ABSTRACT

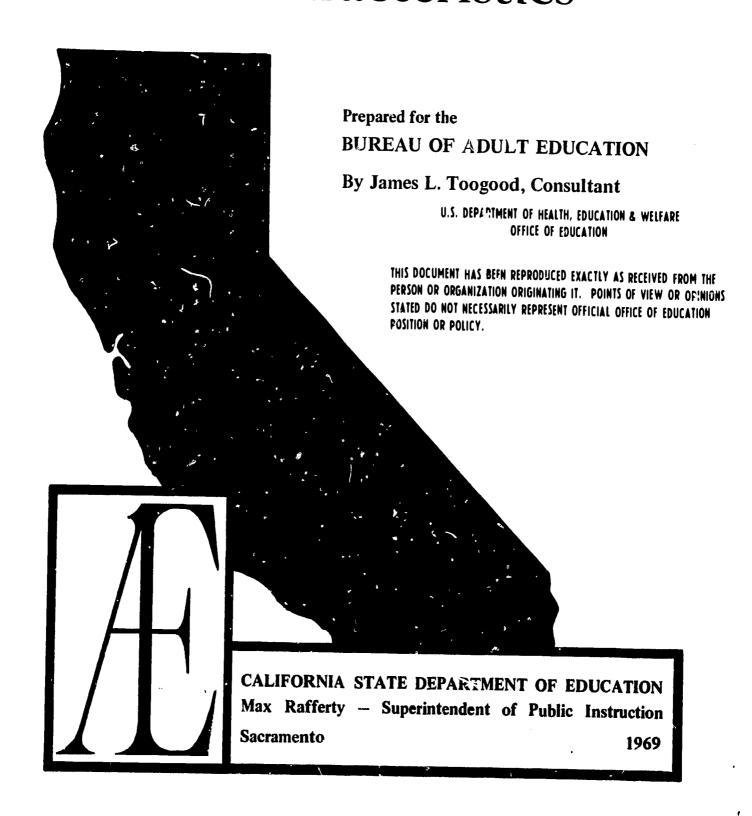

ERIC

The publication presents data on the number and geographic distribution of uneducated adults in the state of California giving information that can be used to provide meaningful programs for adults. Data have been tabulated by area ("standard metropolitan statistical areas," counties, and "urban placed") and by population groups (total population, nonwhite population, and Spanish-surname population). The specific factors with which the study is concerned are the number of adults with less than a fifth grade education, the median school years completed by adults in each population group, and the family income. Adult Population Distribution with Regard To Social, Economic, and Ethnic Characteristics

This publication was developed and published by the California State Department of Education in 1969 with funds provided under the Adult Education Act of 1966, Title III of Public Law 89-750 (Elementary and Secondary Education Amendments of 1966).

PREFACE

Adult education programs conducted by the public schools in California provide instruction for adults of all races, colors, creeds, and socioeconomic levels. Programs for undereducated adults conducted under the provisions of Title III (Adult Education Act of 1966) of Public Law 89-750 (Elementary and Secondary Education Amendments of 1966) have the further significant purpose of providing basic education for adults. "Adult basic education" is defined in Title III, P.L. 89-750, as follows:

... education for adults whose inability to speak, read, or write the English language constitutes a substantial impairment of their ability to get or retain employment commensurate with their real ability, which is designed to help eliminate such inability and raise the level of education of such individuals with a view to making them less likely to become dependent on others, to improving their ability to benefit from occupational training and otherwise increasing their opportunities for more productive and profitable employment, and to making them better able to meet their adult responsibilities.

The objectives of the California State Department of Education in providing adult basic education under P.L. 89-750 are contained in the California Plan for Adult Basic Education, published by the Department in 1967. The Plan also specifies that "... first priority shall be given to programs which provide for instruction in speaking, reading, or writing the English language for persons functioning at the fifth grade level or below"

In order to provide meaningful education programs for these adults, we must know who they are, where they are, how many there are, and the extent of their need for education.

Those persons responsible for program development and evaluation should find this statistical information helpful in planning programs to meet the goals set forth in the *California Plan for Adult Basic Education*.

