ABSTRACT

THIS REPORT ON THE ELEMENTARY AND SECONDARY
EDUCATION ACT TITLE I PROGRAMS IN PUERTO RICO CONCENTRATES ON
IMPROVEMENTS OF SUBSTANDARD CONDITIONS AND OF EDUCATIONAL
ACHIEVEMENTS, ON RECREATIONAL AND CULTURAL ENRICHMENT, AND ON TEACHER
TRAINING. TOPICS COVERED ARE: EFFECTS OF PRESCHOOL EDUCATION; EFFECTS
OF TITLE I PROGRAMS ON GRADES 3, 6, 7, AND 10; NONPUBLIC SCHOOL
PARTICIPATION; TEACHER AND TEACHER AIDE TRAINING PROGRAMS; AND,
PARENTS AND COMMUNITY INVOLVEMENT. TABLES AND GRAPHS ARE INCLUDED.

ANNUAL EVALUATION REPORT
Fiscal Year 1967

Introduction:

Title I funds have been used in Puerto Rico since the year 1965-66. Most of the activities thus funded have continued, some with slight changes, a few with major changes, some have been expanded, others have been reduced and others have been entirely dropped. Our main efforts, however, continue to be concentrated on the same major areas or projects, namely:

1. Improvement of substandard conditions
2. Improvement of educational achievement
3. Recreational and cultural enrichment
4. Teacher training

Since the beginning a decision was made that evaluation of Title I would be centered through the Division of Evaluation which would coordinate all evaluation efforts of Title I projects. For the past two years the Division has been undertaking a massive endeavor to gather data which would enable us more effectively to evaluate these projects. These data have gone to make up student, facilities, and personnel files in a computerized "Test and Evaluation" system being developed for the Department of Education under contract with Federal Systems Division of IBM.

Although we are pleased with the amount of progress achieved so far, we feel that still there is a long way to go in order to be able to assess with the greatest degree of accuracy the effects of efforts expended to increase the attainment of our disadvantaged school population. We are still in the process of developing adequate measuring instruments and we need to develop additional techniques for measuring (1) attitudinal aspects of pupil performance, (2) the environmental conditions under which learning occurs and (3) studies in cost effectiveness of educational programs and ancillary services. More adequate procedures for the collection of data need to be established. However, the kind of information already available enables us to reach some preliminary

conclusions as to the general impact the Title I program might have had in our educational system. We cannot be completely certain that the changes described below were caused by the increased federal aid Puerto Rico received under Title I, nevertheless, unable to identify other events which might provide alternative explanations, it seems reasonable to attribute these to the effects of the Title I program.

Among these changes it seems worth mentioning the increase in the number of pupils who are actually receiving more hours of instruction. The number in thousands and percentages of public day school students by school level and type of school organization for the school years 1961-62 to 1967-68 are presented in Table I. As may be seen in the table, the number of elementary public day school pupils getting six hours of instruction is higher for the years 1965-66 to 1967-68 than for years prior to Title I. Although there was a trend of increase in previous years it was not as high as for the above mentioned years. This change is also confirmed when we compare the number of students who received only three hours of instruction during the school years 1961-62 to 1964-65 and 1965-66 to 1967-68. The decrease in the number of students getting only three hours has been due almost entirely to the fourth hour program, one of the activities under Area I of the Title I program. The table also reveals a similar trend in the secondary level.

Table 2 presents cumulative retention rates for various school years. This also shows a favorable change taking place in our educational system during the past two years.

The average number of pupils per classroom teacher has decreased in the elementary school level from an average of 40.3 in the year 1964-65 to an average of 35.9 in the year 1967-68. Although as shown in Table 3 there was a decrease in the average number of pupils per classroom teacher in the years prior to Title I, this trend was even greater during the past two years.

ANSWERS TO QUESTIONS 1 - 9

1. Basic State Statistics:

Puerto Rico is considered both a State and Local Educational Agency, therefore, our answer to questions A and B is the same.

- A. Total number of operating LEA'S in the State - 1
- B. Number of LEA'S participating in Title I - 1
- C. Number of Title I programs - 4
- D. Unduplicated number of pupils who participated in Title I programs
 - (1) enrolled in public schools - 670,061
 - (2) enrolled in non-public schools - 6,987

2. Since Puerto Rico is both State and Local Agency, the SEA Title I staff only includes personnel from the Title I Coordinator Office plus personnel from the Division of Evaluation of the Department of Education.

