DESCRIPTORS- *ELEMENTARY SCHOOLS, *PRINCIPALS, *STATUS, SCHOOL ORGANIZATION, *ADMINISTRATOR CHARACTERISTICS, ADMINISTRATOR QUALIFICATIONS, ECONOMIC STATUS, *ADMINISTRATOR ROLE, LEADERSHIP, EDUCATIONAL ENVIRONMENT, TABLES (DATA), QUESTIONNAIRES, CHARLESTON,

FROM THE QUESTIONNAIRE RESPONSE DATA OF A 1964 SURVEY REPRESENTING A 56-PERCENT RETURN OF ALL ELEMENTARY SCHOOLS IN ILLINOIS, 76 TABLES WERE DEVELOPED TO DEFINE THE PRINCIPAL'S ROLE AND STATUS IN RELATIONSHIP TO CURRENT PRACTICES AND EMERGING TRENDS IN THE ORGANIZATION AND ADMINISTRATION OF PUBLIC ELEMENTARY SCHOOLS. QUESTIONNAIRE CATEGORIES INCLUDED -- YOU AND YOUR SCHOOL, FERSONAL INFORMATION, EDUCATION FOR THE PRINCIPALSHIP, RECRUITMENT, EXPERIENCE, FINANCIAL STATUS, YOUR POSITION, RESOURCES, PRINCIPAL'S ROLES IN ADMINISTRATION AND SUPERVISION, AND COMMUNITY WORK. VARIABLES ANALYZED INCLUDED THE ORGANIZATIONAL CHARACTERISTICS OF ELEMENTARY SCHOOLS AND PRINCIPALS' CHARACTERISTICS, USE OF TIME, AND STATUS IN THE SCHOOL SYSTEM. A PROFILE, DETERMINED FROM A NUMBER-PERCENTAGE MEASUREMENT OF RELATIONSHIPS, DESCRIBES THE AVERAGE ILLINOIS ELEMENTARY SCHOOL PRINCIPAL AS MALE, 48 YEARS OF AGE, MARRIED WITH THREE DEPENDENTS, ADMINISTERING A SINGLE SCHOOL WITH A STAFF OF 17 AND AN ENROLLMENT OF APPROXIMATELY 550 PUPILS. OTHER CHARACTERISTICS OF THE AVERAGE ELEMENTARY SCHOOL PRINCIPAL AND IMPLICATIONS OF THE STUDY FOR FURTHER RESEARCH ARE OUTLINED. (JK)

INTRODUCTION

It is generally agreed that school administration exists for one primary purpose; the facilitation of instruction and learning. To achieve this purpose, administration must serve the function of providing capable teachers and a school environment conducive to learning. To a great extent, the degree to which these factors are present in the elementary school is determined by the manner in which the elementary principal performs various administrative, supervisory, and human relations functions.

leadership. If school operation is to be evaluated fairly and adequately, and if plans and policies are to be formulated, revised intelligently, and nurtured by all persons concerned, the elementary principal must provide the leadership. The significance of the leadership role of the principal in structuring the organization and additional additional and additional ad

It is assumed by the writers that the best schools usually have principals of ability, vision, and flexibility who are well trained for the task of administering an elementary school. If the elementary principals of Illinois are to continue the process of elevating the principalship to a truly professional position, they must begin by examining the present status of the principalship. From an understanding of the position as it exists today, and the exercise of reflection on what it may be tomorrow, plans and programs needed to

and the control of th

produce increased effectiveness and efficiency can be developed.

Background and Content of the Study

The study reported in this bulletin was conceived and conducted by Dr. Harry Merigis, Director, School of Elementary and Junior High School Teaching and Professor of Education, and Mr. Donald Gill, Principal, Laboratory School and Assistant Professor of Education at Eastern Illinois University. The study was funded by a grant from Eastern Illinois University and was conducted with the support and active assistance of the Illinois Elementary Principal's Association.

The study seeks to present a state wide report of current practices and emerging trends in the organization and administration of public elementary schools in Illinois. The study represents an effort to ascertain how elementary principals perceive certain functions of their positions. The study makes no attempt to inquire into the causes of success or failure, strengths or weaknesses, and only a minimum effort to qualify one practice or belief as better than another.

Development of the Survey Instrument (2000) The Survey Instrument

The basic research instrument was a questionnaire containing

178 questions divided into eleven categories. The categories were:

You and Your School, Personal Information, Education for the Principalship, Recruitment, Experience, Financial Status, Your Position, Resources,
Principal's Role in Administration, Principal's Role in Supervision,
and Community Work.

The basis for selecting items was a combination of a survey of

the literature, the experience and judgment of the researchers, and conferences with elementary principals. From refinement of an initial mass of potential materials and the reactions of members of the Board of Directors of the Illinois Elementary Principals Association, the final questionnaire was developed. Many of the questions used were based upon those used in two national studies by the Department of Elementary School Principals.

Conduct of the Study

It was intended that the anonymous questionnaire would be mailed to all elementary principals listed in the Directory of Illinois Schools, 1964-65, published by the Office of the Superintendent of Public Instruction. Questionnaires were mailed during October, 1964, by the Administrative Associate, Illinois Education Association.

Inadvertently a substantial number of principals in Cook, DuPage, and Lake counties did not recieve copies of the questionnaire. Since these counties are among the most populous in the state, undowedly this seriously affected the percentage of returns and must be viewed as a limitation of the study. A return of approximately fifty-six percent of all schools in the state was achieved.

Data collected were data processed and the relationship was determined between each item and time devoted to administration, sex,

The Elementary School Principalship-Today and Tomorrow, The

and divisions of the Illinois Education Association. Because of the voluminous nature of data pertaining to divisions of the Illinois Education Association these data are presented in a separate monograph.

Only numbers and percentages are used to show responses and relationships. These are believed to be adequate for the purpose, conditions, and nature of the study and desirable because of simplicity. Throughout this report reference will be made to the National Study. The reference cited is the Elementary School Principalship - A Research Study.

ORGANIZATIONAL CHARACTERISTICS OF ELEMENTARY SCHOOLS

The survey instrument was mailed only to elementary school principals and could include any combination of grades from kindergarten through grade eight, but not a school organized as a separate junior high school. " Within the framework of this definition, the following categories of facts are reported in this chapter: (a) type and number of separate schools administered, (b) enrollment, and (c) staff.

TABLE 1 TYPE OF SCHOOL THE PRINCIPAL ADMINISTERS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

计,一定是一点,不是一个多数是一个一个一个一个人就要的一个数据的最后,但是不是一个人

on the first of the second Types of schools administered by respondents indicate that the The second of th majority are elementary schools, although a suprisingly large percentage of respondents indicate their position as superintendent and elementary principal. This study did not seek to relate this combination of roles to assistance provided, but one must wonder how much time a superintendent can give to his dual role as elementary principal unless adequate assistance is provided. It is important to note that 18 percent of the respondents who indicate less than half time devoted to administration also indicate they are superintendent and administer an elementary school.

