PROJECTIONS OF EDUCATIONAL STATISTICS TO 1976-77 1967 EDITION.

National Center for Educational Statistics (DHEW), Washington, D.C.

Report No-OE-10030-67

Pub Date Mar 68

Note-130p.

Available from-Superintendent of Documents, U.S.Government Printing Office, Washington, D.C. 20402 (GPO No. FS 5210:10030-67, \$1.00).

EDRS Price MF-\$0.75 HC Not Available from EDRS.

Descriptors-COLLEGE GRADUATES, DEGREES (TITLES), *ELEMENTARY SCHOOLS, *ENROLLMENT PROJECTIONS, ENROLLMENT TRENDS, EXPENDITURES, *HIGHER EDUCATION, HIGH SCHOOL GRADUATES, *SCHOOL STATISTICS, *SECONDARY SCHOOLS, STUDENT COSTS, TEACHERS

Based mainly on the assumption that enrollment rates through 1976-77 will continue the trend from 1956-57 to 1966-67, projections are determined for several key educational statistics, including enrollment for all levels from kindergarten through graduate study, number of high school graduates and college degrees, number of teachers and other professional staff, expenditures of educational institutions, and basic student charges for institutions of higher education. Projections of Educational Statistics to 1976-77

EA 601 607

ED022249

Highlights

If present trends continue, we can expect increases in:

- Fall enrollment in all regular public and private elementary and secondary day schools:
From 49.6 million in 1966 to 52.1 million in 1976.
- Fall degree-credit enrollment in institutions of higher education:
From 5.9 million in 1966 to 9.4 million in 1976.
- High school graduates from all public and private secondary day schools:
From 2.7 million in 1966-67 to 3.6 million in 1976-77.
- Bachelor's and first-professional degrees granted by institutions of higher education:
From 570,000 in 1966-67 to 961,000 in 1976-77.
- Fall full-time and part-time classroom teachers in all regular public and private elementary and secondary day schools:
From 2.0 million in 1966 to 2.3 million in 1976.
- Full-time equivalent instructional staff for resident degree-credit courses in institutions of higher education:
From 328,000 in 1966-67 to 471,000 in 1976-77.
- Total expenditures of all regular public and private elementary and secondary day schools:
From \$31.9 billion in 1966-67 to \$42.4 billion in 1976-77 (in 1966-67 dollars).
- Total expenditures of institutions of higher education:
From \$16.6 billion in 1966-67 to \$27.8 billion in 1976-77 (in 1966-67 dollars).

Foreword

This publication supplies projections of statistics on elementary and secondary schools and institutions of higher education. The statistics include enrollment, graduates, teachers, and expenditures. These projections supersede the ones shown in *Projections of Educational Statistics to 1975-76* (OE-10030), 1966. They are based mainly on 1956-57 to 1966-67 Office of Education data and they cover the period 1967-68 to 1976-77 for the United States. Many of these data are available by State for 1966-67 in the Office of Education publication, *Digest of Educational Statistics*, 1967 edition.

The projections shown here are based mainly on the assumption that the 1956-57 to 1966-67 trend in enrollment rates will continue through 1976-77. The overall trend for an increasing percentage of persons to enroll in school or college is then reflected in the totals of graduates, teachers, and expenditures. Further information about projected changes and the assumptions on which these are based are shown in the main body of this report. Details of the methodology used in making these projections are given in the appendix.

TABLES

ENROLLMENT

All Levels

1. Fall enrollment in educational institutions: United States, 1956 to 1976..... 8

Elementary and Secondary Schools

2. Fall enrollment in grades K-8 and 9-12 of regular day schools, by control: United States, 1956 to 1976..... 9
3. Fall enrollment by organizational level of school and by control: United States, 1956 to 1976..... 10

Institutions of Higher Education

4. Total opening fall resident and extension enrollment in all institutions of higher education, by degree status and level: United States, 1956 to 1976..... 11
5. First-time opening fall degree-credit resident and extension enrollment in all institutions of higher education, by sex and by control of institution: United States, 1956 to 1976..... 12
6. First-time opening fall degree-credit resident and extension enrollment in 4-year institutions of higher education, by sex and by control of institution: United States, 1956 to 1976..... 13
7. First-time opening fall degree-credit resident and extension enrollment in 2-year institutions of higher education, by sex and by control of institution: United States, 1956 to 1976..... 14

	Page
8. Total opening fall degree-credit resident and extension enrollment in all institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976.....	15
9. Total opening fall degree-credit resident and extension enrollment in 4-year institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976.....	16
10. Total opening fall degree-credit resident and extension enrollment in 2-year institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976.....	17
11. Total opening fall degree-credit resident and extension enrollment in all institutions of higher education, by level and type of institution: United States, 1956 to 1976.....	18
12. Estimated graduate opening fall degree-credit resident enrollment in 4-year institutions of higher education by sex, by attendance status, and by control: United States, 1956 to 1976.....	19
13. Estimated undergraduate opening fall degree-credit resident and extension enrollment in all institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976.....	20
14. Estimated undergraduate opening fall degree-credit resident and extension enrollment in 4-year institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976.....	21
15. Estimated opening fall nondegree-credit resident and extension enrollment in institutions of higher education, by attendance status and by control of institution: United States, 1956 to 1976.....	22
16. Estimated full-time equivalent of total full-time and part-time opening fall resident and extension enrollment in institutions of higher education, by degree-credit status of student and by control of institution: United States, 1956 to 1976.....	23

HIGH SCHOOL GRADUATES AND EARNED DEGREES

Graduates

17. Total high school graduates, by sex and by control of school: United States, 1956-57 to 1976-77.....	30
--	----

Earned Degrees

18. Earned degrees, by level and sex: United States, 1956-57 to 1976-77.....	31
19. Percentage distribution of degrees, by field and level: United States and outlying areas, 1956-57 to 1976-77.....	32
20. Earned bachelor's and first-professional degrees, by field: United States and outlying areas, 1956-57 to 1976-77.....	34
21. Earned master's (except first-professional) degrees, by field: United States and outlying areas, 1956-57 to 1976-77.....	36
22. Earned doctor's (except first-professional) degrees, by field: United States and outlying areas, 1956-57 to 1976-77.....	38

TEACHERS

Elementary and Secondary Schools

23. Classroom teachers in regular elementary and secondary day schools, by control and by organizational level: United States, 1956 to 1976.....	47
24. Pupil-teacher ratios in regular elementary and secondary day schools, by control and by organizational level: United States, 1956 to 1976.....	49
25. Estimated total demand for classroom teachers in public elementary and secondary schools: United States, 1961 to 1976.....	51
26. Estimated total demand for classroom teachers in nonpublic elementary and secondary schools: United States, 1961 to 1976.....	53
27. Estimated instructional staff in regular elementary and secondary day schools, by control: United States, 1956 to 1976.....	54

Institutions of Higher Education

	Page
28. Total instructional staff for resident degree-credit courses in institutions of higher education: United States and outlying areas, first term 1956-57 to 1976-77.....	55
29. Full-time-equivalent instructional staff for resident degree-credit courses in institutions of higher education: United States and outlying areas, first term 1956-57 to 1976-77.....	56
30. Total full-time and part-time professional staff in institutions of higher education: United States and outlying areas, first term 1956-57 to 1976-77.....	57
31. Total estimated full-time-equivalent professional staff in institutions of higher education: United States and outlying areas, first term 1956-57 to 1976-77.....	58
32. Total demand for estimated full-time-equivalent instructional staff in institutions of higher education: United States and outlying areas, first term 1961-62 to 1976-77.....	59
33. Total demand for estimated full-time-equivalent professional staff in institutions of higher education: United States and outlying areas, first term 1961-62 to 1976-77.....	60

EXPENDITURES

All Levels

34. Expenditures by regular educational institutions (1966-67 dollars), by level of instruction and by control: United States, 1956-57 to 1976-77.....	75
35. Expenditures by regular educational institutions (current dollars), by level of instruction and by control: United States, 1956-57 to 1968-69.....	77

Elementary and Secondary Schools

36. Current expenditures of public school systems: United States, 1956-57 to 1976-77.....	79
37. Current expenditures for salaries of instructional staff in regular public elementary and secondary day schools: United States, 1956-57 to 1976-77.....	81
38. Construction of public elementary and secondary school classrooms and capital outlay: United States, 1956-57 to 1976-77.....	83
39. Construction of public elementary and secondary school classrooms and capital outlay, by reason for construction: United States, 1957-58 to 1976-77.....	84
40. Expenditures for interest by public elementary and secondary school systems: United States, 1956-57 to 1976-77.....	85

Institutions of Higher Education

41. Expenditures from current funds and total current expenditures (1966-67 dollars) by institutions of higher education: United States, 1956-57 to 1976-77.....	86
42. Expenditures from current funds and total current expenditures (current dollars) by institutions of higher education: United States, 1956-57 to 1968-69.....	88
43. Capital outlay of institutions of higher education: United States, 1956-57 to 1976-77.....	91

STUDENT CHARGES

Institutions of Higher Education

44. Estimated average charges (1966-67 dollars) to full-time resident degree-credit undergraduate students, by type and by control: United States, 1956-57 to 1976-77.....	92
45. Estimated average charges (current dollars) to full-time resident degree-credit undergraduate students, by type and by control: United States, 1956-57 to 1968-69.....	94

Chapter I

Enrollment

Velma S. Southard and Martin M. Frankel

Total fall enrollment

Total fall enrollment increased from 40 million in 1956 to 56 million in 1966 and is expected to be 62 million in 1976. This includes enrollment in all regular public and nonpublic elementary and secondary schools and enrollment in all degree-credit and nondegree-credit courses in occupational or general studies programs in institutions of higher education. It excludes enrollment in adult education courses of regular length and less than regular length in institutions of higher education, enrollment in correspondence, television and radio courses given by institutions of higher education, enrollment in private subcollegiate vocational schools, and enrollment in elementary and secondary grades in the following schools: Residential schools for exceptional children, Federal schools for Indians, schools on Federal installations, and subcollegiate departments of institutions of higher education.

Projected total fall enrollments are shown in table 1. The projections are based on the following assumptions: (1) The percentage of school-age persons enrolling in school and the retention rates of those already in school will continue the 1956-66 trend; and (2) the current fertility rate, upon which the projections of school-age population are based, will continue without major change to 1976. This population base differs from the base used previously which assumed a continuation of the average 1964 and 1965 fertility rates. Office of Education estimates of the October 1 school-age population which make use of these bases are shown in appendix tables E and F. A projection of elementary and secondary enrollments using the same base as last year is shown in appendix table G. The higher education projections are unaffected by the change in population base.

Fall enrollment in regular public elementary and secondary schools

Fall enrollment in regular public elementary and secondary schools (table 2) increased from 31.7 million in 1956 to 43.1 million in 1966, and is expected to be 45.7 million in 1976. This enrollment excludes an estimated total of 0.3 million enrolled in schools such as residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

Increases in the next decade will be at the high school level because all of the children who will be progressing through high school in those years were born in the high-birth-rate years between 1946 and 1961, and because enrollment rates of persons of high school age are continuing to increase. Enrollment in grades 9 through 12 rose from 7.2 million in 1956 to 11.9 million in 1966 and is expected to be 15.2 million in 1976.

Enrollment in grades kindergarten through 8 is expected to increase to 1969 and then decline as the smaller birth cohorts of the 1960's make up a larger and larger proportion of the numbers attending. If current fertility rates hold, however, the downward trend will be reversed by the end of the 1970's. The proportion of children of elementary school age who enroll in school is already so high (about 99 percent, if 5-year-olds are excluded) that any increase in enrollment rates for this age group will be minimal. Enrollment in kindergarten through grade 8 increased from 24.5 million in 1956 to 31.2 million in 1966, and is expected to be 30.5 million in 1976.

Enrollment in schools organized as high (secondary) schools increased from 9.5 million in 1956 to 15.9 million in 1966, and is expected to be 20.6 million in 1976. Enrollment in these schools is larger than the enrollment in grades 9 through 12 previously given because it includes some of the enrollment in grades 7 and 8. This also accounts for the fact that enrollment in schools organized as elementary schools is smaller than that in grades kindergarten through 8. The enrollment loss from grades 7 and 8 to schools organized as secondary schools may be even larger than the reported figures show because some school areas find it difficult to report by organizational level. Enrollment in elementary schools increased from 22.2 million in 1956 to 27.1 million in 1966 and is expected to be 25.1 million in 1976.

Projections of enrollment by grade group and school organization are shown in tables 2 and 3. The projection by grade group was derived by applying enrollment rates to 5-, 6-, and 7-year-olds and retention rates to grades 2 through 11. The projection by organizational level was derived by assuming that the percentage of seventh- and eighth-grade enrollment organized as secondary school enrollment will continue to increase as it has in the past.

Fall enrollment in regular nonpublic elementary and secondary schools

Fall enrollment in regular nonpublic elementary and secondary schools, kindergarten through grade 12, increased from an estimated 4.9 million in 1956 to 6.5 million in 1966, and is expected to be 6.4 million in 1976. These figures exclude enrollment in residential schools for exceptional children, subcollegiate departments of institutions of higher education, and private vocational schools.

As in the public schools, increased enrollment is expected only at the secondary school level. Enrollment in grades 9 through 12 increased from 0.9 million in 1956 to 1.3 million in 1966 and is expected to be 1.5 million in 1976. Enrollment in kindergarten through grade 8 increased from 4.0 million in 1956 to 5.2 million in 1966 and is expected to drop to 4.9 million in 1976. The drop in enrollment may be attributed partly to the school-age-population decrease and partly to the effort of some nonpublic elementary schools to limit class size in order to lower pupil-teacher ratios.

Almost all nonpublic school enrollment follows the traditional pattern of organization by level. That is, almost all nonpublic seventh and eighth graders are in elementary schools. Therefore, the nonpublic school figures shown in this publication for grades K-8 and 9-12 are the same as the ones shown for enrollment by organizational level.

Projected enrollment in nonpublic elementary and secondary schools is shown in tables 2 and 3, along with public school enrollment. It is based on the assumption that current trends in nonpublic school enrollment will continue with a tendency to level off toward the end of the projection period.

Total opening fall enrollment in institutions of higher education

Fall enrollment in 4-year and 2-year institutions of higher education (table 4) includes resident and extension, full-time and part-time students taking work creditable toward a bachelor's or higher degree; and also resident and extension, full-time and part-time students in occupational or general studies programs not chiefly creditable toward a bachelor's degree. It excludes students in adult education courses, correspondence, television, or radio courses, and students in subcollegiate departments of higher educational institutions. Fall enrollment in higher educational institutions (table 4) increased from an estimated 3.1 million in 1956 to 6.4 million in 1966 and is expected to be over 10 million in 1976, of which 710,000 or 7 percent are expected to be in occupational or general studies programs.

Of the 9.4 million students expected in 1976 who will be taking work toward a bachelor's or higher degree, 1.1 million or 12 percent are expected to be seeking degrees beyond the bachelor's level. Of the remaining 8.3 million who are seeking undergraduate degrees, fewer than one-fourth are expected to be first-time students.

Included among the projected higher education enrollments shown in this publication are an estimated annual total of 67,000 veterans who have been discharged during the past 10 years or are expected to be discharged and who, it is assumed, would not have entered college without the aid offered by the Veterans' Readjustment Benefits Act of 1966. Therefore, they have been added to the projected numbers which were obtained through application of attendance rates to the college-age population. Because these entering veterans represent all levels of college attainment from first-time in any college to the graduate level, they have been distributed in tables 4 through 16 in the same proportions as the projected enrollments.

First-time opening fall enrollment in degree-credit courses

First-time opening fall enrollment in degree-credit courses increased from 0.7 million in 1956 to an estimated 1.4 million in 1966 and is expected to be 2.0 million in 1976. Projected first-time degree-credit enrollment in all institutions of higher education is shown in table 5. It is based on the assumption that first-time enrollment as a percentage of the population averaging 18 years of age will continue the 1956-65 trend. This percentage increased from 32 in 1956 to 40 in 1965 and is expected to be 49 in 1976. The large increases in first-time enrollment in 1964 and 1965 are the result of the large number of births immediately following World War II. There was a subsequent one-year drop of 300,000 births and then a gradual increase through 1957, followed by a leveling off period and small yearly decreases from 1962 through 1966. As a result, the 1966 estimate of first-time enrollment shows a small decrease despite the upward trend in enrollment rates, and the years following 1966 are expected to show only moderate increases. In addition to the population and attendance rate increases between 1966 and 1976, the

Veterans' Readjustment Benefits Act of 1966 is expected to increase first-time enrollment by 17,000 each year.

The distribution of first-time enrollment by sex and by control of the institution attended is shown in table 5 also. Women increased their percentage of first-time enrollment from 38 percent in 1956 to 42 percent in 1965 and are expected to reach 46 percent of all first-time degree-credit enrollment by 1976. First-time degree-credit enrollment in public institutions increased from 60 percent in 1956 to 69 percent in 1965 and is expected to be 75 percent in 1976.

First-time degree-credit opening fall enrollment in 4-year institutions is shown in table 6, and that in 2-year institutions is shown in table 7. First-time enrollment in 2-year institutions represented 23 percent of all first-time degree-credit enrollment in 1956, 28 percent in 1965, and is expected to be 32 percent by 1976.

The enrollment of men accounted for 62 percent of first-time degree-credit enrollment in 2-year institutions in 1956, 60 percent in 1965, and 58 percent in 1976. Most students enrolled in 2-year colleges for the first time attend publicly controlled institutions. The percentage in public institutions rose from 84 percent in 1956 to 87 percent in 1965, and is expected to reach 88 percent in 1976.

Total opening fall enrollment in degree-credit courses

Total opening fall enrollment in courses creditable toward a bachelor's or higher degree in all institutions of higher education increased from 2.9 million in 1956 to an estimated 5.9 million in 1966 and is expected to climb to 9.4 million by 1976. These figures include all resident and extension, full-time and part-time, graduate and undergraduate enrollment in degree-credit courses in 4-year institutions and in 2-year institutions. They include first-time as well as more advanced students.

Projected total opening fall degree-credit enrollment in all institutions of higher education is shown in table 8. The projections were made separately for men and women by type and by control of the institution attended and by the full-time or part-time attendance of the student. They are based on the assumption that the percentage of college-age people enrolled in college in each of the above enrollment categories will continue to increase from 1967 to 1976 as it did from 1956 to 1966. Further details of the methodology are given under the entries for tables 8 to 10 in appendix table A.

In addition to the number of enrollments between 1967 and 1976 obtained under the assumption mentioned above, the Veterans' Readjustment Benefits Act of 1966 is expected to increase enrollment in degree-credit courses by 66,000 each year.

Table 8 also gives the distribution of degree-credit students in all institutions of higher education by sex, by attendance status, and by control of the institution attended. As shown by this distribution the proportion of women enrolled has increased in the past decade from 35 percent in 1956 to 39 percent in 1965. It is expected to be 43 percent by 1976. The distribution also shows that about 71 percent of all opening fall degree-credit students attend college full time. There is, however, considerable variation in the 1965 percentages of full-time attendance among the different categories of students. The percentages for the different categories of students are given in the methodology for tables 8, 12, 14, and 15 in appendix table A. The 1965 percentages are expected to continue with only minor changes through 1976. According to the distribution shown in table 8, public institutions drew 57 percent of total enrollment in 1956 and 66 percent in 1965. The enrollment in public institutions was 1.7 million in 1956 and an estimated 4.0 million in 1966. This contrasted with an enrollment in private institutions of 1.3 million in 1956 and an estimated 2.0 million in 1966. Projected enrollment for 1976 is 6.7 million in public institutions and 2.6 million in private institutions.

