AESTRACT

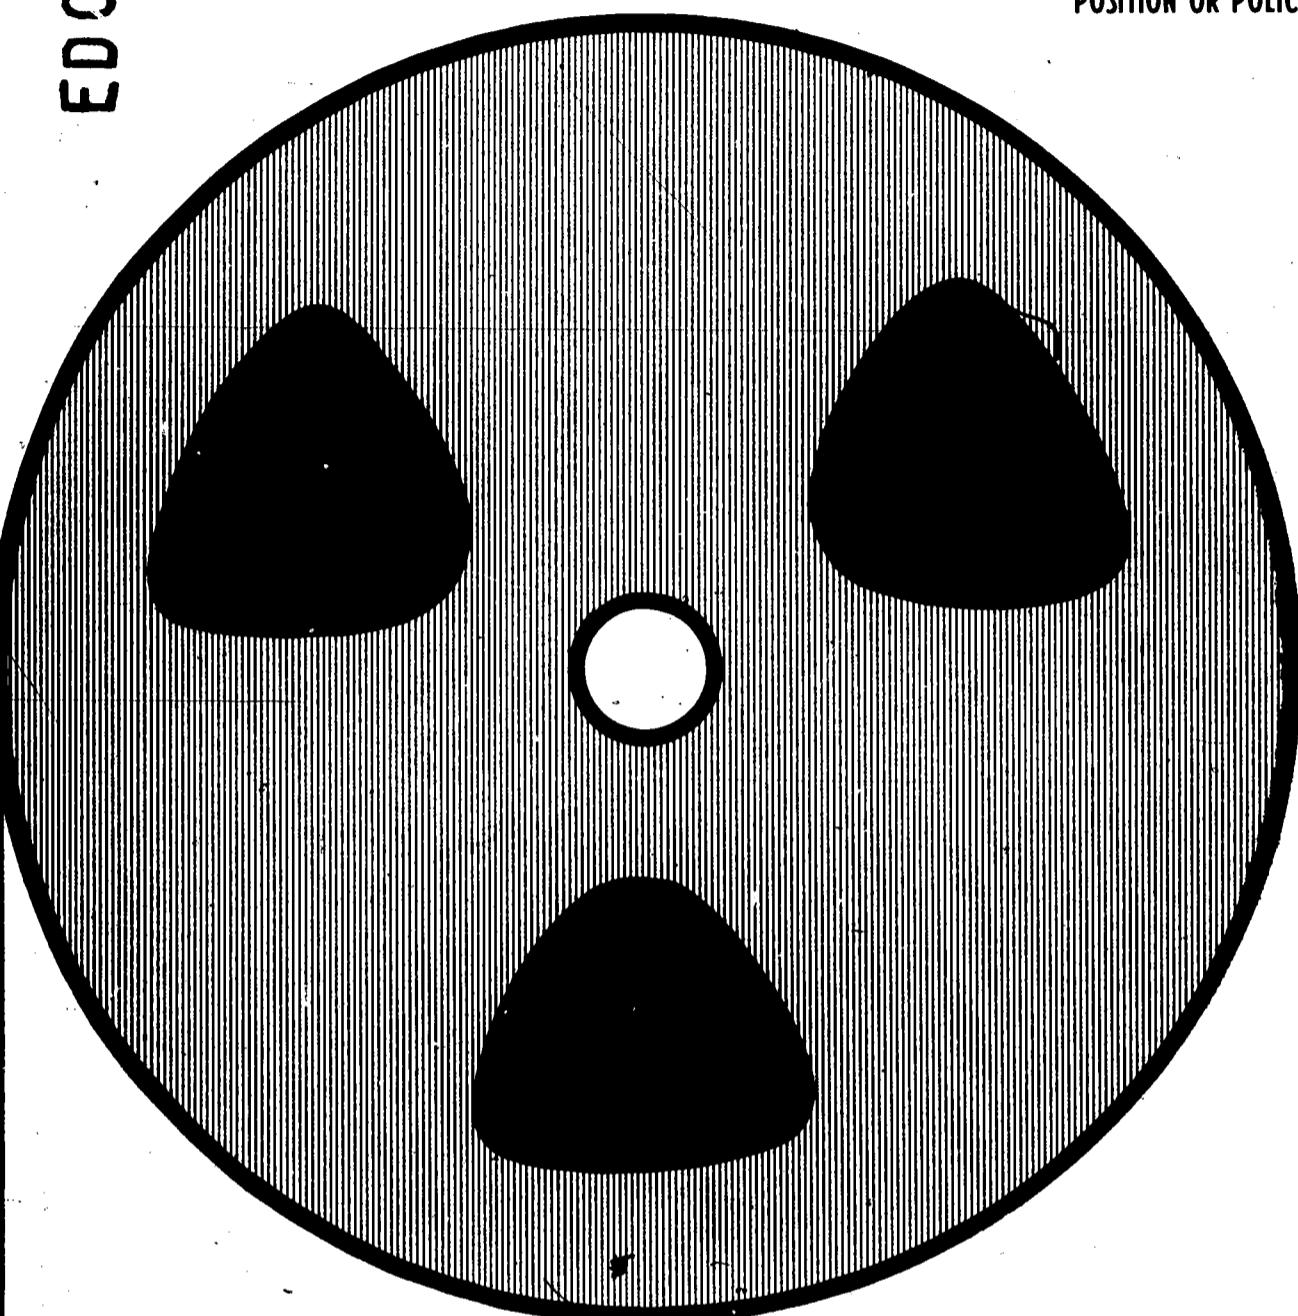

Primary types of three-phase pattern drills for language instruction are illustrated and discussed in this teacher's guide. French, German, Italian, and Spanish sample drills are developed in each of five classifications: (1) replacement, (2) transformation, (3) analogy, (4) fixed-increment, and (5) paired sentences. Instructional procedures, laboratory terminology (in four languages), sample visuals, and a bibliography are included. (RL)

PATTERN DRILLS FOR THE LANGUAGE LABORATORY

GEORGIA STATE UNIVERSITY

A Notebook of
PATTERN DRILLS FOR THE LANGUAGE LABORATORY
-a guide for the student and teacher-

Introduction

There are about thirty varieties of pattern drills, some varying minimally from one another in structure and intent, some so different as to suit only one purpose. This notebook presents what we feel are the primary drill-types which probably will be most useful to the teacher of foreign languages and to the students of FL 423, Methods and Materials for Teaching Modern Foreign Languages, part of the program in professional preparation at Georgia State College.

In this course, the prospective teacher learns not only what pattern drills sound like and how they can be used to supplement classroom teaching, but what they are designed to do; he also learns to "script" them---to develop them according to the goals of his teaching day, to write them in proper form, and finally, to produce the exercises on a tape suitable for use in any language laboratory. Thus our notebook attempts to unify each pattern drill per language on one page, to visually break down the drill into frames (similar to the frames comprising a "scene" on movie film), to provide space for the student to try out his new learnings, and to give a diagrammatic representation, with practice-space, of how a pattern drill appears on tape. Directions to the student of the foreign language, for whom the script is ultimately written, are given in English only once, at the beginning of all drills of a certain type so that the language-learner can find out what he is expected to do. The classroom teacher will later substitute the target language for English in these directions as the student becomes familiar with the nature of the drills and the demands being made upon his language behavior.