- NUMBER OF SCHOOLS THE PRINCIPAL ADMINISTERS BY POPULATION TABLE 2 GROUP, SEX AND TIME DEVOTED TO ADMINISTRATION
- ORGANIZATION OF SCHOOLS THE PRINCIPAL ADMINISTERS BY POPULATION GROUP, SEX AND TIME DEVOTED TO ADMINISTRATION

The most frequent school organization reported by respondents includes grades kindergarten through sixth (37 percent). The second highest in frequency enrolls pupils from kindergarten through grade eight (24 percent). If we add to these two types the I-VI and I-VIII types, the percentages become 45 for the sixth grade school and 25 for the eight grade school. Other types of organization reported were kindergarten through grade three, and grade one through grade three.

Among teaching principals the same general pattern exists except their schools are more likely not to have a kindergarten.

The National Study reports that in 1958, 85 percent of supervising principals administered one school; 12 percent, two schools; and 3 percent, three or more schools. The same study reported that 51 percent of the sample consisted of elementary schools organized on a kindergarten through sixth grade plan.

TABLE 4 ENROLLMENT OF SCHOOLS THE PRINCIPAL ADMINISTERS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Schools reporting in this study have a mean enrollment of 540 pupils. Forty-nine percent have enrollments of fewer than 400 pupils; 41 percent, 400-799 pupils; and 11 percent, 800 or more pupils. The National Study reports that in 1958 twenty-eight percent had less than 400 pupils; 54 percent, 400-799 pupils, and 18 percent, 800 or more pupils.

It is significant to note that 64.3 percent of the principals devoting less than half time to administration are employed in schools enrolling fewer than 200 pupils.

TABLE 5 NUMBER OF TEACHING POSITIONS UNDER PRINCIPAL'S CONTROL BY POPULATION CROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is interesting to note that 65.5 percent of the total sample report fewer than twenty teachers working under their control. When compared on the basis of sex of the principal, there is no striking difference although approximately twice as many female as male principals supervise fewer than five teachers. Fifty-two percent of full time principals supervise fewer than 20 teachers and as might be expected 99 percent of principals devoting less than half time to administration supervise fewer than 20 teachers.

CHAPTER 2

PERSONAL CHARACTERISTICS OF PRINCIPALS

The purpose of presenting personal data is to portray, as accurately as possible, a complete picture of the elementary principal in regard to age, sex, and family. No claim is made that males make better principals than females or that marital status is necessarily an important factor in the determination of the effectiveness of a principal.

TABLE 6 PRINCIPAL'S CLASSIFICATION BY SEX AND TIME DEVOTED TO ADMINISTRATION

In the early history of education in the United States the great majority of principals were men. Historically there has been much argument concerning the relative merits of men and women for the principalship. Fortunately such non-productive arguments have given way to a realization that individual competency, regardless of sex, is the only intelligent basis for the selection of principals.

One might assume that in the teaching principalship women would predominate, but such is not the case as the majority, 74 percent, reporting in this study are male.

The 1958 National Study by the Department of Elementary School Principals reported that 59 percent of their sample were men and 41 percent women, with 41 percent of the teaching principals men and 59 percent women. An earlier study done by the same group in 1928 reported 45 percent men and 55 percent women. Although current national figures are not available it is reasonable to assume that

more men are entering the elementary principalship or that Illinois is atypical of the national picture.

TABLE 7 PRINCIPALS CLASSIFIED BY AGE FOR POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Age in and of itself does not seem important as a criteria for the principalship. It does seem important that any dynamic profession must accept a substantial percentage of its membership from persons young enough to develop full careers within a segment of the profession.

In the sample reported here it is of interest that 49 percent are under 40 years of age. It is also worthy of note that while 58 percent of the men are under age 40, only 10 percent of the women fall within this category. A total of 18 percent of the males and percent of females are over age fifty. There is not much difference in the mean ages of supervising principals and teaching principals, but there is considerable difference in the mean age of men and women principals.

The approximate mean age for the population group is 42 years; for male principals 39 years, and for female principals 52 years. In the National Study the following information was reported: Median age for the population group was 47.7 years; median age of male principals 43.2 years, and median age of female principals as 52 years. While in the National Study only 4 percent of supervising principals were under age 30, the Illinois Study found that 26.5 percent of the respondents were under 30 years of age.

- TABLE 8 PRINCIPALS CLASSIFIED BY MARITAL STATUS FOR POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION
- TABLE 9 PRINCIPALS CLASSIFIED BY NUMBER OF DEPENDENTS FOR POPULATION GROUP, SEX AND TIME DEVOTED TO ADMINISTRATION

A much larger percentage of female teachers, 38 percent are single than is true for male, 6 percent. When the classifications of single and widowed are combined it is noted that 48 percent of female principals as compared to 6 percent of males do not live within a total family context.

As might be expected a far larger percentage of female principals, 81 percent, than male, 7 percent, have no dependents. It is interesting to note that male principals reporting four or more dependents total 43 percent.

CHAPTER 3

PRINCIPAL'S EDUCATION FOR THE PRINCIPALSHIP

This chapter seeks to present data concerning both formal and informal preparation for the principalship. Although it is recognized that formal academic preparation does not constitute the only valid preparation, and that in-service education contributes much, degrees held is a usual way to measure formal education. In addition to reporting formal education this study seeks to report the principal's perception of the value of academic experiences.

TABLE 10 DATE OF LAST FULL TIME COLLEGE ENROLLMENT BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is important to note that over half, 53 percent, of the sample have been enrolled full time in a college during the last ten years. In view of the vast and significant changes in the field of school administration within recent years, this argues well for the elementary principalship in Illinois. In respect to date of last full time enrollment in a college there is little difference between full time and part time principals, although considerably more females than males were last enrolled full time prior to 1950.

- TABLE 11 YEARS OF COLLEGE COMPLETED BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION
- TABLE 12 PRINCIPALS HIGHEST EARNED DEGREE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is dangerous to assume that the number of years a principal has spent in college is a good measure of his adequacy as a principal.

However, it is one criterion and does give some indication of interest in meeting professional qualifications for the principalship.

It should be noted that for the total sample, 2 percent have no degree while 11 percent have less than five years of college education. Conversely it is important to note that 36 percent have more than five years of college training, and 98 percent have at least four years. It is of further interest that of those persons devoting less than half time to administration, 16 percent have more than five years of college. Slightly more women, 37 percent, than men, 36 percent, have more than five years of college.

The National Study reported that 98 percent of the principals had four or more years of undergraduate college preparation; 82 percent, compared with 86 percent for the Illinois study, had varying amounts of graduate study, and 2 percent had no academic degree. It is clear that Illinois exceeds the national level of 1958.

The National Study also reported 3 percent of the sample as holders of the doctorate while the present study reports almost the same percentage, 2.9. When full time administrators are taken as a group, 4 percent hold the earned doctorate.

TABLE 13 PRINCIPAL'S HIGHEST EARNED DEGREE BY YEAR GRANTED FOR POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

A total of 85 percent have received their most recent degree since 1950, with an amazing 62 percent receiving this degree during the last ten years, with 65 percent of the males and 47 percent of the females falling within this category. A rather startling 45

administration have received their last degree since 1960.

TABLE 14 ACADEMIC MAJOR BY BACHELOR'S DEGREE FOR POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The most significant aspect of Table 14 is that 34 percent, one third, of all respondents did not respond to this item. It is reasonable to assume that all respondents know their undergraduate major and thus one may assume that the large percent of no response indicates that a substantial percentage of the sample did not wish to reveal their undergraduate major to the researchers. An attempt to secure this information from the Office of the Superintendent of Public Instruction was not fruitful because this Office does not record such information on data processing cards.

