## AEDS PROPERTY CLASSIFICATION CODE MANUAL.

Association for Educational Data Systems, Washington, D.C.

Spons Agency- Office of Education (DHEW), Washington, D.C. Bureau of Research.

Report No- SPEC-PUB-644

Bureau No- BR-6-2836

Pub Date Jan 63

Note- 248p.

EDRS Price MF-\$1.00 HC-\$10.00

Descriptors- BUILDING EQUIPMENT, BUILDING MATERIALS, \*CLASSIFICATION, \*COMPUTERS, ELECTRONIC EQUIPMENT, \*EQUIPMENT EVALUATION, \*FACILITY INVENTORY, FURNITURE, INFORMATION PROCESSING, INSTRUCTIONAL MATERIALS, LABORATORY EQUIPMENT, \*SCHOOL BUILDINGS

The control and inventory of property items using data processing machines requires a form of numerical description or code which will allow a maximum of description in a minimum of space on the data card. An adaptation of a standard industrial classification system is given to cover any expendable warehouse item or non-expendable piece of equipment. Items which are covered include--(1) textile, fabrics, apparel, (2) lumber and wood products, (3) furniture and fixtures, (4) paper and allied products, (5) chemicals and paint, (6) stone, clay, and glass, (7) fabricated metal products, (8) machinery and electrical, (9) instruments, and (10) musical, toys, and sports. A ten-digit number allows breakdown into specific items or classes with descriptive information identified. The identification of style, size, color, material, and manufacturers' flexibility is incorporated to allow for a maximum description of the items of equipment considered. (MM)

## PROPERTY INVENTORY PROCEDURE

The importance of accounting and control over property items within a public corporation cannot be under-estimated. In addition to controlling the location and number of equipment items, replacement data, analyses of durability of different types and brands of equipment, and burglary and fire insurance information are more readily accessible. The basic procedure for property inventory control is as follows.

### A. The Property Control Manual

Any property control and inventory system for use with data processing machines must employ a form of numerical description or code which will allow a maximum of description in a minimum of space on the data card. The Property Manual was designed to accomplish this most important description, a ten-digit number which may be devised for any expendable warehouse item or non-expendable piece of equipment and easily deciphered into a complete description of the item of equipment.

While there are many sorts of property control systems throughout the country, there are few, if any, intended specifically for use in a large and complex school system. The difficulty previously found in organizing school property control methods was that too often the property was classified according to use; for example, a typewriter might be classed as an instructional item in the classroom and also as an office item in the offices of the school system. Consequently, duplications arose in the system, rendering it almost useless. The property control system with which we are concerned here, however, avoids such duplications through the use of the Standard Industrial Classification Manual designed and published by the Federal Government.

The SIC Manual classifies American industry into several categories according to the type of activity in which a particular industry is engaged. Each of the greater categories is broken down into more detailed sections which give brief descriptions of the industry and its products. Following the same idea in the Property Manual - that is, classifying an item of equipment by the industry which manufactured it - duplication is avoided; and the property control system becomes a working reality.

#### 1) The Categories

Each page in the Property Control Manual represents one of the more descriptive, detailed sections of the SIC Manual; thus, each page is designed for a particular type of equipment depending upon the industry which manufactured the piece of equipment. Each page is numbered according to the category division of the SIC Manual, which employs four digits to divide the sections (i.e. 2499, 2531, or 3999).

## 2) The Numerical Description Number

The limit of ten spaces for the coded numerical description on a punched card is set to allow for a maximum of description of the item of equipment in a minimum of digits on the card, thereby keeping time to a minimum in the processing of the Property Inventory Cards by the tabulating machines.

Each page in the Property Manual is divided into six columns which can be used for any particular type of description. Within each column there are ten spaces for divisions within each type of description; for example, a column may be headed "Color," and the divisions within the column be labeled "red," "green," "blue," and so on. If there are more than ten divisions within a column, then two columns are used for a single heading, giving ninety-nine different divisions within the column.

With the exception of the first four digits of the code number which are assigned to the main category division, each of the remaining six digits are given to a column on a page in the Property Manual.

To explain the code number and how it is devised, a 17" chair desk will be used as an example; and the number for it would be as follows:

a) The first four digits would be 2531, which identify the page number, or main division of categories, in the Property Manual; 2531 in the Manual is "Furniture and Fixtures - Public Building and Related Furniture." Thus, the first four digits are 2531-----.

b) There are many different kinds of public building furniture and fixtures, so to further identify a chair desk, a Unit column must be listed. There are more than ten kinds of furniture, so two columns are grouped in the Unit figure. The number in that group for a chair desk is "11," so the fifth and sixth digits are ----11----

The code thus far, then, is 253111----

c) The seventh column of the Property Manual Page 2531 is designated for Style of furniture. Since there is no particular style of chair desk, the digit "0" is used to signify that in this column the item is unclassified. Thus, the seventh digit is -----0---

And the whole code number so far is 2531110---

d) The eighth column is assigned to Construction, and since the first space is labeled Wood and Pressed Steel, and the chair in question is

constructed from the same, the digit for the eighth space is "1," and the code -----1--,

The code number entirely so far is 25311101--.

e) There are many different dimensions of desks and tables and other fixtures accorded to the main category 2531, so the last two digits have been reserved for size. The particular number for a 17" chair desk in the last two columns is "07." Thus, the last two digits of the ten digit number are -----07.

f) The complete number for a 17" wood and pressed steel chair desk, then, is 2531110107.

