ABSTRACT

This report is part of an effort to develop a statewide comprehensive plan for higher education in South Dakota. The report consists of a preface, summary, introduction and three major parts. Part 1 is the Research Committee Report and includes a summary of educational offerings at the state's 15 public and private colleges and universities. Part 2, the General Consultant Report, makes a brief analysis of the curriculum data. Part 3 contains over 300 pages of appended information on curriculum offerings by field of study and subject and the curriculum evaluative instrument. (AF)

September, 1969

A report issued by the South Dakota Commission on Higher Education Facilities as the State Agency administering the Higher Education Facilities Comprehensive Planning Grant made through the United States Office of Education under Title I, Higher Education Facilities Act of 1963.

PREFACE

Under Section 3 of Public Law 89-752 of 1966, the United States Congress authorized the expenditure of federal monies for assisting states in developing statewide comprehensive facilities plans for future higher education planning. Consequently, in February, 1967, the South Dakota Commission on Higher Education Facilities (SDCHEF) was designated by the State Planning Agency as the State Agency to administer the Statewide Comprehensive Plan of Higher Education in South Dakota. On April 28, 1967, the Commission adopted and forwarded for approval to the United States Office of Education a draft of the "South Dakota Higher Education Facilities Comprehensive Planning Proposal and Grant Request." On June 5, 1967, the Office of Education approved the draft and provided a financial award to be used in carrying out comprehensive planning activities using a three-phase approach.

Following grant approval by the Office of Education, work was begun immediately upon developing an expanded plan for research completion. Several drafts for an organizational plan were reviewed and approved by South Dakota public and private college and university presidents, the Commission, and other interested groups and individuals. Consequently, in September, 1967, the "Organizational Plan for the Statewide Comprehensive Plan of Higher Education in South Dakota" was printed and given wide distribution. The "Organizational Plan" sets forth in detail the historical background of the research, the scope of the research, general and specific goals, areas and outlines of the research, organizational chart for plan conduction, research time and priorities, and possible use and value of the research. In general, the "Organizational Plan" has served as a blueprint and, therefore, has been carefully followed in the conduct of the study.

The "Organizational Plan" provided for the study to be conducted over a three-year period in three phases:

Phase I - System Development was completed on June 30, 1968. Included in the first-year phase was the development of definitions and standards pertaining to the research areas of faculties,

students, curriculum, facilities, and costs. Research committees, composed of faculty representatives from all South Dakota colleges and universities, prepared evaluative instruments in the five research areas. The evaluative instruments were tested in Pilot Projects at Yankton College and South Dakota State University to determine the reliability of the system. The evaluative instruments were then refined and adjusted based upon the results of the pilot projects.

Phase II - Data Gathering was accomplished by the end of fiscal year 1969. Demographic, economic, and social data, as well as the research areas of Phase I, were collected, audited, and programmed where possible for data processing.

Phase III - Data Analysis will be completed by the end of fiscal year 1970. An analysis of data has been performed revealing the current status of South Dakota higher education facilities, faculties, students, costs, and curriculum. Projections, where applicable, will be attempted in each area for short range and long range periods. In addition, data from research areas will be published into five volumes, each emphasizing the important research data affecting South Dakota higher education. Following publication of the five research areas, an on-going development of statewide comprehensive facilities planning will be attempted.

The Statewide Comprehensive Plan of Higher Education in South Dakota was conducted by the South Dakota Commission on Higher Education Facilities with the assistance of its staff and the following individuals, groups, and organizations:

State Advisory Committee in Higher Education Comprehensive Planning. The State Advisory Committee was a fifteen member group broadly representative of the people in South Dakota. The committee was composed of three private and three public higher education institution representatives, five representatives of the South Dakota Legislature, three representatives of business and industry, and one representative of vocational-technical institutions. The committee met periodically to offer advice and evaluate the needs of the state as a whole.

SDCHEF Research Staff. The SDCHEF Research Staff was primarily a communication

organ composed of five representatives with one representative chosen by the members of each of the five research committees. The major purpose of the SDCHEF Research Staff was to coordinate committee research to avoid duplicity and foster correlation of collected data.