While it is possible to obtain professional training in elementary education in ways other than through an undergraduate major in elementary education, Table 31 reveals that 26.4 percent of the sample have no elementary teaching experience; at total of 36.2 percent have one year or less, and 68.9 percent have fewer than six years. Slightly under fifty percent have graduate preparation in elementary school administration while 5.4 percent have graduate preparation in elementary education.

Almost twice as many female principals, 59 percent, as male, 37 percent report their undergraduate major as elementary education.

TABLE 15 MAJOR FIELDS OF GRADUATE EDUCATION FOR POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The greatest single percentage, 48, report the major field of graduate study as elementary school administration. Half, 50 percent, of full time administrators report their major graduate training to be in elementary school administration. When the fields of elementary school administration, elementary education, and elementary school supervision are combined, it is noted that 65.7 percent of the responses fall under these classifications. The researchers believe that this represents a very desirable trend in the preparation of elementary principals. Male and female principals as groups report approximately the same precentages for the combined fields, but it is noted that more female, 42 percent, than male, 13 percent, report their major field of graduate study to be elementary education or elementary school supervision. Comments related to these data are made under the conclusions appearing at the end of this bulletin.

TABLE 16 PORTION OF EDUCATION IN ADMINISTRATION AND SUPERVISION PRIOR TO FIRST PRINCIPALSHIP BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is of notable importance that a large percentage, 36 percent, of respondents indicate they received less than half of their training in administration and supervision prior to the first principalship.

Only 36 percent report they had received all of their training in these areas prior to the first principalship, while 21 percent had no such training prior to the first principalship.

TABLE 17 EVALUATION OF RESOURCES FOR GUIDANCE OF PRINCIPALS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

When the categories of much help and average help are combined it is clear that principals rank the most helpful assistance as coming from local school personnel (92.1 percent), professional journals and books (62.4 percent), principals outside the system (46.2 percent), County Superintendent (41.6 percent), Office of the Superintendent of Public Instruction (35.9 percent), and consultation with colleges and universities (31.9 percent). It is clear that principals turn for assistance to the sources most accessible to them and because of the close geographical proximity of the County Superintendent to all schools, one may wonder why principals do not view this office as being of greater assistance. Data remain constant for male and female principals with the County Superintendent providing increased service to individuals reporting less than half time devoted to administration.

TABLE 18 VALUE OF COLLEGE INSTRUCTIONAL METHODS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is apparent from this Table that the internship as an instructional device has been experienced by only a small percentage of principals. When the classifications Much Help and Average Help are combined, instructional methods and precent of response are ranked as follows: Class Discussion 91 percent; Course Lectures 76 percent; Workshops 67 percent; Seminar 67 percent; Research 64 percent; Term Papers 52 percent; Field Studies 39 percent, and Internship 8 percent.

A study of Table 18 reveals that for most items female teachers indicate Much Help more frequently than did male teachers. When the classifications Much Help and Average Help are combined it is apparent that full time principals rank Workshops, Research, and Seminars as more valuable than do part time principals.

In the National Study, principals ranked college instructional methods as being of Much Benefit as follows: Class Discussion 50 percent; Workshops 39 percent; Seminars 32 percent, and Research 29 percent.

TABLE 19 HELPFULNESS OF TOTAL PREPARATION FOR ROLE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is evident that all classifications consider that they are best prepared in supervision and curriculum and most poorly prepared in the area of community relations. It may be significant to note that a greater percentage of men principals feel their preparation in administration is most helpful while female principals rank supervision and curriculum as the area in which their preparation is of greatest help. In the National Study the sample reported Supervision and Curriculum development as most helpful (48 percent), Classroom teaching (23 percent), Administration (22 percent), and Community relations (7 percent).

TABLE 20 SABBATICAL LEAVE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Approximately one fourth of the respondents are employed in school systems with sabbatical leave policies. A higher percentage of female teachers are employed in such systems and it is clear that part time principals have a minimal chance to be employed in such systems.

TABLE 21 LEAST HELPFUL AREAS OF PREPARATION BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

This Table strongly supports the data presented in Table 19.

It is abundantly clear that elementary principals in Illinois feel their total preparation has been of least help in meeting problems in the area of community relations. Even when one concedes that the present study may be a crude measure, these data should alert teacher preparation institutions to a need to reexamine this area in the preparation programs for elementary principals.

TABLE 22 TIME DEVOTED TO PROFESSIONAL IMPROVEMENT BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is rather astonishing to note that 6 percent of the total population group report 11 hours or more per week devoted to professional improvement. Interpolated to hours, days and weeks this percent of respondents apparently spend in this activity 44 hours per month, the equivalent of 48 eight-hour days or 9.3 working weeks during a nine month school year. The percentage for female principals is even higher. This indeed represents a dedicated group.

It is also interesting that full time principals devote only slightly more time to these activities than do principals who teach less than half time. On the average principals who devote less than half time to administration, spend fewer hours per week in professional improvement.

The question asked respondents required that they indicate the number of hours in an average week devoted to professional improvement, such as reading and study, and professional association work.

TABLE 23 MEMBERSHIP IN PROFESSIONAL ASSOCIATIONS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

A substantial percent (39) of all respondents indicate they belong to a local association, Illinois Elementary School Principals Association, and Department of Elementary School Principals of the National Education Association. Female principals, over half, represent the largest single percentage (51.2) with the smallest percentage (14.5), represented by principals devoting less than half time to administration. Of considerable interest to the profession is the fact that 32.2 percent of this group belong to no professional principals organizations.

When data from this study are analyzed one notes that 63 percent belong to a local association, 69 percent to the state association, 46 percent to the national association, and 19 percent belong to none of the three. These percentages may be compared with the 1958 National Study which reports that 89 percent of respondents belonged to a local association, 85 percent to the state association, 66 percent to the national, and 6 percent to none of the three.

TABLE 24 RANKED PROFESSIONAL GROWTH EXPERIENCES BY POPULATION GROUP, SEX AND TIME DEVOTED TO ADMINISTRATION

Principals engage in a variety of activities that undoubtedly contribute greatly to their professional growth. Principals were asked to make a value judgment concerning certain activities by indicating the benefits derived from each activity. Action Committees of teachers working on school problems is reported as being of most

benefit. Of interest is the fact that for the population group

27 percent have not experienced an institute coordinated by a state
department of education, university, or a cooperative sponsorship.

TABLE 25 POSITION JUST BEFORE FIRST PRINCIPALSHIP BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The largest group reports they were employed as elementary teachers prior to their first principalship. While at first glance it would appear encouraging to note that slightly over half of the respondents were selected for their first principalship from the ranks of classroom teachers, one must consider that a total of 32 percent were placed in their first principalship from posts only remotely connected with elementary education.

Female principals are more likely to be recruited from the ranks of elementary teachers than are males. This may be attributed to the fact that until a few years ago there was a paucity of male elementary teachers, and while this situation has changed slightly, the preponderence of elementary teachers today are women. The principal who devotes less than half time to administration is quite likely to be an elementary classroom teacher.

TABLE 26 SOURCES OF PERSONNEL FOR THE PRINCIPALSHIP BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is clear that personnel of the individual school are given preference in only a small percentage of schools, with major preference given to personnel within the total school system and on an equal basis to persons from outside the system. This would

appear to reflect a belief on the part of superintendents and .Boards of Education that they should search for the best persons to fill a position regardless of present place of employment.

