Identifiers-New York

The purpose of this study was to "survey the library resources in the eight Mid-Hudson Counties of Columbia, Dutchess, Greene, Orange, Putnam, Rockland, Sullivan, and Ulster in order to develop a plan of service in which assets would be shared, resources developed, and services extended." Survey data were collected by six questionnaires: visits and evaluations of college, public and special libraries; and a review of the literature of the field. Study findings are presented in sections on the history of the region, the present situation, and libraries of all types. A summary and projections are also included. Thirty-five specific recommendations are made which cover overall planning, public libraries, college libraries, school libraries, central services, and future development. The basic recommendation of the study is that the eight counties of the Hudson Valley be considered as a unified library area, with the Southeastern New York Library Resources Council designated as the agency to work toward integration of all libraries at all levels in the eight counties. Appendixes include tables of survey data, the survey questionnaires, and checklists used in the library evaluations. (JB)

INTRODUCTION

In the winter of 1964 the survey team consisting of Joanne (Mrs. Samuel) Rein, Associate, Professor Maurice Tauber, Consultant, and myself received the following assignment: "survey the library resources in the eight Mid-Hudson Counties of Columbia, Dutchess, Greene, Orange, Putnam, Rockland, Sullivan, and Ulster in order to develop a plan of service in which assets would be shared, resources developed, and services extended. Because of the complex problems of library service in this area caused by topography, culture, commerce, and demography, attention should be given not only to the viewpoint of the librarian, but also to the opinions of educators, sociologists, and industrial research specialists."

We mailed six questionnaires to libraries and library patrons:

<u>Type of Library</u>	<u>Approximate Number of Copies</u>
School libraries	180
Public libraries	150
College libraries	25
Special libraries	25
College faculties	700
Trustees of public libraries	800
Members of communities	<u>1000</u>
 Total Copies	 2880

Seventeen checklists were also mailed:

<u>List Title</u>	<u>Number of Items on List</u>	<u>Number of Lists Sent</u>
1) Reference books	232	3
2) Choice	248	25
3) Books of the year	908	65
4) Standard catalog	84	150
5) Good reading: United States	26	40
6) Greece	31	40
7) Twentieth Century	75	40
8) Children	131	310
9) American history I	20	105

<u>List Title</u>		<u>Number of Items on List</u>	<u>Number of Lists Sent</u>

Totals		2677	1448

Mrs. Rein visited a broad sample of public libraries and some college libraries and made evaluations; in other words, she furnished the groundwork on which the survey rests. She also tabulated the public libraries' questionnaires and summarized the results. Professor Tauber's advice and counsel was of greatest influence for the entire study. He also composed three questionnaires. I visited most of the college libraries and, guided by Mrs. Rein, a few public libraries and special libraries. I consulted the vast literature of the field, the many historical studies, the plethora of sociological and statistical investigations, and library surveys, especially the two recent inquiries authorized by New York State, which partly overlap our own survey.¹

The recommendations made below were discussed in detail by the entire team, as was the draft of this report. Thus we all three share equally in whatever credit may be given to us; the final formulation was my responsibility.

Only selected tables that are of primary importance in supporting recommendations are shown in the report. Although tabulations were made of all questions and items included in the questionnaires and checklists, it was decided that it was not practical to include them all. For those who may wish to examine them, complete tabulations are on deposit at both the Mid-Hudson Libraries System and the Ramapo-Catskill Library System headquarters.

Needless to say, this survey could never have been done without the help and support of our colleagues in the libraries concerned. It is impossible to mention all the names of persons to whom we are indebted; a sample must suffice: the officers of the Southeastern New York Resources Council, Basil Mitchell, president; the staff of the Ramapo-Catskill Library and the Mid-Hudson Libraries Systems headquarters, especially the two Directors, Mrs. Eleanor

Harris and Mr. Leon Karpel; Mrs. Gerald Carson of the Mid-Hudson Libraries Board of Trustees; Jean McFarland, Vassar College Library, Egon Weiss, West Point; Richard Shepherd, New Paltz; and all librarians and board members who answered our lengthy questionnaires and checked the even more voluminous checklists. Mrs. Rein's and my personal thanks go especially to those librarians who extended a much appreciated hospitality to two weary wanderers who motored from one library to another.

Jean Connor and her staff of the New York State Library Extension Division were helpful far beyond the call of duty; they may have wondered at times why I needed these different data, but they furnished them graciously nevertheless. Mrs. Irlene Stephens, graduated assistant to Professor Tauber, tabulated the college library questionnaires and checklists, summarized the answers, and made many helpful suggestions. The library map of the eight counties was made by a Vassar student, Miss Alison Weigel, under the supervision of Miss Elaine Bjorklund, head of the Department of Georgraphy at Vassar College. I am happy to express my appreciation and gratitude to all these ladies.

The department of Rural Sociology of Cornell's College of Agriculture gave me much important advice, and I am especially indebted to the head of the Department, Professor Olaf Larson. My colleagues at the Cornell University Library gave me invaluable help. The reference department, especially Mrs. Caroline Spicer and Miss Evelyn Greenberg, put all its ingenuity at my disposal by giving information about the most esoteric subjects, contacting sources of statistics, and requesting many titles on interlibrary loan; Mrs. Sylvia Faibisoff, Central Serial Record Department, was my guide through the labyrinth of New York State Documents; my secretary, Miss Gertrude Moll, performed most efficiently the duties of an office head by keeping the many thousands of questionnaires, checklists, and letters in order and supervising the tabulations.

I am deeply grateful to the loving patience of my wife, Lilly, who saw with apprehension, but without complaints, the slow transformation of her husband into a Rip Van Winkle, submerged by innumerable charts and statistics of the Hudson Valley.

CHAPTER I

RECOMMENDATIONS

In preparing our recommendations we were conscious of a great number of caveats. The unanimous opinion of educators, sociologists, economists, and industrial research specialists visualizes the future as being dominated by large organizations. A small operation is economically unable to satisfy the varied, complex, and sophisticated needs of a modern community, nor can it afford automatic equipment or other expensive, modern labor-saving devices. For many years it has been recognized as fact that the single community must contract with outside agencies, completely disregarding political boundaries, to secure services like power and sanitary engineering, etc., which are essential to the well-being of the people. We also have accepted the gradual loss of local control in the field of modern communications; dissemination of news and amusements is now largely provided for by radio and television.

The little red schoolhouse has disappeared and central schools, administered by large school districts, have taken its place. The country store, for a long time the economic and social center of a small community, is now an exhibit in the Farmer's Museum; it has been replaced by a supermarket which is often part of a large chain store.

The library is an integral part of the community. For the "good" library this is not lip service, easily said and even more easily disregarded, but a living reality. Our recommendations for the planning of library service cannot disregard what sister disciplines think with regard to the future of the communities themselves. However, we would not like to drive the analogies too far without making sure that we have not lost the tertium comparationis.

The operations of libraries and schools have a number of similarities, but they are by no means identical. Parents living in a small community are forced by law to send their children to a central school, and a school bus is placed at their disposal. The visit to the public library, however, must be a voluntary act. In the thinking of the community, library functions have a low priority compared with, for example, the supply of public utilities; therefore, pressure to relinquish local authority in order to improve library services is less.

We are convinced that the future of efficient library service lies with the larger units. In all aspects of life everywhere in the world trends are toward centralization, and small, indepen-

dent operations find it difficult to meet the competition. The conclusions from this fact with regard to library administration are stringent, but we know that only if preceded by an emotional willingness to recognize and admit the assumptions will their logic be accepted and complied with.

Two other reflections induce us to move cautiously. The Mid-Hudson and Ramapo-Catskill Library Systems were the greatest boom for public library service in the eight counties during the last five years. Their "dynamic flexibility,"² their sincere interest, and their tact in handling sensitive situations have achieved impressive results. Many of their operations are still on an experimental basis; some avenues have not yet been fully explored. We thus do not want to disturb their "peaceful evolution" at this moment.

The philosophy of library systems in New York State recognizes local autonomy in library matters. A large organization will somewhat limit local authority, and we are reluctant to jeopardize civic pride in local cultural accomplishments before we have supplied a substitute.

We further believe that all activities are integral parts of an indivisible whole. Operations performed by school libraries are intimately linked with the services expected from public libraries, and both have repercussions on the management of college and special libraries. This is an axiom to which lip service is often given, but rarely anything else. We fully accept the forceful statement of S. Gilbert Prentiss, State Librarian of New York: "All types of libraries - public, school, college, university, and special - must define their separate roles and at the same time combine their strengths in formal and systematic relationships, so that each can concentrate on its specialty knowing that it can turn to the full resources of other libraries in the state when it is necessary to go beyond that specialty."³ The famous medieval political doctrine Quod omnes similiter tangit, ab omnibus comprobetur⁴ (What touches all in alike manner, should be approved by all) applies fully to library service at all levels and we propose to translate it into administrative recommendations.

Guided by our acceptance of facts which are generally well established, projections of the future done by competent scholars in related fields, and our own caveats, we beg to recommend:

OVERALL PLANNING

Recommendation 1

That the eight counties of the Hudson Valley be considered as a unified library area; that an integration of all the libraries in the counties be accepted as the ultimate goal so that the people of the region may receive the best library service possible; but that the implementations be carried out carefully and cautiously with all the deliberate speed appropriate for a sensitive situation.

Recommendation 2

That the Southeastern New York Library Resources Council be designated as the agency to work toward integration of all libraries at all levels in the eight counties.

Recommendation 3

That the Executive Board of the Southeastern New York Library Resources Council be fully representative of all libraries in the eight counties (both trustees and librarians), so that every type of library can make its voice heard.

PUBLIC LIBRARIES

Recommendation 4

That the Directors and Presidents of the Board of the two systems participate in the board meetings of both organizations in order to guarantee fullest familiarity with both operations.

Recommendation 5

That the Mid-Hudson Libraries and the Ramapo-Catskill Library Systems slowly assimilate their operations, policies, and directives so that all public libraries in the eight counties receive the same services regardless of the system to which they belong.

Recommendation 6

That both systems mail combined newsletters and bulletins.

Recommendation 7

That reciprocal borrowing privileges be extended to all public libraries in the eight counties.

Recommendation 8

That a public relations specialist be appointed jointly by both systems to plan effective library publicity.⁵

Recommendation 9

That regular meetings be held between the professional staffs of the two systems headquarters so that information will be exchanged freely and fully.

Recommendation 10

That the two systems share freely the services of their consultants.

Recommendation 11

That small localities that are not able to finance efficient library service be persuaded to give up their small local libraries and contract with a larger library for more efficient library service.

Recommendation 12

That not the slightest loss of local control be effected until the individuals concerned are psychologically ready to transfer their allegiance from a small local operation to a larger unit.

Recommendation 13

That any, even the smallest, loss of local control be compensated by giving representatives of the individual localities a voice in the executive board of the overall organization.

Recommendation 14

That every effort be made to induce the authorities to raise the tax support for libraries to at least the minimum standard of \$3.50, and if possible to \$4.00 per capita.

Recommendation 15

That steps be taken to make the public library collections more attractive to sophisticated readers; the non-fiction collection especially should be adequate to the needs of persons who have taken a degree in a university.

Recommendation 16

That public library book collections be enriched by a rep-

representative sample of foreign literature in the original language. Several rotating collections of good foreign literature will show the value and the attractiveness of such a venture.

COLLEGE LIBRARIES

Recommendation 17

That all libraries connected with institutes of higher education adopt the Library of Congress (LC) classification.

It has been argued at times that small collections need not be reclassified as the LC classification is of value to larger collections only. The above argument overlooks the following:

- a) LC classification is faster and more economical. Savings in processing costs are important regardless of the size of the institutions.
- b) Developments in automation, which will bring all college libraries into a large network able to transmit not only entries but also bibliographies and eventually entire books, is based on a universally accepted coding system provided by the LC classification. The Dewey number may not be compatible.⁶
- c) Students in small colleges will transfer to larger institutions to work for a graduate degree. These students will be penalized by their lack of familiarity with the LC system.
- d) Small libraries will not always remain small. Developments in higher education have shown that institutions have the tendency to grow rapidly and to increase their educational offerings. Teachers' colleges change to four-year liberal arts colleges, junior colleges add a third or fourth year, undergraduate colleges want to give graduate degrees, and all add area collections. Such changes in the curriculum must be mirrored in the size and quality of the book collections.

We therefore recommend reclassification now, or at least the immediate acceptance of the LC classification for all new acquisitions. Institutions should not wait till the collections are so large that reclassification becomes a major financial burden. Cost of reclassification at present is between \$1.50 and \$3.00 per title, depending on the availability of LC cards, provision of adequate space and tools, and size of the processing staff.

Recommendation 18

We respectfully request the President and Board of Trustees of Vassar College to increase the College book fund to at least \$100,000.00 as the minimum basis. Further increments of about 15 percent should be given yearly.⁷ The college can be proud of its excellent library, but during recent years its current acquisitions have fallen short of minimum requirements. If this situation is not remedied as quickly as feasible, the College library will not be adequate to meet the demands of the superior college faculty.

Recommendation 19

We further respectfully request that the administrative authorities of the State University of New Paltz increase the requirements for the new library. The building as planned is much too small and will be overcrowded the very day it is opened for service.

Recommendation 20

That all college libraries form an informal federation to discuss:

- a) borrowing privileges for the faculties of all institutions.
- b) allocations of subject matter to certain libraries.
- c) joint purchases of expensive titles.

SCHOOL LIBRARIES

Recommendation 21

That every effort be made to persuade school authorities to immediately improve the school libraries. It must be emphasized that it is the responsibility of the schools to maintain adequate library collections, give competent service commensurate to the grade taught, provide sufficient space and facilities for reading, and meet at least minimum national standards. The new education bills (both federal and state) will greatly facilitate such a development.

Recommendation 22

That school authorities be persuaded to offer longer hours of service in the school libraries and to accept the fact that public libraries may supplement school libraries but do not substitute for them.

CENTRAL SERVICES

Recommendation 23

That a central pool of audio-visual materials be created to serve all libraries at all levels in the counties with rotating films, records, and exhibits.

Recommendation 24

That a central storage library be erected to house, service, and lend rarely used materials for all libraries at all levels in the eight counties.

Recommendation 25

That, in cooperation with the State Library and the State Archives, back files of local newspapers and important archival material be microfilmed.

Recommendation 26

That every effort be made to preserve current local newspapers on microfilm.

Recommendation 27

That a Union Catalog of periodicals and series be started, using modern data processing equipment, so that a printout can be distributed to all libraries.

Recommendation 28

That communications between the libraries be improved (a few do not even have a telephone). That larger units be joined by teletype.

Recommendation 29

That developments in facsimile transmission and joint use of computer equipment and similar electronic devices be followed with the greatest attention, and be used for the joint services of all the libraries whenever economically feasible.

Recommendation 30

That a microtext collection be started and developed on a cooperative basis to serve all libraries of every type in all counties.

Recommendation 31

That libraries be equipped with a sufficient number of microtext readers. Libraries will rely heavily on material on microfilm in the immediate future. Familiarity with this essential tool should be cultivated in high school libraries now.

Recommendation 32

That a library be designated to become the central reference and research library for the entire area. Three libraries are eligible for these services:

- a) Vassar College Library
- b) Adriance Memorial Library
- c) The Library of the State University of New Paltz

None of these libraries, however, is at the moment in a position to take on these additional functions because they have neither the holdings, space or staff necessary.

Vassar College has by far the best collection of the area and its reference staff is well-trained to satisfy the most sophisticated requests. However, its primary function is service to its own campus; the College administration may therefore not be interested in applying for this position.

Adriance Memorial Library is the largest public library, well run and with a forward-looking administration. Moreover, it has served as the central reference library for one system and may well be prepared to take on a broader responsibility. Its present holdings, however, are not adequate, and the building is overcrowded and obsolete.

The library of the State University at New Paltz may be in the best strategic position to request adequate financial support from the State. The collections are insufficient at present, and even the contemplated new library building would be inadequate for a large assignment.

Our present preference is slightly in favor of the Adriance Memorial Library. Its geographical location is excellent and its previous experience of work with one system would make it a strong candidate. A new Mid-Hudson headquarters building, now under construction, will help to increase the storage capacity of the Adriance Library. The library will soon have the minimum base of 100,000 adult non-fiction titles. The well-trained staff, strengthened by

the advice given by the highly qualified personnel in the two library systems, will have the competence to build-up and to serve a central reference and research library. There are other good public libraries in the area, but the two reference libraries for the Ramapo-Catskill System have small collections, and such a well-known library as the Finkelstein Library in Spring Valley is ineligible because of its location in the southwest corner of the area.

Recommendation 33

That the two system headquarters gradually transfer all reference questions to the new central library.⁸

FUTURE DEVELOPMENT

Recommendation 34

That the planning not go beyond the integration of all library services in the eight counties, at least for the time being. The size of the area, its population density, and its financial capacity are adequate for a successful solution to its library problems. Moreover, it is both geographically and economically a clearly recognizable unit.

Recommendation 35

That at a later date, if the demography and changes in the economic pattern should warrant it, the two following changes be discussed:

- a) Dropping the southwest corner (Rockland County) from the combined systems and joining it with Westchester County.
- b) Combine all counties which lie in the orbit of New York City--that is, the Mid-Hudson Valley, Rockland, Westchester, and Long Island--into a strong reference and research library system.

Footnotes to Introduction and Chapter I

4. Codex Justinianus V, 59, 5, 2 in Corpus Juris Civilis edited by Krueger and Mommsen II, p. 231.

5. We are aware that the Mid-Hudson Library system just appointed a public relations specialist.

6. The recently passed Higher Education Act necessitates the closest cooperation between the Library of Congress and the Association of Research Libraries of which LC is a member. It is conceivable that the LC cataloging will be limited to LC classification.

7. The first draft of our recommendations suggested \$200,000 as a basis.

8. This recommendation has also been made by previous surveys.

CHAPTER II

HISTORY OF THE REGION

The Hudson Valley is one of the most beautiful sights in America. Nature has abundantly blessed it with romantic scenery and panoramic views. Thousands of visitors flock to such noted resort areas as the Catskill and Shawangunk Mountains, ski in Belleayre (Pine Hill, Ulster County) or in the Clarence Fahnestock Memorial State Park (Putnam County), or drive to the Palisades to see the Bear Mountain. About one thousand hotels and motels and numerous antique and souvenir shops are the immediate beneficiaries of this ever increasing tourist trade.

The geological history of the region is of unusual interest (Table 4).¹ The Hudson Valley counties fall into several of the major physiographic provinces of the state, each of which is characterized and determined by the underlying rocks and their structure. To the west, all of Sullivan and the western parts of Ulster and Greene Counties lie in the Catskill Mountain province, a rugged upland with relief up to 4,000 feet underlain by nearly flat-lying resistant sandstones and conglomerates. To the east of the Catskills are the Hudson Lowlands in eastern Greene and Ulster and northern Orange Counties, a lowland underlain by folded and inclined weak shales, siltstones, and limestones, the latter forming low elongate ridges roughly parallel to the Catskill front. Through this lowland the Hudson River extends from near Coeymans south to Newburgh, beyond which it leaves the lowland and cuts through the Hudson Highlands--with its mountainous ridges of ancient and resistant granites and crystalline metamorphic rocks. This area is an extension of the New England Uplands province across Putnam County into southeastern Orange and northwestern Rockland Counties. Between the Hudson Lowland and the Catskill front is the narrow, high Shawangunk Ridge, the uptilted edge of the thick, strong Shawangunk conglomerate. In eastern Dutchess and Columbia Counties the Taconic Mountains of complexly folded and faulted resistant limestones, dolomites, slates, and quartzites rise up to the New England Uplands of western Connecticut and Massachusetts. The southeastern half of Rockland County occupies the northern end of the Triassic Lowland of weak shales and sandstones within which are several basaltic sills inclined gently to the west. The lowest of these sills appear at the surface and terminate at the Hudson River as the Palisades, the others from the Watchung ridges. The junction between this lowland and the Hudson Highlands is marked by the prominent line of the Ramapo hills.

The latest major event in the physical history of the Mid-Hudson region was the Pleistocene continental glaciation which

ended about 25,000 years ago. The last ice sheet of the Pleistocene extended over the entire area, covering the highest peaks of the Catskill (4,205 feet). The erosive effects on the pre-glacial topography were not marked, being mainly a smoothing of the rougher contours of the bedrocks. In the Catskills the ice remnants lingered in the higher valleys as local glaciers, scooping out cirques near the summits and rounding the profiles of the valleys, while depositing moraines in the lower parts of the valleys. More significant were the results of deposition from the melting of the vast sheet of stagnant ice as it wasted away: most of the main Hudson valley was thickly covered by gravelly delta deposits of sand, silt, and clays laid down in large lakes, ponded among the ice remnants and held back by the narrowness of the pass through the Hudson Highlands. The largest and last of the lakes was Lake Albany which developed when most of the ice had disappeared and a sheet of water covered the region from the Highlands north to Albany. As the Hudson Valley slowly tilted upward to the north as a result of having been relieved of the weight of the ice, the present topography was revealed as Lake Albany drained off southwards.

