\*Health Occupations Education, Program Descriptions

Identifiers- Massachusetts

Information for this inventory is limited to four-year college and university baccalaureate programs. The data were compiled from the 1968-69 catalogs of the 46 Massachusetts colleges and universities which have specified health training programs. Criteria for selection included the following: (1) The program must train students for a specified health position, (2) the length of course must be given in academic years, and (3) descriptive texts on job functions and course requirements must be given. Information on the programs includes general discussions of the type of curriculum in each listed occupation and the courses required. The inventory consists of three parts. A preface contains background information including sponsorship, scope of the project, methods of compilation, and a bibliography. The second section includes a list of health positions and cross references to the inventory. The final section contains the detailed programs listed in alphabetical order. (BC)

## A C K N O W L E D G E M E N T S

Individuals in the Commonwealth of Massachusetts departments who assisted by reviewing sections of the text: Department of Public Health: John A. Bellizia, director, General & Environmental control, Sanitary Engineering; Dr. James J. Callahan Jr., assistant director, Medical Care; Teresa DePippo, public health nutritionist, Adult Health; Dr. Geoffrey Edsall, Institute of Laboratories; Eleanor Gaffney, president, Massachusetts Board of Nursing Registration; Marie Gately, director, Health Education; Dr. Grace Hussey, director, Maternal and Child Health; Dr. Phillip Johnston, Maternal and Child Health; Dr. George Michael, director, Food & Drug; Isaac Seligson, director, Social Work; Dr. William Wellock, director, Dental Health. University of Massachusetts: Dr. William Darity, associate professor of public health; Dr. Russell Smith, professor of veterinary & animal science. Department of Mental Health: Dr. Arthur Bindman, regional administrator for mental retardation.

Individuals in other organizations who also contributed generously of their time in reviewing

text are: Dr. Floyd L. Benitz, director, Lesley College Schools for Children; Thomas E. Bowes, supervisor of staff development, Massachusetts Rehabilitation Commission; Shirley Cogland, Children's Hospital Medical Center; Sharon Cohen, medical record librarian, Massachusetts General Hospital; Charles Colby, assistant librarian, Boston Medical Library Services, Countway Library, Harvard University; Veronica Dobransky, chairman, Massachusetts Association of Occupational Therapists; Dr. Boris Gertz, director of graduate programs, Lesley College; Dr. Henry Guerney, assistant professor of education, Boston University; Mary MacDonald, Massachusetts Association of Physical Therapists; Dr. Howard L. Reed, dean, Massachusetts College of Pharmacy; Stanley E. Smith, Massachusetts Society of Optometrists; Everett Spencer Jr., executive secretary, Massachusetts Medical Society.

Others whose cooperation was most helpful: Mrs. Dorothy Simpson, New England Association of Colleges and Secondary Schools; Miss Ruth Williams, Massachusetts Department of Public Health Library.

## P R E F A C E

Background of the Study

This two-part health manpower survey was undertaken in order to discover the extent of Massachusetts health training, and to provide a resource tool for those engaged in training and recruitment.

In the last three years, since 1965, 230 training programs at less than a baccalaureate level were started in Massachusetts. Part I of the manpower survey, published May 1968, lists these new training programs as well as the 235 existing ones.

The college and university catalogs of the last few years show many new courses in health fields, ones oriented to community problems, leadership training in group work as well as technological advances in public and environmental health fields and a trend to the multi-discipline approach as an undergraduate preparation for graduate specialization. No document existed that listed the 322 Massachusetts college level health training programs together in one pamphlet where they could be examined as an entity. Part II of the survey endeavors to do this.

The two-part study is published in an effort to help all groups. Part I is a practical resource tool for shorter terminal education leading to a wide variety of health occupations. Part II lists health occupations that require many years of education.

Sponsorship

Part II was compiled under the direction of Suzanne Greenberg, director of the Training Center for Comprehensive Care, by Nadia Williams, survey coordinator, with the research assistance of Helen Meltzer, executive director of the Massachusetts Public Health Association, and Virginia Tobin.

The survey was funded by the U. S. Office of Economic Opportunity in cooperation with the Massachusetts Department of Public Health.

Scope of Part II

Information for the inventory of less than baccalaureate programs (Part I) was obtained by a questionnaire survey to the many types of health, educational, and community organizations offering programs of training. The Part II inventory of higher education programs is limited to those conducted in four-year colleges and universities.

It does not include postgraduate training offered by medical and other health institutions for persons with college degrees. Nor does it include all the courses given by these institutions in affiliation with the colleges and universities. For a complete picture of Massachusetts health manpower training, these programs and courses should be included. It is hoped that at a later date this may be done.

### Method Used in Compilation

Part II was compiled from the 1968-69 catalogs of 46 Massachusetts colleges and universities which give specified health training programs. Criteria for selection included the following:

(a) The program of training must be one leading directly to a specified health position. Since there are opportunities in so many of the health fields at entry level for persons with bachelor's degrees in the basic health sciences, these degree programs were excluded (except in instances where clinical or practicum experience accompanied the course).

(b) The length of course is given, in academic years, wherever clearly stated in the catalog.

(c) Comments on the programs were selected at random to give the student reader a very general picture of the type of curriculum in each listed occupation and course required. When one college program is fully described, no description is given for subsequent listings offering similar courses.

The phrase "includes courses in:" is used to indicate that the descriptive listing of courses is not complete. The student should consult the respective catalogs for the full offerings.

Descriptive text on job functions and course requirements is included to aid the high school student. It is derived from the bibliographic sources and from catalog de-

scriptions. Reference numerals in the text refer to these sources. Each occupation description was reviewed by a qualified professional in Massachusetts for its applicability to the local situation.

### Bibliography

I N V E N T O R Y

HEALTH MANPOWER TRAINING IN MASSACHUSETTS. PART II. IN FOUR-YEAR COLLEGES & UNIVERSITIES

ADMINISTRATOR

Administrative opportunities in the health field cover a wide range of situations. There are hospital administrators (and within the hospital, unit administrators in charge of functions such as physical therapy, wards, admission etc.). There are health officers, nursing home administrators, and other leadership positions in health service organizations such as local boards of public health, voluntary health agencies, day care centers, and roles in government agencies and departments.

The situations vary from organizations employing many hundreds, such as hospitals and government agencies, to three or four member staffs in the local departments of public health, community service clinics, or the doctors offices.

In the smaller situations the administrator is usually a health professional, a medical or

public health physician, a dentist, an administrative nurse, a sanitarian, but there are many other administrative positions for which the medical, dental, or nurse training is not required. Many of the assistant jobs to the health administrators are filled at the entry level with persons with a baccalaureate degree in the sciences. Advancement comes with on-the-job experience, or additional further training at a later date.

The supportive administrative staff positions are not considered in this inventory since training for them is the same as that preparing for similar positions in industry and other services. These jobs include: administrative assistants, comptroller or business manager, personnel director, purchasing agent, public relations director, chief engineer and maintenance administration.

Training Programs

Brandeis University. Florence Heller Graduate School for Advanced Studies in Social Welfare, Waltham, Mass. 02154

M. Social Work or M. A. 2 yrs.....  
Advanced Certificate in Social Welfare

1 yr. beyond a master's degree.....

D. Social Welfare, or Ph. D.....

A doctoral program with a master's degree received during the course of study. Educates for social work administrative and consultative roles, for research and teaching. Accepts social science A. B. graduates as well as physicians, public health nurses, social workers, and other experienced professionals.

Letter of attestation.....  
(A program in cooperation with the  
Massachusetts Federation of Nursing  
Homes)

(Graduate School of Education)  
M. Educ. (Admin. Rehab.).....

Emphasis is placed on planning, organization, deli-  
very and evaluation of health services. Tradition-  
al administrative techniques such as budget prepara-  
tion, personnel management, and supervision are  
also treated. There is a close relationship with  
the Harvard Medical School, its affiliated hospitals,  
and community services, the School of Business  
Administration, and the Department of Economics.  
Specialization is in administration of dental health,  
medical care, and health education.

Special courses for physicians, health professionals,  
economist, social scientists, and management ana-  
lysts who are enrolled in master's or doctorate  
programs at the school. Training is for adminis-  
trative and policy-making posts in medical care  
and general public health programs.

Program offers three electives for specializa-  
tion: (1) Hospital organization and manage-  
ment, (2) Long-term care administration, (3)  
Public health and personal and community health.

A 40 credit concentration that can be part of an  
eight year part-time baccalaureate program; or  
the credits can be applied to an associate degree,  
or the courses can be taken first with an inter-  
mediate goal of a letter attesting to the com-  
pletion of the course sequence. The letter meets  
the requirements for professional and regulatory  
agencies.

BIOMEDICAL ENGINEER

The biomedical engineer develops new instruments and equipment for use in patient care or in research, and applied engineering techniques to improve the methods of diagnosis and treatment of disease, and accidents to the human body.

He is responsible for assembling, adapting, and maintaining the equipment as well as developing the new devices. These may be parts used to repair or compensate for damaged parts of the body such as artificial heart valves, kidney machines; or the engineer may develop methods to monitor air pollution, invent new screening methods, or work on surgical instruments, and adapt orthopedic and prosthetic appliances.

Special training in plastics enables him to work on repair and replacement materials, and the development of artificial organs.

The biomedical engineer must have a bachelor of science degree with a concentration in mathematics, biophysics, or one of the engineering sciences. He will find a more responsible position and greater remuneration, with the ability to work in independent research, if he has his master's or doctorate degree in biomedical engineering. His field will be working in hospitals, scientific foundations, government laboratories for medical research, universities, and electronic and instrumentation industries.

Training Programs

Clark University, Worcester, Mass., 01610

2 yrs. Admission requires a bachelor's degree in mathematics or one of the engineering sciences. Program in cooperation with Worcester Polytechnic Institute.

5 yr. cooperative plan

CHILD CARE SPECIALISTS

There are opportunities in hospital recreation programs, in day care centers, and community action programs in urban areas for the person who has specialized in child study and child development.

ation. Most of these courses are preparing nursery school and kindergarten teachers, but the graduates are equipped to work in the medical and health settings as well.

Courses at the bachelor degree level give the student, in addition to child development studies, familiarity with testing, guidance, nutrition, family relations, and children in the urban setting. Usually field experience is required before gradu-

There are, also, beginner's jobs which with advanced study, will qualify for work with children who have special needs, such as the emotionally disturbed, handicapped, and retarded. (See the section of this inventory on "Rehabilitation Positions")

Training Programs

Simmons College, 300 The Fenway,  
Boston, Mass. 02115

B. S. Child Development: 4 yrs.....

Prepares the individual to work with young children in diverse situations including hospital recreation programs and day care centers and community action programs in urban areas. Course is also preparation for graduate study with the child who is emotionally disturbed, handicapped, or retarded.

Tufts University. Eliot Pearson Dept. of Child  
Study, Medford, Mass. 02155

B. S. Child Study: 4 yrs.....

Prepares for professional work with children in... hospitals, day care centers, in testing, teaching, guidance, and is also preparation for graduate work with the atypical child.

M. S. Child Study/M. S. Educ. (Child Study).

One year and a summer session (36 credits)

University of Massachusetts, School of Home  
Economics, Amherst, Mass. 01002

B. S. Home Economics (Child Development)....

Prepares student to work in group programs serving ... clinics for exceptional children, hospital recreation programs, community and welfare agencies. Includes advanced courses in Child development, Nursery school management.

