## Abstract

This report contains the National Education Association (NEA) evaluation of nationwide teacher salary schedules for a 3-year time period. A total of 1,172 schedules for 1968-69 from school systems with enrollments of 6,000 or more were evaluated. Comparable evaluations were included for 967 and 925 of these systems for the academic years 1967-68 and 1966-67, respectively. The evaluation method is based on 10 tests which were applied to teacher salary schedules. Each test yields a maximum of 100 points for a maximum possible evaluation score of 1,000 points for any given salary schedule. Summary tables contain a 3-year comparison of the distribution, mean, and median for the entire sample, for each of the 10 tests. The major portion of the report is an alphabetical listing, by State, of the evaluated school systems, including their total score and score for each of the 10 tests. In addition, 204 salary schedules from selected suburban school systems were evaluated by the same procedure and are listed alphabetically by State. Related documents are EA 002 524 and EA 002 549. ## FOREWORD

This is the third year that the NEA Research Division has reported the evaluation scores for salary schedules of individual school systems as part of its annual series of salary schedule studies. Such an evaluation indicates how well salary schedules are measuring up to the best accepted practices of scheduling, not only in the dollar amounts scheduled, but also in the structural procedures involving the number and relative size of increments, adequate recognition of advanced preparation levels, and other important aspects of scheduling. We trust that this report will help to improve scheduling practices throughout the nation.

For several years the NEA Research Division worked with the NEA Salary Consultant and Negotiation Service, now part of the Division of Urban and Field Services, to develop an objective instrument for evaluating and comparing classroom teacher salary schedules. The developmental work involved extensive efforts to assemble the best in experience and expert judgment regarding the component parts of good salary scheduling and the appropriate relationships among these parts.

The original instrument, developed by this joint effort, was revised in light of the resolution on salary policy passed by the NEA Representative Assembly in July 1966 and restated in July 1967. To show comparable scores for 1968-69, 1967-68, and 1966-67, schedules from reporting systems were evaluated on the basis of the same instrument. Scores for the three years are contained in this report for each schedule evaluated as well as summary tabulations by enrollment stratum.

Since the current study was well under way prior to the adoption of the salary resolution of July 1968, it was impossible to change the instrument for application to 1968-69 salary schedules.

The evaluation of schedules and the preparation of this report have been done under the direction of Gertrude N. Stieber, Research Associate, with the assistance of Audrey Hartung, Statistical Assistant, Janet Baker, John Mueller, Gordon Kellett, and members of the Statistics Section.

GLEN ROBINSON  
Director, Research Division

## INTRODUCTION

### Development of the Evaluation Instrument

The school year 1968-69 is the third consecutive year that the National Education Association has undertaken an objective evaluation of salary schedules for teachers. Salary schedules serve as the basis for remuneration of members of the teaching profession and have an important role in attracting and retaining them in individual school systems and in the profession. It is important, therefore, that desirable practices be recognized, both in providing adequate amounts of remuneration, and in structuring the schedule with respect to factors such as recognition of advanced levels of preparation and number of increments.

The staffs of the NEA Research Division and of the NEA Salary and Negotiation Consultant Service (now part of the Division of Urban and Field Services) worked jointly in the development of an objective instrument for evaluating salary schedules for teachers. The developmental work involved extensive efforts to assemble the best in experience and expert judgment regarding the component parts of good salary scheduling and appropriate relationships among these parts.

The first evaluation instrument was applied by the Research Division to a large number of 1965-66 salary schedules from systems with enrollments of 6,000 or more. Summary results were published in Research Report 1965-R16, Evaluation of Salary Schedules for Classroom Teachers, 1965-66. It contained summary tables showing distributions and average and median scores for salary schedules received from school systems with enrollments of 6,000 or more and for a selected group of high-income suburban systems. Scores for individual schedules were not reported.

The instrument was revised for use in 1966-67 and was developed to the point where it was deemed appropriate to report the scores of individual school systems. Accordingly, Research Report 1966-R19, Evaluation of Salary Schedules for Classroom Teachers, 1966-67, was published in the fall of 1966. It contained summary tables of distributions and mean and median scores of schedules for all reporting systems with enrollments of 6,000 or more and for a selected group of high-income suburban systems, and also a system-by-system listing of scores for each schedule evaluated.

### Evaluation of 1967-68 and 1968-69 Salary Schedules

Experience with the application of the evaluation instrument to 1966-67 salary schedules showed it to be a valid and reliable measure of the relative quality of salary schedules. However, this experience indicated that further improvements were needed. There was also need for the instrument to be more reflective of NEA goals for teacher salaries as stated in the 1966 NEA resolution on salary policy which was restated in July 1967 and applied both to 1967-68 schedules and to those received in 1966-67. To show comparable scores for the three-year period, 1966-67 through 1968-69 the same instrument has been applied to schedules from reporting systems for each of the three years and the results are presented in this report on a system-by-system basis as well as in the form of summary tabulations for each year.