The upheavals of the region's political and social history fully match the dramatic geological evolutions. In colonial times three Indian tribes dominated the scene, the Mahicans, the Lenni Lenapes (both part of the Algonquian group), and the Mohawks.² There was, of course, much savage intertribal warfare. The Mohawks especially, who formed a part of the celebrated Iroquois Confederacy, subjugated their red brethren with inhuman ferocity. Mohawk in Algonquian means "man-eater" and the war parties of the tribe did their very best to deserve the name. It was fortunate for the white settlers that the Mahicans and Lenni Lenapes were comparatively peaceful and retaliated only if provoked beyond endurance by the avarice and the cruelty of the palefaces.

The Iroquois confederacy nations hated the French and were eager to form an alliance with the English colonial government and to accept subsidies. During the War of Independence, however, this friendship turned to the great disadvantage of the American colonists; savage Indian forays led by loyalists brought widespread destruction to the settlers. The Sullivan-Clinton expedition of 1779 shattered the Confederacy and, as the peace treaty of 1783 contained no provision with regard to the King's Indian allies, they were at the mercy of the United States Government. The campaign of General Wayne of 1794 definitely liberated the Commonwealth from any Indian danger.

Today hardly a trace of the Indian occupation of the Valley is visible. The red man had taught his ungrateful white pupil the art of survival in the primeval forest, hunting and guerilla warfare, and the physical geography of the country. The Indian learned

from his white teacher how to use the rifle - and to get drunk. Indian place names are abundant, but mispronunciations and misspellings have made the original meanings doubtful. Wappinger may mean "Eastlander" from "Wabum" (east) and "acki" (land). Poughkeepsie, of which fifty different spellings are recorded, is explained as "Safe Harbor" or as "Red covered lodge by the little waterplace."³

The Dutch occupation lasted only half a century and came to an abrupt end in 1664. Regardless of its short duration, it left deep impressions on the history of the valley.⁴ In spite of important positive contributions, we must bring out three of the worst gifts of its Pandora-box: (1) The Patroonship which gave all privileges to the grantee and all obligations to the tenant and therefore retarded effective colonization; (2) An authoritarian form of government which gave the political power into the hands of a few rich families (Stuyvesant's words, "We do not derive our authority from the pleasure of a few ignorant subjects," are well-matched by Philip Schuyler's appraisal of Ulster County lawyer George Clinton who had been elected New York's first Governor in 1777: "Family and convention do not entitle him yet he has ability and is brave."); and (3) Introduction of slavery which brought New York one of the largest slave populations in colonial times. New generations and immigration from New England⁵ slowly changed the atmosphere. Property qualifications for voting were removed in 1822, slavery was abolished in 1827, and finally all feudal rights were declared illegal in 1852.

There was no printing in Dutch during the colonial period, but some books were shipped to New Amsterdam from the Netherlands. Thus we know of sixty-one religious books received by Stuyvesant in 1660. The few literati who lived in the new Netherlands had to find a European publisher for their books, as Jacob Steendam did for his Distelvink (1649). The Dutch language, however, had a tenacious "underground existence." Preaching in Dutch continued in Kingston to 1808, and as late as 1846 a reading knowledge in English and Dutch was suggested for qualification for voting. Dutch vocabulary is still used in the valley, for instance kill for brook (especially in place names like Catskill), kruller for doughnut, pot-cheese for cottage cheese and lopperd milk for curdled milk.⁶ Other Dutch words have been accepted all over the United States, as cookie, boss, waffle and Santa Claus.⁷

Historians agree that New York State did very poorly under the royal governments (Table 5).⁸ It had a slow growth and was the most backward of the thirteen colonies. Both politically and economically it lagged behind New England to the north and Pennsylvania to the south. The capital cities of the New World were Boston and Philadelphia; both were surrounded by a flourishing countryside,

whereas New York State remained largely a wilderness, sparsely settled and under the menacing shadow of the large forests.

Immigration ameliorated the scarcity of colonists. French Huguenots settled in New Paltz in 1677. Their picturesque dwellings can still be seen on what local historians call with justified pride, "one of the oldest streets in America with its original houses."⁹ The German Palatines founded Newburgh in 1708; the so called "Great Immigration" of 1710 was brought to New York by Governor Hunter to produce naval stores from the pine forests of the Hudson Valley. The Palatines were settled on the Livingston Manor (Table 6), north of Saugerties (the west camp), a total of ca. 3,000 persons. The project was abandoned in 1716.¹⁰ More important than the European immigration was the steady stream of New England farmers, who were attracted by the fertile soil of the valley but did not relish the economic supremacy of the land lords. The impediments to a healthy economic development were the Manor Grants which, like the Dutch Patroonships, were a complete monopoly. Many of the grants ran sixteen miles along the Hudson, eight miles on each side and back almost indefinitely into the country. Their acreage was gigantic. For instance, the Van Rensselaers owned one million acres. The landed aristocracy intermarried and had almost complete political control.¹¹

The farmers, of course, revolted. Already the Palatines had rebelled against Robert Livingston; in 1750 the Van Rensselaers were attacked; and the first large "Rent War" was led by Prendergast in 1766.¹² None of these uprisings were successful, however, and the colony remained thinly populated, having approximately 100,000 inhabitants, including about 15,000 Negro slaves, by 1760.¹³

The War of Independence found the valley bitterly divided. There were a great number of Loyalists, and the area suffered severely under Indian war parties led by revengeful Tories. The landed families were generally in favor of the revolution and were compensated by important political and military assignments.¹⁴ Some of the counties quickly expressed their allegiance to the Continental Congress; for instance, 225 farmers of Greene County joined in signing the Cocksackie Declaration on May 17, 1775.¹⁵

The Hudson River had a pivotal place in the war, and both sides did their utmost to secure their positions on the river. About one-fourth of all the battles in the seven-year struggle were fought in the valley, and some of the engagements are known to every American schoolboy: for instance, Stony Point, stormed by "Mad Anthony" in 1779, and the attempted treasonable surrender of West Point by Benedict Arnold in 1780. The material losses of the valley were excessive. Kingston, to give an example, was burned to ground.¹⁶

Because New York City was occupied by the English army, Kingston and Poughkeepsie became nationally known. Some of the New York City newspapers were published in the valley during the war: the New York Packet and American Advertiser was published from 1777 to 1783 by Samuel London in Fishkill; the New York Journal and General Advertiser was published by John Holt in 1777 in Kingston and the New York Journal and General Advertiser from 1778 to 1782 in Poughkeepsie. The counties had their share of war heroes like the young Sybil Ludington, the Paul Revere of Putnam County in 1777. The bete noire was Claudius Smith¹⁷, a famous bandit in Orange County who tried unsuccessfully to camouflage his atrocities under the cloak of a Robin Hood (executed in Goshen, 1779).

George Washington was the idol of the valley, respected and admired by everybody. Better than anyone else he personified the new government and the people's hope for a successful end of the war. During the last phase of the hostilities his headquarters were in Newburgh, and there he delivered his famous speech which effectively stifled a threatening mutiny of his officers: "Gentlemen, I became almost blind in the service of my county."¹⁸

Posthumously George Washington made Kingston and Ulster County nationally famous in the history of American printing. I am referring, to use Perry Mason's terminology, to "the case of the Ulster County Gazette" issue of January 4, 1800, describing the death and funeral of the first President. Few issues of an American publication have brought its proud possessors as much heartache, disappointment, and even despair as did this small county newspaper, only four pages in small quarto, each page printed in four columns. Sixty odd reprints numbering about one million copies have been sold, but only two examples of the coveted original have survived (Library of Congress and American Antiquarian Society). So the betting average that a third copy of the original will be found is, at the moment, two against one million.¹⁹

The revolution at first brought no radical change. High property qualifications, which excluded ninety percent of the population from the polls, guaranteed that the economic and political power rested in the hands of the landed aristocracy. The temper of the valley was on the whole a conservative one; thus a motion in the assembly to abolish slavery was defeated by the elected members of the region in 1777. Columbia and Dutchess Counties were federalist strongholds²⁰ because of the importance of the landlords, whereas Rockland County, where independent, owner-operated, small farms were abundant, was anti-federalistic.²¹

The severe losses during the war induced the assembly to impose draconic retributions, including property confiscation, on the former loyalists. John Jay, whose patriotism cannot be doubted,

sharply criticized these actions: "New York is disgraced by injustice too palpable to admit even of palliation." The resale of the confiscated land was to the advantage of the small farms. Thus the Philipse Estate in Putnam County, broken up in small parts, was bought by former tenants of the estate.²²

The land at large profited greatly by a steady stream of New England farmers.²³ The immigration was so sizeable that Timothy White, President of Yale, called it "a colony from New England." The War of 1812 was therefore not very popular. Only about one-fifth of the state was settled by 1800, but during the next thirty years the acreage under cultivation increased from one million to five and a half-million, and the export and import figures from eight million dollars to eighty-two million dollars.

The calamitous question of rents and feudal rights was settled by court decision. The last of the anti-rent wars occurred 1844-45 after the death of the "Good Patron," Steven Van Rensselaer, who had been very lenient in collecting the rents.²⁴ The tenants owed a considerable sum of money, and the estate started legal proceedings to enforce payments. The tenants unwilling, and undoubtedly partly unable to pay, banded together and obstructed any action by the counties' law officers. They were led by Dr. Smith Boughton (called Big Thunder), called together by the blowing of tin horns, and camouflaged as Indians by wearing calico dresses. There was some bloodshed and considerable destruction of property. In a dramatic trial, Dr. Boughton was convicted by a Columbia County jury and sentenced to life imprisonment. The mood of the country was decidedly in favor of the defendant who was pardoned by the Governor. The Constitution of 1846 made it clear that the people considered feudal rights to be anachronistic and incompatible with American democracy. The legal point of the landlords was that the lands' feudal rights had been lawfully acquired property and could not be alienated without due process of law.

Only the courts could clarify the situation, and Chief Justice Charles Ruggles, speaking for the New York State Court of Appeals in the action of De Peyster against Michael, October 1852, liberated the Hudson Valley farmers from feudal restrictions. The case is of such vital importance to the social and economic history of the valley that a summary is in order. In 1844 John Watts De Peyster brought action against Anthony Michael in order to repossess one hundred acres of land lying in the town of Claverack, Columbia County, because of the refusal of the lessee to pay the "quarter sales." Quarter sales are a feudal restriction on the property rights of the lessee and oblige him to pay to the lord of the manor one-quarter of all the money arising from "renting, setting aside, etc. of the premises leased." This condition formed part of the original lease, executed by James Van Rensselaer in 1785. The

Circuit Judge ruled that the quarter sales were against public policy and void in law. The appeal of the plaintiff argued that the lease was a contract, accepted by the lessee without coercion and that thus the legal doctrine volenti non fit injuria was applicable, and the defendant could not suddenly maintain that the condition was repugnant.

The defendant rested his case on the New York Statute of 1787, which had abolished sub-infeudation, and maintained with great eloquence that the condition was void on principles of public policy "because it imposes onerous and degrading restrictions not called for by the present state of society, unsuited to the genius of our institutions, and inconsistent with that sense of personal freedom which it is the policy of the law to cherish and expand."

The court ruled for the defendant "on strict legal authority, without adverting to any general consideration of public policy." In England sub-infeudation had been abolished by the statute of Edward I quia emptores. This statute was probably not operating in the New York Colony, however, for the acts of 1779 and 1787 had transferred the seigniorship of the land from the King to the people of the state and had put an end to all feudalistic tenure conditions between one citizen and another. Chief Justice Ruggles wrote that the quarter sales condition is of feudal origin and depending on feudal tenure, "but when the feudal relation between the parties was broken up, these feudal restraints were thereby dissolved; and the common law principle applicable to property not feudal, immediately took effect and rendered similar restraints created by contract entirely void." Conditions based on feudal origin are contrary to the inherent and universal love of independence and, therefore, are void in law.

The majority of the people of the valley had church affiliations. Anti-clerical movements like the society of ancient Druids in Newburgh, which took pleasure in setting dogs on clergymen, were extremely rare. The region was strongly pro-Union and almost 3,000 men donned the blue uniform. Many saw heavy fighting and could show with justified pride the war medals they had earned; one regiment alone won six Congressional Medals of Honor. The casualties were very heavy; the youngest war hero, and at the same time the first²⁵ who gave his life, was John Elmendorf, a 13 year old drummer boy.

Up to this time the economic interest of the valley's population was to a large extent concentrated on agriculture.²⁶ The farmer must be able to bring his products to the market; successful farming is therefore intimately connected with good roads and speedy means of communication. There were but few good roads in colonial times, and even fewer halfway tolerable inns, but the area can claim

one of the oldest hotels in America, the "Beekman Arms," built in Rhinebeck around 1700.

Right after the War of Independence the building of stage lines and turnpikes was started in earnest. In June 1785 Isaac Van Wyck, a resident of Fishkill, established the first important stage line, running on the east side of the Hudson and connecting New York City and Albany.²⁷ The coaches operated three times a week and completed the entire run in two days. The fare was first \$10 but was reduced to \$6 in 1796. The 1797 Anthony Dobbin organized a line on the west side of the river and furnished coaches to connect Goshen in Orange County with New York City. In 1803 he established full service from Hoboken to Albany. The coaches ran three times a week with overnight stops at Hackensack, Goshen, and Kingston, and charged \$8 for a one-way ticket.

The first important turnpike connected Catskill and Newburgh. By 1807 the state had nine hundred miles of improved roads which were financed by turnpikes; by 1821 there were four thousand miles.

A great inland canal, connecting the Great Lakes with the Atlantic Ocean, had been proposed by Christopher Coles in 1785. Under the driving influence of Dewitt Clinton, work on the Erie Canal, affectionately called "the big ditch," started in 1817 and was completed at a cost of eight million dollars in 1825. It was enlarged twice, in 1842 and in 1884. In 1903 the present day barge canal was opened for traffic. The construction of the canal was a major engineering feat and was enthusiastically praised by the people of the state. The ultimate economic beneficiaries were New York City and the western part of the state. Formerly it took three weeks to ship a ton of goods from Buffalo to New York City, at a price of \$100. By using the Erie Canal the traveling time was shortened to eight days and the freight charges reduced to \$15. The immediate result was that land values west of Seneca Lake quadrupled almost overnight.

The river itself provided a beautiful and, except for the winter months, agreeable passage. Sailing boats, however, were slow and used mainly for freight. In spite of the overpowering competition of steamships and railroads, there were still about two hundred Hudson sloops employed by the beginning of the Civil War. River navigation was revolutionized with the successful trip of Robert Fulton's "Claremont" on August 17, 1807. Steam navigation was a Livingston-Fulton monopoly, not only on the Hudson, but also on the Mississippi. Tickets were rather expensive, \$7 for a New York - Albany run, but a trip on a Hudson River steamboat was considered a delightful experience by the valley's landed gentry. The monopoly was bitterly contested from the start and was finally broken by Supreme Court decision in 1824. After a famous speech by

Daniel Webster, Chief Justice Marshall ruled that it was "repugnant to the constitution" (Gibbons v. Ogden). This decision is one of the most important ones in American constitutional history because it affirmed the rights of the federal government to regulate commerce. It also exemplified the pivotal position of the Hudson Valley in national affairs.

During each run, the boats consumed about thirty quarts of pine wood. From 1840 on, anthracite coal was used. They stopped eleven times each way and had used Poughkeepsie as one of the terminals since 1814. Sharp competition reduced the fare drastically, and increased the comfort and even luxury in cabins and dining rooms to such an extent that the ships were called "palaces afloat." Unfortunately it also tempted captains and pilots to seek fame and profits by racing rival boats and jeopardizing the safety of their own ships. The greatest tragedy occurred on July 28, 1852, when the "Henry Clay" racing the "Armenia" burst into flames and had to be beached with a loss of eighty of her passengers. It was the twilight of the genteel past of Hudson River navigation.

The "Iron Horse" soon replaced the "Teakettle" (nickname of the earliest steamboats). The railroads achieved the most satisfactory communication network for the nineteenth century and successfully accomplished the task so gallantly begun by coach lines, turnpikes, canals, and river navigation. The interest in railroads was universal and their potential for economic development was acknowledged everywhere; especially in the United States the new mode of transportation captivated the imagination and the fancy of the broad masses. Mrs. Trollope remarked that the locomotive was treated in America as a domesticated animal. The first railroad to be put in operation was the Stockton-Darlington line in England (1825), to be followed by the Granite Railroad Company of Massachusetts in 1826. The Baltimore-Ohio Railroad was chartered in 1827 but did not provide full service until 1831. The first New York railroad, the Mohawk-Hudson line, operated her sixteen mile long track, connecting Albany and Schenectady, from 1831 on. A meeting in Poughkeepsie in 1845 decided to establish the Hudson River Railroad which would run parallel to the river. Construction started in 1847; two years later Poughkeepsie had rail connection with New York, and by 1851 the line had reached its terminal in Albany. By 1860 most passenger and freight traffic was carried by the railroads.

As the natural termination of these new means of transportation, New York City became a world renowned center of commerce and soon out-distanced its colonial rivals, Boston and Philadelphia. The effects of these technological developments were a mixed blessing for the valley at times, and it took all the ingenuity of the people to turn the disadvantages of the new situation into economic assets. The farmer especially was hard hit, and his resourceful-

ness was greatly challenged to meet the rapid changes. Wheat and meat were carried at cheap tariff rates from the West, to the eastern markets, and the valley could not cope with this powerful competition which operated under much more advantageous conditions. Wheat farming, cattle raising, and sheep breeding had to be abandoned for stringent economic reasons. As industry slowly replaced farming, farm labor became more expensive because wages had to be adjusted to those paid by factories. It has been calculated that the annual upkeep for a sheep was \$1 in the valley, whereas the expenses in the Middle West were 25 cents.

The valley turned to specialized cultivation. Dairy farming proved to be the most successful and profitable activity. Butter from Orange County dairies was a nationally known product, and even before the Civil War the United States Navy insisted on being provided with Orange County butter. Before the advent of refrigerated cars, New York City could not be reached by the farmers in the western part of the state, and the important city market was supplied by counties nearer the metropolis. For the next hundred years, dairy products were to remain the most important agricultural commodities supplied by the valley. Fruit growing, especially of apples, was next in importance, and nobody driving through the valley in spring will ever forget the enchanting beauty of the multitude of blossoming apple trees.

Horticulture, a gift from the tulip-loving Dutchmen, may have been practiced in the valley for a long time. Only in the nineteenth century, however, did it become famous nationwide with the renowned nurseries established by the Downing family in Newburgh. Hothouses and nurseries were (and to a point still are) of economic significance in Greene, Orange, and Rockland counties.²⁸ Trotting horses have been bred in Goshen since 1801. Many famous champions of the racing track have come from the breeding farms of Goshen and vicinity. The race track, called Historic Track, has operated since 1838 and is the world's oldest active harness racing track. Goshen has paid tribute to the fame it owes to the trotting horse by establishing, in 1931, The Hall of Fame of the Trotter, a unique museum in honor of the heroes and men of the sport. Some other activities were comparatively short-lived. Hudson and Newburgh were attracted by the great profits promised by the whaling industry; the different whaling corporations²⁹ flourished for about a score of years, but by 1850 the interest was extinct.

Before 1840 the number of cattle and sheep was more than double the human population of Sullivan County: 13,755 people owned 15,147 cattle, 14,030 sheep, 8,179 swans and 2,433 horses.³⁰ In the second half of the century, the economic well being of the county rested on saw mills and tanneries. At the peak of production, the county had over 200 saw mills and grist mills. • The

greatest output, 44.5 billion board feet, was achieved in 1909; from then on it decreased rapidly. The same fate occurred to the tanneries. The county had about forty tanneries at the time of the Civil War; at the turn of the century they had become a thing of the past.

Ulster County can boast, among many other achievements, being the seat of the Borden Home Farm.³¹ Gail Borden received a patent in 1856 "for producing concentrated milk by evaporation." The invention occurred just in the nick of time, for during the Civil War both the Army and the Navy used great quantities of Borden's condensed milk, and made Mr. Borden both famous and wealthy.

