Abstract

This final report of the Pennsylvania Research Coordinating Unit fcr Vocational Education (RCU) summarizes activities during the period from August 1966 to August 31, 1969. Major activities and accomplishments of the RCU include program initiation, development of research and related activities, ancillary research and related projects, the Pennsylvania Vocational Education Study, and conferences and meetings. Dissemination activities were accomplished through the RCU Reporter, and "Fennsylvania Abstracts of Research and Related Materials." Also included is information about publications and papers presented by staff members and consulting services, staff summary, and future activities. (CH)

FINAL REPORT

I. INTRODUCTION

The Pennsylvania Research Coordinating Unit for Vocational Education (RCU) was established in August 1966, as an integral part of the State Department of Education (formerly the Department of Public Instruction). Funded under provisions of Section 4c of the Vocational Education Act of 1963 (Grant Number OEG-1-6-062470-2234), the unit became one of four divisions within the Bureau of Research. The other divisions were: (1) Division of Research Design, (2) Division of Cooperative Research Studies, and (3) Division of Applied Educational Research. The RCU was administratively responsible to the Director of Research and the State Director of Vocational Education. The unit performed research services for the entire staff of the Bureau of Vocational, Technical and Continuing Education. This administrative arrangement was advantageous in that the special competencies of research personnel and the expertise of vocational specialists were readily available to the RCU when needed. The organizational structure also allowed the RCU to communicate effectively and to maintain an excellent working relationship with personnel in both bureaus.

The general objectives of the RCU were to:

- 1. stimulate and encourage occupational education research and development activities in Pennsylvania,
- 2. coordinate occupational education research conducted within Pennsylvania,
- 3. disseminate information on progress and results of occupational education research, and
- 4. plan and conduct needed occupational education research when other agencies were reluctant to do so.

The purpose of this final report is to present an overview and brief description of the major activities of the RCU from its inception in August 1966, to the termination of the grant period on August 31, 1969. Because of a limitation of space, the major activities and accomplishments section only highlights the most notable events. A broad indication of the objectives and activities which should guide the operations of the unit in the future as it contributes to the extension and improvement of vocational education in Pennsylvania is also included.

II. MAJOR ACTIVITIES AND ACCOMPLISHMENTS

Program Initiation

A major activity of the RCU during its initial stage of operations was to develop research programs including strategies and procedures necessary to extend and improve vocational education in Pennsylvania in light of its previously stated objectives. The selection of an RCU staff to establish role functions, duties and responsibilities was one of the first tasks. The selection of staff was a slow process. However, as staff became available they immediately began to determine and communicate its role with local, State and national personnel from various agencies with whom it would coordinate activities.

Continuous efforts were made to facilitate RCU functions by holding conferences and in-service training sessions with interested individuals and groups. Attending staff meetings and State-wide gatherings provided excellent opportunities to meet the vocational educators and learn of their research needs. Concentrated efforts were focused upon individual conferences with State and university officials including visits to other RCU's in neighboring states with a view toward exchanging ideas and arranging for future communication and cooperation. This continuous communication proved to be extremely helpful in establishing the unit and introducing the RCU as a change agent in vocational education in the Commonwealth.

The formulation of an RCU Advisory Committee was extremely advantageous in determining the role of the RCU. The purpose of the advisory committee was to give guidance and direction to the RCU staff and activities. A twelve-member advisory committee was selected having representation from the five major areas of vocational education, and the Bureau of Employment Security, Public Schools, Teacher Education Institutions, Manpower Programs, and Labor and Industry. Several of the original members remain active on the committee. However, because of death, retirement, job changes, etc., several new appointments have been made:

Members of the advisory committee were:

Mr. Richard Carter
Regional Director
Sears-Roebuck Foundation

Dr. Hugh Davison
Professor of Education
and Research
The Pennsylvania State University

Mr. Michael Johnson Executive Vice-President Pennsylvania AFL/CIO Mr. Chester S. Nagel Bureau of Employment Security Dept. of Labor and Industry

Dr. A. Carolyn Newsom, Chairman Dept. of Home Economic Education School of Home Economics Indiana University of Penna.