Total degree-credit opening fall enrollment in 4-year institutions is shown in table 9. Since 85 percent of all degree-credit enrollment is in 4-year institutions, the enrollment patterns in these institutions resemble closely those of all institutions.

Total degree-credit opening fall enrollment in 2-year institutions is shown in table 10. Two-year institutions represented 12 percent of total degree-credit enrollment in 1956, and 15 percent in 1965. Total degree-credit undergraduate enrollment in 2-year institutions rose from 0.3 million in 1956 to an estimated 1.0 million in 1966 and is projected as 1.7 million in 1976. The pattern of enrollment in these institutions differed considerably from that of 4-year institutions. Men represented 62 percent of degree-credit enrollment in 1965; full-time students, 59 percent; and public institutions, 88 percent. Corresponding percentages for 4-year institutions in 1965 were 61 for men, 73 for full-time students, and 62 for public institutions.

Estimated opening fall enrollment by level and type of institution

Resident and extension opening fall degree-credit enrollment is not reported by level. Therefore, the graduate and undergraduate levels had to be estimated from information provided by other studies in the Office of Education. The estimates of resident graduate enrollment from 1956 through 1966 (table 11) were based on theoretical percentages derived from the projection equations. The equations

were based on resident graduate enrollment as a percentage of total resident and extension enrollment as observed over a period of years, and computed separately for each sex and control category in 4-year institutions (see additional methodology details in appendix table A under entry for table 11 with explanatory footnote 20). The Office of Education studies from which the basic data were obtained were the biennial comprehensive surveys of enrollments in higher education for the first term 1955 through 1961 and the survey of migration of college students, 1963. Percentages derived from the resulting equations were applied to corresponding categories of opening fall resident and extension degree-credit enrollment to estimate resident graduate enrollment.

Estimated resident graduate opening fall enrollment increased from 0.3 million in 1956 to 0.6 million in 1966 and is expected to reach 1.1 million by 1976. Resident graduate enrollment is the fastest growing component of total degree-credit enrollment. Estimated graduate enrollment increased 132 percent between 1956 and 1966, while estimated undergraduate and first-professional enrollment increased 88 percent in the same period. Estimates and projections of resident graduate enrollment and resident and extension undergraduate and first-professional enrollment, as components of total opening fall degree-credit enrollment in 4-year and 2-year institutions, are shown in table 11.

Because the comprehensive surveys obtained data on the number of resident graduate enrollments but not on the number of extension graduate enrollments, extension graduate enrollments are included with resident and extension undergraduate and first-professional enrollments. The number of extension graduate enrollments is believed to be quite small, however. The known components comprising resident and extension, undergraduate and first-professional enrollment in 4-year institutions, according to the 1963 study of migration of college students, are: Resident undergraduate, 87.9 percent; resident first-professional, 4.4 percent; and extension, including graduate extension, 7.7 percent.

Estimated resident and extension undergraduate and first-professional opening fall enrollment in all institutions rose from 2.7 million in 1956 to 5.3 million in 1966 and is expected to be 8.3 million in 1976. Over 80 percent of this enrollment was in 4-year institutions in 1965.

Estimated resident graduate opening fall enrollment

Projected resident graduate opening fall enrollment and the distribution of this enrollment by sex, by attendance status, and by control of the institution attended is shown in table 12. The projections by sex and by control of institution are based on the assumption that the proportion of the total degree-credit enrollment at the graduate level within each sex and control group will continue the 1955-63 trend to 1976. The projection by attendance status is based on the assumption that in each sex and control group, the 1965 ratio of estimated full-time graduate enrollment to total graduate enrollment will remain constant to 1976. Further details of the method used in making the projections are given in the footnotes to tables 12 and 13, and in appendix table A. The projection includes in each year an estimated 7,000 veterans taking graduate work in addition to the veterans enrolled in 1965, and to the veterans who would have enrolled in graduate work through means other than the aid provided by the Veterans' Readjustment Benefits Act of 1966.

The distribution of graduate enrollment by sex shows a slightly greater increase in graduate enrollment of women than in that of men. Women represented 28 percent of all graduate enrollment in 1956, 30 percent in 1965, and a projected 32 percent in 1976. A greater percentage of graduate enrollment was full time and a greater percentage was in public institutions in 1965 than in 1956. Full-time enrollment was 39 percent of all graduate enrollment in 1956 and 44 percent in 1965. It is expected to remain at or near 44 percent in 1976. Public institutions drew 49 percent of all graduate enrollment in 1956, 60 percent in 1965, and are expected to have 69 percent in 1976.

Estimated resident and extension undergraduate and first-professional opening fall enrollment

Projected undergraduate and first-professional opening fall enrollment together with the distribution of this enrollment by sex, by attendance status, and by control of the institution attended is shown in table 13. The projections by sex and by control of institution are based on the assumption that within each sex and control category the proportion of the total enrollment at the undergraduate and first-professional level will follow the 1955-63 trend to 1976. The projection of undergraduate and first-professional enrollment by attendance status is based on the assumption that the 1965 ratio of estimated full-time undergraduate and first-professional enrollment to total undergraduate and first-professional enrollment in each sex and control group will remain constant to 1976. The projections include in each year an estimated 59,900 veterans, enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966.

The distribution of undergraduate and first-professional students by sex, by attendance status, and by control of the institution attended differed greatly from that of resident graduate students. In 1965,

men accounted for 60 percent of the undergraduate and first-professional students, and 70 percent of the resident graduate students. Seventy-four percent of undergraduate and first-professional students were full-time students contrasted with 44 percent of resident graduate students. Public institutions drew 66 percent of undergraduate and first-professional students and 60 percent of resident graduate students.

Undergraduate and first-professional enrollment in 4-year institutions is shown in table 14. In 1965, 83 percent of all undergraduate and first-professional enrollment was in 4-year institutions. Undergraduate enrollment in 2-year institutions is the same as total enrollment in these institutions. This is shown in table 7 and discussed with total enrollment in 4- and 2-year institutions.

Estimated opening fall enrollment in nondegree-credit courses

Opening fall enrollment in nondegree-credit courses in occupational or general studies programs (excluding adult education) rose from an estimated 168,000 in 1956 to an estimated 443,000 in 1966 and is expected to be 710,000 in 1976. Forty percent of this enrollment is estimated to be full time for all years 1956 to 1976. Eighty-seven percent was reported in publicly controlled institutions in 1965 and this percentage is expected to rise to 90 percent in 1976. In 1956, 5.4 percent of all enrollment in institutions of higher education was estimated to be in nondegree-credit courses in occupational or general studies programs (excluding adult education). In 1965 this percentage was 6.7 and in 1976 is expected to be 7.0.

Projected total nondegree-credit opening fall enrollment and the distribution of this enrollment by attendance status of the student and by control of the institution attended is shown in table 15. The projection of total nondegree-credit enrollment is based on the assumption that within each institutional control group nondegree-credit enrollment will increase at the same rate as degree-credit enrollment. The projection by attendance status is based on the assumption that the percentage attending full time reported in the 1964 sample survey of full-time equivalent enrollments¹ will remain constant to 1976 at 40 percent of total full-time and part-time enrollment.

Estimated opening fall full-time equivalent enrollment in degree-credit and nondegree-credit courses

Estimated opening fall full-time equivalent enrollment in degree-credit and nondegree-credit courses increased from 2.4 million in 1956 to 5.1 million in 1966, and is expected to be 7.9 million in 1976. In 1966, 67 percent of this enrollment was in public institutions, and 72 percent is expected to be in public institutions in 1976.

Estimated full-time equivalent enrollment in degree-credit courses increased from 2.3 million in 1956 to 4.8 million in 1966 and to a projected 7.5 million in 1976. Estimated full-time equivalent enrollment in nondegree-credit courses increased from 96,000 in 1956 to 252,000 in 1966 and is expected to be 404,000 in 1976. The estimated increase from 1956 to 1966 of 162 percent in nondegree-credit full-time equivalent enrollment contrasts with an estimated increase in degree-credit full-time equivalent enrollment of 108 percent.

Projections of degree-credit and nondegree-credit opening fall full-time equivalent enrollment by control of institution are shown in table 16. These projections are based on the assumption that the full-time equivalents of part-time enrollment reported in the 1964 sample survey of full-time equivalent enrollments² will remain constant to 1976. These full-time equivalents were 33 percent for part-time degree-credit enrollment and 28 percent for part-time nondegree-credit enrollment.

¹ Department of Health, Education, and Welfare, Office of Education, unpublished data from 1964 full-time equivalent enrollments and credit hours sample survey.

1976	52,100	35,400	16,700	45,700	30,500	15,200	6,400	4,900	1,500

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of Public Schools," fall 1964 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," 1955 through 1963; (3) "Statistics of State School Systems," biennially, 1957-58 through 1961-62; (4) "Statistics of State School Systems, Biennial Survey of Education in the United States," ch. 2, 1954-56; (5) "Nonpublic School Enrollment in Grades 9-12, Fall 1964, and Graduates, 1963-64"; and (6) "Statistics of Nonpublic Elementary Schools, 1961-62."

The population projections as of October 1, on which the enrollment projections are based (appendix table E), are consistent with Series C population projections in U.S. Department of Commerce, Bureau of the Census, "Current Population Reports," Series P-25, No. 359, February 20, 1967. The Series C population projection assumes that the calendar-year fertility rate of 1966 will prevail throughout the projection period.

For enrollment projections based on population projections, Series B, see appendix table G.

² Does not include residential schools for exceptional children, subcollegiate departments of institutions of higher

education, Federal schools for Indians, and schools on Federal installations.

³ Fall enrollment in public schools not reported by grade prior to 1962; grade breakdown for years 1956 through 1961 estimated from school year enrollment.

⁴ Preliminary data.

⁵ The projection of regular fall enrollment in day schools is based on these assumptions: (1) Enrollment rates of the 5-, 6-, and 7-year-old population in public school grades kindergarten, 1, and 2 will follow the 1956-66 trends; (2) the retention rate of public school grade 7 to 6 will remain constant at 103 percent through 1976; (3) the retention rate of public school grade 9 to 8 will remain constant at 104 percent through 1976; (4) the retention rate of all other public school grades will follow the 1956-66 trends with the restriction that they cannot exceed 100 percent; (5) enrollment in grades K-8 in nonpublic schools will decrease to the year 1972 and then remain constant through 1976; and (6) enrollment in grades 9-12 in nonpublic schools will increase to the year 1970 and then remain constant through 1976.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

1976.....	52,100	30,000	22,100	45,700	25,100	20,600	6,400	4,900	1,500

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education, publications. (1) "Statistics of Public Schools," fall 1964 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," 1955 through 1963; (3) "Statistics of State School Systems," biennially, 1957-58 through 1961-62; (4) "Statistics of State School Systems, Biennial Survey of Education in the United States," ch. 2, 1954-56, (5) "Nonpublic School Enrollment in Grades 9-12, Fall 1964, and Graduates, 1963-64"; and (6) "Statistics of Nonpublic Elementary Schools, 1961-62."

The population projections as of October 1, on which the enrollment projections are based (appendix table E), are consistent with Series C population projections in U.S. Department of Commerce, Bureau of the Census, "Current Population Reports," Series P-25, No. 359, February 20, 1967. The Series C population projection assumes that the calendar-year fertility rate of 1966 will prevail throughout the projection period.

² Does not include residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ Preliminary data.

⁴ The projection of total regular fall enrollment in public schools by organizational level of school is based on the assumption that the percentage of enrollment in grades 7 and 8 that will be organized as elementary and as secondary enrollment will follow the 1956-66 trend. The projection of regular fall enrollment in nonpublic schools by organizational level is based on the assumption that substantially all nonpublic enrollment in grades 7 and 8 will continue as elementary enrollment.

For methodological details, see appendix table A.

NOTE.—Data for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

TABLE 4.—Total opening fall resident and extension enrollment in all institutions of higher education, by degree status and level: United States, 1956 to 1976¹

1976	10,108	9,398	1,140	8,259	2,050	6,209	710

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1963.

² Resident enrollment refers to enrollment in classes on the main campus or a branch campus of an institution, irrespective of the student's living quarters (on or off campus) and his legal domicile (in-State or out-of-State). Extension enrollment refers to enrollment in classes at a center or place away from the main campus or branch campus(es) of an institution.

The following types of enrollment in institutions of higher education are not included in this or other tables in this chapter: (1) Adult education (nondegree-credit courses of approximately regular length and degree-credit courses taken without reference to credit toward a degree or other formal award, by persons who have terminated their formal education); (2) degree-credit and nondegree-credit courses by mail, television, or radio; (3) short courses (considerably less than regular length but offering instruction on at least 4 separate days); and (4) individual lessons only (as in music, art, speech, etc.).

³ Includes graduate students in liberal arts and sciences and students taking work beyond the first-professional degree. Graduate enrollment is somewhat higher than enrollment for advanced degrees because graduate enrollment includes

students taking work at the graduate level who are not enrolled for advanced degrees.

⁴ Includes students studying for degrees such as M.D., D.D.S., D.V.M., LL.B., B.D., and other degrees classified as first-professional. It also may include some extension graduate enrollments (see discussion of this in text).

⁵ Vocational or general studies programs, not chiefly creditable toward a bachelor's or higher degree and extending not more than 3 years beyond high school, are designed to prepare for immediate employment in an occupation or cluster of occupations.

⁶ Estimate for 1966 based on 1966 opening fall survey of total degree-credit and nondegree-credit enrollment not reported separately, and on 1965 opening fall survey of total degree-credit and total nondegree-credit enrollment reported separately.

⁷ For assumptions underlying projections and for methods of projecting, see the following text tables with accompanying footnotes and appendix table A references to corresponding tables, also with accompanying footnotes: For column 3, tables 8, 9, and 10; for column 4, tables 11 and 12; for column 5, tables 11, 13, and 14; for column 6, tables 5, 6, and 7; and for column 8, table 15.

For further methodological details, see appendix table A. NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

1975	2,004,000	1,085,000	918,000	1,488,000	516,000
1976	2,050,000	1,103,000	947,000	1,533,000	517,000

¹SOURCES: Enrollment data from U.S. Department of Health, Education, and Welfare, Office of Education, circulars: "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966.

Population on which projections are based is shown in appendix table E.

²Estimate based on fall 1966 survey of first-time degree-credit and nondegree-credit enrollment not reported separately, and on fall 1965 survey of total degree-credit and total nondegree-credit enrollment reported separately. First-time nondegree-credit enrollment was not reported prior to fall 1966.

³The projection of first-time opening fall degree-credit enrollment in all institutions of higher education by sex and

by control of institution is based on the assumption that first-time enrollment, expressed as a percentage of the population averaging 18 years of age, will follow the 1956-66 trend to 1976 in each category of enrollment.

The projections include in each year, in addition to the number of enrollments based on the 1956-66 trend, an estimated 17,000 veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projections.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

1974	8,740,000	5,039,000	3,701,000	6,087,000	2,654,000	6,201,000	2,540,000
1975	9,088,000	5,210,000	3,878,000	6,320,000	2,767,000	6,489,000	2,599,000
1976	9,398,000	5,365,000	4,033,000	6,529,000	2,869,000	6,749,000	2,649,000

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education circulars: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; and (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1961.

Population on which projections are based is shown in appendix table E.

² Total opening fall degree-credit enrollment by attendance status for 1956 through 1961 is estimated from first-term enrollment by attendance status reported in "Comprehensive Report on Enrollment" surveys, biennially, 1955 through 1961.

³ Estimate based on fall 1966 survey of total degree-credit and nondegree-credit enrollment not reported separately, and on fall 1965 survey of total degree-credit enrollment and total nondegree-credit enrollment reported separately.

⁴ The projection of total opening fall degree-credit enrollment in all institutions of higher education by sex and control

of institution is based on the assumption that total enrollment, expressed as a percentage of population aged 18-21 years, will follow the 1956-66 trend to 1976 in each category of enrollment.

The projection of total opening fall degree-credit enrollment in all institutions of higher education by attendance status is based on the assumption that in each enrollment category the 1965 ratio of full-time enrollment to total enrollment will remain constant to 1976.

The projections include in each year, in addition to the number of enrollments based on the 1956-66 trend, an estimated 66,000 veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projections.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

1976.....	9,398	7,714	1,685	1,140	8,259	6,574	1,685

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1963.

² Total opening fall degree-credit enrollment by level was estimated from first-term enrollment by level reported in "Comprehensive Report on Enrollment" surveys, biennially, 1955 through 1961, and in the "Residence and Migration of College Students" survey, fall 1963. See text for further details of estimation methods.

³ Estimate based on fall 1966 survey of total degree-credit and nondegree-credit enrollment not reported separately, and on fall 1965 survey of total degree-credit enrollment and total nondegree-credit enrollment reported separately.

⁴ The projection of resident graduate opening fall degree-credit enrollment in 4-year institutions of higher education was made separately by sex and by control of the institution attended and is based on the assumption that in each enrollment category the proportion of total enrollment at the graduate level will continue the 1955-63 trend to 1976.

The projection of resident and extension undergraduate and first-professional degree-credit enrollment in 4-year institu-

tions of higher education is the difference between projected total resident and extension degree-credit enrollment in 4-year institutions of higher education shown in table 9 and in column 3 above, and resident graduate opening fall degree-credit enrollment in 4-year institutions shown in column 5 above.

The projection of resident and extension undergraduate degree-credit enrollment in 2-year institutions of higher education shown in column 8 above is the same as that shown in table 10.

The projections include in each year, in addition to the number of enrollments based on the 1955-63 trend, an estimated 66,000 veterans (7,000 graduate, 49,000 undergraduate in 4-year institutions, and 10,000 undergraduate in 2-year institutions) enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projection.

For further methodological details, see appendix table A reference to table 11 and accompanying footnote 2.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

1974.....	1,032,000	709,000	323,000	456,000	576,000	698,000	334,000
1975.....	1,086,000	745,000	341,000	481,000	605,000	741,000	345,000
1976.....	1,140,000	779,000	360,000	505,000	635,000	786,000	354,000

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1956 through 1963.

² Total opening fall degree-credit enrollment in 4-year institutions by level and attendance status 1955 to 1966 was estimated from first-term enrollment by level and attendance status reported in "Comprehensive Report on Enrollment" surveys, biennially, 1955 through 1961 and in the "Residence and Migration of College Students" survey, fall 1963. The estimates were adjusted to agree with degree-credit enrollment by attendance status reported in the "Opening Fall Enrollment" surveys, 1962 through 1965, and with the total degree-credit and nondegree-credit enrollment by attendance status reported in the "Opening Fall Enrollment" survey of 1966.

³ The projection of graduate opening fall degree-credit

enrollment in 4-year institutions of higher education by sex and by control of institution is based on the assumption that in each enrollment category the proportion of total enrollment at the graduate level will continue the 1955-63 trend to 1976.