More and more, sons of farmers shunned the occupation of their fathers and looked for employment elsewhere. From the turn of the century on, the number of farms dropped sharply,³² but the economic vacuum was quickly filled by demands originating from the metropolis; the magnetic influence of New York City, more and more, dominated the life in the valley.

Shortly after 1800, rich New Yorkers had started to buy farms, first as summer homes only, and perhaps also with a view toward a place for retirement. With improved communications, the function of these houses changed to that of all year-round residences and a slow suburbanization of the valley started. Those who could not afford to, or were not interested in buying a home, rented one for the summer and turned the valley into a popular vacationland for New York City residents.

A slow, but persistent, industrialization of the region started. It began with establishments which were related to agro-economic pursuits, like factories to produce condensed milk and agricultural machinery, or saw mills, mines, and quarries. Textiles came next, and soon the entire gamut of American industry was represented.

Dutchess County quickly became a center for the textile industry.³³ By 1820 the county claimed 117 factories using wool carding machines. John Given established a cotton factory in Wappinger Falls, and Poughkeepsie had a dozen clothing factories. One of the best known establishments was the Glenham Company which received a large contract from the War Department to furnish the blue uniforms for the Union Army. The rural spirit, still very strong in the county, looked with disgust on the activities of the "Improvement Party;" however, the economic facts were stronger than nostalgic reminiscences of the allegedly serene days of the rural past. Poughkeepsie almost quadrupled its population during the century, whereas the communities without industries remained stagnant or even decreased in population. According to Henry MacCracken, the following statistics apply for the county:

	<u>1840</u>	<u>1940</u>
<u>Dutchess County</u>	<u>52,398</u>	<u>120,542</u>
Poughkeepsie	10,006	40,478
Fishkill	10,437	3,615
Milan	1,725	695
Pine Plains	1,334	1,301
Clinton	1,830	1,070
Stanford	2,278	1,386
La Grange	1,851	1,638
Union Vale	1,498	1,056
East Fishkill	2,500 (est)	2,024
Beekman	1,400	790

Industrialization was on the march and could not be stopped. Adriance, Platt & Company established a flourishing factory producing agricultural machinery. Ready made clothing factories working almost exclusively for the New York City market, multiplied; the telephone, undoubtedly an earmark of modern business management, was introduced in 1879, only three years after Alexander Graham Bell's patent had been granted. Other towns followed Poughkeepsie's example. Beacon for instance had a very prosperous hat industry from 1880 to 1920 as well as many establishments producing leather goods. Unfortunately it had also its share of labor unrest, for instance, a long, drawn out strike in the Werber factory in 1935.

Nyack in Rockland County was known as the "shoe town" because of its plethora of shoe factories. The town had grown rapidly from 1,000 inhabitants in 1850 to 6,000 in 1890 and was one of the first places to introduce electric street lights (1887). The nineteenth century industry of the county emphasized iron, lumber, ship-building, and textiles. Orange County, too, was strong in textiles and specialized in the manufacture of flannels, broadcloth, and woolens. Ulster County's economic wealth was linked with the production of Rosendale hydraulic cement. The county seat, Kingston, was included in Thorndike's evaluation of smaller cities.³⁴ Kingston's average is a mediocre one:

	<u>Kingston</u>	<u>National Range</u>
Number of deaths in the first year of life out of 1,000	71	32 - 161
Percentage attending schools after age 16	61	91 - 128

	<u>Kingston</u>	<u>National Range</u>
Homicide per 100,000 population	2	0 - 23
Illiterates over age 10 per 1,000 population	11	3 - 30
Percentage of homes rented monthly for less than \$15 estimated value under \$1,500	10	0 - 39
Per capita expenditures for teachers	\$ 9.5	\$ 3 - 20
Death by typhoid per 100,000 population	2	0 - 11

The region always had a substantial number of citizens who were seriously interested in education and the diffusion of knowledge. As a sample of the many libraries which were founded, six of the earliest will be mentioned. Shortly after 1760 the Presbyterian minister Ebenezer Knibloe established a small library in Amenia.³⁵ The city of Hudson was not satisfied with the circulating library it had had since 1786, and in 1793 the citizens started a public subscription for a Columbia County library. In 1797 the Hudson library was established.³⁶

The last years of the eighteenth century witnessed the birth of quite a number of libraries. In 1794 the Franklin Union Library Society was founded in what is now Patterson, Putnam County. A year later (1795) the Dutchess County Academy in Poughkeepsie opened the doors of its library, to be followed nine years later by the Poughkeepsie cooperative library in 1804. The best description of an early library is found in the records of the Pine Plains library.³⁷ At a meeting on December 14, 1797, a citizen's committee decided to offer shares of \$2.50 each for a subscription library. After 47 shares had been sold, a book selection committee of three bought 95 volumes and reported an additional gift of 19 volumes. The list shows sophisticated judgment; some of the titles were: Rollin, Ancient History (a standard book at the time), George Washington, Letters, Le Sage, Gil Blas, the works of Seneca and Homer (both in English), Milton, Thomson, Seasons; Butler, Hudibras, etc. It was a perfect gentleman's library.

The educational system of the valley is intimately linked with the history of the Regents.³⁸ This body was created in 1784 "for establishing a university." Soon the power to charter all

colleges and academies and the right to grant degrees were added. With the unification act of 1904, the Regents began heading the State Education Department and were given supervisory authority over all educational institutions, including the licensing for practice in the profession. The executive officer was, and is, the Commissioner of Education.

The public schools of the counties were organized after the legislature had passed the Common School Law of 1812; higher education, however, was mostly either church supported or privately endowed. Many of these institutions were rather small and for a long time were not able to compete with the larger colleges. The Theological Seminary in Newburgh may serve as example of the church-connected group. The Claverack College illustrates the second group.³⁹ It started as a seminary in the early years of the 1800's, and became an academy in 1830; the Regents granted a college charter in 1854, but Claverack had to be closed before the turn of the century. Today the area has 26 colleges, 10 secular and 16 associated with a denomination.

Not even the shortest paragraph on education in the Hudson Valley can fail to mention Vassar. Vassar is not only a jewel among the institutions of the region, it is one of the outstanding schools of higher education in America.⁴⁰ The hope of Mathew Vassar, to endow "a college for young women which will be to them what Harvard and Yale are to young men," has been gloriously fulfilled. To claim for women "the same right as men to intellectual culture and development" were courageous words in 1861. At that time, for most people everywhere in the world, the basic inequality of the two sexes was a law established in heaven and on earth. Few saw the light; a hundred years ago equality for women and men was like a small candle flickering in the darkness of stupidity, selfishness, and cowardice. The "magnificent enterprise" was daring from the start and has remained so. This attitude is well-expressed in the words of Maria Mitchell, one of the most lovable members of the college faculty. "We do things that other colleges have not done before. If the earth had waited for a precedent it would never have turned on its axis."⁴¹

The counties had a number of bookstores; many of them were probably small establishments. Paracleete Potter, however, was destined to become a prominent figure in the annals of American book trade. His Poughkeepsie book store "was a great institution, a sort of club where all those who were fond of literature and of discussion were wont to gather."⁴² The store must have been a landmark. Local addresses are often given in relation to it, for instance, "five doors east of Potter's book store."

Mr. Potter was a leading figure in local journalism and

politics for the first forty years of the nineteenth century. He bought the Poughkeepsie Journal and Constitutional Republican in 1806, was a trustee for the Lancaster School Society (1814), and was on the board of the Dutchess Whaling Company (1833), and the Poughkeepsie Locomotive Engineering Company (1838). He lost a great deal of money in the panic of 1837-38 and, like so many disappointed easterners, he left for the West to recoup his fortune. In 1841 he was Registrar for the U. S. Land Office in Milwaukee.

The Valley has a distinguished place in the history of American art. The Hudson River School represents America's first school of gifted landscape painters. The pictures by Thomas Cole, Asher Brown Durant, J. F. Kensett, etc. made the romantic views of the river, the Catskills, and the White Mountains famous all over the United States.

Their interpretation of nature was a very poetic one, influenced by contemporary writers like Emerson, Thoreau, etc., and especially by William C. Bryant who wrote: "Go forth, under the open sky, and listen to Nature's teaching." Their art also expresses a patriotic pride in the beauty and grandeur of the American scenery. The artists were passionately in love with the landscapes they painted and extolled their beauty and fascination like a medieval troubadour praised the charms of his lady. This sentiment is well-expressed by Durant's advice to his colleagues: "Go not abroad. The virgin charms of our native land have claims on our deepest affections."⁴³

The number of famous sons and daughters of the region is almost legion. Columbia County can claim among many others Martin Van Buren and Samuel Tilden.⁴⁴ Orange County gave four governors to the state; one among those was William H. Seward, famous as Lincoln's Secretary of State.⁴⁵ Rockland County had one of the earliest women doctors, Dr. Gertrude Hammond-Harper (Civil War), and in Mrs. Maggie Lena Walker, the first woman bank president (1903).⁴⁶ The county today has over a hundred famous residents, for instance, Catherine Cornell, Carson McCullers, Helen Hays, Ben Hecht, Mike Wallace, etc.⁴⁷ Dutchess County, famous for its physicians,⁴⁸ also claims five governors of New York State. Hyde Park will forever be a national shrine as the residence of President Franklin D. Roosevelt and his wife, Mrs. Eleanor Roosevelt.

CHAPTER III

THE MID-HUDSON VALLEY IN THE ATOMIC AGE

We all are so fascinated with the dramatic developments of science and technology that we almost overlook the equally spectacular changes in social stratification. No doubt the comparison between a rumbling stage coach and a jet or spacecraft is overwhelming; but the difference between a Hudson Valley farmer fighting feudal restrictions and the modern, college educated manager of a dairy is almost as striking. The entire semantics of those well-known phrases like "rural communities," "farming," etc., have changed so basically that application of the nineteenth century interpretation of these words would totally misrepresent the present day situation. There is hardly anything as unemotional and rational as the United States Census, but even its terminology had to be modified to conform with sociological developments. Instead of the time-honored divisions of Urban and Rural, we have now a tripartite classification: Urban, Rural Non-farming, and Rural Farming. It is most likely that the adjective rural will disappear completely in the near future.

Sociologists are unanimous in their verdict that "urban sites take rural aspects and rural communities acquire urban characteristics."¹ This trend had been observed in the description of Plainville, USA, twenty years ago: "The social differences by which town people as town people once outranked country people as country people have also disappeared almost completely."² A denizen of Plainville phrased it succinctly without the benefit of sophisticated terminology: "There ain't no country boys any more." We may add to this that gone, too, is the country girl who was trained to become the efficient helpmate for her future farmer husband. The young lady today has graduated from high school; she may also have attended a community college or a business school, and her concept of married bliss differs widely from the daily drudgery which her grandmother accepted as a matter of fact.

Town and country, which in the past have played two basic but clearly distinguishable roles in the history of American civilization, are now merging into the personality of the new American who transcends the old classification. Social philosophy, sophistication, education, and cultural demands can no longer be differentiated according to the old stratification. The American who lives in the country has the same, constantly increasing cultural and technological needs as his city compatriot. The basic points are not only that our demands are identical all over the country and bear no correlation to our accidental place of residence, but that our requirements are incessantly augmented. The situation can well

be described by paraphrasing Montesquieu's famous dictum: "It is the nature of (culture and civilization) to make the superfluous useful and the useful necessary." The sociological term for this process is suburbanization.³

We also speak of the megapopolis which extends from Washington to Boston and may soon have its counterpart on the west coast from San Diego to San Francisco. This terminology gives the erroneous impression that the aggressive metropolis devours the hapless country. This is not the case. The population trend which was once mainly from the country to the city has been reversed. People leave the inner core of the city, which is slowly decreasing in population, and settle in great numbers around the periphery. The desire is to get as far away from the city as communications will permit; thus the distant suburbs are being settled at a faster rate than those nearer to the core. The American dream, the owner-occupied home with a small yard, can be realized only in the merger of town and country.

The eight counties included in this survey are being suburbanized at a rapid rate. According to one economic theory⁴ Rockland, Orange, Putnam, and Dutchess Counties belong to the outer ring of New York. Donald Bogue,⁵ however, links the seven counties of Columbia, Dutchess, Greene, Orange, Putnam, Sullivan, and Ulster together as the Mid-Hudson Valley economic area; whereas he considered Rockland County as part of the New York City economic system. The Bogue classification has been accepted by the New York State Department of Commerce.

The eight counties occupy 5,483 square miles and, according to the 1960 Census, have a population of 771,037 with a tax-reported income of \$1,731,700,000. They have therefore 4.6 percent of the population, 11.4 percent of the area, and 3.6 percent of the tax-reported income of the entire state.

Excellent highways permit easy communication with both the metropolitan district of New York and the capital district of Albany. The New York Central railroad gives fairly good transportation to the north and to the south. Because of the comparatively short distances involved, air traffic does not as yet have the impact it has had on the country at large. For the last ten years aeronautical engineers have referred to the helicopter as a possible solution for short distance air travel, but not much that is tangible has materialized so far. The war in Vietnam, however, has impressed on military aviation the extraordinary usefulness of the helicopter, and we may soon see small conventional planes with vertical take-off. The interest of civil transportation specialists is focused on high-speed travel, be it by air or by rail, and thus does not bear on the communication problems of the region. For the time

being, and in the immediate future, the valley will have to rely on rail and motor transportation.

The importance of farming is rapidly decreasing (Table 7). In 1940 the valley reported 16,042 farms; twenty years later the number had shrunk to 7,800 farms. Even this figure is too high if we apply the conventional definition and limit the number to those persons whose occupation is agriculture and whose main income is derived from farming. About twenty percent are hobby-farms; this means they are owned by well-to-do men whose main business interest and income lies elsewhere.⁶ Their economic status is independent from the returns of the land, and in some cases their tax experts may even welcome a deficit. Thirty percent of the farmers work one hundred days or more a year off the land, and report that their non-farming income exceeds the profits of their agricultural pursuits. Fifty percent of all the farmers report some income from activities not related to farming. To a large extent, modern farming is mechanized and therefore it presupposes relatively large acreage and adequate capital. The successful manager of a profitable farm must have a solid scientific background and full understanding of the complexity of agro-economic activities.⁷ Just to milk the cows and sell the dairy products at the next market will not do at all today. Human learning and skills have found the means to reap a more bountiful harvest from nature. The economics of marketing are intersected by a multitude of governmental regulations; they form such an intricate labyrinth that no one lacking good theoretical training can find his way to a profit.

Two examples, one from dairy and one from fruit farming, will illustrate these points. Due to the application of modern scientific methods, milk production of a given cow has been raised by 50 percent in the last 10 years. Dairy farmers in Dutchess County, and in part of Columbia County, succeeded in becoming part of the Connecticut milkshed supply area, which gives better prices than the New York City market. The valley is the second largest supplier for the nation's apple market. Eight million apple trees embellished the Hudson Valley in 1930; the identical quality and quantity of fruit is produced today by 2.5 million trees, cultivated with advanced horticultural skill.⁸

All human activities, occupations, and professions demand a higher standard of sophistication and training today than they did one or two generations ago. How much more difficult it is to be manager of a supermarket than to run a grocery store! Supermarkets are more efficient, have a much larger selection, give better access to the goods, and have cheaper prices; they have therefore outranked their competitors. Within the last generation, the number of food

retail stores in the valley has declined by 30 percent, the sales and the number of employees, however, have doubled. Land, no longer under cultivation, is either reserved by zoning regulations for residential districts or quickly occupied by a rapidly expanding industry. On Tables 17 - 24, which give the basic statistics per county, the important industries are listed. Some of the outstanding ones are as follows:

Columbia County: Large cement plants, textiles.

Dutchess County: IBM, electrical equipment, dairy machinery, printing.

Greene County: Cement plants, Leather goods, Grumman Aircraft, American Thermostat Corporation.

Orange County: Textiles, Electronics, in Sterling Forest - Union Carbide, International Nickel, Reichhold Chemical.

Putnam County: Electronics, Aircraft Instruments.

Sullivan County: Food products, lumber, printing.

Ulster County: Machinery, apparel.

The number of major plants is constantly increasing. The latest available published report (1963 - 64) lists fourteen major additions or modernizations:

<u>New Plants</u>	<u>Location</u>	<u>Remarks</u>
Alpha Portland Cement	Cementon (Greene)	
De Laval Separator	Poughkeepsie (Dutchess)	
Geigy Chemical	Suffern (Rockland)	
Marquetts Cement	Catskill (Greene)	
Nepern Chemical	Harriman (Orange)	
Ruberoid	Vails Gate (Orange)	
Times-Herald-Record	Middletown (Orange)	
IBM	East Fiskill (Dutchess)	
Continental Can	Piermont (Rockland)	Modernization
Louis Harnick	Haverstraw (Rockland)	New production facilities
St. Regis Paper	West Nyack (Rockland)	Expansion

<u>New Laboratories</u>	<u>Location</u>	<u>Remarks</u>
IBM	Poughkeepsie (Dutchess)	
International Nickel	Sterling Forest (Orange)	
Reichhold Chemical	Sterling Forest (Orange)	

The employment statistics (Tables 40 - 41) amply document the prominent position industry occupies in the economic life of the counties. Occupational opportunities are abundant; as everywhere, however, positions for the unskilled worker are scarce.

The population of the valley has made a splendid adjustment to the demands of the time. There are many educational institutions and the per capita level of educational achievements is constantly rising. The counties are very prosperous; as supporting statistical data (Tables 16 - 57) amply prove. Tables 17 - 24 supply basic statistics on a per county basis according to the last Census (1960); Table 16, New York State, has been added for comparison's sake. Table 25 ranks the counties within the overall state picture according to sixteen essential points.

Tables 26 - 31 show a constantly rising population. Tables 26 and 27, which list a breakdown of the 1960 Census data according to important categories are of special interest. The rate of increase of population between 1900 and 1960 is extraordinary; those with the highest percentage are Rockland County, 257.2 percent, Putnam County, 130.1 percent and Dutchess County, 115.5 percent. Only Greene County remained stagnant.

The median school years completed are higher than the State average which is 10.6 years for male and 10.7 years for female. The increase within the last ten years in the number of persons who have completed a college education is as follows: in Rockland County 96 percent, in Dutchess County 80 percent, and in Ulster County 76 percent. In 1960 the counties had a college student population of 12,210; the three highest figures reported are: Orange County (4,168), Dutchess County (3,419), and Rockland County (2,008). The Special Censuses (Table 30) of 1965 demonstrate the persistent increase in Putnam County, from 31,722 in 1960 to 41,543 in 1965; the New York State Vital Statistics (Table 31) differ slightly and are probably too low. They exemplify the excellent health conditions of the area. There is no tuberculosis (under 19 years), and provisions for child care are high above the State average. According to the New York State estimate the population of the eight counties has increased between 1960 and 1965 by 75,642 people.

The breakdown by counties is as follows:

	<u>1960</u> <u>Population</u>	<u>1965</u> <u>Population</u>	<u>Increase</u>
Columbia	47,322	49,156	1,834
Dutchess	176,008	179,611	3,603
Greene	31,372	32,176	804
Orange	183,734	198,211	14,477
Putnam	31,722	38,472	6,750
Rockland	136,803	169,278	32,475
Sullivan	45,272	47,022	1,750
Ulster	118,804	132,753	13,949

Tables 32 - 38 are devoted to the financial status of the area. Tables 32 and 33 illustrate the incessant growth; far above the State average. For the State as a whole the annual rate of increase in per capita income is 4.1 percent. The valley reports a 5.4 percent growth, with Greene County (7 percent), and Rockland County (6.6 percent), as the most flourishing.⁹

Tables 40 - 43 describe the employment opportunities. In 1962 the eight-county total working force was 160,735. Partial employee distribution figures show:

<u>Industry</u>	<u>Number of Employees</u>
Manufacturing	70,927
Retail trade	31,100
Services	<u>22,860</u>
Sub-total	124,887

The distribution of 1963's total employment of 165,520 shows:

<u>Industry</u>	<u>Number of Employees</u>
Manufacturing	71,599
Retail trade	32,479
Services	<u>24,033</u>
Sub-total	128,111

Tables 44 - 56 indicates the high living standards of the region. Table 44 shows that the majority of families, as one would expect from a modern American family, has a washing machine, tele-

vision set, and, of course, a car. Ten percent of the residents in Dutchess, Orange, and Rockland Counties have air conditioning, and 15 - 20 percent in most counties have clothes dryers.

The value of single family homes is shown on Table 45. The median is very high, Rockland \$18,600, Putnam \$16,400, and Dutchess \$14,900 (1960 evaluation). The majority of residences are owner-occupied.