The reason behind the coded description number is that there must be a common identification number for items of the same equipment other than the actual tag numbers on the items of equipment. Since only one school is tagged at a time, to keep the tagged equipment and their cards in groups of chairs, tables, etc., would be an impossibility. The common coded description number allows for items of the same equipment to have any tag number and still be identified as a particular kind of piece of equipment having different numbers.

The column headings in the Property Manual have been kept as consistent as possible, being divided into Unit, Style, Type, Construction, Size, and Model. However, they may vary to include Manufacturer, Color, or some other form of description.

#### F. The Correct Use of the Property Control Manual

Of paramount importance in correct usage of the Property Manual is the placing of equipment in the proper category---in other words, placing a chair desk in 2531 and not in 2522 which is designated "Metal Office Furniture and Fixtures." Placing the item in the correct category means giving the item of equipment a correct coded description number.

If an item of equipment can conceivably fall into one of several categories, it is wise to place the item by the industry which manufactured it or by material, construction, or the design of the object; never, however, categorize an item by use.

Any item of equipment can be tagged and recorded once it has been determined whether or not the item is expendable or non-expendable. Non-expendable may be defined as "an item of equipment which is above the set minimum value limit, which is not fastened to a building by bolts, and which is not used up or consumed." Such equipment would include items as typewriters, file cabinets, desks, shop machines, gloves, maps, cameras, etc. While a minimum value limit is set, it cannot be rigid; often there

may be items below the minimum value limit which are still considered non-expendable items. A good example would be a janitor's service cart.

Expendable items are those instructional items like ink, pencils, paper, chemicals---those items of equipment which are below the minimum value limit. Also included in this category are janitor's supplies and the greater percentage of warehouse inventory supplies. Sometimes expendable items may be over the minimum value limit, such as some chemicals and glassware, but their quality renders them expendable.

A somewhat strict limit on what is expendable and non-expendable must be tried in order to keep the property inventory within a reasonable and useful limit; the only satisfactory method, at least for the present, in determining what is and what is not expendable is the judgement of the Property Clerk. The limit has been set at approximately \$5.00.

### C. The Property Inventory Card

The Property Card is a punched card designed for the purpose of property accounting and control. It is intended for supplying all of the information necessary in the recording and the control of equipment. The punched card is divided into 80 vertical columns, which means 80 separate items of information can be punched into the card. Some items, however, require the use of many columns, so the spaces of the card must be apportioned to best suit the need.

The first thirty columns of the card are designated for the written description of the article of equipment, such as 17" chair desk.

The next ten columns are for the ten digit code number, which when deciphered, gives a fuller description of the item of equipment.

The next five spaces are for the purchase order number which gives additional information about vendor or payment.

The date on which the item of equipment was purchased is allocated to spaces 46, 47, 48, and 49.

The unit cost of the piece of equipment is next, totaling seven columns of the punched card.

The unit of measure is next with three spaces.

The account number which provided the finances for the item of equipment is next in spaces 60-66.

The important space for location by school, room, and department is next in spaces 67-73.

An "X" punch is in column 74.

And the last six columns are for the tag number which is recorded from the tag placed on the items of equipment.

One Property Inventory Card is written up for each item of equipment, or groups of equipment which bear one tag number. There must be a card for each tag and number placed on an item of equipment, and that card must contain all of the above information that is possible and available to record.

Occasionally, especially in older schools, there will be items of equipment for which there are no purchase orders, and thus much of the information for the Property Card cannot be obtained. In these cases, an estimated cost is recorded on the card for the item of equipment, and in place of the date the words "EX," "GOOD," "FAIR," and "POOR" are recorded to indicate the condition of the item. The rest of the information which can be recorded, such as code, description, tag number, and location can be obtained from the Manual and location.

D. The Transfer Card

The Transfer Card for use with property inventory and control has been designed for the transferring of equipment from school to school, warehouse to school, school to warehouse, or disposing of equipment without sending it to a vendor.

The Transfer Card has a second use and that is for equipment traded-in or sold, either to a vendor or to the warehouse. The lower portion of the Transfer Card is designated for this purpose.

The Transfer Card is not usually punched, but is used solely for transferring information from one Property Inventory Card to another. The Transfer Card has space for a brief description of the item of equipment, the numerical code which is indicated by the letters "I.D. no.," spaces for the names and numbers of the sending and receiving schools, the tag number, and an area for authorization. The lower portion has basically the same spaces, except that two description spaces are provided for both old and new equipment, spaces for old and new tag numbers, and numerical descriptions. The same authorization area is used for trade-ins as for transfer.

#### NOTE

Members of the Staff working to implement school property accounting in the Cedar Rapids Community School District, under a contract with the U. S. Office of Education (Federal Project 6-2836) , encountered a significant number of items of equipment for which no code could be found in the AEDS Property Classification Code Manual.

The Standard Industrial Classification Manual prepared by the U. S. Office of Statistical Standards was used by staff members to identify the major groups into which these items of equipment should be classified. These groups determine the first four (4) digits of the code.

Typewritten entries in the columns and identification pages under some of the groups were made by the staff in attempt to supply the remaining numbers for the ten digit code.
