STATUS, FAMILY (SOCIOLOGICAL UNIT), EMPLOYMENT, MOBILITY,
INCOME, PARTICIPATION, URBAN POPULATION, PARTICIPANT
SATISFACTION, INVESTIGATIONS, EXTENSION EDUCATION, CLINTON
COUNTY, NEW YORK STATE,

     COMBINED DATA ON THIRD AND FOURTH CYCLE LESSONS OF THE
CLINTON COUNTY FAMILY SERVICE PROGRAM WERE USED TO STUDY THE
SOCIOECONOMIC CHARACTERISTICS OF THE PARTICIPANTS AND TO
EVALUATE THE EFFECTS OF TEACHING. PLACE OF RESIDENCE, HOME
OWNERSHIP, AGE, EDUCATIONAL LEVEL, MARITAL STATUS, FAMILY
COMPOSITION, EMPLOYMENT, MOBILITY, INCOME, AND PARTICIPATION
WERE AMONG CHARACTERISTICS DISCUSSED. BOTH GROUPS HAD A
LARGER PERCENTAGE OF URBAN PARTICIPANTS, FEWER WOMEN FROM
OWNER FAMILIES, A LOWER MEDIAN AGE, AND A GREATER NUMBER OF
PERSONS PER HOUSEHOLD THAN THE AVERAGE COUNTY OR RURAL
POPULATIONS. THE HIGH RATINGS OF LESSONS INDICATED
SATISFACTION AND PRE AND POST TEST SCORES SHOW SIGNIFICANT
GAINS IN KNOWLEDGE. IMPLICATIONS SUGGEST THAT RECRUITMENT
SHOULD BE CONTINUED AS IT HAS BEEN SINCE BOTH GROUPS DIFFERED
IMPORTANTLY AND UNFAVORABLY FROM THE COUNTY'S TOTAL AND RURAL
POPULATION. THE FAMILY SERVICE AIDES, WHEN TRAINED BY
COMPETENT HOME ECONOMISTS, CAN TEACH PARTICIPANTS SO THAT
THEY MAKE SIGNIFICANT PROGRESS. (PT)

EVALUATION OF FAMILY SERVICE PROGRAM

HOME ECONOMICS DIVISION OF COOPERATIVE EXTENSION

CLINTON COUNTY, NEW YORK

Supplement to Extension Study No. 15

Author: Frank D. Alexander, Extension Studies Analyst

PREFACE

Because of the deep interest of the Leader of the
Clinton County Home Economics Division, the evaluation of
the third cycle of lessons of the Clinton County Family
Service Program as reported in Extension Study No. 15 was
continued into the fourth cycle of lessons. The major data
from the investigation of this fourth cycle have been com-
bined with those of the third cycle in this report. In
general, the combined data confirm the important findings
of Extension Study No. 15. The data which were considered
major and hence are presented in this supplementary report
deal with the characteristics of the participants and eval-
uation of the effects of the Family Service Aides' teaching
on the participants. It is believed that this supplementary
study will add strength to the findings of the earlier study.

TABLE OF CONTENTS

SUPPLEMENT TO EVALUATION OF FAMILY SERVICE PROGRAM
HOME ECONOMICS DIVISION OF COOPERATIVE EXTENSION
CLINTON COUNTY, NEW YORK

Summary of Findings

I. Introduction

This is a supplementary report to Evaluation of
Family Service Program, Home Economics Division of Cooper-
ative Extension, Clinton County, New York. The report
combines the data of the third cycle of lessons in the
earlier report with those of the fourth cycle for two
areas, i.e., 1) the socio-economic characteristics cf the
participants and 2) indications of the influence of the
teaching as measured by pre- and post-testing and by post-
reactions of the participants to the teaching.

II. Characteristics of the Combined Third and Fourth Cycle
Participants[1]

A. Place of residence

1. The participants in the two cycles of lessons
lived in 10 of the county's 14 townships and in the
City of Plattsburgh. Almost one fourth were from
Clinton Township.

2. Sixty-eight percent of the participants came from
what may be considered rural nonfarm places.

---

[1] Data on characteristics were presented for 71 participants
in the study of the third cycle of lessons, and these data
were combined with similar information on 43 participants
in the fourth cycle of lessons.

B. Ownership of Dwelling

1. Of the 111 on whom information was obtained, 60
    percent owned their houses or trailers.

C. Age of participants and their husbands

1. The average (mean) age of the 114 participants was
    36.1 years and of the husbands of those married was
    39.8.

D. Years of school completed by participants and their
    husbands

1. The average (median) number of years of school
    completed by the 113 women on whom information was
    obtained was 9.5. Only five percent had completed
    less than six years, and only eight percent had any
    college training.