The projection of graduate opening fall degree-credit enrollment in 4-year institutions by attendance status is based on the assumption that in each enrollment category the estimated 1965 ratio of full-time enrollment to total enrollment will remain constant to 1976.

The projections include in each year, in addition to the number of enrollments based on the 1955-63 trend, an estimated 7,000 veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projection.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

TABLE 13.—Estimated undergraduate opening fall degree-credit resident and extension enrollment in all institutions of higher education by sex, by attendance status, and by control of institution: United States, 1956 to 1976^{1 2}

Year (fall) (1)	Under-graduate degree-credit enrollment (2)	Sex		Attendance status		Control	
		Men (3)	Women (4)	Full-time (5)	Part-time (6)	Public (7)	Private (8)
1956	2,656,000	1,721,000	935,000	1,913,000	743,000	1,532,000	1,124,000

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education circulars: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1961; and (3) sample survey of full-time equivalent enrollments and credit hours, fall 1964, unpublished.

² Nondegree-credit opening fall enrollment includes enrollment in occupational or general studies programs not chiefly creditable toward a bachelor's or higher degree but excludes enrollment in adult education courses.

³ Nondegree-credit opening fall enrollment estimates for the years prior to 1963 were based on "Comprehensive Report of Enrollment" surveys, 1955 through 1961.

⁴ Estimates of attendance status of students were based on the 1964 sample survey of full-time equivalent enrollments and credit hours.

⁵ Nondegree-credit opening fall enrollment estimates for 1966 were based on fall 1966 survey of total degree-credit and nondegree-credit enrollment not reported separately and on fall 1965 survey of total degree-credit enrollment and total nondegree-credit enrollment reported separately.

⁶ The projection of nondegree credit enrollment in all

institutions of higher education by control of institution is based on the assumption that in each control category the 1965 ratio of opening fall nondegree-credit enrollment to opening fall degree-credit enrollment will remain constant to 1976.

The projection of nondegree-credit enrollment in all institutions of higher education by attendance status is based on the assumption that the ratio of full-time nondegree-credit enrollment to total nondegree-credit enrollment from the 1964 full-time equivalent enrollment and credit hours sample survey will (1) apply to both public and private institutions, and (2) remain constant to 1976. These ratios were 40 percent full time, 60 percent part time.

The projections include in each year, in addition to the number of enrollments based on the 1956-66 trend, an estimated 5,000 veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projections.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

TABLE 16.—Estimated full-time equivalent of total full-time and part-time opening fall resident and extension enrollment in institutions of higher education, by degree-credit status, of student and by control of institution*: United States, 1956 to 1976 1 2

1973	7,038,000	4,994,000	2,044,000	6,680,000	4,674,000	2,006,000	358,000	320,000	38,000
1974	7,337,000	5,241,000	2,096,000	6,964,000	4,906,000	2,058,000	373,000	335,000	38,000
1975	7,625,000	5,481,000	2,144,000	7,235,000	5,130,000	2,105,000	390,000	351,000	39,000
1976	7,881,000	5,697,000	2,184,000	7,477,000	5,332,000	2,145,000	404,000	365,000	39,000

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education circulars: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1961; and (3) sample survey of full-time equivalent enrollments and credit hours, fall 1964, unpublished.

* The estimate of full-time equivalent opening fall enrollment 1956 to 1966 is the sum of full-time opening fall enrollment and full-time equivalent of part-time opening fall enrollment. (Full-time and part-time opening fall degree-credit enrollment is shown in table 8. Full-time and part-time opening fall nondegree-credit enrollment is shown in table 15.)

The estimate of full-time equivalent of part-time enrollment is based on the proportion of part-time enrollment found to be equivalent to full-time enrollment for degree-credit students and for nondegree-credit students in the 1964 sample survey of full-time equivalent enrollment and credit hours. These equivalents were: For degree-credit enrollment, 33 percent

of part time; for nondegree-credit enrollment 28 percent of part time.

* The projection of the full-time equivalent of part-time enrollment is based on the assumption that the 1964 percentages of part-time enrollment equivalent to full-time enrollment (33 percent for degree-credit students and 28 percent for nondegree-credit students) will remain constant to 1976.

The projections include in each year, in addition to the number of full-time equivalent enrollments based on the 1956-66 trend, an estimated 48,000 full-time equivalent enrollments of veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projections.

For further methodological details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

Chapter II

High School Graduates and College Degrees

Frances E. Ryan and Nadine C. Brown

High school graduates

The number of high school graduates increased from 1.4 million in the school year 1956-57 to an estimated 2.7 million in 1966-67, and is expected to increase to 3.6 million in 1976-77. These figures include graduates from all public and nonpublic high schools in the United States. Fewer than one percent of the public school graduates are from Federal schools for Indians, schools on Federal installations, residential schools for exceptional children, and subcollegiate departments of colleges and universities. About three percent of the nonpublic school graduates are from residential schools for exceptional children and subcollegiate departments of colleges and universities. The remainder are from regular nonpublic day schools.

The number of high school graduates is not expected to increase as fast in the next 10 years as it did in the last decade. The increase between 1956-57 and 1966-67 was 85 percent. The increase between 1966-67 and 1976-77 is projected as 33 percent. This smaller increase is in line with the leveling off in the projected number of 18-year-olds. The increase in this age group was 57 percent between 1956-57 and 1966-67 but is projected to be only 19 percent between 1966-67 and 1976-77.

Projected high school graduates by sex and by control of school are shown in table 17. The projection of public high school graduates to 1976-77 is based on the assumption that, for boys and for girls separately, high school graduates expressed as a percentage of the 18-year-old population will follow the 1956-57 to 1966-67 trend. The projection of nonpublic high school graduates is based on the assumptions that (1) the ratio of nonpublic high school graduates to public high school graduates will approximate the ratio of nonpublic grade 9-12 enrollments to public grade 9-12 enrollments in each year; and (2) the 1956-57 to 1966-67 trend in this ratio will continue to 1976-77.

Girls make up slightly more than half of the graduates at the present time although the number of 18-year-old boys exceeds the number of 18-year-old girls. The number of boys graduating, however, has been increasing faster than the number of girls. The percentage increase between 1956-57 and 1966-67 was 91 for boys, and 79 for girls.

The number of graduates from nonpublic schools has been increasing more slowly than the number from public schools. The increase for nonpublic schools between 1956-57 and 1966-67 was 64 percent, for public schools, 88 percent. The increases in the 1966-67 to 1976-77 period are expected to be 20 percent for nonpublic schools and 34 percent for public schools.

Earned degrees by level and sex

Earned degrees for each sex at all levels—bachelor's and first-professional, master's and doctor's—have shown large increases in the last 10 years. The estimated increases were: Bachelor's degrees, over 60 percent; master's degrees and doctor's degrees, each over 100 percent. These growth rates are expected to be maintained at or near the same levels during the next 10 years.

The total number of bachelor's and first-professional degrees granted annually rose from 338,000 in 1956-57 to an estimated 570,000 in 1966-67, and is expected to be 961,000 in 1976-77. The proportion granted to women rose from 35 percent of the total granted in 1956-57 to an estimated 41 percent in 1966-67 and, on the basis of this trend, is expected to increase to 44 percent in 1976-77.

The number of master's degrees climbed from 62,000 in 1956-57 to an estimated 133,000 in 1966-67 and are expected to be 248,000 in 1976-77. The proportion of master's degrees granted to women was 32 percent in 1964-65 and is expected to remain at or slightly below this level during the next 12 years.

The annual output of doctor's degrees increased from 8,800 in 1956-57 to an estimated 18,800 in 1966-67 and is expected to be 38,700 in 1976-77. The proportion of doctor's degrees granted to women was 11 percent in 1964-65 and is expected to remain near this level during the next 12 years.

The projected degrees by level and sex are shown in table 18. Each level was projected separately for men and for women. The main assumption underlying these projections was that the relationships

between college-age population and the number of degrees granted at each of the three levels during the 1967-68 to 1976-77 period will continue the 1956-57 through 1964-65 trend. The trend, which is toward an increasing percentage of the college-age population completing undergraduate requirements and continuing on for advanced degrees, is reflected in the degree projections presented here.

Further details on the methodology may be found in appendix table B.

Earned degrees by level and field

The fields presented are divided into two main groups at each level. These groups are (a) natural sciences and related professions and (b) social sciences, humanities, and related professions. The fields included in both groups and the percentage distribution of degrees by level and field for the years 1956-57, 1966-67, and 1976-77 are shown in table 19.

The projected number of earned degrees by level and field are shown in tables 20, 21, and 22. These projections are based on the assumption that the percentage distribution of degrees by field for each level will continue the 1956-57 to 1964-65 trend. For example, if the proportion of total degrees granted in a particular field has been increasing, it is assumed that it will continue to increase. The proportions thus projected, which are summarized in table 19, were applied to the projected total number of degrees for the corresponding level shown in appendix table I. Separate projections were made for men and for women.

First-level degrees by field

In 1956-57, about one-fourth of all first-level degrees (bachelor's and first-professional degrees) were awarded in the fields of study constituting the natural sciences and related professions. The remaining three-fourths were awarded in the social sciences, humanities, and related professions. These proportions are expected to change little between 1956-57 and 1976-77.

The total number of first-level degrees granted in the natural sciences rose from 96,000 in 1956-57 to an estimated 145,000 in 1966-67 and is expected to be 242,000 in 1976-77. First-level degrees granted in the social sciences, humanities, and related professions rose from 244,000 in 1956-57 to an estimated 429,000 in 1966-67, and are expected to total 728,000 in 1976-77.

First-level degrees by the field of study in which they were awarded are shown in table 20. The three fastest growing fields of study at this level are mathematics and statistics, foreign languages, and psychology. The numbers of degrees in the field of agriculture and forestry are expected to decrease, while those in the health professions are expected to remain almost static.

Second-level degrees by field

The proportion of second-level degrees awarded in the natural sciences and related professions is expected to rise from one-fifth of all second-level degrees in 1956-57 to a projected one-third in 1976-77. Conversely, the proportion of these degrees awarded in the social sciences, humanities, and related professions is expected to drop from fourth-fifths in 1956-57 to two-thirds in 1976-77.

The total number of second-level degrees awarded in the natural sciences and related professions rose from 14,000 in 1956-57 to an estimated 38,000 in 1966-67 and is expected to be 85,000 by 1976-77. Second-level degrees in the group of fields composed of the social sciences, humanities, and related professions rose from 48,000 in 1956-57 to an estimated 95,000 in 1966-67 and are expected to rise to 163,000 by 1976-77.

Second-level degrees by the fields in which they were awarded are shown in table 21. The fastest growing fields at this level are science (general program), mathematics and statistics, and library science. Slightly less than half as many degrees are expected in 1976-77 in agriculture and forestry as were granted in 1956-57.

Master's degrees in education are expected to increase only 26 percent between 1966-67 and 1976-77. The number of degrees in education does not reflect the total number of persons preparing to teach, however. Prospective teachers earning degrees with majors in subject fields such as mathematics, sciences, English, and history are included with the appropriate subject fields rather than in education. The actual number of prospective teachers with majors in subject fields has shown large increases recently.

Doctor's degrees by field

Nearly one-half of all doctor's degrees awarded in 1956-57 were in the subject fields which make up the natural sciences and related professions. This proportion is expected to rise to 55 percent by 1976-77. The remaining doctor's degrees will be awarded in the group of subject fields included under the social sciences, humanities, and related professions.

The total number of doctor's degrees granted in the natural sciences and related professions rose from 4,100 in 1956-57 to an estimated 9,600 in 1966-67 and is expected to be 21,100 in 1976-77. Doctor's degrees granted in the social sciences, humanities, and related professions rose from 4,600 in 1956-57 to an estimated 9,200 in 1966-67 and are expected to be 17,600 by 1976-77.

Doctor's degrees by area of specialization are shown in table 22. The fastest growing subject fields were engineering, mathematics and statistics, and social work. The only field of study with no increase in doctor's degrees expected in 1976-77 over 1966-67 is the health professions.

¹ SOURCES: High school graduate data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education, publications: (1) "Statistics of Public Schools," fall 1964 through fall 1966; (2) "Statistics of State School Systems," biennially, 1955-56 through 1959-60; and (3) "Nonpublic School Enrollments in Grades 9-12, Fall 1964, and Graduates, 1963-64."

² Includes regular public and nonpublic schools, residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ More than 99 percent of public school graduates and 97 percent of nonpublic school graduates are graduates of regular day schools.

⁴ Preliminary.

⁵ Estimated.

⁶ The projection of public high school graduates is based on

the assumptions: (1) The number of boys graduating expressed as a percentage of the number of boys in the population 18 years of age, will follow the 1956-57 to 1966-67 trend; and (2) the number of girls graduating, expressed as a percentage of the number of girls in the population 18 years of age, will follow the 1956-57 to 1966-67 trend.

The projection of nonpublic high school graduates is based on the assumptions: (1) The number of nonpublic high school graduates will be the same percentage of public high school graduates as the nonpublic enrollment in grades 9-12 is of public enrollment in grades 9-12; and (2) the percentage of boys among nonpublic high school graduates (48.2 percent in 1963-64) will remain constant to 1976-77.

For further methodological details, see appendix table B.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: Degree data from U.S. Department of Health, Education, and Welfare, Office of Education publications on "Earned Degrees Conferred by Institutions of Higher Education" (1956-57 through 1963-64) and unpublished data for 1964-65.

² First-professional degrees include: (1) Bachelor's degrees requiring 5 or more years of work; (2) master's degrees in professional fields which have not been preceded by a professional degree in the same field; and (3) doctor's degrees in certain fields which have not been preceded by professional degrees in the same field, such as doctor of jurisprudence, doctor of medicine, doctor of dental surgery, and doctor of veterinary medicine. The number of first-professional degrees was reported for the academic year 1964-65 as 45,946 or about 8.5 percent of total bachelor's and first-professional degrees.

³ Master's degrees include: (1) Master's degrees preceded by the 4-year bachelor's degree; (2) 2d-professional degrees preceded by the 5-or-more year first-professional degree; and

(3) professional degrees beyond the second-professional degree but below the level of the doctorate, such as education specialist.

⁴ Doctor's degrees include: (1) The Ph.D. in any field; and (2) such degrees as doctor of education, doctor of juridical science, doctor of public health (preceded by professional degree in medicine or sanitary engineering).

⁵ Estimated.

⁶ The projection of earned degrees is based on the assumption that the percentage of degrees to population for each level and sex will continue the 1955-56 to 1964-65 trends. (Age of the population at the time of graduation for the first level was assumed to be 22 years; for the second level, 24 years; for the doctorate level, 27 years.)

For methodological details, see appendix table B.

NOTE.—Data include 50 States and the District of Columbia for all years. Data for the United States and outlying areas are shown in appendix table I. Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications on "Earned Degrees Conferred by Institutions of Higher Education" (1956-57 through 1963-64) and unpublished data for 1964-65.

² Includes mathematics, statistics, and computer systems.

³ Includes astronomy, chemistry, earth sciences, meteorology, physics, and other physical sciences.

⁴ Includes anatomy, bacteriology, biochemistry, biology, botany, entomology, physiology, zoology, and other biological sciences.

⁵ Includes dentistry, medicine and osteopathy, nursing, optometry, pharmacy, public health, veterinary medicine, and other health professions.

⁶ Estimated.

⁷ The projection of degrees by subject field is based on the assumption that the percentage distribution of degrees by field for each level and sex, in the United States and outlying areas (appendix table I), will continue the 1956-57 to 1964-65 trends.

For methodological details, see appendix table B; for complete classification of degrees by field, see appendix table J.

⁸ Includes architecture, music, speech and dramatic arts, and other fine and applied arts.

⁹ Includes philosophy, scholastic philosophy, religious education and Bible, and other religious fields.

¹⁰ Includes classical languages, French, German, Russian, other Slavic languages, and other languages and language programs.

¹¹ Includes anthropology, economics, geography, history, international relations, political science, public administration, sociology, and other social sciences.

¹² Includes business and commerce; home economics; law; military, naval, or Air Force science; theology; and miscellaneous and unclassified fields.

NOTE.—Data are for United States and outlying areas. Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications on "Earned Degree" Conferred by Institutions of Higher Education" (1959-57 through 1963-64) and unpublished data for 1964-65.

² Includes mathematics, statistics, and computer systems.

³ Includes astronomy, chemistry, earth sciences, meteorology, physics, and other physical sciences.

⁴ Includes anatomy, bacteriology, biochemistry, biology, botany, entomology, physiology, zoology, and other biological sciences.

⁵ Includes dentistry, medicine and osteopathy, nursing, optometry, pharmacy, public health, veterinary medicine, and other health professions.

⁶ Estimated.

⁷ Engineering degrees awarded in 1965-66 were received too late for inclusion in the tables. They were as follows:

Bachelor's	35,815
Master's	13,677
Doctor's	2,303

⁸ The projection of degrees by subject field is based on the assumption that the percentage distribution of degrees by field for each level and sex, in the United States and outlying areas (appendix table I), will continue the 1955-56 to 1964-65 trends.

For methodological details, see appendix table B; for complete classification of degrees by field, see appendix table J.

⁹ Includes architecture, music, speech and dramatic arts,

and other fine and applied arts.

¹⁰ Includes philosophy, scholastic philosophy, religious education and Bible, and other religious fields.

¹¹ Includes classical languages, French, German, Russian, other Slavic languages, and other languages and language programs.

¹² Includes anthropology, economics, geography, history, international relations, political science, public administration, sociology, and other social sciences.

¹³ Includes business and commerce; home economics; law; military, naval, or Air Force science; theology; and miscellaneous and unclassified fields.

NOTE.—Data are for United States and outlying areas. Because of rounding, detail may not add to totals.

Chapter III

Teachers

Alice R. Pool and Linda E. Gibson

Classroom teachers in regular elementary and secondary day schools

The number of classroom teachers in public and nonpublic elementary and secondary schools rose from 1,354,000 in fall 1956 to 2,019,000 in fall 1966, and is expected to be 2,292,000 by fall 1976. These numbers for 1966 and 1976 include the additions resulting from the Elementary and Secondary Education Act of 1965. This Act is expected to account for an increase in the number of teachers employed in the public schools of about 70,000 in 1967; 80,000 in 1968; and 90,000 each year from 1969 through 1976. Of the increased number, 37 percent are expected, on the basis of 1966 experience, to be elementary teachers and 63 percent to be secondary teachers.

Projected classroom teachers by control and level of school are shown in table 23. The projections of teachers employed in public schools shown in section A of the table include the additional number of teachers expected as the result of the operation of the Elementary and Secondary Education Act. The projections in section B are based on the assumption that, in the absence of the Act, the 1956-1964 trend of pupil-teacher ratios would have continued to 1976. These projections were made by dividing enrollments projected by control and level of school (table 3) by the corresponding projected pupil-teacher ratios in section B of table 24.