Mr. Robert A. Ranberg Sr. Research Analyst Pennsylvania Economy League Dr. H. H. Singer, Director of Vocational Teacher Ed. Temple University

Mr. Robert Buzbee
Eastern Representative
Sears-Roebuck Foundation

Dr. William Kelly, Director
J. F. Kennedy Training Center
The School District of
Philadelphia

Dr. David R. McClay, Dept. Head Agricultural Education The Pennsylvania State University

Mr. J. Thomas Weyant
Assistant Executive Director
Pennsylvania Retailer's
Association

Dr. S. Lloyd Toumey, Director Division of Business Education Bloomsburg State College

Dr. George Brandon, Director Vocational Teacher Education The Pennsylvania State University

Dr. Louis J. Kishkunas, Superintendent Pittsburgh City School District

Mr. William T. Schmidt, Executive Deputy Secretary of Commerce Department of Commerce

Mr. Edward S. Hochstetter, Director State and Federal Economic Aid

Mr. Robert S. Lewis, Assistant Director Pennsylvania Economy League

Development of Research and Related Activities

During the initial phases of the development of the RCU, emphasis was placed upon analyzing the occupational education research goals, needs and priorities in the State. This analysis gave the RCU a strong basis upon which to plan and develop research strategies. It was concluded that the unit could fulfill its objectives best by providing a "consulting service" to local schools and other agencies who were interested in conducting needed occupational education research. This activity involved developing and disseminating guidelines for proposal preparation, giving on-site assistance to individuals and agencies with specific problems involving research design and other procedures, and bridging the research communication gap between agencies and institutions and the Bureau of Vocational, Technical and Continuing Education.

From an analysis of the occupational education research situation in Pennsylvania, the RCU found that there existed in the Commonwealth a strong reluctance on the part of Local vocational educators to conduct needed research. Behind this reluctancy was the attitude that research was very difficult to conduct and that major responsibility for research should be left to the so-called "research experts" in colleges and universities. This situation created a need for the RCU to devote attention to activities designed to stimulate and encourage the development of occupational education research at the local level. The first step in resolving this situation involved the development of an introductory brochure describing the purpose, objectives, activities and organization of the RCU. Over 5,000 brochures were printed and disseminated to appropriate vocational-technical personnel in the Commonwealth.

A series of one day in-service workshops were planned and conducted for local vocational educators, directors and teachers in the Commonwealth. workshops were called PROJECT, an acronym representing the purpose of the workshops; Providing Researchers On the Job with Evaluation Criteria and Techniques. Special attention was directed to preparing prospective researchers in the art of proposal writing and overall research procedures. The presentations covered (1) research methods and procedures, (2) statistics, (3) educational objectives, (4) evaluation in vocational education, (5) dissemination (with emphasis on VT-ERIC), (6) funding sources and (7) the art of proposal writing. In many instances, certain topics included in the workshops were presented separately to vocational educators during conferences and meetings or as a part of in-service workshops in local school districts. activities have caused vocational educators to show more interest in the usefulness and importance of research. Research proposals submitted to the RCU following the workshops tended to be better prepared in terms of acceptable research standards than those in previous years.

Ancillary Research and Related Projects

A total of 166 ancillary research and related projects were approved, funded and conducted during the past four years*. These projects were conducted by local school districts, county offices, colleges and universities. Table I depicts the federal, state and local expenditures for vocational educators with an indication of the percentage of the total budget spent for ancillary research and related projects.

There were four general types of research and related projects funded with ancillary monies. The first was experimental research, which employed a rigid design and made use of inferential statistics. The second was the developmental project, divided into two subcategories. The initial subcategory was curriculum development, which made use of descriptive statistics and observations including evaluation. The second subcategory was the development of innovative instructional methods. The third general type of project was the pilot study and the fourth was the workshop or teacher training activity. The percentage breakdown of projects as to type is shown in Table II.

Ancillary projects were also classified under the several occupational education services. Projects which spanned all seven of the services were classified under the "All Fields" heading. The percentage breakdown of projects in the occupational education vocational services is shown in Table III.

^{*}Twenty-nine of these projects were funded initially in 1965-66. Most of the projects were of a three year duration with year to year funding. Thus, the RCU played a significant role in almost all of the projects.

TABLE I

EXPENDITURES FOR ANCILLARY SERVICES AND VOCATIONAL EDUCATION IN PENNSYLVANIA FROM 1965 THROUGH 1968

																				,			

Almost one-half of the projects were conducted in the development of instructional methods. Workshops, pilot programs and curriculum development projects were fairly evenly distributed. The experimental projects comprised only three percent of all projects. Table III indicates that 19 percent of the projects spanned all occupational fields. Business, home economics, trade

and industry, and agriculture, in that order, were evenly distributed. Distributive education, guidance and health projects were all less than ten percent of the total.

