PROBLEMS AND NEEDS OF WASHINGTON COMMUNITY COLLEGES--AN
EXPLORATORY SURVEY OF IMPORTANT RESEARCH AREAS.

BY- SUVER, J. ALLEN AND OTHERS

WASHINGTON UNIV., SEATTLE,

REPORT NUMBER CDCCE-OF-2

PUB DATE JUN 67

EDRS PRICE MF-\$0.25 HC-\$2.04 51P.

DESCRIPTORS- *JUNIOR COLLEGES, *RESEARCH PROBLEMS, RESEARCH
NEEDS, SURVEYS, STATE PROGRAMS, *OPINIONS, *COLLEGE FACULTY,
*ADMINISTRATIVE PERSONNEL, WASHINGTON,

TO DETERMINE THE TYPES OF RESEARCH PROBLEMS CONSIDERED
IMPORTANT IN WASHINGTON COMMUNITY COLLEGES, A QUESTIONNAIRE
SURVEY WAS CONDUCTED AMONG THE FULL-TIME PROFESSIONAL STAFF
MEMBERS. THE RESEARCHERS IDENTIFIED 38 PROBLEM AREAS, ALL OF
WHICH WERE REPORTED TO BE OF AT LEAST MODERATE IMPORTANCE.
RESULTS WERE TABULATED IN FOUR CATEGORIES--(1) RESPONSES FROM
THE TOTAL GROUP, (2) RESPONSES FROM FACULTY, (3) RESPONSES
FROM ADMINISTRATORS, AND (4) RESPONSES FROM PRESIDENTS. IN
THE TEN MOST IMPORTANT AREAS, ALL GROUPS INCLUDED LONG RANGE
PLANNING AND THE MEANS OF MEETING COMMUNITY NEEDS FOR
VOCATIONAL-TECHNICAL PROGRAMS. FACULTY AND ADMINISTRATORS
ALSO INCLUDED IN THEIR 10 MOST IMPORTANT AREAS (1)
DEVELOPMENT OF SALARY SCHEDULES, (2) DISTRIBUTION OF FEDERAL
AND STATE GRANTS, (3) MATCHING OF COLLEGE PROGRAMS TO STUDENT
NEEDS, AND (4) RELATIONSHIP OF TRANSFER AND VOCATIONAL
PROGRAMS. THE FACULTY AND PRESIDENTS AGREED ON THE IMPORTANCE
OF ARTICULATION OF HIGH SCHOOL, COMMUNITY COLLEGE, AND 4-YEAR
COLLEGE COUNSELING PROGRAMS. TABLES SHOW DETAILS OF THE
FINDINGS, AND THE INSTRUMENTS USED IN THE SURVEY ARE
REPRODUCED. (WD)

INTRODUCTION

The rapid increase in the growth rate of the community college system in Washington state, coupled with recent legislative changes which have led to the establishment of separate districts, has pointed up the need for a systematic approach to the assessment of change through a program of research. Such a program is considered as a necessary guideline to what promises to be a continuing high-growth phase within the state. Many of those who are connected with the community colleges of Washington have expressed a desire for a statewide assessment of emerging problems and needs because of a strong belief that the problems of community colleges in Washington, while indicating basic issues in common with other state systems, nevertheless exhibit a pattern which reflects the forms and forces unique to the area of Washington State.

This interest has crystallized in the conduct of this survey, which is based upon the assumption that the most effective research is that which is directed toward current problems of high priority. This study is also based upon the assumption that involvement of all institutions in a unified approach to research problems is most fruitful in terms of long-range effects. Another important assumption which guided this effort is the belief that the community college, as a unique institution, is worthy of a separate focus of

research and experimentation.

It has seemed appropriate at this time then, to investigate the direction which research should take within the specific context of the emerging Washington State system of community colleges, and attempt to isolate those areas where needs are most pressing.

J. Allen Suver

ACKNOWLEDGEMENTS

This study has been made possible through the help and advice of many individuals within the Washington Community College system. The Research Commission of the Washington Association of Community Colleges contributed the funds to underwrite this project, and the individual members of the Commission, in their capacity as Research Representatives within their respective colleges, were responsible for the collection of the basic data.

