REGIONAL CENTER FOR COLLECTION, SYNTHESIS AND DISSEMINATION OF CAREER INFORMATION FOR USE BY SCHOOLS OF SAN DIEGO COUNTY (DEVELOPMENTAL), JULY 1, 1966 - JUNE 30, 1967.

BY- WHITFIELD, EDWIN A. HOOVER, RICHARD
SAN DIEGO COUNTY DEPT. OF EDUCATION, CALIF.

REPORT NUMBER BR-6-1620 PUB DATE 67
GRANT OEG-4-6-061620-1899
EDRS PRICE MF-$0.75 HC-$6.60 163P.

DESCRIPTORS- VOCATIONAL DEVELOPMENT, *OCCUPATIONAL INFORMATION, *INFORMATION SYSTEMS, COUNSELORS, *HIGH SCHOOL STUDENTS, CAREER CHOICE, CAREER PLANNING, *INFORMATION DISSEMINATION, *INFORMATION UTILIZATION,

THE PROVISION OF OCCUPATIONAL INFORMATION ON MICROFILM APERTURE CARDS (VIEW) IS VALUABLE TO BOTH STUDENTS AND COUNSELORS. THIS SYSTEM CAN INCREASE THE EFFECTIVENESS OF THE SCHOOL VOCATIONAL GUIDANCE SERVICE BECAUSE THE MATERIALS ARE EASY TO READ WITH CURRENT, WELL-ORGANIZED INFORMATION. COUNSELORS PERCEIVE VIEW MATERIALS AS AN AID WHICH SAVES TIME AND INCREASES THE AMOUNT OF INFORMATION AVAILABLE. THE VIEW SYSTEM ATTRACTS STUDENTS, WHO HAD NOT USED OCCUPATIONAL INFORMATION FREQUENTLY, TO THE USE OF OCCUPATIONAL FILES. STUDENT REACTION TO THE PROJECT IS FAVORABLE. THE VIEW SYSTEM ALSO INCREASES INTERSTAFF PARTICIPATION. ACTIVITIES OF THE CAREER INFORMATION CENTER DURING THE 1966-67 YEAR HAVE SHOWN THAT--(1) A SUMMER WORKSHOP FOR COUNSELORS WHICH PROVIDES INSTRUCTION IN VOCATIONAL GUIDANCE AND EXPERIENCE IN ENTRY LEVEL OCCUPATIONS IS VALUABLE, (2) POSITIVE COMMUNITY REACTION TO THE VIEW PROJECT AND TO A SUMMER WORKSHOP EXISTS, AND (3) VOCATIONAL TRAINING PROVIDED BY THE JUNIOR COLLEGES IS PERCEIVED BY THE STUDENTS AS NECESSARY AND VALUABLE IN THEIR CHOSEN CAREER. (FS)

ACKNOWLEDGMENTS

A project such as VIEW, by its very nature, must include many people in order to achieve its goals. Providing career information with the parameters established for VIEW required an extensive community effort. Consequently the efforts of the business, labor, service, government, and school agencies in San Diego County are gratefully acknowledged.

Specifically, the following individuals gave much of their time and effort to the project. Dr. Glen Pierson, project director, Mr. Rex Ball and Mr. Joseph Ondrechen, occupational analysts, California State Department of Employment, and Mr. Paul Nitsche, sales representative, 3M Corporation.

The junior college follow-up questionnaire was adapted from survey instruments developed by Dr. Kenneth B. Hoyt for use in the Specialty Oriented Student Research Program at the University of Iowa.

CONTENTS

LIST OF TABLES

PROJECT SUMMARY

The objectives of the developmental phase of the Career Information Center, conducted from July 1, 1966, through June 30, 1967, were the following: First to prepare, disseminate, and update occupational information on jobs requiring less than a baccalaureate degree for which local training was available in San Diego County. Second, to conduct inservice meetings with counselors and teachers on the professional utilization of these occupational materials. Third, to sponsor a summer career guidance workshop for counselors providing them with pertinent experiences in local entry occupations to aid them in their work with students. Fourth, to record and disseminate the reactions of these counselors to this experience for the use of other counselors and students within San Diego County. Fifth, to follow up selected graduates from training programs in the six local junior colleges to obtain their reactions to the instruction received and their analysis of their current positions. An additional function of the Career Information Center was to prepare a filmstrip depicting the activities of the Center. This filmstrip could then be used to orient students, counselors, and other school personnel to the services offered by the Career Information Center.

During the developmental phase, career information was produced for all occupations requiring less than a baccalaureate degree for which training was available in San Diego County. This resulted in approximately 200 eight-page job descriptions. This information was disseminated to twelve participating schools and an evaluation of the materials and dissemination procedures was secured from the students, counselors, and school administrators.

The dissemination vehicle used was a system based on the use of the microfilm aperture card. A two-card format was chosen for each occupation with the first card containing four pages of general information and a second card containing four pages of local information. Each of the twelve participating schools in the project was supplied with a microfilm reader and a reader-printer which enabled the students to project the microfilm copy on a screen and, if desired, print out hard copy for subsequent discussions with their counselors or parents. In addition, parameters pertinent to the occupation, such as aptitudes, length of training, restrictions, etc., were key-punched into each aperture card.

The main body of information for each occupation was prepared in a standardized format suitable for conversion into microfilm form. Each brief in its unconverted form consisted of four $8\frac{1}{2}$" x 11" pages. A standardized heading was also chosen, the acronym VIEW (Vocational Information for Education and Work), and the briefs were referred to as VIEWscripts. Each of the pair of briefs for an occupation was put on microfilm which is mounted in an aperture card by use of a processor-camera.

The first four-page VIEWscript contained information about the occupation which was generally applicable throughout the country. The order of presentation of the information, however, differed from conventional practices. That is, a thorough look at the criteria which applicants must meet (including such items as physical health, verbal ability, character, training required, advantages and disadvantages) preceded any detailed description of the job itself. The second four-page VIEWscript for each occupation contained pertinent local information including a listing of local training institutions, a bibliography of locally produced studies and surveys relating to the field, and a listing of community resource people working in the occupation who had agreed to talk about their occupations directly with the students. The use of this two-card format could make it possible for the more general descriptive data to be prepared at a central location and the local information to be prepared regionally with the possibility of a card exchange between centers. The number of print-outs that could be produced from one aperture card is unlimited and the cost per copy is modest.

A summer workshop in entry employment was held during the time period June 27-August 5, 1966, which enabled ten high school and junior college counselors to study and observe the entry occupational patterns of selected businesses and industries in the Greater San Diego area and to relate to their experiences to the career and educational programs of the secondary schools and junior colleges. The participants spent four weeks on the job in entry occupations and two weeks in the classroom. The classroom activities were carefully articulated with the participants' experiences on the job. During the two weeks of instruction, the first week and the sixth week, the focus was on theory and process of vocational choice. The group had the additional responsibility of producing copy for a document describing entry employment in San Diego. This document was then distributed to all secondary school counselors in San Diego County for use in counseling students.

Meetings were held with representatives of the counseling departments and vocational education departments in each of the six junior colleges in San Diego County. From these meetings a questionnaire was agreed upon and it was decided that the June, 1966, graduates or certificate recipients in the programs common to all six junior colleges would be included in this survey. This resulted in a sample of 331 students in the business, electronic, and drafting programs in these junior colleges.

EVALUATION PROCEDURES

The evaluation of the VIEW materials and their use in the pilot schools involved several phases, each utilizing a different evaluation instrument.

Immediate Student Reaction Questionnaire

Immediately before and after using the VIEW aperture cards each student was asked to record his reaction on evaluation cards provided by the Career Information Center. These two cards elicited from the user his reaction to previous occupational information he had encountered and his comparison of it with the VIEWscripts. Other data collected by these instruments included referral source, frequency of use, grade level in school, high school grades, past vocational exploration, previous use of occupational information and other information.

Data collected by means of these instruments were recorded in two ways. First, the reactions of the students were tabulated and totals and percentages given for each of the questions. Second, a random sample of one-hundred students was drawn from the total questionnaires received, and where applicable, the z statistic was used to ascertain the significance of change in the reaction of the students to previous occupational information, and then to the VIEW materials.

Later Student Evaluation and Use

In early June 1967 a random sample of students who had used the VIEW occupational file in each of the twelve participating schools was drawn. Their reactions to the VIEW materials and their use of the information was elicited using a questionnaire designed for this purpose. Responses were then totaled and presented in the form of percentages.

Meetings with Student Groups

Group discussions were held with the students who had used the materials in the pilot schools. The purpose of these meetings was to more clearly and specifically identify student use of the project materials and to encourage any comments and criticisms that were not possible to elicit through the use of an objective type instrument.

Counselor Reaction

In June 1967 a questionnaire was administered to counselors working with the VIEW materials in the pilot schools. The purpose of this questionnaire was to obtain their reaction to and use of VIEW.

Evaluation of Summer Workshop

Two procedures were used in evaluating the effects of the six-weeks activities: (1) an evaluative questionnaire was administered to all counselor participants and, (2) an evaluation of the document VIEWPOINT, Entry Employment in San Diego, was conducted with each school counselor in San Diego County receiving the questionnaire. These two instruments were used to obtain the perceptions of the counselor participants as to the value of their six-weeks experiences and to obtain a general evaluation of the timeliness and usefulness of VIEWPOINT in the various schools.

RESULTS

The results obtained from the evaluation instruments used for the VIEW materials indicated that of the three major referral sources to the VIEW files (teachers, students, and counselors) most referrals came from the classroom teacher. In many cases the student indicated that his introduction to the files was a self-referral. The majority of the students used the materials only once and these users were usually high school students receiving average grades and who had decided only recently to investigate the occupation. Many of the students indicated that they had not used occupational information previous to coming to the VIEW files. Those students who did have some comparison basis for evaluation of VIEW (students who had used other types of occupational information) considered the VIEW occupational more helpful, understandable, realistic, interesting, complete, and up-to-date than the occupational information they had investigated previously (significant at .001). The microfilm reader-printer, either alone or in combination with the microfilm reader, was used by over three fourths of the students. A similar percentage of students also took a printed copy of at least some of the materials in the VIEW file. When students were asked to rank the overall method of presentation of the VIEW materials over three fourths also indicated they "very much" or "extremely" liked this method.

The later evaluation by high school students (N=175) generally supported the findings from the Immediate Reaction Questionnaires, that is, a majority of the students used the VIEW materials only once or twice and most indicated that they did take a printed copy of the information. Three fourths of the students said that the information had some or very much of an effect on their choice of a career. Students at this time were also queried regarding their utilization of the different aspects contained in the VIEWscripts. From this it was found that approximately one half of the students had made use of the printed sources of additional information listed, while conversely very few students used the resource people who had agreed to talk with students about their jobs. The aid of a counselor in verifying and utilizing information contained in the VIEWscripts was generally ignored by the students. Professional utilization of the VIEW materials in counseling situations with students seems to have been generally lacking in the schools. A majority of these students, however, did indicate that they sometimes or usually discussed the VIEWscripts with their parents.

The first four pages of information, or the general information, were the pages most printed out by the students. The local information was printed out by few students. Paradoxically, when students were asked to list the most valuable aspect of the VIEW materials, the local information, as well as the sources of additional information, was mentioned frequently.

Counselor Reaction

Generally, the twenty-one counselors returning the evaluation questionnaire indicated that in their estimation student reaction to the VIEWscripts was either favorable or very favorable. Approximately two thirds of the counselors said that the use of other vocational materials had increased since the installation of the VIEW materials and over three fourths indicated that there was at least some increase in interest in vocational guidance from the total school staff since the VIEW project was initiated in their schools. All counselors surveyed indicated that they used VIEW materials in classroom activities.

Evaluation - Summer Workshop

The results of the questionnaire sent to workshop participants indicated that a majority of the participants in the summer program felt they had become familiar with entry occupations in San Diego area and saw the on-the-job experience as a valuable aspect of their workshop experience. Most participants felt that they had gained the most information concerning entry jobs available in San Diego County, personnel practices of local businesses and industry, and entry level experience. They saw the greatest utility of the workshop experience in later counseling sessions with students concerning careers. The document VIEWPOINT produced by the participants was distributed to all schools in San Diego County. This document contained a record of the experiences of the participants in their job experiences. A questionnaire was sent to all pupil personnel workers in San Diego County who had received a copy of this document. Of the 103 counselors, administrators, and teachers who responded to the questionnaire, approximately one half indicated they had used previous VIEWPOINTS in the past. Of these, most indicated they had used it in conjunction with student occupational information files and in counseling with individual students. Also over one half of the respondents who had used VIEWPOINT indicated that the use of this document by students was greater than the use of other local occupational information. In comparing the usefulness of VIEWPOINT with other local information, 70 percent of the total respondents said that it was better or much better and only 4 percent indicated that it was not as good. Over three fourths of the total sample rated VIEWPOINT valuable or very valuable as a counseling tool while 47 percent indicated that student reaction to this document was either favorable or very favorable.

Junior College Follow-up Study

All students who graduated or received their Certificate of Confidence in June 1966 in the business, electronic, or drafting programs in the six junior colleges in San Diego were included in the survey, resulting in a total sample of 313 students. Three mailouts to these students resulted in a return of 224 questionnaires (71 percent). Caution was used in interpreting the results of the study for three reasons: First, most of the respondents had been enrolled in a business curriculum. Second,

few of the respondents completed the entire questionnaire. And third, no statistical analyses were performed on the data received.

Generally, as a total student group the junior college graduate or certificate holder in the business, electronics, or drafting curricula of the San Diego junior colleges were 21 to 25 years old and perceived themselves as ranking approximately in the middle of their high school graduating class. They obtained information on their educational choice from many and diverse sources, but for the most part did not rely upon the help of their high school counselor. The majority of these students made the final decision to attend junior college while still in high school. These students tended to choose the junior college because of its nearness and perceived themselves as being rather independent in this choice. As a group, the students also tended to choose their occupation late in their senior year of high school or after. Many did switch programs from a college transfer to a terminal program after they had once entered the college. Generally one half of these students also indicated they were satisfied both with their choice of school and their choice of training and would repeat these choices again if given the opportunity. Electronics students more than the others indicated greater satisfaction with their training and with the first job they received as a result of this training. Conversely, this same group indicated less often than the other students that they would repeat this same choice. Drafting students on the other hand seemed to take advantage of the counseling help available to them during high school and seemed also to put forth more effort in investigating the junior college before enrolling (e.g., visiting the school), but yet less often received a first job related to their training and seemed more often to be dissatisfied with that job.

CONCLUSIONS

VIEW

Students, when made aware that pertinent information does exist and is available for them, will make use of this information in their decision making. Over 1700 students in the twelve pilot schools did take advantage of the VIEW files, and a majority of these students indicated that previously they had never or had infrequently used information of this type. Apparently the VIEW system motivated the students to use occupational information. The use of the materials at school in conjunction with the counselor was generally ignored by most of the students and points to the need for further emphasis in this area. The evaluation of students in ranking the VIEW materials in comparison with other materials of this nature was generally favorable, indicating that the VIEW approach to occupational information, both in the media used and the content and format of the occupational information itself, is viewed by the students as being of more value than the information they had used in the past. When one combines the favorable reaction of the counselors and students to this material in conjunction with the fact that the microfilm aperture card facilitates storage and retrieval and allows for continuous updating of the information, it is

evident that the system developed by the San Diego County Department of Education Career Information Center holds promise for utilization in school systems throughout the nation.

The reactions of the counselors to the VIEW project indicated that the VIEW concept of an occupational file is wanted, needed, and enthusiastically supported by counselors in the public schools. The frequent use of VIEW materials in classroom situations emphasized the future implications of the materials for these purposes. There is, however, definite need to work with counselors concerning the effective use of the VIEW information or any information in counseling with students. The VIEW program to date has concentrated on student needs in providing students with realistic up-to-date vocational information. The next step in the project must include concentrated inservice work with the counselors and staffs in the schools where the VIEW project is in operation.

Summer Workshop

The reactions of the counselors who participated in the summer workshops in entry employment recommends such experiences for other counselors working with youth. Such an approach provided the working counselor with a valuable source of inservice education in both academic training and personnel experiences in entry types of employment. The reactions of San Diego businesses and industry to this workshop has shown that such community groups are more than willing to provide time and financial compensation to educators for such an experience. The experiences and results evident in San Diego indicated that such an approach is feasible in many areas where community groups and educators plan together to increase the effectiveness of counselors in working with students. The reaction to and use of VIEWPOINT, Entry Employment in San Diego, in the schools has shown that the knowledge and experiences gained by workshop participants can be shared throughout a school system.

Junior College Follow-up

Trends evident from the responses of the junior college vocational graduates indicated a need for both high school and junior college counselors to devote more time and aid to students in their decision-making process involving the choice of post-high school training and subsequent jobs. For many of these students, it appears, the choices regarding these matters are an individual matter and these choices later on result in both time consuming changes in training programs and occupations.

CHAPTER I

INTRODUCTION

Review of Related Research

Changes taking place in the occupational structure in the United States are leading to an increased awareness of the need to work closely with students concerning their vocational development. This need has been emphasized by several researchers, who have described the evident lack of planning and direction on the part of high school students concerning their post-high school goals (Holland 1958), (Venn 1964), (Hoyt 1962), and (Reed 1965).

