PROFILES OF TWENTY MAJOR AMERICAN CITIES. BY- LOURIA, MARGOT, STOKES, MARGURITE C. OFFICE OF PROGRAMS FOR THE DISADVANTAGED (DHEW)

PUB DATE JAN 68

EDRS PRICE MF-\$0.50 HC-\$4.80 118P.

DESCRIPTORS- \*METROPOLITAN AREAS, \*TABLES (DATA), \*ECONOMIC DISADVANTAGEMENT, \*POPULATION TRENDS, \*EDUCATION, DATA, NEGROES, CAUCASIANS, PUBLIC SCHOOLS, EXPENDITURES, TEACHERS, STUDENT ENROLLMENT, WELFARE SERVICES, CRIME, UNEMPLOYMENT, FEDERAL AID, FEDERAL PROGRAMS, JOB TRAINING, ADULT BASIC EDUCATION, COMMUNITY DEVELOPMENT, DROPOUTS,

THESE PROFILES PROVIDE EXTENSIVE DATA ON POVERTY, POPULATION TRENDS, EDUCATION, WELFARE, CRIME, AND UNEMPLOYMENT IN 20 MAJOR METROPOLITAN AREAS. FISCAL YEAR 1967 APPROPRIATIONS FOR ELEMENTARY AND SECONDARY SCHOOL ACTIVITIES, FOR BASIC AND OCCUPATIONAL TRAINING, AND FOR COMMUNITY DEVELOPMENT ARE ALSO LISTED. THE POPULATION, POVERTY, AND EDUCATION INDEXES INCLUDE DATA FOR WHITE AND NONWHITE GROUPS. THE EDUCATION INDEXES CONTAIN FIGURES ON THE PERCENTAGE OF CLASSROOM TEACHERS IN PUBLIC SCHOOLS, ON SCHOOL EXPENDITURES, ON STUDENT ENROLLMENT, AND ON DROPOUTS. GENERAL FINDINGS ARE BRIEFLY SUMMARIZED. (LB)

PROFILES OF TWENTY MAJOR AMERICAN CITIES

Office of Programs for the Disadvantaged U.S. Office of Education Department of Health, Education, and Welfare

January 1968

#### FOREWORD

Twenty major American cities have been selected for intensive survey on population, education, poverty, and related data. The purpose of these urban profiles is to provide Federal administrators and others with an in-depth portrait of major metropolitan areas -- their problems and prospects. The compilation of urban data is the product of an interagency effort. In addition to the Office of Administration and National Center for Educational Statistics in the Office of Education, I would like to acknowledge the invaluable assistance of the Office of Economic Opportunity, the Census Bureau of the Department of Commerce, the Departments of Labor and Justice, the Children's Bureau of the Department of Health, Education, and Welfare, and the National Education Association. These urban profiles were prepared by Dr. Margot Louria assisted by Mrs. Margurite C. Stokes, staff members of the Office of Programs for the Disadvantaged. The findings and interpretations of these data are solely the responsibility of the Office of Programs for the Disadvantaged.

> Regina Goff Assistant Commissioner Office of Programs for the Disadvantaged

#### INTRODUCTION

The widening division between the central city and surrounding area is the most salient feature of the urban life of large metropolitan areas. Two radically different urban cores are developing within major American cities, each attracting dissimilar populations and faced with different needs and problems. Populations within the large metropolitan centers are decentralizing. The shifting of peoples is not a matter of numbers. It is a sorting-out process. The poor, less educated, nonwhite American or newly arrived in-migrant is remaining in the central city, and the higher income predominantly white urbanite is moving to the suburbs. The number of nonwhites in the central city is rapidly increasing while the white population there is declining. According to the Bureau of the Census, the nonwhite population in the central cities of 212 Standard Metropolitan Statistical Areas (SMSA's) increased by 51 percent between 1950 and 1960 and grew at an even faster rate between 1960 and 1966.1/ Of the 2.9 million gain in the nonwhite population over the last six years, 2.5 million was in the central cities of these 212 SMSA's.