2. The average (median) number of years of school
    completed by the 92 husbands on whom information
    was obtained was 8.2. Fourteen percent of the hus-
    bands had only completed from two to six years of
    school, and just three percent had done college work.

E. Marital status

1. Eighty-two percent of the 114 women were married.

F. Family and household composition

1. The average (mean) number of persons at home in the
    114 families of the participants was 4.9.

2. The 14-and-under age group of children in the
    families of the 107 women who were married or widows
    constituted 83 percent of the total number of chil-
    dren in these families.

G. <u>Employment of husbands and participants</u>

1. Almost one fourth (23 percent) of the 90 husbands on whom information was obtained were <u>laborers</u>, 17 percent were <u>operatives</u>, and 13 percent were <u>craftsmen and foremen</u>. Sixteen, or 18 percent, were classified as <u>unemployed</u>, among whom were five <u>retired</u> and three <u>disabled</u> persons.

2. Of the 113 participants who provided information 26, or 23 percent, were employed full- or part-time.

H. <u>Mobility</u>

1. Ninety-one women reported that on the average they had moved once every three years since marriage.

I. <u>Net income per family</u>

1. The average (median) estimated net family income in 1966 for 99 of the participants was $4,110. Ten percent of the families had incomes under $1,000. Only six families reported incomes of $7,000 or more.

J. <u>Formal participation</u>

1. The average (mean) formal participation score of 106 women on whom information was obtained was 1.18. Forty-five, or 42 percent, of the 106 women belonged to no organization.

2. The membership of those who belonged to organizations was concentrated in the church and various auxiliary religious organizations.

K. <u>Comparison with third cycle participants and county total and rural populations</u>

1. The socio-economic characteristics of the combined third and fourth cycle participants were generally

fairly similar to those of the third cycle participants. The combined cycles had a larger percentage of urban participants, fewer women from owner families, and a slightly lower average (median) age.

2. In general the combined participants differed from the county's total and rural population and where the difference could be considered favorable or unfavorable, the combined participants were in an unfavorable position, i.e., on years of school completed, household size, employment of husbands, and estimated family income.

III. Evaluation of Teaching

A. Rating of lessons by combined third and fourth cycle participants

1. The average (mean) percent rating score for lessons attended of 109 participants was 83.8. Only a few (19) of the participants gave overall ratings that were under 60 percent. These ratings were similar to those given by the third cycle participants.

B. Pre- and post-testing of knowledge of combined third and fourth cycle participants

1. The average (mean) percent score on the pre-test for 58 participants whose tests were usable for both the pre- and post-tests was 69.8 and on the post-test, 83.4. The mean difference (gain) between the pre- and post-test means was highly significant (P for t <.0005, one-tail or P <.001, two-tail). The third cycle of participants had a similar record on their knowledge tests.

2. Gains in the numbers (or percentages) of those having correct answers on the post-test compared to those having correct answers on the pre-test that were significant at .05 or less level (one-tail test) occurred on 35 items out of a total of 76 items constituting the testing instrument.

3. Over 80 percent of the participants had correct answers on 30 items of the pre-test.

Implications

1. The recruitment of participants should be continued as it has been conducted since it has resulted in a combined group of women for the two cycles of lessons that is fairly similar to the group who participated in the cycle that was originally studied and which differed importantly and un-favorably, as did the first group, from the county's total and rural population.

2. The Family Service Aides when trained by competent profes-sional home economists can teach participants so that they make significant progress in acquiring knowledge about home economics and other subject matter related to their welfare.

SUPPLEMENT TO EVALUATION OF FAMILY SERVICE PROGRAM
HOME ECONOMICS DIVISION OF COOPERATIVE EXTENSION
CLINTON COUNTY, NEW YORK

Introduction

The leader of the Clinton County Home Economics Division
decided that it would be desirable to follow the evaluation of
the third cycle of lessons with an evaluation of the fourth
cycle. It was thought that a continuation of the evaluation
would not only add numbers to the original study, but would
also strengthen the program by keeping the Family Service Aides
and the Home Economics staff on the alert.

The fourth cycle of lessons began in early April, 1967
and ended around the middle of July, 1967. The evaluation was
limited to pre- and post-testing of the participants and
interviewing of them by the Family Service Aides following the
end of the teaching. The pre- and post-test was identical to
the one used in the evaluation of the third cycle and the
interview schedule was identical to that used for the third
cycle of participants.

This supplementary report combines the data of the third
cycle and the fourth cycle for two areas, i.e., 1) the socio-
economic characteristics of the participants, and 2) indica-
tions of the influence of the teaching as measured by pre-
and post-testing and by post-reactions to various phases of
the teaching.