M. S. Human Development.....

CHILD CARE SPECIALISTS (contd.)Training Programs

Wheeler College, 200 The Riverway,  
Boston, Mass. 02215

B. S. Educ. (Nursery & Primary).....  
M. S. Educ.: 1 yr. plus summer school  
full time program (32 credits).....

At the masters level there are four curricula:  
(1) for the experienced teacher, (2) for the recent graduate, (3) new careers, and (4) for the teacher of the emotionally disturbed child. The new careers is for mature men and women, college graduates, who are employed in other fields and would like to shift. This is a part time study with late afternoon and evening classes. Includes student teaching full time. All courses work with the economically deprived child and family in field situations, and include tests and measurements.

DENTAL HYGIENIST

The dental hygienist cleans teeth and instructs the patient in proper tooth-brushing techniques and correct diet for good teeth. Under the supervision of the dentist, the hygienist removes stains and calcium deposits, polishes teeth, and massages gums. She may apply fluoride solution to children's teeth, take and develop x-rays, mix filling compounds, prepare solutions, administer prescribed treatments, sterilize instruments and assist the dentist at the chairside.

Although dental hygienists work primarily in

dental offices, many have positions in public and private schools, clinics and other institutions. The field of the dental hygienist with an associate degree is usually in clinical practice. (See Part I). With a baccalaureate degree, she may teach in a school, hospital, or public health agency; and with a more advanced degree the training provides background for teaching in a school of dental hygiene.

The dental hygienist must be registered in the state in which she wishes to practice. She takes a licensing examination given by the state board of dental examiners.

Training Programs

Northeastern University. University College  
360 Huntington Ave., Boston, Mass. 02115

B. S. (Dental Hygiene).....

The first two years are taken at the Forsyth School of Dental Hygienists in cooperation with Northeastern leading to an associate degree. The remaining requirements are taken in liberal arts at the University College (part-time, 78 additional credits).

Most dentists are general practitioners, working in their private offices, but some teach in dental schools, engage in research, administer dental programs, become public health dentists, or provide care to patients in public and private clinics, hospitals, military installations, and other institutions.

In their work they are assisted by the dental hygienist, the dental assistant, or the dental laboratory technician (described in Part I). However, some dentists do all their own work, including the making of artificial teeth and dentures.

DENTIST

Modern dentistry places great emphasis upon the prevention of dental disease through such measures as fluoridation and dental education. Regular examination makes possible early diagnosis and treatment of tooth decay, prompt detection of oral cancer; and educational programs stress the importance of proper diet, correct oral hygiene practices.

Dental schools usually require a bachelors degree (with prescribed courses) as part of their admission requirement, though some accept persons with three years of college. Fifteen colleges in Massachusetts specify pre-dental programs of the required courses. At other colleges, the student himself must select

continued on next page

DENTIST (contd.)

and plan his required background. After graduation, the graduate takes an examination given by the state board of dental examiners for his licence to practice.

If he wishes to specialize, he takes at least two years of advanced study to receive his master's degree in dental science (M.D.S. or M.S.), or one year of study for a master in public health (M.P.H.). In addition, he needs several years of experience in his specialty to qualify for the examination by the nationally recognized board in each of the dental specialties.

He may also wish to pursue his specialty further, studying another year, to receive his doctorate of science in dentistry (D.D.S., or D.M.D.), or a doctorate in public health on completion of independ-

ent and original investigation after his master's degree.

It is possible to earn a Certificate of Advanced Graduate Study (C.A.G.S.) upon completion of the first year of course work at the master's level and the clinical aspects of the training.

There is a nationally recognized examining board for each of the dental specialties:

- Endodontics (root canal treatment)
- Oral pathology (diseases of the mouth)
- Orthodontics (teeth straightening)
- Pedodontics (children's dentistry)
- Periodontology (tissues and gums, bones)
- Prosthodontics (artificial teeth or dentures)
- Public health dentistry

Training Programs

Postdoctoral fellowship program in dental public health..... (In cooperation with the Harvard School of Dental Medicine and the Mass. Dept. of Public Health)

3 yrs. First year at the School of Public Health, second year is a residency with the Mass. Dept. of Public Health, third year is spent in research. For careers in dental public health and ecological dentistry.

Harvard University, School of Dental Medicine 188 Longwood Ave., Boston, Mass. 02115 Postdoctoral Certificate in Academic Dentistry.....

3 yrs. in clinical areas of Orthodontics, Periodontics, Dental Medicine, Pedodontics. In collaboration with the Forsyth Dental Center and clinics, the Mass. General Hospital, and the Children's Medical Center.

DENTIST (contd.)

## Training Program

## (DENTAL SPECIALIZATION contd.)

Harvard University, School of Dental Medicine  
Residency required for A. B. P. diploma  
from American Bd. of Pedodontics.....  
Internship in Oral Surgery.....  
Prosthetic Dentist course.....

Massachusetts Institute of Technology. Dept. of  
Nutrition and Food Science  
211 Massachusetts Ave., Cambridge, Mass. 02139  
S. M. Oral Science.....  
Ph. D. or Sc. D. Oral Science.....

Tufts University. Graduate School of Arts &  
Sciences, 136 Harrison Ave., Boston, 02111  
M. S. or M. D. S.....

Postgraduate certificates of accomplish-  
ment in dental specialties.....

Postgraduate refresher courses.....  
(Div. of Continuing Education, School  
of Dental Medicine)

Residency at Children's Medical Center. Intern-  
ship 8 mos. in cooperation with Harvard Medical  
School, School of Dental Medicine, and Massachu-  
setts General Hospital.

Prosthetic Dentistry 11 mos. To meet the require-  
ments for the Board of Prosthetics.

Special programs in oral science, supported by a  
grant from the Nat. Institute of Dental Research  
to prepare graduate students, postdoctoral dental  
investigators and others for research careers.

1 yr., plus a summer term. Training identical  
for both degrees, but M. S. requires a foreign  
language for admission to the program. Special-  
ization: oral pathology, oral pedodontics;  
orthodontics, periodontics, prosthodontics, and  
radiology.

For those interested in training graduates of  
dental schools; and preparation for specialty  
practice and the granting of the diplomas from  
the specialty boards.

Recent developments in the clinical practice of  
dentistry.

DIETITIAN & NUTRITIONIST

The dietitian and nutritionist take different  
courses in their training and their functions  
usually differ, but their titles are often used  
interchangeably. Basic training for both re-  
quires courses in chemistry and biology as well  
as foods and nutrition courses, leading to a  
bachelor's of science degree. Special courses  
are elected in the final undergraduate years to

prepare for specific positions and satisfy special  
interests. For example, the future dietitian may  
take courses in institution management while the  
future nutritionist may take advanced nutrition and  
science courses, including the social sciences.

Following graduation from college, a fifth year of  
training, a dietetic internship, may be taken in a

continued on next page

DIETITIAN & NUTRITIONIST (contd.)

hospital, university, or industrial setting. Some internships provide the opportunity to work concurrently for a master's degree. These programs take 18 months instead of the usual 12 month internship. An approved dietetic internship qualifies a dietitian to become a member of the American Dietetic Association.

The administrative dietitian plans meals and supervises the preparation of food to meet the varied nutritional needs of people in hospitals, schools, industrial cafeterias and commercial restaurants. She, or he, is mainly concerned with the management of business aspects of the dietary department.

As a member of the medical team, the therapeutic dietitian in the hospital interprets the diet orders given by the physician and modifies the patient's food to fit the prescription. The teaching dietitian participates in the training of dietetic interns, nurses, dental, or medical students. The research dietitian is employed in hospitals, industry and the armed forces. She plans diets for special studies on various

disease conditions or she helps develop new food for use by the public or servicemen in the field and in space.

The role of the nutritionist is principally that of a teacher and consultant. She often has had graduate training with a master's degree in nutrition or public health, and may be employed in outpatient clinics, health centers, or in public health departments where she will be consultant to the staff.

Although she may work directly with patients, planning meals for children, the aged, expectant mothers, the overweight, diabetic, or persons suffering from ulcers and allergies, the main emphasis is in working with the community with groups of people. They may be nursing groups, or she may serve as a consultant on committees of other professionals. She may write articles for newspapers or prepare special pamphlets. In so doing she helps promote an awareness in her professional colleagues of the nutritional needs of the community, stimulating a demand for nutrition services and striving to maintain the highest possible standards.

## Training Programs

Atlantic Union College, South Lancaster,  
Mass. 01561

B. S. Foods and Nutrition..... 4 yrs.

Harvard University, School of Public Health,  
Dept. of Nutrition, 55 Shattuck St.  
Boston, Mass. 02115

M. P. H. (Nutrition).....

1 yr. Program for physicians or persons with similar background in biological sciences.

DIETITIAN & NUTRITIONIST (contd.)

## Training Program

Massachusetts Institute of Technology 77 Massachusetts Ave., Cambridge, Mass. 02139 S. M. Nutrition and Food Science..... D. Science Nutrition and Food Service.....	Masters program is one year if the student has a M.I.T. bachelor's degree with major in nutrition, food science, food technology, chemistry, biology, or chemical engineering or in one of the medical, agricultural or other physical sciences, or an M. D., D.D.S., D. M. D. or D. V. M. degree. Transfers may take longer.
Ph. D. or Dr. Sc. in Food Science and Technology..... Ph. D. and D. Sc. in Nutritional Bio- chemistry and Metabolism.....	3½ yrs. including master's year of study, independent research thesis, and comprehensive written and oral examinations. Prepares for research positions.
Special program in Clinical Nutrition and Metabolism.....	For persons who hold the M. D. or equivalent from medical school and have completed one-year internship or postdoctoral training. The Department administers a clinical research center for metabolic studies on hospitalized and ambulatory patients.
B. S. Life Sciences..... Courses in food sciences, nutrition and biology	4 yrs. Prepares students for teaching and beginning research positions in biology, nutrition, food science, for graduate study, and work with industries concerned with biological materials and the fermentation processes.
Regis College, Weston, Mass. 02193 Undergraduate course in Institutional Management & Food Preparation.....	3 hrs. lecture, 3 hrs. laboratory
Simmons College. School of Home Economics 200 The Fenway, Boston, Mass. 02115 B. A. Home Economics.....	4 yrs. Student may elect to specialize in Institutional management, Dietetics, or Foods and nutrition.

continued on next page

DIETITIAN & NUTRITIONIST (contd.)Training Programs

Simmons College. School of Home Economics (contd.)  
M. S. Home Economics (Foods & Nutrition).....

Part-time program primarily for the teacher, but others may apply. Must be completed within 8 yrs.

State College at Framingham  
State Street, Framingham, Mass. 01701  
B. S. Educ. (Foods & Nutrition).....

4 yrs.

Tufts University, Graduate School of Arts & Sciences, Dept. of Education, Medford, Mass. 02155  
M. Educ. (Nutrition Education).....  
(In cooperation with Tufts School of Medicine, Dept. of Preventive Medicine, and Boston Dispensary)

18-month program in dietetics and teaching including a 12-month training program at the Frances Stern Food Clinic of Boston Dispensary.

University of Massachusetts. School of Home Economics, Amherst, Mass. 01002

B. S. Home Economics (Dietetics & Institutional Management) (Foods in Business).....

M. S. Nutrition & Food.....

Ph. D. Nutrition and Food.....

4 yrs.

1 yr. after a baccalaureate in home economics with a major in dietetics or nutrition and food, strong related sciences.

## Dietetic internships:

Beth Israel Hospital  
300 Brookline Ave., Boston, Mass. 02215.....  
Peter Bent Brigham Hospital  
721 Huntington Ave., Boston, Mass. 02115.....  
Mass. General Hospital  
Fruit Street, Boston, Mass. 02114.....

All programs are one year courses. For admission the candidate must have his baccalaureate degree with specialization in nutrition, institutional management, or sciences.

ENVIRONMENTAL HEALTH POSITIONS

To attack such multidimensional problems as air pollution, food protection, occupational health, radiological health, water supply and pollution, and other health hazards in the general environment, requires a wide variety of professional and technical skills.