Research Committees: Costs, Faculties, Curriculum, Students, and Facilities. The Research Committees were composed of five representatives in each group chosen by the Commission from a roster of names submitted by the presidents of all South Dakota colleges and universities. The Research Committees were responsible for identifying available resources of data, developing and gathering new resources of data collecting, developing questionnaires and report forms, and drafting preliminary research findings.

General Consultants. Educational consultants of national reputation and broad experience in the areas of costs, faculties, curriculum, students, and facilities were selected to serve as general consultants for the plan.

Special Consultants. Special Consultants were employed for research of a highly technical nature or to provide counsel and advice regarding analysis of data.

Advisory Facilities Inventory Board. An Advisory Facilities Inventory Board was created to evaluate the condition of all higher education physical facilities in the state. The board was composed of personnel familiar with state and local building codes, fire and other safety regulations, and who could perform an unbiased engineering evaluation of the buildings.

Governing Groups and Other Organizations. The Governor, the State Legislature, governing boards and presidents of colleges and universities, state agencies and

councils, the United States Office of Education, educational organizations, and other groups and individuals interested in South Dakota higher education were used as a sounding board, particularly as to the goals for higher education in South Dakota.

Basic to successful completion of the Statewide Comprehensive Plan of Higher Education in South Dakota has been the participation of all public and private colleges and universities in South Dakota. The seven public higher education institutions under the legal control of the South Dakota State Board of Regents and the eight private higher education institutions each under legal control of individual boards and trustees have cooperated fully in conducting the research. This joint cooperation hopefully will provide as complete a picture as possible of public and private South Dakota higher education.

The South Dakota Commission on Higher Education Facilities sincerely acknowledges the assistance and cooperation given by the governing boards, presidents, faculties, and administrative staffs of all higher education institutions in the state. Special recognition is given to members of the State Advisory Committee, Advisory Facilities Inventory Board, SDCHEF Research Staff and Research Committees. In addition, governmental and business contributions of the South Dakota Planning Agency; South Dakota Legislative Research Council; South Dakota Department of Public Instruction; United States Office of Education; American College Testing Program, Iowa City, Iowa; Spitznagel Partners, Inc., Sioux Falls; Computer Services, Inc., Sioux Falls; Business Research Bureau, University of South Dakota; and other groups and agencies are recognized. Also, particular recognition is extended to the five general consultants of national reputation and other special consultants who provided general and specific advice on research progress and individual research areas.

IV. DATA APPENDICES	49
Appendix A: Curriculum Offerings by Field of Study and Subject	51
Appendix B: Curriculum Evaluative Instrument	355

SUMMARY

Of the fifteen public and private colleges and universities in South Dakota, seven institutions offer an associate or terminal degree; thirteen institutions offer a baccalaureate degree; thirteen institutions offer teacher's certification; six institutions offer a masters degree; three institutions offer a doctors degree; eleven institutions offer summer school work; and ten institutions conduct extension courses.

Five of the four year colleges and universities offer associate or terminal work, and the two two-year colleges have this as their main endeavor. All thirteen four year colleges and universities offer work leading to the baccalaureate degree and teacher's certification. Six institutions lead academic endeavor to the masters degree. Three institutions offer work leading to the doctorate. Ten four-year institutions, and one two-year offer summer work. Ten four-year institutions offer extension work.

Duplication in and of itself may not be bad; it may be required to meet the needs of students and of the state.

Library Science is offered in all of the public teacher-preparation institutions except one; three of the private institutions have programs in library science also. Mathematics is a curriculum available at all of the institutions. Philosophy is offered as a subject area in all but two of the public institutions. Physical education is offered as a major program in all but one of the public institutions. Physical Science is offered as a program in all of the public and private institutions. The institutions which prepare teachers all have some type of psychology curriculum. The area of Social Science is a part of the program at all of the institutions. Physics as a course offering is taught by all but two institutions.

There are a number of areas where courses given in many institutions over the nation are not now offered in South Dakota public and private colleges and universities.

No specialized offerings are given leading to majors or concentrations in South Dakota

educational institutions in: Architecture, Advertising, Banking and Finance, Data Processing, Hotel and Restaurant Management, Insurance, Aeronautical Engineering, Electronic Engineering, Systems Engineering, Dentistry, Medicine, Veterinary Medicine, X-ray Technician Education, and Home-Interior Decoration.

