TO DETERMINE THE EMPLOYMENT OPPORTUNITIES AND TRAINING
NEEDS IN THE FINANCE, INSURANCE, AND REAL ESTATE INDUSTRY OF
LOUISIANA, DATA WERE OBTAINED FROM PERSONAL INTERVIEWS OF 102
FIRMS REPRESENTING 25.4 PERCENT OF THE INDUSTRY AND EMPLOYING
7,849 WORKERS. FINDINGS INCLUDED--(1) IN 1965, 30,843 PERSONS
WERE EMPLOYED IN 56 DIFFERENT JOBS OR OCCUPATIONS, (2) 26
CLERICAL AND SALE OCCUPATIONS CONTAINED 85 PERCENT OF THE
WORKERS, (3) SOME HIGH SCHOOL EDUCATION WAS REQUIRED FOR 10
PERCENT, HIGH SCHOOL GRADUATION FOR 67 PERCENT, SOME COLLEGE
FOR 8 PERCENT, AND COLLEGE GRADUATION FOR 4 PERCENT OF THE
OCCUPATIONS, (4) NO TRAINING REQUIREMENTS WERE ESTABLISHED
FOR 47 PERCENT OF THE OCCUPATIONS, BUT FORMAL INPLANT
TRAINING WAS REQUIRED FOR 27 PERCENT, BUSINESS OR TRADE
SCHOOL TRAINING FOR 21 PERCENT, APPRENTICESHIP TRAINING FOR 3
PERCENT, AND TECHNICAL SCHOOL TRAINING FOR 2 PERCENT OF THE
JOBS, (5) EMPLOYMENT IN 1967 WAS EXPECTED TO BE 107 PERCENT
OF THAT IN 1965, AND IN 1970 TO BE 119 PERCENT OF THAT IN
1965, AND (6) IT WAS ESTIMATED THAT 5,931 ADDITIONAL
EMPLOYEES WOULD BE NEEDED BY 1970. IT WAS CONCLUDED THAT
SCHOOL TRAINING PROGRAMS COULD BE UTILIZED TO PROVIDE
TRAINING FOR ANTICIPATED JOBS IN THE FINANCE, INSURANCE, AND
REAL ESTATE INDUSTRY. DEFINITIONS OF MAJOR INDUSTRIAL GROUPS

LOUISIANA STUDY OF MANPOWER AND TRAINING NEEDS IN
FINANCE, INSURANCE, AND REAL ESTATE OCCUPATIONS

Introduction. The purpose of this study was to determine the manpower and training needs for technical, skilled, office, medical and health occupations in Louisiana. State-operated trade and vocational-technical schools offer training which prepares students for employment. The schools' training programs must be realistic in the light of actual or anticipated opportunities for gainful employment. Employment opportunities and training requirements in the Finance, Insurance, and Real Estate industry have been indicated in this report.

Procedures. In order to determine the employment opportunities and training needs in Louisiana, a survey of selected occupations was conducted on a state-wide basis, covering both manufacturing and non-manufacturing industries. Data were collected throughout the state by interviews conducted by trained personnel of the Division of Employment Security, Louisiana Department of Labor. These data were collated and expanded by the Research and Statistics Unit, Division of Employment Security, Louisiana Department of Labor. The report of findings was prepared and issued by the Vocational Curriculum Development and Research Center, Natchitoches Trade School.

The data reported in this study were obtained from personal interviews of 102 firms employing 7,849 workers. This

stratified random sample represents 25.4 per cent of the Finance, Insurance, and Real Estate industry in Louisiana. This sample was selected to include: small, medium-sized and large units, from the standpoint of employment; and a cross section of the activities of the industry.

Definition of terms. The definitions of the following terms will be applicable for this study.

Finance, Insurance, and Real Estate. This industrial division comprises establishments operating primarily in the fields of finance, insurance, and real estate. Finance includes banks and trust companies, credit agencies other than banks, holding (but not predominantly operating) companies, other investment companies, brokers and dealers in securities and commodity contracts, and security and commodity exchanges. Insurance covers all types of insurance, and insurance agents and brokers. Real estate includes owners, lessors, lessees, buyers, sellers, agents, and developers of real estate.