A brief description of all projects funded from 1965 to 1969 is given in Appendix A.

Procedures for Conducting Research

The RCU staff developed a monitoring procedure manual to coordinate these research and related projects. The procedure manual included step-by-step details of each action taken by the local researcher, the Bureau of Vocational, Technical and Continuing Education and the Research Coordinating Unit project officer from the initiation of the prospectus to submitting the final report. A form for evaluating proposals and a form to distillate field readers opinions were included.

In the summer of 1969, the Research Coordinating Unit dev loped and disseminated 700 copies of a brochure cutlining guidelines for conducting research. The brochure outlined the provisions of P. L. 90-576 as applied to research. Vocational education research was defined, research policies were set forth and eligible agencies identified.

Detailed procedures were given to aid the potential researchers in applying for funds.

The Pennsylvania Vocational Education Study

The most significant long term accomplishment of the RCU was the planning and conduct of a comprehensive study of vocational education in Pennsylvania.

In 1966, Mr. Gail Rose, Chairman of the Vocational Education Committee of the State Board for Vocational Education, requested the Bureau of Vocational, Technical and Continuing Education and the Research Coordinating Unit to develop a proposal for a comprehensive study of vocational and technical education in Pennsylvania which would appraise the present program and determine the direction for programs in the immediate future.

As a result of consultation between the two staffs and with the advice of the State Advisory Committee for Vocational Education, and the RCU Advisory Committee, twelve broad areas of concern in vocational education were identified for possible study. Proposals pertinent to these topics were solicited from consulting firms. Four firms responded with proposals which were presented in June 1967, to a review committee of State Board, Department of Education staff members and two vocational education research consultants.

and the second of the second o

After review and discussion of the presentations and the proposals, it was the consensus of the committee not to enter into a contract with any of the consulting agencies for the whole study. The committee suggested that such a comprehensive study should be completed by the present staff and directed by a consultant who was knowledgeable about vocational and technical education.

As a result, in August 1967, the Pennsylvania Department of Education entered into a contract with Dr. Walter M. Arnold, former Assistant Commissioner for Vocational and Technical Education, U. S. Office of Education, who had been granted a leave of absence to perform certain consulting services.

An outline of a proposed study, prepared by Dr. Arnold with the assistance of the RCU and other department staff members, was presented to and approved by the State Board for Vocational Education in its regular meeting in September 1967.

During the course of the study, sub-contracts were entered into, the results of which were very useful in producing the final report. In addition, the director and the staff of the RCU contributed materially by assuming the responsibility for the planning and conduct of certain special studies. Both clerical and professional assistance provided by the Bureau of Vocational, Technical and Continuing Education also contributed materially to the completion of the study.

The study was planned primarily as a pragmatic overview and analysis of vocational, technical and continuing education program in the Commonwealth over the past five years, 1964 through 1968, to determine its achievements, deficiencies and direction in the light of priority needs of the people and employers. The guidelines for the study were based on the thirteen goals for vocational and technical education approved by the State Board of Education in March 1966.

The study was addressed to an analysis of the operating program since the passage of the Vocational Education Act of 1963, to determine what its direction was in the light of the economic trends and manpower needs of the State and what the projected program needs and costs might be up to 1975. There was a minimum of philosophical treatment of vocational education; the emphasis was on systematic planning for a total, unified manpower development program for the future. The emphasis was placed on "what is needed" and "how can it be accomplished", rather than "why should it be done".

Since this was the first such large scale attempt made in the State, there were undoubtedly some deficiencies in the study. In a number of instances, sub-studies had to be sharply delimited because of the lack of time and the urgent need for results to be synchronized with the implementation of the Vocational Education Amendments of 1968, P. L. 90-576. Certain methods of projecting economic trends, manpower demands and needs, and program costs were chosen as against other methods which might be just as appropriate and reliable. It is very important, therefore, that the study of the manpower de-

velopment programs in Pennsylvania be continued, making necessary adjustments and revisions, by the Research Coordinating Unit with the active cooperation and assistance of the Bureau of Research, the Bureau of Vocational, Technical and Continuing Education and other involved State and Federal agencies.

