped into powerful hydraulic presses, which expel more than half of the free-flowing cocoa butter. The remaining solid cakes are pulverized into cocoa. In this case it is called dutched cocoa.

V. THE FLAVOR OF CHOCOLATE AND COCOA

Flavor is the most sought-after characteristic in chocolate and cocoa. From this standpoint, very dark dutched cocoa is considered practically worthless by bakers of high-quality products. Laboratory tests have shown that a given quantity of breakfast cocoa containing not less than 22% butterfat will impart a more desirable flavor than a greater quantity of low butterfat cocoa.

Flavor tests of various cocoas can be made by substituting cocoa for 10% of the flour in a vanilla wafer and then comparing for flavor.

VI. STORAGE OF CHOCOLATE AND COCOA

It is not enough to specify "a cool dry place" for the storage of chocolate or cocoas. While a temperature of 55°-65°F. is ideal, there should not be a variation of over 5 degrees. This prevents sweating, even in extremely humid weather.

Low temperatures are inadvisable because this causes condensation of moisture on the surface when exposed to air. Humidity should also be low: not over 50%, with good circulation of air.

Chocolate and cocoa should always be kept away from radiators, steam pipes, etc., and they should always be stored away from other strong-smelling products, because they have a tendency to pick up foreign odors.

VII. USING CHOCOLATE AND COCOA INTERCHANGEABLY IN BAKING

Since chocolate and cocoa are basically the same, it is possible to substitute one for the other in many recipes -- provided adjustments are made to compensate for presence or absence of fat. The two charts below show what these adjustments are.

To Substitute Cocoa for Chocolate in a Recipe

To Replace Chocolate		Use Cocoa		Increase Shortening	
<u>Lbs.</u>	<u>Ozs.</u>	<u>Lbs.</u>	<u>Ozs.</u>	<u>Lbs.</u>	<u>Ozs.</u>
	4		3		1
	8		5		2
	12		8		2
1			10		3

To Substitute Chocolate for Cocoa in a Recipe

To Replace Cocoa		Use Chocolate		Reduce Shortening	
<u>Lbs.</u>	<u>Ozs.</u>	<u>Lbs.</u>	<u>Ozs.</u>	<u>Lbs.</u>	<u>Ozs.</u>
	4		6		1
	8		13		2
	12	1	3		4
1		1	10		5

VIII. THE TEMPERING OF CHOCOLATE

In former years, before the development of precision equipment, working with chocolate was more of an art than a science. The confectioner who could work well with chocolate was considered some kind of genius. But today, working with chocolate is more of a science than an art.

The tempering of chocolate is similar to the tempering of steel in that the product is brought to a high temperature, then the temperature is reduced. After that it is brought up to a slightly higher temperature, at which point the tempering process is completed and the confectioner is then ready to begin dipping.

Chocolate is a suspension of solids in cocoa butter. It must be remembered, however, that cocoa butter is itself a mixture of glycerides of fatty acids, each of which has a different melting temperature. Therefore, in order to liquefy chocolate, it is necessary to raise the temperature above that required to liquefy the glyceride with the highest melting point.

If the chocolate is allowed to cool without being stirred, the portion with the highest melting point will solidify first. The remaining portions will solidify in turn, according to the different melting points, and will more or less separate into layers. It is to prevent this from happening that chocolate must be tempered before it is used for dipping.

The confectioner expects these three results of proper tempering:

1. Certain undesirable cocoa butter crystals will be removed.
2. Finished products will have a good, permanent gloss.
3. Maximum coverage will be obtained.

IX. HOW TO TEMPER CHOCOLATE

The best way to temper chocolate is in tempering tanks. But the baker usually is limited in his facilities to the use of the old-fashioned kettle or double boiler. The proper temperature at which chocolate should be melted is 115° - 120° F. for plain chocolate and 110° F. for milk chocolate. Then it is cooled slowly to 80° F. After that, it is rewarmed to about 90° F. (Since there are different types of coatings, there may be a slight variation in the final temperature. The dark coatings are worked at 90° F., but the milk chocolate or light coatings are worked at 88° F.)

Untempered coating in the kettle at 93° F. may be mixed with tempered coatings at 85° F. This process may also be reversed. When chocolate becomes too cool or too thick, it may be thinned down with untempered chocolate at 93° F.

When tempering chocolate, if a higher or lower temperature appears to be necessary, it is an indication that something is wrong. Either water (or steam) has gotten into the chocolate, or the chocolate has been stirred too rapidly.

The cooling time for tempered chocolates is relatively short. In cooling, the baker should try to approach the conditions in chocolate-coating plants, where the proper temperature at the receiving end of the enrobing tunnel is 60° F. and the delivery end has a temperature of 50° F. A humidity range of 60-70% is maintained.

It is also important that chocolate not be cooled below the dew point of the room. Otherwise, moisture will form and sugar bloom will result.

X. CHOCOLATE BLOOM

There are two kinds of chocolate bloom or greying. The more common is fat bloom which is caused by small fat crystals forming on the surface of the chocolate. When the melted chocolate is used too warm, the cocoa butter separates from the other two ingredients in the chocolate (dry cocoa and sugar), and these sink to the bottom while the fat floats to the top. The cocoa butter itself is transparent. The high gloss that improperly coated products have before they dry, is probably the dark cocoa showing through the very thin layer of fat. But when the cocoa butter finally does harden, the result is a mottled grey effect.

The other type of chocolate bloom is sugar bloom. This is almost exclusively the result of water being absorbed on the surface of the chocolate. When this happens, the moisture dissolves some of the crystals of sugar. This forms minute droplets of syrup. Later, the moisture evaporates and the sugar re-crystallizes, resulting in a grey haze.

XI. INSTRUCTIONS FOR MOLDING HOLLOW OR SOLID CHOCOLATE GOODS

1. Take chill off molds; molds can be at 75°-80°F. temperature.
2. For molding hollow chocolate goods, fill mold completely full at once with properly tempered chocolate (about 80°-90°F.)
3. Tap mold for about 10-15 seconds to remove all air bubbles.
4. Drain chocolate from mold so that only a shell remains on the inside of mold.
5. If the chocolate was too thin, and the shell appears very thin, fill the mold again, tap and drain as above.

6. To form the bottoms, the following procedures can be used:
 - a. Have about $\frac{3}{16}$ " of chocolate in shallow pan and stand the molds in this pan to cool.
 - b. If the mold has not been drained too much, stand mold on wax paper to cool. The surplus chocolate dripping down will form the bottom.
7. After chocolate has set, about 10 minutes in room of 50° temperature, remove clamps, as chocolate may crack when chilled too quickly.
8. After final cooling, 20-30 minutes, the chocolate piece should release easily from the mold.
9. Be sure to reheat the mold to molding-room temperature, as described under (1), before using it again.

CHOCOLATE AND COCOA GLOSSARY

NOTES

Bloom -

There are two kinds: sugar bloom and fat bloom. Both result when couverture is improperly used or when temperature conditions are not correct. The resulting products will have a dull grey finish rather than a rich gloss that chocolates are expected to have.

Fat bloom is mainly caused when melted chocolate (couverture) is used too warm. Since the chocolate is made up of three components -- dry cocoa powder, sugar and cocoa butter -- and since cocoa butter is the lightest, it will become separated from the other two ingredients and float to the top. When the chocolate hardens, it will have a dull grey appearance, known as fat (or streaky) bloom.

Sugar bloom is mainly caused by moisture being absorbed on the surface of the chocolate. In this case, the moisture dissolves some of the sugar crystals, forming tiny droplets of syrup. When the moisture in the syrup evaporates, the sugar recrystallizes and the resulting grey appearance is known as sugar bloom.

Breakfast cocoa -

High-fat cocoa. Contains not less than 22% butterfat. May or may not be dutched, but if it is dutched, the label must so indicate.

Cacao -

The bean from which cocoa and chocolate liquor are processed.

Chocolate -

The solid or plastic mass obtained by grinding cacao nibs. It contains not less than 50% cacao fat, not more than 8% ash, not more than 0.4% ash insoluble in hydrochloric acid, nor more than 7% crude fiber.

Cocoa -

A powder made from the seeds of the cacao tree. Cocoa results when the chocolate liquor, obtained from the mills, is passed through hydraulic presses where most of the fat, or cacao butter, is expelled. The remaining cocoa powder will retain a fat content of 8-25%.

Cocoa butter -

A vegetable butter, derived from cacao nibs. It is solid at ordinary temperatures. It has a narrow melting range because of a preponderance of glycerides of nearly the same melting point. Because it lacks greasiness when in a solid state and melts at a temperature below that of the human body, it makes an ideal fat for blending with chocolate coatings. It is pale yellow or creamy in color, is neutral in flavor and melts sharply at a temperature of 93°-95°F.

Couverture -

Anything used to cover; a covering. In chocolate work, the melted chocolate itself used to cover hard or soft centers.

Dutching -

A process invented by C. J. Van Houten in 1828, and claimed by the inventor to make cocoa more soluble. It consists of treating the cacao nib or mass with a small percentage of potassium carbonate, bicarbonate, or other salt of the alkalis. The alkaline salt reacts with the astringent constituents and partly neutralizes the acidity of the cacao. This is considered to improve the cocoa, which becomes darker in color and less likely to sink to the bottom of the cup.

H, hroscopic properties -

The property of attracting and holding moisture. Cocoa exhibits this property as a result of the roasting process during which a major portion of the starch present in the raw nibs is converted into dextrines under the influence of heat. These dextrines show a great affinity for moisture when incorporated in a batter.

Liquor - Chocolate liquor.

Also called bitter chocolate or baking chocolate. The direct result of the milling process whereby cacao nibs are ground in cacao mills to a semi-liquid. Even in its hardened state, this form of chocolate is referred to as liquor.

Milk chocolate -

The product obtained by grinding chocolate with sugar and/or dextrose, with milk solids or whole milk, and with or without cacao butter and/or flavoring materials. It contains not less than 12% milk solids.

Milling -

That part of the process of making chocolate and cocoa which has to do with using steel rolls to grind the cacao nibs into liquor.