Data from the National Study of 1958 indicates that greater consideration was given to personnel already employed in the school system, 55 percent; outsiders and local personnel on equal basis, 28 percent; personnel of individual school staff, 15 percent, and outsiders, 2 percent.

TABLE 27 CONSIDERATION GIVEN MEN AND WOMEN AND PREFERENCE SHOWN
BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Slightly over half, 56 percent, feel that sex is not a major factor in the employment of a principal in their school system. A higher percentage of women, 70 percent, than men, 53 percent, believe this to be true. Of the respondents who feel that sex is a factor in the selection of principals in their system, 98 percent believe that men are given preference. A smaller percentage of women than men feel that men are given preference but the percentage is still high, 94 percent. The 1928 survey of the Department of Elementary School Principal, showed that 55 percent of supervising principals were women and 45 percent men. In 1948 the proportions had shifted to 59 percent men and 41 percent women. In 1958, 62 percent of supervising principals were men and 38 percent were women.

TABLE 28 TOTAL YEARS EXPERIENCE IN TEACHING, SUPERVISION, ADMINISTRATION OR OTHER SCHOOL WORK BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

This Table treats total school experience and reveals that the median years of experience falls within the 14 to 17 year range, as it does for male principals. For female principals the median falls within the 26 to 29 year range. An analysis of this Table reveals that 28 percent of male principals report more than 17 years total experience as compared with 80 percent for female principals. There is no notable difference between groups on the basis of time devoted to administration. The property of the control of the cont

TABLE 29 TOTAL YEARS ADMINISTRATIVE EXPERIENCE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION \$\$6. 是我们的意味

property with a great form to a large model of the

The median number of years of administrative experience for the confiden population group falls within the 6 to 9 year range, as it does for the contract of both male, and female principals. For respondents reporting less than ... ! : half time devoted to administration, the median falls within the sale and the 2 to 9 year range. Although, in relation to total years of educational. experience reported in Table 28, a wide difference was noted in the little of experience between male and female principals, such difference is not ... see present in relation to administrative experience.

1.28 35

TOTAL YEARS CLASSROOM TEACHING EXPERIENCE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION JED 188 1 16 16 16

It is clear that of the respondents, female principals have considerably greater experience than do male principals. Table 7 revealed that 58 percent of males were under 40 years of age while only 10 percent of female principals were under age forty. Therefore it is not surprising to find that 75 percent of male principals have less than ten years teaching experience compared with 22 percent for female principals. A total of 46 percent of male principals as compared to 9 percent of female principals report less than six years teaching experience. Male principals report a total of 4 percent having eighteen or more years teaching experience as compared with 42 percent for females.

Respondents were requested not to count as teaching experience teaching performed while concurrently serving as a part time administrator. When a comparison is made of principals reporting less than ten years teaching experience, it is interesting to note the following percentages: full time administration, 65.8 percent; more than half time devoted to administration, 67.8 percent; and less than half time devoted to administration, 58.6 percent.

TABLE 31 TOTAL ELEMENTARY CLASSROOM TEACHING EXPERIENCE BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

It is interesting and noteworthy that 31 percent of male principals report no teaching experience in grade 1 to 6, while only 3 percent of female principals fall in the same category. Of principals reporting one year or less, 31 percent are male and 7 percent female.

A high percentage, 38.6, of principals devoting less than half time to administration report no teaching experience in grades 1 to 6

TABLE 32 POSITION HELD PRIOR TO PRESENT POSITION BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Data presented in Table 32 indicate that a higher percentage of female principals were elementary classroom teachers prior to accepting their present position than was any other group. This is particularly true for principals who devote less than half time to administration with slightly over half indicating classroom teaching as the position held immediately prior to their present position.

TABLE 33 TOTAL YEARS EXPERIENCE AS PRINCIPAL BY POPULATION GROKP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The median years of experience for the population group fails within the 6 to 9 year range. A total of 37 percent of the total population report less than six years experience as a principal, as compared with 48 percent for individuals devoting less than half time to administration.

The National Study reported a median of 8.7 years experience as a principal.

TABLE 34 TOTAL YEARS EXPERIENCE IN PRESENT POSITION BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The total population group indicate that 75 percent have been principals in their present school system for less than ten years, with 51 percent indicating less than five years. A total of 23 percent of male principals, and 32 percent of female principals report being principal for more than ten years in their present school system. A total of 48 percent of full time principals, and

64 percent of principals devoting less than half time to administration report they have been a principal in their present system for less than six years. It would appear that principals in Illinois are a mobile group.

TABLE 35 ELEMENTARY PRINCIPALSHIP AS A FINAL OCCUPATIONAL GOAL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

TABLE 36 FINAL OCCUPATIONAL GOAL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

A total of 43 percent of all respondents stated that they plan to remain in the elementary principalship. When male and female principals are compared, twice as many females, 74 percent, as male, 35 percent, view the elementary principalship as their final occupational goal. On the basis of time devoted to administration their is no significant difference between the three classifications reported.

Of those who do not view the elementary principalship as a final occupational goal, the largest group, 39 percent, aspire to the superintendency with 16 percent ranking college teaching second. Male principals rank the superintendency first, 42 percent, with college teaching ranked second, 15 percent. Female principals rank other educational positions first, 35 percent, and college teaching second, 19 percent. An amazingly high percentage, 17 percent, of female principals aspire to the high school principalship.

It is probably misleading to interpret these data as dissatisfaction with the principalship as an occupation. It is likely that these data do represent a desire to move to roles perceived to be of greater prestige and more lucrative.

The state of the s

Data presented in the National Study indicate that 63 percent of the total sample viewed the elementary principalship as the final occupational goal. Twenty-five percent of all principals saw the superintendency as their goal, 17 percent aspired to a supervisory position, 17 percent aspired to college or university teaching, and 16 percent aspired to the assistant superintendency. Forty-two percent of men supervising principals who aspired to another position indicated the superintendency.

the second of the second of the second of the

CHAPTER 4

FINANCIAL STATUS OF PRINCIPALS

Elementary principals have seldom enjoyed the professional prestige or compensation commensurate with the professional responsibilities they are assigned. As in most professions, there would seem to be a direct relationship between potential financial renumeration and the quality of persons who chose the elementary principalship as a vocation. Salaries paid principals are influenced by many factors. Educational level, experience, geographical location, and value placed upon the position by employing officials, all influence salary.

TABLE 37 SALARY BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

A total of 30.9 percent of the population group report a salary in excess of \$10,000, with 6 percent reporting a salary under \$0,000. When male and female principals are compared it is noted that 39 percent of female principals and 29 percent of male principals report a salary in excess of \$10,000. At the lower end of the salary scale more female principals 12.4 percent, than male, 4.4 percent, earn under six thousand dollars. A very small percentage, 0.2 percent, of full time principals earn less than \$6,000, while 28 percent of principals devoting less than half time to administration fall in this salary range. A total of 42 percent of full time principals report a salary exceeding \$10,000.

The 1958 National Study reported the median salary for male principals as \$6282; for female principals as \$6,161, and for all principals as \$6,237.