With the preceding as a background, the following paragraphs describe the nature and pattern of the final report entitled "Vocational, Technical and Continuing Education in Pennsylvania—A Systems Approach to State-Local Program Planning". Section I is devoted to a five-year analysis of enrollments and expenditures in vocational-technical and continuing education, 1964, the first fiscal year of the Vocational Education Act of 1963 (without funding) through the fiscal year 1968, the last fully reported program year. Included in the analysis is a general appraisal of the current program and its direction in the light of existing and projected labor force needs in Pennsylvania. It was not possible in this undertaking to make a thorough, in-depth evaluation of the quality of instruction in the existing program. This should become readily possible in the immediate years ahead.

In Section II, economic and projected trends of the Pennsylvania economy were analyzed and described. This analysis is not intended as a fine treatment for professional economists, but rather as a study of the important relevant economic information and trends for vocational, technical and adult education planning purposes. By those means, it is expected that vocational education could be more purposefully planned so that training programs might become attuned to the continued improvement of the economy in their communities and in the State as a whole. Another purpose of the economic analysis was to involve educators and vocational educators more directly in the business and industrial development of their communities and the State. In the future, program plans prepared and submitted by vocational educators could be measured more carefully and thoroughly in terms of an improved social and economic environment. In this way vocational, technical and continuing education could in fact become an economic asset to the Commonwealth.

Section II also identifies and describes briefly nine principal occupational training agencies and programs. The output of their graduates in 1967 became an important part of projecting the unmet occupational training needs by 164 classifications, State-wide and for each of the 67 counties in the State. Therefore, Section II furnishes the basis for program planning and implementation dealt with in Section III.

Section III, along with Section II, forms the keystone to the whole study and report. A systems approach to vocational and technical education program planning is explained and described in detail in Chapter VI. Five charts and five forms were designed and applied in part in a local situation, the Cumberland-Perry Counties area, to illustrate this approach. The idea here was not to "sell" the systems approach as such, but rather to provide a sound method for making decisions in the final selection of programs from various feasible alternatives. Chapter VII sets up recommendations for a State organization and administration that would be needed to

implement the systematic planning procedures as well as the other important functions of the State program.

Section IV identified the principal difficulties in reporting procedures and provides recommendations for improving these administrative activities. Also revealed were some of the weaknesses in the present financial aid policies, especially in the light of the new policies required under P. L. 90-576. Certain recommendations suggest revision of legislation and the need for a formula for determining allocations of funds to local districts in the future.

Section V gave an overview of ancillary services and activities over the past five years. This section was devoted primarily to reports of two major ancillary services of the utmost importance in the growing vocational education programs, teacher education and certification, and vocational guidance services. Both of these services, along with research activities and curriculum development, are fundamental to the ultimate success of the program.

Section VI was devoted to an account of five special studies that were conducted, namely, the two large cities, Philadelphia and Pittsburgh; special socioeconomic needs; a follow-up system of graduates; and employer survey; and a survey of local vocational education administrators. All of these special studies contributed to a well-rounded report and strongly based conclusions and recommendations.

Perhaps the most important single concept threading throughout the report is that of a State-wide unified program of occupational and continuing education coordinated by the Pennsylvania State Board for Vocational Education.

The report will be valuable in affecting program changes and improvements in proportion to the extent of the implementation of, at least, the more basic overall recommendations such as systematic program planning, follow-up of vocational education graduates and early leavers and reorganization of the Bureau of Vocational, Technical and Continuing Education.

Conferences and Meetings

In order to be more effective and to provide appropriate leadership at the State level, the RCU staff attempted to improve its competencies and fulfill its objectives by attending and participating in workshops, institutes and conferences. Participation in these conferences has greatly facilitated the working relationships with both State and national leaders in vocational education. An overview of the more significant workshops, meetings and conferences, participated in or attended by one or more of the RCU staff during the three-year period is listed on the following pages.

Northeastern States RCU Conference - 1969

The Pennsylvania RCU served as host to the Annual Northeastern States RCU Conference in May, 1969. The conference was planned by the Pennsylvania RCU in cooperation with other RCU's in the Northeastern States, USOE, information specialists and other vocational educators.

The central theme of the conference was the problem of communication and unified efforts. A number of topics related to the central theme were presented during the conference.

Another concern of the conference was the establishment of priorities for research and developing guidelines for evaluating proposals.