Nib -

The cotyledon of the cacao seed. That portion inside the seed shell from which chocolate liquor is made.

Oxidation -

Combination with oxygen; conversion into an oxide or an oxide compound.

pH -

A term used to represent the hydrogen ion concentration of a given solution. Cacao products may vary in their pH value from 5.2 to as high as 8.8 for heavily dutched cocoa. The pH of natural cocoa is generally within the range of 5.2-6.0.

Pod -

A seed vessel of a long form. The cacao pod is the fruit of the cacao tree. It may attain a size of four inches in diameter and 12 inches in length. Imbedded in the pod are the cacao beans or seeds, from which cocoa and chocolate are processed.

Pulverize -

The process of making cocoa from the hardened liquor cake by grinding it to a powder.

Soluble -

Capable of being dissolved.

Sweating -

The formation of moisture on the surface of chocolate, resulting from storage or cooling at too low a temperature. One of the causes of sugar bloom.

Sweet chocolate, sweet chocolate coating -

Chocolate mixed with sugar and/or dextrose, with or without the addition of cacao butter, spices or other flavoring materials.

Temper -

According to the Oxford Dictionary, "to bring anything to a proper or suitable condition, state or quality, by mingling with something else. To modify some unsuitable or excessive state or something by admixture of something else."

According to Webster's Dictionary, "to bring to a specified consistency, for example. to bring a substance such as glass or steel to a proper degree of hardness or toughness. Steel is tempered by high heating, sudden cooling, and a gentle reheating to the degree desired." Chocolate tempering means bringing the chocolate to a suitable condition (for working easily and economically and retaining a gloss) by proper heating and cooling to eliminate undesirable crystals.

It is necessary to overcome the natural tendency for cocoa butter to separate from the other substances present in chocolate couverture. Since the glycerides in cocoa butter have different melting points, the lighter ones have a tendency to rise to the surface, causing whitish streaks to appear. To prevent this, the chocolate should be tempered, that is, it should first be properly melted, then cooled slowly till almost at the setting point, then gently reheated to dipping consistency.

I. INTRODUCTION

A knowledge of the use of stabilizers is important to the success of many bakery products. In meringues, stabilizers help to prevent "weeping." When oil and water are used for making an emulsion, the addition of a stabilizer helps to prevent the separation of the oil. When used with cooked fruit, stabilizers help to prevent retrogradation.

Because stabilizers are expensive - often in the neighborhood of ten cents an ounce - some bakers refuse to use them. Others look on the use of stabilizers as if they were some kind of magical ingredient. Many cannot understand how the stabilizers add to the quality of the product.

In truth, stabilizers are neither magical nor expensive. Stabilizers have properties which have been proven in the laboratory and, when properly used, can be depended on to bring about certain known reactions. As for price, when properly used, stabilizers can actually bring down the price of the finished product by adding longer shelf life, palatability, and other desirable qualities.

II. WHAT ARE STABILIZERS MADE OF?

Some stabilizers are made of gums. For the most part, gums are formed by plants or trees when they are cut. Gums can also be processed from seeds or leaves by pressing, boiling, drying, or other means. Gum tragacanth, which is used in making gum paste for decorative flowers on cakes, is such a gum stabilizer. It forms when the astragalus shrub, grown in Turkey, is cut.

Another stabilizer comes from animal sources. Gelatin, which is made from animal tissue (skin, tendons, ligaments) by prolonged boiling, is such a stabilizer. Its properties are similar to those of the gum stabilizers.

Still another form of stabilizer is manufactured. Carboxymethyl cellulose (CMC), which is processed from cellulose, is such a stabilizer.

Another form of stabilizer is starch. This has been dealt with in Unit X and will not be considered here. Even flour, when it is used to thicken custard or pumpkin pie mix, is considered a stabilizer.

III. HOW DO STABILIZERS WORK?

Stabilizers are of either of two types: soluble or insoluble. The soluble type dissolves and thickens the liquid; the insoluble type absorbs the liquid. It is believed that the swollen molecules of the gum act like tiny fibers which run in all directions through the water in a kind of network. This is probably more true of the stabilizers which form gels than those which form pastes.

When the baker buys a stabilizer, he should know what gums are in it, for different gums have different properties. They cannot always be used interchangeably.

Some gums dissolve in cold water. Others require hot water or boiling water for solution. Among the cold-water gums are:

- Algin (sodium alginate)
- Arabic
- CMC (carboxymethyl cellulose)
- Guar
- Karaya
- Locust bean
- Pectin (its alkali salts only)
- Tragacanth

Among the hot-water stabilizers are:

- Agar
- Gelatin
- Irish moss

Commercial stabilizers usually consist of a gum (or a combination of gums) mixed with sugar, so that the baker can use the product without running the risk of having it lump up before it gets a chance to be distributed in the mix.

IV. HOW SHOULD STABILIZERS BE HANDLED?

When gums are mixed directly with water, they usually absorb the water so rapidly that the solution becomes lumpy. That's why it is not practical for the baker to use gums "straight." The better practice is to mix the dry gum with sugar. The sugar separates the particles of gum, permitting each one to swell separately. This is particularly true of cold-water gums.

Hot-water gums also require special handling. They should always be dissolved in cold water first; then the water and the gum should be heated together.

V. USE OF STABILIZERS IN VARIOUS PRODUCTS

Boiled Icings

Gelatin or agar can be used in boiled icings. Gelatin also adds to the gloss. If the icing is to be heated to about 170°F. but not boiled, Irish moss extract is good. In the presence of milk, it will also help form a firmer icing.

Uncooked Icings

Algin is used because it dissolves completely in cold water and has good water-holding properties. With milk it will add to the gel-forming properties.

Gum arabic may be used to improve gloss.

Gelatin may be used because it sets to a firm gel. (When gelatin is used, it must first be dissolved in cold water, then heated.)

Ornamental Icings

Tragacanth may be used because of its slow-swelling properties. The icing will be soft enough to handle. Later, as the gum continues to absorb water, the icing will become firm and hard.

Fruit Pie Fillings

In baked pies, the work of stabilizing the filling is done by starch. Ordinarily, starch is not thought of as a stabilizer, and if you were to order a stabilizer from a bakery supply house, it would not send

you starch. But starch is a stabilizer to the extent that it keeps the water from separating out of the cooked filling.

Gums alone cannot be used because none of the gums alone develops a thick enough body when hot. Some gums can be used in addition to starch, however.

Custard Pies

Custards set to a gel because of the coagulation of eggs during cooking. When a stabilizer is added, the gel will be firmer. Often, it will also help the pies to take on a gloss. The stabilizer used for custard pies may be algin or Irish moss, because they form a firm gel with milk.

Chiffon Pies

Gums are better for chiffon pies than starch because they form a lighter bodied filling than starch. Gelatin, agar, and Irish moss are frequently used.

Meringues

Agar, algin, Irish moss, or locust bean are often used in stabilizers to be used in meringues. When the stabilizer is added to the syrup which is to be added to the whipped egg whites, it results in a stable meringue with lower sugar content. Because it prevents the liquid from separating out, it prevents weeping.

Meringue Powder

This product is made from dried egg whites (albumin) and, when whipped with sugar and water, forms a firm meringue. Since whites whip faster with the addition of salt and acid, such gums as gum arabic and karaya, which are slightly acid, are usually used.

Whipped Cream

Sweet cream of high butterfat content will whip into a firm product and usually does not require the use of a stabilizer. Lighter cream, however, does require a stabilizer.

If the stabilizer is added to the cream before whipping, it may retard whipping. Because gelatin is thin bodied before it sets, it can be mixed in before whipping. However, it does have the tendency to make the whipped cream somewhat tough. When a stabilizer is to be added when the cream is nearly whipped, it should be thoroughly blended with the sugar and should be of cold-water-soluble type.

VI. LIST OF COMMON STABILIZERS

Name	Source	Properties
AGAR (also called vegetable gelatin)	Extracted from certain seaweed from Pacific Ocean	<ol style="list-style-type: none"> 1. Dissolves in boiling water. 2. Solutions, when hot, are thin bodied. 3. Solutions, when cold, form gels. 4. At 1% concentration in water, the gel resembles gelatin. 5. Odorless, flavorless.
ALGIN (also called sodium alginate)	Extracted from giant kelp in the Pacific Ocean	<ol style="list-style-type: none"> 1. Dissolves readily in cold water. 2. Can be cooked and cooled without losing thickening power. 3. Forms a firmer gel with milk than with water. 4. At 1% concentration in water it forms a firm gel.
ARABIC (also called gum arabic or gum acacia)	From Acacia trees grown in central Africa	<ol style="list-style-type: none"> 1. Soluble in cold water. 2. Does not form a firm, solid gel with water. 3. Almost tasteless and odorless. 4. Solutions have a slight color. 5. Is slightly acid. 6. It is an emulsifying agent and protective colloid. It coats particles of other materials and keeps them suspended or separated.
GUAR	From the seeds of a plant grown in India	<ol style="list-style-type: none"> 1. Very similar to properties of locust-bean gum. Dissolves completely in cold water. 2. Forms a thick paste but does not form a firm gel. 3. May be cooked with fruit, as it is very resistant to the action of fruit acids.

Name	Source	Properties
IRISH MOSS	Extracted from seaweed which grows along the coast of Ireland and New England	<ol style="list-style-type: none"> 1. Dissolves in water when heated to 170°F. 2. Forms excellent but tender gel with milk because it reacts with the casein.
KARAYA	From trees grown in India	<ol style="list-style-type: none"> 1. Solutions are thick bodied but do not form firm gels. 2. The less the acidity of its solutions, the thicker bodied they are. This thickening increases further up to pH 8.5 as the alkalinity goes.
LOCUST BEAN	From beans of the locust-bean or carob tree, which grows in countries bordering on the Mediterranean Sea.	<ol style="list-style-type: none"> 1. Dissolves completely in cold water. 2. Forms a thick paste but doesn't form a firm, solid gel. 3. Very resistant to fruit acids and may be cooked with fruit.
TRAGACANTH	Forms when the astragalus shrub is cut. Comes from Turkey and Iran.	<ol style="list-style-type: none"> 1. Dissolves in cold water 2. Swells slowly for 48 hours or more. However, if heated to 160°F., the maximum thickening will occur in about 2 hours.
STABILIZERS OTHER THAN GUMS		
PECTIN	Citrus-fruit pulp or apples	<ol style="list-style-type: none"> 1. Does not swell to a thick-bodied liquid or set to a firm jelly in water alone. 2. When boiled with sugar in the presence of a fairly strong acid such as is found in many fruits, will form a firm jelly.