The number of classroom teachers in public and nonpublic secondary schools increased from 499,000 in 1956 to 857,000 in 1966 and is expected to be 1,104,000 in 1976. In the elementary schools, the number of classroom teachers increased from 854,000 in 1956 to 1,162,000 in 1966 and is expected to be 1,188,000 in 1976. The number of secondary school teachers is increasing at a faster rate than elementary school teachers because of a larger enrollment-rate increase and a lower pupil-teacher ratio in the secondary schools, and because of the shift of public seventh- and eighth-grade pupils from the elementary into the secondary schools. The number of secondary school teachers in 1966 was 72 percent greater than in 1956, while the increase in the number of elementary school teachers for the same period was 36 percent.

About 85 percent of the elementary and 90 percent of the secondary school teachers were in public schools in 1966 and these percentages are expected to continue through 1976. The number of public school teachers increased from 1,199,000 in 1956 to 1,788,000 in 1966 and is expected to be 2,018,000 in 1976. As previously stated, these numbers include 70,000 in 1967 and 90,000 in 1976 as the estimated additions resulting from the operation of the Elementary and Secondary Education Act. Nonpublic school teachers increased from 155,000 in 1956 to 231,000 in 1966 and are expected to be 274,000 in 1976.

Public and nonpublic school pupil-teacher ratios on which the teacher projections are based are shown in table 24. The public elementary school pupil-teacher ratio decreased from 29.6 in 1956 to 27.0 in 1966 and is expected to be 25.1 in 1976. Without the benefits of the Elementary and Secondary Education Act of 1965 the ratio projected on the basis of the 1956-1964 trend (section B) would have been 26.0 in 1976. The public secondary school pupil-teacher ratio increased slightly between 1956 and 1964 (from 21.2 to 21.4) but under the operation of the Elementary and Secondary Education Act is expected to drop to 20.2 by 1976.

Nonpublic school pupil-teacher ratios are higher than public in the elementary division and lower than public in the secondary division. The nonpublic elementary school pupil-teacher ratio decreased from 38.9 in 1956 to 33.1 in 1966, and based on this trend is expected to drop to 26.1 by 1976. The nonpublic secondary school pupil-teacher ratio increased from 16.5 in 1956 to 17.5 in 1966, and is expected to remain at approximately this level through 1976.

Demand for additional classroom teachers

The demand for public elementary and secondary school teachers not employed in the public schools in the previous year includes those needed to allow for increased enrollment, replacement of teachers with substandard credentials, and replacement of teachers leaving the profession (turnover). The demand for

additional public school teachers (including returnees to the profession) to take care of all of these needs was 961,000 in the fall 1962 through 1966 period; it would be expected to be 883,000 in 1967 through 1971, and 803,000 in 1972 through 1976 on the basis of trend alone. Allowance for the expected impact of the Elementary and Secondary Education Act of 1965, however, will increase these totals to 944,000 and 840,000, respectively. This means that 1.8 million new teachers or returnees to the profession will be employed by the public schools during the next 10 years, 1967 through 1976. The largest number is required for turnover, which will account for over 85 percent of this demand.

The projected demand for additional public school teachers is shown in table 25. The number of teachers necessary to take care of enrollment increases was computed for each year as the difference between the total employed for the current year and the total employed for the previous year. The number for turnover was based on the assumption that 8 percent of the total classroom teachers will leave the profession temporarily or permanently each year,¹ and the number for replacement of teachers with substandard certificates was based on the assumption that teachers with substandard certificates would be reduced 220 per year, the average for the 1962 through 1966 period. Projection A includes the increases in classroom teachers due to the Elementary and Secondary Education Act.

The future demand for additional nonpublic school teachers is expected to be smaller than in the past 5 years because enrollment increases are expected to be smaller. About 78,000 new nonpublic school teachers or returnees to the profession were employed during fall 1962 through fall 1966. This number is expected to be about the same in 1967 through 1971, and to drop to 68,000 in 1972 through 1976. Approximately 145,000 additional nonpublic school teachers will be employed during the next 10 years, 1967 through 1976. Turnover will account for 70 percent of this demand.

The projected demand for additional nonpublic elementary and secondary school teachers is shown in table 26. The number for taking care of enrollment increases was computed in the same manner as for public schools, and the number for turnover is based on the assumption that 4 percent (one-half the public school rate) of the nonpublic school teachers leave the profession permanently or temporarily each year. This lower rate (4 percent) was assumed because about one-half of all nonpublic school teachers belong to religious orders where the turnover is presumably small.

Instructional staff in elementary and secondary schools

The instructional staff in public elementary and secondary schools increased from 1.3 million in 1956 to 2.0 million in 1966. It is expected to be 2.2 million in 1976 based on the 1955-1964 trend, and 2.3 million under projection A, table 27. These figures include principals, supervisors, librarians, and guidance and psychological personnel, as well as classroom teachers. Instructional staff and classroom teachers are not reported separately for nonpublic schools. It is believed that the primary responsibility of most professional personnel employed by these schools is classroom teaching; therefore, the number of instructional staff in nonpublic schools shown here is the same as the number for nonpublic school teachers.

Projected instructional staff is shown in table 27. Section A includes the expected effects of the Elementary and Secondary Education Act of 1965. It is expected that the Act will produce an increase in instructional staff in regular public day schools over the number expected on the basis of trend alone (section B). This increase is expected to be about 80,000 in 1967; 90,000 in 1968; and 100,000 each year from 1969 through 1976.

The public school instructional staff projection in section B is based on the assumption that instructional staff as a percentage of classroom teachers will continue the 1955-1964 trend. The ratio of total public school instructional staff to classroom teachers increased from 107.5 in 1956 to 110.5 in 1966 and based on trend alone would be expected to be 113.7 by 1976. These ratios were applied to the public classroom teacher figures shown in table 23 to obtain the projections in section B. Nonpublic school instructional staff was assumed to be 100 percent of the classroom teachers shown in table 23.

Total instructional staff for resident degree-credit courses in institutions of higher education

The total instructional staff for resident degree-credit courses in institutions of higher education increased from 250,000 in 1956-57 to an estimated 461,000 in 1966-67, and is expected to be 662,000 in 1976-77. These figures include all full-time and part-time instructors and above, plus junior instructional staff employed for instruction in resident degree-credit courses. The junior instructional staff includes assistant instructors, teaching fellows, teaching assistants, and laboratory assistants.

Projected total instructional staff is shown in table 28. This projection is based on the assumption that total degree-credit enrollment (appendix table F) will increase to approximately 9 million by fall 1976 and that the student-staff ratio will continue to increase as it has in the past from 11.8 in 1956-57 to

¹ Frank Lindenfeld, U.S. Department of Health, Education, and Welfare, Office of Education. "Teacher Turnover in Public Elementary and Secondary Schools, 1959-60."

an estimated 13.0 in 1966-67, and to 14.3 by 1976-77. It is assumed that the percentage of total instructional staff employed as full-time instructor or above, as part-time instructor or above, and as junior instructional staff, will remain constant to 1976 at the 1963-64 levels of 57.1, 28.2, and 14.7, respectively.

Full-time equivalent instructional staff for resident degree-credit courses increased from 180,000 in 1956-57 to an estimated 328,000 in 1966-67 and is expected to rise to 471,000 in 1976-77. These figures include full-time staff and the full-time equivalent of part-time instructors or above, plus the full-time equivalent of junior instructional staff. In 1963-64, about 80 percent of the full-time equivalent instructional staff members were employed on a full-time basis with the rank of instructor or above.

Projected full-time equivalent instructional staff for resident degree-credit courses is shown in table 29. This projection is based on the assumption that the full-time equivalent of part-time staff employed as instructors or above will remain at the 1963-64 level of 33 percent, and that this same percent will apply to total junior instructional staff for which the full-time equivalent is not reported. Projected part-time instructor or above and projected junior instructional staff (table 28) were multiplied by this percentage to obtain the projected full-time equivalents shown in table 29.

Total professional staff in institutions of higher education

Total full-time and part-time professional staff in institutions of higher education includes, in addition to staff for instruction in resident degree-credit courses, full-time and part-time instructional staff employed for extension courses, resident nondegree-credit courses, and instruction by mail, radio, or television. It also includes full-time and part-time professional staff employed for administration and services, and for organized research. Full-time and part-time professional staff in institutions of higher education rose from 365,000 in 1956-57 to an estimated 701,000 in 1966-67, and is expected to be 1,006,000 in 1976-77.

Projected full-time and part-time professional staff is shown in table 30. It is based on the assumption that full-time and part-time professional staff other than that for instruction in resident degree-credit courses, as a percentage of total full-time and part-time instructional staff for resident degree-credit courses, will maintain to 1976-77 the same relationship that existed in 1963-64. These percentages were 17.3 for other instructional staff, 16.4 for administration and services, and 18.2 for organized research.

The estimated and projected full-time equivalent of total full-time and part-time professional staff is shown in table 31. The method of estimating and projecting full-time equivalent instructional staff for resident degree-credit courses is given in the footnotes to table 29. The 1963-64 ratio of full-time equivalent instructional staff to total full-time and part-time instructional staff for resident degree-credit courses was 0.71. The totals for full-time and part-time staff employed for instruction in courses other than resident degree-credit courses and for administration and services, shown in table 30, were multiplied by the above ratio to obtain the full-time equivalents for this staff given in table 31.

The estimation through 1966-67 of full-time equivalent of total full-time and part-time staff for administration and services was also based on this ratio. The projection from 1967-68 to 1976-77 of full-time equivalent staff for organized research was based on the average increase per year in this staff from 1960-61 to 1966-67. The average annual increase of 5,000 was held constant to 1976-77.

Demand for instructional staff in institutions of higher education

The demand for additional full-time equivalent instructional staff in institutions of higher education is expected to continue to increase during the next 10 years, 1967-68 through 1976-77. During the past 5 years, 1962-63 through 1966-67, the demand for additional full-time equivalent instructional staff was 213,000. It is expected to be 211,000 in 1967-68 through 1971-72 and 234,000 in 1972-73 through 1976-77. These figures include the number needed for both increased enrollment and replacement of staff leaving the profession temporarily or permanently each year. The instructional staff includes those employed for extension courses, resident nondegree-credit courses, and instruction by mail, radio, or television, as well as the instructional staff for resident degree-credit courses.

The projected demand for additional full-time equivalent instructional staff is shown in the last three columns of table 32. It is based on the estimated and projected full-time equivalent instructional staff, and is projected as the total of staff required for increased enrollment and for replacement of those who have left the profession either temporarily or permanently. Full-time equivalent staff required for increased enrollment is computed as the difference between the total number employed in successive years. The requirements for replacement are estimated at 6 percent of the total number employed in the previous year.

It should be noted that one of the basic assumptions underlying the demand for instructional staff shown here is that the student-staff ratios will continue to increase until 1976-77. Any reversal of this trend will result in larger demands for instructional staff than those presented here.

The assumption of a 6-percent replacement rate is based on unpublished data from a 1963 Office of Education study which showed that about 5 percent of the full-time instructors and above in 4-year

institutions intended to leave employment in institutions of higher education during the following year. If we estimate an additional 1 percent for mortality, the annual replacement rate is then 6 percent. If the requirement for replacement should be lower or higher than the assumed 6 percent per year, the demand for replacement of instructional staff would be altered somewhat.

Demand for professional staff in institutions of higher education

The professional staff in institutions of higher education includes in addition to instructional staff, staff employed for general administration and services and staff employed for organized research, as shown in tables 30 and 31. The demand for additional full-time equivalent professional staff is expected to continue to increase during the next 10 years, 1967-68 through 1976-77. During the past 5 years, 1962-63 through 1966-67, the demand for additional full-time equivalent professional staff was 283,000. It is expected to be 287,000 in 1967-68 through 1971-72 and 322,000 in 1972-73 through 1976-77. These figures include the number needed for both increased enrollment and replacement of staff leaving the profession.

¹ SOURCES: Classroom teacher data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of Public Schools," fall 1964 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," fall 1956 through 1963; (3) "Statistics of State School Systems," 1961-62 and 1963-64; (4) "Statistics of Nonpublic Elementary Schools, 1961-62"; and (5) "Statistics of Nonpublic Secondary Schools, 1960-61."

² Includes full-time and part-time classroom teachers (in 1966, 98 percent of teachers in the public schools were full time). Does not include teachers in residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ Instructional staff and classroom teachers are not reported separately. Some data are estimated.

⁴ Preliminary data that include the effect of the Elementary and Secondary Education Act of 1965.

⁵ The projection of classroom teachers in public schools, including the effect of the Elementary and Secondary Education Act of 1965, assumes an additional increase in classroom teachers over the number projected under the

trend assumptions. This increase is based on the amount of funds made available by provisions of the Act. Sixty-three percent of the added teachers are assumed to be in secondary schools, based on the experience of 1966. The total number of teachers added in public schools are as follows: Fall 1967, 70,000; 1968, 80,000; 1969 through 1976, 90,000 per year.

The projection of classroom teachers in nonpublic schools is based on the assumption that the projected pupil-teacher ratios will follow the 1955-61 trend to 1976.

⁶ Estimated, using the 1956-64 trend.

⁷ The projection of classroom teachers in public schools, excluding the effect of the Elementary and Secondary Education Act of 1965, is based on the assumption that the projected pupil-teacher ratios will follow the 1956-64 trend to 1976.

The projection of classroom teachers in nonpublic schools is assumed to be unaffected by the Elementary and Secondary Education Act of 1965.

For further methodological details, see appendix table C.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: Classroom teacher data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of Public Schools," fall 1961 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," fall 1956 through 1963; (3) "Statistics of State School Systems, 1961-62"; (4) "Statistics of Nonpublic Elementary Schools, 1961-62"; and (5) "Statistics of Nonpublic Elementary Schools, 1961-62"; and (5) "Statistics of Nonpublic Secondary Schools, 1960-61."

² Includes full-time and part-time classroom teachers (in 1966, 98 percent of teachers in the public schools were full time). Does not include teachers in residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ Instructional staff and classroom teachers are not reported separately. Some data are estimated.

⁴ Preliminary data that include the effect of the Elementary and Secondary Education Act of 1965.

⁵ The projection of pupil-teacher ratios in the public elementary schools, including the effect of the Elementary and Secondary Education Act of 1965, is based on the ratio of elementary enrollment to the increased number of teachers expected to be hired each year 1967 to 1976 due to the effect of the Education Act.

The projection of pupil-teacher ratios in the public secondary schools, including the effect of the Education Act, is based

on the ratio of secondary enrollment to the increased number of teachers expected to be hired in each year 1967 to 1976 due to the effect of the Education Act.

The projection of pupil-teacher ratios in the nonpublic elementary schools is based on the assumption that the projected pupil-teacher ratios will follow the 1955-61 trend to 1976.

The projection of pupil-teacher ratios in the nonpublic secondary schools is based on the assumption that the 1961 pupil-teacher ratio will remain constant to 1976.

⁶ Estimated, using the 1956-64 trend.

⁷ The projection of pupil-teacher ratios in the public elementary schools, excluding the effect of the Elementary and Secondary Education Act of 1965, is based on the assumption that the projected pupil-teacher ratios will follow the 1956-64 trend to 1976.

The projection of pupil-teacher ratios in the public secondary schools, excluding the effect of the Elementary and Secondary Education Act of 1965, is based on the assumption that the 1964 pupil-teacher ratio will remain constant to 1976.

It is assumed that the projection of pupil-teacher ratios in the nonpublic elementary and secondary schools will be unaffected by the Education Act.

For further methodological details, see appendix table C.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of Public Schools," fall 1964 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," 1956 through 1963.

² Includes full-time and part-time classroom teachers (in 1966, 99 percent of teachers in the public schools were full-time). Does not include teachers in residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ Teachers with substandard credentials are those teachers who are not fully certificated as determined by the individual States. Teachers with substandard credentials were reported in the 1961-66 period as follows: 1961, 91,643; 1962, 82,655; 1963, 83,200; 1964, 82,700; 1965, 84,127; 1966, 90,500.

⁴ Preliminary data that include the effect of the Elementary and Secondary Education Act of 1965.

⁵ The projection, including the effect of the Elementary and Secondary Education Act of 1965, assumes an additional increase in classroom teachers over the number projected under the 1956-64 trend assumptions. This increase is based on the amount of funds made available by the provisions of the Act. Sixty-three percent of the added teachers are assumed to be in secondary schools, based on the experience of 1966. The total number of teachers expected to be added in public

schools are as follows: Fall 1967, 70,000; 1968, 80,000; 1969 through 1976, 90,000 per year.

⁶ Estimated, using the 1956-64 trend.

⁷ The projection, excluding the effect of the Elementary and Secondary Education Act of 1965, of demand for teachers in addition to those retained from the previous year was based on the following assumptions: (1) For enrollment increase, the number of additional teachers needed will be the difference between the projected number that must be employed in a given year to maintain the 1956-64 trend in the pupil-teacher ratio and the similarly projected number in the previous year; (2) for replacement of substandard teachers, the number of additional teachers needed is the average annual number replaced in the 1962-66 period (220); and (3) for teacher turnover, the number of additional teachers needed to replace those leaving the profession either temporarily or permanently will be 8 percent of the total employed in the previous year. The 8 percent separation rate is based on the Office of Education study "Teacher Turnover in Public Elementary and Secondary Schools, 1959-60."

For further methodological details, see appendix table C.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems, 1961-62"; and (2) "Statistics of Nonpublic Secondary Schools, 1960-61," and (3) "Statistics of Nonpublic Elementary Schools, 1961-62."

² The projection of demand for teachers not employed in the nonpublic schools in the previous year was based on the following assumptions: (1) For enrollment increase, the number of additional teachers needed will be the difference between the projected number that must be employed in a

given year to maintain the 1955-61 level in the pupil-teacher ratio and the similarly projected number in the previous year; and (2) for teacher turnover, the number of additional teachers needed to replace those leaving the nonpublic schools either temporarily or permanently is assumed to be 4 percent of the total employed in the previous year.

For further methodological details, see appendix table C.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: Instructional staff data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems," biennial circulars 1957-58 through 1963-64; (2) "Statistics of State School Systems, 1955-56" in "Biennial Survey of Education, 1954-56," ch. 2; (3) "Statistics of Nonpublic Elementary Schools, 1961-62"; and (4) "Statistics of Nonpublic Secondary Schools, 1960-61."

² Instructional staff includes principals, supervisors, librarians, and guidance and psychological personnel, as well as full-time and part-time classroom teachers. (In 1966, 99 percent of classroom teachers were full-time.) Does not include instructional staff in residential schools for exceptional children, subcollegiate departments of higher education, Federal schools for Indians, and schools on Federal installations.

³ Instructional staff and classroom teachers are not reported separately. Some data are estimated.

⁴ Estimated, using the 1956-64 trend.

⁵ Preliminary data that include the effect of the Elementary and Secondary Education Act of 1965.

⁶ The projection of instructional staff in public schools, including the effect of the Elementary and Secondary Education Act of 1965, assumes an additional increase of approximately 80,000 in fall 1967; 90,000 in 1968; and 100,000 each year, 1969 through 1976.

⁷ The projection of instructional staff in regular public schools, excluding the effect of the Elementary and Secondary Education Act of 1965, is based on the assumption that the ratio of instructional staff to classroom teachers will follow the 1956-64 trend. The projection of instructional staff in nonpublic schools is the same as for classroom teachers (table 23).

For further methodological details, see appendix table C.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Faculty in Institutions of Higher Education, November 1955"; and (2) "Faculty and Other Professional Staff in Institutions of Higher Education," biennially, first term, 1957-58 through first term, 1963-64.