Holland's (1958) research with National Merit Scholars provides extensive data supporting these needs. Douvan and Kaye (1964) in summarizing this research concluded that:

> "The dropout and exchange rates in American colleges suggest that something goes seriously awry in this choice process. . . The rates seem to reveal a widespread choice based on inappropriate or transitory needs. The shopping around that occurs after the adolescent is already in college must cause him a great deal of loss and unhappiness. One suspects, at least, that some of the grief might be prevented by the more careful counseling of students at the times of the initial decisions."

Others have shown that the influence of the high school faculty in post-high school training choices is mentioned infrequently by students when they are asked to identify reasons for their choices (Dole 1964), (Lipsett and Smith 1962).

Providing students with career information that is current, accurate, and readily understood has been the goal of vocational guidance specialists for many years. There is general agreement that the making of career choices by students is enhanced through the effective years with such information (Levitan 1966). Recently Hoyt (1965) pointed out a pressing need in this area when he said:

> "The kinds of assistance school counselors are being called on to give represent a largely new area of knowledge in the counseling and guidance field. In addition to learning about occupations at below college grade, counselors also have to know about training opportunities available to these youths. . . Counselors in our secondary schools must become as proficient at helping those who choose not to go to college as they currently are in assisting the college bound. We are not well prepared to meet this challenge in today's secondary schools."

This lack of information on the high school level was also implied by Venn (1964) when he said:

> "It is suggested that there are many students in academic programs of higher education for whom the law of diminishing returns has long since taken affect and who would find a fuller realization of their abilities and interests in a shorter term specialized occupational program beyond the high school."

In many school systems the provision of appropriate career information materials is more a goal than a reality. Such materials as are available come from diverse sources in varying formats and usually lack specificity to the local situation. Much of this occupational literature is also out of date due to the inescapable time lag inherent in conventional, production and dissemination procedures. The more current fugitive materials, since they've been prepared with an eye toward recruitment, cannot always be relied on for the objectivity desirable when students must make choices based on factual information.

A related problem arises from difficulties in filing and retrieving occupational information. Although numerous procedures have been developed, the results of a questionnaire (Appendix A) recently administered by the Department of Education, San Diego County, indicate that a majority of the students responding made limited use of the information contained in typical occupational files (Hoover 1965). Abundant evidence exists to substantiate these and related weaknesses of current programs for providing occupational information to students.

The need existed in San Diego County for current and accurate career information relating to local job opportunities requiring less than a baccalaureate degree. This fact was documented by the responses of students, counselors, and vocational educators on the questionnaire cited in the previous paragraph. The San Diego Metropolitan Area is an increasing population center and the demand will grow for information on local clerical, trade, and technical job opportunities.

A related need was the development of a program to provide information for school counselors concerning the vocational development and career plans of their students, information that would assist counselors in vocational guidance program development and in their work with individual students.

A Brief History and Description

In response to these needs, the Department of Education, San Diego County, on February 1, 1965, submitted a proposal for a pilot project to establish a Regional Career Information Center. Partial funding was provided by the California State Department of Education under the provisions of the Vocational Education Act of 1963 (P.L. 88-210). During

Phase One (February 1 - June 30, 1965) of this pilot project a needs assessment was undertaken to determine the type of career information desired by students and counselors and to devise appropriate procedures to disseminate the information to local schools. Extensive use was made of student reactor panels, advisory committees, questionnaire techniques, and outside consultants. At the termination of Phase One of this pilot project, a model system had been designed to collect, abstract, synthesize, produce, store, and disseminate career information to counselors, vocational teachers, advisers, and school administrators for use with students in the secondary schools of San Diego County.

The vehicle finally selected was a system based on use of the microfilm aperture card. Expendable elements in this system are inexpensive, can be easily updated and filed, and can be utilized directly by students and counselors at the school site as well as the Center itself. In addition, it is possible to key punch into the aperture card parameters pertinent to the specific occupation, including such items as minimum aptitude levels, sex restrictions, minimum educational level, special licenses required, and local training opportunities.

During Phase Two of this pilot project (July 1, 1965 - June 30, 1966), career information on fifty-five occupations in the hospital service field requiring less than a baccalaureate degree was disseminated on a pilot basis to six secondary schools in San Diego County. Student, counselor, and administrator evaluation was highly favorable and the decision was made to submit a proposal for a developmental project.

Developmental Phase 1966-67

The developmental project conducted during the 1966-67 school year produced career information for all occupations requiring less than a baccalaureate degree for which training was available in San Diego County. This resulted in approximately two hundred eight-page job descriptions. This information was disseminated to twelve participating schools and an evaluation of the materials and dissemination procedures was secured from the students, counselors, and school administrators.

During both the pilot and developmental phases each participating school was supplied a microfilm reader-printer (Filmac 400B) and a reader-scanner (DuKane Model 576-90). On the reader-scanner a student could read the information contained on an aperture card as he projected it on the viewing screen; then if he was interested in the occupation and wished to study further or discuss the information with his parents or counselor he could use the reader-printer to take a printout of the information on 8½- x 11-inch paper. The number of printouts that can be produced from one aperture card is unlimited and the cost per copy is modest.

In addition each school received the necessary supplies for the operation of the equipment (microfilm print paper and developing fluid), a deck of approximately four hundred aperture cards (containing two hundred eight-page occupational VIEWscripts) and several procedures manuals. (One deck of four hundred aperture cards and a Procedures Manual are filed with the reports.) Schools included in the 1966-67 developmental project (listed in Appendix B) also received a quantity of VIEW brochures (Appendix C) for distribution to their staffs.

The main body of information for each occupation, prepared in a standardized format suitable for conversion into microfilm form was contained in two occupational briefs. Sources of the information used in preparing the brief were publications from the regional and the state offices of the California Department of Employment, the Bureau of Labor Statistics, commercial publishers, and local employers. From these sources pertinent data were collected, abstracted, and synthesized. Each brief in its unconverted form consisted of four $8\frac{1}{2}$- x 11-inch pages. A standardized heading was also chosen--the acronym VIEW (Vocational Information for Education and Work), and the briefs were referred to as VIEWscripts. Each of the pair of briefs for an occupation was put on microfilm mounted in an aperture card by use of a processor-camera.

The first four-page VIEWscript contained information about the occupation which is generally applicable throughout the country. The order of presentation of the information, however, differed from conventional practice. Instead of beginning with a job description and a description of working conditions, a VIEWscript introduced the occupation with a very brief statement about the nature of the job accompanied by photographs of local workers on this job. A thorough look at criteria which aspirants must meet followed, including such items as physical health, verbal ability, and character. The second page of this VIEWscript contained a description of the occupation, its advantages and disadvantages, training required, salary, and other related information. The remaining two pages of the first VIEWscript contained general descriptive data about the requirements and opportunities of the occupation and references to further information.

The second four-page VIEWscript for the occupation contained pertinent local information, including a listing of local training institutions, a bibliography of locally produced studies and surveys relating to the field, and a listing of community resource people working in the occupation who agreed to talk about their occupations directly with individual students.

The use of a two-card format (Appendix D) make it possible for the more general descriptive data (pink card) to be prepared at a central location and the local information (green card) to be prepared regionally with the possibility of exchange between centers. All the aperture cards produced by the processor-camera became master film cards and were retained at the Career Information Center along with the master input documents. Using a card copier, Uniprinter 086,

VIEWscripts were produced from the master film card on less expensive duplicate aperture cards for distribution to school counseling centers.

Additional duplicate aperture cards could be copied from these second generation cards if a school district would wish to supply each of its schools with the VIEWscripts.

Other activities conducted during the developmental stage included the sponsorship of a summer career guidance workshop for school counselors to enable area counselors to gain experience in entry occupations and to prepare a counseling handbook of San Diego area entry occupations, a followup of graduates of local secondary school technical and vocational training programs, periodic inservice meetings with personnel employed in participating pilot schools, and the preparation of a filmstrip depicting the activities of the Career Information Center.

Objectives

Specific objectives of the Career Information Center during the Developmental Stage (July 1, 1966 - June 30, 1967) were:

1. Prepare, disseminate, and update occupational information for which local training is available to twelve secondary schools.

2. Conduct inservice meetings with counselors and teachers for the professional utilization of the VIEW materials.

3. Sponsor a summer career guidance workshop for counselors so they may have current experiences in local entry occupations to aid them in their work with students. Record and disseminate their reactions to this experience for the use of other counselors and students.

4. Followup selected graduates from training programs in local junior colleges to obtain their reactions to instruction received and their analysis of their current positions. Data obtained from this study could aid in updating VIEWscripts.

5. Prepare a filmstrip depicting the activities of the Career Information Center. This filmstrip would be used locally to orient students, counselors, and other school personnel to the services offered by the Career Information Center. Other geographic areas wishing to establish similar vocational guidance services would also find such a film helpful.

CHAPTER II

METHODS AND PROCEDURES

For the most part the methods employed by the Career Information Center in developing Project VIEW have already been described in Chapter I. Since the 1966-67 operation was partially an extension and an expansion of these earlier steps it will not be repeated in total here. Instead this chapter will, in part, be devoted to the operations and further developments during the 1966-67 school year. Specific evaluation procedures employed are also described.

Collection, Synthesis and Dissemination of Vocational Materials

Various occupational materials were identified and collected to form a general basis for the VIEWscripts that were developed by the Career Information Center. Prior to this the Career Information Center (CIC) staff surveyed the public post-high school training institutions to identify jobs for which training was available in San Diego County and which did not require a college degree. An unexpected result of this survey was the discovery that there were not two hundred such vocational curricula as had been expected, but due to various differences in nomenclature the institutions were in essence offering similar types of training in many instances.

Consequently, after these curricula were throughly covered with VIEWscripts, a major concern of the CIC was providing students with meaningful job descriptions. To accomplish this a close working relationship was maintained with the Department of Employment's Youth Opportunity Center in San Diego, which provided both local information as well as serving as a valuable critic and editor for the VIEWscripts before they were placed in the schools. Committees made up of representatives from business, labor, government, and service organizations also served in a similar capacity. Periodic informal surveys of counselors and students in the twelve pilot schools also provided help in selecting jobs to be presented in the eight-page VIEWscripts.

For a complete discussion and pictoral description of the procedures of the 1966-67 operation of the Career Information Center the reader is referred to the sound filmstrip and printed guide. A copy of this filmstrip and guide is being filed with each copy of the final report.

Evaluation Procedures - VIEW

The evaluation of the materials and their use in the pilot schools involved several phases each utilizing a different instrument. These were:

1. Immediate Student Reaction

   Immediately before and after using the VIEW aperture cards each student was asked to record his reaction on evaluation

cards provided by the Career Information Center (see Appendix E). These two cards elicited from the user his reaction to previous occupational information he had encountered and his comparison of it with the VIEWscripts concerning the understandability, realism, interest, completeness, and currency of the information. Other data collected by these instruments included referral source, frequency of use, grade level in school, high school grades, past vocational exploration, previous use of occupational materials, and other information.

Data collected by means of these instruments were recorded in two ways. First, the reactions of the students were tabulated and totals and percentages given for each of the questions. Second, a random sample of one-hundred students was drawn from the total questionnaires received and where applicable, the z statistic was used to ascertain the significance of change in the reactions of the students to other occupational information and then to the VIEW materials.

2. Later Student Evaluation and Use

In early June 1967 a random sample of students who had used the VIEW occupational file in each of the twelve participating schools was drawn and, using a questionnaire designed for this purpose (Appendix F), the reaction of these students to the VIEW materials and their use of the information presented in the eight pages was elicited. The responses were then totaled and presented in percentages.

3. Meetings with Student Groups

Group discussions were held with the students who had used the materials in the pilot schools. The purpose of these meetings was to more clearly and specifically identify student use of the project materials and to encourage any comments and/or criticisms that were impossible to determine through the use of objective-type instruments.

Summer Workshop in Entry Employment

The typical program of counselor education in institutions across the country offers candidates broad preparation in the field of guidance. Out of necessity, then, many areas of knowledge and skills needed by the counselors in the school setting receive brief attention in these programs. One such area is usually vocational-occupational information. Counselors also tend to have little knowledge of the experiences encountered by youth in their first employment after leaving or completing their formal training (Gerstein 1967).

A summer workshop in entry employment was held during the period June 27- August 5, 1966, enabling ten high school and junior college

counselors to study and observe the occupational patterns of selected organizations of business and industry and to relate their experiences to the career and educational counseling programs of the secondary schools and junior colleges. The chief objective of the workshop was to familiarize counselors with entry occupations in selected group of participating businesses and industrial firms in the Greater San Diego area. Emphasis was placed on developing competence in assisting the young adult to find entry into the labor market with high school or junior college terminal education. The participants spent four weeks on the job in entry occupations and two weeks in the classroom. The classroom activities were carefully articulated with the participant's experiences on the job. Extensive use was made of resource and consultant personnel during this workshop.

During the two weeks of instruction, the first and the sixth week, the focus was on theory and process of vocational choice. The group had the additional responsibility of producing copy for a document concerned with entry employment in San Diego. This document was then distributed to all secondary school counselors in San Diego County for use in counseling students.

Evaluation of Summer Workshop

Two procedures were used in evaluating the effects of the six-week activities. First, an evaluative questionnaire was administered to all counselor participants in both the summer 1966 and 1967 workshops (Appendix H). Second, an evaluation of the document VIEWPOINT, Entry Employment in San Diego was conducted with each school counselor in San Diego County receiving this questionnaire (Appendix I).

The use of these two instruments was to obtain the perceptions of the counselor participants as to the value of their six-week experiences and then to obtain a general evaluation of the timeliness and usefulness of VIEWPOINT in the various schools. Five copies of VIEWPOINT, Entry Employment in San Diego Summer 1966 Supplement are filed with the reports.

Junior College Follow-up Study

Meetings were held with representatives of the counseling departments and vocational education department in each of the six junior colleges in San Diego County. At these meetings, a questionnaire adapted from Dr. Kenneth B. Hoyt's Specialty Oriented Student Research Program was agreed upon (Appendix J), and it was decided that June, 1966, graduates or certificate recipients in the programs common to all six junior colleges would be included in this survey. This resulted in a sample of 331 students in the business, electronic, and drafting programs in these junior colleges.

Five uses to be made of the results were also agreed upon. These were:

1. To provide junior college personnel with information concerning students' reactions to their experiences and placement data regarding the graduates.

2. To identify the perceptions, reactions, and choice patterns of students who tend to be more satisfied with their experiences, as well as those who are disappointed with their experiences in post-college situations.

3. To use the results of 2 in helping to identify areas needing more or less emphasis in dealing with students who are enrolled or intend to enroll in junior college programs.

4. To provide high school counselors with a picture of students' perceptions and choice patterns as they are deciding on their post-high school plans.

5. To provide high school students with a description of these choice patterns and perceptions and their immediate results as seen by their peers.

Career Information Center Filmstrip

A script describing the operations of the Career Information Center was prepared and through the use of the audio-visual and graphic arts services of the San Diego County Department of Education, the necessary technical work was arranged. Work progressed throughout the year in preparing the filmstrip.

CHAPTER III

RESULTS AND DISCUSSION

VIEW Utilization and Evaluation

During the developmental phase of the project, two slightly different evaluation instruments were used in obtaining the immediate reactions of the students using the VIEW files. The reason for these separate instruments was brought about by a preliminary totaling of the reactions of the students at the end of the first semester of the 1966-67 school year. It was found at that time that the student ranking of the information may have been influenced by the great amount of preparation and advertising of the VIEW project and VIEW materials in the pilot schools. This and the wording of the questions on this instrument, it was thought by the project staff, may have influenced the evaluations of the students. This point arose in particular with the questions numbered 6 through 11 on the Before questionnaire. Copies of the questionnaire used during this time period are contained in Appendix E. From these questionnaires, one can see that the questions asked of the students were in a prompting vein. For example: How understandable do you expect the information to be? How realistic do you expect the information to be? It was felt that the great amount of school publicity given to the project, and the work of the counselors in the pilot school may have increased the expectations of the students to such a degree that an objective evaluation would be impossible. In view of this, the Before questionnaire was changed, as can also be seen in Appendix E, to read in place of "How understandable do you expect....." to "If you have used occupational information before.... how understandable was that information....how realistic was that information...," etc. Consequently, these results and discussions were divided into three sections: First, the section using the "old" evaluation cards (October 1966-February 1967), second, the section using the "revised" questionnaires (March 1967-May 1967), third, the total utilization by the students in these schools (October 1966-May 1967), but eliminating in that section the evaluation questions 6-10 and 31-36.

VIEW Utilization and Evaluation October 1966 through February 1967

In Table 1(a) it is shown that the students using the VIEW materials during the first semester of the 1966-67 school year for the most part were referred to these materials by a teacher or a counselor and few of the students returned after using the materials for the first time. Generally, these students were high school students and the greater percentage of them were in the 11th or 12th grade. Most were receiving approximately average grades in school. Many of the students had decided just recently to investigate the occupations which they had viewed in the aperture card files and a majority of these students indicated they had seldom or never used occupational information previous to this time.