Name	Source	Properties
GELATIN	Animal product made from cartilage or bones	<ol style="list-style-type: none">1. Dissolves only in boiling water.2. Solution is thin-bodied when hot.3. At 1% concentration it forms a firm gel when cold.4. Sets slowly.5. If heated in acid solution, it breaks down chemically and loses its ability to gel.6. If not completely dissolved, forms dark spots.7. Odorless, flavorless, and has only slight color.8. Excessive amounts make product tough and rubbery.
CMC (carboxymethyl cellulose)	A manufactured product, made from cellulose	<ol style="list-style-type: none">1. Swells quickly in cold water to form a thick solution.

GLOSSARY ON GUMS AND STABILIZERS

NOTES

Agar -

A stabilizer derived from Pacific seaweed. Also known as vegetable gelatin, because when dissolved the gel resembles that of gelatin and because it dissolves only in boiling water.

Algin -

A stabilizer extracted from various seaweeds or kelps.

Arabic -

A true gum stabilizer extracted from the acacia tree, grown in central Africa.

CMC -

An abbreviation for carboxymethyl cellulose. A stabilizer manufactured from cellulose. Dissolved only in boiling water. Solution is thin bodied when hot, but sets to a firm gel when cold.

Gel -

A semirigid colloidal dispersion of a solid with a liquid as a jelly. Also jel.

Gelatin -

A protein stabilizer derived from animal tissue, cartilage, and bones. Dissolves only in boiling water. Thin bodied when hot but sets slowly to a firm gel.

Guar -

A gum derived from the seeds of a plant grown in India. Properties are similar to those of locust-bean gum.

Gum -

One of the kinds of stabilizers used in bakery production to prevent separation in icings and cooked fillings. Gums are that form of stabilizer which comes from trees and shrubs in the form of a sticky secretion. Other stabilizers, such as gelatin, which is derived from animal matter, are often referred to as gums because they have similar properties, but strictly speaking they are not gums at all.

Soluble gums form viscous solutions by dissolving in liquid, and insoluble gums absorb many times their own volume of liquid.

Irish moss -

A gum derived from seaweed which grows along the Irish and New England coasts. It dissolves in water when heated to 170°F. Forms a firm gel with milk because it reacts with the casein.

Jel -

See gel.

Karaya -

A gum derived from trees grown in India. Swells rapidly in cold water. Solutions are thick bodied but do not form firm gel.

Kelp -

Large brown seaweeds which grow off the coasts of Ireland, Scotland, and other places. Various stabilizers are made from kelp, such as Irish moss and algin.

Locust bean -

A gum derived from the locust-bean tree, grown in countries bordering on the Mediterranean Sea. The tree is also known as carob, and the seed pod as St. John's bread. The gum dissolves completely in cold water, forms a thick paste, is resistant to fruit acids, and may be cooked with fruit.

Meringue powder -

A powder usually composed of dried egg white, sugar, and a gum or other stabilizer. When combined with water and whipped, it forms a stable meringue.

Mixture -

A homogeneous combination of two or more substances, not chemically combined. In relation to this unit, a liquid in which certain solid ingredients have been dispersed or dissolved.

An aggregate of two or more substances which are not chemically united and which exist in no fixed proportion.

Pectin -

A stabilizer prepared from citrus-fruit pulp or from apples. Pectin forms jellies when boiled with sugar and strong acids (pH 2.8 to 3.4).

Solution -

Technically, a mixture formed when a gas, liquid, or solid is dispersed in another gas, liquid, or solid.

Stabilizer -

A substance of a colloidal character which, when added to the oil and water used for making emulsions, helps prevent the separation of the oil. Also, a substance capable of taking up and holding an excess of water by forming a gel. Also, a substance possessing the ability to prevent sugar crystallization.

Syneresis -

See Weeping.

Tragacanth -

A gum derived from a shrub grown in Turkey. It dissolves in cold water and swells very slowly. Excellent emulsion stabilizer. Also used in production of gum paste for decorative flower molding.

Viscous -

Of a sticky, adhesive character. For example, a gel becomes more viscous as additional thickener is added.

Weeping -

Also known as syneresis. The watering of cooled starch paste due to undercooking of starch. Can also result from prolonged storage at low temperature. Accompanied by lower viscosity of cooked fruit. This is usually applied to liquids separating out of lemon meringue pies.

Name _____ Class _____ Date _____

TEST ON FLOUR

Part I: Multiple Choice. Circle the letter of the most meaningful answer:

1. Spring wheat is wheat that
 - a. is planted in the winter and harvested in the spring.
 - b. is planted in the spring and harvested in the late summer.
 - c. is planted in the fall and harvested in early spring.
 - d. will produce bread that has good "oven spring."

2. Winter wheat kernels have an outer covering that is usually
 - a. softer than the outer covering of spring wheat kernels.
 - b. hard - due to exposure to severe weather.
 - c. easy to separate from the inner portion.
 - d. no different from spring wheat kernels.

3. The word "hard" in the term "hard spring wheat" refers to
 - a. the hardness of the strain of wheat from which it is grown.
 - b. the "hard" feel of the flour to the touch.
 - c. the kind of rolls that can be made from this flour.
 - d. the part of the wheat kernel which is to be used in milling the flour.

4. All purpose flour is
 - a. a combination of clear and patent flours.
 - b. flour milled from the whole wheat grain.
 - c. flour that is generally used by the housewife for all types of cakes, cookies, pies, etc.
 - d. flour milled from various strains of wheat.

5. A "strong" flour contains
 - a. almost none of the outer covering of the wheat kernel.
 - b. a greater portion of the outer kernel than a "weak" flour.
 - c. none of the inner portion of the wheat kernel.
 - d. a smaller percentage of protein than weak flour.

6. The percentage of protein in cake flour is
 - a. more than 12%.
 - b. less than 9%.
 - c. more than that in bread flour.
 - d. none of the above.

7. One of the reasons for aging flour is
- to bleach it to a whiter shade.
 - to give the gluten a chance to develop.
 - to increase its vitamin content.
 - to give the baker a chance to use up his present stock of flour.
8. Chemical bleaching of flour
- speeds up the aging process and cuts down storage space needed.
 - increases the value of the flour.
 - is harmful to human beings because it uses gasses that may be toxic.
 - is undesirable because bread made with unbleached flour is better.
9. The ability of a flour "to be made into well-piled loaves" refers to
- its tolerance.
 - its high absorption.
 - how well baked the crust is.
 - its strength.
10. When we say that flour has an absorption of 56%, we mean that
- 100 pounds of water will take up 56 pounds of flour.
 - 100 pounds of flour will take up 56 pounds of water.
 - 100 pounds of flour will take up all the liquids, including those in the milk, eggs, butter, etc., up to 56 pounds.
 - it contains more than half moisture when it comes from the mill.
11. Strong flour will have
- higher absorption than weak flour.
 - lower absorption than weak flour.
 - less ability to produce a high-quality loaf than a weak flour.
 - a different kind of protein than a weak flour.
12. Short patent flour is likely to be
- cheaper than long patent flour.
 - more expensive than straight flour.
 - the same price as all purpose flour.
 - less expensive than whole wheat flour.
13. When the miller uses most of the grain to produce straight flour, the cost of clear flour is
- likely to be higher than usual.
 - lower than usual.
 - unchanged.
 - about the same price as cake flour.

14. The usual percentage of wheat extraction is
- 28%.
 - 80%.
 - 72%.
 - None of the above.
15. If all flour were milled into whole wheat flour, the amount of patent flour available would be
- increased.
 - eliminated.
 - not affected in any way.
 - dependent on the amount of clear flour required.
16. Circle the letter of the missing word. "The _____ the extraction, the lower the quality of the flour."
- higher
 - cheaper
 - lower
 - finer
17. When wheat is milled into whole wheat flour
- there is more separation than when it is milled into patent and clear flour.
 - there is more flour milled into patent than into clear.
 - no separation whatsoever.
 - None of the above.
18. On the average, wheat contains
- 70% ash.
 - 70% carbohydrates.
 - 70% protein.
 - None of the above.
19. Since flour contains only about 2% fat, its presence has very little effect on bread making.
- The above statement is true.
 - The above statement is false.
 - The above statement refers only to bread made with whole wheat wheat flour.

20. The main reason for bleaching flour is to
- improve gluten development
 - satisfy public preference.
 - speed up the milling process
 - none of the above
21. 72% extraction wheat is
- superior to 80% extraction wheat.
 - inferior to 70% extraction wheat.
 - called "wartime" flour.
 - none of the above.
22. In purchasing flour, a flour with 56% absorption would probably be
- cheaper than a flour with 60% absorption.
 - worthless because of its high moisture content.
 - better for cake making than for bread making.
 - none of the above.
23. In the separation of flour
- the more patent you get, the less clear.
 - the less patent, the less clear.
 - there is no relationship between the amount of patent and the amount of clear flour.
 - straight flour is what is left after patent and clears are taken off.
24. Fill in the missing number in the following sentence:
"In the United States, approximately _____ varieties of wheat are grown."
- 200.
 - 5.
 - 72.
 - 80.
25. One of the following is not one of the main classifications of wheat.
- Durum.
 - Hard red winter.
 - White.
 - Semolina.