Only as a guide can this notebook be utilized, for our bibliography (page 39) attests to a new era in the search for greater understanding of the language-learning phenomenon and the application of this understanding to new techniques. As such, what we present here is merely a beginning.

As an athlete must exercise and drill in order to play an effective game, so must the language student spend time in the language laboratory as his practice field. Detailed, consistent drilling must take place in a controlled environment in order to make the patterns automatic, readily available to the student as complete units of speech, as an aid in developing fluency in the language.

The pattern drill is an exercise designed to help the student acquire verbal control over a specific grammatical construction. The language laboratory provides an opportunity for sufficient repetition of the construction in varying types of drills so that a linguistic pattern (ie., a consistent relationship of linguistic forms) may result, and grammar (the structure and relationship of the components of the language) may be learned inductively. This process is similar to the way in which a child learns his native tongue as he uses and repeats the permissible combinations, allowing the generation of an infinite set of language examples from a linguistic "formula".

The drills must give correct patterns, must provide structures related to classroom work, must use familiar vocabulary, must be varied in design, must have a sufficient number of utterances to establish the grammatical construction firmly, and must provide necessary reinforcement to "fix" the correct response. The pattern drill should contain about 8 items (called frames) and have 3 or 4 phases (or utterances) per item. The 3- or 5-phase drills have psychological advantages, since the student hears as the final utterances the correct response instead of his own (which may not be as correct as one would like.)