Tables 46 - 49 give the number of motor vehicles owned by the people in the valley. The figures here are obviously higher than those on Table 44 which counted the availability of a car per resident. Table 49 reports 389,338 registrations for the valley in 1963.

Tables 50 - 56 give a few miscellaneous items. The number of telephones is obviously high, 275,369. Many read the New York Times. At least 31,624 families are buying the Sunday issue. I was not able to get membership figures for the different book clubs, but the Curtis publishing company furnished me with the 1963 circulation statistics for American Home, Ladies Home Journal, Jack and Jill, Holiday, and Saturday Evening Post (Tables 52 - 56).

Table 57 uses Orange County as the example to show building activities. New construction has increased from 917 in 1960 to 1,559 in 1964.

The counties have 974 physicians and 6,714 registered nurses. The breakdown by county is:

<u>County</u>	<u>Physicians</u>	<u>Nurses</u>
Columbia	51	460
Dutchess	279	1,864
Greene	31	227
Orange	219	1,502
Putnam	23	237
Rockland	197	1,089
Sullivan	49	279
Ulster	125	1,056

Periodical production in the eight Mid-Hudson Counties is:

<u>County</u>	<u>Newspapers</u>	
	<u>Dailies & Weeklies</u>	<u>Journals</u>
Columbia	3	-
Dutchess	12	3
Greene	6	-
Orange	11	2
Putnam	4	3
Rockland	6	1
Sullivan	9	-
Ulster	18	1

Sixty-six bookstores, including the excellent college bookstores, are listed in the directories. The distribution by county is as follows:

<u>County</u>	<u>Number of Bookstores</u>
Columbia	4
Dutchess	14
Greene	3
Orange	16
Putnam	0
Rockland	14
Sullivan	3
Ulster	12

The Federal Communications Commission has licensed 13 radio stations:

<u>County</u>	<u>Number of Radio Stations</u>
Columbia	3
Dutchess	1
Rockland	1
Sullivan	2
Ulster	1

There are altogether 68 movie houses and 22 drive-in theaters. The breakdown by county is as follows:

<u>County</u>	<u>Movies</u>	<u>Drive-Ins</u>
Columbia	5	0
Dutchess	13	4
Greene	7	0
Orange	11	5
Putnam	4	0
Rockland	7	3
Sullivan	11	9
Ulster	10	1

The counties have always solidly voted the Republican ticket (Table 58). John F. Kennedy made a dent in 1960, but not enough to win the majority. In 1964 the region followed the nationwide trend and gave the vote to Johnson.

CHAPTER IV

LIBRARIES

College Libraries

There are 25 accredited colleges in the valley. The Academy of St. Basil in Garrison is not accredited as yet. The Academy is of a Junior College level and trains high school graduates as Greek teachers and executive secretaries for the Communities of the Greek Orthodox Church. The library has 5,000 volumes. The institution has not been included in the survey.

Twenty-two colleges answered the questionnaire. Their answers have been tabulated in two sections: Table 59 for the four-year colleges and professional schools, and Table 60 for the Junior Colleges.

The State of New York has the following standards for its college libraries: basic staff for the first 750 students is five professionals and three clericals; for each multiple of 500 students, two additional staff members are needed (one professional and one clerical). The American Library Association standards for holdings are: a minimum collection of 50,000 volumes calculated for enrollment of 600 students; for each additional 200 students, 2,000 volumes should be added.¹ Helen Sheehan has postulated 200 subscriptions as a median number of current periodicals.² Lowell A. Martin's requirements are higher.³ He feels that 50 volumes per student, or a minimum of 100,000 volumes, are needed to give adequate library support for the objectives of a modern four-year college. He also states that at least 350 current periodicals should be available.

The four larger colleges fully meet standards with regard to staffing. The smaller institutions, however, are woefully understaffed. Six have two professionals and two have only one. Although I was often greatly impressed by the high quality of the professional staff, their devotion, and enthusiasm, I seriously doubt whether effective service can be given by such a small staff. The professional education of the staffs is excellent; the larger institutions have a commensurate number of subject specialists and considerable linguistic talent. The overwhelming majority belongs to national, state, and local professional organizations.

The core of the library is its book collection. Services and the multitude of activities which we may lump together under the general heading of administration play a most significant role, but they cannot fully compensate for lacunae in the collections. From the purely quantitative point of view five of the twelve institutions have adequate holdings. One has to take into account the number of fairly young colleges which are in the process of building up their book stock as rapidly as they can; but the fact still remains that the libraries are well below the minimum standard of 50,000 volumes.

The survey of periodical holdings shows a much better result; almost all the institutions which we may call regular four-year colleges come fairly close to the minimum requirements; some of the older institutions have excellent periodical holdings. It is most encouraging to note how swiftly the number of periodical subscriptions has been increased in some cases. One institution, this time an older one, had, for many years, only 160 subscriptions; from the late fifties on, about 100 titles were added annually and today the library has a distinguished collection of 1,020 titles. Two-thirds of the libraries prefer to arrange periodicals alphabetically; only four classify them according to subject.

The book collections are as a whole, well balanced, judging from the breakdown according to Dewey numbers and a quick visual inspection. In many cases the team was much impressed by the sophisticated, well-informed, and careful selection made by the responsible librarian. This is especially true for the Dominican colleges of the Pro Deo Association, which have stretched their purchasing dollar to the utmost. Our classical heritage is by no means overlooked, and even the small institutions have good, in some cases complete, collections of the Loeb Classics. Seminaries and related schools are well stocked in classics and theology. The selection tools used most frequently are: Choice, Library Journal, Publishers Weekly, and the New York Times Book Review.

Except at the larger institutions, not enough attention is given to acquiring a sufficient number of documents, both federal and state.⁴ Generally, an adequate number of newspapers is available. The quality of the reference collections is good and in keeping with the overall size of the book stock. Sufficient care is given to provide modern encyclopedias and related tools.

The three larger institutions have a great number of special collections, some of superior quality, as one would expect from nationally known schools. Most colleges have made an attempt, at times a feeble one, to start a local history room. One institu-

tion has an impressive Mariological collection; unfortunately, there is no endowment provided and thus the collection is more or less neglected.

Only two libraries are halfway adequately supported financially; a third one has probably received a significant increase in its last, not reported budget. However, it is extremely encouraging to note how much the budgets have increased in the last years. One of the well known libraries supplies the following data:

<u>Year</u>	<u>Book Budget</u>
1951-52	\$ 7,757
1960-61	38,540
1961-62	54,141
1962-63	64,446
1963-64	69,860

One of the Dominican colleges indicated that budget increases for the library were most notable. From a beginning, and I would add ridiculously small budget of \$3,500 in 1961, to the approved sum of \$72,000 for the current year is indeed an improvement. Nevertheless, for the moment the harsh judgment must stand: financial support in most institutions is not adequate for a school which serves higher education.

The institutions have done much better with regard to buildings. A fairly large number of libraries have moved into new quarters within the last ten years; some of the older constructions are fairly good. Only one institution gives the end of the nineteenth century as date of the building.

The students are making good use of the collections placed at their disposal, and thus with very few exceptions the circulation statistics show a healthy increase. One institution provided me with additional data, tabulating per capita book use by the student body:

<u>Year</u>	<u>Number of Books Used Per Capita (Students only)</u>
1945-46	8
1955-56	12
1959-60	18
1960-61	20
1961-62	19
1962-63	21

Hours of opening are well within the suggested national standards. Paperbacks are used everywhere, especially as a substitute for the purchase of multiple copies.

The technical services function well. Dewey classification is still the preferred one. One Library has reclassified to Library of Congress, another one has started a vigorous reclassification program, and several more are discussing the various pros and cons for changing the classification system. All have a dictionary catalog, five a divided one. The majority does not publish an accessions list.

There is very little significant cooperation between the libraries. The exceptions are the already-mentioned Dominican colleges which belong to the Pro Deo Association. Association members form a rather closely knit group which works quite well together. They publish a Newsletter (quarterly at the moment), have a Union Catalog (limited to specifically assigned areas), and a Union List of Periodicals.

The colleges of the region have voiced great interest in developing inter-institutional cooperation, but no tangible results have been achieved to date. The group has applied for a charter to place the Associated Colleges of the Mid-Hudson Area on a firm footing. Ralph Fields, has submitted a detailed report and has made many suggestions for immediate action.⁵ Library cooperation is treated but briefly, "although administrators rated these problems among the most important most pressing." These issues are considered part of regional planning, and attention is called to the work of Southeastern Library Resources Council. I cannot avoid the feeling that some administrators still think that cooperation alone will solve all financial problems and will liberate them from the task of supporting the library adequately. The answers to the questionnaires do not indicate that anything of consequence has materialized in the valley.

Very little use is made of modern technological advances. There is not even enough modern copying equipment like the Xerox 914, or even a smaller model. This is regrettable because modern machines are time and labor saving and reduce the cost of operations. The obvious reason for this failure is lack of funds; joint ownership will make the purchase or the rental easier, but joint use may pose other difficult problems.

Few libraries have an organized group of "Friends of the Library," but some are discussing such a venture. Annual book

drives among alumni and friends occur occasionally; thus one library acquired its complete set of Loeb Classics by this method.

The institutions have, on the whole, rather loose connections with the State Library. Although many librarians praise the cooperation they have received from Albany, they make little use of the facilities because "of difficulties and delays." The smaller libraries would like to receive more professional guidance, loan of films (now generally restricted to public libraries), and quicker, direct service, both in interlibrary loan and reference.

Table 60 tabulates the answers received from the Junior Colleges. There is, of course, no basic difference either in size or in instructional quality between a four-year and a two-year college; both are integral parts of our system of higher education and the final evaluation and summary will consider all 22 institutions as a unit.

The national standards for the two groups are almost identical.⁶ But the minimum library requirements for the two-year schools are slightly less demanding: staffing needs for 500 students are two professional and one clerical; for each additional 500 students, two more staff members should be added (one professional and one clerical). Minimum holdings requested are 20,000 volumes, exclusive of textbooks and duplicates, and 200 to 300 periodicals. These reductions are immediately offset by the proviso, "Institutions with a multiplication of programs will need two to three times the basic figures." The final reservation added by the standards committee should be most carefully noted by all college and library administrators. "The two-year college in America is today rapidly changing and expanding. Eventually, it may well become an institution quite different from what it is at the present time. These standards, therefore, may require significant upward revision when the junior college reaches a new stage in its development. At that point, it may well need much larger and richer library resources and greatly extended services. Junior college librarians and administrators should be alert to this coming challenge."

Not everybody agrees with the requirements. Mary Jerome Danese judges them to be unrealistic, as 80 percent of the Catholic junior colleges do not meet them.⁷ According to her tabulations, the range of holdings is between 5,100 and 21,200 volumes, the median being 13,150. I consider such a book stock much too low to give adequate service. National standards are not based on a calculation of actual performances, but postulate minimum standards necessary to achieve required results.

The junior college is a twentieth century creation. The state of California established a "Junior Certificate" in 1892; William R. Harper (President, Chicago University) was allegedly the first educator to use the term "junior college" in 1896. The growth of this new venture in higher education was a most rapid one. By 1930 about 10 percent of the American college population was enrolled in Junior Colleges; by 1960 this figure soared to 37 percent. California, a state which had been of the greatest importance in the development of this program, reports that 75 percent of her freshmen and sophomore population is on the rosters of junior colleges. America has about 300 privately-endowed schools of this type.⁸ Over 60 percent have religious affiliations; the Catholic Church especially has shown great interest in this pattern. Half of the schools are coeducational; in the remainder, there is a marked preference for girls' schools.

The Junior College is well established in American higher education; it is not a poor relative giving watered down college education to the less able students, but a full fledged partner with complete voting rights. Seen from many aspects of the educational process, the younger sister is by far more ambitious, and at times even more forward looking than the older, well-established relative. These qualities are particularly characteristic of the community colleges.⁹ The first community college probably was the Joliet Junior College, which originated as an expansion of the Senior High School of Joliet, Illinois, in 1901; it was accredited in 1917. In spite of this early forerunner one can see that community colleges, as we know them today, are a conception formulated after the end of the World War II, strongly influenced by the report of the President's Commission on Higher Education of 1947. They are an expression of the American dream to give everyone all the appropriate educational opportunities an affluent society can provide, without any loss of quality. In the five counties, which have community colleges, every high school graduate "who seems capable of profiting by the instruction offered" can enroll and receive a college education right in his own county. At existing community colleges, it is very easy to be admitted, but not as easy to continue. A highly developed guidance program directs and supervises the intellectual endeavours of the students.

Schools offer a variety of curricula which are adjusted to the needs and the plans of the student body and carefully worked out in keeping with the occupational needs of the local community. The institutions are proud to be an integral part of the community and are planned in direct relation to the growth of the district. They are dedicated "to the lifelong education," and attempt to pro-

mote with equal zeal and enthusiasm adult education, vocational and engineering training, and instruction in the traditional liberal arts curriculum. The faculty must articulate their programs both with the high schools and with the four-year colleges, and captivate the students with the most inspiring teaching. The governing body consists of a local Board of Trustees which shares financial responsibilities with the county Board of Supervisors. The State University supervises the schools through its Executive Dean of Community Colleges and Technical Institutes. The schools fulfill a unique function and fully deserve Hillway's praise as "the most significant contribution to American higher education." The region has five Community Colleges (Dutchess, Orange, Rockland, Sullivan, and Ulster). The Orange County Community College is one of the best known institutions in the country because the dramatic story of its origin and development has been described in the literature of the field. It may well serve as an example for the group.

In the 1940s Orange County had the smallest number of college students in the State. Today the county ranks in the highest percentile. It started in 1947 as the Middletown Collegiate Center and became a Junior College primarily for returning war veterans in 1950. The offer of Mrs. John H. Morrison to give her 18-acre estate together with its large mansion placed the college on a secure basis. The institution offers five curricula:

1. Transfer curriculum in the liberal arts; students are expected to continue their junior and senior years at a four-year college.
2. Engineering series A; graduating students will be accepted as third year students by Rensselaer Polytechnic Institute.
3. Terminal formal education in the Junior College liberal arts program.
4. Engineering series B; students are terminating their engineering training with the second year at Orange County College.
5. Adult Education program.

The quality of the education provided is proven by the fact that 47 percent of the student body has been accepted by other institutions for further study. The teaching is characterized by bold attempts to try out new methods and fresh approaches. Walter Sindlinger, Dean of the College from 1950 to 1956, has described examples of this.¹⁰ The College has excellent relationship with its supporting community and is truly dedicated to the concept of

community service. The rise in enrollment is spectacular:

<u>Year</u>	<u>Day Division Enrollment</u>	<u>Evening Division Enrollment</u>	<u>Extension and Community Service Division Enrollment</u>	<u>Total Enrollment</u>
1950-51	160	34	51	245
1951-52	222	231	209	662
1952-53	274	261	489	1,024
1953-54	396	375	504	1,275
1954-55	586	541	736	1,863
1955-56	626	717	661	2,042
1956-57	648	907	795	2,350
1957-58	732	1,236	1,055	3,023
1958-59	838	1,254	1,300	3,392
1959-60	904	1,530	1,204	3,638
1960-61	972	2,031	986	3,989
1961-62	2,011	1,879	1,110	5,000
1962-63	2,091	2,149	691	4,931
1963-64	1,081	2,204	1,445	4,730
1964-65	2,312	2,434	1,470	6,216

The work in a community college is very challenging. In spite of the most heterogeneous clientele, instruction and library service (both book collection and reference) must be able to give to the entire college community the strongest intellectual stimulus. A highly qualified staff is essential; together with a book stock which in quantity and variety should surpass the holdings of the traditional four-year liberal arts college.

In evaluating the tabulations included in this report, one must obviously remember that most community colleges are still very young. Some, for instance, which have been established for only a couple of years, are still in temporary buildings, and in the strictest sense of the word are not yet fully operational. However, as bright as the future may be, the present is surely very dark. Not one library meets minimum standards with regard to the number of volumes. It is a bit discouraging to note that the number of volumes added yearly has, in many cases, not significantly increased during the last years. The library identified as C18 (not a community college) reports 45,000 volumes, but to a large extent the collection is somewhat obsolete and the number of current, up-to-date titles is very small. The number of periodical subscriptions seems adequate. One library has the policy not to bind periodicals but to substitute microfilms. This is an interesting but, I am afraid, slightly dangerous experiment which may cause trouble at times. There are not enough data to judge holdings in documents.

With regard to audio-visual material, the institutions do the best they can. The number of newspaper subscriptions, too, is adequate. It is understandable that no special collections are reported except for some slight attempts to assemble material on the history of the college (one college report) and to shelve local history together (two reports). The reference collections are fairly good and all librarians are fully conscious of the importance of using modern reference tools.

The number of the staff is in keeping with the lowest standards. However, the quality of the professional staff is excellent. Their professional competence, enthusiasm, and personal warmth are immediately apparent even to a casual visitor. All have the necessary formal education and have, with one exception, joined the national and state professional associations. There is no need for a specialist on such small staffs, but foreign language competence is a necessity for cataloging and reference. Unfortunately some libraries are poorly staffed with regard to knowledge of French, German and Italian.

The financial support is growing, but only in one case is the increase sufficiently large. Two institutions are too recent to pass judgment on them. The relation between book budget and current expenditures is slightly in favor of book purchases, compared with national norms. The buildings, even those of recent date, are inadequate, but most institutions will move into new quarters in the near future. With one exception, the librarians report that lack of space does not influence the acquisition policy.

Circulation statistics show, on the whole, a slight increase. One must remember again, however, that many colleges are too recent to permit a proper evaluation. If lack of space does not affect buying policy, it may very well be detrimental to good readers' services. The smallness of professional staff makes it impossible to have the reference librarian on duty all the time, a failure especially grave in community colleges with their large evening classes. Opening hours are satisfactory; seemingly local conditions do not warrant opening the libraries on Sundays and late in the evening.

Librarians were not overly enthusiastic with regard to the benefits the library may receive from the use of paperbacks. However, our questions may have been misunderstood. In view of the many well-stocked college bookstores, the solution of the problem may have shifted from library acquisitions to individual student purchases.

No library has modern, labor-saving devices at its disposal; not even copying equipment is available in sufficient quality and quantity. Good equipment means economy in operation; moreover, as many institutions offer engineering courses, it may be advantageous to expose the student body to the manifold implications of modern technological developments.

All librarians consider mutilation and theft as minor problems. However, as most of our inventories are inadequate, this may unfortunately not be the last answer.

There is no cooperation to speak of between the libraries.

The technical services are functioning well and current acquisitions are quickly and competently cataloged. Only one library (C 20) reports a significant arrearage in cataloging; knowledge of its situation will easily explain this shortcoming. The library has bought much, and, according to the team's judgment, with exquisite taste; only two months ago it moved into new and spacious quarters and will now vigorously turn to its processing responsibilities.

All libraries accession, but only three still use the old-fashioned accession books. Five publish an accession list. The dictionary catalog is the standard tool; three community colleges have adopted the divided structure. The classification system is Dewey, but some libraries are interested in changing to Library of Congress classification.

The institutions have not had time as yet to organize Friends of the Library groups, but with an increase in the number of alumni they plan to establish such organizations. Their relations to the local public library are friendly, but loose. Only one public library has issued borrowing cards to the faculty and the entire student body of the local community college. Libraries have a few suggestions for the many services rendered by the New York State Library. Albany restricts titles from interlibrary loan; the libraries would appreciate a more generous definition of loan policy. More and faster help in reference service is needed as is a more intensive use of the telephone in answering questions. The State Library gives formal training to elementary and secondary school teachers in the use of the libraries. This and similar instructions should be taped so that they may be used by local libraries. Finally, we note the perennial request of the borrowing library everywhere in this world; faster interlibrary loan.

The faculties of the 22 colleges were requested to briefly

evaluate their institutional libraries. The answers of 17 schools are tabulated on Table 61. The teaching staff is the most knowledgeable part of our clientele and best qualified to judge the library as a whole. The contemporary scholar does not live in an ivory tower, but is well aware of budget limitations and refrains from unreasonable demands. His whole professional life is intimately connected with the quality of the book collection at his disposal. A stimulating and fresh presentation of the subject matter to the class (and freshmen have the same right as Ph. D. candidates to ask for the best and are at times more demanding), presupposes awareness of the literature, knowledge of new contributions and the possibility of checking a salient reference at a moment's notice. Thus for good teaching, a library is needed which goes beyond the title recommended to students.

The scholar's own publications are judged without reference to the titles available on his own campus. To leave out an important source, to neglect a noteworthy critical contribution, cannot be defended by the lacunae of the college library. The national standards specifically call attention to the library's obligation "to keep the members of the faculty abreast of the latest advances in modern scholarship and to assist them in their professional growth."