Part II: Definitions. Define the following terms as they relate to flour:

1. Tolerance
2. Absorption
3. Strength
4. Extraction
5. Separation
6. Whole wheat flour
7. Gluten
8. Hydration of gluten
9. Ash
10. Gelatinization

Part III: True - False: •

- _____ 1. Bread is usually made from soft wheat flour.
- _____ 2. Hard wheat flour contains a greater percentage of protein than cake flour.
- _____ 3. White bread can be improved by the addition of at least 5% wheat germ.
- _____ 4. A 100-pound dough made from a flour with 58% absorption will have 42 pounds of water.
- _____ 5. The amount of minerals in a flour is reflected by the percentage of ash.
- _____ 6. Gelatinization of the starch refers to the swelling action of starch granules by water.
- _____ 7. Patent flour normally has a fat content of about 2%.
- _____ 8. The structure of a loaf of bread depends largely on the quantity and quality of the gluten.
- _____ 9. About 83% of the wheat kernel is bran.
- _____ 10. The endosperm of the wheat kernel is the germ or seed portion, from which new varieties of wheat are developed.
- _____ 11. Because cakes are made with chemical leavening rather than yeast, it is necessary to use a stronger flour for cake making than for bread making.
- _____ 12. When clear flour is added to rye flour in the production of rye bread, the result is likely to be a small, compact loaf.
- _____ 13. When wheat is milled into fancy patent flour, the remaining clear flour will also be fancy.
- _____ 14. All-purpose flour and short patent flour are more nearly alike than all-purpose flour and straight flour.
- _____ 15. 100 pounds of cleaned wheat will yield 100 pounds of whole wheat flour.
- _____ 16. The average 100-pound bag of flour contains 1.3 pounds of moisture.

- _____ 17. Most of the minerals of wheat are contained in the endosperm.
- _____ 18. Self-rising flour is flour to which dehydrated yeast has been added.
- _____ 19. Good cake flour is whiter than patent flour.
- _____ 20. It is not necessary to use chemicals to bleach flour; flour can also be bleached by aging.
- _____ 21. Clear flour will be higher in ash content than patent flour made from the same wheat.
- _____ 22. Semolina flour is milled from durum wheat.
- _____ 23. Family flour may be blended from both soft and hard flours.
- _____ 24. Better bread can be made from high-extraction flour than from low-extraction flour
- _____ 26. Flour of fine granulation will not be as soft and as white as flour of coarse granulation.

Name _____ Class _____ Date _____

TEST ON YEAST AND FERMENTATION

True - False:

- _____ 1. Leavening can be achieved only through the use of yeast.
- _____ 2. Before the invention of yeast, the production of leavened bread was not possible.
- _____ 3. Molasses is one of the ingredients used in the manufacture of yeast.
- _____ 4. Budding is the system by which two yeast cells join together to produce a single new yeast cell.
- _____ 5. In the manufacture of yeast, the combined ingredients which serve as food for yeast are called wort.
- _____ 6. The temperature in the fermenting tanks in which yeast is grown is maintained constant throughout the entire process.
- _____ 7. When yeast is drawn off from the fermenting tank, it is ready to be packaged.
- _____ 8. In the manufacture of active dry yeast, entirely different strains of yeast from those used for compressed yeast are necessary.
- _____ 9. To rehydrate ADY means to return to active dry yeast the water that has been evaporated from it.
- _____ 10. The chief difference between active dry yeast and compressed yeast is that when using dry yeast, only $\frac{1}{4}$ as much is required.
- _____ 11. Dry yeast should not be mixed in water that is higher than 78°F.
- _____ 12. Once the process of fermentation starts, the gluten structure of a dough does not change.
- _____ 13. Fermentation cannot begin until a certain amount of gluten development has taken place.
- _____ 14. Because yeast is a living plant, it manufactures its own food by enzyme action.
- _____ 15. Proper dough maturity is that point in fermentation at which all of the yeast has been consumed in the dough.

- _____ 16. All of the CO₂ manufactured by yeast remains in a gas state and has no effect on the pH of the dough.
- _____ 17. Correct mixing of a balanced dough is said to be the key to proper fermentation.
- _____ 18. Salt is one of the ingredients used in baking that increases the production of CO₂ in a dough.
- _____ 19. The addition of diastatic malt to flour serves to decrease the amount and the rate of gas production.
- _____ 20. Increased gas production is possible if temperatures are raised above 95°F.
- _____ 21. Such factors as mixing, rounding, molding are more related to gas production than to gas retention.
- _____ 22. Enzyme action is closely related to gas production.
- _____ 23. As long as maximum fermentation is achieved, the baker is sure of a good loaf of bread.
- _____ 24. When a dough is dumped into a trough that is too large for it, instead of rising the dough will spread out and will not ferment properly.
- _____ 25. As a rule, straight doughs are set at temperatures somewhat higher than sponge doughs.
- _____ 26. Yeast can be frozen without being seriously harmed.
- _____ 27. Although the fermentation time required for a straight dough is shorter than the time required for a sponge dough, the fermentation loss is greater.
- _____ 28. Fermentation can be said to be more efficient with sponge doughs than with straight doughs.
- _____ 29. Fermentation tolerance is better in sponge doughs than in straight doughs.
- _____ 30. Better volume of the finished loaf is possible with straight doughs than with sponge doughs.

- _____ 31. A bread made from a sponge dough is likely to have a better grain and texture than bread made from a straight dough.
- _____ 32. In the sponge stage, one of the ingredients seldom included is salt.
- _____ 33. After a dough is punched, it rises faster because the yeast begins to work better after stale CO_2 is expelled.
- _____ 34. It is better for a dough that it be punched than that it merely be folded and turned.
- _____ 35. If a dough is folded back at the right time, practically no gas loss occurs.
- _____ 36. Both a straight dough and a sponge dough are said to be ready when they spring back immediately without leaving any finger marks, when touched with the tips of the fingers.
- _____ 37. If a dough is "punched" more than once, it takes twice as long for the second "punch" as for the first "punch."
- _____ 38. Doughs that are to be refrigerated should be allowed to proof the same as doughs that are to be made up at once.
- _____ 39. There is sufficient nutrition for yeast in good flour alone for the production of satisfactory bread.
- _____ 40. A dough that has been mixed without salt will not rise because of the effect that salt has on yeast.
- _____ 41. Since water does not furnish any food value to yeast, it is not necessary for fermentation.
- _____ 42. One quart of dough with one pound of sugar will ferment more rapidly than one quart of dough with only 4 ounces of sugar.
- _____ 43. A dough with milk in it will require less yeast than a dough without milk.
- _____ 44. The letters OSE at the end of a word indicate that it is an enzyme.
- _____ 45. Sucrose, dextrose, and levulose are sugars that are directly fermentable by yeast.
- _____ 46. Fermentation loss can be avoided by increasing the quantity of all ingredients used in a dough.

- _____ 47. Fermentation tolerance refers to the ability of a dough to make good bread even though the fermentation period is extended.
- _____ 48. It is possible to make bread without yeast if a leaven is used.
- _____ 49. Yeast foods are used in a dough to supplement the minerals that may be lacking in the water.
- _____ 50. The addition of shortening to a dough will increase yeast activity.

TEST ON CHEMICAL LEAVENING

Part I: True - False:

- _____ 1. Although using baking powder will cause a product to rise, this has nothing to do with its eating quality.
- _____ 2. Satisfactory baking powder can be made with two parts of baking soda and one part of baking cream.
- _____ 3. If baking soda alone is used as a leavening, it will probably produce a residue of washing soda.
- _____ 4. Biscuits made with buttermilk and bicarbonate of soda will probably rise just as well as biscuits made with baking powder, provided the baker knows the acid strength of the buttermilk and adjusts the baking time and temperature accordingly.
- _____ 5. According to government standards, baking powders must consist of sodium carbonate and one other product and yield a required amount of gas.
- _____ 6. Baking powder made with tartrate powder will be a fast-acting baking powder.
- _____ 7. Fast-acting baking powders are better for layer cakes than slow-acting powders.
- _____ 8. The main reason for adding a filler to baking powders is to help reduce their cost.
- _____ 9. Sodium bicarbonate is more expensive than ammonium carbonate.
- _____ 10. Baking powders in which the acid reactant is soluble in cold water are fast acting.
- _____ 11. Cheap cake mixes usually require less baking powder than expensive cake mixes.
- _____ 12. Cakes mixed at high altitudes will require more baking powder than cakes mixed at sea level.
- _____ 13. The reason pound cakes are made with little or no baking powder is that they are well creamed and usually have a high proportion of eggs.

- ___ 14. In many recipes, baking cream can be used to replace cream of tartar.
- ___ 15. A creamed batter can be said to be a mechanically leavened batter.
- ___ 16. Sodium bicarbonate and bicarbonate of soda are identical.
- ___ 17. "Soda" is identical with sodium carbonate.
- ___ 18. A pound of freshly mixed baking powder with an inert filler will probably have more leavening power than a pound of freshly mixed baking powder without it.
- ___ 19. Baking powder with an inert filler will probably retain its leavening power longer than baking powder without an inert filler.
- ___ 20. The Egyptians were the first ones to use chemical leavening in baking.

Part II:

- 1. List two reasons for the use of a filler in baking powder.
 - a.
 - b.
- 2. If the baking powder used in a layer-cake mix is of the slow-acting type, how will it react in the oven?
- 3. What two commonly used baking ingredients are used as fillers in baking powder?
 - a.
 - b.
- 4. List four results of using too much baking powder in a cake mix.
 - a.
 - b.
 - c.
 - d.

5. List two reasons why a cake mix might require a reduction in the quantity of baking powder.
 - a.
 - b.
6. What one ingredient must be present in baking powder?
7. What other ingredient is usually present but not required?
8. What function does this optional ingredient perform?
9. According to the government definition, what is the minimum amount of gas that baking powder must release?
10. What is the name of this gas?
11. Why is the manner in which the gas is released more important than the quantity of gas liberated?
12. What is the advantage or disadvantage of using fast-acting baking powder in a cake mix that may have to stand for two hours before baking?
13. When sodium carbonate is combined with shortening, what product will it yield?
14. List four ways in which leavening may take place.
 - a.
 - b.
 - c.
 - d.