The following pages present examples of 3-phase laboratory drills, the last frame recapitulating the first, designed to actively involve the student in target-language behavior, to elicit grammatical utterances, and to provide for sufficient reinforcement and correction.

REPLACEMENT DRILLS (substitution)

page 1

In this Drill the student is required to substitute one utterance for another by replacing a single word or group of words such as a phrase or clause. The replacement of a noun subject by a pronoun subject requires no other substitutions. As this type of drill expands into the progressive substitution drill, the student is required to remember the order of the patterns as they shift from one sentence to another by use of slots or tagmemes.

To the student: This drill is designed to give further practice in substitutions of pronouns for nouns. You will hear an original utterance. During the pause that follows, make the proper substitutions and listen to the correct response.

A l'étudiant: Voici un exercice de la substitution des pronoms pour les noms. Vous entendrez une phrase. Pendant la pause qui suit, faites les substitutions correctes. Ecoutez la bonne réponse.

Note: In German, the immediate future is expressed by the present tense. The future may also be expressed by the present tense and an adverb of time such as TOMORROW, NEXT WEEK, NEXT YEAR, etc. The grammatical form of the future, however, is the present tense of werden plus the infinitive: e.g., Ich werde die Mutter besuchen. (I shall visit my mother.)

PAIRED-SENTENCE DRILL (Integration Drill)

This Drill is used to teach relative pronouns, conjunctions, conditional sentences, present participles, and required combinations of tenses. Two short sentences, easily retained, must be combined into one single statement, the first sentence becoming the main clause.

To the student: You will hear two short sentences. During the pause combine the two sentences using the necessary relative pronouns. Then listen to the correct response.