In the past, those who were concerned with healthful surroundings were the sanitary engineer, the physician, and some research scientists. They sought to prevent the spread of communicable disease by eliminating or controlling its sources and its carriers in the environment, and by personal vaccination. Today the contaminants have multiplied due to persons moving from place to place, the airplane, more people in cities, greater population, detergents in the water supply, more packaged foods and chances of its deterioration.

Today, a greater number of specialists are needed, many with new technical knowledges and skills, to control the environmental hazards: industrial hygienists, health and safety specialists, food technologists, food analysts, and food inspectors,

radiological health specialists, and a range of research scientists: biologists, bioengineers, chemists, ecologists, hydrologists, limnologists, meteorologists, physicists, physiologists, toxicologists, veterinarians. They work from local, state or national public health offices and in the public health laboratories, private as well as public water works, and in industrial and university situations. There are positions also for public health dentists, public health nurses, and research specialists in biostatistics, epidemiology, health demography. (Training for laboratory positions, for food technologists, for nurse specializations, and veterinarians is listed under separate titles in this inventory).

The minimal educational requirement for the environmental professional is a bachelor's degree in engineering or one of the biological or physical sciences. The trend, however, is toward graduate study in one of these fields, or in an area of specialization such as air pollution, industrial hygiene, radiation science or sanitary science.

Training Program

Harvard University, Graduate School of Arts & Sciences, Div. of Engineering and Applied Physics  
75 Mt. Auburn St., Cambridge, Mass. 02138

A. M. (Engineering).....  
S. M. (Engineering).....  
M. Engineering.....  
Ph. D. Engineering.....

Courses in: Design of water resource systems, Advanced topics in environmental engineering, Water supply engineering, Operations in water and water treatment, Principles of water chemistry, Chemical and biological processes in sanitary engineering, Principles of environmental health, Operations research in environmental health engineering, Water quality and its control, Environmental microbiology, Analysis of air contaminants, etc.

ENVIRONMENTAL HEALTH POSITIONS (contd.)

## Training Programs

Harvard University, School of Public Health,  
55 Shattuck St., Boston, Mass. 02115, Dept.  
of Physiology.

M. P. H. .... 1 yr.  
D. P. H. ....  
(1st yr. M. P. H.; 2nd yr. independent  
research and thesis.)

M. S. in Industrial Health.....  
(In cooperation with the Graduate  
School Division of Engineering)  
Same prerequisite as M. P. H.

M. S. in Hygiene.....  
(Kresge Center for Environmental Health)  
1 yr. program for MDs and equivalent  
background. 2 yr. program for others.  
Dr. S. in Hygiene.....  
(Advanced work in fields described  
under the M. S.)

Programs in International Health leading  
to M. P. H., S. M. in Hygiene, or D. P. H..  
(A cooperative program with six other  
Harvard University divisions)

Certificate in International Health.....  
(Granted by American Board of  
Preventive Medicine in the area of  
general preventive medicine)

Lowell Technological Institute, Lowell, Mass.  
01854 (Div. of Physics & Engineering)  
B. S. Nuclear Engineering.....

Prerequisite for the M. P. H. program is an M.D. or  
similar background in the biological sciences.

Courses in Human physiology, Environmental phys-  
iology (human tolerance to temperature, measurement  
of physical fitness, age and fatigue, types of mus-  
cular work), Principles of toxicology (effect on  
living tissue), Special topics in respiratory phys-  
iology, Radiation biology.

Includes courses in: Basic problems in occupa-  
tional health and industrial environments, Analysis  
of air contaminants, Environmental control, Aerosol  
technology, Radiation protection engineering,  
Advanced air analysis.

Courses in: Principles of environmental health,  
Aviation health and safety, Introduction to radio-  
activity and radiation protection, Problems in  
radiation dosimetry, Occupational medical seminars,  
Occupational medical clinics, Human factors in  
occupational performance and safety, Occupational  
medicine, Community air pollution, Operations re-  
search in environmental health engineering.

These programs lead to careers in World Health  
Organization, U. S. State Department, J. S. Public  
Health Service, Peace Corps, industrial organi-  
zations, mission groups, philanthropic foundations,  
other government agencies providing and planning  
health services for developing country.

3 year residency for physicians

4 yrs. Includes in the last year courses in  
sanitary engineering.

ENVIRONMENTAL HEALTH POSITIONS (contd.)

## Training Program

Lowell Technological Institute (contd.)

(Div. of Evening Studies)

Associate Degree in Applied Science in

Civil Engineering.....

Associate Degree in Radiological Health

Technology.....

(See Part I, of this report)

An inservice training program limited to employees of the Commonwealth of Massachusetts and the cities and towns of the commonwealth. 5 yr. program, evening. Includes two courses in sanitary engineering.

5 yr. evening program, three evenings a week, Prepares a radiological health technician trained to (1) take, prepare and analyze samples, (2) assist in safety surveys for protection from radiation-producing machines and areas utilizing radioactive materials, (3) assist in operation of radiation surveillance equipment which monitors radioactivity in air and water, (4) operate, maintain, and calibrate laboratory counting equipment, (5) assist in the measurement of radiation contamination and external radiation and study shielding, storage facilities, waste disposal plans, and facility operating practices.

Massachusetts Institute of Technology. Graduate School. 211 Massachusetts Ave., Cambridge, Mass. 02139

B. S., M. D., D. Sc., or Ph. D. in Civil Engineering.....

M. S. Nuclear Engineering. 1 yr.....

Ph. D. Nuclear Engineering. Advanced study.....

M. S., Ph. D. Food Toxicology.....  
(Division of Nutrition & Food Science)

Includes courses in: Water resource systems, Water quality control, Hydraulics, Fluid mechanics, soil mechanics.

Includes radio isotope study and the biological effects of radiation, shielding, treatment of radioactive wastes.

Evaluating the wholesomeness and safety of foods, additives, contaminants, techniques of safety evaluation, biological assay, and parameters of biological response.

ENVIRONMENTAL HEALTH POSITIONS (contd.)

Training Programs

Northeastern University, 360 Huntington Ave.,  
Boston, Mass. 02115

(School of Engineering)

B. S. Civil Engineering.....

(Graduate School of Engineering)

M. S. Civil Engineering (Sanitary Engineering).....

(Graduate School of Arts  
& Sciences)

M. S. Health Sciences.....

(Lincoln College)

B. S. Engineering Technology.....

(in cooperation with University College)

Assoc. Degree in Engineering. 4 yrs. part-time (Municipal & Sanitary Engineering)....

Smith College, Northampton, Mass. 01060

B. S. Environmental Biology.....

Southeastern Mass. Technological Institute

College of Engineering. North Dartmouth, 02747

B. S. Civil Engineering.....

5 yrs. cooperative. Includes in the last year a course in sanitary engineering.

2 yr. part-time or 1 yr. full time. Courses include: Sanitary chemistry, Water and waste treatment and analysis, Industrial hygiene, air pollution, and Radiation health engineering.

A part-time evening program including Environmental microbiology, Parasitology, Medical microbiology.

Prepares graduate to assume responsibilities related to the design, construction, operation and supervision of municipal plants and systems concerned with the storage and distribution of water and also the disposal of sewage and waste in urban areas, with due consideration for contamination and pollution.

4 yrs. Courses include Environmental health, Concepts of public health, Microbiology, Ecology, Biogeography, Health education seminar (evening course).

In the third and fourth year there is a required course in Sanitary engineering, and elective courses in Water supply, Sewage disposal, and Sanitary bacteriology.

continued on next page

## ENVIRONMENTAL HEALTH POSITIONS (contd.)

Training Programs	
Tufts University. College of Engineering Medford, Mass. 02155	
B. S. Civil Engineering (Sanitary Engineering or Environmental Health Engineering).....4 yrs.	Includes courses in Sewage and water treatment, Water and waste water chemistry, Public health, Radiological health, Advanced hydraulics, Parasitology, Public health administration, Principles of epidemiology, Biology-ecology.
M. S. Civil Engineering (Sanitary Engineering).....2 yrs.	
University of Massachusetts, Amherst, Mass. 01002 (School of Engineering & Graduate School of Engineering)	
B. S. Civil Engineering (Environmental Engineering).....	Includes courses in Water and waste water demands, quantity, and quality, related machinery. Sanitary engineering, analysis, Radiological health engineering, Stream pollution.
M. S. Civil Engineering (Environmental Engineering).....	
(College of Liberal Arts)	
B. S. Environmental Health.....	Includes courses in Occupational health, Industrial hygiene, Sanitary engineering, Air pollution.
(College of Agriculture)	
B. S. Entomology.....	With an option of medical entomology major, or major in entomology concerning pest control, quarantine, etc.
(Graduate School)	
M. S. Public Health.....	Optional concentration in: (1) Administration of Health Services, (2) Community Health Education, (3) Environmental Health, (4) Epidemiology and Biostatistics, (5) Public Health Laboratory. Usually applicants are best prepared with undergraduate major in public health or the physical or biological sciences. Additional background in social and behavioral sciences is desirable.

ENVIRONMENTAL HEALTH POSITIONS (contd.)

Training Programs

Worcester Polytechnic Institute,  
Worcester, Mass. 01609

B. S. Civil Engineering.....

Includes courses in; Elements of environmental engineering (sewage treatment, construction, water resources, design and operation of reservoirs, purification, air and stream pollution), Environmental engineering design projects, Engineering aspects of nuclear explosions.

M. S. Nuclear Engineering.....

FOOD & DRUG INSPECTORS & ANALYSTS

Making sure that the foods we purchase and the drugs we buy are safe and healthy is the province of the food and drug inspectors. They are the persons who act as watchdogs of our food and drug laws, inspecting to see that both the manufacturer and the distributor is maintaining the government standards required for good health. The experts who are engaged in improving food products are the food technologists. They work with food production, processing, packaging, distribution, preparation, and utilization of foods. It is the pharmacologist who specializes in improving drugs (see under Laboratory Positions later in this report).

Since the food inspector must examine food from its raw state through all its processing stages, he needs training in animal science as well as food processing. Most of the meat inspectors employed by the U. S. Department of Agriculture are veterinarians, though some chemists and bacteriologists are also engaged.

Behind the inspectors, who makes the on-the-spot check of the condition of the food, are the

laboratory analysts who test inspector's samples more intensively.<sup>1</sup>

The inspector should have at least a bachelor's degree with a science major. He must be able to use scientific instruments and methods for on-the-spot testing. He is in contact with persons at all levels of processing, the manufacturer, the research chemist, assembly line foreman, warehouseman, store owner and handlers, court officers, and consumers.

Jobs are available in the U. S. Food and Drug Administration in their branch offices and in corresponding units in state agencies. Men performing the same functions are also employed in food processing plants. There are many openings for beginners with baccalaureate degrees in food sciences or chemistry and biology. These beginners are trained further on the job.

A food technologist may start out as a chemist or bacteriologist, or even as a process engineer in a canning factory. From such a position he may move to the research department where new products and processes are developed.

FOOD TECHNOLOGISTS,  
FOOD & DRUG INSPECTORS & ANALYSTS (contd.)

To enter the food technology field, a person must first have a B. S. degree in food science and technology. This means a good background in basic sciences such as chemistry, bacteriology, physics, nutrition, biology, and mathematics.

This enables him to have an entry job as a food technologist. For a career in research, a master's or doctor's degree is almost a necessity, and for teaching it is mandatory.

Training Programs

Massachusetts Institute of Technology. Dept. of Nutrition & Food Science, 211 Massachusetts Ave. Cambridge, Mass. 02139

M. S. Nutritional Biochemistry and Metabolism.....  
M. S. Food Science and Technology.....

Ph. D. or Dr. Sc. in Food Science and Technology.....  
Ph. D. or Dr. Sc. in Nutrition, Biochemistry & Metabolism.....  
See also course in Food toxicology and B. S. Life Sciences.....