15. List four ingredients that might be used to neutralize the baking soda in a baked product.
 - a.
 - b.
 - c.
 - d.
16. List three possible results of not using enough baking powder.
 - a.
 - b.
 - c.
17. List three probable results of using soda without an acid reactant.
 - a.
 - b.
 - c.
18. Define the term "acid-reacting component," and give one example.
19. What is the difference between a double-acting baking powder and slow-acting baking powder?
20. What is the difference between a "leaven" and a "leavening agent?" Give one example of each.

Name _____ Class _____ Date _____

TEST ON SALT

Part I: One-word answers.

1. How much salt is needed in 100 pounds of cookie dough? _____
2. What is the chemical name for common table salt? _____
3. What is the chemical symbol for common table salt? _____
4. Approximately what is the pH of salt in a solution of distilled water? _____
5. Based on the amount of water, how much salt will be needed in 10 quarts of bun dough? _____

Part II: The following questions require a full explanation.

6. In what way does salt help to condition a dough?
7. Does salt have a bleaching action on dough? Explain your answer.
8. Which dough will require more salt: a lean dough or a rich dough? Why?
9. In adjusting a formula from summer to winter, what changes will have to be made in the quantity of salt used? Why?

10. What is the meaning of the phrase "to condition a dough"?

11. What is the relationship between the temperature of the dough and the amount of salt that is required?

12. Which will require more salt: a lean icing or a rich icing? Why?

13. What effect does salt have on the strengthening or weakening of the gluten in a dough?

14. What is the effect on a dough when salt is withheld until the dough is partly mixed? Explain.

15. What is the effect of salt on the texture of a dough?

TEST ON WATER

Part I: True-False

- _____ 1. A soft, sticky dough is likely to result if a dough is made with soft water.
- _____ 2. Alkaline waters can usually be corrected by the addition of vinegar.
- _____ 3. It is impossible to make bread without some form of water.
- _____ 4. The temperature of a dough can be most easily controlled by controlling the temperature of the water.
- _____ 5. Soft water contains a considerable amount of organic matter.
- _____ 6. The consistency of a dough can always be traced to the hardness or softness of the water.
- _____ 7. One of the functions of water in bread making is to set and swell the starch.
- _____ 8. Minerals can be boiled from the water if they are in the form of sulphates.
- _____ 9. Soft water is better for modern white bread than hard water.
- _____ 10. Temporary hard water contains minerals in carbonate form.
- _____ 11. The effects of extremely hard water can be corrected by the addition of the proper amount of yeast food.
- _____ 12. Alkaline waters retard the acidity necessary for proper fermentation.
- _____ 13. The effects of very soft water can be corrected by the addition of salt.
- _____ 14. Bread may contain as much as 38% moisture.
- _____ 15. Temporary hard water is also known as non-carbonate water.

Part II: Multiple Choice

- _____ 1. When soft water is used in a dough
- a. the dough will ferment more quickly than if hard water is used.
 - b. it will produce a loaf of bread that will remain fresh longer than if it were made with hard water.
 - c. it will not produce as tasty a loaf as that produced with alkaline water.
 - d. none of the above.
- _____ 2. Ground water contains
- a. a considerable amount of organic impurities.
 - b. minerals that are, in general, beneficial for fermentation.
 - c. rain water that has just fallen.
 - d. substances that, in normal quantities, retard fermentation.
- _____ 3. For bread making purposes, pure water is
- a. best.
 - b. practically non-existent.
 - c. water that has been filtered at the bakery in special filtering tanks.
 - d. better to use than ordinary tap water.
- _____ 4. The natural water cycle explains
- a. why there is a periodic shortage of water in some sections of the country.
 - b. how the world's water supply is constantly being replenished.
 - c. why certain minerals are needed to make water palatable.
 - d. how much water there will be available for baking purposes.
- _____ 5. Yeast foods are used in bread making to
- a. kill harmful bacteria that develop during fermentation.
 - b. overcome excessive hardness.
 - c. supplement a deficiency of minerals in the water.
 - d. none of the above.
- _____ 6. Alkaline waters are inclined to be
- a. soft
 - b. hard
 - c. unsuitable for bread making.
 - d. beneficial in building bones in young children.

7. Temporary hardness in water is caused by

- a. the presence of carbonates that can be removed by boiling.
- b. the absence of carbonates.
- c. the addition of chlorine at the filtering plant.
- d. the presence of sulphates that cannot be boiled out.

8. Surface water is water that

- a. is found in deep wells.
- b. cannot be used in baking.
- c. contains few impurities.
- d. comes from streams, lakes, and ponds.

9. The kind of water that is best suited for fermentation is

- a. chlorinated water.
- b. alkaline water.
- c. hard water.
- d. soft water.

10. The chemical composition of water

- a. has no effect on the amount of yeast that should be used in breadmaking
- b. is analyzed in terms of "parts per thousand."
- c. cannot be altered at the bakery.
- d. has a direct relation to the amount of yeast that is required.

Part III: Definitions

Define the following words or terms:

- 1. Carbonate hardness
- 2. H_2O
- 3. Solution
- 4. p. p. m.
- 5. Hydration of gluten

6. Pure water
7. Natural water cycle
8. Classes of water
9. Solvent action of water
10. Absorption

TEST ON SUGAR AND OTHER SWEETENERS

Part I: Match the words in Column I with words in Column II that have the same meaning or are directly related.

In some cases the words in Column II can be used more than once; in some cases the words do not match at all.

COLUMN I	COLUMN II
1. invert sugar _____	heat and energy
2. disaccharide _____	sucrose
3. maltase _____	starch
4. levulose _____	malt sugar
5. carbohydrate _____	sucrose + H ₂ O
6. hydrolysis _____	enzyme
7. maize _____	6X
8. glucose _____	simple sugar
9. saccharometer _____	fructose
10. hygroscopic _____	residual sugar
11. calories _____	CO ₂ + alcohol
12. fermentable sugar _____	attracts moisture
13. invertase _____	corn syrup
14. C ₁₂ H ₂₂ O ₁₁ _____	Indian corn
15. dextrose _____	Baume
16. caramelize _____	yeast enzyme
17. fermentation _____	inversion
18. confectioner's sugar _____	Nulomoline
19. fondant _____	blackstrap molasses
20. maltose _____	lactose
	solution
	dextro-maltose
	decolorize

Part II: True - False

- ___ 1. Granulated sugar is a monosaccharide.
- ___ 2. All sugars contribute equally toward caramelization of baked products.
- ___ 3. "Fermentation tolerance" refers to the range of time during which a properly fermented dough will produce a good loaf of bread.
- ___ 4. Sugar contributes toward initial softness better than dextrose because dextrose has a higher caramelization point than sugar.
- ___ 5. Rapid baking results in a drier crumb and lower moisture content in bread because heat causes moisture to evaporate.
- ___ 6. In a comparison of relative sweetness of various sugars, table sugar is given a value of 100. This means that by comparison, other sugars must have a value of less than 100 because 100 is a perfect score.
- ___ 7. The more sugar used in a dough, the less yeast it will require.
- ___ 8. Because yeast must feed on sugar, it is impossible to achieve proper fermentation in a dough unless sugar is added to the basic ingredients.
- ___ 9. Sugar refined from sugar cane is considered to be superior to sugar refined from beets.
- ___ 10. The more sugar used in a bread, the quicker it will bake.
- ___ 11. While crust color adds to the attractiveness of a loaf of bread, it does not add to its flavor.
- ___ 12. The word for an enzyme can easily identified because it always ends in OSE.
- ___ 13. Invert sugar is not quite as sweet as confectionery sugar.
- ___ 14. Raw sugar can only be used by large wholesale bakers who can afford to buy sugar in tank cars.
- ___ 15. Blackstrap molasses is the highest quality molasses used by bakers.
- ___ 16. Soft sugars are not suitable for baking.
- ___ 17. Number 8 brown sugar is lighter in color and contains a higher proportion of molasses than Number 6
- ___ 18. Hydrolysis refers to the process whereby a complex sugar is changed into a monosaccharide.

_____ 19. Granulated sugar is about twice as sweet as corn syrup.

_____ 20. Levulose and dextrose are equally sweet.

Part III:

1. List the rules involving the use of sugar for proper formula balance in the following types of cakes:

Pound Cake and Layer Cake

a.

b.

Angel Cake

a.

b.

Sponge Cake

a.

b.

c.

d.

2. List the six major functions performed by sugar in bread baking.

a.

b.

c.

d.

e.

f.

3. Explain in what ways sugar and yeast help to bring about a loaf of bread of good flavor, color, and size.

4. List the eight major functions performed by sugar in cake baking.

a.

b.

c.

d.

e.

f.

g.

h.

Part IV: (Refer to Part II, True - False)

Write the REASON for EACH of your answers.

1.

2.

3.

4.

5.

6.

7.

8.

9.

10.

11.

20.

TEST ON EGGS

- _____ 1. Eggs of highest quality are produced during
- a. winter
 - b. fall
 - c. spring
 - d. summer
- _____ 2. Brown eggs, compared with white eggs are
- a. lower in vitamin content.
 - b. about the same in food value.
 - c. higher in vitamin A.
 - d. higher in food value.
- _____ 3. The best method of thawing frozen eggs is to
- a. run hot water over the can.
 - b. let them stand overnight at room temperature.
 - c. place them in a bath of cool, running water.
 - d. keep them in the refrigerator at 35°F. for about 3 days.
- _____ 4. The time required to defrost a 30-pound can of frozen eggs at room temperature is about
- a. 36-48 hours
 - b. 28-34 hours
 - c. 18-24 hours
 - d. 10-14 hours
- _____ 5. The formula for reconstituting whole dried eggs is
- a. one pound of eggs to 7 pounds of water.
 - b. three pounds of water to one pound of eggs.
 - c. three pounds of eggs to 7 pounds of water.
 - d. none of the above.
- _____ 6. Frozen eggs can be stored indefinitely at
- a. 0°F.
 - b. 32°F.
 - c. 10°F.
 - d. none of the above.