There are a total of 276 different fields of study proposed through 1975-76 by all South Dakota institutions of higher education.

Of the 276 different fields of study proposed through 1975-76 by all South Dakota institutions of higher education, 155 undergraduate programs are proposed, 89 masters programs are proposed, and 32 doctorate programs are proposed.

Research, both contractual and departmental, is conducted by all but one of the public institutions and is conducted by two of the private colleges and universities.

Most of the contractual and departmental research conducted by the public institutions is done by the University of South Dakota, South Dakota State University, and the South Dakota School of Mines and Technology. Contractual and departmental research in the private institutions is conducted by Augustana College and Mount Marty College.

Public and private colleges and universities in South Dakota conduct extensive extension and public service programs.

All of the public institutions offer campus extension courses for credit. All of the public institutions but one offer off-campus instruction. All of the public institutions except one offer correspondence course offerings. Three of the private institutions offer campus extension courses, two for credit. One private institution offers off-campus extension courses. None of the private institutions offer a correspondence course program.

Curriculum decisions should be based on what is judged to be best for the citizens of South Dakota.

Curriculum plans should be determined by

reviewing a number of factors such as: The economic needs of the state; the extent of the demand in South Dakota for such training; the financial capacity to care for essential offerings and proposed new programs; the needs of the citizens of the state; the direction of growth and development in the state; whether or not such opportunities can be contracted with neighboring states or through regional programs; and other elements judged to be pertinent.

The establishment of role and scope for public and private higher education institutions in South Dakota should be based upon several factors.

In establishing the role and scope for the higher education institutions of South Dakota, several suggestions may be followed based on experiences in other states: Approach the task of assigning role and function to each institution as objectively as possible; lay careful and orderly plans for assigning

role and scope to insure a well rounded quality program; allocate functions to the several institutions on the basis of justified need; develop procedures for preparing asking budgets in a manner so that each institution will receive its fair allocation of funds appropriated keeping in mind variations necessary because of role and scope; be sufficiently flexible in the administering of role and function so that assignments among institutions may be made properly in response to the growth of the state, new industrial, agricultural, and economic developments, new knowledge, and other pertinent considerations; develop procedures for reviewing and evaluating proposed new programs before they are authorized and initiated; arrange for and finance a competent professional staff to work with the institutions in continuing studies which will provide essential data required for basic policy decisions; keep calm, cool, and collected.

All thirteen four year colleges and universities offer work leading to the baccalaureate degree, and teacher's certification. Six institutions lead academic endeavor to the master's degree.

Three institutions offer work leading to the doctorate.

Ten four year institutions, and one two year, offer summer work.

Ten four year institutions offer extension work.

INTRODUCTION

GENERAL COMMENTS:

South Dakota is not unique in its concern for problems in higher education. Throughout the country, from the largest to the smallest state, legislatures, educational groups, and laymen are expressing interest in finding better solutions to the myriad of dilemmas that currently engross institutions of higher education.

Although our problems in higher education are similar to those found in other states, there is a major distinction: The higher education problems in South Dakota are our problems which, if solutions are to be found encompassing the best interests of the state, we must utilize available South Dakota resources to solve them.

Recognizing that the first step toward solving any problem is planning, the state legislature, governing boards, educators, and the public alike are cognizant of the need for a systematic appraisal to obtain data essential to long-range planning. The importance of sound, state-wide planning to meet the needs of South Dakota is acknowledged by the Forty-first Session of the South Dakota Legislature in the following words:

... There is hereby acknowledged in the Office of the Governor, the State Planning Agency for the purpose of effectuating, directing and correlating the state and local planning activities in furtherance of the purposes of this Act. . . 'State Comprehensive Development Plan' means the plan or plans for the orderly and coordinated growth and development of the State. Such plan shall be based upon physical, social, cultural, economic, governmental and other data relating to state development, and shall include plans for natural resources, land use, and other related activities.

Specifically, as pertains to higher education in South Dakota and the law relating to the South Dakota Commission on Higher Education Facilities the Forty-first Session of the South Dakota Legislature further stated:

... The Governor is hereby authorized to designate said Commission as the state agency

within the state of South Dakota to prepare and submit state plans for public and private higher education institutions in South Dakota to the proper federal agencies for the purpose of participating under the federal Higher Education Facilities Act and any amendments thereto, and any other related federal actsThe Commission is hereby empowered to carry out the duties imposed in this actWhereas, this Act is necessary for the immediate support and preservation of the state government and its existing institutions, an emergency is hereby declared to exist and this Act shall be in full force and effect from and after its passage and approval.