Visits to Title I activities throughout the island were carried out mainly for program development and evaluation purposes. A breakdown by types of visits and their effect on local projects is presented below:

Number of visits	Proportion	Purpose	Effect
188	22%	Observe and orient the development and implementation of Title I educational activities and services to public and non-public schools.	<ol style="list-style-type: none"> 1. Strengthening the program and solution of several immediate problems. 2. Redefinition of project objectives in behavioral terms. 3. Determination of feasibility of project procedures.
55	6.36%	Assess local personnel in the development of appropriate evaluation designs.	Identification of important variables, criteria and evaluative instruments or techniques in terms of specific project objectives.
578	67%	Gather data for evaluation purposes.	<ol style="list-style-type: none"> 1. Update the special project files already established in the Computer Center. 2. Appraisal of impact of over all Title I Program on the whole school system. 3. Preparation of evaluative reports. 4. Approval of continuing activities was decided on the basis of additional criteria developed.
33	3.81%	Training local personnel in the administration of evaluative instruments.	Collection of more accurate and reliable data for evaluation purposes.
5	.58%	Provide orientation to local supervisors on Title I benefits and improvements.	Proposals for continuing activities were improved.
5	.58%	Organization and execution of a dissemination program.	Five television programs were organized. Brochures and booklets were produced.

3. The following are some of the changes made in our agency during the last three years which have had some effect in improving the quality of Title I projects and insuring proper participation of non-public school children.

Changes in the last three years	Effect
a. Organization of the Office of Educational Planning and Development of the Department of Education.	a. Needs and priorities were determined which helped allocate resources more effectively.
b. Creation of the Academic Advisory Committee.	b. Integration of the programs, activities and services of the Department.
c. Strengthening of the Evaluation Program.	c. Assessment of the effects of individual Title I projects as well as the overall program.
d. Establishment of a computerized information and evaluation system.	d. Availability of statistical and evaluation data which otherwise would be impossible to have.

4 A. In measuring the impact of Title I upon the educational achievement in Puerto Rico, an approach other than a comparison between participants and no-participants has been used, since almost all public pupils are participating in Title I activities to some degree. Title I extension, almost island wide, follows the assumption that limitations which seem to be imposed by socio-economic factors would be overcome and more uniform progress allowed, since the majority of public school children come from the lowest socio-economic level.

An analysis of the data, available as part of the data base in the Puerto Rico Department of Education Information System as well as files maintained in the testing division, is hereby included.

Records of students tested in Spanish reading at the end of the 1966-67 school year were selected and summarized; then a comparable group listed at the end of the 1967-68 school year was chosen. Differences in mean scores between these two samples were analyzed for statistical significance using the PRESS program system.

While Title I projects form a composite of activities, it was expected that their presence would improve performance on standard achievement tests among students having had an additional year of exposure. To test this hypothesis, two samples were drawn from the educational data base and testing-program files using the following criteria:

Title I activities affected all public school children on the island. About 25% of these were included in the data base and testing program files in 1966-67. While all grade levels were tested in Spanish reading achievement in 1966-67, this was not the case of the following year. The selection of records was limited to only those grade levels which were tested in two consecutive years. The 1966-67 sample was thus

reduced to grades 3, 6, 7 and 10. The number of records meeting these criteria was 32,954. The same procedure was followed in selecting the 1967-68 sample. A total of 29,532 records were selected.

Table 4 and Table 5 show the composition of the two samples by grade level, zone, socio-economic level (as determined by data on parental education and occupation through an adaptation of the Hollingshead "Two Factor Index of Social Position"⁽¹⁾) and sex. They were more or less equivalent in socio-economic composition. The analysis of the data thus obtained has been divided into three main parts, namely:

1. Effect of Pre-school Education-Grade 3
2. Effect of Number of Years Exposed to Title I-Grades 3, 6, 7 and 10
3. Effect of Type of Organization-Grade 3

1. Effect of Pre-School Education-Grade 3

When the results in reading achievement of third graders for the year 1967-68 were analyzed in terms of type of pre-school instruction it was found that the highest mean scores were obtained by those students who have had kindergarten instruction followed by those having had Headstart. The lowest mean scores were obtained by those who did not have Kindergarten or Headstart. Table 6 shows that in all cases the differences in mean scores were highly significant.