7. In sponge cakes, the cost of the eggs alone is
- often more than half of the total cost of all ingredients.
 - not an important factor in arriving at the selling price.
 - less than 70% of the cost of all ingredients.
 - less than the cost of the sugar.
8. When eggs are freshly laid, they are
- covered with a gelatinous material, which should be removed as soon as possible.
 - porous and subject to contamination.
 - not subject to change of pH value for 24 hours.
 - protected by a gelatinous coating which serves to seal the pores.
9. A case of eggs weighing 40 lbs. will probably have about
- 9 pounds of shells.
 - 4 pounds of shells.
 - 50% shells by weight.
 - none of the above.
10. In shell eggs
- the larger the air space, the fresher the egg.
 - the smaller the air space, the older the egg.
 - the air space is necessary to preserve the freshness of the egg.
 - none of the above.
11. Shell eggs contain
- 50% yolk and 50% whites.
 - 65% whites and 35% yolks.
 - 60% yolks and 40% whites.
 - none of the above.
12. The thick portion of the whites will
- whip quicker than the thin portion of the whites.
 - not whip if water is added to it.
 - take longer to whip and give less of a foam than the thin portion of the whites.
 - be found closer to the shell than to the yolk.
13. The rope-like mass at each end of the yolk is called
- albumen
 - chalaza
 - germ
 - membrane

14. A germ or blood spot on the egg yolk
- makes it inedible.
 - is a natural part of a healthy egg.
 - is removed before eggs are processed for freezing.
 - lowers sale price of the egg.
15. Newly laid eggs have a pH that is
- very acid.
 - around 9.
 - neutral.
 - not likely to change unless exposed to extreme cold.
16. Blood spots on egg yolk develop
- when eggs are allowed to lie in the nest for prolonged periods.
 - when a blood vessel fragment becomes detached from the hen's ovaries.
 - only in inedible eggs.
 - when a hen is frightened during egg laying.
17. Eggs contain an emulsifier
- only in the white portion.
 - both in the yolk and the white.
 - only in the yolk.
 - that is more noticeable in the whites than in the yolks.
18. The food value in eggs is
- confined to the yolks.
 - greater in the white portion than in the yolk.
 - low in protein.
 - none of the above.
19. Egg whites at room temperature will whip better than very cold egg whites because
- surface tension is lowered.
 - air bubbles do not form well in a very cold product.
 - any possible grease in the whites will be dissolved at higher temperature.
 - none of the above.

20. If it were possible to remove the protein in an egg
- structure of the baked product would be improved.
 - structure would probably be impossible.
 - the baked product would have increased food value.
 - none of the above.
21. In general the quality of frozen eggs is
- lower than the quality of fresh eggs.
 - about the same quality of fresh eggs.
 - higher than the quality of fresh eggs.
 - none of the above.
22. One pound of eggs is capable of leavening
- about 14 pounds of other ingredients.
 - an equal amount of other ingredients.
 - about 5-6 pounds of other ingredients.
 - none of the above.
23. When even a small bit of egg white is mixed into a batch of egg yolks
- the yolks will not whip to a froth.
 - the yolks will be unsuitable for sponge cake.
 - the yolks will not be affected.
 - the whites will break down the froth.
24. In reconstituting dried yolks
- whip one pound of yolk to 7 pounds of water.
 - whip one gallon of water to one pound of yolks.
 - mix an equal weight of water and yolks.
 - whip one pound of eggs to 3 pounds of water.
25. After reconstituting whole dried eggs
- they should be used immediately.
 - they should be allowed to stand about 4 to 5 hours before using.
 - they should not be used until they thicken.
 - none of the above.

TEST ON SHORTENING

Part I. True-False

- ___ 1. Edible vegetable shortenings are made from soya bean, cotton-seed, and linseed.
- ___ 2. One of the reasons for hydrogenating shortening is to retard its tendency to become rancid.
- ___ 3. Animal shortening is more likely to become rancid than vegetable shortening.
- ___ 4. Compound shortening is a combination of animal and vegetable fats.
- ___ 5. In the manufacture of shortening, plasticity can be controlled to a large degree by the amount of hydrogenation.
- ___ 6. Shortening is used in bakery products to improve eating qualities, keeping qualities, and fermentation.
- ___ 7. A pound of shortening contains approximately 1,200 calories.
- ___ 8. Volume of the finished baked product increases in proportion to the increased quantity of shortening.
- ___ 9. During the baking process, shortening becomes soluble and mixes chemically with the other ingredients in the dough.
- ___ 10. Shortening is an internal lubricant and serves to make a dough smoother and softer.
- ___ 11. One of the differences between vegetable shortening and lard is that the former is bland in flavor, while the latter often has a pronounced flavor.
- ___ 12. In substituting shortening for butter, flavor is lost to an important degree.
- ___ 13. The chief reason for the use of salt in margarine is to improve flavor.
- ___ 14. Emulsified hydrogenated shortenings are better for frying than shortenings that are merely hydrogenated.
- ___ 15. All hydrogenated shortenings are also emulsified.

16. All emulsified shortenings are also hydrogenated.
17. Butter has better creaming power than hydrogenated shortening.
18. Cottonseed oil is not usually considered a plastic shortening.
19. The wide plastic range of cocoa butter makes it unacceptable as a bakery product for everyday use.
20. Standard shortening is made entirely of vegetable oils, part of which have been hardened by hydrogenation.
21. The term "high-ratio" when applied to shortening, means that the shortening is capable of carrying additional water and sugar.
22. The chief difference between an oil and a fat is that an oil is liquid at room temperature while fat is solid.
23. The process of manufacturing shortening is called refining because the object is to refine out all of the impurities.
24. The creaming ability of a shortening is decreased when shortening is added at the end of the mixing period.
25. "Summer" shortening contains a greater amount of hydrogen than "winter" shortening.

Part II: Explain in detail:

1. How the use of emulsified shortening affects (a) cake mixing, (b) cookie mixing, and (c) donut making.

2. How the introduction of emulsified shortening has affected the bakery business in general.

3. What happens to shortening that has been exposed to high temperature and is later brought back to the best creaming temperature? Explain your answer.

4. What effect does the use of emulsifiers have on the creaming power of shortening, so far as temperature is concerned?

5. What is the boiling point of oil? Explain your answer.

6. List three ways in which the decomposition of frying fats can be kept to a minimum:
 - a.

 - b.

 - c.

7. Which is better for frying, fats or oils? Why?

8. "The smoke point of a fat is dependent on the percentage of free fatty acids." Explain this statement.

9. Why is the smoke point, as given in a laboratory statement, misleading?

10. What is the difference between "creaming power" and "shortening power"?

11. Discuss at least two of the factors that affect shortening power.

12. Define "plasticity" in shortening.

Name _____

Class _____

Date _____

TEST ON MILK

1. What is the chief difference between dry skim milk and dry whole milk?

2. What is the only difference between liquid whole milk and dry whole milk?

3. List five kinds of milk:
 - a.
 - b.
 - c.
 - d.
 - e.

4. On the comparison chart in Chapter VIII, which form of milk was found to contain:
 - a. the most water? _____
 - b. the most milk solids? _____
 - c. most fat? _____
 - d. most milk sugar? _____

5. What is the only form of milk that contains cane sugar?
_____ About how much? _____

6. Whole milk is made up of five major components. Name them.
 - a.
 - b.
 - c.
 - d.
 - e.

7. Which of these is missing in skim milk? _____
8. How should liquid skim milk be reconstituted for bakery purposes?
9. What is the government definition of milk?
10. Milk contains many vitamins and minerals, the most important being _____, _____, and _____.
11. Which form of milk is most economical for bakery purposes?
_____.
What is the approximate cost per quart? _____.
12. Name five characteristics which milk in any form gives to baked products.
- | | |
|----|----|
| a. | d. |
| b. | e. |
| c. | |
13. Is spray-process or roller-process dry milk better for general bakery use?
Why? _____.
14. Describe the process of pasteurization. Tell as much as you know about this process as well as the reason for pasteurization.

15. Compare bread made with milk with bread made without milk.

16. Fill in approximate percentages in the chart below?

	Water	Butter Fat	Solids
Whole Liquid			
Whole Dry			
Liquid Skim			
Dry Skim			

TEST ON STARCH

Part 1: Circle the letter of the answer that is most nearly correct.

1. The proper ratio of starch to water in a custard is:
 - a. 4 ozs. starch to 1 quart water.
 - b. 2 ozs. starch to 1 pound water.
 - c. 2 ozs. starch to 1 quart water.
 - d. 1 quart water to 2 pounds of starch.

2. The best ratio of starch to sugar for proper gelatinization of starch in a fruit filling is:
 - a. three times as much starch as sugar.
 - b. three times as much sugar as starch.
 - c. seven pounds of sugar for every pound of starch.
 - d. one pound of sugar for every ounce of starch.

3. Potato starch will gelatinize at a lower temperature than Amioca starch because:
 - a. the potato granules are smaller.
 - b. potatoes have a higher starch content.
 - c. Amioca does not have the same jelling strength as potato starch.
 - d. none of the above.

4. In making custard pies, it is possible to do without starch altogether:
 - a. if the quantity of eggs is increased in the proportion of 1 pound of eggs for every 4 ozs. of starch omitted.
 - b. if tapioca is used.
 - c. if part of the sugar is held out until the mix is thickened.
 - d. if the custard is cooked in a double boiler instead of in a open kettle.

5. An ingredient having a pH value of 8 is:
 - a. extremely acid
 - b. somewhat basic
 - c. extremely basic
 - d. neutral.

6. The one factor below that has least to do with the quality of a cooked fruit is:
 - a. pH of the fruit.
 - b. temperature of the starch slurry.
 - c. pH of the water.
 - d. amount of sugar used.

7. Once peak viscosity of a fruit filling has been reached:
 - a. further cooking will result in retrogradation.
 - b. thinning down of the mix can be prevented by steady stirring at low temperature.
 - c. an increase in cooking temperature is necessary to prevent syneresis.
 - d. the baker must be careful not to rupture the granules, because this can cause a thinning out of the gel.