One of the most significant outcomes of the meeting was the interest shown in the proposed study dealing with the preparation of trade and industrial educators in the Northeast presented by Dr. Leon Tunkel, Vocational Teacher Educator from New York. Several states expressed an interest in developing this proposal. The proposal was developed and submitted to the Office of Education for funding.

III. DISSEMINATION ACTIVITIES

The RCU Newsletter - The major dissemination activity of the RCU was the initiation and publication of The RCU Reporter (Newsletter). The first edition of the Reporter was released during the winter of 1968. The Newsletter has been published each quarter since then.

The RCU Reporter, edited by Mr. Clarence A. Dittenhafer, Research Associate, is a vehicle to aid in transporting vocational education research and related literature to interested educators. It is also designed to bridge the "utilization gap" between researchers and practitioners. Before the publication of The Reporter, not one newsletter specifically served all vocational-technical educators in Pennsylvania. The Newsletter does not only disseminate pertinent information of RCU research and related activities, but it also covered information from the Bureau of Vocational, Technical and Continuing Education and other related agencies.

Two standard features appear in nearly every issue of the Reporter, namely, the State Director's Column and Clip and Save. The director's column is written by Dr. John W. Struck, State Director of Vocational Education. The Clip and Save feature has proven to be a most important factor in dissemination. It is a service that features annotated bibliographies of outstanding research projects and publications. Each issue of the newsletter includes short summaries of two research projects that have been abstracted by the RCU staff. The interested reader may then request a copy of the complete abstract from the RCU. If the abstract proves valuable to the reader, he may borrow the entire text of the abstracted study through the RCU. The interest in Clip and Save was evidenced by the following list of abstracted studies and the numbers of each disseminated:

CLIP AND SAVE ABSTRACTS

<u>Investigator</u>	Title of Study	Number of Copies Requested
Campbell, Robert E.	Vocational Guidance in Secondary Education	69

To Be Cited in Fall Issue - 1969

Carn, Luella L., and Morrow, Mary Elizabeth

Development and Evaluation of a Curriculum of Wage Earning Occupation

Coates, Margaret D.

An Eight-Week Experimental Project in Computer Programming to Determine the Feasibility of Purchasing Computer Time from a Local Business to Teach Such a Course

The list above does not include abstracts of these and other materials given to persons in the office or at various conferences and workshops. Many copies of complete texts have been borrowed from the RCU as a result of being featured in <u>Clip and Save</u>.

Pennsylvania Abstracts of Research and Related Materials (PARM)

Mr. John Landis, Research Intern, completed and disseminated approximately 5,000 copies of <u>Pennsylvania Abstracts of Research and Related Materials (PARM)</u>. PARM is a document containing a review of all research projects that have been funded in Pennsylvania with State ancillary funds. The abstract form closely parallels a similar

document (Abstracts of Research Materials) produced by the ERIC Clearing-house at The Ohio State University. This was done in order to facilitate easy submission of appropriate research abstracts to ERIC.

The RCU has cooperated with VT-ERIC in submitting research and related projects to be included in the system. Many documents were submitted to the center at Ohio State and the unit maintained constant communication with the personnel there.

Other dissemination efforts have included such activities as the RCU staff members replying to individual requests from vocational educators for information and making presentations to graduate-student seminars and other groups on the various activities of the RCU.

IV. SIGNIFICANT FINDINGS OR EVENTS

The significant findings and events of the RCU may be best reported in terms of the success of the unit during its three years of operation as a change agent in vocational education in the Commonwealth. The factors given below are evidences of this:

- 1. Vocational educators in the State are beginning to recognize the value of research in program decision making,
- 2. Many of the significant recommendations of the comprehensive study of vocational education are being implemented, i.e., follow-up study of high school students, supply-demand model of the labor force, and reorganization of the Bureau of Vocational, Technical and Continuing Education for efficiency and effectiveness,
- 3. A number of requests from vocational educators for assistance with potential and on-going research projects are being presented,
- 4. A number of special presentations, as related to research from State level, college and university, and local personnel are being requested, and
- 5. The quality of research activities being conducted in the State is improving.

V. OTHER ACTIVITIES

Graduate Follow-up System

The RCU developed a graduate follow-up system during 1968-69 fiscal year, based on a major recommendation of the Pennsylvania Vocational Education Study. The system, developed in cooperation with the Educational Systems Research Institute, will provide a computerized method to follow-up vocational education graduates and early leavers.