Characteristics of the Combined [1]
Third and Fourth Cycle Participants

---

[1] Data on characteristics were presented for 71 participants in
the study of the third cycle of lessons, and these data are
combined with similar information on 43 participants in the
fourth cycle of lessons. Actually, information was obtained
on 64 participants in the fourth cycle, but because of mis-
interpretation of instructions the information on 21 was not
usable.

Place of Residence

The participants in the two cycles of lessons lived in 10 of the county's 14 townships and in the City of Plattsburgh. The distribution of the 114 participants among the 10 townships and the City of Plattsburgh is given in Table 1.

Table 1

Number and Percentage Distribution of Participants
In Third and Fourth Lesson Cycles of the Family Service
Program According to Township in Which Residing

Township	Participants	
	Number	Percent
Altona	22	19.3
Ausable	5	4.4
Beekmantown	5	4.4
Black Brook	4	3.5
Champlain	14	12.3
Chazy	3	2.6
City of Plattsburgh	6	5.3
Clinton	28	24.6
Plattsburgh	13	11.4
Saranac	7	6.1
Schuyler Falls	7	6.1
Total	114	100.0

Clinton Township had the largest number of participants, 28, or 24.6 percent of the total. It was followed by Altona with 22, or 19.3 percent of the total. Two thirds (67.6 percent) of the participants came from these two townships plus two others, Champlain and Plattsburgh.

Thirty-six percent of the 113 on whom information was obtained lived in the country but not on a farm and another 32 percent lived in or near a village of less than 2,500 (Table 2). Thus, 68 percent of the women came from what may be considered rural nonfarm places. Only 10 percent of the total lived in or near the City of Plattsburgh.

Table 2

Number and Percentage Distribution of Participants
In Third and Fourth Lesson Cycles of the Family
Service Program According to Place of Residence

Place of residence	Participants	
	Number	Percent
On a farm from which get half or more of income	12	11
On a farm from which get less than half of income	12	11
In the country but not on a farm	41	36
In a village less than 2,500	28	25
Near village less than 2,500	8	7
Near City of Plattsburgh	6	5
In City of Plattsburgh	6	5
Total	113	100

Ownership of Dwelling

Of the 111 on whom information was obtained, 66 or 60
percent, owned their dwellings.[1] Of the 24 who lived on farms,
83 percent owned both their dwelling and some land. However,
of the 87 who did not live on a farm, only 51 percent were
owners of their dwellings.

Age of Participants and Their Husbands

The average (mean) age of the 114 participants was 36.1
years (Table 3). A little over one third (37.8 percent) of the
women were under 30. Only 16.6 percent were over 49 years of
age. The average (mean) age of the husbands of the women who
were married and whose husbands were living and a part of the
family was 39.8 years. The average (mean) age of the wives of
these husbands was 36.0.

---

[1]Three of the 66 owned trailers but rented the site on which
they were located.

Table 3

Number and Percentage Distribution of
Participants in Third and Fourth Lesson Cycles
Of the Family Service Program According to Age

| | Participants | |
Age	Number	Percent
16 - 19	6	5.3
20 - 24	15	13.2
25 - 29	22	19.3
30 - 34	17	14.9
35 - 39	12	10.5
40 - 44	12	10.5
45 - 49	11	9.7
50 - 54	7	6.1
55 - 59	5	4.4
60 - 64	3	2.6
65 and over	4	3.5
Total	114	100.0
Mean	36.1	

Years of School Completed by Participants

The average (median) number of years of school completed
by the 113 women on whom information was obtained was 9.5, or
about one and a half years beyond elementary school (Table 4).
Only five percent had completed less than six years. Eight
percent had one or more years of college.

Special Training Received by Participants

Of the 113 participants on whom information was obtained,
27, or 24 percent, had received special training in addition to
that received in public schools or colleges. About 17 different
kinds of training were listed by the 27 women, several of whom
listed more than one kind of training. Business and secretarial
training led the list with six having received this type of
training. It was followed by homemaking with five women indi-
cating special training in this area.

Table 4

14	1	1
15	1	1
17	1	1
Total	113	100
Median	9.5	

Years of Schooling Completed by Husbands of Participants

The average (median) number of years of school completed
by the 92 husbands on whom information was obtained was 8.2,
just slightly above eight years of elementary school (Table 5).
Fourteen percent of the husbands had completed from two to
six years of school. However, 22 percent of the husbands had
completed high school, and three percent had done college work.

Of the 93 husbands on whom information was obtained, 23,
or 25 percent, had received some type of special training
beyond public school or college. The different types of
training received almost equaled the number receiving special
training. Some men had received several kinds of training.
The two most frequently occurring kinds of training were
mechanical (5) and carpentry (4).