Percentage	(.6)	(2.3)	(15.7)	(25.9)	(55.4)	

Paradoxically, over 80 percent of these students also said they had done at least some previous investigation of the occupations or occupational areas they were looking at. When asked a similar type of question on the After questionnaire (Table 1 (b)) 65 percent of the students again indicated they had not used other types of information. Possibly students do not have a clear idea of what occupational information consists of. Table 1(b) also shows that of those who had used other types of information over one half of these felt the VIEWscripts were better than other occupational information. Approximately one half of these students used both the general information (pink) card and the local information (green) card, while a third of the students used only the general information card and a small percentage viewed the local information only. The reader-printer alone or in conjunction with the reader-scanner received the greatest amount of usage and a great majority of the students did take a printed hard copy of the information on the microfilm aperture cards.

VIEW Utilization and Evaluation - March 1967 through May 1967

Table 2(a) presents the results of the revised questionnaire used from March through May 1967. A total of 501 students completed, at least partially, the Before questionnaire, and 527 answered some or all of the questions on the After questionnaire during this period. Self-referrals during this period increased (from 17 percent to 42 percent) while teacher referrals declined slightly and counselor referrals dropped sharply. Apparently, less emphasis was being placed on getting the students to the VIEW files. Table 2(a) also indicates that a majority of the students used the VIEWscript aperture cards just once with small percentages returning for a second or third time.

A greater percentage of the users during the March through May period were 12th grade students. High school students in general made the greatest use of the equipment. Again, the majority of the students perceived themselves as being or receiving average grades in their high school careers and for many the decision to investigate the occupation or occupations was a recent one. Approximately one half of these students indicated they had not used occupational information previous to coming to the VIEW files, yet over three fourths said they had looked into the occupation previously. In Table 2(b) it is shown, as before, that when these students were asked after using the VIEWscripts to compare the materials with other information they had read, most students indicated they had not used other types of information. However, of those who had used other types of occupational information, over one half rated the VIEWscript materials as better than the information they had previously read. Table 2(b) also shows that approximately one half of the students during this period indicated that they had used both the general information (pink) card and the local information (green) card, while a third used the general information card only. Again, the reader-printer alone or in conjunction with the reader-scanner was used by most of the students. Of the students using the VIEW materials during this time period over three fourths of them took a printed hard copy of the materials.

Table 2(a) presents the number, percentages, and mean ranking of the students of previous occupational information before using the VIEWscript occupational materials. The wording of these question (6-11) is slightly different than that used in the similar questions in October through February evaluation. In this evaluation, the student was no longer asked for his expectations of the materials he was about to read but instead his evaluation of materials he had read previous to this time. The means presented in Table 2(a) when compared to the means for comparable items for Table 2(b) do show that in all instances students gave a higher ranking to VIEW materials than to the occupational materials they had previously come in contact with.

Total Sample and Summary

A summary of the VIEW utilization from October through May is presented in Table 3. From these results it appears that referrals to the VIEW equipment generally came from a teacher, a counselor, or the student himself, that a great majority of these students used the materials only once and that users were usually high school students. These students for the most part had received average grades in high school. The decision to investigate the occupation was usually a recent one and the students who used the file were generally novices at this type of investigation in that many indicated they had not used occupational information previous to coming to the VIEW occupational files. Obviously, then, the VIEW dissemination media attracted many students to investigate career opportunities for the first time. Of those students who did have come comparison basis for evaluation of VIEW (had used some other types of information) the majority considered the VIEW occupational materials better than the occupational materials they had previously used. Approximately one half of the students used both the general and local information, while a third of the students used the general card only. The reader-printer, either alone or in combination with the reader-scanner, was used by over three fourths of the students, while only 17 percent of the total sample used the reader only. These proportions are emphasized by the fact that 80 percent of the students did take a printed copy of at least some of the materials in the VIEW file.

When students were asked to rank the overall method of presentation of the VIEW materials, over three fourths indicated they "very much" or "extremely" liked this method.

In reviewing the utilization of the VIEW occupational file throughout the year or during the two time periods specified, it is evident that the amount of counselor referral to the file diminished toward the end of the school year. This may be explained by the concentration of effort early in the year when the materials were being introduced. As the VIEW occupational file became better known during the year and as students used it for a second or third time, it appears that this was done either on their own or through a teacher. Although it has been previously pointed out the majority of the students using the VIEW materials had received average grades in high school (B+, C, or C's), it also should be noted that slightly less than one half perceived themselves as "C" or below "C" students. Assuming such achievement level perceptions as accurate, it appears that many work-oriented and terminal students did not take advantage of the job descriptions in the VIEW files, many of which required little or no formal training beyond high school. Apparently more effort is needed in making the work-oriented or the specialty-oriented student aware of the existence of this material in the counseling center and aiding him to use the information most effectively. Although with some ambivalence, as was previously pointed out, a majority of these students did seem to be indicating little past utilization of occupational information. This lends support to the VIEW system of disseminating occupational information to students. Students who in the past made little use of such information did utilize the microfilm aperture card media of presenting information.

A total of approximately two hundred occupational descriptions were provided to the schools during the 1966-67 developmental phase of the VIEW project. Since these were prepared continually through May 1967 not all of the occupations listed in Appendix K were available throughout the year. When students did view the occupational descriptions, a record was kept of the specific occupations selected. The frequency of use of the various job descriptions can be seen in Appendix L. Appendix M contains a partial listing of occupations by high school subjects applicable to the jobs. These indexes were provided to all schools participating in the project.

Student Evaluation of VIEW Materials - Statistical Analyses

Due to the large number of students utilizing VIEW materials and completing the Before and After evaluation cards, and because of limited project funds for computer programming and processing, a random sample of these evaluation cards was chosen for purposes of further statistical analyses. The Before and After reactions of one hundred students who used VIEW between March and June 1967 were recorded and a difference score was computed for each student concerning his reaction to the helpfulness, understandability, realism, interest, completeness, and currency of the VIEW materials and other materials he had viewed in the past. Only students indicating they were using the VIEW materials for the first time and who had used

other occupational information previous to looking at the VIEW materials were included in this sample. The raw data for each of these statistical analyses is included as Appendix N.

Table 4 contains a summary of the statistical analysis for each of the questions and the z score computed in each case. The level of significance chosen for each of the analyses was set at .001 to provide maximum protection against a type one or alpha error (rejecting a true hypothesis). It was felt that this type of error would be the most serious for the purposes of the project. The hypothesis under consideration was the "null hypothesis" — that the mean of the difference scores for these 100 students was zero or that the difference between the mean of the Before reaction and the mean of the After evaluation of these students equaled zero ($u_D=0$). A two-tailed statistical test was employed with the alternate hypotheses being the mean of the difference score being greater than zero ($u_D>0$) and the mean of the difference score being less than zero ($u_D<0$).

TABLE 4

ANALYSES OF DIFFERENCE OF
STUDENT REACTIONS
(Before and After)
USING VIEW

N = 100

	$\bar{D}$	$\tilde{\sigma}_{\bar{D}}$	z*	Sig.Diff.P
Helpfulness	+ 36	+.1059	+3.3994	<.001
Understandability	+.39	+.0952	+4.0966	<.001
Realism	+.45	+.1192	+3.7751	<.001
Interest	+.50	+.1235	+4.0486	<.001
Completeness	+.51	+.1326	+3.8462	<.001
Up-to-date	+.59	+.1288	+4.5807	<.001

*R: $z \geq +3.29$ and $z \leq -3.29$

Table 4 shows that in all cases the hypothesis of "no difference" ($u_D=0$) was rejected at the .001 level in favor of the alternate hypothesis that the difference was greater than zero ($u_D>0$), indicating that the students do find the VIEW materials more helpful, understandable, realistic, interesting, complete, and up-to-date than other occupational information they had looked at in the past.

Later Student Evaluations

In June 1967 student users in the twelve pilot schools were randomly sampled and administered a questionnaire concerning their reactions to the VIEW materials after they had been exposed to these materials and some time had elapsed to give them an opportunity to follow through on the information presented. A total of 175 students in grades 9 through 12 were included in this sample and 172 usable questionnaires were received. Complete results are presented in Table 5. Generally, this survey confirms that the majority of the students (69 percent) in the school used the VIEW materials only once or twice and when asked the reason for the limited use of the materials indicated that they were after specific information or information on a specific occupation and had no need to return. Obviously, the majority of these students were not exploring occupations in general. Approximately one half of the students of the sample had made use of the printed sources of additional information provided in each of the VIEWscripts, but of these most used these sources only once or a few times.

	Some	64	43	None	0	0

The resource people in the community who had agreed to talk with students about their job and were listed in the VIEWscripts were not used by a large percentage of the students (84 percent). The aid of a counselor in verifying and utilizing the information they had obtained on the VIEW cards was also generally ignored by these students. Eighty percent indicated that they had never visited or made an appointment with their counselor after using the VIEWscripts. Professional utilization of the VIEW materials in counseling situations with students seems to have been generally lacking in the schools.

Parents faired a little better in the utilization of the VIEW materials. A majority of these students indicated they sometimes or usually discussed the VIEWscripts with their parents.

Eighty-seven percent of the students surveyed indicated that they did take a printed copy of the information which they viewed on the microfilm reader or reader-printer and a majority of the students limited these print-outs to four pages or less. The first four pages of information or the general information were the pages most often printed out by the students. The local information, or the information contained on the green microfilm aperture card was printed out by few of the students.

Many of these students did feel that the information contained in the VIEWscripts did seem to have some (43 percent) or very much (32 percent) of an effect on their choice of a career. When these last results are viewed in light of the small percentage of the students who did contact the counselor after viewing this material, it is evident that many of these students are using these materials for career decisions without the professional aid of the counselor. Obviously, more inservice work must be done with these counselors to aid them and to encourage them to work with students in the vocational

guidance area. It must be pointed out in these inservice meetings that the VIEW materials and equipment relieve the counselor of much of the information retrieval and giving, thus allowing him more free time to devote to counseling with students about their career problems and using this information in the counseling session.

Finally, when these students were asked which parts or part of the VIEWscript were of most use to them, the majority of the students limited their comments to the information contained in the first three pages of the general VIEWscript, a fact that is also emphasized by the fact that it is these pages that were printed out by the students the most. Such information as qualifications, training and schooling needed, and salaries were mentioned frequently by these students in response to this question. Also mentioned frequently, but not printed out as frequently as the first four pages, was the value of local information and sources of additional information. The fact that this information was readily available to the student at all times was also mentioned by some of the students as a valuable aspect of the materials.

In summary, students generally seem to use the VIEW occupational file only a few times, occasionally use the additional sources of information listed, seldom make use of the resource people listed on the VIEWscripts, and very seldom contact their counselor about the information and career decision-making that results from their investigation. Many of the students take printed hard copy of the vocational information and take this home to discuss with their parents. These pages are generally the general information only and are perceived as having some effect on their current choice of a career.

Generally, in these questionnaires and in informal panel discussions with students the reaction to the system was favorable with the main criticism being the need for information on more occupations. A need for college and scholarship information in a similar type of presentation was also expressed by students included in the panel discussions.

Counselor Reaction

Periodically throughout the year, meetings were held with counselors in the twelve pilot schools of the VIEW project. Informally at these meetings, the project was discussed and the reactions of the counselors were obtained. Generally, the reactions or comments were favorable, with the main concern of the counselors being the limitations of the VIEW materials to non-baccalaureate jobs. As a group they felt an extension of the VIEW concept to professional level jobs and other types of information would be of great aid to them in working with students.

In June 1967 a formal questionnaire (Appendix G) was sent to

these counselors soliciting their evaluation of the VIEW project in their schools. The results of this survey are presented in Table 6.

TABLE 6

COUNSELOR REACTION TO VIEW

	Same	1	4	Much better	10	48

*Some shared clerical duties, thus percentage exceeds 100.

Generally, the twenty-one counselors returning the questionnaire indicated that in their estimation student reaction to the VIEWscripts was either favorable or very favorable. In no instance did they perceive student reaction as unfavorable. Approximately two thirds of

the counselors indicated that the use of other vocational information increased since the installation of VIEW materials. Approximately three fourths of these counselors indicated that there was at least some increase in interest from the total school staff in vocational guidance since the VIEW project was initiated in their school. All the counselors surveyed indicated they did use VIEW materials in classroom activities. This classroom use of the VIEW materials ranged from business English classes to vocational units, with many types of classroom units utilizing the materials. The most common usage of these materials was in the vocational or career units conducted in many of the high schools.

Clerical responsibility for the VIEW materials was usually assigned to a secretary, although in some instances these responsibilities were shared either with a counselor or with student help. When respondents were asked what in their opinion was the most valuable aspect of the VIEW project, there was little agreement. All aspects of the program were mentioned including the availability of local information, the motivational aspect of the microfilm, the up-to-date information, the clear and concise presentation of the information, the availability of source material, as well as the local reference people. The majority of the counselors responding to the questionnaire rated both the material content of the VIEWscripts as well as the total VIEW system of dissemination much better than other occupational information content and systems. In comparing the use of the VIEW materials to student use of other such materials, 96 percent of these counselors indicated that student utilization of VIEW materials was better or much better than the others.

All respondents to the questionnaire served in a counseling capacity at their schools and all held at least the California General Pupil Personnel credential. The experience of these respondents ranged from two years to twenty-two years of teaching experience and from one year to twelve years of counseling experience. When asked how they saw VIEW as aiding the counselor, most respondents indicated that the information-gathering and dissemination function of the counselor would be relieved, especially in view of the fact that materials of the VIEW project represented local information and information on non-baccalaureate occupations which is usually difficult and time consuming to obtain.

Generally, the counselors in pilot schools had a very favorable reaction to the VIEW project and indicated that the vocational guidance aspect of the school was greatly aided by these materials. They also felt that student reaction to the materials was at least favorable, a feeling which is supported by the student reactions reported previously.

A more informal counselor reaction to the VIEW project can be found in Appendix O containing letters received from counselors as the developmental phase of the VIEW project reached an end in June 1967.

In summary, the counselors in pilot schools indicated that VIEW is of value in counseling with students, in relieving counselors of the drudgery of collecting and disseminating occupational information, and in aiding the classroom teachers in various activities.

Summer Workshop for Counselors in Entry Employment

The workshop and study of entry occupations was attended by ten area educators from June 27 through August 5, 1966. The promotional materials for this workshop, the program, and a profile of the participants in both the 1965 and 1966 summer workshops are included in this report as Appendix P. A copy of the questionnaire sent to the participants is shown in Appendix H. A summary of the questionnaire administered to these nineteen participants is contained in Table 7.

(G) Recommend Similar Experience For Counselors and Other Professionals Who Work With Youth in Career Planning:

	1965	1966	Total
	N = 9	N = 10	N = 19
Yes	9	10	19
No	-	-	-

It is evident that a majority of the participants in these two summer programs felt that they had become familiar with entry occupations in the San Diego area, saw the on-the-job experience as the most valuable aspect of their workshop experience, and ranked writing VIEWPOINT as a valuable or very valuable experience. Most participants felt that they gained the most information concerning entry jobs available in San Diego County, personnel practices of local

businesses and industry, and entry level job experience and saw the greatest utility of the workshop experience in later counseling sessions with students concerning careers. The workshop experience was viewed as helpful or very helpful by most participants, and all recommended a similar experience for counselors and other professionals who work with youth in career planning.

Evaluation and Reaction to VIEWPOINT

The document produced by the participants in both the 1965 (VIEWPOINT 1965) and 1966 (VIEWPOINT SUPPLEMENT 1966) workshops was distributed to all schools in San Diego County. In February 1967 a questionnaire was sent to all pupil personnel workers in San Diego County. The complete results of this survey are contained in Table 8. A copy of the questionnaire is included in Appendix I.

TABLE 8

EVALUATION AND REACTIONS TO VIEWPOINT 1965
and
VIEWPOINT SUPPLEMENT 1966

(A) What Position Do You Now Hold?

100%	

VIEWPOINT as a counseling tool:

34%	Very valuable
44%	Valuable
15%	Of some help
2%	Of little help
5%	No opinion
100%	

Your estimate of student reaction to VIEWPOINT 1965

14%	Very favorable - high interest
33%	Favorable - seem to like it
18%	No unusual reaction - same for other occupational information
0	Unfavorable - do not like it
35%	No opinion
100%	

Of the 103 counselors, administrators, and teachers who responded to the questionnaire, approximately one half indicated that they had used VIEWPOINT in the past. Of these, most indicated that they had used it

in conjunction with the student occupational information file and in counseling with individual students. Approximately one fourth of the respondents said that VIEWPOINT was used as a reference in their occupational classes. Fifty-seven percent of the respondents who did indicate using VIEWPOINT indicated that the use of this document by students greater than the use of other local occupational information. Thirty-six percent of this group indicated that usage was approximately the same as other local information.

In comparing the usefulness of VIEWPOINT with other local information, 70 percent of the total respondents indicated that it was better or much better and only 4 percent indicated that it was not as good. Over three fourths of the total sample rated VIEWPOINT valuable or very valuable as a counseling tool and none saw student reaction to VIEWPOINT 1965 as being unfavorable, while 47 percent indicated that student reaction to this document was either favorable or very favorable.

A possible explanation for the large percentage (52 percent) of respondents who indicated they had not used VIEWPOINT in the past is that the VIEWPOINT in question was VIEWPOINT 1965. It is likely that some of the respondents who answered the questionnaire had not received VIEWPOINT 1965 since only one copy had been sent to every school. Others may have been new to their positions and had not received nor had an opportunity to use the previous VIEWPOINT. Five copies of VIEWPOINT, Entry Employment in San Diego, Summer 1966, Supplement are filed with these reports.