In most cases, establishments included in this division are primarily engaged in specialized activities in either the finance, insurance, or real estate field and can therefore be classified in one of the major groups provided for these activities. However, there are some small establishments which are regularly engaged in some combination of finance, insurance, real estate, and law, no one of which is the principal activity. A separate major group has been provided for such establishments.¹

The major groups comprising the division of Finance, Insurance, and Real Estate have been illustrated and defined in Appendix A.

¹Technical Committee On Industrial Classification, Office of Statistical Standards, Standard Industrial Classification Manual (Washington, D. C.: U. S. Government Printing Office, 1957), p. 173.

The various job titles or occupations have been defined and listed in Appendix B.

Findings. In 1965, 30,843 persons were employed in Louisiana in the Finance, Insurance, and Real Estate industry. There were 12,769 men, 41 per cent, and 18,074 women, 59 per cent, employed in fifty-six different jobs or occupations. Table I lists the job titles or occupations, the Dictionary of Occupational Titles code numbers, and the distribution of workers according to sex. Study of Table I will reveal there were nine professional and managerial occupations, twenty-six clerical and sales occupations, five service occupations, nine skilled occupations, one horticultural occupation, two semi-skilled occupations, and four unskilled occupations listed in the Finance, Insurance, and Real Estate industry in Louisiana in 1965.

The twenty-six clerical and sales occupations contained 85 per cent of the workers in the industry. The clerical and sales occupations when combined with the professional and managerial occupations contained almost 94 per cent of the workers in the industry. Less than one per cent of the workers in the industry were classified in unskilled occupations.

Almost three-fourths of the workers in the Finance, Insurance, and Real Estate industry were in the prime age group, 21-45 years. Slightly less than one per cent of the workers were over 65 years of age. Study of Table II will reveal that of

the 291 workers over 65 years of age, 263 of them were in only four job classifications.

Table III reflects that 24 per cent of the total work force were hired during the past year to maintain normal operations and 3 per cent were hired due to the needs of expansion. Two per cent of the job classifications contain current job vacancies while 1 per cent of the total work force were receiving formal in-plant training. Study of Table III will reveal the distribution of hires, vacancies, and in-plant trainees listed according to the percentage of total workers in each job title or occupation classification.

One category, the rehires of painters to maintain normal operations represents a statistical phenomenon which is unlikely to occur again in subsequent surveys.²

The approximate range of hourly entry wages for the jobs or occupations in the Finance, Insurance, and Real Estate industry have been arranged in Table IV. These figures will indicate the range only. They cannot be further treated to indicate a measure of central tendency, i.e., a mean or a median wage. Three of the jobs listed indicate some firms pay an entry wage of less than one dollar per hour. A range of wages was not available for two jobs which probably would have been low.

Table V reflects the percentage distribution of experience requirements for the job classifications or occupations in the Finance, Insurance, and Real Estate industry in Louisiana. No experience requirements had been established for 45 per cent of the occupations.

Job experience was required for 27 per cent of the occupations while trade experience was required for 7 per cent of the jobs. Job experience indicates work experience within the same exact job title in an identical industry. Trade experience would indicate work experience in the same general area or trade but not necessarily within the same industry. An example of this might be a bookkeeper in an insurance company who had work experience as a bookkeeper in a finance company. He would have had trade but not job experience.

Twenty-one per cent of the jobs surveyed required completion of a formal training program for employment. In many classifications it was unlikely that this formal training was a formal in-plant training program. The formal training required was more probably academic training for accountants and programmers and apprenticeship training for skilled trades such as carpenters and plumbers. It was reported that 21 per cent of the job classifications required completion of some type of formal training.

Education requirements for occupations in the Finance, Insurance, and Real Estate industry in Louisiana have been

well established. Study of Table VI will reveal that only 11 per cent of the job classifications had no educational requirements for employment. Ten per cent of the occupations required some high school education and 67 per cent of the jobs required high school graduation. Some college was indicated for many of the clerical and sales occupations and college graduation was required for some professional and managerial occupations. These latter percentages were 8 per cent and 4 per cent respectively.

The state-operated trade and vocational-technical schools could provide training for those occupations which did not require college graduation. This group eligible for training would comprise 96 per cent of the workers in the industry or slightly more than 29,000 employees.