University of Massachusetts. Graduate School Amherst, Mass. 01002

M. S. (Food Science & Technology).....1 yr.  
Ph. D. (Food Science & Technology).....  
Ph. D. (Industrial Microbiology).....

(See under Dietitian, Nutritionist re:  
B. S. Foods in Business).....

1 yr. course for students who have a B. S. in Life Sciences from M. I. T. or equivalent with major in nutrition, food science, food technology, chemistry, biology, or chemical engineering, or in one of the medical, agricultural or other physical sciences with a strong background in chemistry; or an M. D., D. D. S., D. M. D., or D. V. M. degree.

Time varies. Student can complete in 3½ yrs. full time work, including the M. S. level.

Listed under Environmental Health Positions.  
Listed under Dietician & Nutritionist.

Includes courses in: Microbiology and food processing; Thermobacteriology & food processing; Food packaging; Lipid chemistry; Food analysis, Food colorimetry, Biological & toxicological assay of food. Work in the area of dairy technology is taken in the Dept. of Food Science & Techn. Industrial microbiology is offered in Dept. of Food Science & Techn. in cooperation with the Institute of Agricultural & Industrial Microbiology.

continued on next page

FOOD & DRUG INSPECTORS & ANALYSTS (contd.)  
FOOD TECHNOLOGISTS,

Training Programs

University of Massachusetts (contd.)

M. S. Animal Science.....

Ph. D. Animal Science.....

M. S. Agricultural & Food Economics.....

Ph. D. Agricultural & Food Economics.....

Includes courses in Avian genetics, Adv. animal genetics, Fertility and fecundity, and control, Avian nutrition, Ruminant nutrition, Animal physiology, etc.

The health educator may work in community health education, be a school health educator, or assume the responsibilities of a school health coordinator.

The community health educator works directly with the public, the various community groups (churches, welfare organizations, labor unions, health agencies, the schools) to keep them aware of the health problems in their environment, and to stimulate solutions by the particular groups.

The school health educator, on the other hand, is concerned with classroom teaching of the students, the health program in the schools, and its effect on the community; while the school health coordinator or supervisor may work with all groups, make arrangements for workshops, but, specifically in the interest of the school child.

Besides a general background in all health sciences, sociology and psychology, the public

HEALTH EDUCATOR

health educator will be called upon to exercise leadership skills in communication, community development, community organization, group work, public speaking, and needs an understanding of public administration. Today, this means taking graduate work in a school of public health, leading to a master's degree. Entrance requirements to the graduate program often require some field experience. Some on-the-job training is offered by certain public health agencies, but this is in process of change.

Often dental hygienists take health education advance training to equip them for public health dental education. At present, with the exception of the Harvard program, no university in Massachusetts is accredited to give a graduate degree equivalent to a master in public health.

The public health educator is in a small but rapidly expanding profession with jobs in local, state and federal health departments, in international health programs, in voluntary health agencies, in agricul-

continued on next page

HEALTH EDUCATOR (contd.)

tural extension services, in hospitals, clinics, in industry, anti-poverty and community action programs.

School health educators and coordinators work in the education system. They need, in addition to their undergraduate degree with background in biological, physical, social sciences and health education, a teacher's certificate from their state. This usually calls for certain educa-

tional courses taken in the undergraduate years. The beginning school health educator often has to assume other teaching responsibilities as few school systems can afford a full time person in this capacity. These may be in related fields: science, physical education or social studies. Increasingly, a master's degree in this field is being required.

Training Programs

 B. S. Edu. (Health Education).....

4 yrs. Includes course: Organization and administration of school health program, and field work in a public health agency for one term.

University of Massachusetts. Dept. of  
 Public Health, Amherst, Mass. 01002

B. S. (Community Health & Health  
 Education).....

4 yrs.

M. S. (Community Health Education).....

2 yrs. (in process of being accredited by the American Public Health Association).

### LABORATORY POSITIONS IN BASIC RESEARCH & CLINICAL TESTING

Research in the health-related sciences is a very wide field with limitless discoveries ahead in the nature of disease, in the controls to prevent disease, and in the myriad of ways to improve medical care and prevent sickness and accidents. Persons trained in the basic physical sciences (chemistry, biology and physics) are going in for "bio" specialties studying all phases of life processes.

Some of the titles of scientists doing health research are: anatomist, biomathematician, biostatistician, biochemist, biologist (cytologist, embryologist), biophysicist, chemist, demographer, cultural and physical anthropologists, economists, epidemiologist, entomologist and botanist, geneticist, health economist, health demographer, medical sociologist, microbiologist (bacteriologist, mycologist, parasitologist, virologist), nutritionist, pathologist, pharmacologist, physicist, physiologist, plant pathologist, plant physiologist, public health statistician, radiologist, rehabilitation research specialist, zoologist.

The laboratory is the scientist's workshop where he spends the majority of his time and where, with his assistants, he carries on his widely assorted activities.

Laboratories doing basic research operate in universities, in private foundations, in some industries, in federal agencies; while the clinical laboratories in health departments, in hospitals, in industry and elsewhere provide essential tests as their primary function, but also are involved in basic research (particularly those institutions with teaching responsibilities).

Laboratory testing services are an integral part of the environmental health programs and other community health protection services administered by health departments. Most local and state health departments maintain their own laboratories for this purpose. Testing services are essential in medical care and all hospitals have clinical laboratories for this purpose. This is the province of the pathologist, clinical chemist, hematologist, clinical microbiologist, toxicologist, and their staff workers. Having these services immediately at hand is one of the great advantages of modern hospital care.

The scientists who direct the research have doctorate degrees, many had previous medical training and experience. Their chief assistants, who may also direct some of the projects, are usually persons with a master's degree, and who may be working toward their doctorates.

The individual with a bachelor's degree in the basic sciences can qualify for a beginner's or assistant's job in a laboratory. Recent college graduates without experience often begin their careers in a local hospital, laboratory, municipal or state public health department, or in a laboratory of a food processor or drug manufacturer, and the federal government has openings for recent science graduates in hospitals and laboratories throughout the country. These beginners learn on the job. They may be called "research assistants" or "laboratory technicians" or "technologists." They will work alongside of laboratory technicians and laboratory assistants without baccalaureate degrees but who have had specialized laboratory training after high school graduation and who have gained their position in

continued on next page

LABORATORY POSITIONS (contd.)

the laboratory through experience. Other individuals may prefer to take, in their undergraduate program, specific courses leading to a baccalaureate degree, such as medical technologist, cyto-technologist, chemical-biological technologist. By taking the specific training, particularly that of the medical technologist, they will have had a short field experience during their training in the principle phases of laboratory testing: urinalysis, hematology (blood), serology (blood serum), blood bank, cytology (cells, esp. cancer), histology (tissues), bacteriology and parasitology.

With this clinical training exposure to various types of laboratory testing, the student can better choose his desired speciality and he is equipped to work in a laboratory and be assigned to tasks in many areas. The graduate with a general science degree may find that his first laboratory job will determine his speciality as he learns on the job the techniques of this assigned field.

Job titles in laboratories vary in each individual laboratory. The title does not reflect the degree of training of the recipient except in civil service positions. Since advancement in a laboratory depends so much on the ability of the individual, upward mobility takes many avenues. However, the background of science training has direct bearing on the ability to perform.

There are many rewarding functions, duties, and responsibilities in a laboratory for the assistants and technicians. The person who wishes to assume more responsibility will need, nevertheless, the

background in science that a B. S. can give him as a starting level. He is then in a position to take advanced training in his specialty which opens the way to responsibilities of the top scientist. Many laboratories encourage advanced training and some hospital laboratories will pay the employee's tuition for further training.

Research in the social field of health requires training in the basic sciences as well as the specialization in: biostatistics, demography, economics, epidemiology, mathematics, sociology, etc. These scientists work alongside the medical, public health or environmental scientist in laboratories, or may be employed in government and university situations working independently.

The biostatistician works with statistical summaries to relate all aspects of health to current advances and prepares reports which give the practitioner and others the overall picture of health in his locality, nation, in the world, or in the medical situation within an institution. The demographer looks at the population as a whole, is concerned with its growth, over population and crowded conditions, their relation to health. The sociologist examines the social causes contributing to good or poor health, may work on efficiency patterns in health institutions; while the biometrician develops models, methodology, and applies computer science to testing, research experiments and prognostication.

These scientists are all identifying obstacles and blind spots that stand in the way to realizing the full potential health gains of today's scientific progress.

## LABORATORY POSITIONS (contd.)

## Training Programs

## (RESEARCH SCIENTISTS &amp; ASSOCIATES)

Only selected programs are listed below. In addition, there are 18 colleges and universities\* in Massachusetts which offer master's degrees in one or more of the basic health sciences, each of which can lead to a research position in the health field. There are also 15 of these colleges and universities\* offering doctoral programs in one or more of the basic health sciences: anatomy, biology, chemistry, mathematics, physics, and physiology. By consulting the catalogs or these institutions, the student can find the range of topics each program offers and the individual requisites for admission to the graduate programs. (See also in this inventory description of other programs leading to research, under the sections on: Environmental Health, Food Technologist, Psychologist, Rehabilitation Research).

Boston College, Graduate School of Arts & Sciences, Chestnut Hill, Mass. 02177

MEDICAL LIBRARIAN

The medical librarian (health science librarian) is responsible for seeing that the hospital or institutional library provides the reference materials needed by the professional staff. He orders, classifies, indexes the books, reports, and medical journals, keeping files and loan records. He, or she, assists the physicians, medical students, nurses, dentists, pharmacists, medical specialists and research workers by helping them track down any needed data; and he answers questions by mail and telephone.

Medical libraries may be in hospitals, departments of public health, pharmaceutical houses, insurance companies, general biomedical research institutions, universities and voluntary health agencies.

No college or university in Massachusetts offers the specialized bibliographic training that qualifies for a certificate as a medical librarian. There are three levels of certification: (1) graduates of the approved course, taken after receiving their M. S. in library science, (See below), (2) those who have taken an additional 9-12 month internship, and (3) those whose work and study grants them an advanced degree (beyond the M. S.). The Massachusetts student, however, may prepare

for and take a master's degree program in general library science in this state, then transfer for the specialized training in approved courses for certification at one of the 16 colleges offering the course in the United States and Canada.

Or, since the certification is not compulsory, the student may elect, during his master's program in library science to take courses in "special libraries" and "science and technology materials". With this background, many become medical librarians in the various types of health science libraries.

To prepare for the medical specialization, the library candidate should take in his undergraduate years, a major or minor in one of the life sciences plus the basis courses in physics and chemistry.

The term hospital librarian is often used in place of medical librarian to designate the supervisor of a library staff in a large institution, which may have several library units and a number of medical librarians working on his staff. Hospitals also employ general librarians as patient's librarians. They do not need medical science specialization, and quite frequently, they are volunteers who also help with the book cart service.

Training Programs(GENERAL LIBRARY SCIENCE)

Simmons College, School of Library Science  
300 The Fenway, Boston, Mass. 02114

M. S. Library Science.....

4-5 summer sessions, or combination of summer and term-time courses: 36 semester hrs. of graduate courses, 32 semester hours of library.

MEDICAL RECORD LIBRARIAN

The "medical record" is the permanent health record of a patient's injury or illness. It is used for patient care, research and legal purposes. It includes medical reports describing his progress, x-ray and laboratory reports, medications, and specialized data.

The medical record librarian is responsible for insuring that complete medical records are obtained, designing and maintaining a filing system, to make records available on a minute's notice to authorized persons, preparing them for future use, and preparing statistics and other reports as needed. In the larger hospitals, she or he is an "office manager" for the staff of the record department. In a smaller hospital, she may perform the duties herself. Besides the hospital, there are positions with nursing homes, clinics, health centers, drug

firms, universities, and research firms.