16	1	1
17	1	1
Total	92	100
Median	8.2	

Marital Status

Eighty-two percent of the 114 women were married, 11 per-
cent were widows, and seven percent were single.

Family and Household Composition

The mean number of persons (at home) in the 114 families
of the participants was 4.9 (Table 6). Twenty-one percent of
the families had either one or two members. On the other hand,
19 percent of the families were fairly large, having from eight
to 12 members.

The mean number of children in the families of the 107
women who were married or widows was 3.3. There was a total
of 349 children in these 107 families. Only 11, or 10 percent,
of the 107 families had no children, whereas 22 percent had from
six to 11 children.

Table 6

Number and Percentage Distribution of Participants
in Third and Fourth Lesson Cycles of the Family
Service Program According to Number in Family

Number	Participants	
in family	Number	Pe cent
1	9	8
2	15	13
3	19	17
4	14	12
5	13	11
6	15	13
7	8	7
8	8	7
9	5	4
10	4	4
11	3	3
12	1	1
Total	114	100
Mean	4.9	

The 349 children at home were distributed by age as
follows:

Age	Percent
Under 5	27
5 - 9	32
10 - 14	24
15 - 19	14
20 and over	3
Total	100

The 14 and under age group constituted 83 percent of the
total number, and over one fourth (27 percent) were under five
years.

The mean number of persons in the 111 households on which
information was obtained was 5.5. Sixty-two people other than
members of the nuclear family lived in 20 of the 111 households.

Employment of Husbands and Participants

Almost one fourth (23 percent) of the 90 husbands on whom information was obtained were <u>laborers</u>, 17 percent were <u>operatives</u>,[1] and 13 percent were <u>craftsmen and foremen</u>[2] (Table 7). Eighteen percent were classified as <u>unemployed</u>. Among these were five, or six percent, who had <u>retired</u> and three, or three percent, who were <u>disabled</u>.

Table 7

Number and Percentage Distribution of
Husbands of Participants in Third and
Fourth Lesson Cycles According to Occupation

Occupations	Husbands of participants	
	Number	Percent
Professional and technical	1	1
Managers, officials, and proprietors	5	6
Clerical workers	2	2
Sales workers	2	2
Craftsmen and foremen	12	13
Operatives	15	17
Service workers	5	6
Laborers	21	23
Farmers	11	12
Unemployed	16	18
Total	90	100

---

[1] <u>Operatives</u> include assemblers, bus and truck drivers, delivery men, auto service attendants, packers and wrappers, weavers, welders, and meat cutters.

[2] <u>Craftsmen and foremen</u> include carpenters, electricians, machinists, mechanics, plasterers, plumbers, and members of the armed forces.

Of the 113 participants who provided information, 26, or
23 percent, were employed. Twelve of the 26 women worked full-
time either for others or themselves, 13 worked part-time either
for others or self, and one worked part-time for self and part-
time for an employer. Most (14) of those who worked for
others were either <u>service</u> or <u>clerical</u> workers. And most (6)
of those who worked for themselves were either <u>service</u> workers
or <u>laborers</u>.

Mobility

The mobility of the women (91) since they were married
was about three tenths of a move per year, or about one move
every three years. The range, however, was wide, from no
moves (26 percent) to over two moves (one percent) every
year.

Net Income Per Family

The median estimated net family income for 99 of the
participants was $4,110 (Table 8). Ten percent of the families
had incomes under $1,000. And as high as 34.4 percent had
incomes under $3,000. Only six of the 99 families had incomes
of $7,000 or more.

Formal Participation Score[1]

The mean formal participation score of the 106 women on
whom information was obtained was 1.18 (Table 9). For those
who received a score, or were members of at least one organ-
ization, the mean was 2.05. Forty-five, or 42 percent, of
the 106 women belonged to no organization and another 35, or
33 percent, belonged to only one organization. While 54, or
51 percent were members of one to three organizations, none of
these held leadership positions. Only a few of the women (7)
had scores from five to nine.

---

[1] Formal participation score equals the number of different
organizations to which one belongs plus three for each
leadership position held.

16

Table 8

Number and Percentage Distribution of
Participants in Third and Fourth Lesson Cycles
According to Total Estimated Family Net Income: 1966

| Total estimated | Participants | |
family net income	Number	Percent
Less than $1,000	10	10.1
1,000 - 1,499	6	6.1
1,500 - 1,999	5	5.1
2,000 - 2,499	4	4.0
2,500 - 2,999	9	9.1
3,000 - 3,499	3	3.0
3,500 - 3,999	9	9.1
4,000 - 4,499	16	16.2
4,500 - 4,999	5	5.1
5,000 - 5,499	11	11.1
5,500 - 5,999	7	7.1
6,000 - 6,499	3	3.0
6,500 - 6,999	5	5.1
7,000 - 7,499	1	1.0
7,500 - 7,999	--	--
8,000 - 8,499	--	--
8,500 - 8,999	1	1.0
9,000 - 9,499	1	1.0
9,500 - 9,999	1	1.0
10,000 +	2	2.0
Total	99[a]	100.1[b]
Median	$4,110	

[a] Two Welfare families plus 11 others gave no infor-
mation on income and three participants in the
same family were counted only once.