When the results obtained by these same students, were compared taking into consideration their socio-economic level, it was found that those students with either Kindergarten or Headstart did better than those with no pre-school education, in all socio-economic levels. However, a close examination of Graph 1 reveals that higher gains are reflected by students in the low, medium low, and medium socio-economic levels having had the opportunity of pre-school instruction. This is consistent with the results obtained the previous year as to the benefits derived by the culturally deprived children from pre-school instruction.

(1) August B. Hollingshead. "Two Factor Index of Social Position", 1965 Yale Station, New Haven, Conn., 1957 (Mimeo. 12 pp.)

2. Effect of Number of Years Exposed to Title I-Grades 3, 6, 7 and 10 Spanish Reading Achievement Test Results

The third graders of 1967-68 earned consistently higher Spanish reading achievement test scores than the third graders of 1966-67, as shown in Table 7. The difference in means between years is statistically significant for both sexes with girls performing considerably better than boys each year.

Third graders in school year 1967-68 also scored higher than those of the previous year at all socio-economic levels, as shown in Table 8. The largest difference in mean scores between years falling at the highest of the 4 socio-economic levels is only significant at 5% and does not detract from the overall good results. Title I is aimed at the educationally deprived where differences in means between years are most significant. When the results of urban students were compared to those of rural in Table 9, rural students showed larger gains than urban between school years at all socio-economic levels. Urban and rural students, both had the largest increase at the highest socio-economic level, but with minor significance. The fact that the rural students showed larger gains is a considerable achievement, since more rural than urban students, as per Table 4, were at the lowest socio-economic level. This would tend to indicate that Title I has had the desired effect on the educationally deprived in grade 3.

Among 6th graders, mean scores by sex and socio-economic level were unavailable. Instead, the analysis was concentrated on comparisons between zones, school years, and districts. In all but 1 of the 11 districts tested in 1966-67 there was a significant difference in mean scores between urban and rural as shown in Table 10. In all but 3 of the same districts tested in 1967-68 there was a significant difference in mean scores between urban and rural students. This trend was not observed, however, in a comparison between years. While none of the urban differences were significant

here, 4 districts in the rural zone showed a gain.

While the differences between means by year are consistently higher in 1967-68 than those in 1966-67 for each district, in only 4 of the districts were they statistically significant as shown in Table 11.

Trends similar to those observed among third graders were also observed among seventh graders while among tenth graders the differences in the means between years were not statistically significant. The results are presented in Tables 12 to 15.

3. Effect of Type of Organization-Grade 3

The results in Spanish reading achievement obtained by the third graders in the sample confirms the results obtained last year in which for the first time there was direct objective evidence to verify that there is a close relation between time spent in school and attainment of basic skills. With the exception of students with no pre-school instruction attending interlocking (5 hour) program who did better than those attending single (six hour) program the mean reading scores increased according to the number of hours spent in school. If we disregard the variable of pre-school instruction and analyze the results by hours spent in school, as shown in Table 16, we find that in all cases there were highly significant differences between the means obtained by those having the benefits of more time in school with only one exception - there was no significant difference in the higher mean scores obtained by students attending school five hours and those attending six hours.

The results obtained by these same third graders in English reading achievement presented in Table 17 show the same trend. However, in this case the difference between the mean scores of students attending the six hour program was statistically significant when compared to those attending the five hour program. Thus the assumption of a close relation between time spent in school and better achievement is once more objectively verified.

GRAPH 1

COMPARISON OF MEAN SCORES OBTAINED BY THIRD GRADE STUDENTS IN THE TEST OF READING IN SPANISH BY SOCIOECONOMIC LEVEL AND PRE-SCHOOL INSTRUCTION - TITLE I SAMPLE MARCH 1968

4. - B - Common characteristics of those projects which, in our judgement , have been most effective in improving educational achievement in Puerto Rico, are the provisions under these projects for:

1. increase in actual number of hours of instruction
2. increased attention to remedial and individualized instruction
3. increased attention to children of pre-school to primary level
4. increase in teaching personnel
5. increased availability of audiovisual aids, books, and other materials and equipment.

4. - C - No evidence available.

5. The Title I program has had some effects on the administrative structure and educational practices in our educational system. Significant among these are the following:

- a. Increased awareness among school people of need for curriculum diversification and adaptation to needs of educationally deprived children. Greater efforts are being made in educational planning so as to develop procedures which will allow the Department to evaluate actual or potential educational tactics (i. e. various combinations of different teaching techniques and teaching equipment, curricula, physical facilities, forms of school organization, personnel specialties and qualifications) upon optimal and maximal educational outputs.
- b. The Information and Evaluation System initially developed to meet the evaluation requirements of Title I projects, is now the central tool in the Department's scheme for planning. This system provides historical information and projections concerning the present and future condi-

tions of pupils, staff personnel, facilities, programs and finances.