Significant for educational policy is the unprecedented rise in the nonwhite teenage population and children under 14 years of age in the central cities. The number of nonwhite teenagers increased by over 50 percent over the six-year period, 1960-66, about twice as fast as the teenage population nationally. Nonwhite children under 14 years increased at an average annual rate three times as high as that of white children. Of this increase, 95 percent was in the central cities. The redistribution of urban peoples has

L/ Estimates from the Current Population Survey conducted by the Bureau of the Census, Series P-20, No. 163, based on the urban population in the central city of 212 Standard Metropolitan Statistical Areas. Except in New England, a standard metropolitan statistical area (SMSA's) is a county or group of contiguous counties which include one central city or more or "twin cities" with a combined population of at least 50,000. The title of an SMSA identifies the central city; outside central city is the balance of the SMSA. In New England, SMSA's consist of towns and cities instead of counties.

left the central city school system with a disproportionate number of pupils who are disadvantaged in terms of income level, educational background of their parents, and general home environment. School enrollments in the major twenty cities are characterized by a high degree of de facto racial segregation, a reflection of rigid and uniform patterns of residential segregation. The growing economic and educational disparities among urban populations have intensified differences between the central city and its suburb which again encourage and further widen the gap. It is expected that by 1975, barring major changes, the twenty largest American cities, which together account for over half the Nation's nonwhite population, will be experiencing extreme economic and racial segregation. Today 70 percent of all nonwhite pupils attend schools of 90 to 100 percent nonwhite enrollments. By 1975 this proportion may have reached 80 percent or more.

The objective of these profiles on twenty major American cities is to present selected demographic data which tell of the particular educational needs and related problems facing these cities. Included in detail are data on urban poverty, unemployment, and crime. The significant features of each city are described in summary form preceding the individual profile. A listing of the major Federal programs on education and poverty during Fiscal Year 1967 accompanies each city profile. The profiles are intended to inform Federal administrators of the trends and developments in each of the twenty cities, and of certain relationships among them. It is hoped that these detailed profiles on the socio-economic and educational makeup of each city will be useful in the planning of Federal programs for urban populations.

#### General Findings

1. In the 20 metropolitan areas surveyed, both the proportion and number of families residing in Poverty Areas and having incomes below the poverty level are much greater for the central city than surrounding area. The 6 metropolitan areas with the highest percent of families in Poverty Areas in the central city, as reported in the 1960 census, are the following: 2/

| Metropolitan Area New Orleans                            | Total Number of Families             | Percent in<br>Poverty Area | Percent Below<br>Poverty Level |

<sup>2/</sup> Poverty level has been defined by the Social Security Administration. It takes into account family size, composition, and farmnonfarm residence with the ceiling in 1959 set at \$5,448 for a nonfarm family headed by a male with seven or more members having one related child under 18 years of age. Poverty Areas is based on a poverty index using five socio-economic characteristics: (1) percent of families with money incomes under \$3,000 in 1959, (2) percent of children under 18 not living with both parents, (3) percent of persons 25 years and over with less than 8 years of school completed, (4) percent of unskilled males (laborers and service workers) in the employed civilian labor force, (5) percent of housing units dilapidated or lacking some or all plumbing facilities. Although Poverty Area and poverty level are mutually exclusive terms, there is a natural overlap, i.e., people below poverty level tend to live in Poverty Areas. For a precise analysis, see "Poverty Areas in the 100 Largest Metropolitan Areas," PC (S1)-54, Supplementary Reports, 1960 Census of Population, Bureau of the Census, November 13, 1967.

2. Of the total number of families living in the 20 cities, a very high proportion of nonwhite families is located in the central city. The following metropolitan areas have over 90 percent of nonwhite families residing in the central city.

| Metropolitan<br>Area | Nonwhite Families<br>Percent in the Central City |
|----------------------|--|
| Milwaukee            | 99.0   |
| Cleveland            | 97.5   |
| San Antonio          | 96.6   |
| Chicago              | 92•3   |
| New York             | 90.6   |

3. Because of residential segregation, more nonwhite families who have incomes above the poverty level are located in Poverty Areas than the corresponding proportion of white families. The cities with the most serious gap in regard to income and living condition among nonwhite families are listed below:

#### Nonwhite Families

A

| Metropolitan  | Percent in Central City  | Percent in   | Percent Below  |
|---|--|--|--|
| Area  |  | Poverty Area   | Poverty Level  |
| Milwaukee Chicago New York Cleveland Washington St. Louis Buffalo Baltimore New Orleans Boston Philadelphia | 99.0<br>92.3<br>90.6<br>97.5<br>86.3<br>72.6<br>84.2<br>87.8<br>88.1<br>80.0<br>79.8 | 83.3<br>75.7<br>71.1<br>73.2<br>61.3<br>86.9<br>78.7<br>77.1<br>92.6<br>69.2<br>71.5 | 30.4<br>29.3<br>25.6<br>27.8<br>26.0<br>42.1<br>34.3<br>35.3<br>51.1<br>28.4 |