A total of 1,172 schedules for 1968-69 from systems with enrollments of 6,000 or more were evaluated. Of these, 967 also reported in 1967-68 and 925 in 1966-67. Scores for these systems are also shown in this report. In addition, schedules were evaluated for a selected group of suburban systems for each of the three years. A system-by-system listing of these districts is shown also in the report.

Further revision of the evaluation instrument may be needed to incorporate the changes made in the NEA salary resolution by the Representative Assembly at its annual meeting in July 1968. If further revisions are deemed necessary, they will probably be made in time for evaluation of the 1969-70 salary schedules. Since the present study was well under way prior to the adoption of the revised salary resolution it was impractical, and, in fact, almost impossible, to change the instrument for application to the 1968-69 schedules. It was also believed that a three-year comparison of scores would be of considerable interest and value to many school systems in analyzing their progress toward structuring a better salary schedule.

The present instrument consists of 10 tests, each with a maximum score of 100 points or a total of 1,000 points. The five tests making up Part A, which concern the adequacy of dollar amounts scheduled, account for 500 points, and the five tests in Part B, which evaluate the

structure of the schedule in terms of desirable practice, account for the remaining 500 points.

Throughout the evaluation, only regularly scheduled maximum salaries were considered. No cognizance was taken of long-service increments, merit maximums, or unexplained supermaximums.

Some schedules were received too late for inclusion in the study, and in a few cases, revised schedules were received after the computer print-out was completed and were not re-evaluated to reflect the changes.

No perfect scores were expected, and none was found. However, the maximum score was reached by at least one system in two of the five tests dealing with dollar amounts scheduled, and in each of the five tests on structure of the schedule.

### Tables

The bulk of this report consists of the system-by-system listing of reporting systems with individual scores for each of the 10 tests for the two years covered in the study. This listing begins on page 22.

Summary tables give detailed distributions of scores for each of the 10 tests for 1968-69, 1967-68, and 1966-67 for systems with enrollments of 6,000 or more.

Table A summarizes the analysis. It reports mean and median scores and the range of low and high scores for each of the 10 tests for all reporting systems of 6,000 or more, and for the group of selected suburban systems with enrollments of 1,000 or more.

Mean and median total scores have also been classified on the basis of geographic location, for systems with enrollments of 6,000 or more, and are shown in Table B.

Tables 1 through 5 give percent distributions of scores together with means and medians and the range of low and high scores for each of the five tests based on the dollar amounts scheduled. Table 6 provides a percent distribution of the total score for these five tests.

Tables 7 through 15 summarize the scores of Tests 6 through 10 which concern the structure of the schedule. Separate tables summarize each of the two parts of Tests 9 and 10. Table 16 summarizes the scores for Tests 6 through 10. An analysis of the total score for all tests--1 through 10--is given in Table 17.

Detailed summaries of scores for a group of selected suburban systems are not shown, but mean and median scores and the range of low and high scores are given in Tables 18, 19, and 20 for each test for this group of systems for 1966-67, 1967-68, and 1968-69.

### Description of the Tests

The 10 tests may readily be applied to any teacher salary schedule. Only a few simple calculations are necessary. Since the tests, as shown below, are self-explanatory, only a brief description is given here, together with the basic reasons for their inclusion in the evaluation instrument.

#### Part A--Scheduled Dollar Amounts

##### Test 1--Dollar Amount of the Minimum Scheduled Salary for the Bachelor's Degree Salary Class

The first check point on the schedule is the bachelor's degree minimum scheduled salary. If the earned degree is not mentioned, the salary class requiring four years of preparation is used in the application of Test 1. The maximum score of 100 points is given for a scheduled minimum of \$8,000, the amount specified in the 1967 NEA salary resolution. Admittedly this goal is close to realization by only a few systems. In light of current economic conditions, however, and in relation to salaries paid beginners in other professions, it is a reasonable figure.

##### Test 2--Dollar Difference Between Scheduled Minimum and Step 11 of the Bachelor's Degree Salary Class

The second check point is the spread between the scheduled minimum for the bachelor's degree (or 4-year) salary class and step 11 of the same class. If fewer than 11 steps are recognized, the highest step is used for the application of Test 2. This test is used to measure whether or not the increments are large enough to result in at least a 50-percent spread between the minimum and the maximum of the salary class, which is generally considered to be good salary schedule practice.

##### Test 3--Dollar Amount of Scheduled Salary for the Master's Degree Salary Class at Step 11

The third check point is the dollar amount scheduled at step 11 of the master's degree salary class. If the earned degree is not recognized, the five-year class is used for application of Test 3. Since the NEA salary resolution calls for doubling the beginning salary after 10 years of service and the master's degree, a maximum of 100 points is scored for a salary of \$16,000 at step 11 of the master's degree (or 5-year) salary class. If there are fewer than 11 steps, the highest one recognized is used in applying this test.