To qualify as a professional registered medical record librarian, the candidate attends one of three types of American Medical Association approved schools: (1) A college or university baccalaureate program with a major in medical record science; (2) A sixty semester hour college program, plus a twenty-month hospital school program leading to a certificate in medical record science; (3) A post-graduate program for college graduates, leading to a certificate in medical record science.

Professional recognition as a registered medical record librarian requires, in addition to certification, the passing of the national examination of the American Association of Medical Record Librarians. This examination is offered annually.

The demand for medical record librarians far exceeds the supply, so the qualified graduate has a choice of many well-paying jobs.

Part I of this survey lists the hospitals in Massachusetts which offer the hospital year course. It also lists training for the medical record technician who serves as assistant to the librarian.

Training Programs

Northeastern University, University College  
360 Huntington Ave., Boston, 02115

B. S. Medical Record Science.....

No degree program.....

5 yr. cooperative plan, or 8 yrs. evening classes (174 credits).

2 yr. college (54 credits), plus twelve months hospital training (500 hrs. supervised practice).

Psychiatry, psychiatric nursing, psychiatric social work, and psychology are the major professional fields offering positions within the mental health services. Occupational therapists and other rehabilitation specialists round out the team.

These professionals work with the more seriously emotionally disturbed in the mental hospitals of Massachusetts, or special sections of general hospitals. They may be engaged in preventive work in community or hospital mental health clinics, in the schools, or by seeing individuals in private offices.

New kinds of drug therapy and other developments in treatment have broadened the scope of the mental health field and have placed the research scientist in the important role of discovering what promotes mental health or causes mental illness. Promoting mental health and preventing disorders demands an early recognition of

MENTAL HEALTH POSITIONS

danger signs. The public health nurse or the school nurse is particularly helpful in this regard.

Closely associated to services to the mentally ill, is the care of the mentally retarded who became this way because of abnormalities that happened before birth or shortly thereafter. Most of these children can now stay in their homes if they get early diagnosis, treatment and training. Teachers with special training are needed to do this work, both in the public schools and in special institutions.

Training for the student who desires to work in one of the many mental health positions at the professional level, is listed in this inventory under the following job positions: nurse specialization, physician (psychiatrist), psychologist, rehabilitation positions (occupational therapist, recreation therapist, teachers of emotionally disturbed and mentally retarded) and social workers.

NURSE SPECIALIZATION

The baccalaureate degree nursing program provides knowledge, skills, and understandings that not only make the baccalaureate nurse an effective professional nurse in the hospital, home and community, working with patients and families, but also enables her to participate in organizing, planning and directing the work of nursing technicians and assistants.

The baccalaureate program provides a foundation

for graduate study in nursing and other disciplines through which the nurse may become prepared for positions in a clinical specialty, teaching, supervision, administration, consultation, and research.

In some of the programs, listed below, the employed professional registered nurse who is a graduate of a hospital nursing school is admitted to take courses at the college level for two and a half years, to earn her B. S.

Training Programs	
Boston College, Chestnut Hill, Mass. 02167 (School of Nursing)	
B. S. Nursing.....	4 yrs. plus one intercession in an affiliating public health situation.
(Graduate Sch. Arts & Sciences. Dept. Nursing)

4 yrs.

M. S. Nursing.....

To prepare for (a) clinical specialization,  
(b) supervision and administration of nursing,  
or (c) teaching of nursing.

OPTOMETRIST

The optometrist is trained to examine the eyes in order to determine the presence and extent of vision problems, diseases and other abnormalities. If the diagnosis requires medical treatment, the patient is referred to the proper medical authority. Otherwise, he restores, preserves, and enhances the vision by individually prescribing and adapting corrective lenses, contact lenses, and by visual training.

The optometrist provides a complete service through supervision of his prescription for corrective and contact lenses, and their proper alignment and adjustment. Most optometrists are in private practice. Some serve in hospitals, rehabilitation centers, and research.

Optometrists have developed many aides for children with seriously impaired vision, as well as for adults. They have been largely responsible for the research and development of contact lenses. Some specialize in this area, while others include it in their practice. Another

Massachusetts College of Optometry,  
178 Newbury St., Boston, Mass.

B. S. Optometry & O. D. (Doctor of  
Optometry).....

4 yr. program, with a prerequisite of 2 years  
college.

PHARMACIST

The pharmacist is trained to compound medicines (preparing tablets, powders, capsules, ointment and solutions) according to prescriptions written by physicians, dentists and veterinarians. He must understand the composition of the drugs,

their chemical properties, and be able to test them for purity and strength. He also provides medicine or medical products that do not need a prescription.

As a purchaser and distributor of hundreds of types

specialty is vision training. This treatment is done through prescribed eye exercises for persons with squint (crossed eyes) or whose eyes need coordinating. Such training is helpful for those with reading problems.

The one training program in Massachusetts for optometrists is a four-year course with a two-year college pre-requisite, a total of six years. The B. S. is granted at the same time as the O. D. at the end of the six years, although it is earned two years earlier. Requirement for admission to the Massachusetts College of Optometry includes courses in English, mathematics, physics, chemistry, biology, or zoology. The graduate takes a state examination for his license to practice.

The ophthalmologist differs from the optometrist in that he treats the disease of the eyes and must have an M. D. (See section on Physician). An oculist is a medical practitioner, specializing in eye examination and treatment of pathological eye problems, but who has not been certified by the American Board of Ophthalmology. Very few of these are still in practice.

continued on next page

PHARMACIST (contd.)

of drugs and health related items, he informs doctors of their availability, and provides the public with information on health matters.

Most pharmacists practice in community pharmacies. The pharmacist usually starts as an assistant to the owner or manager. With experience, he assumes managerial responsibility and is later in a position to transfer to a larger establishment or to own or part-own a retail pharmacy of his own.

Pharmacists also work in hospital pharmacies and for pharmaceutical manufacturers and wholesalers in government agencies, or teach in colleges of pharmacy. The hospital pharmacist may have other duties in addition to preparing, dispensing, purchasing, and keeping track of supplies. He may have teaching responsibilities with the hospital staff and students, may be asked to

handle laboratory routines, sterilize supplies, and take a more active role in consulting with physicians on the availability of drugs and supplies.

Professional training to become a pharmacist takes five years after graduation from high school. The five year program of study leads to the degree of Bachelor of Science in Pharmacy. Following graduation, a pharmacist must take the state board examination leading to his licensure. He needs one year of experience in pharmacy in order to take the examination, and may use summer months during his education to achieve this. Further advanced study can lead to the degrees of M. S. in Pharmacy and Ph. D. in Pharmacy.

The pharmacist should not be confused with the pharmacologist, who is a doctor engaged in research measuring the effect of drugs and developing new products (See Physician and Laboratory Positions in this inventory).

## Training Programs

Hampden College of Pharmacy, 694 Chicopee St., Willimansett, Mass. 01040 B. S. Pharmacy.....	5 yrs. 1st yr. pre-pharmacy. 4 yrs. of professional courses.
Massachusetts College of Pharmacy, 179 Longwood Ave., Boston, Mass. 02115 B. S. Pharmacy..... M. S. Pharmacy..... Ph. D. Pharmacy.....	5 years. 30 sem. hrs. of graduate work, including a thesis. 60 sem. hrs. plus research and thesis (incl. M. S.)
Northeastern University. College of Pharmacy 360 Huntington Ave., Boston, Mass. 02115 B. S. Pharmacy..... M. S. Pharmacy.....	5 yrs. Specialization in: hospital pharmacy, industrial pharmacy, medicinal chemistry, or pharmacology.

PHYSICIAN

"Modern medical education, research and practice require a depth and breadth of knowledge which is so bewildering that no one individual can hope to master its entire scope... Students of U. S. medical schools today receive the most thorough and rigorous training and education offered in the world...

"The profession attracts young people to it because of the deep sense of purpose, prestige, and excellent standard of living which many physicians enjoy. Since the physician's work centers around the life and well-being of his patients, he must bear heavy responsibility. His time often is not his own. His medical education never ends for he must keep abreast of the latest scientific and other developments in medicine so that he can provide his patients with the best possible care...

"If you choose medicine as your life's work, you must be prepared to take at least nine years of intensive study beyond the high school level.

This includes four years of college study, four in medical school, and one year internship at a hospital. Those desiring to enter medical specialty fields, such as surgery or psychiatry (see listing below) are required to serve from two to five additional years in residency training at a hospital. Most physicians are in their late twenties before they can launch their medical careers..."<sup>3</sup>

The state licensing boards, most of them, require some internship after the M. D. and the candidate must pass a licensing examination before he is eligible to practice... The examination offered by the National Board of Medical Examiners is recognized in most states as fulfilling part or all of the requirements for licensure. The final authority in each state, however is the board of medical examiners.

This inventory does not list the many Massachusetts training opportunities for physician specialization. This information is obtainable from the medical schools.

Training Programs	
Boston University. School of Medicine	
80 East Concord St., Boston, Mass. 02118	
M. D.....	4 yrs. after a premedical baccalaureate degree.

25 Shattuck St., Boston, Mass. 02115  
M. D.....

4 years after a premedical baccalaureate degree. Elective courses in public health at the School of Public Health and a required course in Tropical Public Health.

Tufts University. School of Medicine  
136 Harrison Ave., Boston, Mass. 02111  
M. D.....

4 years after a premedical baccalaureate degree. Elective courses in rehabilitation. A two-month summer clerkship at the Rehabilitation Institute can be elected and stipends are available under the U. S. Vocational Rehabilitation Administration. In the required preventive medicine courses, occupational medicine is included. A two month clerkship in a community setting is also required as part of the medical curriculum.

(PRE-MEDICAL TRAINING)

26 colleges and universities in Massachusetts specifically list in their catalogs guided pre-medical programs. Requirements for admission to the Massachusetts schools of medicine are almost identical: Four sciences (General chemistry, Inorganic chemistry, Biology, and Physics), Calculus, and English. A reading knowledge of a foreign language is required by two. All recom-

mend a broad background in the humanities and social sciences, specifying art, religion, psychology, economics, rather than anticipating any medical science courses. Other science courses recommended are Physical chemistry, Advanced chemistry, Advanced physics, Comparative anatomy, Genetics, and Embryology.

PHYSICIAN (contd.)

## Training Programs

## (PHYSICIAN SPECIALIZATION)

Administrative medicine  
 Anesthesiology  
 Colon and rectal surgery  
 Dermatology  
 Internal medicine (or its sub-specialties:  
 Allergy gastroenterology, Pulmonary disease)  
 Neurological surgery  
 Obstetrics & Gynecology  
 Ophthalmology  
 Orthopedic surgery  
 Pathology or sub-specialty: Forensic pathology

Pediatrics, with sub-specialties of Pediatric  
 allergy or Pediatric cardiology  
 Physical medicine and rehabilitation  
 Preventive medicine with sub-specialties of  
 Aviation medicine, Occupational medicine or Public  
 health medicine  
 Psychiatry and Neurology with sub-specialties:  
 Diagnostic radiology and Therapeutic radiology  
 Surgery  
 Thoracic surgery  
 Urology

While this inventory does not list the health institutions which offer residencies, fellowships, and other postdoctoral training in Massachusetts for physicians, under the job categories of "Environmental Health Positions"

and "Laboratory Positions" are listed certain training courses for graduate medical students who plan to go into aspects of preventive medicine and into research as a career.

PSYCHOLOGIST, & COUNSELORS

Psychology is concerned with how people act, and why they act the way they do - their feelings, thinking, and behavior. In the health field, psychology concerns both prevention of mental illness and its diagnosis and treatment. Psychology is a nonmedical science, whereas psychiatry is a branch of medicine.