In summary, the summer workshop in entry employment was seen by the participants as a valuable experience in their later interaction with their students in their school and in gaining knowledge about local employment personnel practices and employment in an entry level job.

The reaction of industry to this type of interaction with the schools in San Diego County has been favorable. Participating industries have indicated a willingness to support the program on a continuing basis.

The reaction to VIEWPOINT by school personnel and by students was generally favorable. Generally, all counselors indicated that this document was of value to the students and staff and that it filled a void by providing local occupational information where very little had previously existed.

Junior College Follow-Up Study

All students who had graduated or received their Certificate of Competence in June 1966 in one of three vocational programs in the six junior colleges in San Diego County were included in this survey. This resulted in a total sample of 313 students. Three mail outs to

these students netted a return of 224 questionnaires or approximately 71 percent. Business, electronics, and drafting were the three training programs selected since they were the only programs common to all junior colleges in the county. The percentage of response to selected questions on the Junior College Follow-Up Questionnaire are shown in Table 9. These responses are reported for each program and for total sample. The complete results of this survey by total sample and by school majors are included as Appendix Q.

Caution was used in interpreting the results of this study for three reasons. First, the number of respondents in the three programs differ greatly, with electronics and drafting programs having a small number of students, and business programs a large percent of the total sample. Second, there is an unexplainable large number of no responses to many of the items throughout the questionnaire. Apparently, although a large percentage of these students returned the questionnaire, few completed the entire instrument. Third, no statistical analyses were performed on any of the differences in the percentage of responses in the different groups; consequently, any results can at best be interpreted only as trends.

From Table 9 it is evident that many of these students, as a total group, perceive themselves as being approximately average or a little above average, do not use the services of their high school counselor, and tend to make the final decision on attending junior college in high school. Approximately one half of these students do visit a junior college before enrolling and consider the nearness of the school as a deciding factor in their choice. They perceive themselves as being somewhat independent (encouraged by no one) and decide on their occupation late in their high school career or just prior to entering junior college. Many change their program after once entering junior college (from a college transfer program), perceive the instruction or information they received as new, and take no further training after leaving junior college. The first job for these students is usually related to their training and many hold their junior college in high esteem and feel their training aids them in obtaining their first job and doing better work on it. For the most part, these students are satisfied with the first job they receive. For many of these students, the first job they received was within 25 miles of their home and community. Approximately 50 percent of these students perceive this job "as good as" or "better than" they had expected, yet over one half of these students leave this first job within one year after junior college training. Many of the students would repeat the same choice of a training program and school if given the opportunity, while almost two thirds of these students would repeat their choice of a training program.

Students enrolled in the business programs in the junior college differed very little from the total sample. This, of course, would be expected since these business students comprised approximately three fourths of the total sample.

TABLE 9

PERCENT OF RESPONSES OF FORMER

JUNIOR COLLEGE STUDENTS TO

SELECTED QUESTIONS BY MAJORS AND TOTAL SAMPLE

ITEM	Total (N=224)	Business (N=166)	Electronics (N=31)	Drafting (N=27)
Middle Two Quarters of High School Class	67	67	58	74
Visited with high school counselor	25	21	26	44
Visited with no counselor	54	55	55	00
Made final decision in high school	58	58	45	67
Visited junior college before enrolling	49	49	35	63
Closeness of school dwelling factor	50	48	45	70
Encouraged by no one	50	48	61	48
Decided 6 months or less before junior college on occupation	52	54	38	52
Decided on occupation at least one year before enrolling in J.C.	29	25	45	37
First program was college transfer	45	49	23	41
All or most was new information	62	61	71	63
Took no further training after J.C.	44	49	29	30
First job was exactly or somewhat related to training	53	51	71	37
Rate their J.C. above average or high	63	62	77	59
Training helps them to do a better job	65	64	81	52
Utilization of skills-most liked aspect of job	19	17	32	15
Money is most liked aspect of job	12	11	19	7
Probably or definitely did not need J.C. training to get present job	38	43	19	26
Satisfied or very satisfied with first job	47	48	58	34
Feel certain or very certain first job was what they can do best	41	40	52	37
First job was within 25 miles of home	57	57	65	48
First job was as good as or better than expected	46	44	62	45
Left first job within one year after J.C.	55	57	48	48
Would repeat exact same choice	48	51	39	44
Would take a different course (regardless of school)	20	18	19	26
Would take same course (regardless of school)	64	69	49	55

It appears that more electronics students seemed to perceive themselves as being encouraged by no one and saw their first job as being related to their training more often than did students in either business or drafting curriculums. These electronics students also tended to rate their junior college as above average or high and perceived the training they received at the junior college as helping them to do a better job more often than did the other two groups. The electronics students were also more often satisfied with their first job and more of them saw this job as utilizing their best skills. More electronics students also tended to stay within 25 miles of their home and community and felt their first job fulfilled the expectations they had for this job. Electronics students, less often than the students in the other two curricula, enrolled in a college transfer program as their first program at the junior college, less often took further training after leaving junior college, and conversely less often said they would repeat exactly the same choice of school and training. Electronics students more often than students in the other two groups also saw utilization of their skills as their most liked aspect of their job and had decided earlier on their occupation than did students in the business and drafting programs.

Drafting students as a group differed from students in the other two groups in that more of them saw themselves in the middle two quarters of their high school graduating class (no drafting student indicated he was in the bottom quarter of his graduating class), indicated that they did visit with a high school counselor (none of the drafting students indicated they had not visited with a counselor), and did make the final decision to attend a junior college while still in high school. More of these students also visited the junior college before enrolling and saw the nearness of the school as the deciding factor in their choice.

Drafting students, less often than students in either of the other programs, perceived their first job as being related to their training and less often were satisfied with this first job. Drafting students also saw money as the "most liked" aspect of their job fewer times than did the students in electronics programs. Few of these drafting students, like the electronic students, indicated that they took further training after leaving the junior college. It should be noted, however, that most of the electronics and drafting students were male and consequently did take some further training in the military service. This finding is supported by the response of the students in these two groups to Item 21F on the questionnaire (see Appendix R).

It should be noted that with the major exceptions noted above, in few instances do responses exceed 50 percent to many of the questions. Many of these students, it seems, regardless of program were responding to many of these questions in what could be termed a negative manner. For example, approximately 50 percent of these students

did not indicate their job was exactly or somewhat related to their training, did not indicate they were satisfied with their first job, did not indicate that the job was "as good" or "better than" they had expected, would not repeat exactly the same choice, did take further training their first year after leaving junior college, did not visit the junior college before enrolling, and did not feel that their first job was what they could do best.

Summary

As a total student group, the junior college graduates or certificate holders in the business, electronics, or drafting curricula of the San Diego junior colleges are approximately 21 to 25 years old and perceive themselves as ranking approximately in the middle of their high school graduating class. They obtained information on their educational choice from many and diverse sources but for the most part did not rely upon the help of their high school counselor, yet the majority of them did make the final decision to attend junior college while still in high school. These students tended to choose the junior college because of its nearness and perceived themselves as being rather independent in this choice. As a group, these students also tended to choose their occupation late in the senior year of high school or after. Many switched programs from a college transfer to terminal programs after they had once entered the college. Most of these students chose their job close to their home town and approximately half of them changed from this first job within the first year after leaving junior college. Generally, approximately half of these students indicated that they were satisfied both with their choice of school and choice of training and would repeat these choices again if given the opportunity.

Although no definite conclusions can be drawn from this survey, there is indication that many of the decisions that these students make in high school are neither well planned nor implemented later on. Planning is done in many cases without the help of a school counselor or any type of professional aid and quite often dissatisfaction is experienced in later years.

Electronic students more than the others seemed to indicate a greater satisfaction with their training and with the first job they received as a result of this training. Conversely, it was this same group which indicated less often than the other students that they would repeat this same choice. Drafting students, on the other hand, seemed to take advantage of the counseling help available to them during high school and seemed also to put forth more effort in investigating the school before enrolling, yet they less often received a first job related to their training and seemed to be dissatisfied more often with that job.

CHAPTER IV

CONCLUSIONS, IMPLICATIONS, AND RECOMMENDATIONS

Student Reaction and Evaluation

Students, when made aware that pertinent information does exist and is available to them, will make use of this information in their decision making. This is supported by the fact that over 1700 students in the twelve pilot schools did take advantage of the VIEW files and a majority of these students indicated that previously they had never or had infrequently used information of this type. Apparently the VIEW system motivates students to use occupational information. Another aspect of the VIEW materials utilized by the students is the print-out capability of the system. These printed copies were often carried home by the students for discussions with their parents. The use of the materials at school in conjunction with a counselor was generally ignored by most of the students and points to the need for further work in the area of staff utilization of the VIEW materials.

The evaluation of the students in ranking the VIEW materials in comparison with other materials of this nature was generally favorable, indicating that the VIEW approach to occupational information both in the media used and the content and format of the occupational information itself is viewed by the students as being of more value than the information they had used in the past. When one combines the favorable reaction of the counselors and students to this material in conjunction with the fact that the microfilm aperture card facilitates storage and retrieval and allows for a continuous updating of the information, it is evident that the system developed by the San Diego County Department of Education Career Information Center holds promise for utilization in school systems throughout the nation. This is emphasized by the development of similar systems utilizing both the VIEW microfilm aperture card approach and the developmental research of the VIEWscript format and content in various geographic locations, including New York State, Colorado, Utah, and several counties in California.

Counselor Reaction

The reactions of the counselors to the VIEW project indicate that the VIEW concept of an occupational file is wanted, needed, and enthusiastically supported by the counselors in the pilot schools. Many of the counselors in these schools noted that both an increase in the use of other vocational information by students, as well as an increase in the interest of other faculty members in the vocational aspect of the guidance services. The frequent use of VIEW materials in classroom situations emphasizes the future implications of the materials for these purposes. Generally, counselors saw the VIEW materials as relieving them of the task of gathering and disseminating information to students. Apparently,

from other evaluation instruments used in the project, the time saved by the counselors was not used in counseling with these students regarding the information they had received. Students seemed to have been left on their own to obtain the information from the VIEW files with no concentrated effort made to counsel with the students to verify the information and choices they were making. VIEW, as pointed out by this survey, is enthusiastically supported by the counselors and was shown to be frequently utilized and favorably evaluated by the students. There is, however, definite need to work with counselors concerning the effective use of the VIEW information or any information in counseling with students. The VIEW program to date has concentrated on student needs and on providing students with realistic up-to-date vocational information. The next step for the project will include concentrated inservice work with the counselors and staffs in the schools where the VIEW project is in operation.

Summer Workshop for Counselors in Entry Employment

The reactions of the counselors who participated in both the 1965 and 1966 summer workshops in entry employment recommend such experiences for other counselors working with youth. Such an approach provides the working counselor with a valuable source of inservice education in both academic training and personal experiences in entry types of employment. The reactions of San Diego business and industry to this workshop has shown that such community groups are willing to provide time and financial compensation to educators for such an experience. The experiences and results evident in San Diego indicate that such an approach is feasible in many areas where community groups and educators plan together to increase the effectiveness of counselors for the work-oriented students. The reaction to and the use of VIEWPOINT, Entry Employment in San Diego in the schools has shown that the knowledge and experiences gained by participants can be shared throughout the school system or school systems. Such a program as conducted in San Diego County is recommended for its value to students, participants, and other counselors, as an effective means for promoting better working relationships between the school and community.

Junior College Follow-up Survey

Although, as indicated previously, no definite conclusions can be drawn from the Junior College Follow-up Study of graduates and certificate holders in business, electronics, and the drafting programs of the junior colleges in San Diego, definite implications are evident from these results. Foremost among these is a need for both high school and junior college counselors to devote more time to students in their decision-making process involving the choice of post-high school training and subsequent careers. These results indicate that more efforts on the part of both the high school and junior college faculties should be devoted to these students to aid them in the process of both their immediate and later career choices. For many of these students it appears that the choices regarding these matters are an individual

matter and these choices later on result in both changes in training goals and occupations. Generally, then the results indicate a need for more aid to be made available to these students. There also exists a need for further study of these students to ascertain whether the differences and trends reported in this survey would be repeated in a more sophisticated repetition of this study. The major implication of this survey then serves as a warning and a guide to educators in both their interactions with these students in the future and for similar types of research into the perceptions held by these students of their high school, junior college, and later experiences.

Evaluation Summary

The operations of the Career Information Center during the 1966-67 developmental phase of Project VIEW have illustrated several advantages of the microfilm aperture card adaptation to the problem of providing meaningful occupational information for the use of the students and counselors. These are:

1. Counselors perceive the VIEW materials and approach as an aid to the in implementing their guidance programs. This aid was seen as relieving them of the time-consuming task of collecting and disseminating occupational information to their students and at the same time providing an increase in information.

2. The VIEW system attracts many students to the use of the occupational files who typically had not used such information frequently in the past.

3. Student reaction to all phases of the VIEW project was favorable, and they perceived this information as being of aid to them in making their career choices.

4. Counselor enthusiasm for and promotion of a service of the counselor service (e.g., occupational information) leads to a greater participation by the total staff in this aspect of the guidance service, both in referrals from teachers and the use of this service within a classroom setting.

The activities of the Career Information Center during the 1966-67 school year have also shown that:

1. A summer workshop providing both instruction in vocational guidance and experience in entry level occupations is perceived by counselors as a valuable and worthwhile experience and an aid to them in their future interactions with students.

2. The reaction of the community to both the VIEW project and the summer workshop for counselors was favorable. Representatives of community services, industries, and businesses freely gave of their time and talents in both the preparation of the VIEW materials for the schools and for providing vocational experiences and financial reimbursement for workshop participants during the summer. Both activities have created closer working relationships between the San Diego County Department of Education and schools of San Diego County with the local communities.

3. The vocational training provided by the junior colleges in San Diego County is perceived by these students generally in a favorable light with most students seeing this training and experiences in the junior college as valuable and necessary in their chosen occupations.

Specific needs were also revealed during the year as a result of the evaluations and surveys conducted by the Career Information Center staff. These include:

1. A need for more effort in making students aware of the aid available to them in the counseling center of the various schools.

2. A need for more counseling and guidance with students who do not plan to attend a four-year college. Many of these students it was shown, change their level of aspiration once after entering their junior college training and many are not satisfied with the occupation they do enter after leaving their vocational training courses in the junior colleges. This was emphasized by the large percentage of students who received jobs unrelated to their training, who changed majors after once entering the junior college, who felt they were not using their abilities to their best advantage on the job they held, and who changed jobs within one year after leaving their junior college training. This need was also pointed out by the large majority of these students who wait until late in their senior year of high school or just previous to entering junior college before deciding upon an occupation in which to seek training. The trends from this survey have also shown that students do make the decision to attend a junior college while still in high school, evidently without the aid of a counselor. And many of these students do not investigate this training beyond the secondhand information received through catalogs and other brochures released by these institutions.

Generally, the Career Information Center has shown that the providing of occupational information via microfilm aperture card provides valuable and useful information to both students and counselors, and with a more concentrated effort on the part of the guidance personnel working with the students, this system can be utilized to provide an even more effective vocational guidance service in the schools.

APPENDIX

APPENDIX A

OCCUPATIONAL INFORMATION QUESTIONNAIRE FOR JUNIOR COLLEGES OF SAN DIEGO COUNTY

JUNIOR COLLEGE STUDENT SAMPLE - PERCENT OF TOTAL RESPONSES

TOTAL N = 856

General Information

1. Check One	Male	61 / 521	Female	39 / 334			
2. Check your class	Freshman	71 / 603	Sophomore	29 / 244			
3. Check your plans for after junior college	Job	19 / 165	Further education and training	70 / 592	Undecided	11 / 94	
4. Check your past use of career or occupational information	Little or no use	34 / 292	Some use	54 / 451	Great deal of use	12 / 100	

Introduction

Much time, money, and effort have been devoted to the collection, classification, and distribution of occupational information to students. People such as yourself often do not utilize this information. We wish to determine why this is so and what might be done to provide students with the kinds of occupational information most important to them in making career plans.

Your cooperation in completing this questionnaire will help in this effort to determine:

What information about occupations is of the most worth to junior college students.

How it can be prepared in the most meaningful way for junior college students.

How it can be disseminated most effectively for junior college student use.

PART I. WHAT INFORMATION ABOUT OCCUPATIONS IS OF THE MOST WORTH TO YOU?

Instructions for filling out Part I of the Questionnaire

Please indicate how important the following kinds of information about occupations are to you.