4. Moves by the nonwhite population to better neighborhoods in recent years tend to be offset by the continuing stream of poor nonwhite inmigrants who take the place of people moving out of Poverty Areas. Despite the general improvement in income level and educational attainment for nonwhite people, conditions are stagnant or deteriorating in the poorest areas, such as the neighborhoods of Hough in Cleveland, and Watts in Los Angeles. (See Social and Economic Conditions of Negroes in the United States, October 1967.)

5. The large metropolitan cities vary in public school expenditures. Per pupil expenditures in 1966-67 based on average daily attendance among the 15 largest cities show New York City spending the highest amount, \$1003 and Houston spending the least, \$386. Similarly, there is the same range of per pupil expenditure, using average daily membership with New York City spending \$887 per pupil and Houston, \$360.

In 1962 the central city was found to be spending about \$145 less per pupil than its suburban counterpart. The disparity in per pupil expenditures among cities and between central core and suburb does not in itself determine whether a school is adequate. If all schools were operating on similar levels of expenditure, significant differences in the quality of education would still exist.

6. Federal aid to education legislation has made an impact on urban education, although small in relation to need. Fiscal Year 1967 funds spent on Title I, II, and III of the Elementary and Secondary Education Act and Titles III (grants to States only) and V-A of the National Defense Education Act represent an average of about 7 percent of estimated current total expenditures, 1966-67, for public schools among 14 cities. The chart below lists these cities and the Federal share of estimated current total expenditures, 1966-67, on public school education.

| City                | Estimated Current Total<br>Expenditures<br>on Public Schools, 1966-67 | Federal Share<br>(Percent)<br>Fiscal Year 1967 Funds |
|---------------------|---|--|
| Baltimore           | \$ 134,947,000  | 5 <b>.</b> 8   |
| Boston              | 63,154,000  | 6.2  |
| Chicago             | 384,203,000   | 7.6  |
| Cleveland           | 97,250,000  | 6.3  |
| Dallas              | 77,920,000  | 4.0  |
| Detroit             | 167,340,000   | 8.7  |
| Washington          | 119,582,000   | 5•7  |
| Los Angeles         | 475,000,000   | 3.4  |
| Milwaukee           | 75,556,000  | 5.0  |
| New Orleans         | 69,067,000  | 8.4  |
| <b>Philadelphia</b> | 218,636,000   | 6.7  |
| New York            | 1,140,000,000   | <b>6.</b> 8  |
| San Francisco       | 69,750,000  | 5•5  |
| St. Louis           | 64,894,000  | 8.7  |

7. The Nation's 5 largest cities, New York, Los Angeles, Chicago, Detroit, and Philadelphia had an average dropout rate of 24 percent from high school in 1963 according to a National Education Association study. 3/ Philadelphia had the highest rate of dropouts, 46.6 percent. The National Education Association discovered that the size of the city is a determinant in the rate of dropouts—the larger the city, the higher the dropout rate. "In cities with a population over 600 000 the chances that a grade ten student will graduate is two out of three." 4/ The tables below list the 10 cities with the highest rate of high school dropouts and the largest percent of nonwhites over 25 not completing high school in descending order.

| City   | Percent Not Graduating, June 1963 (Difference between 10th grade and graduating class) | Nonwhite Adults Not<br>Completing High School<br>(1960 Census)   |
|--|--|--|
| Philadelphia San Antonio Detroit New York Boston Baltimore Chicago San Francisco Cleveland Buffalo | 46.6<br>41.0<br>37.8<br>37.1<br>35.9<br>35.0<br>34.0<br>33.2<br>31.4                   | New Orleans 85% Baltimore 80% Buffalo 78% St. Louis 77% Philadelphia 76% Dallas 76% Pittsburgh 75% Houston 75% Milwaukee 74% Detroit 73% |