² Excludes professional staff for instruction at the elementary and secondary school level.

³ Includes faculty with rank of instructor or above and junior instructional staff.

⁴ Includes instructional staff for extension, resident nondegree-credit courses, and instruction by mail, radio or TV, short courses, and individual lessons.

⁵ Includes professional staff for general administration, student personnel services, and libraries.

⁶ Includes only professional staff engaged specifically for full-time or part-time research and those who have been relieved from some or all other duties in order to perform

systematic organized research. Excludes graduate students not performing research at a professional level and research consultants employed occasionally.

⁷ Interpolated.

⁸ Estimated.

⁹ The projection of total full-time and part-time instructional staff for resident degree-credit courses is detailed in table 28, footnote 4.

The projection of total full-time and part-time other instructional staff, professional staff for administration and services, and professional staff for organized research is based on the percent each was of total full-time and part-time instructional staff for resident degree-credit courses in 1963-64. These percentages were 17.3, 16.4, and 18.2 percent, respectively, and are assumed to remain at the 1963-64 level to 1976-77.

For further methodological details see appendix table C.

NOTE.— Because of rounding, detail may not add to totals.

¹ SOURCES: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Faculty in Institutions of Higher Education, November 1955"; and (2) "Faculty and Other Professional Staff in Institutions of Higher Education," biennially, first term, 1957-58 through first term, 1963-64.

² For the categories of professional staff members included in this table, see footnotes 2 through 6, table 30.

³ The estimation, from 1956-57 through 1966-67, of full-time equivalents of reported total full-time and part-time professional staff for other instructional courses, for administration and services, and for organized research is based on the following assumption: The percentage that full-time-equivalent instructional staff for resident degree-credit courses is of total full-time and part-time instructional staff for these courses (71 percent in 1963-64) will apply to all other professional staffs as well. The totals for the full-time and part-time professional staffs shown in table 30 were multiplied by this percentage.

⁴ Interpolated.

⁵ Estimated.

⁶ The projection of full-time equivalent of total full-time and part-time other instructional staff and of professional staff for administration and services is based on the following assumptions: (1) the percentage that full-time-equivalent instructional staff for resident degree-credit courses is of total full-time and part-time instructional staff for these courses (71 percent in 1963-64) will continue to apply to full-time and part-time other professional staff and to professional staff for administration and services; and (2) this percent will remain constant through 1966-67.

The projection of full-time equivalent of total full-time and part-time professional staff for organized research is based on the assumption that the average increase of 5,000 full-time equivalents per year during the past 5 years will continue to 1976-77.

For further methodological details, see appendix table C.

NOTE.—Because of rounding, detail may not add to totals.

Chapter IV

Expenditures of Educational Institutions

Kenneth A. Simon and C. George Lind

Explanations and definitions

All the main tables shown here include only expenditures of regular public and nonpublic elementary and secondary schools and institutions of higher education in the 50 States and the District of Columbia. This means that "other" and "special" institutions are not included.

"Other" institutions include other elementary and secondary schools, such as residential schools for exceptional children (public and nonpublic), Federal schools for Indians (public), and federally operated elementary and secondary schools on posts (public). In 1966-67, it is estimated that expenditures of "other" schools were about \$200 million for public and \$100 million for nonpublic schools in this category. Almost all "other" schools, including the nonpublic, are nonprofitmaking institutions.

"Special" institutions include schools such as trade schools or business colleges not in the regular school or college framework. Expenditure data are not available for "special" schools, but it would seem that they might spend approximately \$700 million per year. This supposition is based on the fact that the U.S. Bureau of the Census estimated that 1.3 million persons, aged 5 to 34 years, were enrolled in "special" schools in October 1965.¹ If we assume an average expenditure per student of about \$540, their total expenditures would be about \$700 million. Almost all "special" schools are nonpublic profitmaking institutions.

Regular institutions include public and most nonprofitmaking nonpublic elementary and secondary schools (kindergarten through grade 12) plus the institutions of higher education offering degree-credit courses and a small number of technical and professional schools. Most of these schools and colleges are oriented toward regular academic programs, but some of them are primarily technical training institutions or offer both academic and vocational courses. As we said earlier, all the main tables and discussions here are for the regular institutions. However, we do include "other" schools in our discussion and text table on expenditures by source of funds.

Total expenditures include all funds expended for capital outlay, current expenditures, and interest. They exclude repayment of debt and transfers of funds that would result in duplication.

Capital outlay includes expenditures which result in additions to fixed assets. This includes the expenditures by public school building authorities but excludes lease or rental payments made to these agencies. Borrowed money is included; a large percentage of the funds expended for capital outlay was received from loans. In 1961-62, it was estimated that 38 percent of the capital outlay for public elementary and secondary schools was for land and buildings and the remaining 12 percent for new school buses and other equipment. The percentage for equipment could be higher than 12 percent in 1966-67 because a substantial amount of the funds available from the Elementary and Secondary Education Act of 1965 was spent for equipment. About 82 percent of the capital outlay by institutions of higher education was for lands and buildings, and the remaining 18 percent was for equipment.

Current expenditures include any expenditures except those for repayment of debt and capital outlay. Interest is generally excluded from the current expenditures shown here because it is treated separately. The largest current expense item is salaries of instructional staff. About 60 percent of current expenditures by public elementary and secondary schools is for this purpose. The remaining 40 percent goes for transportation, maintenance, etc.

Interest includes all funds expended for the use of money. Most of the interest shown here was expended on account of long-term debt that was incurred for constructing buildings.

Expenditures by regular and "other" schools by source of funds

Although we have not attempted to project the source of funds expended by educational institutions,

¹ U.S. Department of Commerce, Bureau of the Census, "Current Population Reports, School Enrollment: October 1965." Series P-20, No. 162, March 24, 1967.

we can show estimates of how they identified sources of funds they expended during the past 11 years. In order to do this, estimates for "other" schools were added to the total expenditures shown in table 34 for the appropriate years. The resulting total expenditures for regular and "other" schools were then broken down by source of funds by first adjusting receipts to equate them with expenditures, and then assuming a continuation of the 1955-56 to 1963-64 trend in the amount of receipts from each source. In the case of elementary and secondary schools, the trend was modified by adding \$1 billion to the trend figure for 1965-66, 1966-67, and 1967-68, because of the Elementary and Secondary Education Act of 1965. Equating receipts to expenditures was accomplished mainly by including loans and excluding the receipts used for repayment of loans.

¹ In addition to regular schools (shown in table 34) these figures include "other" elementary and secondary schools such as residential schools for exceptional children, Federal schools for Indians, and federally operated elementary and secondary schools on posts. The annual expenditures of "other" elementary and secondary schools were estimated as follows:

Years	Public Million	Nonpublic
1955-56 to 1959-60	\$100	Less than \$50 million.
1960-61 to 1962-63	200	Less than \$50 million.
1963-64 to 1967-68	200	\$100 million.

² Less than \$50 million.
³ Less than 0.05 percent.

Data for the table above were based on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems," 1955-56, 1957-58, 1959-60, 1961-62, and 1963-64; (2) "Statistics of Public Schools," fall 1964, 1965, and 1966; (3) "Financial Statistics of Higher Education," 1955-56, 1957-58, 1959-60, 1961-62 and 1963-64 surveys; (4) "Digest of Educational Statistics," 1966; and unpublished data in the U.S. Office of Education.

Total expenditures were defined as the expenditure of all money from both loans and grants and exclude only the funds used for reducing debt and transfers that result in duplication. Expenditures from Federal, State, and local sources are defined as institutional expenditures of all grants (but not loans) of funds received from those sources. Expenditures from all other sources include all funds received by the institutions that were not received as a grant from Federal, State, and local governments. Loans to institutions of higher education from any source are included in under "all other." (It is estimated that in 1966-67 more than \$500 million in Federal loans to institutions of higher education was included in the

all other category shown here.) There is virtually no income from the "all other" source for public elementary and secondary schools although nonrevenue receipts include loans. These loans are made by the local governments for the schools, and consequently the source of funds is the local government.

Since the foregoing definitions are designed to show sources of funds through the eyes of educational institutions, the Federal figures shown in the preceding table are different from the ones shown in the appendix expenditure table on Federal funds for education. The three main reasons are as follows:

(1) Different items are included. For example, the table on Federal funds shows grants and loans to individuals, which would appear in institutional accounts as a receipt from tuition or auxiliary services; or it may be spent for board and room outside the institution and not be a receipt of the institution from any source.

(2) The same items may be handled differently. For example, the table on Federal funds shows only basic research for institutions of higher education, while the institutions include some applied research grants from the Federal Government.

(3) The table on Federal funds generally shows obligated funds, while the institutional figures show expenditures.

Total expenditures by regular institutions

Total annual expenditures of regular educational institutions (in 1966-67 dollars) increased from \$23.3 billion in 1956-57 to \$48.5 billion in 1966-67, and are expected to be \$70.2 billion in 1976-77. The expenditure increases are due chiefly to increases in enrollment at all levels of education, especially in high schools and colleges, and the increasing costs of the many items, such as school facilities and teachers' salaries, that are necessary for providing education. The projected total expenditures are shown in table 34. They are based mainly on the assumptions that the 1956-57 to 1966-67 trend will continue through 1976-77, and that some additional amounts (above trend) will be expended because of the effects of the Elementary and Secondary Education Act of 1965. The actual amounts assumed to be due to the act are shown in table 36.

Current expenditures for regular public elementary and secondary schools

Annual current expenditures for public elementary and secondary schools (in 1966-67 dollars) increased from \$11.1 billion in 1956-57 to \$23.4 billion in 1966-67, an increase of 111 percent. They are expected to increase 37 percent to \$32.0 billion by 1976-77. These projections include the increased expenditures expected because of the Elementary and Secondary Education Act of 1965.

Increased enrollment together with increased costs per pupil have accounted for the increase in current expenditures. Expenditures have been increasing and are expected to continue to increase for practically all of the major items included in current expense, such as administration, instruction, operation and maintenance of plant, fixed charges, and other school services and programs. Annual current expenditures per pupil (in 1966-67 dollars) increased from \$374 in 1956-57 to \$569 in 1966-67, and are expected to increase to \$733 by 1976-77. The last two figures include the effects of the Elementary and Secondary Education Act of 1965.

Projected current expenditures for public elementary and secondary day schools are shown in table 36. They were projected as follows:

(1) Current expenditures per pupil in average daily attendance (ADA) for the base years' 1955-56 to 1965-66, were converted to 1966-67 dollars on the basis of the Consumer Price Index prepared by the Bureau of Labor Statistics, U.S. Department of Labor. Monthly index numbers were averaged on a July-June basis to correspond to the school years.

(2) The current expenditures per pupil excluding the effects of the Elementary and Secondary Education Act for the years 1955-56 to 1964-65 were used in deriving a formula (by least squares) for projecting trend figures for 1965-66 to 1976-77. This formula was $y' = \$341 + \$17t$ (t = time in years, $t = 1$ in 1955-56).

(3) Average daily attendance was projected for 1967-68 to 1976-77 by assuming that the ratio of average daily attendance to fall enrollment in kindergarten through grade 12 will remain constant at the 1966-67 level of 92.7 percent.

(4) Total current expenditures (excluding effects of the Elementary and Secondary Education Act, 1965) allocated to public elementary and secondary school pupil costs (1966-67 dollars) were projected for 1965-66 to 1976-77 by multiplying the current expenditures per pupil, as projected in step (2), by the corresponding average daily attendance projected in step (3). These figures exclude expenditures for summer schools, adult education, and community colleges operated by school districts.

(5) Total current expenditures (excluding effects of the Elementary and Secondary Education Act, 1965) for all programs operated by school districts, including summer schools, adult education, and community colleges were projected for 1967-68 to 1976-77 by assuming that the ratio of current expenditures for all programs to current expenditures allocated for public elementary and secondary school pupil costs will remain constant at the 1966-67 ratio of 103 percent.

(6) Current expenditures per pupil (including the Elementary and Secondary Education Act, 1965) allocated to public elementary and secondary pupil costs were projected by adding \$25 to the figures projected in step (2). (In 1966-67, the current expenditure per pupil reported by State departments of education was \$33 higher than the trend figure for 1966-67 derived in step (2)).

(7) Total current expenditures allocated to pupil costs (including the effects of the Elementary and Secondary Education Act of 1965) were projected by multiplying the current expenditures per pupil, as projected in step (6), by the corresponding average daily attendance projected in step (3).

(8) Total current expenditures for all programs operated by school districts (including the effects of the Elementary and Secondary Education Act) were projected by multiplying the figures in step (7) by 103 percent.

Expenditures for salaries of instructional staff in regular public schools

A large part of current expenditures for public elementary and secondary schools is for salaries of instructional staff (62 percent in 1966-67). Total expenditures for salaries of instructional staff (in 1966-67 dollars) increased from \$6.8 billion in 1956-57 to \$14.0 billion in 1966-67, and are expected to be \$21.3 billion in 1976-77. These increases are due to larger numbers of instructional staff and to higher average annual salaries. The amounts for 1966-67 to 1976-77 also reflect the larger number of instructional staff expected on account of the Elementary and Secondary Education Act of 1965.

The average annual salary of instructional staff (in 1966-67 dollars) increased from \$5,269 in 1956-57 to \$7,100 in 1966-67, and is expected to be \$9,000 in 1976-77. During the past 10 years, the average annual salary has been increasing about \$183 per year in 1966-67 dollars. The projected figure for 1976-77 (\$9,000) is based on the assumption that the 1955-56 to 1964-65 trend will continue to 1976-77.

Projected total and average annual salaries of instructional staff in public elementary and secondary schools are shown in table 37. The procedure was as follows:

(1) The average annual salary (y) was projected as a continuation of the 1955-56 to 1964-65 trend: $y' = \$4,878 + \$189t$ (t = time in years, $t = 1$ in 1955-56).

(2) Total expenditures for salaries of instructional staff were then computed as the product of the average annual salary and the total number of instructional staff. (The total number of instructional staff was taken from table 27.)

Classroom construction and capital outlay by regular public elementary and secondary schools

Capital outlay (in 1966-67 dollars) by public elementary and secondary schools, including the expenditures of State and local school building authorities, was \$17.8 billion for the 5-year period 1957-58 to 1961-62, and \$18.4 billion for the following 5-year period, 1962-63 to 1966-67. It is expected to be \$19.0 billion for 1967-68 to 1971-72 and a similar amount for 1972-73 to 1976-77.

Projected expenditures for capital outlay together with projections of classroom construction are shown in tables 38 and 39. They are not projections of need but are simply projections of the classroom construction and capital outlay expected in the light of the 1957-58 to 1966-67 trend.

Procedure

The procedure was as follows:

(1) The total number of rooms completed was projected on the basis of the 1957-58 to 1966-67 trend $y' = 69,897 + 68t$ (t = time in years, $t = 1$ in 1957-58). The basic data and projections are shown in table 38.

(2) The number of classrooms that would be completed on account of enrollment was assumed to be equal to the enrollment increases over each 5-year period divided by the median

pupil-room ratios for 1964-65. These ratios were 27.4 for elementary and 27.5 for secondary schools.

(3) The number of classrooms that could be completed on account of current replacements (abandonments), migration, consolidation of school districts, and reduction of crowded and unsatisfactory rooms was derived by subtracting the number completed on account of enrollment increases from the total number completed. (The number of rooms abandoned was 88,000 in the 5-year period 1957-58 to 1961-62, and 86,000 in the 5-year period 1962-63 to 1966-67).

(4) Capital outlay was projected by multiplying the number of rooms completed by the average capital outlay per room in the 1965-66 to 1966-67 period. This figure was \$54,000 per room in 1966-67 dollars. The basic data and projections are shown in tables 38 and 39.

It should be noted that not all the capital outlay shown here represents construction. It was estimated that, in 1961-62, 2 percent of capital outlay was for transportation equipment, 10 percent for other equipment, and the remaining 88 percent was for land and buildings.

Data sources

Data include 50 States and the District of Columbia for all years. Data are based mainly on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education, "Statistics of State School Systems," 1955-56, 1957-58, 1959-60, 1961-62, and 1963-64; "Enrollment, Teachers, and Schoolhousing," fall 1955 to fall 1963; "Statistics of Public Schools," fall 1964 to 1966; and "Bond Sales for Public School Purposes," 1960-61 to 1965-66.

Reason for construction

Table 39 shows that we may expect a sharp decrease in the number of rooms to be completed on account of enrollment increases and a sharp increase in the number completed for other reasons. Other reasons include (1) replacements (abandonments), (2) migration factors (including school district reorganization), and (3) reduction of crowded and unsatisfactory rooms. Data limitations do not permit an exact analysis of these three factors, but we can gain some insight into the way they might operate if we examine data for the past 5 years (1962-63 to 1966-67). During this period, a total of 347,000 rooms were completed and 86,000 were abandoned.

If we assume that the 86,000 abandoned rooms were all replaced, and that 164,000 of the completed rooms were used for taking care of enrollment increases, it would leave 97,000 rooms that could have been used for taking care of migration and the reduction of crowded and unsatisfactory rooms ($347,000 - 86,000 - 164,000 = 97,000$). Since we have some indications that the number of crowded and unsatisfactory rooms did not change substantially during the 5-year period, we might assume that almost all these 97,000 rooms were used to take care of migration factors, and therefore, that about 183,000 rooms were completed on account of abandonments and migration together ($86,000 + 97,000 = 183,000$). If we apply this 183,000 for migration and replacement to our projections, the number of rooms completed for reducing crowded and unsatisfactory classrooms could be approximately 107,000 in 1967-68 to 1971-72 and 172,000 in 1972-73 to 1976-77. That is, in 1967-68 to 1971-72 the total classrooms completed (355,000) minus the number for enrollment increases (65,000) minus the number for migration and abandonments (183,000) equals the number for reducing crowded and unsatisfactory rooms (107,000); and comparable figures for 1972-73 to 1976-77 would be $355,000 - 183,000 = 172,000$ (enrollment increases are expected to be negligible) that could be applied to reduction of crowded and unsatisfactory rooms.

Figures derived in this way are not intended for use as firm estimates of reasons for construction because they are, in a sense, partly hypothetical. That is, they show numbers of rooms completed that could have been (but may not have been) completed for various reasons. Nevertheless, they throw some light on the probable reasons for past and future construction.

Crowded and unsatisfactory rooms

Indications that the number of crowded and unsatisfactory rooms was not reduced during the 1962-66 period are shown in Office of Education studies on school facilities for 1962 and 1964-65.² The following information was selected from those two studies:

² George J. Collins, U.S. Department of Health, Education, and Welfare, Office of Education "National Inventory of School Facilities and Personnel, Spring 1962." George J. Collins and William L. Stormer, "Condition of Public School Plants, 1964-65."