The Statewide Comprehensive Plan of Higher Education in South Dakota has encompassed the seven state institutions of higher education and the eight private colleges and universities. Recognizing the importance of assisting all colleges and universities, both public and private, the United States Congress stated in its Declaration of Policy for the Higher Education Facilities Act of 1963:

The Congress hereby finds that the security and welfare of the United States require that this and future generations of American youth be assured ample opportunity for the fullest development of their intellectual capacities, and that this opportunity will be jeopardized unless the Nation's colleges and universities are encouraged and assisted in their efforts to accommodate rapidly growing numbers of youth who aspire to a higher education. The Congress further finds and declares that these needs are so great and these steps so urgent that it is incumbent upon the Nation to take positive and immediate action to meet these needs through assistance to institutions of higher education, including graduate and under-graduate institutions, junior and community colleges, and technical institutes, in providing certain academic facilities.

The South Dakota Commission on Higher Education Facilities, as prescribed by both federal and state law, assists all institutions of higher education in South Dakota. It is the belief of the

Commission that this assistance and responsiveness to all institutions is the only proper course which can be followed in the development of a comprehensive plan for South Dakota higher education. For institutions of higher education in our state have one common basic goal: *To provide the best possible education for students in South Dakota.*

It is gratifying to the South Dakota Commission on Higher Education Facilities that all fifteen public and private institutions of higher education in South Dakota consented to participate in the development of the statewide comprehensive plan. Such complete interest in the research is particularly noteworthy since research conduction was carried out with the on-going program of each college and university. Recognizing the current burden of the institutions, the Commission has made every effort to gather

PROCEDURES:

The general procedures which were followed in conducting the Statewide Comprehensive Plan of Higher Education in South Dakota are reported in detail in the Commission publication "Organizational Plan." Data basic to this particular research study were gathered, compiled, and analyzed in the following manner:

Activities for the Statewide Comprehensive Plan officially began with an orientation workshop conducted at Sioux Falls College on October 27 and 28, 1967. The meeting was conducted for the purpose of explaining the

data and use institutional personnel in such a manner as to minimize the amount of time and work required of individual faculty and staff members.

SCOPE OF THE REPORT:

This report presents narrative and statistical data that emerged from the research study of Curriculum and South Dakota Higher Education. It is concerned with an analysis of the most significant characteristics of Curriculum in South Dakota colleges and universities and related data.

This research includes data on the seven state controlled colleges and universities and the eight privately controlled higher education institutions. A listing of the participating institutions, geographical location, and institutional abbreviations commonly used follows:

Sioux Falls, South Dakota
Spearfish, South Dakota
Mitchell, South Dakota
Freeman, South Dakota
Madison, South Dakota
Huron, South Dakota

 November 8, 1968.....Mitchell, South Dakota
 November 8, 1968.....Huron, South Dakota

The foregoing meetings are not all inclusive of the work involved in developing this publication. Written and telephone communications have been voluminous. Individual and small informal meetings and conversations have been numerous.

Phase One, System Development may have been the most difficult part of the research. Beyond the major task of forming the committees and advisory groups, there was the difficulty of cohesion of purpose while maintaining research area identity. This problem was resolved through the efforts of the five research committee chairmen coordinating activities on the SDCHEF Research Staff. Phase One also encompassed the development of the evaluative instruments, the questionnaires with which much heretofore uncollected data was gathered. The eventual success in devising adequate evaluative instruments was directly related to two major facts: (1) A personal visitation was made by the research staff to every South Dakota college and university campus in July, 1967, to visit personally with presidents and staffs in order to get advice on what questions should be asked and what answers were necessary for assisting the various governing boards at arriving at meaningful decisions, and (2) pilot projects were conducted at one public and one

private South Dakota higher education institution during June, 1968, to test the reliability and validity of the evaluative instruments. Thus, in asking for the "right" information and testing uniform definitions, terminology, general format, and organization, the instruments were further refined.