8. Cornstarch is the most widely used starch because it:
 - a. has a pronounced cereal flavor.
 - b. is abundant and inexpensive.
 - c. has qualities that cannot be duplicated by other starches.
 - d. makes a paste that is cohesive and noncloudy.

9. In cooking most fruits, the best procedure is to:
 - a. first soften the fruit by cooking, then thicken with starch, then add the sugar.
 - b. cook the juice or water with part of the sugar, then thicken with the slurry, then add the fruit, then the remainder of the sugar.
 - c. cook the water only and thicken with WARM starch slurry, then add the remainder of the sugar, then turn off the heat and stir in the fruit gently.
 - d. cook the water or juice with part of the sugar, then thicken with the starch milk, then add the remainder of the sugar, then add the fruit and bring the mix back almost to a boil.

10. Instant starch is:
 - a. basically the same as regular cornstarch, except that it has been pre-gelatinized.
 - b. less expensive than regular starch because it does not give a finished product that has the same high gloss as cooked starch.
 - c. soluble in cold water and is therefore better for custards than regular starch.
 - d. none of the above.

Part II.

1. When we say that a starch jel is "stable" we mean:

2. Three desirable characteristics of a starch that is to be used for cooking fruits are:

- a. _____
- b. _____
- c. _____

3. Three different types of starch are:

- a. _____
- b. _____
- c. _____

4. List three reasons for breakdown of starch jel in fruit pies:

- a. _____
- b. _____
- c. _____

5. What is meant by the "pasting point" of a starch?

6. List the approximate percentages of each of the following constituents in corn:

- a. Moisture _____
- b. Starch _____

7. List the four principal substances in a kernel of corn.
 - a. _____
 - b. _____
 - c. _____
 - d. _____
8. As a general practice, what is the desirable sugar-starch ratio in the first stage of preparing a gel?
9. Which starch will gel at a lower temperature -- tapioca or Amioca?
10. What is the sugar-starch ratio when using instant starch?

Part III.

1. Explain the effect that the pH value of a batch has on its jelling with cornstarch.
2. Describe the steps in the manufacture of starch from corn kernels.
3. Describe the planting and growth of corn.

TEST ON CHOCOLATE

I. Define the following terms:

- a. couverture
- b. chocolate liquor
- c. dutching
- d. cocoa butter
- e. sugar bloom

II. Multiple choice:

1. Breakfast cocoa contains

- a. not more than 10% butter fat.
- b. a higher proportion of glycerides than natural cocoa.
- c. not less than 22% butterfat.
- d. added acids to darken its color.

2. Because of the hygroscopic properties of cocoa, all but one of the following is true. Which one is not true?

- a. Devil's food cake contains more liquid than yellow cake.
- b. a reduction in flour must be made to offset the addition of cocoa.
- c. where the recipe calls for cocoa, it is not possible to substitute chocolate.
- d. Devil's food cakes are characteristically more moist than yellow cakes.

3. The pH of cocoa

- a. never varies.
- b. is higher for dutched cocoa than for natural cocoa.
- c. ranges between 7 and 8.8.
- d. has no effect on the color of the cake it will produce.

4. The melting point of cocoa butter is
 - a. higher than body temperature.
 - b. 72°F.
 - c. dependent on the conditions under which it is melted.
 - d. none of the above.

5. Cacao nibs have a fat content of
 - a. 80%
 - b. 12%
 - c. 50%
 - d. 3%

6. The pressed cake remaining after the extraction of cocoa butter has
 - a. a fat content of about 50%.
 - b. no fat whatever.
 - c. 8-25% fat.
 - d. none of the above.

7. Cocoa that has been dutched has
 - a. a lighter color than natural cocoa.
 - b. a lower pH than natural cocoa.
 - c. most of the fat removed.
 - d. a darker color than natural cocoa.

8. The number of pods a cacao tree yields annually is about
 - a. 6,000
 - b. 25
 - c. 60
 - d. 250

9. In the manufacture of sweet milk chocolate, which one of the following ingredients is not used?
 - a. milk powder
 - b. sugar
 - c. glucose
 - d. cocoa butter

10. Comparing the flavoring power of a pound of cocoa with a pound of chocolate liquor
 - a. the cocoa has more flavor than the liquor.
 - b. the liquor has more flavor than the cocoa.
 - c. they are equal in flavoring power.
 - d. they cannot be compared because each has a different flavor.

III. Problems in substitution:

1. Where a recipe calls for one pound of cocoa and the baker finds that he has none in stock, what substitutions or changes must be made in the recipe? Be specific.
2. Where a recipe calls for two pounds of chocolate liquor and the baker finds that he has none in stock, what substitutions or changes must he make in the recipe? Be specific.

IV. True-False

1. The wholesale price of chocolate liquor is lower than the price of sweet milk chocolate.
2. The dipping room should be about 22° lower than the temperature at which chocolates are to be dipped.
3. Cacao plants can be grown only in equatorial Africa.
4. When chocolate is cooled below the dew point of a room, sugar bloom is almost certain to result.
5. The actual portion of the plant from which chocolate liquor is made is called the "nib."
6. The addition of water or steam to melted dipping chocolate will cause it to thin out.
7. Cocoa butter is processed from chocolate liquor by a process called "skimming."
8. Dark chocolate coatings are worked at lower temperatures than milk coatings.
9. Another name for chocolate liquor is "baking chocolate."

- ___ 10. One of the reasons for stirring chocolate while it is being melted is to prevent it from solidifying in layers as it cools.
- ___ 11. In the manufacture of milk chocolate, two of the ingredients added to the chocolate liquor are cocoa butter and sugar.
- ___ 12. The exact temperature to which chocolate must be heated will depend on the glyceride with the highest melting point.
- ___ 13. Milk chocolate must contain at least 20% milk solids.
- ___ 14. In tempering chocolate, the batch should never be heated over 98°F.
- ___ 15. In the manufacture of cocoa, the nibs are ground to a very fine powder and then sifted through very fine bolting cloth.
- ___ 16. Pound for pound, chocolate and cocoa have the same effect in a cake batter.
- ___ 17. In the manufacture of cocoa, all of the fat is drawn off so that a powdered product can be obtained.
- ___ 18. When we substitute cocoa for chocolate, we add a certain amount of fat.
- ___ 19. Chocolate should be stored in a cool, dry place with temperatures not over 45°F.
- ___ 20. Chocolate that has been stored under unfavorable conditions and allowed to sweat is likely to result in finished products with fat bloom.

V. Describe the process of manufacturing chocolate. Touch on the following:

1. Growth and description of plant.
2. Steps before roasting.
3. Steps in manufacture of chocolate liquor.
4. Steps in manufacture of cocoa.
5. Steps in manufacture of milk chocolate and sweet chocolate.

TEST ON GUMS AND STABILIZERS

Part I. Multiple Choice

Directions: In the blank at the left of the item, place the letter of the answer that best completes the item.

- ___ 1. Gum stabilizers are made from
 - a. the boiled tissue of animals.
 - b. cellulose.
 - c. secretion of vegetable matter.
 - d. cornstarch, wheat flour, and other types of plants.

- ___ 2. Stabilizers work best when mixed with
 - a. hot water.
 - b. cold water.
 - c. twice as much sugar.
 - d. about one-third as much sugar.

- ___ 3. Gum tragacanth is
 - a. a cold-water stabilizer that is derived from animal matter.
 - b. a hot-water stabilizer that is used for cooking fruit.
 - c. often used in making gum paste for decorative purposes.
 - d. one of the most expensive stabilizers known.

- ___ 4. A stabilizer that is derived from fruit pulp and apple peelings is called
 - a. karaya
 - b. pectin
 - c. agar
 - d. peelin

- ___ 5. Soluble gums are gums which
 - a. expand to many times their own weight.
 - b. need not be mixed with sugar to work properly.
 - c. cannot be used in thickening custard or pumpkin pies.
 - d. none of the above.

6. One of the best stabilizers to be used in custard pie is Irish moss because
- it is inexpensive.
 - it breaks down the egg structure and produces a tender gel.
 - it reacts with the casein of milk and produces a tender gel.
 - it gives good color and flavor to the pie.
7. In the preparation of fruit for pies, it is best to combine a gum stabilizer with starch because
- starch alone cannot thicken all fruits.
 - none of the gums alone develops a thick enough body.
 - starch alone produces too cheap a filling.
 - fruit acids destroy most gum stabilizers.
8. The difference between a mixture and a solution is
- mixtures are made of solids and solutions are made of liquids.
 - in a mixture the substances are not chemically united; in a solution they are.
 - in a solution all substances are combined in fixed proportions to each other; in mixtures they are not.
 - none of the above.
9. Gum arabic is
- a stabilizer but not a true gum because it is manufactured in Arabia.
 - extracted from the Acacia tree, which grows in Africa.
 - soluble only in hot water.
 - capable of forming a very firm gel.
10. All gums are
- soluble in water.
 - usable as stabilizers in food products.
 - expensive.
 - none of the above.

Part II.

Directions: At the left of each item in Column I, place the letter of the best answer from Column II. Some answers in Column II may be appropriate more than once; some may not be appropriate at all.

	<u>Column I</u>	<u>Column II</u>
___	1. One of the best stabilizers to use in the preparation of custard pies	A. Gelatin
___	2. Hot-water stabilizer	B. Algin
___	3. A stabilizer extracted from kelp	C. Tragacanth
___	4. A stabilizer that swells very slowly	D. Guar
___	5. A stabilizer that is highly resistant to fruit acids	E. Locust bean
		F. CMC

Part III.

Directions: In the blank in each sentence, write the word or words that best complete the sentence.

1. The difference between soluble and insoluble stabilizers is that soluble stabilizers _____ in the liquid while insoluble stabilizers _____ the liquid.
2. Because all stabilizers cannot be used interchangeably, the baker should have some knowledge of the _____ of different stabilizers.
3. Commercial stabilizers are usually mixed with _____ to prevent lumping.
4. Hot-water stabilizers should first be dissolved in _____ in order to work properly.
5. Two of the gums often used in meringue powders are _____ and _____.
6. Because gelatin is thin bodied before it sets, it is sometimes used to stabilize _____.