[b] Not possible to round so that a total of 100 could
be obtained.

Table 9

Number and Percentage Distribution of
Participants in Third and Fourth Lesson
Cycles According to Formal Participation Score

Formal participation score	Participants

Brownies (leader)	1
Church mothers' club	1
Church Society	1
Fireman's Auxiliary	1
Gold Star Mothers	1
Ladies of St. Anne	1
Pioneers	1
Teachers' Association	1
Women's Association	1

Memberships were concentrated in the church and various auxiliary religious organizations.

Comparison with Third Cycle Participants and County Total and Rural Populations

The socio-economic characteristics of the combined third and fourth cycles of participants were generally fairly similar to those of the third cycle participants (Table 10). The combined cycles had a larger percentage of urban participants,

---

[1]The number of women who reported belonging to one or more organizations was 61.

fewer women from owner families, and a slightly lower median
age; otherwise, the two groups differed very little.

The percent of participants in the combined cycles who
lived in rural nonfarm places was somewhat larger than the
percent of the total population in these places. The median
age of the women in the combined cycles was a little lower
than in either the rural or total county population. The
median years of school completed compared to the same figure
for the county's total population was a little over a year
less for both the women and their husbands in the combined
cycles. The combined participants were married and living
with their husbands somewhat more frequently than was the case
of females 14 years of age and over in the county's total and
rural populations, but this was the result of the program being
essentially directed to housewives. The mean number of persons
per household for the combined cycles was somewhat larger than
the mean of both the county's total and rural populations.
The occupation with the highest percent of husbands of par-
ticipants in the combined cycles was that of laborer, whereas
it was operative for both the county's total and rural popula-
tions. The median estimated net family income of the com-
bined participants in 1966 was over $1,000 less than the median
for the 1960 total population of the county and slightly over
$800 less than the median for the 1960 rural population. Only
on ownership of home were the combined participants similar
to the county's total and rural populations. Thus, in general
the combined participants differed from the county's total
and rural population and where the difference could be con-
sidered favorable or unfavorable, the combined participants
were in an unfavorable position, i.e., on years of school
completed, household size, employment of husbands, and es-
timated family income.

Table 10

Comparative Socio-Economic Characteristics of Participants in Combined Third and Fourth
Lesson Cycles, Participants in the Third Lesson Cycle, and the County's Total and Rural Populations

Median	$4,023 (1966)	$5,165 (1959)	$4,110 (1966)	$4,938 (1959)
Percent with net income under $2,500	24	--	25	--
Formal participation score	(N=66)		(N=106)	
Mean	1.1	--	1.2	--
Organization with highest percent of members	Church 42%	--	Church 41%	--

[a] Data are from 1960 U.S. Census and for 1960 unless otherwise stated.

[b] Women 15 years and over.

[c] Females 25 years and over.

[d] Males 25 years and over.

[e] Females 14 years and over.

[f] Males 14 years of age and over in the labor force (employed and unemployed minus type of job not specified).

Evaluation of Teaching

Ratings of Lessons by Combined Third and Fourth Cycle Participants

When interviewed, each interviewee was asked to rate the lessons which she had attended. The qualitative ratings used in the interview schedule were very helpful, some help, and not at all helpful. Values of two, one, and zero were assigned respectively to these three qualitative ratings. A percent score for the home economics lessons plus resource lessons was calculated for each interviewee. This percent score was obtained by summing the numerical values of lessons attended, dividing by the maximum score for these lessons (which was 2 x the lessons attended) and multiplying by 100.[1]

The mean percent score for lessons attended for both cycles was 83.8 (Table 11). Only a few (19) of the participants gave over-all ratings of lessons that were under 60 percent. Actually, slightly over one half of the participants gave ratings of 100 percent. The mean percent rating score for lessons attended in the third cycle of lessons was 86 with 47 percent of the women giving ratings of 100. Only a few (eight) gave over-all ratings that were under 60. Whether or not the lessons deserved such high ratings may be questioned. While the ratings of individual lessons from which the over-all ratings were determined were given in interviews done by their teachers (Family Service Aides) and hence may have been influenced by this personal relationship, it is not entirely incorrect to suggest that the high ratings can be taken as giving some indication of the participants' satisfaction with the lessons.