Phase Two - Data Gathering was begun with major meetings of all research committees and general consultants in September, 1968, called for the purpose of finalizing the evaluative instruments prior to data gathering at the institutions. In November, 1968, the Comprehensive Planning Coordinator again visited all public and private South Dakota colleges and universities for the purpose of personally explaining the evaluative instruments to presidents, institution data gathering coordinators, key administrators, and faculty representatives. Beyond increased efficiency in gathering data, the success of these personal meetings is evidenced by the fact that all institutions returned the complete package of evaluative instruments before the established deadline.

The new year, 1969, was ushered in with a mountain of completed data returned by the institutions. Upon receipt, the research staff began

the major task of reviewing data to check conformity with definitions and instructions; follow up, where necessary to obtain missing data or correct errors with institution data gathering coordinators; compilation of raw data into raw tables and figures for research committee review; and transformation of raw data into professional summaries, tables and figures.

After the data had been assimilated into meaningful form, work was begun on the drafting of a narrative analysis by the research committees and general consultants.

Prior to the writing of the narrative analysis, the Comprehensive Planning Coordinator met with the research committees and the general consultants to discuss the manner in which research data would be presented. It was decided that each publication should contain a summary page of the most significant research information followed by separate narrative analysis by the research committees and general consultants. It was the opinion of the committees and consultants that this method of presentation would allow independently made comparisons of the research data through the views of South Dakotans involved in higher education in the state and non-South Dakotans with a national perspective of higher education. Thus, the total narrative analysis, taken together, may contain areas of agreement, disagreement and interpretation by committees and consultants on the meaning of research data. Obviously, where there is significant disagreement on the interpretation of research data, further study should be conducted to determine the nature of the problem.

During May and June, 1969, the research staff, committees, and general consultants drafted the narrative that was to supplement the tabular and graphic data for the reports.

Prior to final publication, the State Advisory Committee, institutional presidents and staffs, and the Commission reviewed the research data and narrative. Following this review and the incorporation of suggestions for improvement of the publications, the months of July, August, and September were devoted to publication details.

LIMITATIONS:

This report on Curriculum and South Dakota

Higher Education does not include all of the items as originally set forth in Area IV of the "Organizational Plan." In certain instances it became obvious during the research that some items were not necessary or could not be adequately obtained at this time. However, most of the items originally intended for the research have been included.

This report does not include narrative or an explanation of all data presented. In certain cases, the data speaks for itself. In other instances, since it was not the role of the committees or consultants to make recommendations, little could be said without infringing upon the legal prerogative of the governing bodies to interpret data in the light of their responsibilities. Certain data presented could not be commented upon until a greater period of time had passed. In other words, what may appear to be a fact at this time can only be proven with further research or follow up in the future.

Occasionally, there may be missing data on certain items presented. Every attempt was made to get complete information on every item from all institutions. However, there were instances where historical or current information was not available. Missing data in this report has been clearly indicated. Fortunately, such missing data is minimal and, therefore, has not had an appreciable effect on data analysis.

Little emphasis has been placed on presenting comparisons of data on South Dakota institutions and national statistics. Such comparisons have been minimized due to the difficulty of correlating definitions and terms with conflicting and nebulous national terminology. The committees have been satisfied with the fact that it has been possible to standardize most educational areas within the state of South Dakota. Such standardization of terms and definitions have been patterned, where possible, with similar work of the United States Office of Education. Unfortunately, however, until all national education organizations similarly adjust to Office of Education classifications and definitions, there will continue to exist ambiguous and multiple standards of data comparison.

Perhaps the greatest limitation of this study has

been time, money and personnel. Certainly, this could be said of any research project. But, even though three years were allocated for the research, a federal grant was obtained to finance the study, and excellent faculty members and general consultants participated in the research, the mass of important data collected clearly indicates how much more could be learned about higher education in South Dakota if greater resources were available.

SOURCE OF DATA:

The great majority of the information presented in this report was obtained from the following sources: (1) Reports in the files of the South Dakota Commission on Higher Education Facilities; (2) Reports in the files of the South Dakota State Board of Regents; (3) Data from state governmental agencies; (4) Data from the evaluative instruments which, in turn, were supplied by the institutions; (5) Data obtained through research in cooperation with the business and educational research corporations; (6) Data presented by the general consultants and special consultants; (7) Data obtained from the United States Office of Education; and (8) Data submitted by individual faculty members at public and private South Dakota colleges and universities.