About one-third of all psychologists in the United States in 1965 were engaged in health activities. Most of those in the health field are clinical psychologists who work in hospitals, clinics, or medical centers and private offices.

They help the individual who is maladjusted or a misfit to find new and better habits of behavior so that he can live his life in a more satisfying way. The clinical psychologist works directly with the patient. He gives tests and does psychotherapy. He may talk with family, friends and neighbors, teachers, and others to round out the background. In the medical setting, he usually works with the psychiatrist, social worker, and other professionals assigned to the case, but he also may assume overall responsibility and provide counseling and psychotherapy. The counseling psychologist may work in a clinical setting, but works more frequently in schools, colleges,

PSYCHOLOGIST, & COUNSELORS (contd.)

in industry and community agencies, helping fit individuals to jobs, establishing learning and work patterns, tackling everyday problems and devisions. He also works with the rehabilitation of persons disabled by accidents or illness.

The school psychologist or counselor must have a knowledge of educational methodology as well as some clinical and counseling experience, and will usually take professional training in a graduate school of education or department of psychology.

On the other hand, the experimental psychologist is involved in the development of behavior conditioning in both hospitals, institutions for the mentally ill and schools for the mental retarded. This is a growing field in helping shape behavior through the use of conditioning methods.

Another type of psychologist is the psychometrician who devises tests for measuring people's mental emotional, and social characteristics. He

also is employed to administer the tests, usually working under or with the clinical or counseling psychologist. These specialists are a small proportion of the psychologist in the health field. 2

The social psychologist is mainly concerned with group reactions and behavior - the way social attitudes develop, how families and communities act and react upon one another. There are, also, only a small (but growing) number involved in health projects!

Some practicing psychologists have had only one or two years of graduate study in psychology, but the usual requirement is four years leading to a Ph. D. degree and at least a one year internship. The top in formal recognition is the Diplomate in Psychology, earned after at least five years of experience after a Ph. D, and the taking of an examination before the American board of Examiners in Professional Psychology. There is a growing need for research assistants and testing assistants in psychology who hold a master's and even a bachelor's degree in psychology.

Training Programs

Assumption College, 500 Salisbury St.  
Worcester, Mass.

M. S. Guidance & Psychology.....

Seminars held on mental health.....

2 yrs. Includes teaching-counseling the emotionally disturbed child and the mentally retarded, counseling in the mental health setting. The college conducts the Institute on Problems of Teaching the Perceptually Handicapped, for school administrators and teachers.

For educators, nurses, other health specialists.

PSYCHOLOGIST, & COUNSELORS (contd.)

## Training Programs

Boston College. Graduate School of Arts & Sciences, Chestnut Hill, Mass. 02114 (Dept. of Education)	Prepares for school and college counselors, and also for counseling in non-school settings (employment, rehabilitation, community agencies). Includes courses in mental health and hygiene, the abnormal. 36 hrs.
M. S. Educ. (Secondary & College Counselor Educ., Elem. Guidance & School Psychology)	30 hrs. Professional preparation which counselors need beyond the master's degree.
C. A. E. S. (Cert. of Adv. Educ. Specialization).....	Min. of 48 hrs., plus dissertation. Prepares for counseling psychologist. Prerequisites: 3 yrs. of teaching experience.
Ph. D. Educ. or D. Educ. (Counselor Education and Counseling Psychology).....	48 credits, including 12 cr. of field work. Community social psychology. 4 yrs. residency. 60 hours to qualify for membership in Amer. Psych. Society. Major in counseling, minor in evaluation and measurement. Other minors also available.
(Dept. of Psychology)	
M. S. (Social Psychology).....	General, experimental, clinical. 1 yr.
Ph. D. (Social Psychology).....	Experimental and physiological, Personality and social psychology, Clinical psychology, Counseling psychology.
Boston University, 705 Commonwealth Ave., Boston, Mass. 02215 (Graduate Schools of Arts & Sciences Department of Psychology)	Specialization prepares for school and college counselors, rehabilitation counselors, school psychologists, and administration of personnel. 4 yrs. for doctorate, 1 yr. masters, and 2 yrs. for C. A. G. S.
M. A. Psychology.....	
Ph. D. Psychology.....	
Ph. D. in clinical and counseling, APA-approved. (Graduate School of Education)	4 yrs. leading to Ph. D.; candidates for master's only (1 yr.) not admitted. Over 61 courses including experimental, developmental, physiological, clinical and social.
M. Educ. (Counseling & Personnel Service)...	Programs in experimental, developmental and child psychology, learning, clinical, social personality, and rehabilitation, Educational measurements, School counseling, Clinical psychology using Gardner State
C. A. G. S. (Counseling & Pers. Serv.).....	
D. Educ. (Counseling & Pers. Serv.).....	
Brandeis University, Graduate School of Arts & Sciences, Dept. of Psychology, Waltham, 02154 Ph. D. Psychology.....	
Clark University, 940 Main St., Worcester, Mass. 01610 M. A. Psychology.....	
Ph. D. Psychology (4 yrs. incl. 1 yr. internship) (Ph. D. clinical APA-appr.)....	
Postdoctoral psychology programs.....

REHABILITATION POSITIONS

Rehabilitation involves the care and assistance given persons with disabling conditions to help them learn to live within the capabilities of their limitations. Amputees learn how to use artificial limbs, stroke victims may regain movement lost by paralysis, or learn to use the movement they have. Polio and muscular dystrophy victims develop muscle control, persons with speech and hearing difficulties learn to talk and hear better, the blind develop techniques to substitute for their loss of vision. The acutely ill may be spared disability through rehabilitation treatment as prevention.

The goal of the treatment and counseling is the independence of the disabled in the home and as

(OCCUPATIONAL THERAPIST)

Individuals are referred by physicians to the occupational therapist for evaluation and treatment. The treatment takes many forms of purposeful activities: creative (writing, dramatics, music, art, design), manual (ceramics, leathercraft, weaving, textile crafts and printing, blueprint reading, hand and power tools), recreational, daily living activities, pre-vocational or functional (exercises). The therapist often calls upon outside experts to conduct specialized skill training.

Often he will have the assistance of volunteers who will work under his supervision. He may be responsible for their training.

Training Programs

Boston University, Sargent College of Allied Health Professions, Charles River Campus, Boston, Mass. 02215

B. S. Occupational Therapy.....  
(In cooperation with B. U. School of Medicine).

an employee. Children and adults who are emotionally disturbed, mentally retarded, or who have a variety of psychological learning difficulties benefit from rehabilitation.

There are many specialized positions in this field (listed below). Each specialist works with the other as part of a rehabilitation team with the doctor and nurse. The therapists, specialists, and teachers work in hospitals, nursing homes, clinics, rehabilitation centers, treatment centers, sheltered workshops, public and private schools for both normal and crippled children, in the home, in community agencies (local, state, federal), in physician offices, in the military services, Veteran's Administration and Public Health Service, and on college and university faculties.

The treatment is determined according to the individual need of each patient. Activities are used to encourage the return of physical or mental function and thereby decrease the disability. The therapist helps the patient to use whatever function he still has to achieve the greatest degree of independence possible. The patient may be physically disabled, emotionally ill, socially and developmentally deprived, or mentally retarded. Treatment is given during both the first acute phase and the later chronic phase of the illness.

A clinical internship period of six to nine months is a required part of the 4-year baccalaureate program in order to qualify for professional registration by the American Occupational Therapy Association.

4 yrs, including 6-9 months full-time clinical experience (3 months during the summer following the third year; the remainder after graduation). The program accepts transfers in the second and third

B. S. Occupational Therapy (contd.).....

year. Half the courses are liberal arts, the other half professional preparation. At the end of the clinical affiliation, the student receives a certificate and is eligible for the national registration examination to become a registered occupational therapist.

Certificate in Occupational Therapy.....

Special postgraduate program for persons with a baccalaureate degree. 2-3 yrs. (45 credits) in sixteen subjects. Includes nine-month clinical training, and prepares for the national registration examination. Limited number of students.

M. S. Occupational Therapy.....

Tufts University. Boston School of Occupational Therapy, 136 Harrison Ave., Boston, Mass. 02111

B. S. Occupational Therapy.....

4 yrs., including nine months hospital internship.

(ORTHOPTIST)

The orthoptist usually works under the supervision of the ophthalmologist, helping youngsters and adults overcome the handicap of crossed eyes and other eyes defects. She teaches the patient certain exercises which help the eyes work together as they should, and applies

other techniques as directed. The training for this specialty can be a degree course or a fifteen-month training at a hospital after two years of college (See Part I). Both courses qualify for certification of the American Orthoptics Council.

Training Programs

Simmons College, 300 The Fenway, Boston, Mass. 02115

B. S. (Orthoptics).....  
(In cooperation with the Massachusetts Eye & Ear Infirmary).

The concentration is taken in the fourth year in cooperation with the affiliating hospital. Academic requirements are met at the end of the fourth academic year, but an additional six month internship is necessary to qualify for the certification of the American Orthoptics Council.

REHABILITATION POSITIONS (contd.)

## (PHYSICAL THERAPIST)

The demand for physical therapists has been rapidly increasing as the profession broadens. Once polio patients called on most of the services of the physical therapist. Now, children and adults with all kinds of motor disabilities and breathing problems, from special-ities such as neurology, cardiac surgery, medical, as well as orthopedics, arthritis, rely heavily on the therapist. This has resulted in heavy case loads for the therapist in hospitals, nursing homes, home health agencies, and other treatment centers, and there is a need for physical therapy assistants and aides as well. (See Part I).

person to walk again or use other parts of the body, massage, use of heat and cold in water baths, hot packs, electricity to stimulate paralyzed muscles, or teaching the patient to use braces or other needed appliances.

In 1967 three-quarters of physical therapy graduates found positions in general hospitals and specialized hospitals, the others in health agencies, outpatient centers, extended care facilities and others. Some therapists enter private practice on a medical referral basis, while others are hired by public schools as well as special schools for the handicapped.

On medical referral, the therapist works directly with the patient and his family and this relationship often determines the patient's attitude toward doing his part of the treatment. The therapist engages in patient evaluation, the follow-up care, and instruction. The treatment may include therapeutic exercise to enable the

Supervised clinical experience is included in the four-year baccalaureate program. Graduate courses at the master's and doctorate levels enable the physical therapist to go into research, teaching or administration.

Training Programs

Boston University. Sargent College of Allied Health Professions., Boston, Mass. 02215

B. S. Physical Therapy.....  
(In cooperation with the Boston University School of Medicine)

Sci. (12), and at least 6 hrs. in Psychology.</p>

(RECREATION THERAPIST)

Recreational therapy is part of the restorative services for people who are ill, disabled, or handicapped. The recreational therapist is trained to select certain recreational activities that will help in the recovery of the patient's illness or disability. The therapist may work in the hospital, other medical or extended care facilities, or work in community situations where the persons who have returned home can continue to keep up the needed activity.

In the institutions, he supervises the volunteers who help with recreation, or he may arrange for outside groups to sponsor various kinds of recreation. Some of the activities he will direct are: athletic games, dancing, music,

dramatics, card games, movies, gardening, handicrafts, and special events such as picnics, trips to ball games, museums and zoos.<sup>3</sup>

Most of the recreation therapists are engaged in mental hospitals or general and psychiatric hospitals operated by the Veterans Administration, in special facilities for mentally ill or retarded children. Others work in homes for the aged, for the Red Cross in Armed Forces hospitals, in general hospitals, rehabilitation centers, chronic disease hospitals, special schools and community centers, after-care and home-bound programs, municipal recreation departments, public and private welfare agencies at the local, state and national levels.

- (Graduate School of Education)  
 M. Education (Recreation).....  
 D. Education (Recreation).....  
 C. A. G. S. (Recreation).....  
 M. Educ. (For Mentally Retarded).....