Slightly less than 400 answers concerning the adequacy of the college book collection were received. Almost 75 percent of the faculties judged the library in general to be good to excellent for teaching purposes, about 20 percent said satisfactory, and only 5 percent were completely negative. The general research possibilities of the libraries were not considered in such a favorable light. More than 25 percent of the faculty were lukewarm and almost as many wrote "poor." In the evaluation of the books in the teachers' own fields, the judgment became more severe. Seventy percent are still satisfied for teaching purposes, but lukewarm and negative responses increased to thirty percent. Research material in the teachers' own fields was considered "poor" by almost one third, the same number was lukewarm, and only about thirty-five percent were fully satisfied.

Faculty relations with the library staff could hardly be better. All questions were answered most positively; the query, "Do you want more librarians?," received the answer, "Only if they are as good as the librarians we have now."

Under improvements recommended, increasing number of new titles ranks first, then comes improved photocopying services. Calls for more space, more multiple copies, and faster interlibrary

loan received less emphasis.

A successful future depends on better collections. More than half of the faculty is planning new courses which will require stronger library resources. Only twenty percent testify that research projects had to be abandoned because of lack of material.

A further attempt to evaluate the quality of library holdings was made by submitting four checklists. Table 62 summarizes the results, Tables 63 - 66 reproduce the checklists indicating the number of copies of the given titles available. We all are aware of the pitfalls of checklists.¹¹ A given library may have other treatments of the same subject which are as good or even better than the titles listed. Not all books on the list can be considered a must for all libraries, and the individual institutions should not be judged to be at fault because some titles have not been acquired. Book selection is an individualistic judgment, influenced by local conditions and needs, and can rarely be considered normative. The evaluations of the checklist results have to be made with utmost care. However, considering all these precautions, checklists are useful for broad generalisation.

Checklist 1, Less Common but Important Reference Books, 231 titles. This checklist was sent to the four major libraries only, because smaller institutions have a different priority in book selection. One library has 130 titles, the others 48, 48, and 13 respectively. Ninety titles, or 40 percent, are not represented. The results may have been improved slightly if all libraries had checked. The lack of a few essential reference tools can be noted: dictionaries foronyms in German and Italian literature (Holzman & Bohatta, Melzi); a basic biographical directory (Jocher), and bibliographies such as those by Schlosser and Schottenloher.

The other three lists were sent to all 22 libraries. Every title on List 2, Choice, Vol. I Issue 4, 1964, 248 titles, is available in the area; the less pleasant phenomena, however, is that the individual libraries have only a small percentage of them. The five best libraries have checked 137, 100, 87, 69, and 61 titles.

List 3, Books of the Year, New York Times 1961-64, lists 909 titles. One hundred and three titles, a little over 11 percent, are not available. The big institutions are responsible that the overall generalization is so favorable. The five largest collections have 453, 427, 321, 307, and 260 titles. The tabulation gives an unjust picture of the college libraries. The smallest holdings belong to professional schools which have little interest in the

material listed. Most colleges have at least twenty percent of the titles.

List 17 gives the 691 periodicals indexed in Applied Science & Technology, Education Index, International Index, and Reader's Guide. One hundred and thirty-four, almost 20 percent, are not available in the region. Almost the same libraries as in the preceding paragraph list 348, 347, 308, and 169 titles respectively.

Considering their difficult financial situation, the colleges have done fairly well. To do well, however, is often not sufficient. The colleges have to do better to meet fully the needs of the present day society. A short summary and comparison will justify this appraisal:

Number of Colleges	22
Number of volumes in all libraries	1,234,265
Number of periodicals	7,646
Total budget	\$1,222,853
Number of faculty	1,349
Number of students	15,720
Increase of holdings, 1963-64	89,091
Annual circulation	494,074

As not all colleges have answered the questionnaires and some schools did not provide the requested statistics, all above figures deserve a slight increase.

Lancourt¹² provides similar figures from colleges in the Middle West (1960 statistics):

<u>State</u>	<u>Number of Colleges</u>	<u>Volumes Averaged</u>	<u>Budget</u>
Nebraska	23	1,510,374	\$1,368,738
Iowa	34	2,971,370	\$1,915,844
Kansas	28	2,149,189	\$1,749,621
Wyoming	5	305,098	\$ 225,000

Public Libraries

The region has 105 public libraries and three reading centers. Under the clear-sighted state plan, which coordinates public library service through twenty-two library systems, the Mid-Hudson Library System and the Ramapo-Catskill Library System have been or-

ganized (Table 67). The Mid-Hudson System has 51 member libraries and three reading centers; the Ramapo-Catskill System has 45 libraries. Nine libraries have not yet joined either system. State aid, partly augmented by federal funds,¹³ has been of vital importance in making the vigorous and constructive actions of the systems possible.¹⁴ State aid to the system is distributed under the following formula:

A cash grant of 30¢ per person based on the population of the area served by the system.

An area grant of \$6 per square mile if the system serves only one county or less; and \$3 more per square mile for each complete county served, if the system includes more than one complete county, to a maximum of \$18 per square mile for a five-county system.

An annual cash grant of \$5,000 if the system serves less than one complete county; \$10,000 if the system serves one complete county; \$15,000 per complete county if the system serves more than one complete county.

A book expenditure reimbursement. This is an additional amount paid to systems which spend more money for the purchase of books than they received under the per capita grant of 30¢ per person. These systems are reimbursed all money spent for books (in excess of the per capita grant) up to a maximum of an additional 20¢ per person.

In addition to direct financial aid, the systems receive state aid in the form of books given to build a central library reference collection to a total of 100,000 adult non-fiction books. These books are given on a matching basis--four books from the state for each volume purchased by the central library.

The significance of the two systems for the library service in the Hudson Valley can hardly be overestimated. The financial aid, although undoubtedly highly appreciated by the members, is almost of the smallest consequence. The greatest impact resulted from the work of the devoted and competent staff assembled in the two systems' headquarters. Through consultants,¹⁵ workshops, visits, and publications, they give advice, professional knowledge, and new strength to their member libraries. Reciprocal borrowing privileges among the libraries of a given system have increased dramatically the accessibility of a large book stock, as each system has combined holdings of about one-half million volumes. If the two systems will agree to extend these privileges even further and to include both

systems in a reciprocal agreement, every library in the Hudson Valley will have access to their combined holdings of more than one million books. Through the systems the great resources of the State Library can be tapped. Thus one of the postulates of the national standards is almost reached: the smallest library in the Hudson Valley can connect its patrons with the total book collection of the region and of the state.

The independence, one can almost say sovereignty, of the local library is one of the basic principles of the system. From a superficial point of view this could be regarded as a built-in weakness; undoubtedly such a condition makes it extremely difficult and rather frustrating for the system staff to introduce modern methods. But if handled correctly this weakness can turn into a tower of strength. The people of the state, and by delegated authority--the community, must decide what kind of library they want. If a place is currently satisfied with yesterday's inferior and obsolete library service, then it must be demonstrated to it that the revolutionary socio-economic changes that are shaping our contemporary society demand a much higher quality of library service. Failure to observe this advice will jeopardize the well-being of the community and the social mobility of its inhabitants.

Libraries are an integral part of a community's educational endeavors. They are not a "nice thing to have" which ranks lowest on the list of services provided by the community and receives the support of only a small fraction of the tax dollar. Libraries are not a kind of luxury, but a moral obligation.

Only if the people are convinced of the need for changes and are thus psychologically ready to accept them out of their own free will and not by authoritarian dictum, only then the community will have a public library which deserves this name. The two systems' directors have reacted to this situation with infinite tact, sensitive patience, and courageous and constructive leadership. Through unceasing efforts, persuasive demonstration, and financial assistance they prevailed upon the different communities to improve their libraries.

The two systems offer to their member libraries the following services:

Services given by the two Systems:

1. Publications

Booklists
Monthly newsletters

Annotated list of books added to the central collections
List of new publications, if possible 8-12 weeks in advance of publication
Annotated film catalogue
List of periodical holdings
Regular news releases to paper and radio stations
Occasional reading lists
Bibliographies, etc.

2. Services

Individual surveys of a library which serves as an introduction to new libraries and for follow-up consultation
Consultants' visits to each library, either by invitation or on a regular basis, as often as staff and funds permit
Basic pool or central collection, to provide each library with books on loan
Rotating collections
Rotating phonograph record collections
Films and film guides
Workshops (These cover reference, book selection, organization, and administration--practically all problems of interest to member libraries. They are as often as staff permits.)
Reference service
Purchase of library supplies through system
Union catalogue
Central storage collections
Delivery service
Bookmobile service
Processing of current collection
Meetings with member libraries according to different schedules

3. Financial aid

Cash grants
Gift book program
Subscription to Library Journal
Travel grants to conferences occasionally

A good test for the quality and quantity of a given library service is a comparison with nationally accepted standards. The American Library Association believes that the very minimum necessary to give adequate service is as follows:

Personnel. Even the smallest community library needs close and

regular guidance by a professional librarian. One sub-professional with a college degree should be on regular duty.

Libraries in communities of under 10,000 inhabitants need one professional and four sub-professionals; in general, one staff member is needed for every 2,500 people. In communities of under 25,000, two professionals and eight sub-professionals are needed, and in communities of under 50,000, six professionals and fifteen sub-professionals.

Book Collections. A minimum of 10,000 volumes is necessary. Three volumes per capita is recommended for communities with a population under 5,000; under 25,000, two and one half volumes per capita; and over 25,000, two volumes per capita.

Periodical Holdings. Minimum for any library is 25 titles. With a population under 5,000, the minimum is 50 titles; under 10,000, 75 titles; under 25,000, 100 titles; and under 50,000, 150 titles.

Record Collection. Minimum with a population under 5,000 is 150 records; under 10,000, 200 records; under 25,000, 500 records; and under 50,000, 1,000 records.

Hours of Opening. The minimum for a population under 500 is 15 hours; under 1,000, 20 hours; and under 3,000, 30 hours. These three groups should be open at least four days a week. For communities between 3,000 and 5,000 in population, 40 hours are minimum; between 5,000 and 10,000, 50 hours; and between 10,000 and 25,000, 60 hours. These three groups should be open five days a week. Cities with a population over 25,000 should have library service six days a week.

Circulation. With a population under 10,000, the minimum is 10 per capita; under 25,000, 9.5 per capita; under 50,000, 9 per capita.

Seats Available. Under 10,000, ten per thousand are necessary; under 25,000, five per thousand and under 50,000, three per thousand of population.

Martin¹⁷ believes that a "local neighborhood library" should have at its disposal:

1. 25,000 volumes, including 8,000 children's books
2. At least 1,000 new titles added yearly
3. Up-to-date reference collection
4. 75 current periodical subscriptions with ten-year files for the most used periodicals

5. For every 5,000 persons, one professional and one clerical staff member
6. Full-time professional children's librarian
7. Open hours of at least 48 hours per week
8. An attractive building with at least 60 seats

A recent publication by the national organization stresses again that the financial basis should be at least \$4 per capita of population served. With regard to library holdings, it agrees with the basic standards, but adds the warning that most collections are extremely short of publications in foreign languages. In view of the global commitments of the United States, it is imperative that readers have access to books in the most prominent languages--French, German, Italian, Russian, and Spanish.

Moshier urges that even the smallest library should add yearly one title for every five persons served; larger libraries in cities of over 25,000 population can reduce yearly acquisitions to two and one half titles per capita.¹⁹ Martin would like libraries in small communities (under 3,500) to be open at least 20 hours weekly and add 500 volumes yearly.²⁰

The following discussion will show to what extent libraries in the Hudson Valley are meeting minimum national standards. In order to avoid needless clumsiness of the lengthy tabulations, the libraries of each system will be discussed separately; the final evaluation however will consider the region as a whole.

Mid-Hudson Libraries

A recent statistical analysis, published by the State Library, provides the overall view of the libraries in the Mid-Hudson System (Table 68).²¹ The summary will be supplemented with the data furnished by the 38 libraries of the system which returned the questionnaire and the checklists (Table 69).²²

Thirty-six libraries, a little more than two thirds, have an adequate number of volumes and titles; indeed, many exceed the minimum standards by a most comfortable margin. One third, however, are much too small to give effective service. It is by no means the small communities which lack library resources, although the summary finds a few really tiny ones that do not provide good library service; rather some of the larger towns, places with considerable population, have badly neglected their libraries during recent years. The total picture, therefore, is below minimum requirements. The population of 379,137 has a total book stock of 589,730,

that is little more than 1.5 books per capita. Considering the large area these 51 libraries serve, the quantity of books must be considered inadequate.

It is obviously very difficult to make a meaningful generalization about the quality of 51 library collections. There is often, however, a positive correlation between quantity and quality--libraries which are far below the quantity requirements tend also to be poor in quality. Neglect and financial starvation just work both ways. Aside from a rather small number of libraries which have an obsolete and badly preserved book stock, reading rooms and, to a degree, the stacks make a fairly good impression. Many libraries have some dark corners where a good house cleaning would be most appropriate (the librarians in charge are fully conscious of this situation), but there is not enough staff time available to perform a careful weeding out. In general, however, the books are clean and well selected. The overall percentage of adult fiction and children's books follows accepted nationwide patterns. The breakdown by Dewey classification indicates that the strength of the non-fiction collection lies in the Dewey 800 and 900 groups and is least in the 100, 200, and 400 groups. Biography is a most favored subject.

A vulnerable point in the composition of the book collection is the number of periodicals. Only about one third of the libraries reach the minimum requirement and only one library exceeds it significantly; two thirds have preferred monograph acquisition to periodical subscriptions. Periodicals are not classified. A very few libraries keep a backfile (mostly unbound), and only three libraries report bound backfiles of a few titles. There are almost no government publications. It is regrettable that not enough attention is given to the highly informative and very inexpensive publications issued by federal and state governments. There is hardly a pamphlet collection of value, and maps are very few and, all too often, are not well housed. Most libraries are showing considerable interest in local history and have started to assemble the literature. However, it seems that these collections do not receive high priority from the technical services as they are often uncatalogued and, therefore, difficult to approach.

Almost all libraries subscribe to the local newspaper. The larger ones have a New York City paper; a few have also the Christian Science Monitor and the Wall Street Journal. All libraries have fairly good phonograph record collections, ranging from 50 to 180 records in the smaller institutions and up to more than 400 in the larger ones (most libraries had accepted the advantageous offer of 60 records made by the Columbia Record Company in 1962). Seem-

ingly, micro-reproductions are not used by the libraries. Few institutions report a backfile of the local newspaper on microfilm. The team has no report about the availability of micro-readers in public libraries.

Reference collections are kept up-to-date. Collections of bibliographies are small, but dictionaries and encyclopedias are generally fairly modern. The most popular ones are World Book Encyclopedia and Collier's Encyclopedia. Additional reference material is often kept in periodical files, arranged alphabetically by subject. Most libraries have clippings, and some have a collection of photographs. One library has a charming collection of foreign dolls.

By tabulating the number of volumes which have been added during the last three years, one notices the same arithmetical pattern which has been observed with other sets of figures. The development is unequal; two thirds show no changes, and, in some cases, even a small decline. Libraries in smaller communities are equally divided between the two groups; however, a significant number of larger institutions show an increase. This would appear to mean that in the future larger libraries will grow constantly, whereas smaller institutions may not have the same healthy development.

Staffing, as in most libraries everywhere, is inadequate. The state statistics for 1964 for the Mid-Hudson libraries report 41,533 hours of professional time and 133,344 hours of non-professional time. A full-time staff member works about 48 weeks a year and 37 hours weekly; a full-time non-professional has generally only three weeks vacation and we therefore calculated 49 weeks. In neither case was sick leave taken into account. The equivalent of a full-time staff member is roughly 1,800 hours of service yearly; in rounded figures this would give the Mid-Hudson System a staff of 25 professionals and 75 non-professionals. The 38 reports received from Mid-Hudson libraries give a higher figure, 18 professionals and 100 non-professionals. As only 76 percent of all the Mid-Hudson libraries have reported, the figure may be further increased by one half to about 27 professionals. But even this number is not sufficient to give good service. In order to offset this shortage, institutions have asked for volunteers; work at the circulation desk is very often a volunteer monopoly. The number of these unpaid and, unfortunately, frequently untrained staff-members is very high. One library reported 47 volunteers on the staff.

The quality and the morale of the staffs are very good. The professionals have, generally, the normal formal education; the

majority has joined the state organization, but only 50 percent are members of the national organization. Few librarians reported competence in handling foreign languages; two mentioned German, and one each Dutch, Italian, French, and Spanish.

The total expenditures of all 51 libraries is \$669,942 (\$1.77 per capita). The amount spent for books is \$106,472 (28¢ per capita). Seventy-five percent of the libraries reported an increase in their budget for 1963-64; one fourth showed a small decrease. The situation in the current year seems to be even better; at least one library, badly neglected for the last years, received an almost 100 percent increase. The state supplied \$213,448, and local taxation resulted in \$381,005. Endowments, gifts, etc., are responsible for the remainder. As gratifying as the steady increases are, the total is still below the national minimum standards.

Most of the buildings are rather old, with little possibility for expansion; only three have been built since 1960; one is being constructed. Some libraries are housed in charming buildings which are esthetically pleasing and of considerable architectural value. Unfortunately esthetic values cannot be translated into adequate working space.²³

Total circulation is 1,140,755, or 15.07 volumes per borrower; there are 75,737 registered borrowers. Two thirds of the libraries reported a steady increase in the annual circulation, while one third noticed a small decline. Hours of service are, almost uniformly, much too low; not more than 10 percent of the libraries meet national minimum standards. The average number of hours the libraries are open per week is 23.5. The average for the larger institutions is 37 hours; the best, report 68 and 60.5 hours respectively. The smaller libraries are open an average of 16.5 hours per week with the shortest opening time 7.5 hours. Lack of personnel is the obvious reason. Although the failure is easy to explain, the fact still remains that the value of a library is very small if the public has access to it only a few hours a week.

Two thirds of the institutions reported an increase in interlibrary loan activities, albeit not a very great one; one third indicates a decrease. As far as the team could ascertain the work loan of the reference desks; about half of the libraries had an increase. Paperbacks have had little influence so far; some libraries treat them as "expendables." Neither mutilation nor theft seem to be a problem so far; the estimates of losses run between 5 and 50 volumes yearly.

Six libraries have no telephone, and seemingly none has teletype except the system headquarters. Most believe they are easily accessible although in some cases considerable doubt was voiced by librarians about the location of the business district. The parking problem has been solved by only a few fortunate ones. The majority of institutions charge fees to non-residents. Two libraries operate a bookmobile. The system itself delivers books to libraries, but does not operate a bookmobile.

Great care is given to provide exhibits and to attract patrons. Typical is the following report given by a librarian in a middle-sized town: "We have a regular program utilizing different units and bulletin boards. Exhibits in children's room downstairs--usually art, models, unusual books and bindings--are provided by local schools and clubs. Adult library has exhibits from State Museum, Folger Shakespeare Library, Smithsonian Institute, and National Gallery of Art. Also features special collections, like pieces from our Thoreau collection (324 volumes), rare books, etc. Usually a new exhibit every month."

All libraries have a dictionary catalog; about 10 percent reported the divided structure and about 60 percent still keep an accession book. Obviously Dewey classification is used and open stacks access is given.

Book selection responsibility is generally divided between the librarian and a few interested trustees. A very great variety of selection tools was quoted--Library Journal, lists published by the system, the New York Times, ALA Booklist. New acquisitions are generally reported to the local newspaper.

Without exception the libraries were satisfied with belonging to the system and feel that membership has assisted them greatly. As "best features," librarians quoted: centralized processing, interlibrary loan, consultant service, reference service, and rotating book collections. Possible improvements suggested were:

1. Library supply ordering through the system.
2. Workshops geared to real needs.
3. Educational information for librarians.
4. Help in determining weaknesses and in planning growth.
5. Books on advanced ordering lists should be numbered.
6. Faster service on books ordered (four libraries).
7. More mystery collections.
8. A wider selection of "ready-to-purchase" books.
9. More workshops with displays for forthcoming books.

10. Allowing librarians to participate in conferences.
11. Funds be made available for administration (as well as books).
12. Twice-a-week book delivery.
13. More use of phone for interlibrary loan requests.
14. Central magazine subscription purchase.
15. Small rotating collections of western and light romances (like the mystery collections).
16. Constructive criticism for small libraries who have no help on their own staff.

The relation to the State Library, reactions of trustees and outstanding members of the community, and evaluations of the checklists for the region as a whole will be treated following the discussion of the libraries in the Ramapo-Catskill System.