THE DISTRIBUTION OF POPULATION

This publication is concerned with data on the number and geographic distribution of undereducated adults in the state of California. Information is tabulated by area — "standard metropolitan statistical areas," counties, and "urban places" — and by population groups — total population, nonwhite population, and Spanish-surname population.

The specific factors with which this study is concerned are the number of adults with less than a fifth grade education, the median school years completed by adults in each population group, and the median family income.

The statistical information is based on the United States Census of Population, 1960. Specific reference is made to two U.S. Bureau of the Census publications:

- U.S. Census of Population: 1960. General Social and Economic Characteristics, California. Final Report PC(1) 6C. Washington, D.C.: U.S. Department of Commerce, Bureau of the Census, 1962.
- U.S. Census of Population: 1960. Subject Reports. Persons of Spanish Surname. Final Report PC(2) 1B. Washington, D.C.: U.S. Department of Commerce, Bureau of the Census, 1963.

Data for Table IV were compiled from reports made by public school districts on projects conducted during the 1967-68 fiscal year under the provisions of Public Law 89-750 (Elementary and Secondary Education Amendments of 1966), Title III (Adult Education Act of 1966).

A brief explanation of the terminology and classifications used in the tables follows.

The Standard Metropolitan Statistical Area, or "SMSA." In order to permit all federal statistical agencies to utilize the same areas for the publication of general-purpose statistics, the Standard Metropolitan Statistical Area was established by the U.S. Bureau of the Budget in 1959. An SMSA is a county or group of contiguous counties that has at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the

Ā

county or counties having such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

Urban Places. "Urban places" as considered here are those places of urbanization with a population of 10,000 or more. The term "place" as used in the census report refers to a concentration of population, regardless of the existence of legally prescribed limits, powers, or functions. Most of the places listed are incorporated, however.

Nonwhite Population. The term "nonwhite" refers to races such as the Negro, American Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan. Persons of Mexican ancestry or birth who are not definitely of an Indian or other nonwhite race are classified as white.

Spanish-Surname Population. The Spanish-surname classification identifies a population with distinctive social and economic characteristics highly correlated with certain national origins. The population of the Spanish surname adults in California is heterogeneous in both its history and ethnic origin. It includes the Spanish-American group and also the Mexican-American group that consists of recent immigrants from Mexico and their dependents.

Median Family Income. In the statistics of family income, the combined incomes of all members of each family are treated as a single amount. The median income is the amount which divides the distribution into two equal groups, one half having incomes above the median, and one half having incomes below the median, with the median income based on the total number of families.

Median School Years Completed. The population group for which data are given includes only persons twenty-five years of age or older. The median number of school years completed is defined as the value that divides the population group into two equal groups, one half having completed more schooling and one half having completed less schooling than the median.

Functional Illiterates. In this publication adults twenty-five years of age or older who completed less than fifth grade are categorized as functional illiterates. The data include persons whose highest level of

education was the approximate equivalent of completion of fourth grade in a regular school in the American school system. Education may have been obtained in a foreign school or in this country in other than regular schools as well as in regular schools, public or private, denominational or nondenominational.

DATA OBJECTIVES

From the viewpoint of the State Department of Education, Bureau of Adult Education, information must be made available that will lend direction to programs of education for adults. Current programs of adult basic education must be evaluated in terms of the number and characteristics of people they are serving. The distribution of such programs geographically is also a concern, for although emphasis of federal subvention programs centers on urban areas, the state retains the responsibility for comprehensive education. The data also present implication for curriculum in educational programs for adults, based on ethnic and income level information. Local administrators must be aware of the makeup of the populations in their immediate areas and of the type of curricular patterns necessary to meet the needs of these populations.

Along with programs of education, a definite pattern of need with regard to teacher availability and teacher training is evidenced. The U.S. Office of Education and the National University Extension Association have sponsored adult basic education teacher training institutes nationally, one being conducted in California each summer. The Bureau of Adult Education also has conducted summer workshops as well as workshops held on weekends during the school year. Certainly, the population data, with an indication of need for program distribution, suggest geographic distribution of teacher training within the state.

The Bureau of Adult Education must continuously appraise programs for adults and must estimate and evaluate them in terms of the future of adult education in California. Long-range planning, as well as immediate program implementation, is an essential objective of these data.