Program of study is constructed from graduate courses in the College of Business Administration, School of Social Work, School of Public Communication & Graduate School, as well as School of Education.

Northeastern University, Boston-Bouve School,  
 360 Huntington Ave., Boston, Mass. 02112  
 B. S. Educ. (Recreation Education).....

4 yr. modified cooperative plan. First year of three consecutive twelve week quarters, followed by a cooperative plan in the sophomore year (two quarters in school, two quarters at work for each academic year).

Springfield College, Springfield, Mass. 01109  
 B. S. Recreation as Therapy.....

4 yrs. Specialized studies start in the first year and continue all four years. They include recreation skills, music, crafts, camp leadership, festivals as well as first aid, safety, hygiene, problems of disability in the adapted physical education program. Selected students may serve on the Springfield College Day Camp staff or work during the summer months (a Sears Roebuck Foundation camping intern program).

University of Massachusetts, School of  
 Physical Education, Amherst, Mass. 01002  
 B. S. Recreation.....

Includes an option to prepare for a career in hospitals and institutions dealing with the ill, handicapped, and other types of dependents. There is a 18 credit specialization in recreation.

## (REHABILITATION NURSING)

## Training Programs

Boston College, Graduate School of Arts &  
 Sciences, Dept. of Nursing, Chestnut Hill,  
 Mass. 02177

M. S. Nursing (Rehabilitation Nursing).... 2 yrs. 44 credits.

REHABILITATION POSITIONS (contd.)

(REHABILITATION SPECIALIZATION & RESEARCH)

The programs listed below cover more than one aspect of rehabilitation training. Since they could not be listed under the specific occupations in this section, they are grouped together here.

Training Programs

Boston College, Graduate School of Arts & Sciences, Department of Education, Chestnut Hill, Mass. 02177

M. S. Educ. (Special Education and Rehabilitation).....  
Ph. D. Education (Spec. Education & Rehabilitation).

Extensive courses for working with the blind, deaf, emotionally disturbed, handicapped, speech disorders.

Clark University, Worcester, Mass. 01610

Ph. D. (Rehabilitation).....

In conjunction with other areas of specialization, rehabilitation research training is available. Such training usually begins after the first two years of graduate work. Program is designed to prepare students for investigation of psychological problems as they occur in everyday life. Emphasis is on the development of novel techniques and concepts. There is an apprenticeship-practicum during which the various phases of research in real-life settings are examined. Particularly pertinent to those who are interested in social-emotional and value problems of handicapped and non-handicapped people.

Northeastern University. Graduate School of Education, 360 Huntington Ave. Boston, Mass. 02115

M. Educ. (Medical Rehabilitation).....  
M. Educ. (Administration Rehabilitation)..  
M. Educ. (Vocational Rehabilitation).....  
listed also on page 62 & 67

REHABILITATION POSITIONS (contd.)(SPEECH THERAPISTS, AUDIOLOGISTS, & ASSISTANTS)

The field of speech pathology and audiology (disorders in speech, language, hearing and their rehabilitation) is a relatively new field. Forty years ago there was no central agency or clinic for persons requiring speech and/or hearing rehabilitation. Few physicians, or child psychologists had been trained in therapeutic techniques for speech and hearing disorders. Today, there are specialists who concentrate on speech and hearing problems, working in the elementary and secondary schools, in college, hospital, and special Armed Forces clinics, in nursing homes, in special schools for the deaf, for crippled children, and as consultants in hospitals, social agencies, and medical centers.

Speech and hearing disorders can be classified as; defect of articulation, voice production, rhythm, delayed speech development, cleft palate speech, cerebral palsy speech, impairment of language function (aphasia) and speech defects associated with defective hearing. Frequently, a person has multiple defects. For example, a hard-of-hearing child or a cerebral-palsied child may have defects of language delay, articulation and voice. Most cleft-palate children have defects of articulation as well as voice. Brain-damaged adults frequently suffer impairment of language function as well as articulation.

The therapist's job is to determine the severity of the disorder, to identify the problem through interviews and tests in order to help decide which of the variety of techniques, exercises and scientific devices should be used in the rehabilitation. The therapist makes referrals for medical or other professional attention.

Since the speech or hearing disability may often have an organic origin, the therapist works closely with the physician and dentist, and where the cause may be emotional, he will work with the psychiatrist or psychologist, or he may work with the public health nurse, the social worker, and the school teacher.<sup>1,2</sup>

The professional speech pathologist and audiologist need master's degrees. However, many jobs are available as assistants for those who have taken special courses at the undergraduate level. As the field is still fairly new, many persons practicing today have only a bachelor's degree, but the equivalence of the master's degree is required for obtaining membership in the American Speech and Hearing Association, and a certificate of clinical competence is awarded by the ASHA (one for speech pathology and another one for audiology) for those with their master's plus a year of experience in the field. The master's degree is also necessary for research and teaching positions.

Training Programs

Atlantic Union College, South Lancaster, Mass.  
Course in Speech Correction.....

2 hrs. wk. Study of causes, nature and treatment of common speech defects. Planned especially for the classroom teacher.

continued on next page

REHABILITATION POSITIONS (contd.)(SPEECH THERAPIST, AUDIOLOGIST, & ASSISTANT) (contd.)Training Programs

Boston College. College of Education and  
College of Business Administration, Chestnut  
Hill, Mass. 02177

Two courses leading to B. A. in Speech  
and English.....

Voice Science - 3 credits. The study of mechanisms for speech and hearing, international phonetic systems, and experience in phonetic transcription. Introduction to Speech Correction - 3 credits. The more common speech handicaps and their causes. A course designed to meet the needs of youth workers, teachers and others working with young people.

Boston Conservatory of Music, 8 The Fenway,  
Boston, Mass. 02115

Courses in Voice Therapy.....

2 hrs. weekly for two semesters. Anatomy and physiology of the larynx and respiratory organs and musculature, study of various pathologies involved in throat problems; exercises for handling these problems. Course continues for a third semester, two hours/week as a clinical internship in a local medical institution, plus a symposium.

Boston University, 725 Commonwealth Ave.,  
Boston, Mass. 02215

(School of Education)

B. S. Educ. (Speech and Hearing).....

4 yrs. Includes courses in General psychology. Psychology of personal adjustment, Fundamentals of speech. Psychology of learning. Orientation to speech and hearing, Introduction to speech therapy, Speech pathology and audiology, Science of speech, Clinical techniques of speech, Aural rehabilitation, Education and psychology of the exceptional child.

(Graduate School of Education.

Dept. of Special Education)

M. Educ. (Speech Pathol. & Audiology)....

C. A. G. S. (Speech Pathol. & Audiology).

D. Educ. (Speech Pathol. & Audiology)....

In cooperation with B. U. Medical  
Center, Veteran's Administration,  
Jos. P. Kennedy Memorial Hospital

Prepares for positions as speech pathologists and audiologists, to conduct diagnosis and therapy for the speech, language and hearing handicapped in public schools, hospitals, clinics, rehabilitation centers, or teaching. Depending on background, usually a one-year program for a master's degree.

REHABILITATION POSITIONS (contd.)(SPEECH THERAPISTS, AUDIOLOGISTS & ASSISTANTS) (contd.)

College of Our Lady of the Elms,  
Chicopee, Mass. 01073

Survey Course in Speech in Education.....

2 credits. Includes development of speech and language, consideration of types and causes of speech disorders and therapeutic procedures.

Eastern Nazarene College, Wollaston Park,  
Quincy, Mass. 02170

Course in Speech Correction.....

Includes study of disorders of speech and treatment, ability to detect and diagnose, recommend, and employ corrective procedures.

Emerson College, 130 Beacon St., Boston  
Boston, Mass. 02116

B. S. Speech Pathology & Audiology.....

Background for graduate level study. Thirty specialized courses taken over four year period on: speech and hearing disorders, therapeutic techniques, diagnostic procedures, defects of cerebral palsy, aphasia, problems of cleft palate, vocal cords, dental anomalies, laryngectomy, stuttering, hearing-aid selection and evaluation. In the third year, the student starts his clinical experience. Students also observe at the college's Robbins Speech and Hearing Center where pediatricians and psychologists examine and give therapy to children with speech and hearing defects. Within the center is the Thayer Lindsley Nursery designed to educate pre-school deaf children.

M. S. Speech Pathology.....

Lesley College, 29 Everett St.,  
Cambridge, Mass. 02138

Two courses.....

(1) Teaching the Language Arts in Elementary School - includes diagnosis and treatment of minor speech difficulties. (2) Speech Development and Correction, includes a survey of speech disorders and remedial procedures (related to the education of exceptional children).

continued on next page

University of Massachusetts, Amherst, Mass. 01102  
(Graduate School of Arts & Sciences)

M. A. Speech Pathology & Audiology.....

(College of Arts & Sciences)

B. S. (Speech Pathology & Audiology).....

Fulfills the requirements for certification by the American Speech and Hearing Assn., and Mass. Dept. of Educ. Includes courses in voice problems, Clinical practicum, Experimental phonetics.

Eight specialized courses with laboratory and clinical practice.

(TEACHERS OF THE EMOTIONALLY DISTURBED AND MENTALLY RETARDED)

While the teacher of emotionally disturbed and mentally retarded persons is not a therapist (she does not "treat" the child or adult, or attempt to effect a personality change), her work in educating him has a profound effect on his health and his ability to achieve a satisfying pattern of living. The teaching of children up to age seven-teen includes the same skills and educational subjects of the normal classroom, but taught in an entirely different manner, and only as much as each child can absorb. Adults are taught occupational skills.

Since the two type of mental disorders are quite different, they are usually taught separately, but sometimes taught together in special education classes in the early years in public school.

Mental retardation is caused by abnormalities of development starting before birth, or by accidents occurring during and after birth. The mental retardation appears soon after birth or when the child is very young, slowing his responses.

The handicaps of the emotionally disturbed, on the other hand, manifest themselves in childhood, adolescence, or adulthood. These persons may be hyperactive and impulsive, overreacting to situations, noises, objects, and other stimuli, both internal and external. The emotionally disturbed children are not able to interact or work together successfully as a normal group of children could. Nor do they respond to the usual signals that a teacher uses to control behavior - a look or a gesture.

For this reason separate classes are set up for them in the schools, or they may attend special schools. Frequently the emotionally disturbed have physical as well as psychological handicaps. Hearing losses, visual problems, organic brain disease or speech disorders may cause or contribute to the emotional-social handicaps, psychoses, or neuroses.

These children must be taught how to experience their own relation to space, new approaches to perception, form, movement and rhythm, all the things that normal children naturally learned in their everyday experiences.

continued on next page

REHABILITATION POSITIONS (contd.)(TEACHERS OF THE EMOTIONALLY DISTURBED AND MENTALLY RETARDED) (contd.)

The teacher sets up these experiences for the disturbed or retarded child so that he can learn the things the normal child takes for granted. The teacher observes each child's learning style and his particular way or responding so that she can know when to give him a feeling of structure (finding his place in line, his place at table, a sensing of the group order). Her approach and instructions must be carefully consistent, to ensure that the child develops as a person capable of achieving his learning goals.

While the teacher works with small class groups, she has to be constantly aware of a continuing relationship between herself and each child to keep him from detaching himself from the learning. She has to adjust differing methods of con-

trol to his constantly changing moods. Such flexibility requires an extremely stable person, with a healthy attitude and a good sense of humor.

Teachers in this field find positions in the public schools, in special schools (both public and private) which take adults as well as children, and in mental institutions.

One may teach emotionally disturbed or mentally retarded persons with the background of a bachelor's degree and some concentration in special education. A master's degree is more desirable. The Certificate of Advanced Study (earned after a year of study beyond the master's degree) is a requirement for counseling or administrative positions in this field.