RATE EACH ITEM ON A SCALE OF 1 TO 5, PLACING A ✓ IN THE APPROPRIATE BOX WHERE:

1 = NO IMPORTANCE TO ME
2 = LITTLE IMPORTANCE TO ME
3 = SOME IMPORTANCE TO ME
4 = IMPORTANT TO ME
5 = VERY IMPORTANT TO ME

PERCENT OF TOTAL RESPONSES

	1 No importance to me	2 Little importance to me	3 Some importance to me	4 important to me	5 Very important to me
A. DESCRIPTIVE INFORMATION ABOUT AN OCCUPATION					
1. History of the occupation	8	30	36	21	5
2. Social status of the occupation	5	11	34	39	11
3. Contribution of the occupation to society	2	6	23	41	28
4. Dictionary Of Occupation Titles code numbers	28	32	24	12	4
5. Job duties	1	1	7	38	53
6. Tools, equipment, or instruments used on the job	2	4	14	37	43
7. Other occupations related to the job	1	6	25	43	25
8. Opportunities for advancement	1	1	6	23	69
9. Where employed—major industries, kinds of employers	2	3	12	37	46
10. Physical setting, including safety factors	2	4	18	42	34
11. Social environment	2	5	23	43	27
12. Psychological environment and job satisfaction	0	1	9	33	57
13. Hours of work	2	5	21	44	28
14. Vacations	2	7	31	38	20

	1	2	3	4	5
B. REQUIREMENTS OF THE OCCUPATION					
Personal Requirements for Getting the Job					
1. Recommended interest patterns	1	6	32	40	21
2. Kinds of aptitudes needed	1	2	18	47	32
3. Kinds of personality needed	1	3	18	46	32
4. Physical factors needed, ("stamina," "normal vision," etc.)	1	5	21	42	31
5. Sex requirements	13	15	28	27	17
6. Age requirements	6	13	29	35	17
7. Grades required in school subjects	2	4	16	37	41

PERCENT OF TOTAL RESPONSES

Preparation Requirements for Getting the Job

	1 No importance to me	2 Little importance to me	3 Some importance to me	4 Important to me	5 Very important to me
1. General education required	*	2	12	45	41

C. ECONOMIC INFORMATION ABOUT THE OCCUPATION

Distribution and Outlook for the Occupation

	1	2	3	4	5
1. Number of workers in the occupation	10	20	32	25	13
2. Ratio of men to women in the occupation	23	32	29	10	6
3. Number of workers in the occupation by industry	17	31	33	14	5
4. Geographical distribution of work force	13	22	32	22	11
5. Chances of getting job after meeting entry requirements	1	2	9	33	55
6. Location of current job openings	2	4	12	32	48

*Less than 1%

PERCENT OF TOTAL RESPONSES

Economic Returns of the Occupation

	No importance to me (1)	Little importance to me (2)	Some importance to me (3)	Important to me (4)	Very important to me (5)
1. Stability of employment	2	1	6	26	65
2. Beginning earnings, salary increases, peak earnings, lifetime earnings potential	1	2	7	29	61
3. Potential span of working life in the occupation	1	4	12	36	47
4. Cost to worker for uniforms, tools, equipment, instruments, association or union membership, etc.	8	14	30	30	18
5. Fringe benefits, such as retirement plans and insurance (health and life)	3	4	17	33	43

D. GEOGRAPHIC AREA COVERED BY INFORMATION ABOUT AN OCCUPATION

	1	2	3	4	5
1. Information applying to all of San Diego County	4	7	24	32	33
2. Information applying to Southern California	2	8	24	40	26
3. Information applying to the State of California	3	9	34	33	21
4. Information applying to the western region of United States	7	19	34	26	14
5. Information applying to the total United States	12	19	28	19	22

PART II. HOW CAN OCCUPATIONAL INFORMATION BE PREPARED IN A MEANINGFUL WAY FOR YOU?

Instructions for filling out Part II of the Questionnaire

In utilizing occupational information, please rate each item in terms of how well it would present occupational information for your use.

RATE EACH ITEM ON A SCALE OF 1 TO 5, PLACING A ✓ IN THE APPROPRIATE BOX WHERE:

1 = VERY POOR WAY FOR ME
2 = POOR WAY FOR ME
3 = ACCEPTABLE WAY FOR ME
4 = GOOD WAY FOR ME
5 = VERY GOOD WAY FOR ME

E. STYLE AND FORMAT OF THE MATERIAL

	PERCENT OF TOTAL RESPONSES				
	1 Very poor way for me	2 Poor way for me	3 Acceptable way for me	4 Good way for me	5 Very good way for me
Style					
1. Use of short, simple sentences	6	13	45	25	11
2. Use of lengthy, compound sentences	8	27	52	11	2
3. Use of words with few syllables	8	25	53	11	3
4. Use of more complex vocabulary	4	23	46	21	6
5. Limited use of technical terms	6	16	41	29	8
6. Liberal use of technical terms	7	30	38	19	6
7. Use of concrete true to life examples to illustrate concepts	2	3	24	39	32
8. Use of abstract theoretical examples to illustrate concepts	12	29	36	15	8
Format	1	2	3	4	5
1. Use of statistics	6	13	34	29	18
2. Use of charts, graphs, and tables	5	12	35	32	16
3. Use of pictures	4	9	40	29	18
4. Narrative presentation	4	8	38	34	16
5. Story presentation	9	24	41	18	8
6. Straight-fact presentation only	6	16	35	24	19
7. Cartoon or comic book presentation	45	29	18	5	3

PART III. HOW CAN OCCUPATIONAL INFORMATION BEST BE DISSEMINATED FOR YOU?

Instructions for filling out Part III of the Questionnaire

Please rate each item in terms of the way in which you would want to receive occupational information.

RATE EACH ITEM ON A SCALE OF 1 TO 5, PLACING A ✓ IN THE APPROPRIATE BOX WHERE:

1 = VERY POOR WAY FOR ME
2 = POOR WAY FOR ME
3 = ACCEPTABLE WAY FOR ME
4 = GOOD WAY FOR ME
5 = VERY GOOD WAY FOR ME

F. MEDIA FOR DISSEMINATION OF OCCUPATIONAL INFORMATION

PERCENT OF TOTAL RESPONSES

1 Very poor way for me	2 Poor way for me	3 Acceptable way for me	4 Good way for me	5 Very good way for me

APPENDIX C

VIEW

VOCATIONAL INFORMATION FOR EDUCATION AND WORK

REGIONAL CENTER FOR CAREER INFORMATION
Department of Education, San Diego County
6401 Linda Vista Road, San Diego, California 92111

VIEW SERVES YOUTH

There **ARE** jobs for young people. And you don't always need a 4-year college degree to get a job.

BUT:

How much education **DO** you need?

What must you have just to be considered for the job?

AND:

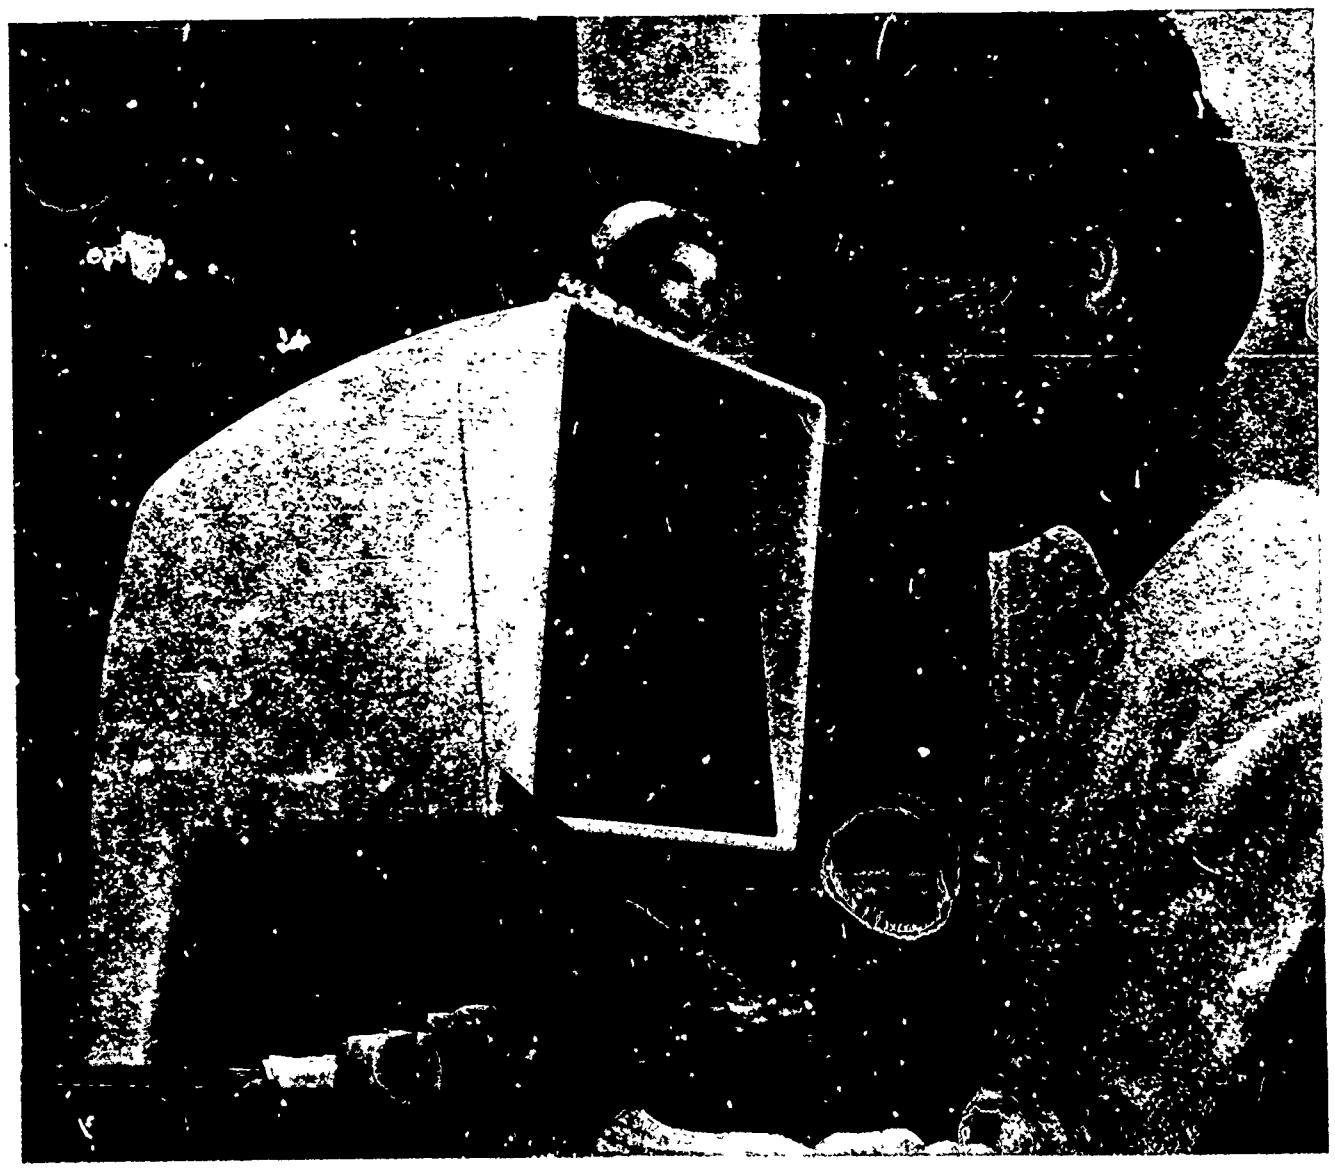
Would you really like the job?

What do you know about the pay, the working conditions, and the career opportunities?

In plain words, **VIEW** – Vocational Information for Education and Work – gives you facts you can use – up-to-date, realistic information on job opportunities plus the personal qualities and education you need to get these jobs.

VIEW lets you:

- Inquire in privacy about the personality, aptitudes, and physical traits you need to get the job and education you want
- Decide for yourself whether you will like the working conditions
- Plan your preparation and training for both education and job
- Take advantage of job prospects and educational opportunities which may appeal to you in your own and nearby communities
- Investigate for yourself where you can get more facts about the job and education that interest you



VIEW HELPS THE COUNSELOR

Today, a counselor is overwhelmed trying to keep up with the multiple sources of information about jobs and educational opportunities for young people. VIEW collects, organizes, and synthesizes such information. VIEW packages the data in a compact form so that a counselor is not crowded out of his office space by hundreds of publications and catalogs. VIEW lets the counselor:

- Stay up to date with changing information about jobs, job markets, pay scales
- Have at his fingertips information about a wide variety of jobs that young people may find attractive
- Motivate young people to inquire for themselves about careers and educational opportunities
- Find out facts about jobs and education so he can help young people achieve their goals
- Obtain in short order an encyclopedic knowledge that otherwise would require extensive searching

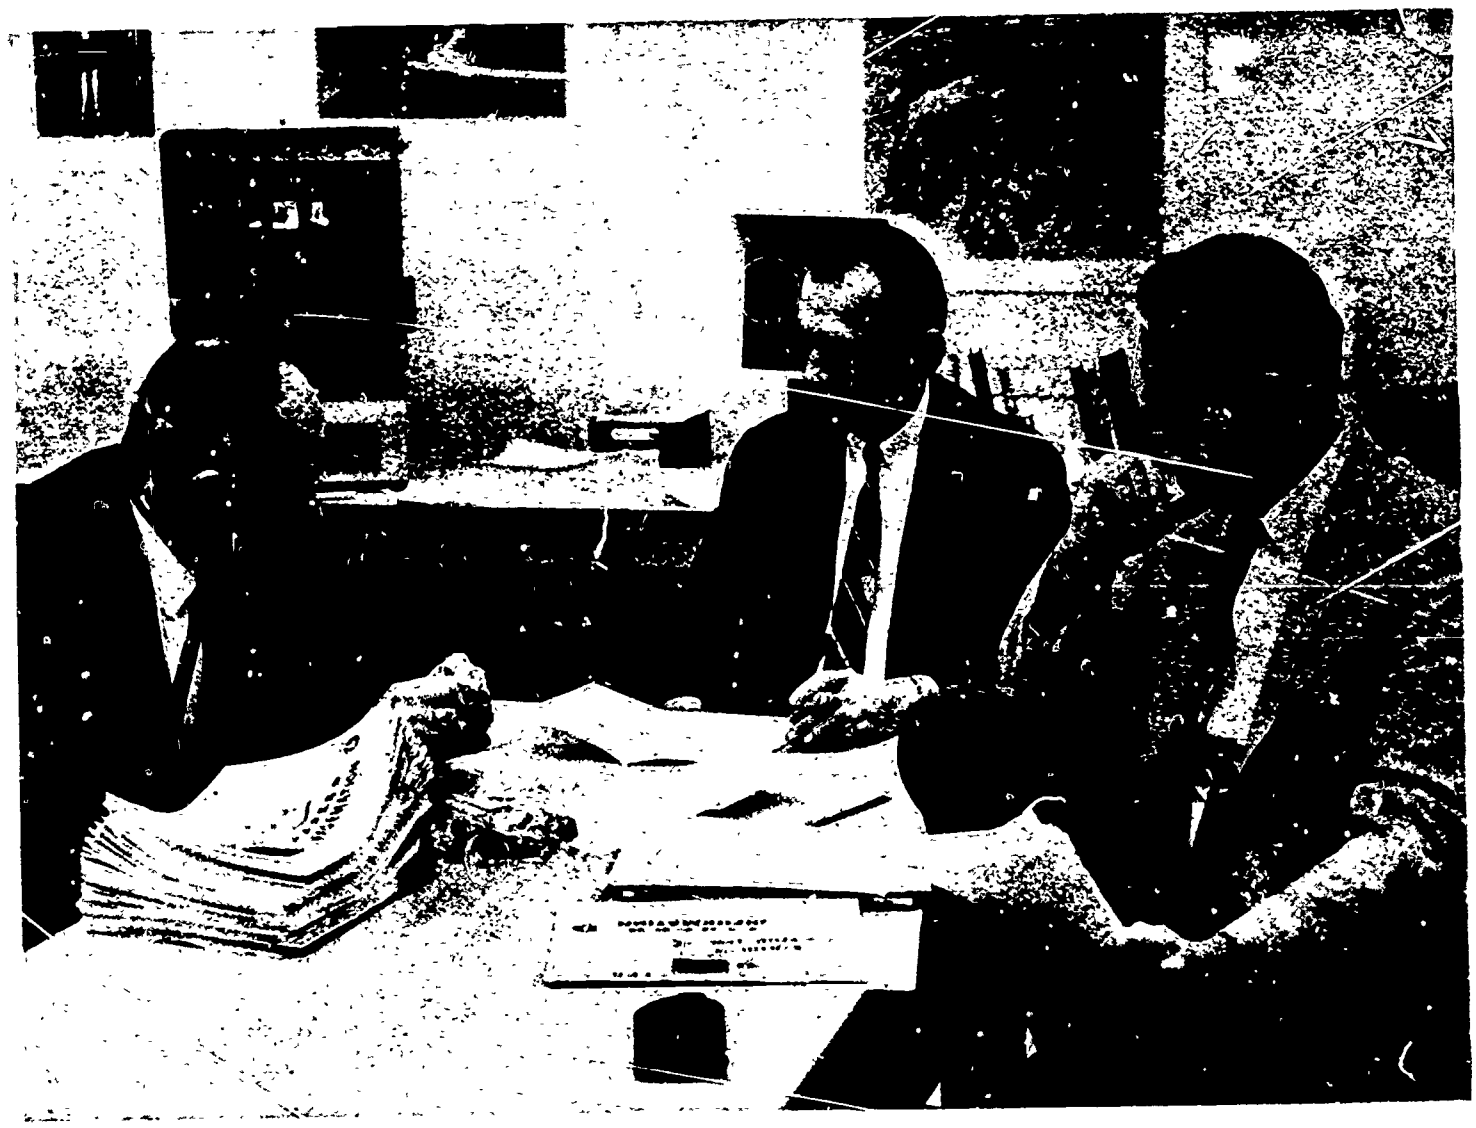
HOW VIEW STARTED

VIEW – Vocational Information for Education and Work – started with an idea:

> Young people should have a chance to find out for themselves about jobs and schooling.