8. The dropout rate among high school students in the cities is believed to be directly related to the lack of job opportunities. In the metropolitan areas that are experiencing high rates of unemployment among teenagers, there is a corresponding rise in numbers of youth quitting school. A worrisome aspect of the unemployment and dropout problem is the upsurge in nonwhite teenage unemployment. "Normally about one-quarter of the Negro youth looking for jobs can't find them; in October the ratio was just short of one-third. For white teenagers the comparable figure was a trifle over one-eighth." (A. H. Raskin, New York Times, December 10, 1967)

In a November 1966 Department of Labor survey of 12 large metropolitan slum areas, the worst unemployment was among 14-to 19-year-old non-whites, ranging from 18.4 percent in Washington, D.C., to 36.0 percent in Philadelphia with the rate running above 30 percent in 7 areas. With the large increases expected in nonwhite teenage population in the central city, there is need for expansion of training and work opportunities to counteract a probable rise in unemployment and dropout rates.

9. According to the Department of Labor, a third of the Nation's unemployed and nearly 40 percent of jobless Negroes are found in 15 large metropolitan areas it recently surveyed. The rates represent averages over the first 9 months of 1967. The Negro jobless rate for the 15 cities averaged 7.7 percent, that for the white population 3.5. The 2 largest areas surveyed—New York and Los Angeles (including Long Beach)—accounted for 12 percent of the total U.S. unemployment, with about 180,000 jobless workers each. Four cities, Detroit, San Francisco (including Oakland), St. Louis, and Newark had unemployment rates of 10 percent or more for the nonwhite population.

10. Unemployment is far higher in slum areas of major cities than the metropolitan area as a whole. In surveys of 8 large cities conducted by the Department of Labor, November 1966, the rate of unemployment in slums was 3 times the national average (Manpower Report of the President, April 1967). According to the Department of Labor, a disproportionately large number of slum residents were neither working nor looking for work. This "nonparticipation rate" was 11 percent among men 20 to 64 in slum areas compared to the national average of 7 percent. The Department of Labor developed a "sub-employment" concept based on joblessness and discovered that the average rate of sub-employment for 10 slums surveyed was 34 percent. (See Sources and Explanation, p. 12.) Lack of education and training is reported to be the principal reason for unemployment and sub-employment among slum residents. In these slum districts a third of the unemployed adults have never attended high school; two-thirds never graduated from high school. Many of the unemployed in the slum areas are limited in choice of employment and not trained to fill vacancies that do exist. In the central city job openings tend to be in clerical and white-collar occupations, rather than low-skilled construction work that is now more prevalent in the suburbs.

11. Between 1961 and 1966 the rate of crime had increased in the 20 major cities with the exception of Chicago. Although crime is on the rise in suburban areas, a much higher volume of crime is reported by the large cities. According to the Department of Justice, the number of crimes per unit of population is highest in large metropolitan centers and in those areas where populations are growing the fastest. Cities with a rise of over 100 percent in the crime rate between 1961-1966 are the following:

| City   | Percent Change In<br>Crime Rate, 1961-66  |
|--|---|
| Buffalo Baltimore New York Cleveland Detroit | 151.3<br>136.7<br>134.0<br>126.1<br>106.1 |

R

12. Cities facing especially serious problems in poverty, education, unemployment, and crime are described below.

### St. Louis

St. Louis has a very high rate of unemployment among its nonwhite population, averaging 12.7 over the first 9 months of 1967. 77 percent of its nonwhite residents over 25 do not have a high school diploma. Nearly half of its total number of families in the central city reside in Poverty Areas.

#### Buffalo

Buffalo had the highest percent increase in crime between 1961 and 1966 of all 20 cities. Its percent change was 151.3. Of its nonwhite families, 84.2 percent live in the central city, 78.7 percent reside in Poverty Areas. Its rate of unemployment was 5.0 as of July 1967. Buffalo had a net migration of -5.0, 1960-1965, indicating that more people are leaving the city than entering it.

### Baltimore

Baltimore had an increase in crime rate of 136.7 between 1961 and 1966 which was one of the highest for the 20 cities. Of its total number of families in the central city, 41 percent live in Poverty Areas. 80 percent of its nonwhite residents over 25 do not have a high school diploma. Of its public school classroom teachers in 1966, 17.6 percent did not have a bachelor's degree.

#### New Orleans

Of its total number of families in the central city, 67.1 percent live in Poverty Areas. Nearly all of its nonwhite families live in the central city, 92.6 percent in Poverty Areas. 85 percent of nonwhite persons over 25 did not complete high school. New Orleans had an unemployment rate of 5 percent for the metropolitan area as a whole, July 1967, and 10 percent for slum districts, November 1966.