Item	1962	1964-65
Number of additional public school classrooms needed:		
To eliminate off-site.....	6,000	14,000
To eliminate nonpermanent.....	31,000	31,000
To eliminate improvised or makeshift.....	28,000	31,000
To eliminate rooms in buildings with 3 or more defects.....	(Not available)	158,000
To achieve a pupil-room ratio for all students of:		
27.6 elementary and 26.3 secondary pupils.....	117,000	-----
27.4 elementary and 27.5 secondary pupils.....	-----	98,000
25 elementary and 20 secondary pupils.....	272,000	285,000
U.S. median pupil-room ratio:		
Elementary schools.....	27.6	27.4
Secondary schools.....	26.3	27.5

In view of the figures above, it seems reasonable to assume that there was very little change in the number of crowded and unsatisfactory rooms in the 1962-63 to 1966-67 period and that the rooms (97,000) completed in excess of those that could have been used for taking care of enrollment increases and current replacement (abandonments) were used primarily to take care of migration factors.

In 1964-65 the number of additional rooms needed to eliminate the use of off-site, nonpermanent, and improvised or makeshift rooms was 76,000 and the number for replacing rooms in buildings with 3 or more defects was 158,000. An additional 98,000 rooms were needed to permit all public school pupils to be in rooms with no more than 27 pupils. If they were to be accommodated in rooms with no more than 25 elementary or 20 secondary pupils, the additional number needed was 285,000. These figures are not intended to show the total additional rooms needed but are presented simply to show that the approximately 263,000 rooms which we assumed could be completed for reducing crowded and unsatisfactory rooms in the next 10 years fall far short of the number which could be built for this purpose.

Expenditures for interest by regular public elementary and secondary schools

Annual expenditures (in 1966-67 dollars) for interest by public elementary and secondary schools increased from \$333 million in 1956-57 to over \$949 million in 1966-67 and are expected to be almost \$1.5 billion in 1976-77. Projected interest is shown in table 40. The projections are based on the assumption that the 1956-57 to 1966-67 upward trend will continue through 1976-77. In spite of the fact that capital outlay is expected to level off in the next decade, this assumption seems reasonable because interest payments continue 20 years or more after construction, resulting in debt being incurred at a greater rate than it is being eliminated. The trend formula for projecting interest (y) in 1966-67 dollars was as follows: $y' = \$293 + \$57t$ (t = time in years, $t = 1$ in 1956-57).

Expenditures for regular nonpublic elementary and secondary schools

Expenditure data for nonpublic elementary and secondary schools comparable to those for public schools are nonexistent. The main reason is that it is extremely difficult to arrive at a universally accepted method for determining the value of donated services for nonpublic schools, even if data on actual expenditures were collected. These donated services make up a substantial part of nonpublic school resources, especially in the elementary and secondary schools operated by religious orders. In fall 1962, over one-half of the 200,000 nonpublic school teachers belonged to religious orders of the Roman Catholic Church. Also it might be argued that many of the remaining nonpublic school teachers, whose salaries generally run lower than those in public schools, really donated part of their services.

Although it is difficult to arrive at national estimates of nonpublic school expenditures that everyone will accept, the substantial contribution of nonpublic elementary and secondary schools cannot be ignored when we consider total expenditures for education. Therefore, illustrative estimates of nonpublic elementary and secondary school expenditures were developed rather arbitrarily and are shown in table 34. They are based on the assumption that the cost per teacher (including donated facilities and services) in nonpublic schools is the same as in public schools. The formula was as follows: $y = xp$ (x = ratio of nonpublic to public school teachers, and p = public school expenditures). The ratio of nonpublic to public school teachers was slightly over 13 percent during the 1956 to 1966 decade and is expected to

remain the same during the 1967 to 1977 decade. The numbers upon which these ratios were computed are shown in table 27.

Previous Office of Education estimates were based on the assumption that per pupil costs in nonpublic were the same as in public schools. Since the average pupil-teacher ratio is higher in nonpublic than in public schools, the previous estimates were higher than those shown here. Both types of estimates are, in a sense, hypothetical. That is, one showed what it would cost to educate nonpublic elementary and secondary school children if they were enrolled in public school and if the public school pupil-teacher ratio were maintained; and the other type, shown in table 34, shows the cost if the pupil-teacher ratio were maintained at the nonpublic school level.

Another way in which nonpublic school contributions may be assessed is to treat them as personal consumption expenditures. Personal consumption expenditures for nonpublic elementary and secondary school services are reported annually in the *Survey of Current Business*, by the Office of Business Economics, U.S. Department of Commerce. These figures usually run about 30 percent lower than the estimates shown in table 35. The personal consumption expenditure for nonpublic elementary and secondary school services in 1964 was estimated at \$1.7 billion.

Current expenditures of institutions of higher education

Annual current expenditures of institutions of higher education (in 1966-67 dollars) increased from \$4.5 billion in 1956-57 to \$13.2 billion in 1966-67, almost a threefold increase. They are expected to reach \$25.3 billion by 1976-77, or nearly double during the projected 10-year period. The projected data are based largely upon expected increases in enrollment and upon the trend of increasing costs per student expressed in constant dollars. Thus, while enrollment is not expected to increase at as rapid a rate as during the past 10 years, this factor will be more than offset by increasing expenditures per student. The result is an expected or projected constant dollar increase of \$12.1 billion over the next 10 years compared to a constant dollar increase of \$8.7 billion over the past 10 years (see table 41). When expressed in terms of current expenditures per full-time equivalent student, the data are as follows:

Item	1956-57	1966-67	1976-77
Total current expenditures.....	\$1,858	\$2,615	\$3,211
Publicly controlled institutions.....	1,834	2,222	2,575
Nonpublicly controlled institutions.....	1,892	3,414	4,870

Current expenditures are divided into four functional components: student education, related activities, organized research, and auxiliary enterprises and student aid. "Student education" encompasses general administration, instruction and departmental research, extension and public services, libraries, and operation and maintenance. Expenditures for student education were projected by use of the trend of annual expenditures per full-time equivalent student over the 10-year base period and in conjunction with the projected enrollment of such students (see table 41). When expressed in terms of current expenditure per full-time equivalent student, the data are as follows:

Item	1956-57	1966-67	1976-77
Current expenditures for student education.....	\$1,178	\$1,518	\$1,805
Publicly controlled institutions.....	1,204	1,388	1,558
Nonpublicly controlled institutions.....	1,142	1,782	2,450

Current expenditures for "student education," related activities, and organized research are commonly known as current expenditures for educational and general purposes and these expenditures per full-time equivalent student are as follows:

Item	1956-57	1966-67	1976-77
Expenditures for educational and general purposes.....	\$1,546	\$2,199	\$2,597
Publicly controlled institutions.....	1,577	1,898	2,100
Nonpublicly controlled institutions.....	1,504	2,812	3,896

The institutions of higher education engage in organized research and related activities and auxiliary enterprises in widely varying degrees. Thus, only the "student education" component expressed as expenditure per full-time equivalent student can be considered a norm for all institutions. Per student data for the United States for total current expenditures and for educational and general expenditures are presented as general interest items and not as institutional norms.

Related activities, auxiliary enterprises, and student aid expenditures were projected on the basis of their percentage relationship to student education during the base period. These functions are obviously closely related to trends in enrollment, but allowance had to be made for the change during the base period in their percentage relationship to student education. The base period data indicate a trend toward slightly more emphasis on these activities. The exception is expenditures for auxiliary enterprises in nonpublicly controlled institutions which have decreased slightly during the base period in relation to student education.

Item	1956-57	1966-67	1976-77
Related activities:	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
Publicly controlled institutions.....	9.58	10.10	10.36
Nonpublicly controlled institutions.....	8.62	8.93	9.15
Auxiliary enterprises:			
Publicly controlled institutions.....	26.57	27.84	29.31
Nonpublicly controlled institutions.....	33.49	31.19	29.13
Student aid:			
Publicly controlled institutions.....	2.83	4.02	5.21
Nonpublicly controlled institutions.....	7.46	10.45	13.33

The projection of expenditures for organized research, as a component of current expenditures, was done without regard to enrollment or to relationship with expenditures for student education. In view of the extremely variable nature of this component's relation to industry and education, we have projected on the basis of the constant dollar trend of expenditures for organized research during the base period. This projection may well be quite conservative, especially for the publicly controlled institutions which undoubtedly have the potential to engage in organized research to a far greater degree than performance over the past 10 years would indicate (see table 41).

Capital outlay by institutions of higher education

Annual capital outlay of institutions of higher education (in 1966-67 dollars) increased from \$1.4 billion during 1956-57 to an estimated \$3.4 billion during 1966-67. Capital outlay over the entire 10-year base period of 1956-57 to 1966-67 amounted to an estimated total of \$25.0 billion and is expected to reach a total of \$26.7 billion over the 10-year projected period of 1966-67 to 1976-77.

Estimates of capital outlay were made on the basis of reported book value of plant at the beginning and end of each biennial reporting year and converted to 1966-67 dollars. An amount equal to 1 percent of the value of plant for each year was added as a conservative estimate of replacement and rehabilitation.

Projected capital outlay was based primarily on actual or expected increases in enrollment plus estimated expenditures for replacement and rehabilitation. This is not as straightforward a concept as it may seem. The historical data showed clearly that capital outlay could not be related to increased

enrollment on an annual basis. The shortest reasonably reliable period of time proved to be 5 years. Therefore, a moving average was used to arrive at an orderly annual projection based on annual enrollment increases. We would emphasize, then, that the annual capital outlay data shown in tables 34 and 43 are designed to be utilized in the context of a fitted curve.

Expenditures for interest by institutions of higher education

Data on expenditures for interest by institutions of higher education are incomplete and cannot be shown as a separate item. The major portion of expenditures for interest is included with the current expenditures shown in table 34.

Figure 7.—Total expenditures by elementary and secondary day schools:
United States, 1956-57 to 1976-77

Figure 8.—Total expenditures by institutions of higher education:

TABLE 34—Continued

¹ For sources of data and methodology, see tables 36, 38, 40, 41, 43 and appendix table D.

² Includes the effect of the Elementary and Secondary Education Act of 1965. Excludes expenditures for residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations. See text table on expenditures by source of funds for data on these schools. Expenditures for the school years ending in 1957, 1959, 1961, and 1963 are estimates based on enrollment changes and bond sales. Expenditures for 1964-65, 1965-66, and 1966-67 were based on estimates furnished by State departments of education. All nonpublic school expenditures shown here were estimated on the basis of expenditures per teacher in public elementary and secondary schools.

³ Includes expenditures for subcollegiate departments of institutions of higher education, estimated at \$85 million in 1965-66. Includes expenditures for interest from current funds and excludes interest paid from plant funds. (An estimated

\$158 million was expended for total interest in 1966-67.)

⁴ Includes current expenditures of public elementary and secondary school systems for community services, summer schools, community colleges, and adult education. Interest is included in the estimated current expenditures of nonpublic schools.

⁵ Includes capital outlay of State and local school building authorities. See table 38.

⁶ Expenditures for interest on public school debt were projected as a continuation of the 1954-55 to 1963-64 trend. Data for school years ending in 1957, 1959, 1961, and 1963 were interpolated.

⁷ Includes expenditures for interest from current funds. Excludes expenditures from current funds for capital outlay.

⁸ The estimated capital outlay figures shown here include estimated expenditures for replacement and rehabilitation.

⁹ Less than \$50 million.

NOTE.—Data are for 50 States and D.C. for all years.

¹ For data sources and methodology, see footnotes on preceding table which shows these statistics in 1966-67 dollars.

² Excludes expenditures for residential schools for exceptional children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations. All nonpublic elementary and secondary school expenditures shown here are estimated on the basis of expenditures per teacher in public elementary and secondary schools.

³ Includes expenditures for subcollegiate departments of institutions of higher education, estimated at \$55 million in 1966-67. Includes expenditures for interest from current funds and excludes interest paid from plant funds. (An estimated \$158 million was expended for total interest in 1966-67.)

⁴ Includes current expenditures of public elementary and secondary school systems for community services, summer

schools, community colleges, and adult education. Interest is included in the estimated current expenditures of nonpublic schools.

⁵ Includes capital outlay of State and local school building authorities.

⁶ Interest for nonpublic schools is based on interest for public schools.

⁷ Includes expenditures for interest from current funds. Excludes expenditures from current funds for capital outlay.

⁸ The estimated annual capital outlay figures shown here include estimated expenditures for replacement and rehabilitation.

⁹ Less than \$50 million.

¹⁰ Includes effect of Elementary and Secondary Education Act of 1965.

NOTE.—All data are for 50 States and D.C.

1975-76.....	42,400	692.00	29.3	30.2
1976-77.....	42,400	708.00	30.0	30.9

¹ SOURCES: Data are based on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems, Biennial Survey of Education in the United States," ch. 2 (1955-56 and 1957-58); (2) "Statistics of State School Systems" circulars (1959-60 and 1963-64); and (3) "Statistics of Public Schools," fall 1964 through 1966. Current expenditures were converted to 1966-67 dollars on the basis of the Consumer Price Index prepared by the Bureau of Labor Statistics, U.S. Department of Labor. For method of converting, see appendix table K.

² The expenditures shown in this table include current expenditures for administration for State boards of education, State departments of education, and intermediate administrative units. Therefore, they are higher than those that exclude such expenditures.

³ Includes only the current expenditures for public day schools allocated to pupil costs, and excludes the other expenditures shown in footnote 4.

⁴ Includes current expenditures for summer schools, adult education, and community colleges operated by school districts, in addition to expenditures allocable to pupil costs.

⁵ Estimated on the basis of actual enrollment and interpolated expenditures per pupil.

⁶ Derived from estimates furnished by States.

⁷ The projections of current expenditures of public school systems including the effect of the Elementary and Secondary Education Act of 1965 are based on the assumptions: (1) The ratio of average daily attendance to fall enrollment in grades K-12 of public schools (table 3) will remain constant at the 1966-67 level of 92.7 percent; (2) current expenditures allocated to costs per pupil in average daily attendance will follow the 1956-57 to 1964-65 trend, (3) the ratio of current expenditures for all programs to current expenditures allocated to pupil costs will remain constant at the 1966-67 level of 1.03; and (4) an increase in expenditures of \$2 per pupil will be added to the trend expenditures outlined above due to funds provided by the Elementary and Secondary Education Act of 1965.

⁸ Based on the assumption that the Consumer Price Index will follow the 1963-64 to 1966-67 trend through 1968-69.

⁹ Estimated, using the 1955-56 to 1964-65 trend.

¹⁰ The projections of current expenditures of public school systems excluding the effect of the Elementary and Secondary Education Act of 1965 are based on the first three assumptions outlined in footnote 7 above.

For methodological details see appendix D and discussion in text.

NOTE.—Data are for 50 States and the District of Columbia for all years.

TABLE 37.—Current expenditures for salaries of instructional staff in regular public elementary and secondary day schools: United States, 1956-57 to 1976-77¹

Year	Number of instructional staff ² (in thousands)	Salaries of instructional staff ³			
		Average annual salary		Total (in billions)	
		Current dollars (3)	1966-67 dollars (4)	Current dollars (5)	1966-67 dollars (6)

PROJECTED ⁶					
1967-68	1,964	7,400	7,300	14.5	14.3
1968-69	2,013	7,800	7,500	15.7	15.1
1969-70	2,058	-----	7,700	-----	15.8
1970-71	2,091	-----	7,900	-----	16.5
1971-72	2,116	-----	8,100	-----	17.1
1972-73	2,140	-----	8,300	-----	17.8
1973-74	2,165	-----	8,500	-----	18.4
1974-75	2,198	-----	8,700	-----	19.1
1975-76	2,226	-----	8,800	-----	19.6
1976-77	2,264	-----	9,000	-----	20.4

¹ Source and method: Data are based on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems, Biennial Survey of Education in the United States," ch. 2 (1955-56 through 1957-58); (2) "Statistics of State School Systems" circulars (1959-60 through 1963-64); and (3) "Statistics of Public Schools," fall 1964 through 1966.

Conversion to 1966-67 dollars was based on the Consumer Price Index prepared by the Bureau of Labor Statistics, U.S. Department of Labor. For method of converting see appendix table K.

² Data on number of instructional staff were taken from table 27.

³ The average annual salaries of instructional staff are about 3 percent higher than the salaries of classroom teachers.

⁴ Interpolated.

⁵ Estimates of salaries furnished by State education departments.

⁶ The projections of current expenditures for salaries of instructional staff in public elementary and secondary schools, including the effect of the Elementary and Secondary

Education Act of 1965, are based on the following assumptions: (1) Average annual salaries will follow the 1955-56 to 1965-66 trend; (2) the ratio of instructional staff to classroom teachers in regular public schools will follow the 1955-64 trend (see tables 23 and 27); and (3) funds provided by the Elementary and Secondary Education Act of 1965 will increase the number of instructional staff over the number expected from the 1955-56 to 1965-66 trend by approximately 80,000 in fall 1967, 90,000 in 1968, and 100,000 each year, 1967 through 1976.

⁷ Based on the assumption that the Consumer Price Index will follow the 1963-64 to 1966-67 trend through 1968-69.

⁸ Estimated, using the 1955-56 to 1964-65 trend.

⁹ The projections of current expenditures for salaries of instructional staff in public elementary and secondary schools, excluding the effect of the Elementary and Secondary Education Act of 1965, are based on the first two assumptions outlined in footnote 6 above.

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

See footnotes next page.

TABLE 38—Continued

¹ SOURCES: Data are based on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of State School Systems, Biennial Survey of Education in the United States," ch. 2 1957-58; (2) "Enrollment, Teachers, and School-housing" (fall 1957 to fall 1963); (3) "Statistics of Public Schools," fall 1964 through 1966 (4) "Bond Sales for Public School Purposes" (1960-61 to 1965-66). Conversion to 1966-67 dollars was based on the American Appraisal Co. Construction Cost Index. For method of converting, see appendix table K.

² In 1961-62, 2 percent of capital outlay was estimated to be for transportation equipment, 10 percent for other equipment, and the remaining 88 percent for land and buildings.

³ Capital outlay was estimated at 128 percent of bond sales, the average for 1957-58 and 1959-60.

⁴ Capital outlay was estimated at 122 percent of bond sales, the average for 1959-60 and 1961-62.

⁵ Capital outlay was estimated at 119 percent of bond sales, the average for 1961-62 and 1963-64.

⁶ Capital outlay was estimated by State departments of education.

⁷ Number of rooms completed was estimated on the basis of State estimates of capital outlay and the Office of Education estimate of capital outlay per room.

⁸ Bond sales were estimated on the basis of data for the first half of 1966-67.

⁹ Projections of construction of public elementary and secondary school classrooms and of capital outlay are based on the assumptions: (1) The total number of rooms constructed will be 71,000 per year, projected on the basis of the 1957-58 to 1966-67 trend; and (2) the capital outlay per room will remain constant at the 1965-66 and 1966-67 average of \$54,000 per room in 1966-67 dollars.

¹⁰ Based on the assumption that the Construction Cost Index will follow the 1963-64 to 1966-67 trend through 1968-69.

For further methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

TABLE 39.—Construction of public elementary and secondary school classrooms and capital outlay, by reason for construction: United States, 1957-58 to 1976-77 ¹

TABLE 41—Continued

¹ SOURCES: Data are based on statistics in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) *Statistics of Higher Education, Biennial Survey of Education in the United States*, chapter 4, 1955-56 and 1957-58; (2) *Financial Statistics of Higher Education*, 1959-60, 1961-62, and 1963-64 surveys; and (3) unpublished data in the Office of Education. Conversion to 1966-67 dollars was based on the Consumer Price Index published by the Bureau of Labor Statistics, United States Department of Labor and (for capital outlay) on the American Appraisal Company Construction Cost Index. For method of converting the indexes, see appendix table K.