Characteristics of Good Pattern Drills

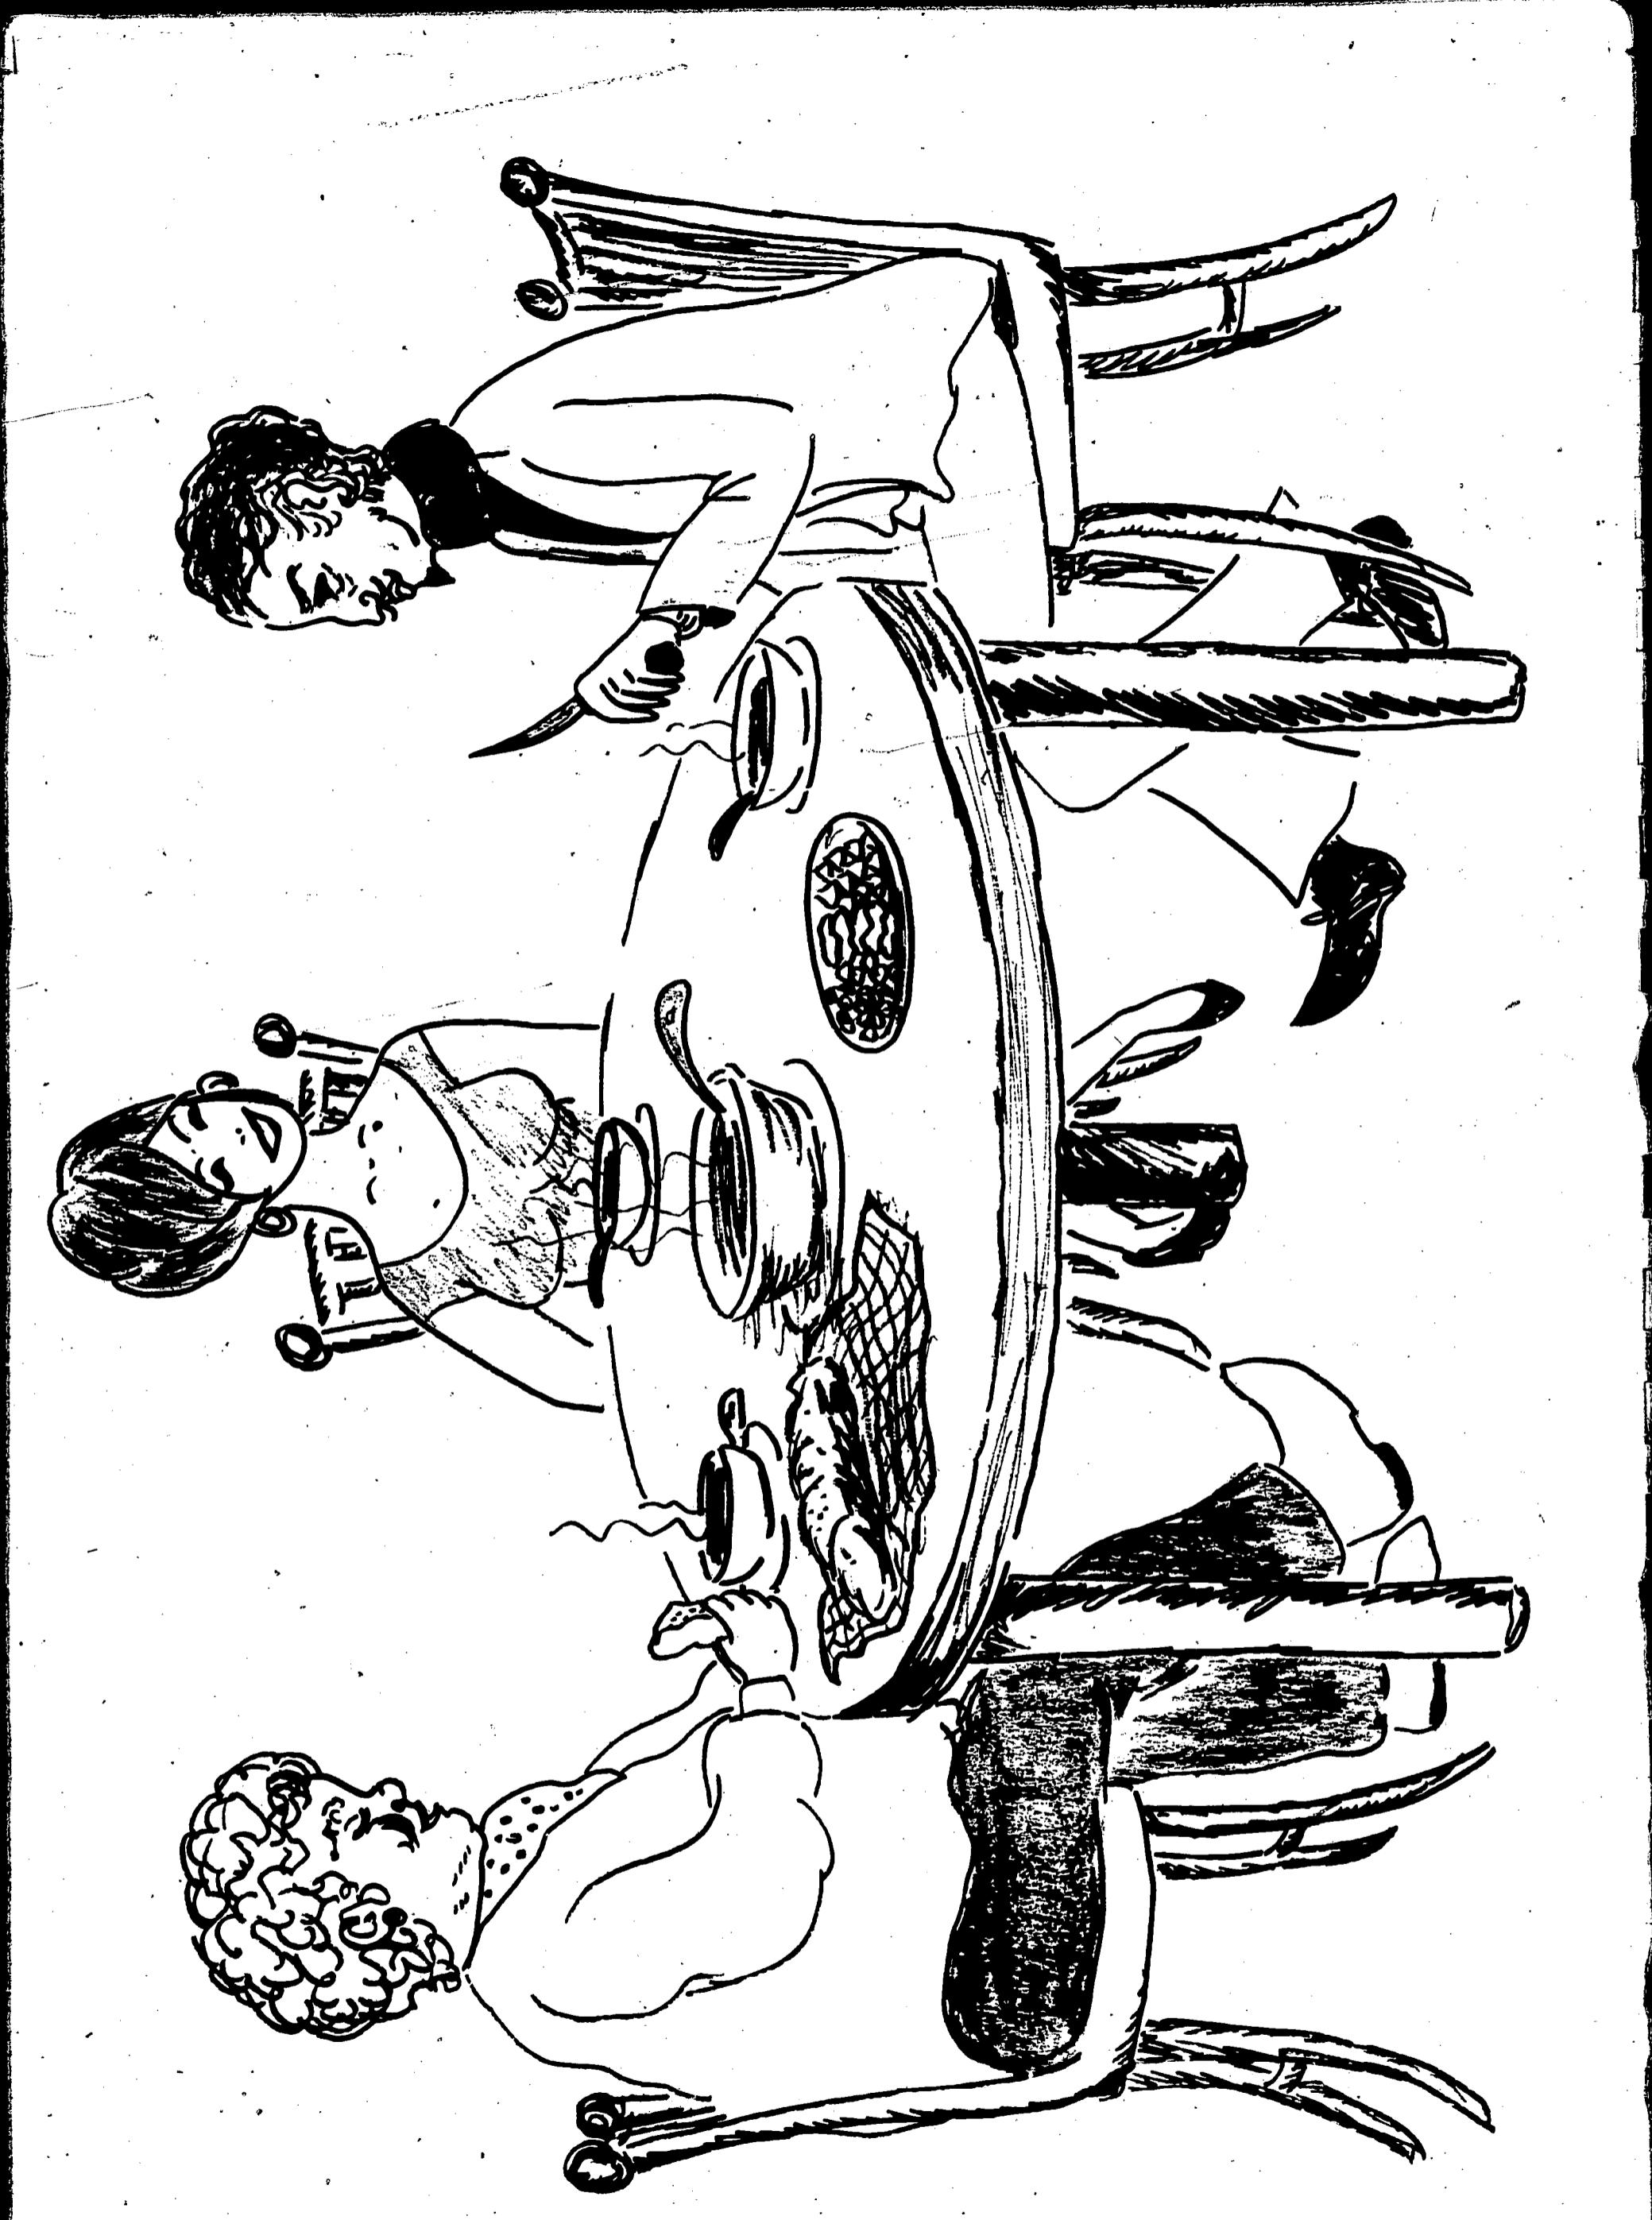

1. Frames must be of workable length to aid retention of structure by ear.
2. Pattern drills should teach one new structure at the time to increase chances for overlearning.
3. Each frame must give immediate correction, if needed - or simply affirmation.
4. Pattern drills should continue through five or eight frames, the last frame recapitulating the first to give a sense of unity to the whole exercise.
5. Drills should be recorded at normal native speed and with normal native intonation patterns - to approximate realistic situations.
6. Pauses for student response should be twice the length of the correct response to avoid "crowding" the student's response.

INTRODUCTION TO VISUALS

Visuals easily lend themselves to use in the language laboratory and serve to pictorially indicate the content and the direction of a pattern drill. They are valuable in beginning classes where more than lingual cues are usually necessary for comprehension and will aid in motivation, especially if the visuals are elaborate. There are pitfalls, however, in relying too heavily on the use of pictures, diagrams or drawings in laboratory sessions: the teacher can not proceed rapidly from one type of drill to another without having very carefully planned the exercises for variety within the framework of the story; and the use of certain drill-types may be precluded by the circumstances of the story. For example, the