#### San Antonio

Similarly, of its total number of families in the central city, 50.8 percent live in Poverty Areas. Nearly all of its nonwhite families live in the central city, 82.8 percent in Poverty Areas. 44 percent of its total population are Mexican-American. The rate of unemployment for the city was 4.5 in July 1967. It had no Vista Volunteers nor Teacher Corps in Fiscal Year 1967.

13. In conclusion, population trends in large metropolitan areas are resulting in patterns of racial and economic segregation with severe consequences for disadvantaged peoples, and the communities where they are concentrated. Continuing economic and social disparities between the central city and suburb can be expected to produce major conflicts among urban populations in interests, needs, and values. Recognition and detailed knowledge of these disparities become essential for the planning of Federal programs and the coordinated actions among agencies. These 20 urban profiles defining population characteristics and needs are intended to help Federal administrators pimpoint immediate problems and to coordinate efforts which will strengthen the Federal role in large metropolitan areas.

#### SOURCES AND EXPLANATIONS

#### **POPULATION**

Total and Nonwhite: National Center of Educational Statistics, U.S. Office of Education. In accordance with census procedure Mexican Americans, Spanish Americans, Latin Americans, and Puerto Ricans have been excluded from the nonwhite population. Projections of population should be considered only as general approximations.

Components of Population Change: "Estimates of the Population of Standard Metropolitan Areas, 1965," Series P-25, Census Bureau, and 1960 Census of Population.

#### POVERTY INDICES

"Poverty Areas in the 100 Largest Metropolitan Areas," 1960 Census of Population Supplementary Reports, PC (S1)-54, November 13, 1967 and 1960 census data.

#### **EDUCATION**

Population and Enrollment: National Center of Educational Statistics, U.S. Office of Education. Projections are approximations only. Expenditures for Public Schools: Statistics on 15 cities -- Baltimore, Boston, Chicago, Cleveland, Dallas, Detroit, Houston, (except total expenditures), Ios Angeles, Milwaukee, New Orleans, New York, Philadelphia, San Francisco, St. Iouis, Washington, D.C., are from Fall 1966 Statistics on Public Schools, the U.S. Office of Education. Data on the remaining cities is from Selected Statistics of Iocal School Systems, 1964-65, National Education Association.

Percent of Estimated 1966-67 Current Total Expenditures from Federal Funds: The sum of FY 1967 Funds of Titles, I, II, III of the Elementary and Secondary Education Act and Titles III (grants to States) and V-A of the National Defense Education Act as a percent of 1966-67 current total expenditures.

Percent of Revenue Receipts from Local Sources, 1965-66: Taken from a forthcoming publication by the National Education Association. Figures should be considered as approximations.

Percent of Estimated 1966-67 Receipts from Federal Sources:

See Estimates of School Statistics, 1966-67, National Education Association.

Classroom Teachers: Fall 1966 Statistics on Public Schools; Percent of Full-time Teachers without a Bachelor's Degree, 1965-66: From a forthcoming publication by the National Education Association.

Public High School Graduates: Fall 1966 Statistics on Public Schools

Dropouts: See Daniel Schreiber, Holding Power/Large City School Systems,
Project: School Dropouts, 1964, and 1960 Census of Population.

#### WELFARE

Department of Health, Education, and Welfare, Welfare Administration, Recipients of Public Assistance and Total Assistance Payments by Program, State and County, June 1966.

#### POPULATION DENSITY

1960 Census Data, 1966 figures supplied by the U.S. Office of Economic Opportunity.

#### CRIME

Department of Justice, Crime in the United States: Uniform Crime Reports-1966 and Crime in the United States: Uniform Crime Reports-1961. Children's Bureau, Department of Health, Education, and Welfare, Juvenile Court Statistics-1966 (not yet released).