The primary objective is to provide useful data and information about the employment and further education of occupational education graduates and early leavers.

The data obtained through the follow-up system will provide the information necessary for preparing: (1) an annual program directory; (2) an annual descriptive report showing growth in curriculum offerings, enrollments and graduate outputs; (3) a summary of the postsecondary plans of occupational education graduates; (4) an annual assessment of the employability of graduates; and (5) an annual descriptive report of graduate behavior patterns twelve months after graduation.

There are three phases in the follow-up system. Phase I, initiated each fall, involves obtaining information from Pennsylvania school districts about occupational curriculum offerings. This information is used to compile the occupational education directory. The directory will aid state and district planning, guidance, evaluation and research.

Phase II of the system involves the completion of student information forms by all occupational education seniors except business education where a representative sample will be asked to respond. The information will provide student addresses for later follow-up activities and the data for a Pennsylvania occupational education growth report.

Phase III follows Phase II by a minimum of one year. The seniors identified in Phase II receive follow-up survey questionnaires one year after graduation. The completed questionnaires provide the information necessary for the occupational program graduate and early leaver survey reports. The follow-up system is designed to permit additional analyses at the fifth year or any other interval after graduation. Federal, state and local requirements will dictate the time interval between surveys.

State Plan for Vocational Education

The RCU staff devoted considerable energies to assisting in interpreting the Vocational Education Amendments of 1968 (P. L. 90-576) and developing the State Plan for Vocational Education in Pennsylvania.

Dr. Jay Smink was a member of a three man steering committee with responsibility for interpreting, disseminating and implementing the Act at the State level.

Dr. Ferman Moody was chairman of a committee to interpret and write the research implications of the Act at the State level.

Miss Erma Keyes was chairman of a committee to interpret and write the vocational guidance aspects of the Act.

The work on the State Plan was done in cooperation with personnel from the Bureau of Vocational, Technical and Continuing Education and certain other vocational educators from across the state.

Selected Bibliography of Major Publications, Papers Presented and Consulting Services by RCU Staff Members

The RCU staff was encouraged and given the opportunity to publish materials, read papers and serve as consultants as a part of their service to vocational educators and professional development. The selected bibliography below is indicative of their activities.

- Dittenhafer, Clarence A., Editor, RCU Reporter, 1967 1969.
- Dittenhafer, Clarence A., "ERIC Systems and How to Use It", A Series of Projects to Vocational Educators and Community College Deans, 1967 1968.
- Keyes, Erma D. and McNamara, James F., "A Guide for Converting Test Scores", The Clearinghouse, March, 1969.
- Keyes, Erma D., Pennsylvania Personnel Guidance Association Annual Conference, Consultant, Hershey, Pennsylvania, April, 1968.
- Keyes, Erma D., American Personnel and Guidance Association Annual Conference, Consultant, Las Vegas, Nevada, April, 1969.
- Keyes, Erma D., The Need for Vocational Guidance in Schools, A Series of Lectures, 1968 1969
- Landis, H. John, Editor, <u>Pennsylvania Abstracts of Research and</u>
 <u>Related Materials</u> (PARM), RCU Publication of Research Projects, 1969.
- McNamara, James F., "A Guide for Converting Test Scores", The Clearinghouse, March, 1969.
- McNamara, James F., "Using School Mathematic Personnel in Business Education", The Journal of Business Education (forthcoming).

- McNamara, James F., "Turnabout! Students Speak to Teachers", Paper Presented to Annual Meeting of the American Statistical Association, New York City, August, 1969.
- McNamara, James F., "Uses and Limitation of Statistical Analysis in Research", Paper Presented to Annual Meeting of the Pennsylvania Home Economic Coordinators, 1967.
- McNamara, James F., Chairmanship, AASA Session on Vocational Education, Annual Meeting of the American Association of School Administrators, Atlantic City, New Jersey, 1968.
- Moody, Ferman B., "Teacher Aide, Description and Analysis of a New Staff Position in Pennsylvania Public Schools", Pennsylvania School Journal, March, 1968.
- Moody, Ferman B., "How to Pigeonhole Teacher Aides for Better Performance and Production", American School Board Journal, September, 1968.
- Moody, Ferman B., "Educational Assistants", Chapter in <u>Technicians</u> in <u>Public Service and Education</u>, J. G. Ferguson Publishing Company, Fall, 1969.
- Moody, Ferman B., Northeastern States Conference to Evaluate Title I Programs, Consultant, Buck Hill Falls, Pennsylvania.
- Moody, Ferman B., "Systematic Approach to Vocational Research Program Planning", Paper Presented to National RCU Directors Conference, Salt Lake City, Utah, March, 1969.
- Moody, Ferman B., "The Role of Vocational Education Research in Pennsylvania", Paper Presented to Annual Meeting of the Pennsylvania School Study Council, Pennsylvania State University, March, 1969.
- Sites, Patricia T., "Move Vocational Education Ahead in Pennsylvania Through Research", Guidelines for Preparing a Proposal for Funding, Pennsylvania RCU Publication, 1969.
- Sites, Patricia T., "Processing and Monitoring Research Projects", Pennsylvania RCU Publication, 1969.