---

[1] The home economics lessons included in the combined third and fourth cycles were: (1) Penny Snitchers, (2) Money Saving Meals, (3) Enjoying Your Pre-Schooler, (4) Storage Secrets, (5) Taking the Blues Out of Laundering, (6) Budget Ideas for Decorating, and (7) Buying Children's Clothes. A variety of resource lessons were offered in the two series and included: (1) Mouth-to-Mouth Breathing, (2) Shopping for Credit, (3) Gardening, (4) Planned Parenthood, (5) Lawyer, (6) Mental Health, (7) Trade School, (8) Freezing and Canning, (9) Alcoholism, (10) First Aid, (11) Christmas Slides, (12) Safety Driving, (13) School Nurse, and (14) You as a Very Important Person.

Table 11

Number and Percentage Distribution of Participants in
Third and Fourth Lesson Cycles According to Ratings of All
Lessons Including Home Economics and Resource Lessons

Percent rating score for all lessons	Participants	
	Number	Percent
20 and under	5	5
50 - 59	14	12
60 - 69	4	4
70 - 79	10	10
80 - 89	12	11
90 - 99	8	7
100	56	51
Total	109	100
Mean percent rating score	83.8	

Pre- and Post-Testing of Knowledge of Combined Third and Fourth Cycle Participants

A test consisting of 68 items was developed for use in pre-
and post-testing of the participants on the subject matter of
the seven home economics lessons. The test was an objective
one with true-false, multiple-choice, and fill-in-the-blank
answers called for. The number of questions applicable to each
of the seven home economics lessons varied from eight to 12.
The segregation of the questions by lessons made it possible to
calculate scores for persons who attended some lessons but were
absent from others.

The pre- and post-test scores used in this section are per-
cent scores for only those lessons which the participants re-
ported having attended. The mean percent score on the pre-test
for the 58 participants whose tests were usable for both the pre-
and post-tests were 69.8 and on the post-test, 83.4 (Table 12).
The mean difference (gain) between the pre- and post-test means
was highly significant with P for t <.0005 (one-tail) or P <.001
(two-tail). Twenty-one percent of the 58 participants had pre-
test scores of 59 and under, whereas only four percent had scores
under 59 on the post-test. Four percent of the 58 had pre-test

scores of 90 or more, but 31 percent had post-test scores which were 90 or more. The mean percent score on the pre-test for the third cycle of women for the lessons which each one reported having attended was 70.5 and on the post-test, 82.0. The mean difference (gain) between the pre- and post-test means was highly significant.

Tab:e 12

Number and Percentage Distribution of 58 Participants
Taking Both Pre- and Post-Tests According to
Percent Scores on Test Items for Lessons Attended

Percent score	Pre-test		Post-test	
	Number	Percent	Number	Percent
20 - 29	1	2	0	0
30 - 39	1	2	0	0
40 - 49	4	7	1	2
50 - 59	6	10	1	2
60 - 69	11	19	5	9
70 - 79	23	39	11	19
80 - 89	10	17	22	38
90 - 99	1	2	17	29
100	1	2	1	2
Total	58[a]	100	58[a]	101[b]
Mean percent score:	69.8		83.4	

[a]Two participants eliminated; no data on lessons attended.
[b]Does not add to 100 because of rounding.

The knowledge test consisted of 68 items, four of which offered opportunities for three correct answers each. Thus, the test could be said to contain 76 items and this is the number used in this discussion of test items. Gains in the numbers (or percentages) of those having correct answers on the post-test compared to those having correct answers on the pre-test that were significant at .05 or less level (one-tail test) occurred for the following 35 items:[1]

---

[1]This level of significance was achieved on only 14 items by the participants in the third cycle, but for a number of additional items this level was approached.

No. of Item In test	Item	Number and percent giving correct answer				Differ- ences between tests		Probability of difference occurring by chance[1] (one tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
1	A storage device which can be used to improve storage of dishes (N=47)	26	55	38	81	12	26	<.005
3	The prepared food which is less expensive to buy than it is to make (N=47)	24	51	38	81	14	30	<.005
4	The method of putting a cuff on a sock (N=37)	24	65	34	92	10	27	<.005
6	The place to store small quantities of potatoes and onions (N=47)	31	66	41	87	10	21	<.005
11	Liquids in which rice can be cooked (N=45)	22	49	41	91	19	42	<.0005
14	Whether or not muted colors provide a satis- factory background for a room (N=40)	21	52	37	92	16	40	<.0005
15	What kind of flour is used to make bread (N=45)	19	42	28	62	9	20	<.05
17a	The three basic ways to sort clothes for laun- dering--fabric (N=44)	11	25	21	48	10	23	<.025
17b	The three basic ways to sort clothes for laun- dering--color (N=44)	38	86	43	98	5	12	<.05
17c	The three basic ways to sort clothes for laun- dering--soil (N=44)	13	30	20	46	7	16	<.05
18	Whether or not a large number of accessories in a room add to its attractiveness (N=40)	27	68	34	85	7	17	<.05
23	What kind of flour is used to bake cakes (N=45)	40	89	31	69	-9	-20	<.025

[1]Tested by the following formula:

$$x^2 = \frac{(|A - D| - 1)^2}{A + D}$$, Psychological Statistics by Quinn McNemar,

(New York: John Wiley & Sons, Inc. 1949), p. 207. For the appli- cation of this formula those participants who are included must have taken both the pre- and post-test.