² Includes general administration, instruction and departmental research, extension and public services, libraries, and operation and maintenance of the physical plant.

³ Includes expenditures for such items as laboratory schools, medical school hospitals, dental clinics, home economics cafeterias, agricultural college creameries, college-operated industrial plants connected with instructional programs but not actually integral parts of it, etc.

⁴ Auxiliary enterprises include student dormitories, dining halls, cafeterias, student unions, bookstores, faculty housing, athletic programs not part of the instructional program, lectures, concerts, etc.

Student aid consists of scholarships, fellowships, and prizes and includes remission of fees.

⁵ Current-fund expenditures less capital outlay from current funds.

⁶ Interpolated.

⁷ Estimated.

⁸ The projections of expenditures from current funds are based on the assumptions: (1) Expenditure per student and the percent of college-age persons attending college, on which expenditures for student education depend, will continue to increase as they did during the years 1956-57 to 1966-67; (2) expenditures for organized research will follow the 1956-57 to 1966-67 trend; (3) the relationship to student education of expenditures for related activities, for auxiliary enterprises, and for student aid will each continue the 1956-57 to 1966-67 trend; and (4) the 1966-67 to 1976-77 expenditures from current funds for capital outlay will approximate 16 percent of total capital outlay.

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

⁶ Interpolated.

⁷ Estimated

⁸ Projected by applying the 1963-64 to 1966-67 trend in the Consumer Price Index to the projected expenditures from current funds (table 41).

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and D.C. for all years.

Chapter V

Basic Student Charges by Institutions of Higher Education

Kenneth A. Simon and C. George Lind

Explanation and definition

The source for estimated basic student charges (tuition and required fees, board, and room) was the published charge by individual institutions to a resident full-time degree-credit student for these services and the full-time degree-credit enrollment in the institutions whose charges were published. Required fees are those for matriculation, laboratory, library, health, etc., but do not include books.

Additional charges to graduate students were not estimated because charges to graduate students were not published by institution. Additional charges by publicly controlled institutions to nonresident students were not estimated because enrollment of nonresident students was not available by institution for each of the base years.

Estimated average basic student charges (entire academic year)

The estimated average basic student charges (tuition and required fees, board, and room) by publicly controlled institutions of higher education, in 1966-67 dollars, increased from \$874 in 1956-57 to \$1,034 in 1966-67. The charges are expected to reach \$1,211 by 1976-77. (Table 44.) The estimated average basic student charges by nonpublicly controlled institutions of higher education were \$1,486 in 1956-57, \$2,125 in 1966-67, and are expected to reach \$2,748 in 1976-77. The trend indicates that charges by nonpublic institutions will increase at a much higher rate than charges by publicly controlled institutions. The rise in estimated average basic student charges is influenced primarily by tuition and required fees, although room charges have also been a factor. The charges for board, in comparison with other charges, have been held on a relatively even keel, and even reduced slightly when allowance is made for changes in the purchasing power of the dollar over the past decade. Board charges are held unchanged at the 1966-67 level through the projected decade. We are, in effect, assuming that the many large institutions which had held their board charges unchanged, in current unadjusted dollars, will not be able to continue doing so during the next decade. Board and room are ordinarily considered to be services for which a fee is charged that is directly related to, although not necessarily equal to, the cost of the service.

Tuition and required fees are the primary source of funds for educational and general purposes in nonpublicly controlled institutions. The remainder is made up largely of income from the Federal Government which is designated for research, from endowment earnings, and from private gifts and grants.

The publicly controlled institutions' source of educational and general funds are primarily from State governments for the 4-year institutions and from State and local governments for the 2-year institutions. Tuition and required fees in publicly controlled institutions are only approximately one-fourth of the income from State and local governments. Income from the Federal Government, designated for research, in the 4-year institutions, exceeds the amount received from tuition and fees.

¹ Sources: Data are based on statistics shown in U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) *Statistics of Higher Education, Biennial Survey of Education in the United States*, chapter 4, 1955-56 and 1957-58; (2) *Survey of Financial Statistics of Higher Education*, 1959-60, 1961-62, and 1963-64 and (3) unpublished data in the Office of Education.

Conversion to 1966-67 dollars was based on the American Appraisal Company Construction Cost Index. For method of converting, see appendix table K.

² Interpolated.

³ Estimated.

⁴ The projection of capital outlay was based on the following assumptions: (1) That capital outlay per additional full-time equivalent of total opening fall enrollment will follow the 1956-57 to 1966-67 trend insofar as capital outlay resulting in increased value of plant is concerned; (2) that capital outlay for replacement and rehabilitation will remain constant at the level of 1% of value of plant each year through 1976-77; (3) that since capital outlay relates to increased numbers of students over a number of years rather than annually, a moving average would more reasonably reflect annual capital outlay.

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Higher Education Basic Student Charges," 1961-62 through 1964-65; and (2) "Opening (Fall) Enrollment in Higher Education," 1961 through 1964

¹ Estimated.

² Data for 1961-62 through 1964-65 represent constant 1966-67 dollars as converted from the unadjusted current dollars shown in table 45. See constant dollar index, table K.

³ The projection of basic student charges is based on the assumption that these charges will continue to increase

through 1976-77 as they did during the base years of 1961-62 through 1964-65, in constant dollars. The decreases in charges for board during the base period are not projected and are frozen at the 1966-67 level. The base year data for board charges, in current unadjusted dollars, did show an increase but not enough to offset the application of the Consumer Price Index.

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

TABLE 45.—Estimated average charges to full-time resident degree-credit undergraduate students, by type and control of institution of higher education: United States, 1956-57 to 1968-69

SOURCE: U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Higher Education Basic Student Charges," 1961-62 through 1964-65; and (2) "Opening (Fall) Enrollment in Higher Education," 1961 through 1964.

¹ Data for 1956-57 through 1960-61 and for 1965-66 through 1966-67 estimated by applying the 1961-62 to 1966-67 trend in the Consumer Price Index to the data in table 44.

See constant dollar index, table K.

² Projected by applying the 1961-62 to 1966-67 trend in the Consumer Price Index to the projected charges to students (table 44).

For methodological details, see appendix table D.

NOTE.—Data are for 50 States and the District of Columbia for all years.

APPENDIX

General Methodology and Statistical Tables

The 1967 projections of educational data by the U.S. Office of Education include enrollments at all levels, high school graduates, degrees by level and field, teacher and faculty demand, and expenditures in elementary and secondary schools and in institutions of higher education. Of these, projections of the number of children entering the first three grades of public elementary and secondary schools, enrollments in higher education, high school graduates, and degrees by level, were based directly on population. The others, with the exception of enrollment in grades 3 through 12 of public elementary and secondary schools and of degrees by field, were based on enrollments. Enrollments in grades 3 through 12 of public elementary and secondary schools were based on grade retention rates. Degrees by field were based on the distribution of total degrees by field at each level over a 10-year period.

Population aged 18-21 years was used for projecting college enrollments. It is recognized that not all college enrollments fall in this age group; nevertheless, in the absence of data on age of college students, some fairly sensitive yet stable exposure measure had to be used. Since about two-thirds of all degree-credit enrollment is full time, it can be assumed that a like proportion of the students fit the population age group used. The population averaging 18 years of age was chosen for projecting both high school graduates and first-time college enrollment. This age group gave a smoother fit when correlated with these data than could be obtained with other age groups. For projecting kindergarten, first-grade, and second-grade enrollments, population aged 5 years, 6 years, and 7 years, respectively, was used.

The choice of timelag between first-year enrollments and bachelor's degrees, between bachelor's degrees and master's degrees, and between master's degrees and doctorates was also made on an empirical basis. The different series of data were plotted against time so that different timelags between the series could be compared. While the evidence for the timelags chosen was not uniformly conclusive, there was no evidence pointing to a different choice.

The timelags chosen were: Bachelor's degrees 4 years after first-time enrollment, master's degrees 2 years after bachelor's degrees, and doctorates 3 years after master's degrees. To avoid escalation in rates, the actual projection of degrees was based on population of the age, assuming the chosen timelag, which fitted the entrance of the student into college.

For making the projections, regression methods were used wherever a trend could be established. Where no consistent series was available or the data were too irregular to establish a trend, a constant based on the latest observation or an average of the last two or three observations was used. For some projections, such as graduate enrollments, enrollments in institutions of higher education by full-time and part-time attendance, and nondegree-credit enrollments, relationships had to be obtained from a different series of data and transferred to the opening fall higher education enrollment series. This series is current and reasonably consistent in the past, although lacking some detailed characteristics which are required by educators for decision-making.

For the trend, observations in the 10 most recent years were used and these were extrapolated for 10 years into the future. The 10-year timespan was considered better than a longer timespan because of the rapid change in economic and social conditions and the improvement in the available statistics in recent years.

Straight lines fitted by the least squares technique to the ratio (for example, of enrollment to population) as the dependent variable and time in years as the independent variable were used for projecting whenever possible. The rationale for using the straight line is that the long-range, true curve of relationship would be likely to yield a straight line over any portion covering only a 10-year span. An advantage in using straight lines is their additive property when the ratio bases are the same. This simplifies projection of components (all complex data are usually projected by components and summed).

The fitted straight line often lies considerably above or below the last observed point, resulting in an unusual rise or drop from the last actual observation. To avoid this and give face validity to the projections, the line was used only to establish the last point and a new line was drawn through the last observed ratio and the end point on the curve. (In this case, the fitted equation is used only to establish the ratio at the end of the 10-year span.) When all of the component curves are adjusted in this manner, they are additive just as were the original curves. For this reason, when any curve in a group of components exhibited a serious difference with the last observation, all of the component curves were adjusted,

even if differences were slight. An independent curve was adjusted only when the discrepancy was serious.

An exception to the use of the straight line for projecting trends was made for projecting grade retention rates in the public schools. Because retention rates rose rapidly in the last 10 years, a straight line equation would produce projected rates well above permissible limits of retention. To allow for leveling off and to keep within such limits, an asymptotic equation was used with limits at 100 percent except at certain grade levels where transfer of students from nonpublic schools occurs in large numbers.

The tables that follow outline for each major area (enrollments, degrees, teachers, and expenditures) the equations and constants that were used, the standard error when appropriate, and adjustments, if they were used. Adjustments have been expressed in terms of the projection equation.

TABLE A.—Methodology (ch. I)—Continued

¹ Adjusted by relocating line through last observed point and 1976 point of fitted line.

² y = percent kindergarten enrollment is of population aged 5 years.

³ y = percent 1st grade enrollment is of population aged 6 years.

⁴ y = percent 2d grade enrollment is of population aged 7 years.

⁵ y = percent grade 3 is of grade 2 in preceding year with restriction that percent cannot exceed 100.

⁶ y = percent grade 4 is of grade 3 in preceding year with restriction that percent cannot exceed 100.

⁷ y = percent grade 5 is of grade 4 in preceding year with restriction that percent cannot exceed 100.

⁸ y = percent grade 6 is of grade 5 in preceding year with restriction that percent cannot exceed 100.

⁹ Constant percent = percent grade 7 is of grade 6 in preceding year. (Transfers from nonpublic schools are assumed to account for excess over 100).

¹⁰ y = percent grade 8 is of grade 7 in preceding year with restriction that percent cannot exceed 100.

¹¹ Constant percent = percent grade 9 is of grade 8 in preceding year. (Transfers from nonpublic schools are assumed to account for excess over 100).

¹² y = percent grade 10 is of grade 9 in preceding year with restriction that percent cannot exceed 100.

¹³ y = percent grade 11 is of grade 10 in preceding year with restriction that percent cannot exceed 100.

¹⁴ y = percent grade 12 is of grade 11 in preceding year with restriction that percent cannot exceed 100.

¹⁵ y = percent 7th and 8th grades organized as secondary are of total 7th and 8th grades.

¹⁶ Approximations based on the assumption that enrollment in grades K-8 in nonpublic schools will decrease to 1972, and then remain constant through 1976.

¹⁷ Approximations based on the assumption that enrollment in grades 9-12 in nonpublic schools will increase to 1972, and then remain constant through 1976.

¹⁸ y = percent that 1st-time opening fall degree-credit enrollment is of population aged 18 at nearest birthday (projected separately by sex and by type and control of institution).

¹⁹ y = percent opening fall degree-credit enrollment is of population aged 18-21 in completed years (projected separately by sex and by type and control of institution).

²⁰ y = percent that resident graduate 1st-term degree-credit enrollment is of total resident plus extension, graduate plus undergraduate in 4-year institutions (projected separately by sex and control of institution). The extrapolated percents were applied to projected resident plus extension, graduate plus undergraduate opening fall degree-credit enrollment in 4-year institutions.

²¹ Constant percent = percent that full-time graduate 1st-term degree-credit enrollment was of total graduate 1st-term degree-credit enrollment in 1961-62, calculated separately for each category by type and control of institution and by sex and level of student. These percentages were adjusted to agree with percentages for total opening fall degree-credit enrollment in 1961 through 1965 by control of institution and by sex of student. The adjusted 1965 percentages, held constant to 1976, were applied to projected graduate opening fall degree-credit enrollment 1967 to 1976 in each corresponding category by type and control of institution and by sex of student.

²² Method was same as for full-time graduate opening fall degree-credit enrollment, replacing graduate enrollment by undergraduate enrollment.

²³ Constant percent = percent that was full-time by control of institution and sex of student as reported for 2-year institutions in the 1965 opening fall enrollment survey. These percentages, held constant to 1976, were applied to projected opening fall degree-credit enrollment in 2-year institutions in corresponding categories by control of institution and by sex of student.

²⁴ Constant percent = percent that nondegree-credit opening fall enrollment in publicly controlled institutions was of degree-credit opening fall enrollment, in publicly controlled institutions in 1965. (This percentage, held constant to 1976, was applied to projected degree-credit enrollment in publicly controlled institutions).

²⁵ Constant percent = percent that full-time nondegree-credit enrollment was of total nondegree-credit enrollment in the 1964 full-time-equivalent enrollment and credit-hours survey. (This percentage, held constant to 1976, was applied to projected nondegree-credit enrollment in publicly and privately controlled institutions).

²⁶ Constant percent = percent that nondegree-credit opening fall enrollment in privately controlled institutions was of degree-credit opening fall enrollment in privately controlled institutions in 1965. (This percentage, held constant to 1976, was applied to projected degree-credit enrollment in privately controlled institutions).

²⁷ Constant percent = percent that full-time equivalent of part-time degree-credit enrollment was of part-time degree-credit enrollment in the 1964 full-time-equivalent enrollment and credit-hours survey (percent same in publicly and privately controlled institutions).

²⁸ Constant percent = percent full-time equivalent of part-time nondegree-credit enrollment was of part-time nondegree-credit enrollment in the 1964 full-time-equivalent enrollment and credit-hours survey (percent same in publicly and privately controlled institutions).

TABLE B.—Methodology (ch. II)

¹ Adjusted by relocating line through last observed point and 1976-77 point of fitted line.

² y = percent that public high school graduates are of population averaging 18 years of age for men and women separately.

³ Total nonpublic high school graduates = the percent that 9-12 nonpublic enrollment is of 9-12 public enrollment in each projected year times public high school graduates in corresponding years (series smoothed).

⁴ Constant percent = percent that boys were of nonpublic high school graduates in 1963-64.

⁵ y = percent that B.A. degrees are of population averaging 18 years of age, 4 years earlier.

⁶ y = percent that B.A. degrees in selected fields are of all B.A. degrees.

⁷ y = percent that M.A. degrees are of population averaging 18 years of age, 6 years earlier.

⁸ y = percent that M.A. degrees in selected fields are of all M.A. degrees.

⁹ y = percent that doctor's degrees are of population averaging 18 years of age, 9 years earlier.

¹⁰ y = percent that doctor's degrees in selected fields are of all doctor's degrees.

¹¹ Original equation based on year 1957-58 = 1; adjusted equation based on year 1959-60 = 1.

¹² Constant percent = percent that doctorates conferred on women in science, general program were of all doctorates conferred on women in 1964-65.

TABLE C.—Methodology (ch. III)

Demand for additional instructional staff:					
For increased enrollment				(22)	
For replacement ²⁴		6.0			
Total demand for estimated full-time-equivalent professional staff in institutions of higher education.	33				
Demand for additional professional staff:					
For increased enrollment				(22)	
For replacement ²⁴		6.0			

¹ Projected enrollment (table 3) divided by projected pupil-teacher ratio (table 24) for each type of school by control and level.

² y = ratio of number of pupils to number of teachers.

³ Constant ratio = 1964 pupil-teacher ratio.

⁴ Increase in total teacher demand over each previous year.

⁵ Constant amount = 1962-66 average decrease in number of teachers with substandard certificates.

⁶ 8 percent of total teacher demand in each previous year.

⁷ 4 percent of total teacher demand in each previous year.

⁸ y = ratio, instructional staff to classroom teachers (staff-teacher ratio times projected classroom teachers = projected instructional staff).

⁹ Instructional staff assumed = classroom teachers.

¹⁰ y = student-staff ratio (projected enrollment (table 8) divided by projected student-staff ratio = projected instructional staff).

¹¹ Constant percent = percent full-time instructor or above was of total instructional staff in 1963-64.

¹² Constant percent = percent part-time instructor or above was of total instructional staff in 1963-64.

¹³ Constant percent = percent junior instructional staff was of total instructional staff in 1963-64.

¹⁴ Constant percent = percent full-time equivalent of part-time was of total part-time instructor or above in 1963-64.

¹⁵ Constant percent = assumption this percent (not reported by institutions) is same as for full-time equivalent of part-time for instructor or above (reported by institutions).

¹⁶ See method detailed for table 28 in footnotes 11 to 13 of this table (methodology table C).

¹⁷ Constant percent = percent total full-time and part-time other instructional staff was of total full-time and part-time instructional staff for resident degree-credit courses in 1963-64.

¹⁸ Constant percent = percent total full-time and part-time professional staff for administration and services is of total full-time and part-time instructional staff for degree-credit courses in 1963-64.

¹⁹ Constant percent = percent total full-time and part-time professional staff for organized research is of total full-time and part-time instructional staff for degree-credit courses in 1963-64.

²⁰ See method detailed for table 29 in footnotes 14 and 15 of this table (methodology table C).

²¹ Constant percent = percent full-time equivalent instructional staff for resident degree-credit courses is of total full-time and part-time instructional staff for resident degree-credit courses in 1963-64. This percent is assumed to apply to all full-time equivalents as percent of total full-time and part-time staff.

²² Constant amount = 1960-61 to 1965-66 annual average increase in staff employed in full-time organized research.

²³ Increase in total full-time equivalents employed over each previous year.

²⁴ Constant percent = 6 percent of total full-time equivalents employed in previous year.

NOTE.—Sources of data and assumptions on which projections were based are given in text footnotes.

TABLE D.—Methodology (ch. IV and V)

¹ See method detailed for table 36 in footnotes 9 to 16 of this table (methodology table D).

² Ratio of nonpublic school teachers to public school teachers times public school current expenditures.

³ See method detailed for table 38 in footnotes 19 to 21 of this table (methodology table D).