TABLE 38 SALARY INCREASE OVER PAST YEAR BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The average increase reported for the population group falls within the \$350 to \$549 range. It is interesting to note that 8 percent of male principals and 16 percent of female principals report no salary increase. It is clear that on the average men received a greater increase than did women. For male principals 26 percent received less than a \$250 salary increase while 43 percent of females received less than this amount. It is also interesting that of those who are not full time principals, 46 percent report salary increments of under \$250.

TABLE 39 MAXIMUM SALARY IN PRESENT POSITION BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Table 37 shows that 9.5 percent of full time principals indicate a salary of \$12,000 or higher, while 22 percent indicate it is possible for them to earn this salary in their present position.

A substantially higher percentage of female principals, 48 percent, as compared to 36 percent for males, work in systems where they may potentially earn in excess of \$10,000. This differential holds true at all of the higher salary ranges. As might be expected, principals devoting less than full time to administration have a minimum chance of earning a salary in excess of \$10,000.

TABLE 40 INCOME FROM OUTSIDE SOURCES BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Slightly over half, 55 percent, of the population group report no outside income. The present study did not attempt to reveal the types of occupations accepted by principals in their post school hours, but did ask for the amount of their outside earning during the twelve month period of July, 1963, through June, 1964. The figures reported in this survey may be compared with those of the 1958 National Study which reported that they median male supervising principal earned about \$310 extra; the median man teaching principal about \$418; and the median woman principal earned nothing.

CHAPTER 5

HOW THE PRINCIPAL USES HIS TIME AND HIS STATUS IN THE SCHOOL SYSTEM

This chapter reports the perception held by principals of their status within their school systems. Principals were asked to estimate how their time was allocated, realizing that such an estimate is difficult to make and inexact because the usual division of time does not lend itself to neat compartmentalization.

TABLE 41 TERM OF EMPLOYMENT BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The largest single parcentage of principals are employed on a ten month basis. Information that would show variations in salaries for principals in relation to length of school term is not available. It is of some interest to note that a greater percentage of half time administrators are employed on a twelve month basis. It is encouraging that 40 percent of full time principals are employed for eleven or more months. It is also clear that men principals are employed in excess of the regular school year at a higher level than female principals.

The 1958 National Study reported that 15 percent of their sample were employed for eleven or more months. The Illinois Study found that 26 percent of the sample were employed for eleven or more months.

`:;

Illinois elementary principals devote a varied amount of time each day to their positions. The largest percentage in each of the categories report a nine hour day, including the lunch period. Since most principals are generally "on call" during the noon hour, this makes his day slightly longer than the usual eight hours. But, the principal is also "on call" for many night and Saturday assignments. Table 43 reveals that 25 percent of the principals reporting invest eight or more hours per week in school duties directly connected with their position, but after regular working hours. As much as thirteen hours were invested by 3 percent of the total group of respondents. No striking differences in time investment were apparent among the various categories reported.

TABLE 44 SATISFACTION WITH PRESENT ALLOCATION OF TIME BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Half of the respondents indicate they are dissatisfied with the present allocation of their time. A slightly greater percentage of female principals, 56 percent, than male principals, 50 percent, report such dissatisfaction. Proportionately a much greater percentage of teaching principals are dissatisfied than are full time principals, although percentages for both groups are high.

TABLE 45 ACTUAL AND DESIRED DIVISION OF WORK WEEK BY AVERAGE HOURS PER WEEK BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

No reporting in terms of mere hours can adequately describe the complicated and demanding job of the principal. A critical element is how he spends his time during the work day and the distribution of time he would prefer. Table 45 indicates that principals would

generally prefer to devote less time to organization and management, clerical work and classroom teaching, and more to curriculum, supervision, program development and community work. It is not surprising that principals who spend less than one half time in administration would prefer more time for organization and management. Of all groups reporting, only the female principals would choose to work longer hours. No other appreciable change in working hours was suggested.

That principals are busy people is evident from their work loads.

They prefer to stay busy, but would put more emphasis on the instructional program in time allocation if they could do so.

TABLE 46 RANKED CONDITIONS WHICH IMPEDE IDEAL USE OF TIME BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Principals as a group view lack of clerical help as the single greatest impediment to ideal use of their time. Those who devote less than half time to teaching find this more of an impediment than those who devote more than half time to teaching. Lack of administrative assistance and demands of the central office are also among the chief impediments to ideal use of the principal's time. For those who teach more than half time, 81 percent, see regular teaching duties as the chief impediment to ideal use of time. These data reveal a varied pattern of impedimenta facing the principal as he allocates his time. It is of value to observe that of the total respondents, only 6 individuals indicate no impediments, with all being males. Five were full time administrators and one devotes less than half time to administration.

TABLE 47 COMPARISON OF EQUALITY OF STATUS WITH HIGH SCHOOL PRINCIPALS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

This Table reveals the elementary principals effort to see himself as he perceives how others see him in relation to a comparison with the high school principal. A majority of principals believe that they have equal status with the high school principal in the eyes of the superintendent, the Board of Education and elementary teachers. Of these three groups, they are least certain of the Board of Education. This holds true for all groups reporting. It is of some concern that nearly a third of the principals do not perceive their status as equal with that of the high school principal.

CHAPTER 6

RESOURCES AVAILABLE TO THE PRINCIPAL

Often principals are tempted to get bogged down in the details of school administration. While it is true that the principal must understand all of the details of the position he holds, it does not logically follow that he must perform them all. The fact that it is possible for a principal to devote much of his energy to details without being dismissed, may only indicate his lack of understanding that others will allow him to perform the details of administration unless he perceives his role to be something else. Obviously the principal must devote a portion of his time to routine administration, but his success, to a great degree, will depend upon his ability to budget his time and effort effectively so that he has adequate time to perform his instructional leadership role.

The elementary principal's effectiveness as administrator and instructional leader is, to a large degree, circumscribed by the resources that are available to him. Evidence from this study indicates a wide variation in the availability of certain resources which have a critical effect upon his performance.

TABLE 48 DESCRIPTION OF PRINCIPAL'S OFFICE BY POPULATION GROUP

The principal's office is the center for the coordination of all school activities. Yet, 5 percent of the principals responding indicate they have no real office. At the other end of the spectrum, 10 percent term their office "tip-top" while nearly 49 percent are

"satisfied" with regard to both space and equipment. It is of interest that 12 percent of female principals had no real office while only 3 percent of the men respondents indicate this to be true. In addition, 2 percent of principals devoting full time to administration indicate they have no office, with approximately 19 percent of those devoting one half or more time to teaching were not housed in an office.

TABLE 49 ITEMS OF OFFICE EQUIPMENT AS PART OF PRINCIPAL'S OFFICE BY POPULATION GROUP

Nearly all, 98 percent, of the principals have telephones in their offices. A small percentage of respondents indicate a lack of telephones and other common items of equipment. Certain other items such as dictating machines are conspicuous by their absence.

TABLE 50 SECRETARIAL TIME AVAILABLE TO THE SCHOOL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

While most principals indicate that they have satisfactory offices, adequate clerical help presents another problem. Approximately 18 percent indicate they have no secretary. Female principals fare less well than males in this respect, with 22 percent having no secretary compared to only 16 percent of the males. Secretarial help for elementary principals is somewhat scarce even though over 60 percent of the principals report at least one secretary, only 3 percent report more than two. It is of interest that 6 percent of full time principals have no secretary as compared to 58 percent of those devoting one half

principals have varied amounts of schooling. Only 1.5 percent have
less than a high school education while 3.6 percent are college graduates.