Ramapo-Catskill Library System

The Ramapo-Catskill System serves a population of 406,801; its 45 libraries have combined holdings of 630,281 volumes, or a little more than 1.5 volumes per capita (Table 70, 71, 72). Thirty-two libraries have answered the questionnaire and given the team highly appreciated help in evaluating the situation. The pattern, two thirds versus one third, familiar from the previous discussion, occurs here, too. A little less than two thirds meet standards with regard to number of volumes, about one third do not have satisfactory holdings. The system has its share of very small communities, but one observes again that many of the little places have done fairly well with their libraries, whereas some of the more thickly populated towns have neglected their library obligations.

Judging from the breakdown of the collections by Dewey classification, selections have been made with care and competence. It covers, equally well, all the important subjects. The percentage of fiction among the adult books is somewhat less than usual; this goes very well with the current trend of giving a higher priority to non-fiction. The number of children's books conforms with the general rule. The books are clean and well taken care of.

Periodical holdings are not fully satisfactory, as is so often the case. A little over 40 percent meet the minimum standards; one library has a really good and extensive list of current subscriptions. Librarians do prefer the purchase of monographs to the subscription of another periodical. Very few libraries (about 10 percent) keep bound backfiles; nobody classified this material. There are hardly any government documents (either federal or state) and few maps, but some libraries keep good pamphlet collections.

Ten percent of the libraries do not receive any newspapers, the rest have subscriptions to both local and, frequently, New York City papers. Some have the Christian Science Monitor; one library cites the Wall Street Journal and the Manchester Guardian.

The collection of phonograph records is excellent; only two libraries have holdings that are too small, and this is more than offset by the very extensive acquisitions policy of their sister institutions. The two largest collections are 2,154 and 1,100 records respectively. In case of the largest collection, one has to consider that that is four times larger than the usual collection in libraries of its size.

Reference collections are adequate. Care is taken to buy, as often as possible, a current encyclopedia. World Book is the most popular one, then comes Compton, Americana, Brittanica and Collier's. Publication dates range from 1955 to 1964.

Some libraries have assembled clippings, photographs, and slides; two report the use of a vertical file. Half of the institutions express interest in collecting local history; one library was able to form a very extensive collection of books, maps, clippings, manuscript material, and artifacts from local industry.

A little less than two thirds reported a steady increase in the number of yearly additions to the book stock, while a little over one third noticed the opposite. The development is unequal, as there is a slight trend manifested by the larger libraries to develop faster than the smaller ones.

Good staffing, so necessary to modern, efficient library service, is one of the weakest spots in the system's libraries as it is in so many other places. The state reports a total of 47,696 hours of professional and 176,194 hours of non-professional activities for the Ramapo-Catskill System. Using the same methods as above for the Mid-Hudson system, there are the equivalent of about 26 professionals and 100 non-professionals working full-time in the Ramapo-Catskill libraries. Reports from the libraries with two thirds of the libraries reporting a total of 16 professionals more or less bear out the state figures. Including the librarians in the headquarter's staff, we can assume that the entire system has about 30 professional librarians at its disposal. The tabulation of non-professional work is much more difficult because answers did not differentiate clearly between full-time and part-time activities. One can assume that the full-time equivalent is not much higher than 100 workers. A great number of libraries rely almost com-

pletely on volunteer help with no professional supervision. One library reports 20 volunteers, each working only a few hours weekly. We know that all these helpers love library work, are enthusiastic in fulfilling their duties, and would have more than enough intelligence to "learn the trade." Unfortunately, there are not enough librarians available to give solid training, and we all have to accept the fact that in the complex world of today all the enthusiasm and good will in the world is not a substitute for a professional education.

Some of the persons who are holding a professional position are still working towards their Master's degree. As this goal will be reached within the near future, one can say that the professional staff has an adequate educational background. The professional staffs' language competence stresses French, German, and Spanish. The majority has joined the national organization, and almost all are members of the state society. A large percentage of the volunteer workers also have a college education.

Total expenditures of all 45 Ramapo-Catskill libraries is \$846,878 (\$2.08 per capita). The amount spent for books is \$201,531 (50¢ per capita). Over 80 percent of the institutions reported a steady increase in annual budget figures, in a few cases a substantial one. Less than 20 percent showed a small decrease. Local taxation supplied \$574,114, state grants amounted to \$213,587. In spite of the excellent standing of some libraries²⁵ and the hard work performed by all, the total picture is still below minimum standards.

Most of the buildings are old; only one was constructed after 1960 and four after 1950. The possibilities of expansion are doubted by the majority; most libraries are crowded and do not have enough elbow space either for staff or for books.

Total circulation was 1,572,735 or 12.94 books per borrower; there are 121,538 registered borrowers. The libraries are open to the public on the average of 29.5 hours per week. Larger libraries give service for an average of 46 hours; the two largest figures are 80 and 68 hours respectively. The smaller institutions have an average weekly opening schedule of 15.3 hours. The two shortest opening times reported are four hours (Saturday from 1-5 p.m.) and six hours (three times a week from 2:30-4:30 p.m.). It doesn't help too much when the first library promises to open the library at all hours on request. Another institution that opens its doors afternoons only, states that telephone service for reference and renewals is given daily from 10 a.m. on. Undoubtedly the libraries

do the very best they can, but unfortunately that is not enough.

Two thirds of the libraries reported an increase in inter-library loan; all libraries are carrying an increasingly heavy burden at the reference desk. Increases in the number of reference questions asked have been quite staggering in a few cases. This is undoubtedly a strong testimony for the quality of service given and the public's recognition of the library, but it also places a heavy burden on the typical small staff. There is divided opinion on the use of paperbacks. Some disregard this type of material, others feel that the potential usefulness has not been explored. Three libraries use micro-copies for articles in encyclopedias and journals. There is a dearth of modern copying equipment. Fortunately neither theft nor mutilation seem to be a problem. The estimates of losses run between \$10 and \$100 a year.

Five libraries have no telephone. The library buildings are generally well placed, although three librarians are not satisfied with the location. Only a few institutions have solved the parking problem.

All libraries do their best to arrange exhibits, at least using the bulletin board and, if possible, street windows. One library reports that the "Friends of the Library" maintain the exhibit case in the lobby and have accepted the responsibility of changing the exhibits frequently.

The majority of the libraries has the traditional dictionary catalog, with two reporting the divided arrangement. Ten libraries have no subject approach through the catalog. With very few exceptions the accession book is still maintained. All libraries use the Dewey classification and have open stacks. Book selection is performed by librarians and trustees, using as main tools: a system meeting during which advice is given and books are shown, Kirkus (used by almost all larger libraries), Library Journal, The New York Times and Herald Tribune Book Reviews, Horn Book, and Choice (mentioned once). Only a few libraries have organized "Friends of the Library" groups; one institution reports enthusiastically: "Our group is a very active one which raises money each year for extras for the library. They have provided a film projector, screen and table, a record case, two book carts, counter height book sections, a magazine rack, and several hundred dollars worth of books and recordings."²⁵

The libraries are extremely satisfied with their membership in the system and stress the many benefits they have received. By a popularity vote, the three "best features of the system" nominated

are: consultant services, interlibrary loan, and centralized processing. The following suggestions for improvements were voiced:

1. Revise monthly meetings. They are too general.
2. Objective criticism of "our" services.
3. System should have larger rotating collection of books in foreign languages: "We are interested in books in foreign languages. We believe widespread education has widened the use for such books. We think they ought to be intershelved with books in the English language. We believe the system ought to have a large rotating collection of books in foreign languages."
4. Supply professional consultants and library staff for aid.
5. Support local expansion and development programs.
6. Increase personnel to answer reference questions.
7. A clarified policy on rotating collections.
8. Member libraries should take greater part in planning programs.
9. More frequent workshops.

Reaction of all libraries in the Region.

The reaction of the libraries in the valley towards the State Library is ambivalent. They are very complimentary about the attitude of the State Library and its willingness to help and to cooperate, and the competence of its staff. Heavy criticism, at times with an almost emotional undertone, was voiced about its performances. The main area of complaint is the interlibrary loan. Libraries grumble about the delays which seem to be so lengthy that books have reached the borrowing library after the due date stamped in the book. Often letters and requests are not answered and must be repeated, and books are received which have not been requested.

Suggestions submitted are: inclusion of the interlibrary loan request with the book to facilitate identification of the borrower and attempt by the State Library to locate a requested title elsewhere if it is not available in Albany. The libraries would be most grateful for the following additional services:

1. More explicit information about the services available.
2. More up-to-date subject lists.
3. More extension courses in library science, to be given in several places in the eight counties (many cannot commute to New Paltz).
4. In-service training of sub-professionals.
5. Assistance in public relations.

In order to evaluate the book stock, nine check lists were submitted to the libraries. The lists number 3, 5, 6, 7, 15, 16, and 17 were sent to only a few libraries; lists 4 and 8 were sent to all libraries. Tabulation of the results is seen on Tables 73 and 74. The check lists themselves, marked for both systems, follow on Tables 75-83. The pitfalls of check lists have already been discussed when the college lists were examined above. To the precautions mentioned there, one more has to be added: only 68 out of 96 libraries in the two systems returned the lists; one can hardly guess the holdings of the remaining 28 institutions. Therefore, only one very broad generalization is permissible: the strength and efficiency of the valley's libraries lies in unity; the combined book holdings represent a most respectable book collection and give the people of the valley access to a fairly large representation of current publications in English. With very few exceptions, however, the single library is much too weak to fulfill the needs of the modern community.

List 3, a combined New York Times Christmas List for years 1961-1964, quotes 908 titles. Except for 11 books, none of which I would consider essential, all are available. Only two libraries have a large share of these titles; most institutions are poorly represented.

List 4, selected from the Standard Catalog for Public Libraries, quoting 84 titles, is completely checked. Only a single library has all 82 books. The smallest one has only two.

Of the 26 titles in List 5, "Collection of Books on the United States," only two libraries have more than 50 percent. The smallest number checked is two, but the combined holdings cover the whole list.

Three good books on List 6, "Greece," are not available; the other 28 are.

All 75 titles on List 7, covering twentieth century American novels, have been checked, but some libraries have as few as 18 of these well-known novels.

List 8, quoting 131 children's books, was sent to all libraries. All but two are available in one or more libraries, but two libraries report as little as four titles.

List 15 mentions 18 books on Latin America; it speaks well for the libraries' book selection that all titles are available.

List 16 is devoted to the Middle Ages and 31 out of 34 books included have been checked. The little book by Painter, Medieval Society (Cornell, Development of Western Civilization Series), should be bought; the two others do not matter.

Slightly different is the periodical list, quoting the journals which are indexed in four major bibliographies. Out of 691 standard periodicals only 163, about 23 percent, are available. The list is not tailor-made for public libraries because a list was needed to cover all institutions in the eight counties so that we would have a total picture of periodical resources. It includes, therefore, a great number of journals which are too specialized to be considered for inclusion except by a very large metropolitan public library.

Above, when discussing the individual libraries, the observation was made that the selecting librarian spends his meager budget on monograph acquisitions rather than on periodical subscriptions. This is confirmed by the result of the periodical check list. The list includes a great number of journals which have such a wide appeal that their inclusion in a public library is more than justified.

In order to get a better understanding of the fundamental issues which determine the quality of the libraries, a questionnaire was addressed to all trustees. Trustees not only represent the libraries, they are in every respect the determining factor in the life of the institution.²⁴ The answers have been tabulated on Table 84 for Mid-Hudson and on Table 85 for Ramapo-Catskill. With one insignificant exception, both groups of trustees voiced identical opinions. The majority rated their libraries as follows:

Book Stock	Good
Building	Good
Personnel	Excellent
Financial Support	Satisfactory

Their opinion about the improvement gained by individual libraries through membership in the system was:

Easier ordering	Very much
Easier processing	Very much
Better library materials available	Very much
Improved readers' services	Very much
Help in in-service training	Much

Requested to rank the best features of the system, one group voted: rotating book collections, interlibrary loan, centralized processing, reference service, aid in book selection. The other system group gave as priorities: rotating book collections, consultant services, interlibrary loan, reference service, centralized processing.

Trustees were then asked to identify important improvements of existing services or the addition of new services for which the system was at least partly responsible. A small sample of the more than one hundred statements which the team received is as follows:

1. General. Overall expressions of appreciation for general improvement were given. "I feel that our services to the community have improved a hundredfold in the several years thanks to the system."

"Improvements in local library service have been so tremendous since our membership in the system that it is difficult to think of further improvements. I have the feeling that, except for interlibrary loans and workshops, we have not used the system's services as extensively as we might."

2. Speed. The most frequently voiced request was for quicker services, faster answers, and an overall decrease in the time element. Samples are:

"Speed up ordering of books."

"Best sellers much quicker. Of little use if it is delivered too late."

"More deliveries. At least twice a week."

3. Finances. The next priority was given to increased financial aid, voiced as follows:

"Greater cash grants to member libraries."

"Larger cash grants and book grants."

"Financial assistance towards operating costs."

"More support for expansion plans."

"Help in the development of long-range expansion plans, with adequate financial support."

4. Requests for more books were voiced very frequently:

"More reference books" was mentioned many times.

"More suspense and mystery stories" was the request of another library.

"More books about animals."

"More films and records" were other requests voiced.

5. Services. "Story hours for children" were frequently requested, and "Longer loan of reference and research material, especially for writers and those working on theses."

6. Administrative Problems. "More dissemination of knowledge as to ways in which smaller libraries can solve their problems: financial, personnel, and other."

"Clarification of the aims of the systems, specifically how will they aid the member libraries. System should concentrate on basic problem areas. Professional advice to trustees and librarians. Lead libraries away from volunteer workers except in fund raising activities. Emphasize the need of trained persons for book selection, otherwise too much waste of money and a poor book collection."

"The system should help to organize the interlibrary relationship in the counties. We are all growing rapidly; a planned, organized growth is what we want."

"A closer analysis of strengths and weaknesses of member libraries and specific suggestions for eliminating weaknesses."

7. Public Relations. "Although we as trustees are completely aware of the services offered us by the system, the services are not yet fully appreciated by the general public or used to the extent I would like to see. Perhaps more publicity and greater public awareness of the many fine services the system provides is necessary."

"More work with publicity and public relations."

"Advice with regard to fund-raising methods and promotion."

"Suggestions for better advertising."

"Give us new ideas to promote books and the library in general."

"Visits by system representatives to each local library board. The system should tactfully remind board members of services available from the system. Too many trustees do not yet fully understand what a system is and does and will do for them."

8. Communications. Lack of clear information channels between system and libraries was deplored by many. Some stressed the necessity of giving information and reference service by phone.

9. Training. Help in training library staff was the most frequently voiced request.

"In-Service training courses for volunteers."

"Training and information given how to weed collections."

- "Continuation of training program including repetition of those previously conducted."
- "More workshops and longer training periods."
- "More staff training. More professional librarians who remain with us for a longer period to give basic training."
- "Continuous training for new libraries, particularly necessary in the formative years."
- "Advice in planning space and rearrangement of shelving of books. Training how to select library furniture."
- "More data on how to solve common nagging problems such as long overdues and organization of book handling when non-professional help is used almost exclusively. Advice on library structure, shelving, filing, etc. Advice to the board of trustees."
- "More continuous attention. Periodic and frequent evaluation of services and performances. Frequent and regular criticism together with recommendations in all areas of library activity."
- "Revised reference workshops for library personnel."
- "More counselling in the solution of sub-urban public library problems."
- "Yardstick for rating our library in connection with others of the same general type."
- "More educational training for non-professional librarians."

We believe this extract of the trustees' opinions can well close with the following quote:

"The system has been marvelous. It has meant the difference between a sub-standard young library and a fairly good one. We are most appreciative."

Finally, members of the local community were asked to render their opinion on their library (Table 86). The majority verdict was extremely favorable. Unfortunately, the reliability of the evaluation is somewhat weakened by the fact that 60 percent of the persons who answered were visiting the local library only occasionally. Over 50 percent considered the library to be very easily accessible; thirty-five percent rated their library as good; only fifteen percent were lukewarm or critical. The library book collection was judged both from the patrons' point of view and from the broader angle of service to the entire community. Thirty percent of the patrons interviewed rated the book collection as excellent, 40 percent as good, and 30 percent answered satisfactory or poor. The second point of view, collection evaluation in terms of community service, was judged by 40 percent as excellent, by 35 percent as good, and by 25 percent as satisfactory or poor.

The reference service received highest praise by 25 percent. The remaining 75 percent of the citizens interviewed were almost equally divided between two groups: One which rated it good, and the one which was of the opinion that satisfactory or poor would be more applicable.

The library staff was greatly applauded by half of the answers; 30 percent believed that good was the correct opinion and 20 percent indicated a satisfactory or poor opinion.

The combined statistics of all 105 libraries (Mid-Hudson 51, Ramapo-Catskill 45, non-member 9) is as follows:

Per capita ratio of books:	1.6
Per capita rate of expenditure is:	\$1.93
Population served	806,812
Registered borrowers	204,980
Books	1,305,290
Circulation	2,818,321
Local tax	\$ 971,885
State support	\$ 427,718
Expenses for books	\$ 316,265
Tot. Expenses	\$1,562,540

Additional data with regard to state aid, local taxation, and wealth of the counties are exhibited on Tables 87, 88, and 89. The performances of the library systems and the non-member libraries in 1963 can be compared with 1964 activities in Tables 90-93. With one small exception, all figures show an increase. The combined book stock has risen by over 100,000 volumes and the circulation has increased by over one-quarter of a million volumes. Four former non-member libraries have recently seen the advantage of joining a system.

The libraries have made great progress. It was not, to use the Chinese expression, "the great leap forward," but it has been a steady advance. The greatest success, long overdue and richly deserved, was achieved by the library of one of the major cities of the valley. The librarian in charge had submitted to the authorities a pathetic picture of the plight of the institution year after year: "We have one of the poorest collections in New York State for a city of this size. Our book budget does not satisfy the barest necessities, and we were never able to afford the indispensable material for a community of this size Compared with the minimum financial support of \$3.50 per capita, we have \$1.13. Our collection has, instead of 60,000 volumes, only 24,000 but even those are badly worn and out of date. We occupy less than one

third of the space which we should have, and we have exactly one fifth of the staff necessary." Everything was seemingly hopeless, the budget had hardly changed for the last five years. This year, however, the miracle happened. For the current year, the library's appropriation was almost doubled. It may not stay so high, but a 50 percent increase over the former figure seems assured.

The five-year reports of the two systems illustrate achievements with fully justified satisfaction. For Ramapo-Catskill we refer again to Table 72. Mid-Hudson reports that circulation has increased from 785,145 volumes in 1960, to 1,130,196 volumes in 1964.

The team has a sincere appreciation for the devoted and enthusiastic trustees and for the hard-working librarians, the two groups which can take full credit for the achievements. It is, therefore, with great reluctance that we have to summarize our impressions with the harsh judgment: it is not enough. The inspection of the statistical abstract of the State's public libraries shows that the institutions of the valley rank among the lowest percentiles. The state average for book stock per capita is 2.66. The highest figures are for New York City, 5.80 books per capita; Westchester, 2.92; and North Country 2.66. Only three regions are lower than the valley's average of 1.60. Per capita expenditure in the State is \$3.66. The best support is in Nassau, \$5.51; New York City, \$5.10; and Buffalo, \$4.44. Only two areas rank lower than the valley's \$1.90.

There cannot be any doubt that financial support for the systems is inadequate. Federal and state government can help and assist, but the basis for good library service is local taxation. Modern and efficient libraries are a vital necessity for the people of the valley; they cannot be supplied ready-made by outside means, but must be paid for by the people of the region. The two major deficiencies of the libraries are the lack of staffing with professional, trained librarians, and the need for increases in the book stock.

School Libraries

The valley has 332 public schools; 210 elementary schools, and 113 junior and senior high schools. Thirty-three institutions of this last group also include the elementary grades, kindergarten to 6th grade (Table 94, 95). All educational surveys claim a place of utmost importance for the school library. The Pacific Northwest

Library Survey for instance states: "The school library is an integral part of the intellectual conditioning of the child There is a relation between the soundness of an educational program and the extent to which books are used The school library is a mirror of the school."²⁶

The national professional association claims four important functions for school libraries:

1. It is a center for the learning materials required to support the instructional program and meet the needs of students.
2. It offers a planned, continuous program of instruction in library and study skills, equipping pupils for independent use of learning resources.
3. It serves as a classroom laboratory for reference and research work, and its staff works closely with other teachers in a team approach to instruction.
4. It offers individual guidance to students in using materials - in reading, listening, and viewing - to meet their personal, social, educational, and vocational needs.