It was a good idea **BUT** – the information about such jobs and educational opportunities wasn't in any one place. Furthermore, a lot of it wasn't organized for fast reading. . . fast copying. To accomplish this idea, the San Diego County Career Information Center – and **VIEW** – was pioneered by Martin Gerstein and Richard Hoover, Guidance Coordinators, Department of Education, San Diego County.

Help came from the office of the California State Director of Vocational Education and the Vocational Education Act of 1963. Also, the State Department of Employment, San Diego State College, and the Hospital Council of San Diego along with many other community agencies worked together to get the current, local facts that young people want and counselors need. These facts were put together in a modern format, using microfilm and data processing – the advanced tools of getting information into the hands of people who need to know. Young people who have used VIEW like the privacy of investigation – the localized information about job and school opportunities – the information as up-to-date as today's newspaper – and the easy, understandable phrasing.



The work presented or reported herein was performed pursuant to a grant from the U.S. Office of Education, Department of Health, Education, and Welfare.

38. If you have used other types of occupational information how well did the VIEWScript compare with it? (check)

   1. _____ I have not used other types.
   2. _____ Not as good as other occupational information.
   3. _____ About the same as other occupational information.
   4. _____ Better than other occupational information.

39. Which VIEWScript aperture cards did you use? (check)

   1. _____ Card C (pink), General Information
   2. _____ Card I (green), San Diego Job Information
   3. _____ Both

40. Did you take a print-out of the VIEWScript? (check)

   1. _____ Yes
   2. _____ No

APPENDIX F

Career Information Center

VIEW Utilization Questionnaire

To The Student: This questionnaire is an attempt to evaluate and improve our vocational information. Your honest opinions will be greatly appreciated. No names are needed. Thank you.

A. How often did you use the VIEW materials (check one)

1.____Once only

2.____Twice

3.____3 - 6 times

4.____6 - 12 times

5.____Over 12 times

B. If you answered the above question 1 or 2 - Why?

_____

_____

_____

C. Listed in each occupational description are sources of additional information. (Page 4) Did you seek out and use any of these additional sources? (check one)

1.____Yes

2.____No

D. If yes - how often? (check one)

1.____Only once

2.____A few times

3.____Quite often

4.____Everytime I used the VIEWScripts

E. Listed with many occupations are resource people to contact for additional information. Did you contact any of these people? (check one)

1.____Yes

2.____No

F. Did you make an appointment to visit with your counselor after using the VIEWScripts? (check one)

1.____Sometimes

2.____Usually

3.____Always

4.____Never

G. Did you discuss any of the information on the VIEWScripts with your parents? (check one)

1.____Sometimes
2.____Usually
3.____Always
4.____Never

H. Did you usually take a print-out? (check one)

1.____No
2.____Yes (1 or 2 pages)
3.____Yes (3 or 4 pages)
4.____Yes (5 or more pages)
5.____Yes (Number of pages varied)

I. Which pages did you usually print out? (check more than one if you wish) Your counselor has copies of the pages.

1.____Page 1
2.____Page 2
3.____Page 3
4.____Page 4
5.____Page 5
6.____Page 6
7.____Page 7
8.____Page 8

J. What effect did the information on the VIEWScripts have on your choice of a career? (check one)

1.____Very much
2.____Some
3.____A little
4.____No effect

K. What part or parts of the VIEWScript were most useful to you?

_____

_____

_____

_____

_____

Counselor Reaction Questionnaire

(1) How would you estimate student reaction to the VIEWScripts?

1.____Very favorable

2.____Favorable

3.____Same as to other occupational information

4.____Unfavorable

5.____Very unfavorable

(2) Did the use of other types of vocational information increase since VIEW was placed in your school?

1.____Yes, very much

2.____Yes, a little

3.____No, not noticeably

(3) Was there an increase in the participation and/or interest of your total school staff in this (vocational) aspect of the guidance service?

1.____Yes, very much

2.____Yes, a little

3.____No, not noticeably

(4) Were the VIEW materials used in any classroom activities?

1.____Yes

2.____No

(5) If you answered Question #4 Yes--How? (use back if necessary)

_____

_____

_____

_____

_____

(6) Who had the clerical responsibility for the VIEW project in your office?

1.____A counselor

2.____Secretary

3.____Student help

(7) What, in your opinion, is the most valuable aspect of the VIEW project?

_____

_____

_____

_____

(8) In reflecting on all the sources of occupational information available, how would you rate VIEWScripts (the printed copy only) in value for students. (place an X)

1.____Not as good

2.____About the same

3.____Better

4.____Much better

(9) How (in comparison) would you rate the total system (content as well as dissemination media) in value for students?

1.____Not as good

2.____About the same

3.____Better

4.____Much better

(10) How would you rate student use compared to these other sources?

1.____Not as good

2.____About the same

3.____Better

4.____Much better

(11) What is your title?

_____

(12) What credential(s) do you hold?

_____

_____

_____

(13) Please list your experience

_____ teaching
years

_____ counseling
years

(14) Specifically--how do you see VIEW aiding you as a counselor?

SUPERINTENDENT OF SCHOOLS

March 7, 1967

Mr. John A. Geddes
1686 Bahia Vista Way
La Jolla CA 92037

Dear John:

I hope you'll forgive this rather informal and hasty message. However, it is very important that we receive your reaction to your experience as a participant in the Summer Workshop for Counselors in Entry Occupations which was conducted by this office in cooperation with San Diego State College. In addition, it is quite critical that we receive your reply on or before Wednesday, March 15.

A brief one-page questionnaire requiring only a few minutes of your time to finish is enclosed. Please complete as indicated in the instructions and return the questionnaire to me in the stamped self-addressed envelope provided. It is not necessary to sign or otherwise identify yourself on the sheet.

Your assistance with this is greatly appreciated. If you are interested in receiving a summary of this survey, please indicate this on the questionnaire. Thanks again!

Sincerely yours,

Richard Hoover
Guidance Coordinator

PLEASE RETURN AT ONCE--THANK YOU

SUMMER WORKSHOP FOR COUNSELORS IN ENTRY OCCUPATIONS

Participant Reaction
March 1967

INSTRUCTIONS: Please check your answer for each item 1-10

1. Participant: Male____ Female____

2. Participant IN: Summer 1965____ Summer 1966____

3. Position: Counselor____ Teacher-Counselor____ Teacher____ Administrator____

4. A major objective of the Workshop was to "familiarize counselors with entry occupations in participating business and industrial firms." Was this objective realized for you?

Yes____ No____ Questionable____

5. Most valuable Workshop experience for you:

Classroom Experience____ On-the-job Experience____ Both, equally valuable____

6. As a result of my participation, I gained the most information about: (May check more than one)

____Sources of occupational or career information
____Uses of occupational or career information
____Career development theory
____Labor market outlook
____Entry jobs in San Diego County for high school and junior college graduates
____Personnel practices of local business and industry
____Role of California Department of Employment in working with school age youth
____Counseling students about careers
____What it's like to "begin at the bottom"
____Did not acquire significant amount of new information

7. Participating in the Summer Workshop has been helpful to me in: (May check more than one

____Counseling with students about careers
____Finding part-time jobs for students
____Finding jobs for school dropouts
____Finding jobs for graduates
____Working with business and industry
____Working with teachers
____Working with parents
____Professional advancement
____Not helpful

8. How would you rate the writing of VIEWPOINT as a part of your Workshop experience

____Very valuable
____Valuable
____As valuable as any of the other Workshop experiences
____Had little value
____Not valuable--should not be included

9. In general, how would you rate the overall value of the Workshop experience to you in your work?

____Has been very helpful in my work
____Has been helpful in my work
____As helpful in my work as typical graduate course
____Was interesting but of little value in my work
____Not interesting and has little value in my work

12. Would you recommend that counselors and other professionals who work with youth in career planning and vocational guidance have a similar experience?

____Yes ____No

Guidance Coordinators

Re: Evaluation and Reactions to VIEWPOINT

As you know this is our second publication concerning the summer workshops conducted for area guidance personnel. Before continuing on our present course we would welcome your reactions to the value and use of this publication.

A few minutes of your time in completing the attached questionnaire will be of great value to us in our attempt to provide occupational and vocational information for your use with San Diego secondary school students.

A self-addressed return envelope is enclosed for your convenience in returning the questionnaire.

Thank you.

VIEWPOINT EVALUATION

1. What position do you now hold?

_____

2. Are you (check one)

1. _____ Full-time in this position?

2. _____ Part-time in this position?

3. Have you used VIEWPOINT in the past?

1. _____ Yes

2. _____ No

(If you answered #3 "No" please skip to question 6)

4. If yes, how did you use it? (Check more than one if applicable)

1. _____ It was placed with other occupational information for the use of students if they wished.

2. _____ It was used in counseling sessions with individual students.

3. _____ It was used in occupational classes or units as a reference.

4. _____ Other _____
(please specify)

_____

5. Compared with other local occupational information, how would you rate the amount of usage?

1. _____ Much more
2. _____ More
3. _____ About the same
4. _____ Less often

6. How does it compare with other local occupational information in usefulness?

1. _____ Much better
2. _____ Better
3. _____ About the same
4. _____ Not as good

7. As a counseling tool how would you rate VIEWPOINT?

1._____Very Valuable
2._____Valuable
3._____It is of some help
4._____It is of little help

8. As a reference tool how would you rate VIEWPOINT?

1._____Very valuable
2._____Valuable
3._____It is of some help
4._____It is of little help

9. What would you estimate student reaction was to the previous VIEWPOINT?

1._____Very favorable, interest level high.
2._____Favorable, seem to like it.
3._____No unusual reaction—no different than other occupation information.
4._____Unfavorable, definitely do not like this means of presentation.

10. Were you aware that summer workshops such as the one described in VIEWPOINT are conducted for counselors?

1._____Yes
2._____No

11. What other occupational areas would you like to see covered in future workshops?

_____

APPENDIX J

DEPARTMENT OF EDUCATION
SAN DIEGO COUNTY

6401 LINDA VISTA ROAD, SAN DIEGO CA 92111 • AREA CODE 714 TEL. 278-6400

CECIL D. HARDESTY
SUPERINTENDENT OF SCHOOLS

Dear Former Junior College Student:*

The Department of Education, San Diego County, in cooperation with the junior colleges throughout San Diego County is trying to supply high school students with help in choosing their educational goals in the coming years.

To obtain this needed information we have decided to ask the experts—you. We say experts and we really mean it, for who else but those who have experienced the training and life of a junior college can really say what it is like for a prospective student. It is this kind of information that high school students want and need.

Career information for those students who do not wish to attend a four-year college is scarce, and in some instances nonexistent. Next year hundreds of students in San Diego County will follow a course of study similar to that which you have taken. The information you provide can be of vital aid to them.

Your answers will be strictly confidential. No names will be used and all processing will use the number next to your name on the last page which identifies your major. Results will be reported to each high school student by major on a countywide basis only.

So won't you help us to help others? Ten minutes of your time in checking answers to the following questions may save many students from wasting months or years in an inappropriate program or school.

Incidentally, if you are interested in how your classmates as a group are doing (types of jobs, salaries, etc.) we would be happy to send you our results. Just correct the address on the back page and mail the questionnaire to us in the prepaid self-addressed envelope.

Hope to hear from you soon—and thanks.

Sincerely yours,

Edwin A. Whitfield

*NOTE: If the person for whom this questionnaire is intended no longer lives at this address would you please forward it? If this is not possible, please correct the address on the back page and return it to us. Thank you.

JUNIOR COLLEGE
FOLLOW-UP QUESTIONNAIRE

Note: Even if you have not been employed since junior college for whatever reason (marriage, military service, illness etc.) please answer any of the questions that you can.

1. Are you male or female?
   A. _____ Male
   B. _____ Female

2. How old are you now? (check one)
   A. _____ At least 18 but less than 21
   B. _____ At least 21 but less than 25
   C. _____ At least 25 but less than 30
   D. _____ At least 30 but less than 45
   E. _____ At least 45

3. Where did you rank in your high school graduating class? (check one)
   A. _____ Top quarter
   B. _____ Second quarter
   C. _____ Third quarter
   D. _____ Bottom quarter

4. How did you first find out about the junior college you attended? (check one)
   A. _____ Information published by the junior college such as catalogs, pamphlets, etc.
   B. _____ A high school counselor
   C. _____ A high school teacher
   D. _____ My parents
   E. _____ Friends
   F. _____ Other _____
   (please specify)

5. Did you ever visit individually with a counselor about the possibilities of attending the junior college you attended? (check one)
   A. _____ Yes, I visited with a high school counselor
   B. _____ Yes, I visited with a U. S. Employment counselor
   C. _____ Yes, I visited with a junior college counselor
   D. _____ No, I never visited with any counselor

6. Did you make the final decision to attend your junior college while still in high school?
   A. _____ Yes
   B. _____ No

7. Did you visit the school and look around before enrolling? (check one)
   A. _____ Yes
   B. _____ No

8. What finally made you decide to attend the junior college you did? (check one)
   A. _____ Closeness of the school
   B. _____ Influence of my parents
   C. _____ Influence of my high school teachers and/or counselors
   D. _____ Influence of a U. S. Employment counselor
   E. _____ Influence of a junior college counselor
   F. _____ Influence of friends or relatives
   G. _____ The curriculum and facilities of the school
   H. _____ Literature published by the junior college
   I. _____ The school's reputation
   J. _____ The length of the course of study
   K. _____ Financial reasons
   L. _____ Entrance requirements of the school
   M. _____ The ability of the college to place its graduates
   N. _____ My choice was a secondary or temporary one
   O. _____ I don't know

9. Who encouraged you most to attend the junior college? (check one)
   A. _____ My parents
   B. _____ Relatives of mine
   C. _____ Friends of mine about my age or not much older
   D. _____ Friends of my family
   E. _____ A previous employer of mine
   F. _____ The people from the junior college
   G. _____ A teacher or counselor in a high school
   H. _____ Somebody in some government agencies (such as the employment service)
   I. _____ Nobody encouraged me. I decided all by myself.

10. How long before entering junior college did you decide to go into the occupation you are now engaged in or hope to enter as soon as possible? (check one)
    A. _____ I really didn't decide until I had been in junior college for a while
    B. _____ I decided just before coming to junior college (within one month)
    C. _____ I decided more than one month but less than six months before I came to junior college
    D. _____ I decided more than six months but less than one year before coming to junior college
    E. _____ I decided at least one year before I came to junior college

11. Did you have a full-time job before you attended the junior college?
    A. _____ Yes
    B. _____ No

12. In what course of study did you first enroll at the junior college?
    _____

13. Was this a college transfer program?
    A. _____ Yes
    B. _____ No

14. Did you hold a job while attending junior college? (check one)
    A. _____ Yes—full time (35 or more hours per week)
    B. _____ Yes—part time (less than 35 hours per week)
    C. _____ No—I didn't hold a job

15. If you did hold a job during junior college, how related was this job to your training? (check one)
A. _____ It was exactly the kind of work I was training for
B. _____ It was related to my area of training
C. _____ It was in a different occupation

16. What part of your junior college expenses did you earn through employment while attending junior college?
A. _____ 1/4 or less
B. _____ Between 1/4 and 1/2
C. _____ Between 1/2 and 3/4
D. _____ Over 3/4

17. How hard did you have to study to be successful in junior college? (check one)
A. _____ Not hard at all. If you show up for classes you are O.K.
B. _____ We keep busy but none of the work is really hard
C. _____ You have to work hard at least half of the time to get along
D. _____ You have to work hard almost all of the time to get along

18. What do you consider the biggest difference between junior college and the high schools you had attended in the past? (check one)
A. _____ There really isn't much difference
B. _____ At junior college we studied only what we needed to know
C. _____ At junior college they had the equipment that the other schools just don't have
D. _____ If you go to a junior college you can get a job when you finish
E. _____ At junior college the instructors know what they are talking about
F. _____ I couldn't get a course like I had any place else (such as private schools)

19. How much of what you learned in junior college was new information? (check one)
A. _____ All of it was new. I didn't know anything about it before coming
B. _____ Most of it was new information
C. _____ About half of it was new information
D. _____ Less than half of it was new information
E. _____ Hardly any of it was new. I knew it before I came

20. I attended junior college for about: (check one)
A. _____ One semester
B. _____ Two semesters
C. _____ Three semesters
D. _____ Four semesters
E. _____ More _____
(please specify)

21. I have had the following types of schooling or training since I left junior college (check one)
A. _____ None
B. _____ Another junior college
C. _____ A private trade, technical, business, or similar type of school
D. _____ A four year college or university
E. _____ A correspondence school
F. _____ A military training school

22. If you have had training since leaving junior college, name the training program (or objective) and the length of the course or program
Name of Program
_____
_____
Number of Months
_____
_____

23. How long after leaving junior college did you actually begin work on your first job? (check one)
A. _____ There was no wait. I went right to work
B. _____ Within a week
C. _____ At least 1 week but less than 2 weeks
D. _____ At least 2 weeks but less than 5 weeks
E. _____ At least 5 weeks but less than 15 weeks
F. _____ At least 15 weeks but less than 27 weeks
G. _____ 27 weeks or more
H. _____ I haven't had a job since I left junior college. (You may comment in the spaces below if you wish.)
_____
_____
_____
_____
_____
_____

24. I first heard about the first job I obtained after leaving the school from: (check one)
A. _____ The junior colleges placement service
B. _____ Someone else working for the school
C. _____ Friends or relatives
D. _____ An ad in a newspaper or magazine
E. _____ An employment agency
F. _____ A previous employer of mine
G. _____ Other (explain) _____
_____
_____

25. In your opinion, is the first job you obtained after leaving school related to the training you received? (check one)
A. _____ Yes, it is exactly the kind of work I was trained for
B. _____ Yes, it is related to my area of training
C. _____ No, it is in a different occupation

26. Is (or was) this first job a full-time paid job?
A. _____ Yes
B. _____ No

27. When you started on your first job after leaving the school, what were your weekly wages (before taxes and deductions)? (check one)

A. _____ Less than $40
B. _____ At least $40 but less than $60
C. _____ At least $60 but less than $80
D. _____ At least $80 but less than $100
E. _____ At least $100 but less than $120
F. _____ $120 or more
G. _____ Impossible to determine due to:

_____
_____
_____

(for example, farming on shares, self-employed, etc.)