Approximately 19 percent are graduates of business schools, and an additional 13 percent have had some college work but do not possess a degree.

It is important to emphasize the value of a good educational secretary. As with most jobs, experience in the position tends to increase the incumbents effectiveness. Illinois principals, seem to experience difficulty in retaining secretaries for a very long tenure.

Approximately 68 percent of the secretaries have five or fewer years tenure in their present position, while only a little more than 3 percent have more than fifteen years in their present position.

TABLE 51 AVAILABILITY OF RESOURCE PERSONNEL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The principal must call upon a variety of resources if he is to effectively fill his role. However, the principal is, in the main, deprived of the services of many specialists who can contribute in a meaningful way to the educational program of the school. Only 10 percent of the principals have a full time assistant with 79 percent reporting none. Eight percent can call upon the services of a full time General Supervisor with about 25 percent having part time assistance. Table 49 shows that only a small percentage of schools have full time help in the various critical positions listed. It is encouraging to see that a number of these areas are represented by

Committee of the control of the cont

part time assignments, but far too many schools are deprived of these services. For example, 44 percent have no librarian, and reading specialists are unavailable in over 64 percent of the schools reporting.

If the elementary principal is to guide the school to achievement of its full potential, much more effort must be made to make these valuable resources available to him.

The school as part of the larger community can often call upon other agencies for assistance. Many Illinois principals make use of these agencies but far too many cannot. It is of importance that nearly 70 percent have no access to a reading clinic and over 50 percent cannot call upon the services of a social welfare center. It is clear that the principal who is employed in an urban area has an excellent chance to have many community agencies at his disposal, while in semi-urban and rural areas the probability of having such agencies available is greatly reduced. With the growing complexity of American society and the ever increasing pressures upon children and the schools that serve them, the value of these egencies or cooperating extensions of the school cannot be over-emphasized.

CHAPTER 7

THE PRINCIPAL'S ROLE IN ADMINISTRATION

This study has attempted to reveal the principal's perception of his role as well as his estimate of how his position is perceived by his superiors. The magnitude of the study demanded that a forced choice item be used. Since such a technique can never provide adequate description for the many unique situations which respondents face, an opportunity was provided to add supplementary comments for specific questions at the end of the questionnaire. Only a very few such comments were forthcoming. Hence, the investigators seem justified in considering the responses to be an accurate appraisal of the situations in question.

PRINCIPAL'S PERCEPTION OF THE STATUS OF THE ELEMENTARY PRINCIPAL IN HIS SCHOOL SYSTEM BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

A majority, 55 percent, of the respondents feel that the principals role is recognized publically as head of the school with considerable authority to plan, organize, and administer the educational program. However, 40 percent feel that their role is viewed as that of a functionary, carrying out the policies of the central office while acting as administrative head of the school, with some encouragement offered to plan for their school.

Only 5 percent feel they are neither encouraged nor authorized

ERIC

to act independently to significantly alter the school program. It is not surprising that 14 percent of those teaching more than half time feel that this is true as compared with 3 percent of the full time principals. There can be little doubt that most principals feel that their superiors view them as educational leaders for their schools.

TABLE 53 PRINCIPAL'S ROLE IN DEVELOPING SYSTEM WIDE POLICY BY POPULATION GROUP

In describing his part in general educational policy making for the school system, over 67 percent of the respondents indicate they are encouraged to suggest and help to develop policies. Another 16 percent indicate they receive some encouragement to propose policy, while only 2 percent are never consulted on matters of policy development for the system as a whole. An almost identical percentage of full time principals, 1.7 percent, and those teaching more than half time, 1.8 percent, are never consulted concerning policy. This study made no effort to assess the quality of the principal's contribution, but these data tend to indicate that an opportunity to contribute to this vital process is available. This, in itself, has far reaching implications for the principal as he prepares himself to perform in a productive, professional capacity.

TABLE 54 PRINCIPALS' ROLE IN SELECTING FACULTY FOR HIS SCHOOL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The principal, in his many faceted role as educational leader and administrator of a school program, will often stand or fall on

the professional staff which he heads. Unfortunately, the principal often has very little to say about who becomes a member of his staff. It is recognized that a team effort involving all levels of administration is the only reasonable way to locate and employ competent staff or, unfortunately in some cases, any staff at all. That the principal should be an important part of this team effort is generally accepted by responsible educators. Yet 29 percent of the nearly twelve hundred principals who responded indicate that all assignments are made by the central office, with the principal having nothing to say about the decision. In addition 32 percent are allowed to select only from several persons offered by the central office after specifying the kind of person needed.

A small number of principals do have significant influence over the choice of personnel, with 7 percent having full responsibility for employing teachers. Male principals tend to exert more influence over the choice of teachers than do the female principals who responded. Principals devoting one half time or more to administration fare best of all in influencing choice of their staff. Over 18 percent of this group reported having full responsibility for choosing staff.

TABLE 55 PRINCIPALS RESPONSIBILITY FOR EVALUATING WORK OF TEACHERS IN HIS SCHOOL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Regardless of his influence on the choice of people who work under his direction, the principal, either formally or informally,

アストン ディスト 神経 アイ・スティー アン・オー・ナン・スレイ・アングラ ダブ・ディス (数数を こだ)

evaluates the work of his staff. It is revealing to note that 10 percent of the respondents indicate that no evaluation is required for teachers under his direction, while approximately 20 percent evaluate only probationary teachers. The greatest percentage, 48 percent, are required to submit an annual descriptive or rating scale report teach year, and in addition, 11 percent use some other form of evaluation. Among these were conference with the teacher and superintendent and semi-formal oral reports to the administrative head of the district.

FRU OFF A CHICARULE CHAPTER 8 DATE OF FULL CONTROL STATE ST NAME OF

THE PRINCIPAL AND SUPERVISION

while it is generally accepted to be common knowledge, it should not be forgotten that the one and the only purpose of the school is education. To fulfill this function goals must be set, plans formulated to achieve the goals and a staff assembled. Seldom does a principal find a school and a staff that is fully capable of achieving full potential without supervision.

As Harlan L. Hagman points out, in the past the literature has which is not a select the select of the advocated the position of the supervising principal as a more skilled the go export serie stay there and knowledgeable one than the teachers. Supervision under this concept consisted essentially of the principal observing, correcting and observing again. Under this procedure the principal was placed in a precarious position because seldom does he know as much about teaching and learning at a particular grade level as the teacher. Present day emphasis in supervision has changed from that of teaching teachers how to teach to increasing emphasis upon cooperative efforts directed toward improvement of individual and school wide teaching skills. It is becoming increasingly common for principals to understand that teachers do not change their behavior unless they perceive the need and value for change. Change in behavior on the part of teachers is a complex process and one not easily achieved, although it appears most likely that desirable change will occur in an weiv contained atmosphere of mutual effort rather than one of superior-subordinate relationship.

TABLE 58 RESPONSIBILITY FOR SUPERVISION BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

The principal's role as supervisor of the instructional program
is often a solitary one. Nearly 95 percent of the respondents indicate
that this responsibility is either their's alone, or that they have
limited assistance from a supervisor of instruction. In only 1 percent
of the cases is the principal by-passed in the supervisory function,
and only 3 percent indicate that no one is specifically charged with
the improvement of instruction in the school. Female principals tend
to have more help from a supervisor than do males, and full time
principals have more of such assistance than do teaching principals.
In all but a very few instances, the need for adequate supervision
has been recognized and provided for.