#### UNEMPLOYMENT

Data on unemployment was supplied by the Department of Labor. For number of unemployed and unemployment rate as of July 1966, see Area Trends in Employment and Unemployment, October 1967. Unemployment averages in the first 9 months of 1967 are taken from a forthcoming publication of the Bureau of Labor Statistics. Unemployment in the slum areas is from a special Department of Labor survey of several large cities. The "sub-employment" index which was constructed from survey data includes the following: (1) those unemployed in the sense that they are "actively looking for work and unable to find it;" (2) those working only part-time when they are trying to get full-time work; (3) heads of households under 65 years who earn less than \$60 per week working full-time and those individuals under 65 who are not heads of households and earn less than \$56 per week in a full-time job; (4) half the number of "nonparticipants" in the male 20-64 age group; and (5) a conservative, and carefully considered estimate of the male "undercount" group. For further information on these surveys, see Department of Labor, A Sharper Look At Unemployment In U.S. Cities and Slums. Unemployment figures as of July 1967 are based on 150 major labor areas. Unemployment averages for the first 9 months of 1967 are based on SMSA's.

## BALTIMORE, MARYLAND

## Highlights

Baltimore's total population is close to a million with 40.2% nonwhite.

## Poverty Indices

| Metropolitan Area In Central City Outside Central City | Number of<br>Families<br>229,069<br>194,411 | Percent in                   | Percent in Poverty Areas 41.0 10.7 | Percent Below<br>Poverty Level<br>17.9<br>8.6 |
|--|---|------------------------------|------------------------------------|---|
| White Families . Nonwhite Families                     | 345,766<br>77,714                           | Central City<br>46.5<br>87.8 | 15.8<br>77.1                       | 8.8<br>35.3                                   |

Its total school-age population (5-17 years) increased between 1960 and 1965 but is expected to decrease by 1975 to a level below that of 1960. Its non-white school-age population is increasing and is expected to continue increasing in the 1970's. Nonwhite public school enrollment is now 61 percent of total public school enrollment.

84.2 percent of Negro elementary students attend schools 90-100 percent Negro, 1965-66.

Of its classroom teachers, 17.6 percent do not have a bachelor's degree, fall 1966.

80 percent of nonwhite persons over 25 are without a high school diploma.

Its unemployment rate in the central city only, averaged 5.7 between January and September 1967, 3.4 for whites and 9.1 for nonwhites.

## Highlights

Boston's white population is declining; its nonwhite population is rapidly growing and is projected to be 30.7 percent of the total by 1975.

### Poverty Indices

| Metropolitan Area In Central City Outside Central City | Number of Families 164,215 476,311 | Percent in                   | Percent in<br>Poverty Areas<br>28.8<br>2.3 | Percent Below<br>Poverty Level<br>14.2<br>7.2 |
|--|------------------------------------|------------------------------|--|---|
| White Families<br>Nonwhite Families                    | 621,191<br>19,335                  | Central City<br>23.9<br>80.0 | 7.2<br>69.2                                | 8.4<br>28.4                                   |

Nonwhite school-age population and public school enrollment are rising disproportionately to the white school-age population and white public school enrollment which are decreasing.

Unemployment is far greater in the slum districts of South Boston than the metropolitan area as a whole and is more prevalent among the youth compared to other age groups in Boston's slums.

## POPULATION

Rate of rejection from military service is 52 percent for the slums (39 percent for all Boston) and two-thirds of the rejections are because of low mental achievement.

Many of the unemployed in the surveyed neighborhoods of Boston say they would like additional training to improve their chances of employment. 79.3 percent would be willing to take on-the-job training. 68 percent expressed interest in returning to school for training if necessary.

#### Quotes from The Saturday Review

(estimated rate)

Unemployment in the Central City

"During the past year, 1965-66, for the first time, the majority of those enrolled in the Chicago public schools were nonwhite. According to a Chicago Urban League research report on de facto segregation submitted to the Committee on Education and Labor of the House of Representatives in July 1965, 188,000 of the 211,000 Negro pupils in the Chicago elementary schools were in substantially Negro segregated schools (schools with 90 percent or more Negroes). That substantially all-Negro schools in Chicago are destined to continue -- and probably increase -- is the conclusion drawn from these hearings.

Rate of Unemployment, Jan.-Sept. 1967 Average 3.2 (Total) 2.3 (White) 8.2 (Nonwhite)

4.3 (Total) 2.8 (White) 8.5 (Nonwhite)

"The new Bond School in Chicago may be cited as evidence of the difficulties of planning for desegregation in large cities. When this school was first planned, it was expected that 200 white children from the nearby completely white school would attend the new school, thus providing in the enrollment about 15 per cent non-Negro children. But two years later, when Bond School opened with an enrollment of 1,300, only forty white children, or about 3 per cent of the school population, enrolled. Most of the white families had moved out during the two years of planning and construction.