The national standards are: A book stock of 6,000 - 10,000 volumes for schools with an enrollment of 200-900 students. Schools with larger enrollment should have 10 books per student. Institutions with a student body under 200 can have a proportioned reduction under 6,000 volumes.

There should be one professional librarian for each 300 students; if the enrollment is over 1,000 students, one librarian for each 400 students is considered sufficient. The professional staff should be assisted by one clerk for each 600 students. "The standards are not maximum uses and superior schools will want to go beyond them."^{27, 28}

The New York State education law reads, "Each school is required to establish and maintain a school library." New York standards require a collection of 3,000 titles for schools with an enrollment of 500 or fewer students, institutions with a student body of 500-1,000 should have 5,000 titles; a library of 8,000 titles is required for an enrollment of more than 1,000 students. One professional librarian is needed for each 350 children.

Of 39 elementary schools in the valley only four (slightly better than 10 percent) meet the national standards with regard to

books. If we apply the less demanding New York State requirements, 13 schools would be acceptable. Even under these most lenient circumstances two thirds of the elementary schools in the valley are below standards. One school reports that it has no library at all.

From the point of staffing (Tables 96, 97), no elementary school library fully meets national or state standards.

Of the 75 high school libraries which returned the questionnaire, 23 meet the national standards in holdings. A little more than half, 44 schools (55 percent), comply with New York State requirements (Tables 99, 100).

With regard to staffing, only two schools fully meet state and national standards.

The result of the check lists (Tables 98, 101-107) submitted to the schools confirm the overall statement that a great number of the school libraries are below minimum standards. There is no need to repeat here all the reservations which have been voiced above with regard to the reliability of check lists and questionnaires.

Out of 218 elementary schools only 39 have answered the questionnaire and returned the check list. One cannot even guess at the quality and quantity of the library in the remaining 82 percent. I wonder whether most of the libraries didn't find time, didn't have the personnel, or had no interest in participating in the survey. The 18 percent who have answered the questionnaire do not represent a true random sample and no reliable conclusion can be drawn.

Seventy-four out of 113 high school libraries (65 percent) were good enough to answer the questionnaire. The situation is similar to the questionnaires submitted to the public libraries. Almost every book on these check lists is represented in the valley. The nine titles which are not represented at all are: Persons, American Minds; Adams, Chapters of Erie; Graebner, An Uncertain Tradition: American Secretaries of State in the Twentieth Century; Adams, The United States in 1800; Bancroft, Slave Trading in the Old South; Clark, The Rampaging Frontier: Manners and Humors of Pioneer Days in the South and the Middle West; Estergreen, Kit Carson, A Portrait in Courage; Owsley, Plain Folk of the Old South; and Winther, Via Western Express and Stagecoach.

The reports the team received from visits and surveys confirm the above statement. One children's librarian judged that many school libraries in her district are rather poor. Many highly qualified librarians, persons with great enthusiasm and excellent

background, work in the valley's schools, but in many cases their effort is wasted. In some of the larger schools the librarian's time is mainly occupied with ordering, distributing, and collecting textbooks. One interviewer concluded his call report: "From the brief visit I would conclude that we have here a person of immense professional capacity whose talents are being wasted without concern by the administration which has no understanding of the professional status and abilities of the school librarian. In the main she works as a glorified office clerk. Who suffers? Her staff, her library, she herself as a person and, most of all, the students toward whose benefit supposedly all this is geared."

Another librarian bemoans the necessity to act most of the time as study hall monitor and not as a librarian. One highly qualified librarian in an elementary school library bitterly complained that the inability of school administrators to understand the professional qualities and objectives of librarianship is infuriating and hardly bearable. She is also angered that due to federal law available audio-visual materials are restricted to public libraries (The new Education Act will rectify this situation).

There is very little cooperation between school libraries and public libraries. In some states such a venture has been highly successful.²⁹ It would be of great benefit in our area, but in spite of some sporadic overtures, hardly any cooperative action of significance has materialized.

It has been said often and publicly during the last years that the condition of our school libraries is a national disgrace. Unfortunately the valley does not show up very well either.

Compared with the situation ten years ago, much progress has been made; a number of school superintendents and principals are sympathetic with the plight of the library and have a lucid conception of its significance and objective. However, they would like to shift the burden of maintenance to somebody else. This "somebody else" is either the local public library or a helpful guardian angel which is vaguely called "cooperation." Unfortunately, the sum of two insufficiencies or of two negatives does not make a positive, neither in life nor in arithmetic. Cooperation by itself is not sufficient.

The attitude of school administrators does not differ basically from the approach taken by college administrators or public officials who decide on the budget of academic and public libraries. They do not see the expenditure of the library as a power supply which vitalizes the intellectual atmosphere of the institution and of the community at large, but as a drain on the budget.

Special Libraries

There are about a hundred special libraries in the Mid-Hudson Valley.³⁰ They can be roughly grouped according to their main functions:

1. Industrial libraries
2. Historical Societies
3. Hospital libraries
4. Law libraries
5. Libraries of institutions of correction and similar agencies.

They have collections of various importance and have in common the fact that many cannot be used by outsiders; except by special permission. Frequently interlibrary loan is severely restricted. (Tables 108-110)

There are about 40 research laboratories affiliated with the leading industrial concerns of the nation.³⁰ Most of them have sizeable libraries; for instance IBM has libraries in Poughkeepsie, Kingston, and Fishkill; Texaco in Beacon; Lederle (American Cyanamid Corporation) in Pearl River; St. Regis Paper in West Nyack; Schwartz Biochemical Laboratory in Orangeburg and Avon Production in Suffern. In Sterling Forest one finds libraries of Union Carbide (Mining and Metals Division), International Nickel, Reichhold Chemical, and New York University Institute of Environmental Medicine. All these libraries (Table 108) exceed Danny Bedsole's average figure by a multiple.^{31, 32} According to Miss Bedsole's tabulation, the average industrial library has one professional librarian and two clerical assistants, 180 periodicals, and a collection of 4,000 volumes. The libraries are well organized, administered by a most competent staff, and meet the appropriate national standards.³²

There are 14 historical societies which have some book collections. Most institutions are administered on a somewhat informal basis. Often they are not well housed and have little elbow room (both financially and physically) for expansion or systematic development. Quite different from the local historical societies is the Franklin D. Roosevelt Library in Hyde Park. This is federal property and is administered by the National Archives. The library has about 37,000 volumes, mostly on the President, but also about 700 volumes on Dutchess County history and about 2,000 volumes on naval history, both subjects having been of great interest to Franklin D. Roosevelt. In addition there are about 25,000 pamphlets.

It also has a chronologically arranged collection of presidential speeches (drafts, corrections, final speech, and press releases). A microfilm collection of dissertations on the Roosevelt administration is carefully kept up-to-date. Almost 85,000 photographs, arranged partly chronologically and partly topically, illustrate the life of one of America's greatest presidents. The collection is open to legitimate research upon a written application. Only 6 percent of the materials are restricted; however, there is no interlibrary loan. Annually about 1,500 reference questions are answered by mail.

The region has three State hospitals for mental diseases--Orangeburg, Middletown, and Wingdale--and a number of general hospitals,³³ like the Vassar Brothers Hospital in Poughkeepsie. According to the Hospital Magazine, "Buying Guide" issue, 1964, the region has the following number of hospitals, broken down by counties: Columbia 1, Dutchess 12, Greene 1, Orange 11, Putnam 2, Rockland 7, Sullivan 5, and Ulster 6. As far as the team could ascertain, all hospitals have medical reference libraries for the professional staff. The School of Nursing in Poughkeepsie has a small library of 800 volumes and 20 periodicals for teaching purposes only. The residence of the student nurses has a small library of browsing character. The team did not observe many extensive book collections for the use of patients.³³ The national standards require eight titles per patient (up to 300 beds served). The number of titles per capita deemed necessary decreases with the size of the hospital; the final figure is four titles per patient in an institution with 1,500 beds. I do not believe that the institutions in the valley meet these standards.

The Rockland State Hospital in Orangeburg has about 9,000 patients and 2,500 employees and student nurses. The patients' library has 15,038 volumes, not including branch and ward books. The professional library has 3,228 volumes and 2,601 periodicals. The staff consists of two professionals, and two part-time clericals and volunteer workers.³⁴

Letchworth Village in Thiells, Rockland County, is a state institution for the mentally retarded with a patient population of 4,300. The patient library of 1,200 books, equally divided between boys school and girls school, is very small. There are no separate library facilities for the patients. The staff library stresses psychiatry, psychology, and social service. There are about 3,000 titles and 20 subscriptions to scholarly periodicals. The best part of the library is a collection of 200 titles on mental retardation.^{34a}

All the counties have legal reference libraries. The largest collection is the New York State Supreme Court Library in Poughkeepsie. As far as could be ascertained, the collection has about 17,000 volumes; it is open to the interested public without any supervision. Other legal libraries in the counties are: Third Judicial District Library in Kingston, serving Columbia, Greene, Sullivan, and Ulster counties; Ninth Judicial District Library in Newburgh, serving Dutchess, Orange, Putnam, and Rockland counties. Columbia County also has its own Supreme Court Library in Hudson, and Greene County has one in Catskill.

All these libraries have material which is highly important for advanced research. Because of lack of a Union catalog the existence of these titles is unknown to the readers in the valley.

Libraries in institutions of correction are highly important. It was most gratifying to read in most of the correspondence with wardens and other administrative officers that the importance of the library was fully acknowledged. The observation was made frequently that the "interest in reading matter among inmates in correctional institutions is very high." Unfortunately with very few exceptions the libraries are extremely small and not well staffed. West Coxsackie has a library of 9,000 volumes and reported for the last three months of 1965 a circulation of 17,738 volumes. A position for a certified librarian is in the budget, but no candidate could be found.³⁵

Napanoch, housing mental defectives and borderline cases, has a library of 5,000 volumes, mostly based on gifts, as the annual library budget of \$469 would surely not be sufficient. The administration of this institution is well aware of the importance of a librarian, but their request for such a position has not been approved as yet.³⁶

As an example of good library service in an institution of correction, I quote a description of the library in Wallkill Prison: "The library at Wallkill Prison serves a twofold purpose. Services comparable to those provided by both public and school libraries are needed for our inmate population, and library habits of a lasting nature may be developed in the individual."

The book collection of 8,000 volumes, 3,000 of which are fiction, serves a maximum population of 504 inmates. The size of the collection is limited by the space available in the physical plant, but exceeds minimum standards recommended by the Committee on Libraries of the American Prison Association. Special emphasis is given to maintaining a reference collection of current and

standard reference books, bound periodicals, and appropriate indices. These are much in demand and are not available on loan from other sources. Standard bibliographies are used in book selection, and an effort is made to maintain a balanced collection of high quality.

The inmate population is free to use the library daily from 12 noon to 8 p.m. An open shelf system is used; the reader is allowed to browse, examine, and select his own books. A civilian librarian provides advisory service for the reader.

A special collection of high interest, low vocabulary books suitable for adults is available to the poor reader and persons enrolled in lower academic classes. Spanish language books and periodicals are available for those persons unable to read English.

Current issues of popular magazines and daily newspapers are provided for use in the library. A music collection of over two hundred volumes of classical and popular music can be played on a special phonograph equipped with earphones. Persons wishing to listen to music are able to reserve a time period and can listen without disturbing other library users."³⁷

The team is happy that our chapter on the libraries in the Mid-Hudson Valley can conclude with the description of a library for which we have nothing but the highest praise.

CHAPTER V

SUMMARY AND PROJECTIONS

The American society of today, and the new society of tomorrow, is characterized by an ever increasing mobility of the population. This mobility is twofold, both social and physical. Some towns may decrease in population density, but new residential areas are founded. The suburbia, for instance, which constitutes a slow but constant drain on the big city, differs in many aspects from the small town of yore.¹ Both have in common that the residents live close enough so that active social organization can flourish, and at the same time there is enough distance not to suffocate neighborliness by the sheer mass of humanity which is congregated in the big city. The origin of their constituents, their moods, and attitudes, show marked contrasts. To a large extent, the country town attracted the surplus of the agricultural population and was their first step towards urbanization. Suburbia is fed from the city, but it is by no means a passive receptacle of city surplus or a metropolitan satellite. It has developed a community spirit of its own, and enjoyment of life away from the hubbub, the hustle, and bustle of the city crowd. At the same time it is more citified, has more metropolitan attraction, and more direct contact with the city's occupational opportunities than the country town. Large research laboratories are choosing this "out of town" location in compliance with the suburban preferences of their technical and scientific staffs, and manufacturers find ways of expansion easier outside the city. Suburbia is a powerful lodestar for a new way of living and slowly changes the entire countryside into a sequence of suburban places.

The new society which is developing in this setting has all the earmarks of a broad middle-class culture.² Sociologists may continue to distinguish between upper, middle, and lower strata, but mobility between the classes has greatly increased. Average educational achievements are rising from year to year; twenty years ago the median years of schooling completed was 8.7, the last census reported 10.7 years. Almost half of the adults have completed high school, and the percentage of teenagers who do not finish high school is decreasing. Formal education is accepted and socially valued as the instrument of upward mobility. Urbanization, defined as "awareness of, participation in, and dependency upon the surrounding urban world," has become a dominant cultural factor, and urban values are being accepted everywhere.

The new phenomenon, sometimes called megalopolis and more recently the "spread city," will also function as melting pot of

races as does the metropolis. Those Americans whose "apartheid" is based only on the color of their skin and not on their attitude and language, will follow the trend of the majority. Both the negro American and the white American are Americans first, and they have accepted the identical status symbol, to own a house in a less congested neighborhood.³ The newcomers, immigrants from Puerto Rico, will follow later, after they have made their first successful assimilation. Such a development would be of extreme importance for the Americanization of minority groups. A metropolis is a seed bed for ghetto-like segregation; the country town, too, has its quarters on the wrong side of the railroad track. The spread city will provide more possibilities for the individual to break out of the chains of a residence dictated by obsolete custom and not by choice.

Wherever the Americans of the new society will live in the Hudson Valley--in a large town or in a small community, in a high class residential area or in a less desirable neighborhood, whether working as a professional or business man, for salaries or for wages, whether a man or a woman--they all will have less working hours and much more leisure time.⁴ Within the last hundred years, the working week has been about halved:

<u>Non-agricultural Working Time</u>		<u>Agricultural Working Time</u>	
<u>Year</u>	<u>Average hours worked per week</u>	<u>Year</u>	<u>Average hours worked per week</u>
1850	65.7	1850	72
1900	55.9	1900	67
1940	41.1	1940	54.6
1950	38.8	1950	47.2
1960	38	1960	44

There is no doubt that this trend will continue. Organized labor is demanding a thirty-hour week to offset unemployment caused by automation.⁵ More important, than laws and contracts based on collective bargaining, is the changed attitude towards the merits of hard work and longer hours. A hundred years ago, long working hours and especially hard physical labor had a prestige value; today ease and speed of performance by using modern labor-saving devices get the highest acclaim. No merit is given to back breaking work, per se, if it can be more easily performed by a machine, and the only honor given to the plowman who "homewards plods his weary way" is rendered in classes of English literature.

How have Americans in the last fifty years spent their leisure time? Average expenditure for reading has slowly declined;

the same goes for theatre and movies, but it has greatly increased for sports and equipment. The last item includes pleasure craft, etc. The exact figures, taken from Sebastian de Grazia's book, are as follows:

Percentage Distribution of Consumer Expenditures for:

	<u>Reading</u> %	<u>Theatre</u> %	<u>Sports</u> %
1909	12.1	19.4	16.6
1921	11.6	18.6	16.4
1930	9.2	23.4	12.8
1940	10.5	24.6	17.0
1950	9.1	15.5	22.7
1959	9.5	10.0	26.9

The consumer expenditure both for reading and theatre is, of course, rising although the percentage has declined.

Consumers Expenditures in Millions of Dollars:

	<u>Reading</u>	<u>Theatre</u>	<u>Sports</u>
1909	104	167	143
1921	239	382	338
1930	326	827	453
1940	346	806	560
1950	912	1,552	2,274
1959	1,538	1,617	4,358

Agriculture is probably more affected by these trends than any other occupation.⁶ With regard to farm activities in the Hudson Valley, the agricultural experts on the Cornell Campus are unanimous: "Urban activity will expand . . . and will largely displace the farming that remains." Demographers are certain that the category "rural-non-farm" will increase much more rapidly than the other two, rural farm and urban. By 1970 the rural non-farm population of the region may outrange the rural farm population by a ratio of ten to one. The individual farm will continue to increase slightly in size, but farms will greatly decrease in number. This development is to a large extent nationwide; net hours spent on agricultural pursuits have dropped from a peak of twenty-four billion in 1918 to eleven billion at present, and the number of farm workers has been halved. In 1960 the nation had a farm population of 10.5 million. Some predictions for 1975 believe this number will shrink to two million, others say five million.

Agriculture will, obviously, not disappear, but it will differ from the romanticized picture the non-farmer still has in his mind as much as a modern factory is different from the country blacksmith shop. Both the rural community and the rural spirit will disappear. For a long time to come, however, Americans will remember the rural past with a great nostalgia and cherish the conception of a pastoral society as a cultural symbol, although in reality it may have diminished to a flower bed in their back yard. The simplicity of life, much exaggerated by the literary observers who themselves had a much more complex existence, has given way to a sophisticated approach. Housewives everywhere rely, less and less, on family recipes handed down by oral tradition; rather they consult an array of modern cookbooks if they do not use convenience foods altogether. Young mothers prefer to read Dr. Spock instead of following the advice given by the older generation.

Maybe art can dramatize the cultural changes better than mere words, sociological theories, and statistics are able to do. A work of art is, among many other things, the reaction of the individual artist to the society of which he forms an integral part. Gothic cathedrals exemplify the mystic religious fervor of their contemporary culture, and the great baroque churches mirror the dynamics of the Counter Reformation. In 1851 Emanuel Leutze painted "Washington crossing the Delaware" (Table 111), a picture known to every American school child. It represents the romantic view of warfare in the mid-nineteenth century; the time of the Charge of the Light Brigade. The society as a whole and the artist could remain outsiders, seeing only the glittering uniforms and hearing the bugles from a safe distance. Modern warfare, however, engulfs everybody. Soldiers and civilians participate in total war, and suffer equally. Picasso expressed this radical change when, under the impact of one of the first aerial bombardments, he painted the stirring Guernica frescoes (Table 112).

The attitude of the society towards nature underwent fundamental changes, too. Two respective paintings, one from 1849, the other one from 1950, will make this clear. Asher B. Durand's "Kindred Spirits" delineates the Catskill Gorge (Table 113). The center is formed by the cascade of the untamed waterfall; the overhanging branches of the big tree on the left form an aerial bridge which finds its counterpart in the stones and rotten twigs depicted at the bottom of the picture. These details together with the steep rock on the right form the frame which gives the picture its impressive unity. The two human figures to the left are the poet William C. Bryant and the painter Thomas Cole, who look with awe, mingled with emotional approval, at nature's beauty. There is a unity between poetry, art, and unspoiled nature. The eerie beauty

of nature, not yet touched by civilization, has inherent health and strength, and man returns to it as a fountain of youth. This is the romantic version of Rousseau's "Retournons a la nature," the belief that civilization has a contaminating effect, and that nature is best if not touched by humanity.

Society a hundred years later has a different approach. We see, all too often, in the cascades of water only a potential source of hydro-electric power; we do not look with awe at unspoiled nature, rather we deplore that it has not been put to practical use. The emotional bond between man and nature has become very loose indeed. At the very best we treat nature as a monument of the past, a museum piece which we preserve respectfully as a memorial. This detachment is obvious in Jackson Pollock's "Autumn Rhythm." Nature is no longer awe inspiring; the artist and the society no longer feel the unity of art, nature, and humanity. The artist does not want to depict reality or give a moral lesson, he is almost detached from his own work. As Pollock himself wrote, "My painting has a life of its own. I try to let it come through." The value of the painting lies in its rhythm, the connection with nature is hardly recognizable.^{7a}

This is not a value judgment, not an evaluation of artistic quality or of cultural worth, although I have to state that Picasso is far the greatest artist in the group shown. My point is simply this: Society has basically changed in the last hundred years. If statistics are not sufficient; the contrast between Picasso and Pollock on one side, and Leutze and Durand on the other, will document the revolutionary transformation and confirm the previous statements that we have decidedly abandoned our rural past.

This society, with its rapid changes, will urgently need up-to-date, sophisticated library service. The continuous flow and interpretation of information will be of utmost necessity for everyone, so that he can adapt himself to the rapidly changing conditions. This concerns the whole profession; all libraries must be viewed as a whole. Elementary school libraries, as well as book collections in academic institutions, must give service commensurate to the needs of the new society in the atomic age. Each library on each level must do its full share, for "weakness in anyone of the links is harmful to the rest."