- c. Massive programs of in-service teacher training have been developed. These programs include training in techniques and special training in specific subject matters (English, Language Arts, Sciences, Mathematics) and other means of improving teaching quality.
- d. The expansion and diversification of educational services: curriculum enrichment, regional curriculum development laboratories, local centers for study and supervision for in-service teachers; the pre-school programs; programs offering cultural and recreational experiences, programs for the retarded and the gifted child, programs for recovering high school dropouts.
- e. Quantitative improvements through an increase in teaching hours. This involved transportation services, classroom construction, recruitment of substitute teachers and the use of specialist teachers (mostly in English) to offer a fourth hour of instruction daily in schools organized in double sessions.
- f. Development of programs designed to provide general improvements in teaching conditions, through the purchase of new materials and equipment, innovations in teaching technology, classroom design and organization, etc.
- g. Amendments in the regulations for personnel contracting have been introduced.
- h. Introduction of the teacher-aide classification in the public school system.

6. Additional Efforts to Help the Disadvantaged.

State funds have been used to augment the following Title I activities:

1. The Fourth Hour Program - to offer daily an additional hour of instruction in elementary schools organized in three hour double sessions. Twenty five additional teaching positions were assigned representing a cost of \$81,375.00. This is approximately 10% of the Title I appropriation for this program.

2. The Library program for rural schools - to offer library services to rural deprived children. Ten additional positions of librarians were assigned representing a cost of \$32,550.00. This is approximately 10% of the Title I appropriation.

3. The Educational Opportunity Center - to provide educational opportunities for dropout students ages 17-21 - received an additional appropriation of \$125,000.00 from State funds. This is 17% of the Title I appropriation.

4. Transportation Program - to offer transportation services for rural children attending urban schools. Additional state funds were provided for transportation representing approximately 53% of the appropriation for this activity under Area I of the Title I program.

7. One of the activities under Project I, The Improvement of Sub Standard Conditions, is the financial aid to private schools for the acquisition of materials and equipment. Eleven private schools with an approximate enrollment of 6,987 students were included. In all of these schools the materials and equipment thus purchased were used as part of their regular teaching program and in some cases for the enrichment of recreational cultural programs.

Visits were planned and realized to these schools to supervise services provided to their deprived children. New services were planned with and among Title I staff and non-public school officials during these visits as well as during interviews held in the Title I Office. These officials also attended meetings for planning and evaluation purposes.

There were no changes in legal interpretations in Puerto Rico as regards financial aid to private schools.

8. Teacher - teacher aide training programs were conducted mainly as part of the activity under Area I which provides for the training and use of teacher aides. To some extent they were also conducted as part of two other programs, the Pre-School Education program and the Team Teaching program.

In general the training programs were organized as workshops or training seminars in which participants get orientation or had the opportunity for practical application regarding the following aspects:

- a) individualized instruction
- b) independent study skills
- c) preparation of educational materials
- d) use of audio-visual aids
- e) curriculum content
- f) the teaching of Art
- g) new approaches to teaching

The most common types of activities held were lectures, demonstration classes, discussion group meetings and actual workshop sessions. The number of participants as reported by persons in charge of activities is indicated below:

Teacher Aide Training Program	-	242
Pre-School Education Program	-	230
Team Teaching Program	-	7

9. In the third year of Title I, there has been great progress in the involvement of parents and other members of the community in various activities carried out under our four major Title I projects. Both parents and other members of the community have been involved in varying degree in the planning, coordination, operation, evaluation and dissemination of some of the activities or subprojects carried out under each project. The following tables describe the nature and extent of both parent and community involvement as expressed by leaders of various Title I activities.

Table 18

Extent of Parent and Community Involvement in Title I Program

Programs	Total number of activities	Number of activities in which there was			
		Parent involvement		Community involvement	
			%		%
I. Improvement of sub-standard conditions	24	11	46	10	42
II. Improvement of academic achievement	17	12	70	11	65
III. Curriculum enrichment	13	6	46	4	31
IV. Teacher training	<u>10</u>	<u>3</u>	<u>30</u>	<u>3</u>	<u>30</u>
Total	64	32	50	28	44

Analyzing this table we find that parents have become involved in fifty per cent (50%) of Title I activities and other members of the community in forty-four per cent (44%). Considering that some of the activities developed are of such a nature that parent or community involvement would not be appropriate then we might say that the extent of both parent and community involvement in Title I activities for the year 1967-68 has been extremely satisfactory.