(Henry R. Hill, "School Desegregation North and South: I. It Will Take Time,"

Quotes from The Saturday Review (Continued)

- "Although 30 per cent of Chicago's children attend parochial schools, the public system still enrolls some 600,000 students, employs 23,000 teachers, and occupies more than 600 classroom buildings. In short, Chicago has more population inside its schools than Denver or Minneapolis have within their city limits.
- ".....the exodus of seasoned teachers and the increasing reluctance of talented novitiates to accept Chicago assignments, particularly in light of the fact that most must start in hard-core slum schools without benefit of any orientation or in-service training, has left many schools bereft of personnel.
- "The Chicago Teachers Union has estimated that 300 to 700 classrooms each day have no teachers whatever, with the concentration of teacherless rooms particularly heavy in Negro Areas. One survey showed that in a district encompassing seventeen schools 83 per cent of the teacher absences were not covered. In others, as many as 80 per cent of the teachers on any given day are substitutes. In some schools, libraries are closed down weeks at a time because librarians must be drafted for classroom duty. Likewise, gym classes in some schools have been suspended as long as eighteen months."

(Charles and Bonnie Remsberg, "Chicago: Legacy of an Ice Age," Saturday Review, May 20, 1967.)

"My second example of a superior Negro school is the Dunbar Vocational High School in Chicago. I visited this school briefly last fall and found it even better than I had anticipated. The modern \$8,000,000 building with its spacious halls, attractively planted interior courts, and well ordered school life is only one pleasing facet of the school. The real excellence is evidenced in the serious-minded students, competent instructors, and the fact that its graduates have obtained a well-rounded high school education which will be of value as long as they live. The school enrolls approximately 2,300 students, all Negroes except two. The faculty is approximately one-third white and two-thirds Negro; but it is the kind of school in which any first-class vocational instructor would feel at home."

(Henry R. Hill, "School Desegregation North and South: I. It Will Take Time," Saturday Review, July 16, 1966.)

The average person living in the slum district of Hough, Cleveland was in worst economic straits in 1965 than the typical inhabitant in 1960. Unemployment was higher, income was lower, and a larger percent of the population was poor. (Manpower Report of the President, April 1967).

Slum areas of Hough and neighboring districts had an unemployment rate of 15.5 percent, as of November 1966.

Median family income for these slum areas declined from 1959 to 1964, while it was rising by \$570 for the city as a whole.

82.3 percent of Negro elementary students attend schools 90-100 percent Negro, 1965-66.

Its unemployment rate averaged 3.8 between January and September 1967, 2.7 for whites and 9.5 for nonwhites.

| Inadequate and inferior education and training   |   |                                |

Inadequate and inferior education and training are the underlying elements in a majority of employment problems.

Median family income for all four areas declined from 1959 to 1964, while it was rising by \$570 for the city as a whole.

A fourth of the unemployed adults in this slum area have never been to high school; almost two-thirds have less than a high school education. Four high schools serving the slum area have dropout rates ranging from 36 percent to 45 percent. Explanations given by the unemployed as to their condition relate to a lack of skill or education.

Persons of Spanish surname numbered around 166,630 in 1965 in East and South Los Angeles. Of the total population in East Los Angeles 75.6 percent were Mexican American. Of the total in South Los Angeles 9.9 percent were Mexican American.

Its nonwhite school-age population (5-17) is increasing in relation to its white school-age population and white public school enrollment which are expected to decrease between 1970 and 1975.

68 percent of nonwhite persons over 25 (474,962 adults) lack a high school diploma.

Its unemployment rate was 4.0 as of July 1967.

In the slum districts of Central Harlem, East Harlem, and Bedford-Stuyvesant unemployment rates ranged from 6.2 to 9.0 with a preponderance of unemployment among teenagers.

Inadequate and inferior education and training are responsible for the high rate of unemployment. According to the Mayor's Manpower Utilization Commission, "...most of the students coming up through the public schools in the poverty sections do not become eligible to attend one of the three Vocational Technical Schools."

Of the unemployed, 76.7 percent expressed a willingness to take on-the-job training, and 44.3 percent would return to school if necessary.

In Philadelphia there have been waiting lists of 6,000 for training programs.

#### PITTSBURGH, PENNSYLVANIA

#### Highlights

Pittsburgh's population has decreased from 1960-1965 and is expected to continue decreasing in the 1970's.