Training Programs(TEACHERS & COUNSELORS OF THE EMOTIONALLY DISTURBED)

3 credits. Introduction to the study of the exceptional child.

(TEACHERS OF THE PHYSICALLY HANDICAPPED, INCLUDING THE BLIND & DEAF)

Children and adults handicapped by partial or total blindness, deafness, crippling conditions, or multiple handicaps, need special teachers to help them learn to read, speak and coordinate movement, in addition to mastering the regular school subjects.

training to enable their students to understand and use oral communication.

The deaf-blind are taught language using analytic and synthetic methods (including the vibration method) which brings about the formation, development and correction of elementary speech sounds.

In community agencies and public and private schools, blind and partially blind (low blind) students are taught orientation and mobility (peripatolgy), braille (mathematical and literal), and independent travel techniques.

Those with crippling conditions are taught in hospitals, in special classes, in the home, and in residential institutions. Their learning situation is complicated by problems of health, adjustment, and acceptance of their handicaps in terms of body image, self-concept and status position. This is given special consideration by the teacher.

Teachers of the deaf and hard of hearing use speech-reading methods and special auditory

continued on next page

REHABILITATION POSITIONS (contd.)(TEACHERS OF THE PHYSICALLY HANDICAPPED, INCLUDING THE BLIND & DEAF) (contd.)

Teachers in this field of special education may, at times, counsel parents of crippled, deaf, blind, or deaf-blind children so that they may better understand their child's particular handicap and their own role in helping him have a successful learning experience.

A master's degree is required for those interested in teaching the physically handicapped. The doctorate is necessary if a person is interested in teaching special education, in planning guidance programs for the handicapped, and for doing research.

Training Programs

Boston College, Chestnut Hill, Mass. 02167  
(Grad. Schl. of Arts & Sciences,  
Dept. of Education)

M. S. Educ. (Special Education  
& Rehabilitation).....  
Peripatology program in cooperation with the U. S. Vocational Rehabilitation Administration. Teaching the blind and deaf in cooperation with Perkins Institute for the Blind.

Programs to prepare students to teach (a) orientation and mobility (peripatology) to blind children and adults in community agencies and public and private schools; (b) children who are blind or partially sighted; (c) children with multiple handicaps, including those who are deaf-blind. There is some degree specialization with a different course concentration listed under teaching the emotionally disturbed and mentally retarded.

Post-master's degree program.....  
For experienced special educators

Planning and conducting research, preparation for supervising special class teachers, college level teaching, curriculum construction for special classes, guidance services.

Boston University, 765 Commonwealth Ave.,

University of Massachusetts. Department of Education, Amherst, Mass. 01002

M. Educ. of the Deaf.....  
In cooperation with the Clarke School of the Deaf in Northampton.

1 academic year and one summer. 36 hours.

(VOCATIONAL REHABILITATION COUNSELORS, & ADMINISTRATORS)

Vocational rehabilitation counselors find jobs and counsel those who are physically, emotionally, or mentally handicapped. These handicaps could include: blindness, deafness, a crippling condition, amputation, mental retardation, emotional

disturbances, juvenile delinquency, aging, and financial problems. The counselor may be responsible for locating persons in need of rehabilitation. He becomes acquainted with the client's problems, arranges for diagnosis and tests, evaluates his

continued on next page

REHABILITATION POSITIONS (contd.)(VOCATIONAL REHABILITATION COUNSELORS & ADMINISTRATORS)

situation and capabilities, arranges for rehabilitation services needed (physical restoration, prevocation, and vocation), and helps him secure employment.

A vocational rehabilitation counselor must know how to meet his client's emotional and financial needs while satisfying the demands of a particular job. A person who is physically or mentally disabled may be unaware of his capabilities or may feel he lacks ability. The counselor is trained to understand these additional problems and discover what the client is capable of doing. He is familiar with various job placement services, will find a job that requires some of

the client's skills, a job with duties he is able to perform, and will make follow-up visits to help the adjustment. In this way, the handicapped person will be meeting the needs of his employer while feeling confident that he has an important contribution to make.

Vocational rehabilitation counselors and those who administer the program, work in federal, state, and private agencies, sheltered workshops, rehabilitation centers, community action programs, or hospital rehabilitation programs. They must have special training in this field, which means additional study at the master's degree level. A Ph. D. is often necessary, especially if the person is interested in advanced vocational rehabilitation administration.

6 terms. Includes courses in: Psychology of exceptional youth and adults; Occupational and educational information and adjustment, Medical survey; Legislation and administration, Counseling including practicum and internship; Advanced community organization.

SOCIAL WORKER

When illness results in serious and prolonged incapacity, it puts strain on other family members, on financial resources and produces emotional stress. In turn, it has an effect on the recovery of the ill person. This is where the social worker enters the health picture.

While many families can adjust to cases of illness, too often the problem is more than they can manage. They need professional help. The social worker, working with the physician, or other members of the health center team, works closely with the family to help overcome the difficulties in adjusting to the illness. Thus, much of the social worker's time may be spent outside the institution, helping the patient and his family in the community.

In the medical setting, the social worker helps the patient plan for his convalescence and return to the community. She, or he, may get in touch with an employment counselor, with a school teacher, a child placement agency and other community resources.

Medical social workers are employed in hospitals, clinics, in local, state and federal public health or welfare departments, public and private health centers, in military and veterans hospitals, in voluntary agencies concerned with crippled children, the blind, the handicapped people in need of rehabilitation, the deaf, patients with tuberculosis, heart disease, or cancer. Experienced social workers may teach in schools of medicine, public health and social work, or engage in research.

In the psychiatric situation, the social worker assists those who may be physically healthy but are mentally or emotionally disturbed. Along with the psychiatrist, the psychiatric nurse and the psychologist, he works in and out of the mental hospital or mental health clinic. In conjunction with the psychiatrist, he obtains from the patient his personal history, including symptoms and steps leading to his present breakdown or disturbance. He explains to the family the nature of the patient's illness, shows them how to cooperate best to help him get well. He will also assist the patient in overcoming fears and prejudices that may retard his recovery.

Psychiatric social workers may work in child guidance clinics, be part of a hospital psychiatric service, work in federal hospitals and specialized institutions for epileptics and the mentally retarded. They provide psychiatric care in court, community centers, and rehabilitation organizations.

Fourteen percent of the social workers in the United States in 1965 were estimated to be in the health field, somewhat more in psychiatric than in medical positions.

A master's degree (2 yrs.) from an approved school of social work is a requirement for professional social work. Many caseworkers with baccalaureate degrees in social work or sociology, however, are employed to work as case aides to the professionals. There are also aides who assist who may be neighborhood persons with less than baccalaureate degree training. (See Part I).

Training Programs	
Boston College, Graduate School of Social Work, Chestnut Hill, Mass. 02177	2 yrs. First year, students are engaged in field instruction in a social agency two days a week and

## Boston College. (contd.)

attend classes three days a week. Second year students spend three days a week in the field. Field work includes work in agencies for child welfare, correction, family service, mental health, hospitals, school social work, and community organization agencies. A part-time study program spreads the requirements of the first year over three years, and the second year class and field work are taken on a full time basis.

Boston University. School of Social Work.  
Charles River Campus, Boston, Mass. 02215

M. Social Work.....

2 yrs. It is also possible to take part-time study for the master's degree over a three year period.

Brandeis University. Florence Heller  
Graduate School for Advanced Studies in  
Social Welfare, Waltham, Mass. 02154

Primarily a doctoral program for students interested in teaching, research, administrative and consultative roles. The master's degree is received during the course of study. Emphasis is placed upon community organization, social work administration and research. Graduates accept positions in established areas of social work as well as newly emergent areas such as international social work, inter-group organization, labor industry, and government.

M. A. Social Welfare (2 yrs.).....  
Ph. D. Social Work (3 yrs. incl. M.A.)..

College of our Lady of the Elms, Chicopee,  
Mass. 01013

Includes two undergraduate courses in social work: an introductory course including casework methods complemented by a quasi-field work placement; and a course in child welfare problems also including quasi-field work placement. Prepares for casework assistants and for further graduate study.

B. S. Sociology.....

Eastern Nazarene College, Wollaston Park,  
Quincy, Mass. 02170

A six-course concentration including, in the senior year, field work and placement twelve hours per week under the direct supervision of trained social workers.

B. S. Social Work.....

SOCIAL WORKERS (contd.)

## Training Programs

Emanuel College, 400 The Fenway, Boston, 02115 B. S. Sociology.....	4 yrs. In the senior year, the course includes field work for a few students preparing for social work. Courses include: Fields of social work - the art of interviewing, study of casework, of group, medical, psychiatric and community organizations; Seminar in sociology of the community. No credit for the field work.
Northeastern University, Lincoln-University College, 360 Huntington Ave., Boston, 02115 B. S. (Sociology-Social Work).....	Includes field work practicum. Part-time program with 174 credits in the major concentration.
Regis College, Weston, Mass. B. A. Sociology.....	4 yrs. Includes field work experience one day each week in social agencies in the Greater Boston area, or the equivalent in summer social welfare in-service programs. Prepares for social work assistants, and for further graduate study.
Simmons College. School of Social Work 51 Commonwealth Ave., Boston, Mass. 02116 M. S. Social Work.....	2 yrs. Field work in both first and second years in community social agencies and institutions.
Smith College. School of Social Work, Northampton, Mass. 01060 M.S. Social Work.....	2 yrs. Choice of two field work plans: (a) One year winter field work plus three summers of class work, or (b) One year of classwork plus two summers of field work. One year course after the master's degree. Includes independent research and thesis.
Tufts University. College of Liberal Arts and Jackson College, Medford, Mass. 02155 B. S. Sociology.....	4 yrs. Includes field work and prepares for social work assistant positions, and for further graduate study.

VETERINARIAN SPECIALIZATION

In the city we associate the role of the veterinarian with caring for household pets in his private office or animal hospital. In the country, he is the farmer's doctor, caring for his cows, horses, swine or poultry, traveling from place to place by automobile and plane and keeping in touch with his office by radio telephone. A few build clinics where animals can be taken, but in most cases, the veterinarian goes to the animals, vaccinating them for protection against disease, giving medical care, performing surgery when necessary, teaching owners proper methods of caring for and feeding the animals. By protecting and treating the animals, the veterinarian helps to stop animal diseases from spreading to man.

In the public health field, veterinarians develop programs for the control of animal diseases affecting man, help set up statewide veterinary public health programs, serve as consultants on committees, and participate in other public health projects.

Veterinarians in public health collect and evaluate statistical data on human illness caused by animals, study the effects of air pollution on animals, and conduct basic research on chronic and communicable disease to help reduce diseases which may spread from area to area.

Some veterinarians are meat and poultry inspectors, work for the U. S. Department of Agriculture, supervise stockyards and license firms manufacturing serums and vaccines for animals. They may be responsible for enforcing federal regulations on food safety, or may work with the import and export of animals and animal products.

There is no veterinary college in New England (a four year graduate program). A student interested in veterinary medicine should be enrolled in a pre-medical program leading to a baccalaureate degree, then transfer to one of the twenty veterinary colleges in the United States and Canada. In some instances certain of these colleges may accept for admission three years of undergraduate work, but the probability of acceptance from an out-of-state applicant is higher if he already has his B. S.

The license to practice veterinary medicine is based upon graduation from a veterinary college and the taking of a written and practical examination given by a registration board in each state.

To enter the public health field, the veterinarian must take work at an accredited school of public health which requires for admission one or two years of practical experience in his field.

Training Programs

Massachusetts Institute of Technology,  
211 Massachusetts Ave., Cambridge, Mass. 02139  
D. in Animal Pathology and Physiological  
Chemistry.....

For veterinary college graduates.