CONCLUSION:

This project for the development of a Statewide Comprehensive Plan of Higher

Education in South Dakota was initiated with great enthusiasm and high expectations. The Higher Education Facilities Commission believes that higher education and the state of South Dakota can derive valuable benefits from the research data presented in this report.

The value of the Statewide Comprehensive Plan of Higher Education in South Dakota, beyond fostering cooperation, providing information, and management instruments for private and public institutions will be determined by what subsequently happens regarding the improvement of South Dakota higher education. The efforts of the Higher Education Facilities Commission in compiling and analyzing quantitative data on factors which affect quality education will be completed by the conclusions drawn and actions taken by the appropriate private and public boards, agencies, legislature, and the colleges and universities themselves. Thus, valuable information obtained from the statewide comprehensive plan can be the vehicle used for designing and implementing programs to meet the major problems and challenges of South Dakota Higher Education. To this end it is the hope of the South Dakota Higher Education Facilities Commission that statewide comprehensive planning will become a continuous on-going process through a cooperative partnership of all public and private colleges in South Dakota.

Internal and External Duplication

Instruction Programs:

A law degree is offered by the University of South Dakota.

Linguistics is proposed as a new offering at the University of South Dakota and at Northern State College.

Library Science is offered in all of the public teacher-preparation institutions except one; three of the private institutions have programs in library science also.

Mathematics is a curriculum available at all of the institutions. A master's degree is offered or proposed to be offered in five of the public institutions. None of the private institutions offer work beyond the bachelor's degree in mathematics.

Philosophy is listed as a subject area in all but two of the public institutions.

Physical Education is offered as a major program in all except one of the public institutions — that being the School of Mines and Technology.

Physical Science is a commonly occurring subject area being that all of the institutions offer some type of physical science. Geology is offered only at the University of South Dakota and South Dakota School of Mines and Technology. Physics as a subject appears as a course offering in all of the institutions except Mount Marty College and Presentation College. Other more advanced areas of Physical Science are limited to the two universities and the School of Mines.

Psychology is offered to the doctorate level at the University of South Dakota. The institutions which prepare teachers all have some type of psychology curriculum. Specializations appear to be limited to the University, South Dakota State, and Northern State College.

Religion is proposed as an area of study at South Dakota State University and at the University of South Dakota. It is part of the requirements in all of the private institutions.

The area of Social Science is a part of the program of all the institutions. The highly specialized areas appear to be limited to the two universities. Economics, history, political science, and sociology are course areas offered in all of the institutions except the two-year colleges. The specializations again are limited to the two universities.

Trade and industrial training is concentrated at Southern State College.

Distributive education is proposed at Northern State College. Industrial arts education is offered at Northern, Southern, Black Hills, and General Beadle. The other institutions do not teach industrial arts education.

Drivers education is proposed as a bachelor's degree program at South Dakota State University and Southern State College.

Research:

Appendix A contains a complete account of all research both contractual and departmental for the public and private institutions of higher education in South Dakota.

In the public institutions, most of the research—both contractual and departmental—is reported by the University of South Dakota, South Dakota State University, and South Dakota School of Mines and Technology. Some research, contractual or departmental, was reported by Southern State College, General Beadle State College, and Black Hills State College. No research was reported by Northern State College.

In the private institutions, research—both contractual and departmental—was reported by Augustana College and Mount Marty College. No research was reported by Huron College, Sioux Falls College, Dakota Wesleyan University, Yankton College, Freeman College, or Presentation College.

Extension and Public Service Programs:

Appendix A contains a complete account of all extension and public service programs for both the public and private institutions of higher education in South Dakota.

All of the public institutions reported campus

extension courses for credit; however, all except the South Dakota School of Mines and Technology reported off-campus instruction. Only two institutions, the University of South Dakota and South Dakota State University reported extension courses offered for no credit.

All of the state institutions except General Beadle State College and South Dakota School of Mines and Technology reported correspondence course offerings.

None of the private institutions reported a correspondence course program.