As in Test 1, this goal is not easily attained, but for many systems it is a reasonable expectation in the near future.

Test 4--Dollar Differential Between Bachelor's Degree and Master's Degree Salary Classes at Step 11

The fourth check point on the schedule measures the dollar difference between the scheduled salary for step 11 of the bachelor's degree salary class and the amount scheduled for step 11 on the master's degree class. If there are fewer than 11 steps on the bachelor's degree scale, the highest one recognized on that scale is compared with the corresponding step on the master's degree scale. Likewise, if there are fewer than 11 steps on the master's degree scale, the highest step recognized on that scale is compared with the corresponding step on the bachelor's degree salary class. Four- and five-year preparation equivalencies are used for application of Test 4 if earned bachelor's or master's degrees are not specified.

This test permits a system currently unable to schedule the "goal" maximum salaries called for in Test 3 so to structure its schedule to allow for adequate recognition of the master's degree (or equivalent) and thereby obtain a relatively high score on Test 4.

Test 5--Dollar Amount of Maximum Scheduled Salary for the Highest Preparation Salary Class Not Requiring an Earned Doctor's Degree

The fifth check point is the maximum scheduled salary for the highest preparation level recognized which does not require an earned doctor's degree. This may range from the master's degree to seven years of preparation.

Long-service or merit maximums beyond the regularly scheduled maximum are excluded in the application of this test.

A maximum of 500 points can be scored on Tests 1 through 5 making up one-half of the 1,000 points possible of attainment of the 10 tests.

Part B--Structure of the Salary Schedule

Test 6--Ratio of the Minimum Scheduled Salary for the Master's Degree Salary Class to the Minimum for the Bachelor's Degree Class

The sixth check point concerns recognition of the master's degree or fifth year of preparation, in relation to the bachelor's degree or four years of preparation. This is a test of structure, and a good score can be made even though scheduled dollar amounts may not be high. To obtain the maximum score of 100 points, the master's degree minimum should be at least 20 percent higher than the minimum scheduled for the bachelor's degree salary class. This is

approximately the differential necessary to double the bachelor's degree minimum with 10 increments of 8 percent of the bachelor's minimum.

Test 7--Ratio of the Amount Scheduled for the Master's Degree Salary Class at Step 11 to the Minimum Scheduled Salary for the Bachelor's Degree Class

The seventh check point measures in structure of the schedule what Test 3 measures in terms of scheduled dollar amounts. To score the maximum 100 points on Test 7 the eleventh step of the master's degree salary class (or five-year class if master's degree is not specified) should be twice that of the bachelor's degree minimum step. If there are fewer than 11 steps in the master's degree class, the highest step recognized is used in applying this test.

Test 8--Ratio of the Maximum Scheduled Salary for Six Years of Preparation to the Minimum Scheduled Salary for the Bachelor's Degree Salary Class

The eighth check point is the ratio of the maximum scheduled salary for six years of preparation to the minimum scheduled salary for the bachelor's degree salary class. Good structuring calls for the recognition of the sixth year of college preparation; the maximum of this class should be at least 120 percent above the bachelor's degree minimum since the goal for the master's degree maximum at step 11 is 100 percent above the bachelor's degree minimum.

Since Test 8 is a measure of good structure, the maximum points can be achieved by a system whose scheduled dollar amounts are somewhat lower than the goal schedule would require.

Test 9--Increments in the Master's Degree Salary Class

Test 9 is based on two check points: (a) the number of increments from minimum to maximum in the master's degree (or five-year preparation) salary class, and (b) the average increment (dollar amount) for the master's degree (or five-year preparation) salary class as a percent of the bachelor's degree minimum scheduled salary. Both subtests are related directly to the NEA salary resolution of the 1967 Representative Assembly.

In calculating the score for the entire test, each half is assigned a maximum of 50 points or a total possible score of 100 points for Test 9.

Test 10--Recognition of Advanced Preparation Beyond the Bachelor's Degree

Test 10 is also based on two check points: (a) recognition of advanced preparation requiring advanced degrees or full year academic training, and (b) recognition of intermediate advanced

preparation levels requiring less than a full year of academic training.

Test 10 is scored the same as Test 9 with a maximum of 50 points for each of the two subtests and a total of 100 points for the test.

This test takes cognizance of the NEA salary policy of recognizing advanced preparation be-

yond the master's degree and has been constructed in accordance with what is generally accepted as the best practice in salary scheduling.

A maximum of 500 points can be scored on Tests 6 through 10 making up one-half of the 1,000 points attainable on the 10 tests.