VI. PROBLEMS

One of the major problems that has continually plagued the RCU was securing and maintaining professional staff members. The RCU was adequately staffed for only one quarter of its three years of operation. This problem caused all staff members to become competent in, and render services to, a broad range of activities in order to fulfill its objectives. During the conduct of the Comprehensive Study of Vocational Education the problem caused the RCU staff to work many hours overtime without fiscal remuneration.

The lack of Federal and State funds to adequately finance all needed research and related projects was another problem faced by the RCU. This was especially true during 1968 and 1969. This problem created a difficult position for the RCU. Although the staff was devoting considerable effort towards stimulating and encouraging vocational educators to conduct research, the funding of new proposals was virtually curtailed. This problem was especially handicapping to the overall effectiveness of project PROJECT. Hopefully, the appropriations under P. L. 90-576 will provide adequate funds to finance several high priority research activities.

Developing a system to effectively disseminate research findings and other materials to appropriate vocational educators was a cause of major concern, and created somewhat of a problem. The problem seemed to have stemmed from civil service regulations making it difficult to secure a professional staff member with competencies needed to develop and operate a dissemination system. Moreover, RCU staff members were so preoccupied with equally important tasks that sufficient time could not have been devoted to dissemination. (Preliminary plans are currently being made to develop a system to effectively disseminate pertinent vocational research and related literature to the right individual at the right time).

Another problem closely related to dissemination was the limited amount of needed equipment available to the RCU; i.e., photo copier, multilith and other smaller equipment. If this equipment had been more readily accessible to the RCU, staff members could have done a better job in the area of disseminating vocational information. Also, valuable time would have been saved in reviewing literature and performing clerical tasks.

Communications with personnel in the Bureau of Vocational, Technical and Continuing Education and other bureaus and agencies created a problem during the first 18 months of operations. As was stated earlier, the problem seemed to have stemmed from a lack of concern on the part of vocational educators for the value of research. However, the type of interaction and communication necessitated by the conduct of the comprehensive study of vocational education, and the persistence of the RCU in stimulating and encouraging the development of research, have virtually eliminated the problem.

VIII. CAPITAL EQUIPMENT PURCHASE

The RCU purchased and placed in service a 3M Microfiche Reader-Printer. Microfiche cards, distributed by the ERIC Clearinghouse, and microfilm are visually displayed on a screen for immediate reading. The printer capability provides the researcher with enlarged hard copies of selected pages of filmed material. Ample quantities of desired information can be prepared for immediate use or for dissemination upon request. Time is saved in reviewing projects conducted across the nation and wasteful duplication of research efforts can be minimized. Limited possession of this machine by other educational agencies focuses attention on the research dissemination function of the RCU.

IX. FUTURE ACTIVITIES

Vocational Education Dissemination System

The RCU submitted a proposal to VT-ERIC and was selected as one of seven states to develop a pilot vocational education dissemination system. The system will be developed in cooperation with VT-ERIC, the library education staff at Millersville State College (MSC) and the professional staff at Research and Information Services for Education (RISE), a Title III project in the Commonwealth of Pennsylvania.

A planning grant will be made to Millersville State College to support a six to nine month planning phase for designing the dissemination system. The planning phase will be conducted primarily by the staff of MSC, RISE, RCU, and VT-ERIC, utilizing others when necessary.