28. In my first job after I left junior college my title and some of the important things I do (or did) are:

Title _____
_____

Tasks _____
_____
_____
_____
_____
_____

29. Now that you have left the school, how would you rate it if a prospective student asked you? (check one)

A. _____ Very high, I think it's among the best in the country
B. _____ Above average, it's better than most
C. _____ Average, it's probably no better nor worse than most
D. _____ Below average, most others would probably be better
E. _____ Very low, I wouldn't recommend that others go there

30. Do (or did) the things you learned in junior college help you to do better work on your first job? (check one)

A. _____ Yes, they help a lot
B. _____ Yes, they are of some definite help
C. _____ No, they don't help much if at all

31. What do (or did) you like most about this job? (check one)

A. _____ The amount of money it pays
B. _____ The kinds of job skills I am able to use
C. _____ It's a chance to help other people
D. _____ The prestige I get from this position
E. _____ The work surroundings (equipment, light, friends, etc.)
F. _____ The fact that the job is mine as long as I want it
G. _____ The people I work with
H. _____ The fact that there is lots of variety in the things I do

32. If you had not received the specialized training you obtained at junior college, could you have been hired for this job? (check one)

A. _____ Yes, I'm quite sure I could have
B. _____ I probably could have
C. _____ I just don't know
D. _____ No, I probably could not have
E. _____ No, I'm sure I could not have

33. Do you think your chances for advancement are better because of your junior college training? (check one)

A. _____ Yes, they are definitely better
B. _____ Yes, a little better
C. _____ No, the junior college training made little difference

34. How satisfied are (or were) you with this job? (check one)

A. _____ Very satisfied, I hope I never leave it
B. _____ Satisfied, I like it as well as most things I could be doing
C. _____ A little dissatisfied, I probably won't stick with it for too long
D. _____ Quite dissatisfied, I am looking for something better now
E. _____ Very dissatisfied, I hope to leave very soon

35. How certain do you feel that this is (or was) the type of work which you can do best? (check one)

A. _____ Quite certain, I wouldn't be able to do anything else this well
B. _____ Fairly certain, I don't know of anything that would be better
C. _____ A little uncertain, sometimes I wonder if some other occupation wouldn't be better for me
D. _____ Quite uncertain, I often think I should try something else
E. _____ Very uncertain, I'm sure I could do better in some other occupation

36. My first job is (or was) (check one)

A. _____ Within my home town or community
B. _____ Not more than 25 miles from my home town
C. _____ Between 26 and 100 miles from my home town
D. _____ More than 100 miles from my home town

37. How does (or did) your first job after leaving school compare with the kind of job you thought you might be able to get? (check one)

A. _____ It is better than the type of job I expected
B. _____ It is just about what I expected
C. _____ It isn't as good as I expected
D. _____ This question does not apply to me because I did not look for work in the area for which I was trained

38. If you are not still on your first job after leaving the junior college, why did you seek another job? (check one)

A. _____ I am still on my first job
B. _____ I left to go into the armed services
C. _____ I was promoted to a better job in the same company
D. _____ I found a better job in another company
E. _____ I didn't like the kind of work I had to do
F. _____ I didn't like the people I had to work with
G. _____ There was no chance for advancement
H. _____ I was laid off or fired

I. _____ I left because my husband (wife, parents) changed jobs and we moved to another community

J. _____ Other (explain)_____

If you are still working on your first job after leaving the school, skip to item 41. If not, complete items 39 and 40.

39. What is your present occupation?

A. _____ I am not working now

B. _____ Title_____

Tasks_____

40. What are your weekly wages (before taxes and deductions) now? (check one)

A. _____ Less than $40
B. _____ At least $40 but less than $60
C. _____ At least $60 but less than $80
D. _____ At least $80 but less than $100
E. _____ At least $100 but less than $120
F. _____ $120 or more
G. _____ Impossible to determine due to:

_____

(for example, farming on shares, self-employed, etc.)

41. If you had the opportunity to start again would you? (check one)

A. _____ Go to the same school and take the same course
B. _____ Go to the same school and take a different course
C. _____ Go to a different school and take the same course
D. _____ Go to a different school and take a different course
E. _____ Go to a four year college or university and take the same course
F. _____ Go to a four year college or university and take a different course
G. _____ Skip all schooling and go right to work
H. _____ Other_____
(please specify)

_____

42. If the job you now hold is not related to your junior college training, what was the main reason for choosing this job?

_____

☐ Yes, please send me the results of the Follow-up Study when it is completed.

   (please specify)

5. Did you ever visit individually with a counselor about the possibilities of attending the junior college you attended? (check one)
   A. _____ Yes, I visited with a high school counselor
   B. _____ Yes, I visited with a U.S. Employment counselor
   C. _____ Yes, I visited with a junior college counselor
   D. _____ No, I never visited with any counselor

6. Did you make the final decision to attend your junior college while still in high school?
   A. _____ Yes
   B. _____ No

7. Did you visit the school and look around before enrolling? (check one)
   A. _____ Yes
   B. _____ No

8. What finally made you decide to attend the junior college you did? (check one)
   A. _____ Closeness of the school
   B. _____ Influence of my parents
   C. _____ Influence of my high school teachers and/or counselors
   D. _____ Influence of a U.S. Employment counselor
   E. _____ Influence of a junior college counselor
   F. _____ Influence of friends or relatives
   G. _____ The curriculum and facilities of the school
   H. _____ Literature published by the junior college
   I. _____ The school's reputation
   J. _____ The length of the course of study
   K. _____ Financial reasons
   L. _____ Entrance requirements of the school
   M. _____ The ability of the college to place its graduates
   N. _____ My choice was a secondary or temporary one
   O. _____ I don't know

9. Who encouraged you most to attend the junior college? (check one)
   A. _____ My parents
   B. _____ Relatives of mine
   C. _____ Friends of mine about my age or not much older
   D. _____ Friends of my family
   E. _____ A previous employer of mine
   F. _____ The people from the junior college
   G. _____ A teacher or counselor in a high school
   H. _____ Somebody in some government agencies (such as the employment service)
   I. _____ Nobody encouraged me. I decided all by myself.

10. How long before entering junior college did you decide to go into the occupation you are now engaged in or hope to enter as soon as possible? (check one)
    A. _____ I really didn't decide until I had been in junior college for a while
    B. _____ I decided just before coming to junior college (within one month)
    C. _____ I decided more than one month but less than six months before I came to junior college
    D. _____ I decided more than six months but less than one year before coming to junior college
    E. _____ I decided at least one year before I came to junior college

11. Did you have a full-time job before you attended the junior college?
    A. _____ Yes
    B. _____ No

12. In what course of study did you first enroll at the junior college?

    _____

13. Was this a college transfer program?
    A. _____ Yes
    B. _____ No

14. Did you hold a job while attending junior college? (check one)
    A. _____ Yes—full time (35 or more hours per week)
    B. _____ Yes—part time (less than 35 hours per week)
    C. _____ No—I didn't hold a job

15. If you did hold a job during junior college, how related was this job to your training? (check one)
A. _____ It was exactly the kind of work I was training for
B. _____ It was related to my area of training
C. _____ It was in a different occupation

16. What part of your junior college expenses did you earn through employment while attending junior college?
A. _____ 1/4 or less
B. _____ Between 1/4 and 1/2
C. _____ Between 1/2 and 3/4
D. _____ Over 3/4

17. How hard did you have to study to be successful in junior college? (check one)
A. _____ Not hard at all. If you show up for classes you are O.K.
B. _____ We keep busy but none of the work is really hard
C. _____ You have to work hard at least half of the time to get along
D. _____ You have to work hard almost all of the time to get along

18. What do you consider the biggest difference between junior college and the high schools you had attended in the past? (check one)
A. _____ There really isn't much difference
B. _____ At junior college we studied only what we needed to know
C. _____ At junior college they had the equipment that the other schools just don't have
D. _____ If you go to a junior college you can get a job when you finish
E. _____ At junior college the instructors know what they are talking about
F. _____ I couldn't get a course like I had any place else (such as private schools)

19. How much of what you learned in junior college was new information? (check one)
A. _____ All of it was new. I didn't know anything about it before coming
B. _____ Most of it was new information
C. _____ About half of it was new information
D. _____ Less than half of it was new information
E. _____ Hardly any of it was new. I knew it before I came

20. I attended junior college for about: (check one)
A. _____ One semester
B. _____ Two semesters
C. _____ Three semesters
D. _____ Four semesters
E. _____ More _____
(please specify)

21. I have had the following types of schooling or training since I left junior college (check one)
A. _____ None
B. _____ Another junior college
C. _____ A private trade, technical, business, or similar type of school
D. _____ A four year college or university
E. _____ A correspondence school
F. _____ A military training school

22. If you have had training since leaving junior college, name the training program (or objective) and the length of the course or program
Name of Program
_____
_____
Number of Months
_____
_____

23. How long after leaving junior college did you actually begin work on your first job? (check one)
A. _____ There was no wait. I went right to work
B. _____ Within a week
C. _____ At least 1 week but less than 2 weeks
D. _____ At least 2 weeks but less than 5 weeks
E. _____ At least 5 weeks but less than 15 weeks
F. _____ At least 15 weeks but less than 27 weeks
G. _____ 27 weeks or more
H. _____ I haven't had a job since I left junior college. (You may comment in the spaces below if you wish.)
_____
_____
_____
_____
_____
_____

24. I first heard about the first job I obtained after leaving the school from: (check one)
A. _____ The junior colleges placement service
B. _____ Someone else working for the school
C. _____ Friends or relatives
D. _____ An ad in a newspaper or magazine
E. _____ An employment agency
F. _____ A previous employer of mine
G. _____ Other (explain) _____
_____
_____

25. In your opinion, is the first job you obtained after leaving school related to the training you received? (check one)
A. _____ Yes, it is exactly the kind of work I was trained for
B. _____ Yes, it is related to my area of training
C. _____ No, it is in a different occupation

26. Is (or was) this first job a full-time paid job?
A. _____ Yes
B. _____ No

27. When you started on your first job after leaving the school, what were your weekly wages (before taxes and deductions)? (check one)

A. _____ Less than $40
B. _____ At least $40 but less than $60
C. _____ At least $60 but less than $80
D. _____ At least $80 but less than $100
E. _____ At least $100 but less than $120
F. _____ $120 or more
G. _____ Impossible to determine due to:

_____

_____

_____

(for example, farming on shares, self-employed, etc.)

28. In my first job after I left junior college my title and some of the important things I do (or did) are:

Title _____

_____

Tasks _____

_____

_____

_____

_____

_____

29. Now that you have left the school, how would you rate it if a prospective student asked you? (check one)

A. _____ Very high, I think it's among the best in the country
B. _____ Above average, it's better than most
C. _____ Average, it's probably no better nor worse than most
D. _____ Below average, most others would probably be better
E. _____ Very low, I wouldn't recommend that others go there

30. Do (or did) the things you learned in junior college help you to do better work on your first job? (check one)

A. _____ Yes, they help a lot
B. _____ Yes, they are of some definite help
C. _____ No, they don't help much if at all

31. What do (or did) you like most about this job? (check one)

A. _____ The amount of money it pays
B. _____ The kinds of job skills I am able to use
C. _____ It's a chance to help other people
D. _____ The prestige I get from this position
E. _____ The work surroundings (equipment, light, friends, etc.)
F. _____ The fact that the job is mine as long as I want it
G. _____ The people I work with
H. _____ The fact that there is lots of variety in the things I do

32. If you had not received the specialized training you obtained at junior college, could you have been hired for this job? (check one)

A. _____ Yes, I'm quite sure I could have
B. _____ I probably could have
C. _____ I just don't know
D. _____ No, I probably could not have
E. _____ No, I'm sure I could not have

33. Do you think your chances for advancement are better because of your junior college training? (check one)

A. _____ Yes, they are definitely better
B. _____ Yes, a little better
C. _____ No, the junior college training made little difference

34. How satisfied are (or were) you with this job? (check one)

A. _____ Very satisfied, I hope I never leave it
B. _____ Satisfied, I like it as well as most things I could be doing
C. _____ A little dissatisfied, I probably won't stick with it for too long
D. _____ Quite dissatisfied, I am looking for something better now
E. _____ Very dissatisfied, I hope to leave very soon

35. How certain do you feel that this is (or was) the type of work which you can do best? (check one)

A. _____ Quite certain, I wouldn't be able to do anything else this well
B. _____ Fairly certain, I don't know of anything that would be better
C. _____ A little uncertain, sometimes I wonder if some other occupation wouldn't be better for me
D. _____ Quite uncertain, I often think I should try something else
E. _____ Very uncertain, I'm sure I could do better in some other occupation

36. My first job is (or was) (check one)

A. _____ Within my home town or community
B. _____ Not more than 25 miles from my home town
C. _____ Between 26 and 100 miles from my home town
D. _____ More than 100 miles from my home town

37. How does (or did) your first job after leaving school compare with the kind of job you thought you might be able to get? (check one)

A. _____ It is better than the type of job I expected
B. _____ It is just about what I expected
C. _____ It isn't as good as I expected
D. _____ This question does not apply to me because I did not look for work in the area for which I was trained

38. If you are not still on your first job after leaving the junior college, why did you seek another job? (check one)

A. _____ I am still on my first job
B. _____ I left to go into the armed services
C. _____ I was promoted to a better job in the same company
D. _____ I found a better job in another company
E. _____ I didn't like the kind of work I had to do
F. _____ I didn't like the people I had to work with
G. _____ There was no chance for advancement
H. _____ I was laid off or fired

I. _____ I left because my husband (wife, parents) changed jobs and we moved to another community

J. _____ Other (explain)_____

_____

_____

_____

If you are still working on your first job after leaving the school, skip to item 41. If not, complete items 39 and 40.

39. What is your present occupation?

A. _____ I am not working now

B. _____ Title_____

_____

_____

Tasks_____

_____

_____

_____

_____

40. What are your weekly wages (before taxes and deductions) now? (check one)

A. _____ Less than $40

B. _____ At least $40 but less than $60

C. _____ At least $60 but less than $80

D. _____ At least $80 but less than $100

E. _____ At least $100 but less than $120

F. _____ $120 or more

G. _____ Impossible to determine due to:

_____

_____

_____

_____

(for example, farming on shares, self-employed, etc.)

41. If you had the opportunity to start again would you? (check one)

A. _____ Go to the same school and take the same course

B. _____ Go to the same school and take a different course

C. _____ Go to a different school and take the same course

D. _____ Go to a different school and take a different course

E. _____ Go to a four year college or university and take the same course

F. _____ Go to a four year college or university and take a different course

San Diego, California

Dear Dr. Whitfield:

The faculty and students of Mount Miguel High School wish to thank you and the San Diego County Career Information Center for the V.I.E.W. project for 1966-67.

The students, teachers and counselors have made excellent use of the Reader-Printer and Reader in many ways. Students of all grades 9-12 have been stimulated by this new and unique way of presenting vocational information.

V.I.E.W. materials were demonstrated Parent Nights and at PTA meetings. Classroom use in the Mount Miguel High School Reading Clinic and Title I ESEA Compensatory Education classes helped to motivate students with special needs. Teachers and counselors used the information to obtain current facts.

We certainly hope to continue in the V.I.E.W. project for the 1967-68 school year.

Cordially,

Virgil E. Duea, D.E.

Dear Dr. Whitfield:

The account of your Career Information Center View Project, appearing in this month's "Education Newsletter", besides being quite interesting and informative, suggests a possible solution to our problem of providing career information to our students at El Capitan High School.

As you may know, this high school will be going into flexible scheduling next year, and as a result, I expect more interest to be shown by our students in counseling services, particularly in the vocational area. Consequently, would it be possible for El Capitan to be included in your program for next year?