7. Because such gums as gelatin, agar, and Irish moss form a lighter body than _____, they are often used in the production of chiffon pies.

8. The term applied to "weeping" in chiffon pies is called _____.

Part IV.

On a separate sheet of paper, write a paragraph of not less than fifty words on each of the following:

1. All gums are stabilizers but not all stabilizers are gums.
2. How Stabilizers Can Improve the Keeping Qualities of Pies.
3. How Stabilizers Can Improve the Keeping Qualities of Icings.

Supplementary Information on Instructional Material

Provide information below which is not included in the publication. Mark N/A in each blank for which information is not available or not applicable. Mark P when information is included in the publication. See reverse side for further instructions.

(1) Source of Available Copies:

Agency Trade and Industrial Education
Address Box 2847, University, Alabama 35486
Limitation on Available Copies NO limit Price/Units \$1.50-Guide, \$1.25-
(quantity prices) Answer Book

(2) Means Used to Develop Material:

Development Group Committee of Alabama T & I Coordinators
Level of Group State
Method of Design, Testing, and Trial Designed by Subject Matter Specialists and Teacher Educators. Tested by use in high school programs for past thirty years.

(3) Utilization of Material:

Appropriate School Setting Area Vocational and Comprehensive High School
Type of Program Cooperative High School Classes (on the job training)
Occupational Focus Furniture Upholstery
Geographic Adaptability Now used in all states of U. S. A.
Uses of Material Guide for students study and a record of his progress
Users of Material Students

(4) Requirements for Using Material:

Teacher Competency N/A
Student Selection Criteria Senior High School Students 10, 11, and 12th Grades
Time Allotment One school period per day for two years - 360 hours

HOW TO USE THIS STUDY GUIDE AND RECORD OF PROGRESS

The student's record of progress is kept on the Trade Analysis and Progress Record page. Progress "on-the-job" is kept in the column headed "Job Progress", and related study progress is kept in the adjoining column headed "Related Study".

The four step method of training is used in developing the skills of a trade or occupation. A record of all these steps for each job is kept in the squares in the column below "Learning Status" (Steps), opposite a specific job.

A dot in the center of the square indicates a student is in the first step; that of observing the job being done. No other mark is made in this square as long as the student remains in this step.

A diagonal line across the same square indicates the student is in the second step; that of helping perform the job under instruction.

Two diagonal lines across the same square indicates that the student is in the third step; that of doing the job under supervision.

The square filled in solid indicates that the student has reached the fourth step; that of a satisfactory level of accomplishment. The date when this accomplishment has been reached is placed in the column "Date Objective Reached", opposite the specific job.

On the day the student has read all the references and has written the answers to all of the questions, for a specific job, the student places this date in the column headed "Date Completed", opposite this job. The grade made on the test on this job is entered in the adjoining square headed "Test Grade".

The word "Information" will be found in the "Job Progress" column for all information lessons. When all references have been read and all answers to the questions have been written, for a specific information lesson, the student places the date of completion in the "Date Completed" column, opposite this lesson number. The grade made on the test on this lesson is entered in the square headed "Test Grade".

- List two ways to apply oil stains.
- What care should be taken when applying oil stains?
- What results when insoluble aniline gets on surface?
- What are advantages in using spirit stains?

- What seems to be the most desirable quality of a filler?
- What is required of a filler that can be dissolved by toluol or xylol?
- Why should fillers be tested before use?
- In what shades may fillers be obtained?
- How may any desired shade of filler be made?
- How may a crack filler be made?
- For color darker than walnut, oak or mahogany, what may be used?
- How may Silver, French or Kaiser gray oak finish be made?
- How should filler be brushed on with regard to graining? Why?
- What are disadvantages to filling carvings?
- What materials are used in quick and slow drying?
- What materials are used for wiping off excess filler?
- How should strokes run in wiping off excess filler?
- How long should filler be allowed to dry?
- Why is it often necessary to fill oak and mahogany twice?

- What is the first consideration in refinishing old pieces?
- What, to a large extent, governs choice of stains?
- Does a new or old wood take stain darker?
- If an old piece of wood has a new one attached, which should be stained first? Why?
- How may checks be removed from varnish?
- How may old surfaces be covered without removing varnish?
- What is meant by the "turpentine test" for varnish?
- How may wax be removed from a varnished surface?
- Describe test for determining if a surface is lacquer.
- What precautions should be taken in applying lacquer?
- What is the best method of treating spirit aniline stain?
- List three (3) wood bleaching preparations.
- How should wood be treated after bleaching?

Making Fabric Skirts		EMU 89-98	

1. Name the types of furniture on which a fabric skirt is very popular.
2. How many types and styles of popular fabric skirts are made?
3. Name the four types of fabric skirts.
4. Why is the shirred skirt very popular?
5. Name the tools and equipment used in making fabric skirts.
6. What is the first step in attaching the shirred skirt?
7. Why are the covering pieces for box pleats cut in the same direction?
8. How are box pleats measured?
9. How is the welted skirts attached to the furniture?
10. In cutting the cover for the box pleats, how many pieces are cut?
11. Why are the pleats sewed down close to the top edge?
12. On what type furniture is the kick pleat skirt very popular?
13. Since the distance from corner to corner will vary, how is the kick pleat skirt joined together?
14. Before sewing pinned up pleats, what check should be made?
15. In attaching the skirt, how is the distance measured?

Making Pleated Buttoning		PU pp 139-146	

1. How may the back of a pad-back chair be upholstered with deep buttoning?
2. Explain the laying-out process of canvas for a diamond-tufted chair back.
3. What is the button arrangement on the back of the chair?
4. How can time be conserved in covering chairs of identical form of buttoning?
5. How is the width of covering for back of pad-back chair determined?
6. How is covering marked off for back of pad-back chair?
7. How can the upholsterer economize on expensive material when covering front of chair back to lower rail?
8. What is an exception to Question 7?
9. How is the fabric arranged so that distinct pipes from bottom to the seat are formed?
10. If fabric is slightly slack after buttons are pulled down, what corrective measure may be taken?
11. How are arms canvased and marked off?
12. After covering for arms has been cut and marked and buttoned into place, give procedure for installing cover.
13. How is the fabric handled where the arms and back meet?
14. How is the front of the arm treated?
15. How may buttoning variations be obtained on high-back chairs?
16. What factor in material controls amount of fullness that should be allowed in chair backs?
17. How are chair backs that are wider at top than bottom measured for covering?

Surfacing Second Coaters		FFFDP pp 209-211	

1. What kind of paper should be used in sanding a shellac or spirit varnish coat if another coat is to be applied?
2. What kind of finish is usually desired when shellac or spirit varnish is used as a two-coat finish?
3. If another coat of lacquer is desired after a second coat, how is it finished?
4. What care should be given in sanding on edges?
5. How can it usually be determined if enough sanding has been done?
6. Why is waterproof paper preferred over steel wool?
7. When may pumice stone FF and water be used for a second coat of lacquer material?
8. How are oil and pumice stone used?
9. What precaution must be observed in sprinkling pumice over wood surface?

Finishing Coats		FFFDP pp 212-222	

1. In surfacing enamel or varnish coats, on what coat is oil rubbing used? What is used for rubbing?
2. After preliminary sanding, what is used to rub shellac finish?
3. How should carvings and straight surfaces be rubbed?
4. What solvent is used to clean off pumice and oil?
5. On the last coat in gull finishing, why is oil used instead of water?
6. (a) How is a dull finish obtained on varnish?
(b) Why must plenty of water be used?
7. How is a satin finish obtained?
8. What treatment should be given edges?
9. How should round surfaces be rubbed?
10. In rubbing, what two things must be mastered to insure good results?
11. What abrasives are used to secure extra fine, full or satin finish?
12. What coating takes the finest finish of any material? Why?
13. How is it determined if enough rubbing has been done?
14. (a) When is French polishing used?
(b) What are the objections to French polishing?
(c) How is French polishing done?
15. Briefly, how is rotten stone polishing done?
16. Where are flat coat materials used extensively?
17. Why are flat coat materials used?

Finishing Troubles		FFFDP pp 232a-232f	

1. When source of trouble in finishing is definitely located what two items should be checked?
2. If a coating goes bad in service, what may be done rather than remove coating?
3. What are the characteristics of bleeding in finishing?
4. Give an example of bleeding.
5. What is a non-bleeding color?
6. What causes blistering?
7. How does blushing show up on a finished surface?
8. What causes blushing?
9. How may blushing be prevented?
10. What causes chipping?
11. What conditions cause crawling of finish coat?
12. How does drying differ in spirit varnishes or lacquers and varnishes and oil enamels?
13. What usually causes pinholing?
14. When do runs or sags appear?
15. What remedy is offered for runs or sags?

Patching Scratches		FFFDP pp 398-401	

1. What are usual characteristics and causes of furniture scratches?
2. How is a light scratch sanded?
3. Why should oil be used in connection with finishing paper?
4. When spraying is to be done, what previous operations should be carried out?
5. What is best method to use on varnish or shellac surfaces after sanding?
6. Why is it difficult to use above method on lacquer surfaces?
7. What is necessary to match surrounding surface after scratch removal by French polishing?
8. Describe a method of dulling a patch to match surrounding surface.

TYPE JOB	LABORATORY PERFORMANCE	RELATED STUDY REFERENCES	DATE READ
Spraying Scratches		FFFDP pp 401-403	

1. When should spraying be done in scratch-removal finish?
2. Why should same material be sprayed on finish as was formerly used?
3. What usually occurs if lacquer is sprayed on varnish?
4. Where doubt exists as to kind of finish, what should be done?
5. For a satin finish, what is a safe method for matching a spot to the rest of the surface?
6. If, after finishing, surface seems too dull, what may remedy this?
7. Why shouldn't steel wool be used on spots in conspicuous places?
8. What advantage is there in using 6/0 or 7/0 waterproof garnet paper on lacquer or varnish finish?
9. What care should be given to the use of the above paper?
10. How much time should be allowed for drying of: (a) lacquer and shellac (b) rubbing varnish?