TABLE 59 ROLE IN SHAPING INSTRUCTIONAL PROGRAM OF THE SCHOOL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

This Table reveals that the principal and his staff have considerable influence in shaping the content of the general studies for the program of their school. Over one fourth of the respondents indicate that they follow the program of the school system closely but do have some influence on its development. But 60 percent, by far the largest group, have full responsibility for adapting cooperatively developed programs to their various schools. Ten percent of the principals view their job as one of carrying out the prescription of state law and doing little or nothing about specific curriculum

content.

As might be expected, the full time principal has somewhat more impact on the curriculum in general than does his colleague who devotes to part of his time to teaching. The figures presented in Table 59 closely approximate those presented in the 1958 National Study.

Full time principals that to exploy this cechnique more improvement. The principal's function as leader and coordinator of offen than those who devote two than full time to administration. such a program places a great responsibility upon him for its Of those who spend lass than half time an administration is percent ultimate success. Whatever other elements such a function might never ampley such cecentique, and only 11 percent do it always as a contain, it most certainly emphasizes the need for the principal to part of their equervisors pattern. aid and support the teacher in many meaningful ways. This Table indicates that a large majority of the principals consider the most important way they help teachers in improving the learning environment is through discussion of instructional problems with individual

instructional problems. Emphasis was given to assuming leadership in providing instructional materials and helping teachers use them effectively. Of some interest is the fact that only a total of 144 respondents view research on school problems as being of major importance in improving the learning environment.

- TABLE 67 STATUS OF BUDGETED FUNDS FOR CARRYING ON INSERVICE EDUCATION PROGRAMS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION
- TABLE 68 BUDGETED FUNDS FOR PROFESSIONAL TRAVEL OF TEACHERS BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION
- TABLE 69 BUDGETED FUNDS FOR PRINCIPAL'S PROFESSIONAL TRAVEL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION
- TABLE 70 AMOUNT OF PERSONAL FUNDS SPENT BY PRINCIPAL FOR PROFESSIONAL TRAVEL BY POPULATION GROUP, SEX, AND TIME DEVOTED TO ADMINISTRATION

Only 36 percent of the principals have access to budgeted funds for carrying on in-service programs for the education of teachers. However, 45 percent have budgeted funds for professional travel of teachers while 62 percent of the principals have travel funds budgeted for their personal use. Over half of this group have access to less than \$150.00 but 17 percent of the total respondents used \$250.00 or more for their personal travel expenses. Of those devoting less than half time to administration, 63 percent have no funds and only 2 percent have \$250.00 or more.

Many principals find it necessary to spend their own money for professional travel, although 50 percent spent less than \$50.00 during the 1963 fiscal year. A total of 7 percent spent \$250.00 or more during this time period for travel purposes.

CHAPTER 9

SUMMARY AND CONCLUSIONS

Profile of the Principal

The average Illinois elementary school principal administers a single school with a staff of 17 and an enrollment of approximately 550 pupils. He is male, 40 years of age, and married with three dependents.

He was last enrolled as a full-time student during the period 1950-54 and has completed five years of college. His highest academic degree is the Master's which was awarded in 1954. The major area of undergraduate preparation is uncertain, but at the graduate level his degree is in elementary school administration. He received slightly over half of his formal training in school administration prior to becoming a principal. He feels that he receives the greatest amount of professional help from within his school system and considerably less assistance from such sources as the Office of the Superintendent of Public Instruction, County Superintendent of Schools or universities. He identifies workshops, class discussions and seminars as the most valuable instructional methods in his training for the principalship. He has not been exposed to an internship or field study as instructional methods. He feels his formal education has been most helpful in the area of administration and least helpful in community relations.

The average principal was a classroom teacher immediately prior to becoming a principal and he has 19 years experience in

education with eleven of these years in administrative work. He does not consider the elementary principalship as his final vocational goal but aspires to becoming a superintendent of schools. His salary is approximately \$8500 for a ten month work year, and he received a salary increase of \$400 last year. His potential salary, if he remains in his present position, is \$10,500, and he has no outside employment.

He has a work day of about 9 hours and spends six hours a week in evening or weekend work associated with school duties. He allocates his at school time as follows: Administration 14 hours; clerical work 5 hours; working with professional staff 8 hours; pupil personnel 5 hours; program development $3\frac{1}{2}$ hours; public relations $2\frac{1}{2}$ hours; work with community groups 3 hours, and working with parents 4 hours. There is a fifty percent chance that he is dissatisfied with this allocation of time. He would like to spend less time in administrative work and more time working with the instructional program. He feels that the major obstacles to achievement of this goal are lack of clerical help and administrative assistance.

He feels that his status image is good and that he has equal status with the high school principal, but he is not as certain that he enjoys equal status with the high school principal in the view of the local Board of Education. He feels he is generally recognized as the head of his school with considerable authority to plan, organize and administer the education program, but there is about a 45 percent chance

that he is only expected to carry out policies of the central office. He does have a voice in selecting staff but his recommendations are not always accepted. He is expected to rate his teachers annually but he does not feel that his evaluation affects the salary of teachers.

He is responsible for instructional supervision and does have some assistance from a supervisor of instruction or some other designated individual. He works in a school system where he is able to work cooperatively with teachers to plan the curriculum, and he and his staff have considerable freedom in the selection of instructional materials.

His major sources of new ideas are obtained from conferences and workshops, administrative and supervisory personnel within his system, and ideas obtained from a teacher or group of teachers. He does like to experiment with new ideas.

He makes frequent supervisory visits to classrooms but does not visit the same classroom two days in succession. He tends to make unannounced visitations and always has a follow-up conference with the teacher visited. He frequently revisits a classroom to determine the effectiveness of the conference, but only occasionally does he share written evaluations of the visit with a teacher. He feels his two most effective supervisory techniques are: (1) helping individual teachers identify, study, and take action on problems in their own classrooms, and (2) providing classroom teachers with many instructional materials and maintaining a high degree of morale among the staff.

He feels that office space and equipment allocated to his office is satisfactory but he does not have a dictation machine. He has a full time secretary who is a high school graduate, and who has been in the position five years. He does not have an assistant principal.

He does not have funds budgeted for an in-service program nor is there a budget for professional travel by teachers. He does have about seventy-five dollars for his professional travel and spent less than fifty dollars of his own funds last year. A total of 5½ hours are devoted to professional reading and professional association work each week. He indicates that he is a member of his local principals' association, Illinois Elementary Principals' Association, and Department of Elementary School Principals of the National Education Association.

Conclusions

Elementary schools and the principals who administer them are close to the people, undoubtedly closer and more deeply involved with school patrons than any other segment of the school system. This is the school that must introduce the child to schooling, and must help parents develop positive attitudes toward the school program. This is indeed a crucial role and presents both a challenge and an opportunity to the alert principal. Unfortunately, almost five of every ten principals have a self image that they do not have much

authority or support to do much more than carry out the policies of the central office. If data presented in this study accurately represents the principal's perception of his status, the Illinois Elementary Principals' Association has a rare opportunity to develop strategies to foster the principal's perception of himself as a change agent, and to develop plans and procedures for increasing the status of the position in the perception of boards of education, superintendents and school patrons.