Table VII lists the training requirements by percentage distribution for Finance, Insurance, and Real Estate occupations. Forty-seven per cent of the occupations have had no training requirements established. Three per cent of the job classifications required apprenticeship training. Twenty-one per cent required business or trade training only 2 per cent of the occupations required technical school training. Twenty-seven per cent of the jobs required formal in-plant training with many of these job titles in the clerical and sales occupations. Some of the requirements were incongruous with present school offerings. One example would be the requirement that all mechanics, a

skilled trade, be trained in a technical school. This might indicate a lack of understanding among employers as to the respective roles of the business, trade and technical schools.

The greater preference to hire equally qualified women in the Finance, Insurance, and Real Estate industry is reflected in Table VIII. Forty-seven per cent of the occupations reported preference for equally qualified women while 31 per cent of the employers preferred equally qualified men for these occupations. Many of the jobs in the survey were naturally filled by either men or women, e.g., men porters and women maids. Many of the clerical and sales positions could be filled by either males or females. Twenty-two per cent of the occupations reported could be filled by either sex with no difference in preference by the employer. Preferences to employ equally qualified men or women might be compared with actual employment where currently 41 per cent male and 59 per cent female comprise the work force.

The Finance, Insurance, and Real Estate Industry has indicated growth in the past 5 years and has been predicted a greater future growth by 1970. There were an estimated 27,975 employees working in 1960. This work force increased to an estimated 30,843 employees in 1965, an increase of 2,868 for the past 5 years, Table IX reveals the estimated required employment in Finance, Insurance, and Real Estate occupations for 1967 and 1970. An additional 2,096 workers will be required for 1967 bringing the total estimated total employment to 32,939

from the present 30,843. For the 5-year period of 1965 to 1970, an additional 5,931 employees will be required and will bring the total work force to an estimated total of 36,774 employees. The increase for the period 1965 to 1970 has been estimated to more than double the 1960 to 1965 period increase.

Summary and conclusion. In order to determine the employment opportunities and training needs in Louisiana, a survey of selected occupations was conducted on a state-wide basis, covering both manufacturing and non-manufacturing industries. Data were collected throughout the state from personal interviews conducted in cooperation with the Employment Security Division of the Louisiana Department of Labor. While it was not feasible to survey all manufacturing and non-manufacturing industries in the state due to the large number of small units with few employees, an adequate sample was selected to provide valid data. Data collected were collated and statistically expanded by the Research and Statistics Unit of the Employment Security Division, Louisiana Department of Labor. The report for the Finance, Insurance, and Real Estate industry has been presented in this study.

The work force of the Finance, Insurance, and Real Estate industry in Louisiana consisted of an estimated 30,843 employees, 59 per cent women and 41 per cent men. Seventy-one per cent of the workers were in the prime age group of 21-45 years. Only 1 per cent of the workers were over 65 years of age. There was considerable hiring to maintain normal operations during the

past year, some 24 per cent of the total work force. The total work force increased 3 per cent due to expansion, had 2 per cent current job vacancies, and was giving formal in-plant training to 1 per cent of the employees.

By percentage, there were no experience requirements for 45 per cent of the occupations, job experience required for 27 per cent, trade experience for 7 per cent, and formal training required for 21 per cent of the jobs. There were education requirements for all but 11 per cent of the jobs. Some high school was required for 10 per cent, high school graduation for 67 per cent, some college for 8 per cent, and college graduation for 4 per cent of the occupations in the industry. There were no training requirements established for 47 per cent of the occupations. Formal in-plant training was required for 27 per cent of the jobs, business or trade school training for 21 per cent, apprenticeship training for 3 per cent, and technical school training for 2 per cent. There was a slight preference to hire equally qualified women but the actual employment percentages indicate a much greater percentage of women employed. The bulk of the jobs were in the clerical and sales classifications and the hourly wage range for entry workers was a 75¢ per hour low to a \$4.50 per hour high. Incidentally this was in the same occupational classification.

The Finance, Insurance, and Real Estate industry is growing. Employment in 1967 will be 107 per cent of 1965 and employment in 1970 will be 119 per cent of 1965. It was estimated that 5,931 additional employees will be needed

by 1970. The state-operated trade and vocational-technical schools offer training which prepares students for employment. The schools' training programs could be utilized to provide the training background for the anticipated opportunities in the Finance, Insurance, and Real Estate industry in Louisiana.