⁴ Ratio of nonpublic school teachers to public school teachers times public school capital outlay.

⁵ See method detailed for table 40 in footnote 28 of this table (methodology table D).

⁶ Ratio of nonpublic school teachers to public school teachers times public school interest.

⁷ See method detailed for table 41 in footnotes 29 to 38 of this table (methodology table D).

⁸ See method detailed for table 43 in footnotes 40 to 43 of this table (methodology table D).

⁹ Constant percent = percent that average daily attendance in public schools was of K-12 enrollment in public schools in 1966-67.

¹⁰ The Elementary and Secondary Education Act of 1965.

¹¹ y = current expenditure allocated to pupil costs per pupil in average daily attendance.

¹² Average daily attendance times per-pupil cost for each year.

¹³ Current expenditure per pupil increased by \$25 per pupil over trend expenditure.

¹⁴ Average daily attendance times per-pupil cost augmented by \$25 per pupil.

¹⁵ Percent that expenditures for all programs were of expenditures allocated to pupil costs in 1966-67. Constant percent times total current expenditures allocated to pupil costs (excluding effects of Act) = current expenditures for all programs (excluding effects of Act).

¹⁶ Percent that expenditures for all programs were of expenditure allocated to pupil costs in 1966-67. Constant percent times total current expenditures allocated to pupil costs (including effects of Act) = current expenditures for all programs (including effects of Act).

TABLE D.—Methodology (ch. IV and V)—Continued

¹⁷ y = average annual salary of instructional staff in public elementary and secondary schools.

¹⁸ Average annual salary times number of instructional staff in public elementary and secondary schools in each year.

¹⁹ y = number of rooms completed.

²⁰ Projected number of rooms completed (table 38) times constant capital outlay per room (\$54,000).

²¹ Total capital outlay in (1965-66 and 1966-67) divided by the number of rooms completed in the same period.

²² Elementary increase in enrollment over 5-year period divided by 1964-65 elementary median pupil-room ratio plus secondary increase in enrollment over 5-year period divided by 1964-65 secondary median pupil-room ratio.

²³ 1964-65 elementary median pupil-room ratio.

²⁴ 1964-65 secondary median pupil-room ratio.

²⁵ Total number of rooms to be completed less the number to be completed because of enrollment increases.

²⁶ Capital outlay per room times projected number of classrooms for increased enrollment in each 5-year period.

²⁷ Capital outlay per room times projected number of classrooms for current replacement in each 5-year period.

²⁸ y = annual expenditure for interest in public elementary and secondary schools.

²⁹ y = expenditures for student education per full-time equivalent student in publicly controlled institutions of higher education. (y times projected number of full-time equivalent students in corresponding years (table 16, column 3) = projected expenditures for student education.)

³⁰ y = expenditures for student education per full-time equivalent student in nonpublicly controlled institutions of higher education. (y times projected number of full-time equivalent students in corresponding years (table 16, column 4) = projected expenditures for student education.)

³¹ y = total expenditures for organized research in publicly controlled institutions of higher education.

³² y = total expenditures for organized research in nonpublicly controlled institutions of higher education.

³³ y = expenditures for related activities as a percent of expenditures for student education in publicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for related activities.)

³⁴ y = expenditure for related activities as a percent of expenditures for student education in nonpublicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for related activities.)

³⁵ y = expenditures for auxiliary enterprises as a percent of expenditures for student education in publicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for auxiliary enterprises.)

³⁶ y = expenditures for auxiliary enterprises as a percent

of expenditures for student education in nonpublicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for auxiliary enterprises.)

³⁷ y = expenditures for student aid as a percent of expenditures for student education in publicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for student aid.)

³⁸ y = expenditures for student aid as a percent of expenditures for student education in nonpublicly controlled institutions of higher education. (y times projected expenditures for student education in corresponding years = projected expenditures for student aid.)

³⁹ Constant percent = 1956-57 to 1966-67 average capital outlay from current funds as percent of capital outlay from all sources. (Projected annual capital outlay from all sources (table 43) times constant percent = projected capital outlay from current funds.)

⁴⁰ Constant dollars = 1956-57 to 1966-67 average capital outlay by publicly controlled institutions divided by average increase in number of full-time equivalent students in these institutions. (Constant dollars times annual increase in projected full-time equivalent students = projected capital outlay for increased capacity. Result smoothed by moving average.)

⁴¹ Constant percent = estimated percent of value of plant replaced or rehabilitated each year. (Constant percent times projected value of plant in publicly controlled institutions in each year = projected capital outlay for replacement and rehabilitation.)

⁴² Constant dollars = 1956-57 to 1966-67 average capital outlay by nonpublicly controlled institutions divided by average increase in number of full-time equivalent students in these institutions. (Constant dollars times annual increase in projected full-time equivalent students = projected capital outlay for increased capacity. Result smoothed by moving average.)

⁴³ Constant percent = estimated percent of value of plant replaced or rehabilitated each year. (Constant percent times projected value of plant in nonpublicly controlled institutions in each year = projected capital outlay for replacement and rehabilitation.)

⁴⁴ y = average charge for tuition and required fees per full-time degree-credit student, calculated separately for each category by type and control of institution.

⁴⁵ y = average charge for board per full-time degree-credit student, calculated separately for each category by type and control of institution with $t = 6$ held constant to 1976-77.

⁴⁶ y = average charge for room per full-time degree-credit student, calculated separately for each category by type and control of institution.

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education publications: (1) "Statistics of Public Schools" fall 1964 through 1966; (2) "Enrollment, Teachers, and Schoolhousing," 1955 through 1963; (3) "Statistics of State School Systems," biennially, 1957-58 through 1961-62; (4) "Statistics of State School Systems. Biennial Survey of Education in the United States," ch. 2, 1954-56; (5) "Nonpublic School Enrollment in Grades 9-12, Fall 1964, and Graduates, 1963-64"; and (6) "Statistics of Nonpublic Elementary Schools, 1961-62."

The population projections as of October 1, on which these enrollment projections are based (appendix table F), are consistent with Series B population projections in U.S. Department of Commerce, Bureau of the Census, "Current Population Reports," Series P-25, No. 359, February 20, 1967. The series B population projection assumes that the average of the 1964 and 1965 fertility rates will prevail throughout the projection period.

These enrollments are included for comparison with earlier projections because the 1966 projections (Circular OE-10030-66) were based on Series B. The enrollment projections (tables 1 through 3) on which other projections in this circular (OE-10030-67) are based have as their base population Series C (appendix table E).

² Does not include residential schools for exceptional

children, subcollegiate departments of institutions of higher education, Federal schools for Indians, and schools on Federal installations.

³ Fall enrollment in public schools not reported by grade prior to 1962; grade breakdown for years 1956 through 1961 estimated from school year enrollment.

⁴ Preliminary data.

⁵ The projection of regular fall enrollment in day schools is based on the assumptions: (1) Enrollment rates of the 5-, 6-, and 7-year-old population in public grades, kindergarten, 1, and 2 will follow the 1956-66 trends; (2) grade-to-grade retention rates of public grades 6 through 3, 8 to 7, and 12 through 10, will follow the 1956-66 trends with the restriction that they cannot exceed 100 percent, (3) the retention rate of public grade 7 to 6 will remain constant at 103 percent through 1976; (4) the retention rate of public grade 9 to 8 will remain constant at 104 percent through 1976; (5) the number of enrollments in grades K-8 in nonpublic schools will decrease to the year 1972 and then remain constant through 1976; and (6) the number of enrollments in grades 9-12 in nonpublic schools will increase to the year 1972 and then remain constant through 1976.

For further methodology details, see appendix table A.

NOTE.—Data are for 50 States and the District of Columbia for all years. Because of rounding, detail may not add to totals.

TABLE H.—Total opening fall degree-credit resident and extension enrollment in all institutions of higher education, by sex: United States and outlying areas, 1956 to 1976¹

1966 ²	5,991,000	3,598,000	2,393,000	1976....	9,478,000	5,401,000	4,077,000

¹ SOURCES: Enrollment data and estimates are based on U.S. Department of Health, Education, and Welfare, Office of Education circulars: (1) "Opening (Fall) Enrollment in Higher Education," annually, 1956 through 1966; and (2) "Resident and Extension Enrollment in Institutions of Higher Education," biennially, 1955 through 1961.

Population on which projections are based is shown in appendix table E.

² Estimate based on fall 1966 survey of total degree-credit and nondegree-credit enrollment not reported separately, and on fall 1965 survey of total degree-credit enrollment and total nondegree-credit enrollment reported separately.

³ The projection of total opening fall degree-credit enroll-

ment in all institutions of higher education by sex is based on the assumption that attendance rates of men and women aged 18-21 years will follow the 1956-66 trend to 1976.

The projections include in each year, in addition to the number of enrollments based on the 1956-66 trend, an estimated 66,000 veterans enabled to attend college through aid provided by the Veterans' Readjustment Benefits Act of 1966. Veterans who would have attended without this assistance are assumed to be included in the trend projections.

For further methodology details, see appendix table A.

NOTE.—Data include United States and outlying areas for all years. Because of rounding, detail may not add to totals.

1976-77.....	969,000	542,000	428,000	247,800	173,800	74,000	38,700	34,400	4,300

¹ SOURCES: Degree data from U.S. Department of Health, Education, and Welfare, Office of Education publications on "Earned Degrees Conferred by Institutions of Higher Education" (1955-56 through 1963-64, and unpublished data for 1964-65).

² 1st-professional degrees include: (1) Bachelor's degrees requiring 5 or more years of work; (2) master's degrees in professional fields which have not been preceded by a professional degree in the same field; and (3) doctor's degrees in certain fields which have not been preceded by professional degrees in the same field, such as doctor of jurisprudence, doctor of medicine, doctor of dental surgery, and doctor of veterinary medicine. The number of 1st-professional degrees was reported for the academic year 1964-65 as 45,946 or about 8.5 percent of total bachelor's and 1st-professional degrees.

³ Master's degrees include: (1) Master's degrees preceded by the 4-year bachelor's degree; (2) 2d-professional degrees

preceded by the 5 or more year 1st-professional degree; and (3) professional degrees beyond the 2d-professional degree but below the level of the doctorate, such as education specialist.

⁴ Doctor's degrees include: (1) The Ph.D. in any field; and (2) such degrees as doctor of education, doctor of juridical science, doctor of public health (preceded by professional degree in medicine or sanitary engineering).

⁵ Estimated.

⁶ The projection of earned degrees is based on the assumption that the percentage of degrees to population for each level and sex will continue the 1955-56 to 1964-65 trends. (Age of the population at the time of graduation for the 1st level was assumed to be 22 years; for the 2d level, 24 years; for the doctorate level, 27 years.)

For methodology details, see appendix table B.

NOTE.—Data include United States and outlying areas for all years. Because of rounding, detail may not add to totals.

TABLE J.—Classification of degrees by field of study

[Individual fields listed in 1964-65 report of bachelor's and higher degrees conferred]

I. Natural sciences and related professions	Pharmacology (excluding pharmacy)
Mathematics ¹	Biological sciences, other field ²
Mathematics	Biological sciences, fields not identified ²
Statistics	Agriculture and forestry ¹
Computer science and systems analysis ²	Animal science
Computer science	Animal, dairy, and poultry science
Systems analysis	Other agriculture
Computer science and systems analysis, other fields	Agriculture, general
Computer science and systems analysis, field not identified	Agriculture business ²
Engineering ¹	Agronomy, field crops
Physical sciences ²	Farm management (excluding agricultural economics)
Astronomy	Fish and game, or wild life management
Chemistry	Food science
Chemistry	Horticulture (fruit and vegetable production)
Pharmaceutical chemistry	International agriculture ²
Earth sciences	Ornamental horticulture
Geology	Soil science
Geophysics (including seismology)	Agriculture, other fields ²
Oceanography	Agriculture, field not identified ²
Earth sciences, other fields ²	Agricultural education
Meteorology	Forestry
Physics	Health professions ¹
Other physical sciences	Dentistry, D.D.S. and D.M.D. only
Physical sciences, general	Medicine, M.D. only
Metallurgy (excluding metallurgical engineering)	Nursing and/or public health nursing
Physical sciences, other fields ²	Optometry (excluding preprofessional degrees)
Physical sciences, field not identified ²	Osteopathy
Biological sciences ¹	Pharmacy
Anatomy and histology	Public health
Bacteriology, virology, mycology, parasitology, and microbiology	Veterinary medicine, D.V.M. only
Biochemistry	Other health professions
Biology, general	Chiropody or podiatry
Botany	Dental hygiene
Botany, general	Hospital administration
Plant pathology	Medical technology
Plant physiology	Occupational therapy
Entomology	Physical therapy, physiotherapy
Physiology	Radiologic technology
Zoology, general	Clinical dental, medical, and veterinary medical sciences (advanced degrees only)
Other biological sciences	Health professions, other fields
Premedical, pre dental, and pre-veterinary sciences	Health professions, field not identified
Biophysics	Science, general program (without major field) ¹
Cytology	II. Social sciences, humanities, and related professions
Ecology	Fine arts
Embryology	Architecture
Genetics	Music
Nutrition	Music education
Optometry (preprofessional degree)	
Pathology (excluding plant pathology)	

See footnotes at end of table.

TABLE J.—*Classification of degrees by field of study—Continued*

Music including sacred music	Psychology, other fields ²
Speech and dramatic arts	Psychology, field not identified ²
Speech and hearing	Social sciences ¹
Speech and dramatic arts	Anthropology
Other fine and applied arts	Economics
Art education	Agricultural economics
Art, general	Economics
Fine and applied arts, other fields	Geography
Fine and applied arts, field not identified	History
Philosophy and religion ¹	American civilization, American culture
Philosophy	History
Scholastic philosophy	International relations
Religious education and Bible	Political science or government
Other religious fields	Public administration
Religion, liberal arts curriculum, nonsectarian	Sociology
Religion, other fields	Other social sciences
Religion, field not identified	Social sciences, general
English and journalism ¹	Area studies, regional studies
English	Foreign service programs (consular and diplomatic service)
Journalism	Industrial relations
Foreign languages	Basic social sciences, other fields ²
Latin and/or classical Greek	Applied social sciences, other fields ²
French	Social sciences, field not identified ²
German	Education ¹
Russian and other Slavic languages	Physical education
Russian	Physical education (including non-teaching ²)
Other Slavic languages	Health education
Spanish	Recreation education
Other languages and language programs	Industrial arts
Linguistics (including phonetics and semantics)	Industrial arts education (non-vocational)
Italian	Trade and industrial education (vocational)
Portuguese	Other specialized teaching fields
Philology and literature of romance languages	Education of exceptional children
Other Germanic languages	Education of the partially sighted ²
Philology and literature of Germanic languages	Education of the blind ²
Arabic	Education of the mentally retarded
Chinese	Education of the emotionally disturbed ²
Hebrew	Education of the deaf ²
Hindi and/or Urdu	Education of the crippled ²
Japanese	Education of exceptional children, all other ²
Foreign languages, other fields ²	Specialized teaching fields, other fields ²
Foreign languages, field not identified ²	General teaching fields
Teaching English as a foreign language	Nursing and/or kindergarten education
Psychology ¹	Early childhood education
General psychology ²	Elementary education
Clinical psychology	Secondary education (including junior high school)
Counseling psychology ²	
Social psychology	
Rehabilitation counselor training ^{2 4}	
Educational psychology ^{2 5}	

See footnotes at end of table.

TABLE J.—Classification of degrees by field of study—Continued

II. Social sciences—Continued	Business education, commercial education
Education—Continued	Distributive education, retail selling
General teaching fields—Continued	Home economics
Combined elementary and secondary education	Home economics education
Adult education	Home economics, general
General teaching fields, other fields ²	Child development, family relations
Other education fields	Clothing and textiles
Educational administration, supervision, or finance ²	Foods and nutrition
Counseling and guidance	Institution management, institutional administration
Rehabilitation counselor training ²	Home economics, other fields
History, philosophy, and theory of education, and comparative education ²	Home economics, field not identified ²
Curriculum and instruction ²	Law (L.L.B., J.D., or higher degrees)
Education, general	Military, naval, or air force science
Preprofessional bachelor's degrees	Merchant marine (deck officer only)
Other education fields ²	Military, naval, or air force science
Education, field not identified ²	Theology
Library science	Theology (1st-professional degree)
Social work, social administration, social welfare	Theology (master's and doctor's degrees)
Other ¹	Miscellaneous and unclassified fields
Business and commerce	Trade and industrial training
Accounting	Arts, general program (without major field)
Other business and commerce	Arts and sciences, general program
Hotel and restaurant administration	Interarea and interfields of study ²
Secretarial studies	Fields of study not listed ²
Business and commerce, general	Field of study not identified ²
Business and commerce, other fields ²	
Business and commerce, field not identified ²	

¹ Projected in tab. 20, 21, and 22.

² Added and/or revised item, 1964-65 report.

³ Total of detailed listing by field in 1964-65 report.

⁴ See also education.

⁵ Includes similar listing from education, 1964-65 report.

TABLE K.—Constant dollar index

[1966-67 = 100]

¹ Includes estimates for "other" elementary and secondary schools such as residential schools for exceptional children, Federal schools for Indians, and federally operated elementary and secondary schools. The annual receipts were estimated as follows: Public; \$100 million for 1955-56, 1957-58, and 1959-60, \$200 million for 1961-62 and 1963-64; nonpublic, less than \$50 million for 1955-56, 1957-58, 1959-60, and 1961-62, and \$100 million for 1963-64.

² Less than \$50 million.

³ Less than 0.05 percent.

NOTE.—Receipts include revenue and nonrevenue receipts, current and plant-fund receipts, proceeds of loans, less transfers of funds which would result in duplication, and less repayment of loans. All receipts and deductions concerning loans are included in "All other" sources. Deduction of transfers was made from data in "All other" sources.

SOURCE: Department of Health, Education, and Welfare, Office of Education, *Digest of Educational Statistics, 1966*; and budget documents.

¹ Excludes payments for services rendered to the Federal Government.

² Includes Indian education and Economic Opportunity Act programs.

³ Includes Titles III (part) and X of NDEA and Titles II, III, and V of ESEA.

⁴ Includes District of Columbia, Canal Zone, national parks and territories, Cuban refugee education, etc.

⁵ Includes construction at Howard University and Gallaudet College, Washington, D.C., Higher Education Facilities Act, AEC and NSF grants.

⁶ Includes AEC, NSF, and PHS grants, language and area centers, land-grant colleges, and support of Howard Uni-

versity, Gallaudet College, East-West Center for Cultural and Technical Interchange, and State merchant marine schools.

⁷ Includes Veterans education and work-study programs.

⁸ Estimated actual value of surplus real and personal property at time of transfer for education uses.

⁹ Includes college, health professions, nursing, and Cuban refugee programs.

¹⁰ Includes college housing and Higher Education Facilities Act programs.

¹¹ Includes payments for services rendered to the Federal Government and education and related activities excluded above.

¹² Office of Education estimates.

¹³ Data not available.

DISCRIMINATION PROHIBITED

Title VI of the Civil Rights Act of 1964 states "No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance." Therefore, any program or activity making use of this publication and/or receiving financial assistance from the Department of Health, Education, and Welfare must be operated in compliance with this law.