The Center staff would like to acknowledge in particular, the help of the following:

The Executive Committee of the Research Council of the Washington Association of Community Colleges

Dr. Melvin A. Allan, Commissioner
Mr. William R. Merifield, Chairman
Mr. F. Ray Duncan, Vice-Chairman
Dr. Jeane Jones, Secretary

The Institutional Research Representatives of the Washington Association of Community Colleges

Dr. Ramon LaGrandeur Bellevue Community College	Mrs. Beverly A. Dobson Everett Junior College
Mr. Paul K. Preus Big Bend Community College	Dr. Jeane Jones Grays Harbor College
Dr. Kellis A. Hamilton Centralia College	Mr. William R. Merifield Green River Community College
Mr. William J. Sheehan Clark College	Mr. Jesse M. Caskey Highline College
Dr. Marion Oppelt Clover Park Community College	Mr. Henry W. Lennstrom Lower Columbia College

OBJECTIVES OF THE STUDY

This survey was conducted as a cooperative effort between the Center for the Development of Community College Education, and the Research Commission of the Washington Association of Community Colleges with the following objectives in mind:

1. To develop a series of statements which would be broadly representative of problem areas within the community college system of Washington State.
2. To develop a means of ranking these objectives on the basis of the experience and judgment of full-time community college personnel of the State of Washington.
3. To determine the special interests of the sub-groups making up the total population of the study.
4. To disseminate the findings of the study through the Research Commission of the Washington Association of Community Colleges in order that the results may be analyzed and used as a base for developing further research studies closely related to the pressing needs of the community colleges in the state.
5. To establish the feasibility of a cooperative research effort directed toward the solution of practical problems which promise a high degree of usefulness to individual colleges within the community college system.

METHOD OF THE STUDY

This study consists of a ranking of items which were considered to be representative of the problems facing the community colleges of Washington. The final list of 38 items was prepared from an analysis of the Basil Peterson California study and the 1964 Washington Community College Research Inventory.¹

The California study gathered a list of 174 research problems and needs by asking each of the 77 public junior colleges in California to submit listings of problem areas. This listing was then reduced by a working committee to a list of 45 critical items.

The Washington Inventory consists primarily of a listing of the research projects completed, in progress, and anticipated by the state's community colleges during the 1964-65 academic year. Included also is a category of suggested research areas as submitted by the faculties of the participating colleges.

The findings of the California study and Washington inventory were analyzed by the Center staff, and it was

¹Basil Peterson, Critical Problems and Needs of California Junior Colleges (Committee on Institutional Research, California Junior College Association, June, 1965).

Ray E. Jongeward, Community College Research Inventory (Olympia, Washington: Office of the Superintendent of Public Instruction, Research Report 01-04, December, 1964).

determined that the listings of problems, needs and suggested areas of research were sufficiently complete to serve as the base for this study. A final list of 38 items was prepared covering the areas of Administration and Finance, Counseling and Guidance, Community Service, Instruction, Students, Vocational-Technical Education, and General.

Instruments and instructions were prepared by the Center staff and sent directly to the Research Representative in each college for administration to full-time personnel of the institution. The Research Representative of each college administered the survey in his college and returned his data to the Center for tabulation.

In constructing the survey instrument, a four-point scale response was used in which respondents were asked to check one of the following four choices:

1. A critical problem of Washington Community Colleges indicating a pressing need for study or research.
2. An important but not critical problem of Washington Community Colleges indicating a need for study or research.
3. A problem of moderate importance for study or research by Washington Community Colleges.
4. A problem of no importance.

These responses were converted to mean scores for the total population sample and for each of three sub-groups of the total; faculty, administration, and presidents. The mean scores were then used to rank items in order of importance for the total group, and for each of the three sub-groups. The rankings of the

total group were calculated by adding together each of the sub-group responses without attempting to use a system which would weight the sub-group responses equally.