The initial grant will also feature a pilot phase to test the basic system design. This phase, lasting from three to six months, will provide a basis for determining whether or not to complete the system. The proposed system will be operated primarily by the Department of Education (Research Coordinating Unit) with a close back-up data network housed at Millersville State College and/or other advantageous locations. Several back-up services such as special literature searchers provided by RISE will be part of the total program available to educators in the Commonwealth. User analysis studies and periodic evaluations will be conducted as the system develops.

Supply Demand Model

The Pennsylvania Research Coordinating Unit is currently making plans to develop a mathematical supply and demand model for the allocation of Federal resources to local schools for vocational-technical education

program planning. The development of the model is an outgrowth of a recommendation from the Pennsylvania Vocational Education Study. The proposed model, which uses the manpower demand approach for analyzing human resource development in schools will base funding on a set of perimeters derived from the supply-demand relationship that exist in a specific labor market area. While the model investigates the output of trained graduates by all educational agencies in the labor market area (e.g. community colleges, technical institutes and manpower programs), it will tend to maximize the output of public secondary schools, and consider the output of other educational institutions as a fixed flow. The current plan is to investigate the utility of a dynamic extension of a linear programming model which is widely used in developmental economics. This should allow the State Education Department to simulate the results of different funding patterns over three to five year periods.

Northeastern States Teacher Education Study

The Pennsylvania Research Coordinating Unit has cooperated and assisted in planning a study of the "Characteristics of Industrial Trade and Technical Teacher Preparation in Selected Northeastern States". The problem and objectives of the study are:

- 1. To identify the distinctive characteristics of the preparation and development of practicing industrial trade and technical teachers, in a number of states, so that each state may assess the educational and occupational preparation of its teachers in terms of its own goals and standards, as well as in relation to those of other states. Ultimately, and with the assistance of further research, a link should be established between the various elements of such teacher preparation and teaching effectiveness.
- 2. To evolve an appropriate instrument, methodology and procedures for identifying and measuring the various aspects of industrial trade and technical teacher preparation.
- 3. To provide each state with definitive information about the preparation characteristics of its industrial trade and technical teachers by which it can assess (a) relationships of teacher selection and preparation in terms of its own goals and (b) relationships of teacher selection and preparation with other states.
- 4. To develop categories of data which can be incorporated into further evaluative research areas such as (a) occupational experience as a factor in teacher effectiveness, (b) professional preparation as a factor in teacher effectiveness,

- (c) relationships of specific content courses to teacher effectiveness, (d) relationships of teacher preparation to student success in school and (e) relationships of teacher preparation to student success in employment.
- 5. Development of consideration for a national system of collecting and maintaining data on teacher preparation programs and standards.

As soon as funding is approved by the U. S. Office of Education, the RCU in Pennsylvania will participate in conducting the research.

Other Future Activities

The RCU's future plans include the following activities in addition to those presented above:

- 1. Stimulate and encourage the development of occupational education research at all levels in the State;
- 2. Revise and perfect the monitoring system and procedures for conducting good quality research:
- 3. Cooperate and communicate with vocational educators and related agencies:
- 4. Develop and initiate a research grant program for innovative research and development projects for vocational teachers and personnel at the masters level in vocational-technical education in the Commonwealth;
- 5. Complete program planning budgeting system assignments as a part of the State governments efforts to implement the system;
- 6. Identify additional research resources including personnel, funds, institutions and agencies:
- 7. Continue to publish the RCU Reporter:
- 8. Assist the Bureau of Vocational, Technical and Continuing Education in implementing P. L. 90-576 and the recommendations of the Vocational Education Study:
- 9. Update PARM at the end of each fiscal year; and
- 10. Attend and participate in workshops, meetings and conferences which will enhance the competencies and working relationships of the RCU staff.

X. SUMMARY

The RCU for Vocational Education was established in the Pennsylvania Department of Education in August 1966. During the first three years of operations, in spite of certain problems, the unit has made substantial progress towards all of its objectives which were stated in the original proposal to the U. S. Office of Education. A large number of research strategies and methodologies have been included in the conduct of research and related projects. The comprehensive study of vocational education and the 116 research and related projects are producing several necessary changes in vocational education in the Commonwealth. As a result of cooperation, communication and services, the unit has received adequate amount of recognition throughout the State and nation. The RCU has established the necessary framework and plans to move into the challenges mandated by P. L. 90-576 with even greater contributions to an effective program of vocational education designed to meet the needs of all persons, of all ages, in the Commonwealth.