No. of item in test	Item	Number and percent giving correct answer				Differences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
26	Which color makes an object appear small (N=40)	24	60	33	82	9	22	<.025
27	The item that should not be stored in cardboard boxes (N=47)	37	79	45	96	8	17	<.01
29	The person a seven year old girl likes to copy in her dress (N=37)	18	49	31	84	13	35	<.005
31	The place of kitchen equipment near which kitchen utensils should be stored (N=47)	33	70	42	89	9	19	<.01
33	The age at which a child's foot is fully developed (N=37)	23	62	33	89	10	27	<.005
35	Whether or not accessories should repeat the colors one has used in room (N=40)	24	60	31	78	7	18	<.05
35	For which meals rice is a good food (N=45)	33	73	42	93	9	20	<.01
39a	The three aspects any color has--hue (N=40)	5	12	28	70	23	58	<.0005
39b	The three aspects any color has--intensity (N=40)	8	20	25	62	17	42	<.0005
39c	The three aspects any color has--value (N=40)	3	8	15	38	12	30	<.005
41	The nutrient in which peanut butter is rich (N=45)	21	47	29	64	8	17	<.05
43	Method for removing spots and stains when washing (N=44)	30	68	39	89	9	21	<.01
45	From what shortening can be made (N=45)	27	60	37	82	10	22	<.01
51	Whether or not a stain is removed by working from inside of garment (N=43)	21	49	41	95	20	46	<.0005

No. of item in test	Item	Number and percent giving correct answer				Differences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
53	What should be stored in fireproof storage devices (N=46)	38	83	43	94	5	11	<.05
57	What is a good source of iron (N=44)	28	64	37	84	9	20	<.025
58	Whether or not impulse buying is buying without plan (N=46)	39	85	45	98	6	13	<.05
61	For what the best storage space should be used (N=47)	8	17	22	47	14	30	<.005
62	Whether 4 cans of peas for $1.00 is a better buy than 2 cans for $.50 (N=47)	36	77	44	94	8	17	<.01
63	A requirement for trim on children's clothing (N=37)	24	65	33	89	9	24	<.005
68a	The three items recommended for removing grease stains--cigarette lighter fluid (N=44)	22	50	25	57	3	7	<.05
68b	The three items recommended for removing grease stains--Carbona (N=44)	17	39	38	86	21	47	<.0005
68c	The three items recommended for removing grease stains--Renuzit (N=44)	20	46	34	77	14	31	<.005

These 35 items are the ones which reflect the significant learning of the participants. On the pre-test 17 of the 35 items were answered correctly by less than 60 percent of the participants and as many as seven of them were answered correctly by less than 40 percent. The list provides those concerned with the subject matter of the program with an opportunity to consider whether or not these kinds of knowledge are

the ones which are of primary importance for the learners.
Only four of the 35 items had 83 percent or more of the partici-
pants who had correct answers on the pre-test.

The 10 test items on which there was no or little (gain
of one or loss of one in number) change in correct answers are
listed below:

No Change in Correct Answers

No. of item in test	Item	Number and percent giving correct answer			
		Pre-test		Post-test	
		No.	%	No.	%
20	Whether or not all labels should be read by buyer (N=37)	34	92	34	92
38	How one determines temperature of wash water (N=44)	44	100	44	100
40	Whether or not children should have a specific place for their toys (N=47)	47	100	47	100
66	The varieties dried split peas come in (N=45)	41	91	41	91

Gain of One in Correct Answers

No. of item in test	Item	Number and percent giving correct answer				Differences between tests	
		Pre-test		Post-test			
		No.	%	No.	%	No.	%
16	Whether or not stockings should fit snugly (N=37)	16	43	17	46	1	3
34a	Three criteria for a good toy--can use it in several ways (N=34)	24	71	25	74	1	3
42	A criterion for selecting a growing girl's dress (N=37)	35	95	36	97	1	2

Loss of One in Correct Answers

No. of item in test	Item	Number and percent giving correct answer				Differences between tests	
		Pre-test		Post-test			
		No.	%	No.	%	No.	%
2	Whether or not child-rearing authorities advise against punishing children physically (N=34)	17	50	16	47	-1	-3
24	Whether or not clothes for children should be purchased according to age not size (N=37)	32	86	31	84	-1	-2
60	What pre-schoolers like in their books (N=34)	30	88	29	85	-1	-3

Of the 10 items included in the above three classifications, 86 percent or more of the participants gave correct answers on the pre-test for seven. It would appear, therefore, that these seven items are primarily those which the participants already knew. The Aides and the agents training them should consider elimination of the topics with which these items are concerned. Of course, it is possible that these test items were so stated that the participants could hardly miss the correct answers.