It should be noted that the sums of the item response distribution varies because of the fact that every respondent did not answer each item of the survey instrument.

A fourth sub-group not connected directly with the two-year colleges, but who were identified as community college experts within the state of Washington, were surveyed. However, the sample proved to be too small to include with the findings in this report.

TABULAR PRESENTATION OF FINDINGS

The tables which form the body of this report are organized in four basic groups. Tables 1 through 4 show the raw data of responses from the total of all respondent groups and for each of the three sub-groups of faculty, administration and presidents listed separately, with distributions shown for each of the four possible responses on each item of the survey. Table 5 lists each survey item with its resultant ranking, as derived from mean scores, for total group and sub-groups.

The second set of tables, tables 6 through 9, show the item means for total group and sub-groups in rank order. Table 10 is provided as a summary showing items in rank order on the basis of total group response, with a comparison listing of rank order by sub-groups for each item.

The third set of tables, numbers 11 through 17, show ranking of items by each subject area for the total group and the sub-groups making up the total.

The fourth set of tables, tables 18 and 19, provide a breakdown of the top-ten-ranked items for the total response group, showing the comparison rank for each sub-group, and a comparison table showing commonality of the top-ten-ranked items for each of the sub-groups.

SUMMARY OF FINDINGS

1. All 38 items listed in the survey instrument were judged important by full-time professional personnel in the community college system of Washington. A comparison of item means shows that the lowest ranked item of the 38 was scored 2.56 on a four-point scale, indicating a composite judgment of the item as falling between an "important problem" and one of "moderate importance" for research and study. Nearly 40% of all items on the questionnaire were ranked between 1 and 2 on the four-point scale as shown by the means of the total group response to the survey. A study of the means of the item responses tends to indicate that all of the 38 individual items are worthy of study in the view of those responding to the instrument.

2. Item number 7, concerning long-range planning needs of Washington Community Colleges, was ranked as the item of highest priority by each of the sub-groups in the study. The ranking assigned to this item may indicate a need for a formal and continuous effort in this area as a statewide service.

3. A glance at Table 10 will show a high degree of uniformity of responses among the three sub-groups of faculty, administrators and presidents of community colleges.

4. A comparison of items under the subject headings of Administration and Finance, Counseling and Guidance, Community Service, Instruction, Students, Vocational-Technical Education, and General, show that the area of Vocational-Technical is

considered to be of major importance for study and research at this time. Table 16 shows that of the four statements listed under this heading, the lowest ranking given to any of the items by total group and the three sub-groups was 15 on a scale ranging from 1-38. Note also that among the 16 rankings given the four items by the total group and sub-groups, 12 of the 16 were ranked among the top-ten priority items.

An analysis of items in the area of Counseling and Guidance (Table 12) shows that for the six questionnaire items in this area ranked by the total population sample and three sub-groups (comprising 24 separate rankings), 12 of these were made in the top-fifteen-ranked items and 7 of the 24 rankings were made in the top ten.

An analysis of the commonality among the three sub-groups for the top-ten-ranked items for each group was made (Table 19). This analysis showed that items 7 and 35, "long-range planning needs," and "methods of matching vocational-technical programs to current needs of business," were included in the top-ten ranking for each sub-group. There were six items in common among the top-ten ranking for faculty and administrators. There were five items in common among the top-ten ranking of presidents and administrators, and three items appeared in common to the top-ten-ranked items of faculty and presidents.

- 35 Methods of matching vocational-technical programs to current needs of business and industry

Items Common to Faculty and Administrators

- 2 Development of faculty and staff salary schedules
- 7 Long-range planning needs in the community college
- 8 Distribution of federal and state grants to Washington community colleges
- 10 Matching of student need and college program
- 34 Relationship of vocational and transfer programs within the community college
- 35 Methods of matching vocational-technical programs to current needs of business and industry

Items Common to Faculty and Presidents

- 7 Long-range planning needs in the community college
- 14 Articulation of counseling programs with high school and four-year institutions
- 35 Methods of matching vocational-technical programs to current needs of business and industry