There is unanimity of opinion that education is a prerequisite for social mobility.⁸ If the time for formal education has passed, adult education can take its place. Moreover, the best educated man needs continuous access to new publications to keep

himself well-informed. Insufficiency of public library service would constitute a dangerous stumbling block in the pass of social mobility. Mobility is of such vital importance for American democracy that the blocking of mobility channels either by lack of understanding, or by apathy, could have the most dangerous consequences.⁹ The great technological advances of the Russian people, exemplified in the Sputnik, made us increase financial support for education. That was the right decision; unfortunately wrongly motivated. We have to improve education for America for ourselves and for our children, not for the purpose of reaching the moon earlier than the Russian astronauts.

Increased leisure time will send many people to libraries, but they will only come a second time if they find a modern sophisticated institution, servicing books in many languages, newspapers, periodicals, and audio-visual material of all kinds. Time is man's most important capital. If leisure time (that is, the time where we are free from working for our livelihood) is not directed towards the enrichment of our lives, it is wasted and at the very best will turn into boredom.

Our colleagues in the Pacific Northwest have well-summarized the objectives of the public library: "The challenge to intellectual development in the democratic society, grows greater literally by the hour. The public library is the community's basic resource for education and enlightenment; in the long run it is a primary instrument in the development of a free people."

Maybe we librarians exaggerate the importance of libraries; maybe they are a luxury which we really do not need! It is a sobering observation that sociologists hardly ever mention local libraries. In writing their books and papers they use the academic libraries to the hilt, but in describing a given social set up they mention just everything under the sun, but hardly ever the libraries. Undoubtedly very few members of the communities studied have considered the public library worthy to be mentioned. Women's clubs and their activities are criticized in lengthy chapters, but the fact that these activities also generally include volunteer service in the public library is not even noted.

It is therefore most heartening to read the words of a non-librarian who had realized, almost with a shock, the significance of a good library. In 1816 George Ticknor, who at that time was studying in Gottingen, wrote to a friend back at Harvard:¹⁰

. . . One very important and principal cause of the difference between our University and the one here is the

different value we affix to a good library, and the different ideas we have of what a good library is . . . We found new professorships and build new colleges in abundance, but we buy no books; and yet it is to me the most obvious thing in the world that it would promote the cause of learning and the reputation of the University ten times more to give six thousand dollars a year to the library than to found three professorships; and that it would have been wiser to have spent the whole sum that the new chapel had cost on books than on a fine suite of halls . . . We are mortified and exasperated because we have no learned men and yet we make it physically impossible for our scholars to become such. To escape from this reproach we appoint a multitude of professors, but give them a library from which hardly one and not one of them can qualify himself to execute the duties of his office. You will perhaps say that these professors do not complain. I can only answer that you find the blind are often as gay and happy as those who are blessed with sight.

Harvard has observed Ticknor's advice and that is one of the reasons that Harvard is America's leading academic institution. But many other places, institutions, and communities have paid no heed to it. The situation today is well-described by using the words of Koos¹¹ about health services, but substituting library service for health service: "The future of Regionville's library service, that is whether it will achieve the optimum of library service, is problematic. In the last instance the library service of the community is based upon the ideals, attitude and behavior pattern of the individual and his family, for these determine what he will or will not, can or cannot, expect or accept from those who made his library service their professional concern."

There is no doubt that America as a whole, and especially the eight counties in the Hudson Valley, could easily afford the best library service money can buy if the people really wanted it. Our expenditures for some nonessentials are so great that the smallest economy would, without any hardship, free a major financial support for libraries. Frank Cowell has calculated how easy it would be to give fifty or a hundred million pounds yearly to libraries. "If in every family in Great Britain ten cigarettes less were smoked weekly or the consumption of beer was reduced by a pint a weeks, either of these two minor economies would raise the sale of books by fifty million pounds."¹²

A similar calculation could be made for America and the Hudson Valley, and with hardly any sacrifice a substantial sum could

be raised. A table in Sebastian de Grazia's book which I mentioned above (his page 450) shows that the average American household in 1956 spent over twenty-five percent on food, beverages, and tobacco. His table runs:

All goods and services	\$4,110
Food, beverages, and tobacco	\$1,203
Clothing and accessories	\$ 494
Medical and personal care	\$ 222
Home operation and improvement	\$ 763
Home furnishing and equipment	\$ 346
Automotive	\$ 591
Other goods and services	\$ 276
Recreation and recreation equipment	\$ 215

If in addition, a matching agreement with the state could be concluded, ample support for the libraries in the valley could be accomplished almost overnight.

I fully realize that this is daydreaming; but the projections with regard to the future are not utopian. Undoubtedly one cannot predict the future accurately, for the famous words of Lorenzo il Magnifico in the praise of youth will be always true: "Del futur non c'e certezza." However, a few predictions can be made safely, first because the future is already here, it is part of the present, and is manifested in trends which can be observed in our daily life; and second because projections of demography are based on well proven theories of mathematical probability. We can expect, to use a phrase often found in modern sociology, the tightening of "social space" and the quickening of "social time." We can also accept the fact that there will be more people. The exact figures vary from one statistical bureau to another; there are lots of "ifs" and "if nots," but a substantial increase of population is accepted by all.

Table 115 gives the figures calculated by the U. S. Bureau of the Census for 1970 and 1980. Tables 118-120 follow the Regional Planning Association in its projections for 1975. Tables 121-122 are copied from Vernon,¹ and Tables 123-129 are reproduced after Berman.¹³ Table 130 projects the population of the State by age and sex to 1980.

Vernon's population projection for 1985 for the national population is 286 million; he forecasts a labor force of 106 million and a gross national product of \$1,368 billion. For the entire New York metropolitan region he accepts a population figure of 20.8 million for 1975 and 22 million, possibly even 25 million, by

1985. At least three counties in the Mid-Hudson Valley--Dutchess, Orange and Rockland--will triple or maybe even quadruple by 1985.

Edward Stockwell (Table 130) differs slightly.¹⁴ He projects an increase of 5 million (32 percent) for the metropolitan region for the period 1960-80. He starts with

<u>Year</u>	<u>Population</u>
1960	16.7 million
1970	19.0 million
1980	22.1 million

For the population under 25 years of age (public and college school age), he foresees an increase of 2 million (29.5 percent):

<u>Year</u>	<u>Population</u>
1960	6.6 million
1970	8.6 million
1980	10.7 million

For the labor force, age group 25 to 64 he has calculated:

<u>Year</u>	<u>Population</u>
1960	8.3 million
1970	8.4 million
1980	9.1 million

The population over 65 is estimated, by him, as follows:

<u>Year</u>	<u>Population</u>
1960	1.7 million
1970	2.0 million
1980	2.2 million

Donald Bogue¹⁵ has extended some of his calculations to the year 2000. He has included the ratio of white to non-white Americans and quantitative relationships between men and women. Projections of population in millions are:

<u>Year</u>	<u>Population in Millions</u>
1960	180
1970	214
1980	260
1990	312
2000	375

The percentage of non-white in the total American population is calculated as follows:

<u>Year</u>	<u>Population in Millions</u>
1960	11.3
1970	11.9
1980	12.7
1990	13.6
2000	14.4

Women will continue to outnumber men, and the surplus of women will be larger both in absolute and in percentage terms:

Amount Number of Women in U. S. Population Exceeds Number of Men

<u>Age</u>	<u>1960</u>	<u>1970</u>	<u>1980</u>
Under 5	19 million	24 million	32 million
5-9	19 million	22 million	29 million
10-14	17 million	21 million	25 million
15-19	13 million	19 million	22 million
20-24	11 million	17 million	21 million

Bogue's data for 1975⁶ for the nation are:

<u>Age Group</u>	<u>Population</u>
All ages	228 million
Under 20	92 million
20 and over	136 million

School age population is of vital interest to all libraries. Although the exact projection figures vary, here too, a great increase in enrollment is predicted by all statisticians. The basis of the probability calculation is the high birth rate the nation had in the fifties.¹⁶ It reduced the median age of the population to 29.5 in 1960 from the 30.2 which had been calculated in 1950. In the decade 1950-1960 kindergarten and elementary schools had the greatest increase (50 percent). From 1960 on, high schools and

colleges must be prepared to teach a greatly enlarged body of students.

Elementary school enrollment will increase 30 percent between 1960 and 1970, whereas high schools must be able to accept 62 percent more pupils during this decade. The increase in college enrollment will be in the magnitude of 235 percent between 1960 and 1980.

Other statistics more or less agree with these calculations. Edward Stockwell¹⁷ was interested in the total picture of America's school population from the kindergarten to those who finished college. He observed an increase of 41 percent of the total school population during the last two decades (1940-1960), and predicts a further rise of 56 percent for the twenty years of 1960 to 1980. He, too, is concerned about the expected maximum increase in the college age group of 18-24, and forewarns us that a great many of this group will want to go to college.

Again Donald Bogue⁶ limited his projection to the year 1975 with the result:

<u>Educational institution</u>	<u>School age population</u>
Elementary schools	39.5 million
High Schools	16.0 million
College	8.5 million

The American Association of College Registrars wanted most carefully calculated figures for expected enrollment and asked Ronald Thompson to submit his projection.¹⁸ His results are:

Estimated Enrollment for the Entire Nation for College Age 18-21

<u>Year</u>	<u>Population</u>
1961	3.9 million
1964	4.8 million
1970	6.5 million
1978	9.2 million

For New York he calculates:

<u>Year</u>	<u>Enrollment for age group 18-24</u>
1961	380,365

<u>Year</u>	<u>Enrollment for age group 18-24</u>
1964	437,679
1970	581,049
1978	725,935

From the classic book on American demograph, Daniel Bogue's The Population of the United States,¹⁵ we learn: "The median school year completed was 10.8 in 1960. It will be 12 in 1970 and 12.3 in 1980. The age group 5-34 counted 47 million in 1960, it will increase to 57 million in 1970, and to 62 million in 1980.

These figures seem to be overwhelming and at the first moment, even frightening. The main conclusion, however, is imperative: there is a job to be done for all of us. The teeming multitude of youngsters will have heard again and again how important it is to have an education. They will demand this education, and the facilities must be ready to give it to them. It is the moral obligation of all of us who are in any way connected with educational activities to prepare for the future now.

The first step is to put our house in order and to give to the people of the Hudson Valley the library service they need today. As the previous pages have proven, the average library at all levels in the valley does not meet minimum standards. Such a deplorable situation is unfortunately not confined to the region. All over the United States we find similar sad conditions. In a recent article in Time (September 3, 1965) the plight of library service is summarized. School libraries are called a national disgrace. Sixty percent of schools do not even have a centralized library. Seventy percent of all public libraries are sub-standard, both in holdings and service; eight-three percent of all college libraries are considered inadequate, although in the quinquennium 1957-62, 211 million dollars had been spent for books. It is estimated that during the next 5 years, 1963-68, this amount will be more than tripled to about 650 million dollars. Only a score of university libraries are competent to fulfill their functions.

The question has been raised whether quotas and standards are realistic or whether they represent an utopia which can never be attained. The problem is wrongly phrased. The point is not whether we are willing to finance it, but whether we want to survive. The standards are calculated to form the basis of a good educational system. It has been said that it was the Prussian school teacher more than the Prussian army who was ultimately responsible for the victory at Sedan. It is education which is vital for survival in the second half of the twentieth century. The enthusiastic

belief in the fundamental importance of education is firmly anchored in the American tradition. The thrilling words in the Ordinance for the Northwest Territory of 1787 will always find a responsive echo in the heart of the American people: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall be forever encouraged."

The counties of the Hudson Valley had a glorious position in American history and will maintain a significant place in the American future. Library service must be adequate to the social and economic importance of the region and must provide a solid basis for adult education, including recreational reading, and for formal education up to a Bachelor's degree. For training leading to advanced university degrees, the student can turn, at least for the time being, to the great centers of learning which are situated in New York City and will be established in the capital district of Albany. The librarians who are now working in the valley have the knowledge, enthusiasm and vitality to give the required service.

I am confident that the people at large will insist that libraries receive the necessary financial backing so that they can give service which is commensurate with the illustrious past, and in keeping with the successful future to which the Hudson Valley can look forward with serene confidence.

Population (000)

Columbia County, a major agricultural region, is important in the State in the value of fruit harvested and also rates high in the production of sweet corn. Hudson, the first city chartered in the United States after the signing of the Declaration of Independence and once a trading center, is the county's largest city and trading area and is the site of two large cement plants. Other leading products includes textiles, apparel, women's handbags and paper products. The county is served by the New York Central Railroad and has ready access to the Governor Thomas E. Dewey Thruway and the Massachusetts Turnpike.

Dutchess County is the most industrialized of the Mid-Hudson counties, with manufacturing centered mainly in Poughkeepsie and Beacon. Chief products include computers, dairy machinery, ball bearings, recording equipment, industrial tape, textiles, apparel, children's books and periodicals, and other printing.

The scenic countryside is dotted with dairy farms. The world-famous Black Angus beef cattle are bred here. The county is also noted for its apple orchards, ranking seventh among the counties of the State in apple production in 1959.

Vassar College, one of the oldest colleges for women in the Nation, is located at Poughkeepsie. Bard College, at Annandale-on-Hudson, was founded at about the same time and is co-educational. Dutchess Community College, Poughkeepsie, is a locally-sponsored two-year college under the program of State University. Also at Poughkeepsie, is Marist College, for men.

Principal rail and highway routes traverse the county and airline service is available at the Dutchess County Airport.

 New York Central System

Population (000)

Greene County is a widely-known vacation area. A substantial part of the county lies in the Catskill State Park. Numerous small communities cater to the large number of vacationers who swell the population of the county each summer. The Catskill Game Farm, one of the largest zoological parks in upstate New York, attracts thousands of visitors each year. Large cement plants operated by the principal manufacturing firms in Greene County are located along the bank of the Hudson River. Other factories in the county produce netted goods, handbags, valves, appliances, heat controls, and aluminum alloy truck bodies.

Firms in the county enjoy good transportation facilities, which include freight services on the west shore lines of the New York Central System and the Governor Thomas E. Dewey Thruway (with an exit at Catskill).

Catskill is the largest community and trading center in the area.

Dairying is a major agricultural pursuit in the county, accounting for more than two-fifths of the total value of farm products sold annually.

The New York Vocational Institution (operated by the Department of Correction) at West Coxsackie, is an important source of jobs and income for county residents.

Population (000)

Orange County has a wide diversity of manufacturing activity. Products include textiles, apparel, shoes and slippers, women's handbags, communication equipment, folding rules, silverplated hollow ware, aluminum castings, glass lighting fixtures, valves, paper products, rubber products, mastic and vinyl tile, machinery, carbon paper, cosmetics and essential oils. Shipbuilding and repair yards are located in and around Newburgh. A growing electronics industry is taking root, producing such items as coils and magnetic cores.

This county is the site of Sterling Forest, a fully integrated community for scientific research containing laboratories, and residential and recreational areas on a 20,000-acre tract near the Governor Thomas E. Dewey Thruway. Union Carbide Corporation was the first company to move into the development. New York University has acquired a large section of the tract for construction of a research center; International Nickel Company and Reichhold Chemicals, Inc. are also building facilities there.

Vegetables rank second to dairy farming in the agriculture of Orange County. This county is the leading onion-producing area in New York State and also grows large crops of celery, lettuce and carrots.

The United States Military Academy (West Point), on the Hudson River below Newburgh, and Stewart Air Force Base are located in this county. The Orange County Community College, Middletown, locally sponsored under the program of the State University, offers two-year programs.

Putnam County, one of the smallest in the State in both area and population, is largely rural in character. The central section is heavily wooded and mountainous and in the western half of the county are numerous lakes and reservoirs. Many New York City residents maintain small estates and country homes in the area because of its scenic attractions and proximity to the city. Lake Mahopac is a well-known vacation spot.

Agriculture was of relatively minor importance in the county in 1960, service industries accounting for the largest proportion of employment. In recent years, however, manufacturing has become increasingly important in the extreme western and eastern ends of the county, ranking second in employment. Long-life batteries, transformers, heat exchangers, electric switches and aircraft instruments are among the principal products.

Rockland, the most southerly county in the State on the west shore of the Hudson, has numerous villages, the largest of which are Spring Valley, Nyack, Haverstraw and Suffern. One of the leading pharmaceutical concerns in the country is located at Pearl River. Other manufactured products of the county include clothing, paper cartons, textiles, rubber stamps, sewing machines, cosmetics and toilet preparations, pipe, wire conduits, metal specialties, organic chemicals and glass containers.

The Governor Thomas E. Dewey Thruway and its connections with the Garden State Parkway, the New Jersey Turnpike and the Tappan Zee Bridge, over the Hudson linking Rockland to Westchester and New York City, have made Rockland County an important transportation hub and a growing industrial center. It is also served by the New York Central Railroad.

Rockland County is noted for its recreational facilities, which are particularly attractive to residents of the New York metropolitan area because of their nearness to New York City. Outstanding among the recreation areas are the Bear Mountain and Harriman sections of the Palisades Interstate Park. There are numerous small mountains, lakes and streams. Despite its rural character, the county is not important agriculturally.

The Rockland Community College, at Suffern, is a locally-sponsored, two-year college under the program of the State University of New York.

- Hamilton Avenue Hospital, Monticello
- Homowack Lodge, Inc., Spring Glen
- Manor Poultry Corp., Livingston Manor
- New York Telephone Co.

Sullivan County is a favorite vacation spot for New York City residents. In the Catskill Mountain area are clustered hundreds of hotels and motels offering complete recreational facilities. Proximity of these facilities to the New York metropolitan area results in a tremendous increase of summer population.

Farming is also an important activity in the county, with poultry and dairy products accounting for most of the cash farm income. Sullivan County ranks first in the State in egg production and number of chickens raised.

The Sullivan County Community College at South Fallsburg, sponsored by the county under the program of the State University of New York, was organized in 1962.

	1940	36, 505	50, 512	87, 017

* Rockland County has had a high growth rate since 1940. The decrease in rural population can be partially explained by the fact that places of less than 2500 population in 1940 and 1950 have now gone above the 2500 mark and are now considered urban.

Questionnaire to Trustees of Public Libraries
Mid-Hudson System

How would you rate the following parts of your library:

A. Library Materials:		<u>Total</u>
1. Excellent	37	
2. Good	84	
3. Satisfactory	42	173
4. Poor	7	
B. Building:		
1. Excellent	34	
2. Good	67	173
3. Satisfactory	43	
4. Poor	23	
C. Personnel:		
1. Excellent	92	
2. Good	52	173
3. Satisfactory	25	
4. Poor	3	
D. Financial Support:		
1. Excellent	13	
2. Good	45	173
3. Satisfactory	70	
4. Poor	40	

Has the system membership improved your library:

A. Easier ordering:		
1. very much	74	
2. much	65	173
3. little	26	
B. Easier processing:		
1. very much	91	
2. much	50	173
3. little	22	
C. Better library materials available:		
1. very much	96	
2. much	55	173
3. little	17	
D. Improved readers' services:		
1. very much	73	
2. much	71	173
3. little	19	

Questionnaire to Trustees of Public Libraries
Mid-Hudson System
 (continued)

E. Helped in service training:		<u>Total</u>
1. very much	35	
2. much	71	173
3. little	41	

What in your opinion are the best features of the system membership?

	<u>Number</u>	<u>Rank</u>
1. Aid in book selection	121	5
2. Centralized processing	131	3
3. Rotating book collections	139	1
4. Consultant services	119	6
5. Reference services	123	4
6. Interlibrary loans	135	2
7. Films	85	9
8. Assistance in public relations	82	10
9. Promotional tools like booklists etc.	98	8
10. Phonorecords	103	7

Do you use your own public library:		<u>Total</u>
1. very much	60	
2. much	58	173
3. little	43	

Questionnaire to Trustees of Public Libraries

excl. N.Y. City 5,359,000.00 6,858,000.00 1,521,000.00 1,531,000.00 15,269,000.00

* In counties, cities, and villages Library costs are combined with Museum costs and tabulated as Code 01-1113. In towns, the same code is used for "Educational Activities" which consists of Library costs plus the costs of an Attendance Officer and Town Historian. However, the bulk of the expenditures are Library costs.

@ Consists of \$136,457 for Poughkeepsie to operate a city Library plus \$15,000 contribution by Beacon to an independently-operated Library. For 1964, the comparable expenditures were \$176,431 (Poughkeepsie) and \$15,000 (Beacon).