Below are the 31 items that changed more than one in number of participants giving correct answers when the pre- and post-tests are compared but the change was not significant.

Test Items Changing More Than One But Not Significantly

No. of item in test	Item	Number and percent giving correct answer				Differences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
5	The best guide for selecting toys for preschool children (N=34)	28	82	32	94	4	12	<.15

No. of item in test	Item	Number and percent giving correct answer				Differ- ences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
7	Whether or not one should shop for prepared food when hungry (N=47)	38	81	44	94	6	15	<.10
8	What the label on manu- factured garments must state (N=37)	27	73	33	89	6	16	<.10
9	The requirements of a pre-school child for conversation (N=34)	30	88	33	97	3	9	<.25
10	The requirement for good color in one's room (N=40)	37	92	40	100	3	8	<.15
12	Whether or not children's shoes should be 1/2 inch longer than foot (N=37)	35	95	37	100	2	5	<.25
13	What determines the amount of detergent to use (N=44)	34	77	39	89	5	12	<.10
19	What oleo is made from (N=45)	39	87	42	93	3	6	<.25
21	Whether or not all brands of bleach are alike (N=44)	39	89	41	93	2	4	<.35
22	The most restful color combinations for a bed- room (N=40)	35	88	38	95	3	7	<.25
25	The best time to add bleach when bleaching clothes (N=44)	32	73	38	86	6	13	<.10
28	Whether or not shopping daily for groceries is recommended as a way of saving money (N=47)	42	89	44	94	2	5	<.35
30	Whether or not the real effects of play on grown- ups and children are the same (N=34)	31	91	29	85	-2	-6	<.35
32	The form of cheese that is least expensive (N=47)	30	64	36	77	6	13	<.15

No. of item in test	Item	Number and percent giving correct answer				Differ-ences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
34b	Three criteria for a good toy--help teach something (N=34)	27	79	25	74	-2	-5	<.40
34c	Three criteria for a good toy--be safe and sturdy (N=34)	29	85	33	97	4	12	<.15
37	Whether or not elastic in children's slacks should be stitched to garment three times (N=3̀)	33	89	37	100	4	11	<.10
44	Whether or not a large amount of color is restful (N=40)	31	78	34	85	3	7	<.25
46	Whether or not money can be saved at the super-market if adequate time is allowed (N=47)	37	79	42	89	5	10	<.10
47	If protein food stains should be allowed to dry before removal (N=44)	41	87	43	92	2	5	<.25
48	Whether or not room ac-cessories should be used for decoration only (N=40)	32	80	34	85	2	5	<.40
49	Whether or not rolled wheat may be used in same way as rolled oats (N=45)	42	93	44	98	2	5	<.25
50	Whether usually store brands are less expensive than name brands (N=47)	35	74	41	87	6	13	<.10
52	The effect on appearance of size produced by light walls in a room (N=40)	38	95	40	100	2	5	<.25
54	Whether or not housewife can save money by cutting up own chicken (N=46)	40	87	45	98	5	11	<.10
55	Whether or not the large economy box of detergent may be more expensive (N=43)	18	42	23	54	5	12	<.15

No. of item in test	Item	Number and percent giving correct answer				Differences between tests		Probability of difference occurring by chance (one-tail)
		Pre-test		Post-test				
		No.	%	No.	%	No.	%	
56	Whether or not a pre-school child may not mind because he feels he is being bossed (N=33)	24	73	29	88	5	15	<.10
59	Whether or not very dirty spots can be taken care of after washing (N=44)	37	84	41	93	4	9	<.15
64	The best way to prevent a pre-school child from hurting himself (N=34)	31	91	33	97	2	6	<.25
65	Whether or not storage needs in the home change very little (N=47)	35	74	37	79	2	5	<.40
67	Whether or not children's clothes should have loose sleeves (N=37)	29	78	34	92	5	14	<.10

Nineteen of these items had 80 percent or more of the
participants giving correct answers on the pre-test. These
items should be examined for possible de-emphasis in teaching.
Again, however, it should be recognized that the items may
have been so stated that they failed to constitute a real test
of the participants' knowledge.