I have investigated the possibility of renting the required equipment, but the costs would be prohibitive. If you could extend your services to us, our students and I would be most appreciative. Thank you for your consideration of this request.

Sincerely yours,

J. RICHARD BROWN
Counselor

SUPERINTENDENT

February 24, 1967

Edwin A. Whitfield
Guidance Coordinator
Department of Education
6401 Linda Vista Road
San Diego, California

Dear Mr. Whitfield:

I am very pleased to report to you that we have made considerable progress at our school toward inaugurating the VIEW program here this semester. Our sincere thanks go to you and to your interest in explaining the project to us during the C.C.G.A. convention.

We were very fortunate to find that a reader-printer was available in our district office which had limited use. We are in the process of having that piece of equipment transferred to our school and purchasing an adapter to handle the VIEWScript microfilm aperture cards. When that is done, we plan to locate the reader-printer in our Counseling Office.

So, as you can see, we are much indebted to you for passing on to us the enthusiasm you have for the project. When we saw you last in San Diego, none of us believed that I would be writing you so soon to ask that you send us the microfilm aperture cards in order for us to begin to offer this valuable vocational information service to our students.

Please consider this then our formal request to be included as a participating school in the VIEW program.

Sincerely,

Cyril Beattie

Dear Dr. Whitfield:

It is my understanding that project VIEW will be continued for this district for the 1967-68 school year. We have greatly appreciated having this project located at Carlsbad High School and I believe good use has been made of it.

My purpose in writing you at this time is to thank you for making this material available to us and to request that it be located at Oceanside High School for the 1967-68 school year. There is a great deal of interest expressed by the counsellors in this program and I am sure that maximum utilization will be made.

6401 Linda Vista Road,
San Diego CA 92111, California,
U.S.A.

Dear Dr. Whitfield:

Please accept my sincere appreciation for the time and effort that you devoted to my recent visit to investigate VIEW. I have explained this program to my colleagues back here in Winnipeg and they have all expressed a great deal of interest and excitement about its possibilities.

It will be some time before we have been able to study the 500-odd pages of material which you kindly passed along to me. Until we have done this, we won't be able to make a proper judgment as to its application in Canada and in our particular area.

I am assuming that we will be hearing from the 3M Company through the contacts you mentioned. In case you are interested, I will keep you informed of any positive developments which occur as a result of my visit with you.

Once again, I would like to express my sincere gratitude for a very interesting and memorable experience in San Diego.

Yours truly,

E. E. Robertson, Chief,
Operational Support Services.

Dear Ed;

Grossmont College intends to purchase the Reader-Printer and the Reader which we have used this year. The monies for these purchases are in our budget for next year.

We look forward to receiving the VIEW aperture cards. We are currently considering whether or not this material should be placed in the Library with the other vocational materials. As the file of materials becomes larger, utilization will increase.

We are currently collecting the data for your end-of-year report.

Cordially,

June 1, 1967

Dr. Edwin A. Whitfield
Guidance Coordinator
Department of Education
San Diego County
6401 Linda Vista Road
San Diego, California

Dear Dr. Whitfield:

I would like to report on the success of the VIEW project at Southwestern College. During the Spring Semester of 1967, the aperture cards have received daily use. A number of students have returned for the study of additional careers and have brought in friends to investigate the careers of their choice.

It is unfortunate that prior to this semester, the equipment was housed in a testing room and not readily available to students except upon request. With the installation of the necessary power lines and outlets, the equipment was moved to the waiting room of the Counseling Center where it is now used extensively.

Also of great importance was the adding of careers other than those directly related to a hospital. The constant up-dating of career information and the addition of new careers makes this the most valuable career information on campus.

It is our sincere hope that this service be continued and improved as it provides an invaluable service to the students of Southwestern College.

Sincerely,

Robert H. Mills
Counselor, Southwestern College

San Diego, California 92111

Dear Dr. Whitfield:

Let me take this opportunity to state our school's appreciation for being selected for participation in this year's VIEW project. Although, we consider the program meaningful, and desirable, there is always the problem of implementing any new services. In this respect, it took about one semester for students to become sufficiently interested in the machines. This might be because of normal reactions by youngsters. Then again the initial response was one of disappointment since many vocations were not then available on aperture cards, or were not as yet on file.

Because of crowded facilities, the machines were placed in a third office in the counseling wing. Unfortunately, this office is occupied by the District Psychologist on Tuesdays and Thursdays so that the machines were not available for use on those days. A more desirable situation would be placing the machines in a more accessible location, as the library. Unfortunately, our housing problem did not permit such a placement.

The most effective use of the machines was made by students enrolled in Driver Education and Civics. Each of these classes has a vocational unit and the teachers used VIEW as one reference source.

I hope these few comments will be of value to you.

Sincerely,

Robert A. Wood

Dear Dr. Whitfield:

This is an informal evaluation of the VIEW project which was located in the counseling office at Kearny High School during the 1966-67 school year.

(1) To introduce the project, it was presented to small group faculty meetings.
(2) Meetings were held involving Dr. Whitfield and other people connected with the project at the Department of Education, San Diego County and the 3-M Corporation.
(3) Meetings were attended at the County Education Center on the project.
(4) We did have individual teachers and students use the materials and machines throughout the year in the counseling office.
(5) Our biggest use came in the classrooms in connection with specific units within the curriculum. We had gratifying results, especially in the Business Education classes.
(6) To familiarize other counseling staffs of the potential of the machines -- our machines were used at Madison High School during January.
(7) The use of the machines was demonstrated at the State-wide California Hospital Convention.
(8) It is difficult to complete an objective evaluation of this type of material as there is no way to measure how the information gained was actually used by the student. What information these machines had on vocational choices can only be determined by the future.
(9) Suggestions for improvement should include additional sets of cards and scanners so that more students could use the material. As the largest item of expense seems to be the printer, one would be sufficient. We sometimes felt that there was an ever present possibility of misuse of the printer. It would help in the operation if additional rolls of printing paper and activator be left with the machine.

Sincerely,

Charles S. Cawle

Dear Mr. Whitfield:

With the school year coming to a close I would like to take this opportunity to thank you for selecting Chula Vista High School as a participant in the VIEW Project. If at all possible we would like to continue to use the VIEW machine and participate in the study next year.

From conversation with the other counselors, faculty, and students we found an interest and enthusiasm for this approach to providing career information. It gave us, as counselors, a new approach to the non-college student. We also found that it was an excellent tool to use when registering students for the vocational classes.

We wish you continued success in this study and would like to repeat our request for consideration next year.

Sincerely,

Kenneth Thomas

The responsibility of the VIEW Project for the school year 1966-67 was assigned to me as the vocational counselor. My major assignment is as the guidance counselor for all ninth grade students. Consequently, I have not been able to spend as much time as I wanted on VIEW. A full-time vocational counselor could certainly do greater justice to it.

I have had difficulty getting the teachers interested in the use of the materials. The major success has been when I have taken the machines into the classrooms for demonstrations and then had the students use them individually in our guidance offices. I have kept the Project in an office adjacent to mine and supervised its use myself; I have not let my office help supervise it. Once again, this has been extremely time consuming in relation to my other duties.

A few students have returned at a later time to use the materials, but very few have consulted the counselors as a result of using VIEW. The reverse has been true more often - if vocational plans have been a part of a conference, the counselor has referred the student to the Project.

I believe that the aperture card approach to vocational information is much more interesting and informative for certain students than the other means of dissemenating this information which we have been using in our school.

Dear Mr. Whitfield:

The consensus of the counseling staff in the Poway Unified School District is that the Micro Reader Printer and the Micro Reader is an excellent aid in counseling students.

The equipment is located in the outer guidance office where students of all grade levels may use the materials at their convenience. This availability enables them to pursue national and local information on many occupations and encourages more occupational exploration in an unstructured atmosphere.

All usage of the equipment has been student initiated with no formal introduction, explanation or demonstration by any of the faculty. Some limitations did occur due to supply shortage and to equipment breakdown; however, it was our general feeling that more students actually utilized the information and material than had indicated so in writing.

We are looking forward to participating as a demonstration school again next year and hope that the college profiles, scholarships, and financial aids information will be available for the college gound student.

Sincerely,

Conrad Lee

Dear Dr. Whitfield:

On behalf of the Counseling Department of Fallbrook High School, I want to express my appreciation for View as used in the Career Centers.

We know it will be most helpful to us and we especially appreciate your efforts in making it available to us.

Sincerely yours

Mary Grigsby

EDUCATION X - 197 PROBLEMS IN EDUCATION

WORKSHOP IN THE STUDY OF ENTRY OCCUPATIONS

This workshop will enable a limited number of junior college and high school counselors to study and observe the occupational patterns of selected organizations in business and industry and to relate their experiences to the career and educational counseling programs of the secondary schools and junior colleges.

The chief objective of the workshop will be to familiarize counselors with entry occupations in a selected group of participating business and industrial firms in the greater San Diego area. Emphasis will be on developing competence in assisting the young adult to plan for entry into the labor market with high school or junior college terminal education.

Participants will spend four weeks on the job and two weeks in the classroom. The classroom activities will be carefully articulated with the participants' experiences on the job.

Each participant will register for 3 units of upper division credit and will be compensated by his cooperating organization as a temporary employee. Compensation will be $400 for the four weeks and the participant will be on the job forty hours a week at his business or industrial location.

During the first and sixth week, the participants will meet at San Diego County, Department of Education each day; and during the weeks two through five, the participants will meet one evening per week at the Department of Education or the business location for a seminar activity. Class limited to twenty students.

Date: June 27 - August 5, 1966
Time: On the job - 40 hour week
In the classroom - 9:00 a.m. - 3:00 p.m.
Fee: $39.00 ($13.00 per unit)

Instructional Consultant: Dr. Robert D. Smith, Assistant Professor of Education and Coordinator of Junior College Programs for San Diego State College (286-6133)

For further information and application forms, contact the program director

Martin Gerstein, Guidance Coordinator
Pupil Personnel Services Department
Department of Education, San Diego County
6401 Linda Vista Road, San Diego 92111
Telephone: 278-6400, Ext. 310 or 332

QUALIFICATIONS:

1. Recent or anticipated experience as a school counselor, or coordinator of placement or work-study programs at the junior college or secondary level.
2. Specific responsibility to the school or college for the improvement of the guidance programs for the coming year.

APPLICATION DEADLINE -- May 13, 1966

PROBLEMS IN EDUCATION
WORKSHOP IN ENTRY EMPLOYMENT

Summer 1966
June 27 - August 5

Department of Education, San Diego County
San Diego State College

PROGRAM

Monday, June 27	Conference Room 6, Department of Education, San Diego County
9:00 a.m.	Registration and Review of Course Requirements Dr. Robert Smith

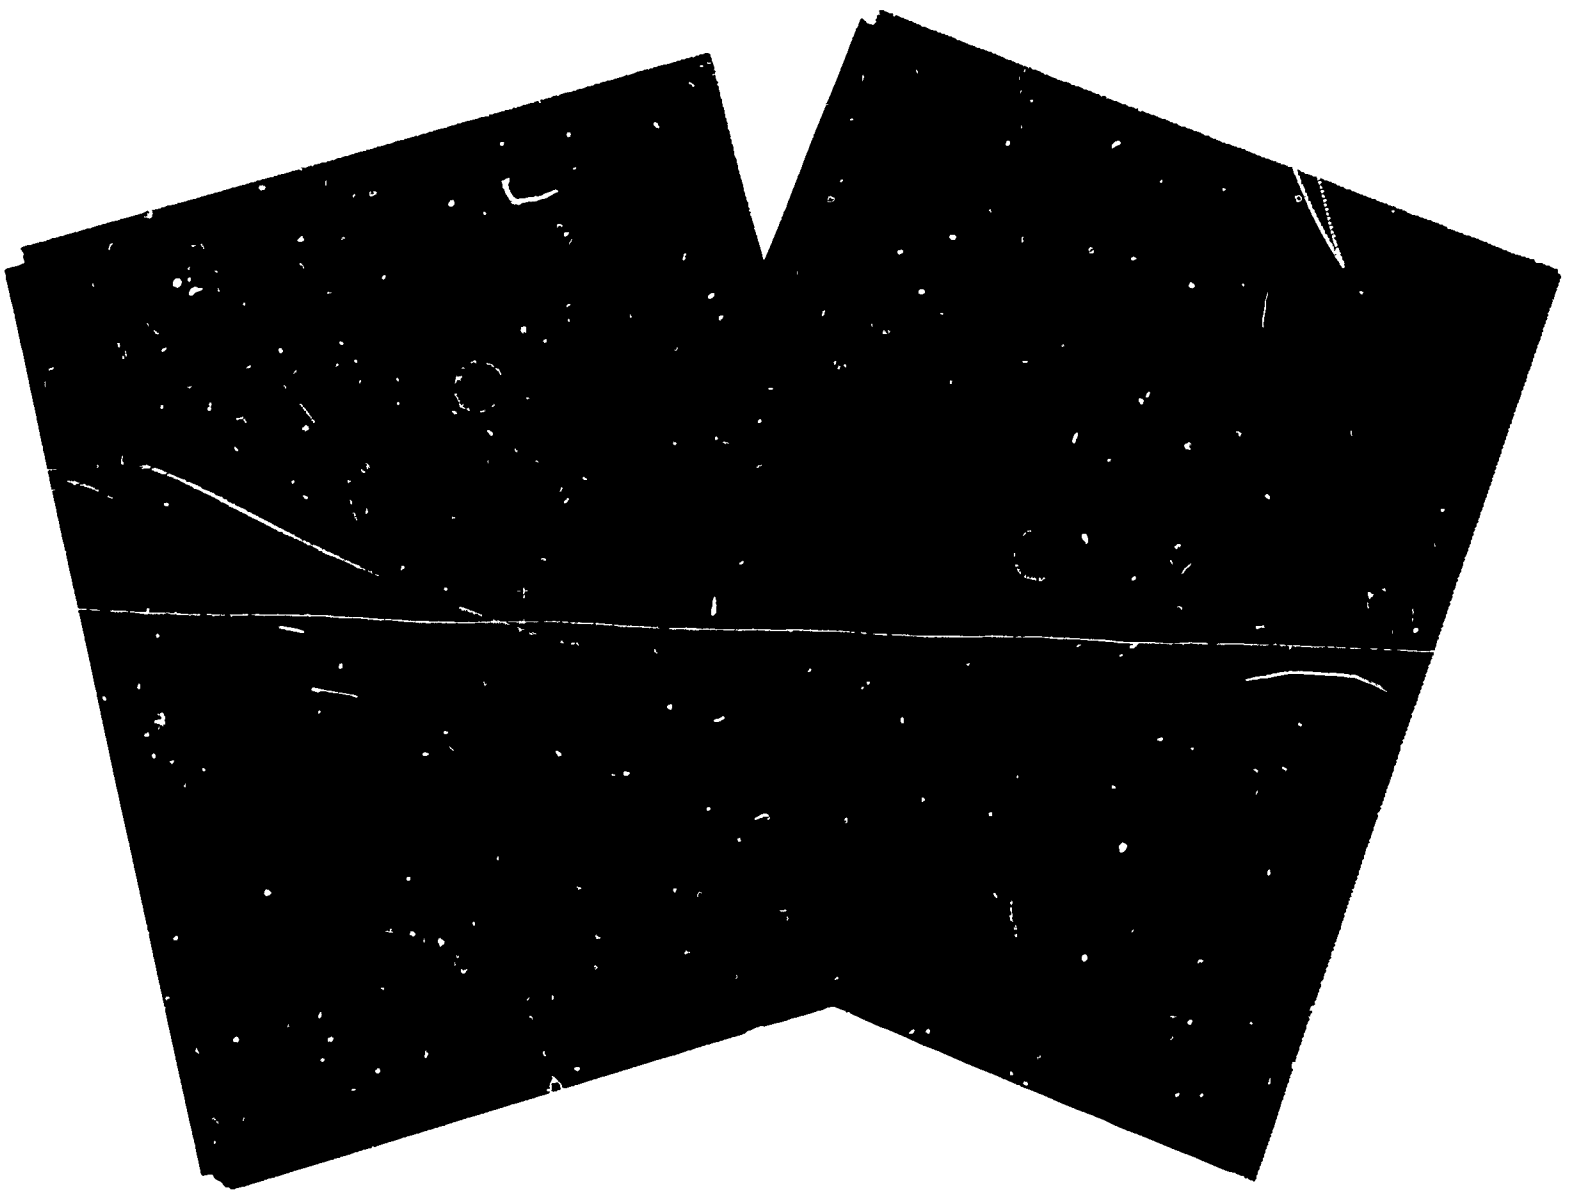
PROGRAM DIRECTOR

Martin Gerstein
Guidance Coordinator
Department of Education, San Diego County

INSTRUCTIONAL CONSULTANT

Dr. Robert Smith
Associate Professor of Education
Coordinator of Junior College Programs
San Diego State College



These publications attempt to capture the essence of each counselor's experience in the workshops in entry employment. The workshop participants produced the copy for the publications and copies were distributed to all counselors in the public schools of San Diego County.

Each counselor approached his writing task differently but in each instance there is structure in format. Each business, industry, or agency is introduced by a profile sheet. This is followed by job descriptions of selected entry occupations within the firm, and finally, in most instances, by a narrative impression of the counselor's reactions.