It is the only city of the 20 cities studied, where the natural increase in population did not offset the loss due to migration, 1960-65; Pittsburgh had a net migration loss of -6.0, 1960-65.

#### Quotes from The Saturday Review

"The number of Negro children enrolled in the Pittsburgh public schools rose from 18,000 in 1955 to 28,000 in 1965; in terms of percentage, from 26 to 37 per cent. Negro enrollment in the public schools increased disproportionately to the white increase in scholastic population because most Negro children attend public schools and one-third of the white children attend parochial schools. The number of substantially segregated schools increased almost 50 per cent from 1960 to 1965."

(Henry R. Hill, "School Desegregation North and South: I. It will Take Time," Saturday Review, July 16, 1966.)

"What makes Pittsburgh unusual, however, is not the programs, but the fact that the school system, under its benevolent patriarchs, has managed to take the initiative—to lead rather than respond—and to acknowledge its problems with candor. Pittsburgh is perhaps the most pragmatic of American cities; its Republican businessmen accept federal renewal funds with delight, collaborate with the Democratic political machine of former Mayor and Governor David L. Lawrence, and seek all the outside aid they can get. Thus, by the time large sums of federal money became available for education and poverty campaigns, Pittsburgh's schools, aided by Ford and Mellon Foundation grants, had already developed plans for compensatory education, had initiated programs that anticipated Head Start and Upward Bound, and had begun to collaborate with the University of Pittsburgh and Carnegie Tech in writing new courses and curricula.

"Pittsburgh's schools, now about 38 per cent Negro, are as segregated as those in most other Northern Communities. Of the city's 600,000 people 17 percent are Negroes, who live in the ghettos or near-ghettos on the Hill, the Homewood-Brushton District, and the North Side.

"Two-thirds of Pittsburgh's Negro school children attend elementary schools that are more than 80 per cent Negro; more than half the Negro high school students are enrolled in institutions that are predominantly black. As everywhere else, the Negro schools compile the city's lowest reading scores, its greatest percentage of academic failures, and its most severe social problems. (It should also be said that among the ten schools with the lowest reading scores, one is 85 per cent white.) And yet, the city has faced no major boycotts, no suits, no race riots. Negro leaders have access to the School Board and the superintendent, they serve on the school administration's advisory committees, and they are frequently consulted (if not heeded) on policy decisions.

"Part of this situation is the consequence of a history of reasonably good race relations, and of a relatively low immigration of southern Negroes; part is the result of the system's willingness to acknowledge its problems; and part is probably sheer luck."

(Peter Schrag, "Pittsburgh: The Virtues of Candor", Saturday Review,

"The Pittsburgh Board of Education will not reassign or bus children from one school to another to achieve racial balance. The Board states it this way: Forced, unnatural or irrational relocation of children shall not be imposed. Whether by busing or by other means, it is not the intent of the Board of Education to dislocate any children from their neighborhood, except for reasons of overcrowding, underpopulation of schools, or other reason acceptable to the Board.

"Sydney B. Marland, superintendent of the Pittsburgh schools, favors the construction of massive new high schools, serving from 3,000 to 5,000 from large areas of the city, as a means of promoting desegregation. One of the two Negro board members considers it desirable to mix the races at an early age, preferably in the elementary school, rather than to wait until high school."

(Henry R. Hill, "School Desegregation North and South: I. It Will Take Time," <u>Saturday Review</u>, July 16, 1966.)

#### Highlights

Washington has a rapidly growing population; its nonwhite proportion is expected to reach 71.9% by 1970 at which time it will probably level off.

It had a percent increase of 21.1 in population, 1960-65; 11.2 percent of this rise was caused by net migration.

### Quotes from The Saturday Review

(estimated rate)

Unemployment in the Central City

"Washington has the closest thing to an all-ghetto school system of any city in the nation: Nearly 91 percent of its students are Negro. More important, a majority of public school students come from a poverty subculture which stymies traditional educators.

1.9 (Total) - (White) 2.5 (Nonwhite)

"Two statistics tell the dismal story of public education in Washington: The citywide dropout rate hovers between 45 and 50 percent; and, of the students who do finish high school, at least one-third are retarded in reading to the point where they would find it difficult to pass an employment examination administered by the Civil Service Commission or a local bus company."

(Susan Jacoby, "National Monument to Failure," Saturday Review, November 18, 1967.)