Table 19

NATURE OF PARENT AND COMMUNITY INVOLVEMENT BY TYPE OF INVOLVEMENT

Program	Number of Activities by Type of Involvement											
	Planning		Coordination		Operation		Evaluation		Dissemination			
	Parent	Community	Parent	Community	Parent	Community	Parent	Community	Parent	Community	Parent	Community
I. Improvement of sub-standard condition	6	3	9	4	9	5	7	-	9	6		
II. Improvement of academic achievement	4	3	6	2	10	8	6	3	11	6		
III. Curriculum enrichment	1	-	3	-	5	2	1	-	2	-		
IV. Teacher training	11	8	19	8	25	17	16	6	24	15		

As seen in Table 19 the type of parent involvement as well as that of other members of the community has been most noticeable in the operational and dissemination phase of the activities. To a lesser extent both parents and other members of the community have become involved in the planning, coordination and even in the evaluation of various of the Title I activities.

In a questionnaire filled in by all school directors in the 21 school district Title I sample, one hundred and forty two (142) reported that in their opinion parents now participate more in school activities. This number represents 69% of the school directors included in the sample who reported that some kind of Title I activity was being developed in their schools. Approximately 61% reported that other members of the community participated more in school activities than in previous years. (prior to Title I program).

Of these 205 school directors only one (1) reported that there was less parent involvement at present than in previous years; only two (2) reported there was less community involvement.

The following table summarizes the opinion of 205 school directors on parent and community involvement.

Table 20

Question: Have you noticed any changes in parent and community involvement in school activities due to Title I activities?

Degree of involvement	Parents	Community
More participation	142	127
Same participation	30	45
Less participation	1	2
Unable to appreciate change	32	31

In general, parent and community involvement has been most outstanding in the pre-school education programs including the planning, organization and operation of kindergartens and Headstart programs. The following are just a few cases of the many

which we consider outstanding examples of such participation:

1. In the Manuel Corchado School at the Isabela school district the parents assumed full responsibility for the preparation of the area for outdoor activities. They not only contributed with the money for the needed equipment but they actually worked in the preparation of the area and some of them built part of the equipment.
2. Parents in the school at Sierra Bayamón Urbanization and at Public Housing Project Falín Torrench, both at Bayamón school district, have provided most of the equipment for the kindergarten rooms.
3. In the Arecibo school region parents and other members of the community have contributed to a great extent with the furniture and equipment needed for the Home Area in the kindergarten rooms; they have helped in the repairing of school equipment and in the preparation of the facilities for the outdoor activities. They have become also greatly involved in trying to improve attitudes, habits and health of kindergarten and Headstart children.

Outstanding examples of parent and community involvement in other types of Title I activities:

1. At Magueyes Second Unit in the Barceloneta school district the owner of an upholstery shop cooperated actively in the rehabilitation of a group of mentally retarded children. These children, under the direction of their teacher worked in the shop every school day for one hour period. They learned to sand and make minor repairs in furniture and some of them learned certain phases of upholstery work.
2. Parents and other members of the community in the Arecibo School Region have given free transportation to deprived students in order

to enable them to participate of recreational and cultural activities. They have also cooperated in the organization of festivals, exhibitions and shows bringing in refreshments and food, providing the physical facilities and contributing with prizes. This type of cooperation has been almost island wide.

3. In the Mayaguez School region some municipalities have bought buses which they rent at moderate price to the Program of School Transportation thus allowing a greater number of economically deprived students to receive the benefits of this service.
4. The Municipal Government at Las Marías have cooperated with the Centers of Study and Supervision providing the physical facilities for conducting the classes and a warehouse for books and materials.
5. The Juncos Lions Club contributed with money for buying additional books for the Rural Mobile Library in the Juncos school district.
6. Distinguished members of the community have actively participated in some of the cultural activities offered by the Cultural and Recreational Program giving conferences, art shows, recitals, etc. Parents have voluntarily helped the teachers in taking care of groups of students on trips and excursions and preparing refreshments and different kinds of foods for various activities.