Items Common to Presidents and Administrators

- 7 Long-range planning needs in the community college
- 9 Development of realistic self-concept in students
- 32 Guidelines for establishing vocational education programs within the community college
- 33 Development of statewide cooperative approaches to community college vocational programs
- 35 Methods of matching vocational-technical programs to current needs of business and industry

CENTER FOR THE DEVELOPMENT OF COMMUNITY COLLEGE EDUCATION

M206 Miller Hall
University of Washington

TO: Institutional Representative
FROM: Center for the Development of Community College Educ.
SUBJECT: Basic Information Concerning Survey of Community
College Problem Areas

This project represents an attempt to catalog the most important areas requiring study and/or research of community college education within the State of Washington. The study is concerned with evaluations from sub-groups within the operating community colleges.

Each community college within the state is being asked to submit a summary evaluation sheet for three basic sub-groups within the institution:

1. Faculty are defined for purposes of the study as full-time instructors who spend more than 50% of their time in the teaching activity.
2. Administrative staff persons are defined for purposes of this study as those individuals spending more than 50% of their time in administrative activities.
3. The President of the institution should submit a separate response to the instrument, attaching appropriate comments.

Procedure for Administering the Instrument

For this initial survey it has been determined that a sampling technique will be used to collect responses from the faculty which should, for practical purposes, give as accurate a picture as the collection of a 100% sample from the entire Washington community college population.

1. Sample Size
 - (a) Faculty

Institutions having fewer than 66 full-time faculty members will take a 100% sample of this group. Institutions with more than 66 full-time faculty members will take a 50% sample of this group.

2. Procedure

(a) If possible, use an alphabetical list of all full-time faculty, and determine the names of those persons to complete the survey by taking every fifth name on the list. In this operation consider your list as an endless chain by counting, eliminating, and continuing through the list until you have selected the appropriate size sample. It is important that each individual selected from your list complete the survey form. The usefulness of this procedure is dependent on collecting answers from each person you have identified as comprising your sample.

(b) Administrative Staff

Since this is a relatively small group no sampling techniques are necessary, and each person in this group should complete the survey.

(c) President

The response of the president should not be included in your tabulation as part of the administrative staff group since it is considered as a separate category.

3. Tabulation

When you have collected the completed surveys from your faculty sample, record the responses and comments on the enclosed faculty summary sheets.

The responses and comments from the administrative staff should be tabulated on the special summary sheet enclosed for that group.

The two summary sheets and the president's survey should be returned to this office no later than April 15, 1967.

If you have any questions regarding the administration of this survey, please feel free to call Allen Suver or Marvin Sondalle at 543-1891.

SURVEY OF COMMUNITY COLLEGE PROBLEM AREAS

The Research Commission of the Washington Association of Community Colleges has established a cooperative project with this Center to identify the most pressing problems and needs confronting Washington Community Colleges, and to propose ways and means by which solutions may be found through a program of research and development.

This survey is the first step of the program and you are being asked to cooperate in helping to reach the following objectives:

1. Identify those present and future critical problems and needs of Washington State Community Colleges in the areas of administration and finance, counseling and guidance, community service, instruction, students, and vocational-technical education.
2. Determine those problems and needs which are most pressing and for which effective solutions might be found through a coordinated program of research and development.

Your cooperation in this effort is greatly appreciated. Please fill in completely and carefully each item on the survey and return it to your Institutional Research Representative. Results of this survey will be available through his office early in May, 1967.

CENTER FOR THE DEVELOPMENT OF COMMUNITY COLLEGE EDUCATION

M206 Miller Hall

University of Washington
Seattle, Washington 98105

INSTRUCTIONS:

In one of the boxes following each item, place a check mark indicating your assessment of the importance of the item based on the following scale:

- 1 - A critical problem of Washington Community Colleges indicating a pressing need for study or research.
- 2 - An important but not critical problem of Washington Community Colleges indicating a need for study or research.
- 3 - A problem of moderate importance for study or research by Washington Community Colleges.
- 4 - A problem of no importance.