use of the future tense of to wish would not be in keeping with the idiom of the French language in our given dialogue. It could, of course, be used, but it would sound mechanical to the trained ear and would be strictly academic.

The teacher would begin the taped exercises with the dialogue, allowing the student to pick up the thread of the story. The student would then repeat the dialogue in toto, line by line and several times to ensure familiarity, after which the variations would be used. It is advisable, of course, to begin with the easiest of the frames or drills to allow the student to build confidence and gain early mastery. The student may have a copy of the visual, or it may be projected on a screen at the front of the laboratory, depending upon resources, both financial and audio-visual, and also upon whether the class is to work as a group or individually.

Following this introduction are four sample visuals including dialogues and pattern drill frames in four languages. Space does not permit us to give a complete 8-frame drill for each type, but you will be able to see at a glance how a teacher can vary a story line to fit the requirements of the drill-type and how he can go beyond the dialogue to create interest.

Glossary of Laboratory Terms

Audio-lingual	-an approach to language teaching with primary emphasis upon acquiring listening and speaking skills, followed by graphic skills of reading and writing.
Basic sentences	-sentences presented in dialogue form, illustrating the typical patterns of the target language to be overlearned.
Cue	-a word or phrase used to prompt an utterance from the student.
Frame	-a sequence of tagmemes having internal unity within a pattern drill.
Overlearning	-the process of establishing as habits of speech basic sentences learned by mimicry-memorization before substitution of variations.
Pattern	-any recurring group of sounds, words, phrases or sentences.
Pattern practice or drill	-any exercise which involves the repetition of a pattern with some variation of the elements.
Phase	-an utterance in the form of a stimulus, response, or reinforcement. A 3-phase drill would combine the stimulus, response, and reinforcement in sequence.
Programmed learning	-the process of learning by means of material broken up into minimal steps, requiring an active response for each step with an immediate follow-up on correctness of the response.
Reinforcement	-the correct response as given by the master speaker.
Scripting	-the act of writing, in programmatic form, the sequences of frames and drills to be recorded on tape.
Slot	-a tagmeme or functional substitution point in a drill at which time a vertical substitution may be made without changing the structure of the drill, e.g., The small boy is playing → The small boy is crying.
Tagmeme	-a substitution point in a drill - also called <u>slot</u> .
Tagmemics	-the use of slots or tagmemes in frames of pattern drills.
Utterance	-a sentence spoken in a pattern drill.