There is little research that adequately correlates the kind of education a principal possesses and his competency. It seems reasonable that the principal, if he is to perform administrative and supervisory functions, ought to be well grounded in elementary education, administrative theory, and supervisory techniques. If elementary principals are selected who are not adequately prepared for these roles, procedures must be developed for systematic inservice education of such personnel.

There is a need for the profession to examine the influence of elementary teaching experience upon the effectiveness of the principal. When one considers that one fourth of the individuals occupying elementary principalships in the State have never taught in an elementary classroom, the question of how the lack of this experience affects the principal's performance is raised. Is teaching skill an important aspect of the principal's arsenal or may such skills be mastered vicariously? How do teachers view the principal without elementary classroom teaching experience?

All are questions raised but not answered by this study. It is suggested that these and similar questions provide clues for further and more intensive investigation.

Approximately half of the principals indicated they were dissastified with the manner in which they allocate their time. There is a marked tendency for the principal to want to spend more time interacting with people and less time in working with things. Interestingly the principals indicate they are least well prepared in the areas of leadership and community relations. Clearly this suggests the need for a searching evaluation of preparation programs for the elementary school principalship. Another dimension to the problem is that data collected seem to indicate that a great many school systems have not seen wisdom in providing necessary secretarial help to free the principal to implement a style of leadership representing a deep involvement with ideas and people.

Principals indicate a strongly positive self image as agents who provide much supervisory assistance to teachers. Even a naive observor reading data presented in this study will be puzzled by the amount of supervision indicated, and the apparent inability of elementary schools to rapidly absorb innovations. A question such an observor might ask is, "Do teachers perceive they are objects of so much supervisory attention?" Data presented in this study indicate that principals say they make many supervisory visits, and utilize

several other supervisory techniques. It is recommended that
the Illinois Elementary Principals' Association conduct a
study to determine if a significant difference exists between
principals and teachers in their perceptions of the frequency,
dimensions, and value of selected supervisory practices. It
appears clear that educational change and adoption of new
teaching approaches will occur whether we want it to or not-it cannot be prevented but only postponed. Whether such
change will reflect better practice or simply a change in
practice, will be determined in large measure by the principal's
supervisory skill in developing sound strategies and a positive
frame of reference for his staff and patrons.

When over half of the respondents indicate they receive
little or no help from the county superintendent of schools,
it would appear that in many instances this office is not
adequately fulfilling one of its major functions. While
recognizing the political nature of the office, the fact
remains that this office is intended to provide maximum help
for the schools in the county. It appears clear that this
purpose is not being realized, and it is recommended that the
Illinois Elementary Principal's Association work cooperatively
with the Illinois Association of County Superintendents to
develop greater services to elementary school principals.

Elementary principals apparently feel strongly that their college preparation has failed to adequately prepare them to meet problems in the areas of leadership and community relations. Certainly these data ought to alert colleges and universities to re-examine their preparation programs in these areas. While the assertion that schools will become what parents in a community want them to become is argumentative, there is considerable evidence to indicate that harmonious school-community relations are important to good schools, and generally result in increased support for progressive programs.

The fact that thirty-two percent of respondents belong to no professional principals group should serve to alert the leadership of the Illinois Elementary School Principals' Association to intensify efforts to enroll all elementary principals in their organization. It seems obvious that a substantial number of Illinois elementary principals do not perceive this organization with high regard, at least no enough to join its ranks.

Principals feel that lack of clerical and professional assistance, coupled with demands of the central office, present serious obstacles to the accomplishment of their task. It is recommended that the Illinois Elementary Principals' Association organize a Task Force to study two facets of the problem: (1) Are there standards that can be developed and supported by the State Superintendent of Public Instruction to decrease the ratio of students and faculty to clerical personnel; (2) are there procedures that can be

developed to train elementary principals in office organization and management to increase the principal's efficiency.

Appendix I

SURVEY QUESTIONNAIRE

	A. YOU AND YOUR SCHOOL	2.	How many years of college have you complated?
1.	What is your present position?		1. Less than 4 yrs.4. 6 years 2. 4 years 5, 7 years 3. 5 years or more
	A. School level. Check ONE. 1. I am principal of an elementary	_	
	school	3.	What is your HIGHEST EARNED COLLEGE DEGREE? If you hold a dagram not
	2. I am principal of the elementary		listed, chack the one that is most
	and junior high school. 3. I am principal of the alementary		nearly aquivalent to the one you hold.
	school and the night school.		Do not raport honorary degrees. 1. No degree
	4. I am principal of the elementary school and am the superintendent.		2. A dagrae bassd on less than 4

ERIC.

	F. Work with groups of teachers on problems at their own choosing. G. Assume leadership in providing instructional materials and helping teachers use them effectively. H. Conduct reaearch studies on school problems. I. Encourage and make possible intervisitation of teachers. J. Help teachers feel free to experiment with new instructional innovations.	3. How many HOURS PER WEEK on the average do you usually give to these lay groups and activites? Check one. 11 hour 22 hours 33 hours 44 hours 55 hours 66-7 hours 78-9 hours 810 or more hours
	K. Free teachers to participate in professional meetings & conferences.	L. SUPPLEMENTARY COMMENTS ON SPECIFIC QUESTIONS
	Do you have budgeted funds to carry on an inservice education program? 1. Yes 2. No Does your school budget funds for professional travel of teachers? 1. Yes 2. No	This questionnaire has been set up for machine tabulations, so in most cases, it has used a limited number of items to be checked. You may have felt an urge to comment on your answer, to add a specific item, or to make suggestions which the form of the question did not encourage. Here is your chance to add something.
17.	How much money is budgeted for your professional travel (include travel to educational meetings and recruitment of staff). 1. None 2. Less than \$50 3. \$50 to \$99 4. \$100 to \$149 5. \$150 to \$199 6. \$200 to \$249 7. \$250 or over	We do not expect you to comment on every question. Just look over your answers and pick the few where a comment or new item would enrich our understanding of your situation. Be sure to indicate the exact question - write in its number - then put down your comment in brief and clear fashion. ON QUESTION of Section I
18.	Indicate the approximate amount of your own funds you spent during 1963 fiscal year for professional travel. 1less than \$50 2\$50 to \$99 3\$100 - \$149 4\$150 - \$199 5\$200 - \$249 6over \$250	want to say:
1.	K. COMMUNITY WORK A variety of avenues may be found for interpreting the schools to the public. Which of the following do you use frequently in trying to build public understanding? Check one for each item.	
	A. Thru newspapers, radio, television 1. Yes 2. No E. Thru pupils 1. Yes 2. No C. Thru teachers 1. Yes 2. No D. Thru parents and parent organizations 1. Yes 2. No E. Thru community contacts and organizations 1. Yes 2. No	PLEASE RETURN TO: Dr. Harry Merigis, Director School of Elementary & Junior High School Teaching Eastern Illinois University Charleston, Illinois By Friday, November 6, 1964
2.	In what types of LAY ORGANIZATIONS or community programs do you PARTICIPATE? Please indicate your status in EACH type by entering the number from one of the following statements: 1. Hold a major office or committee chairmanship 2. An active member 3. Hold membership, but am not active