Summer School Programs:

All of the state institutions except South Dakota School of Mines and Technology reported a summer school offering.

Among the private institutions an extension

offering was reported by Augustana College, Huron College, and Mount Marty College with credit indicated by Huron and Mount Marty. Huron reported the only off-campus extension program for the private institutions. A non-credit campus extension offering was reported by Mount Marty.

The private institutions which reported a summer program included Augustana College, Huron College, Sioux Falls College, Mount Marty College, and Freeman College.

Trends in Expansion:

Appendix A contains a complete account of trends in expansion to include projections for the public and private institutions of higher education through the 1975-76 academic year. The table reports the number of different fields of study proposed by the different institutions, public and private, and the academic level of the proposal.

Different Fields of Study
All South Dakota Institutions of Higher Education
Proposed Through 1975-76

Institution	Undergraduate	Graduate (Masters)	Graduate (Doctorate)
University of South Dakota	24	28	14
South Dakota State University	16	16	11
Northern State College	15	13	2
Southern State College	10	1	0
Black Hills State College	6	6	1

GENERAL COMMENTS:

Dr. J. B. Culpepper
Vice President for Administrative Affairs
Texas Women's University
Denton, Texas

Formerly Chancellor
State University System of Florida
Office of the Board of Regents
Tallahassee, Florida

The purpose of the study by the SDCHEF Curriculum Committee was to determine the scope of opportunities in higher education in South Dakota both public and private. This has been accomplished. We now know what students may obtain in formal study in colleges and degree granting institutions of South Dakota. These offerings have been classified after a comprehensive review and the Curriculum Committee in its report has shown the program of the institutions as to courses and activities in:

- Associate or terminal degrees
- Bachelor's degrees
- Master's degrees
- Six year degrees (Specialists)
- Doctoral degrees
- Proposed offerings to be initiated by 1975-76
- Extension courses
- Continuing education
- Research activities

Having completed this task, the Committee or some designated group or individual needs to point up where there is unnecessary duplication on the one hand, or no offering in essential areas on the other.

Duplication in and of itself may not be bad; it may be required to meet the needs of students and of the state. For example, the shortage of qualified teachers is such that each degree granting institution in the state should offer teacher education courses leading to certification although not necessarily in each area of concentration. As illustration, the need for qualified social studies teachers in South Dakota may not be so great as to warrant each degree granting college offering courses in social studies education. Careful examination can reveal the extent of this need. Then it must be determined which of the

institutions will offer courses in social studies education so as to avoid needless duplication. The same evaluation needs to be made in elementary education, secondary teaching, counseling and guidance, as well as in all individual offerings leading to subject certification. In this manner, unnecessary duplication in courses in education or in any other areas of specialization such as journalism and library science can be eliminated. The savings effected will then, at least in part, provide for courses where duplication is needed or for the offering of courses needed but not now offered in the colleges of South Dakota.

Every area of specialization should be critically evaluated with resulting elimination of unnecessary duplication. To accomplish this, the studies must be made objectively and with the determination to meet justified needs without regard to pressures by special interests within or outside the institutions.

ANALYSIS OF CURRICULUM DATA

Review of the compilations of the Committee as to course offerings shows a number of areas where courses given in many institutions over the nation are not now offered in South Dakota. According to the study, no specialized offerings are given leading to majors or concentrations in South Dakota higher educational institutions in:

- Architecture
- Advertising
- Banking and Finance
- Data Processing
- Hotel and Restaurant Management
- Insurance
- Aeronautical Engineering
- Electronic Engineering
- Systems Engineering
- Dentistry
- Medicine
- Veterinary Medicine
- X-ray Technician Education
- Home - Interior Decoration

There may or may not be justification for authorizing and encouraging selected institutions in South Dakota to develop such courses.

The fact that these and other offerings are not

given in South Dakota does not necessarily indicate inadequacy. Whether or not careful plans should be made for giving such programs in one or more selected institutions can be determined by reviewing a number of factors such as:

- The economic needs of the state
- The extent of the demand in South Dakota for such training
- The financial capacity to care for essential offerings and proposed new programs
- The needs of the citizens of the state
- The direction of growth and development in the state
- Whether or not such opportunities can be contracted with neighboring states or through regional programs
- Other elements judged to be pertinent

Having reviewed the educational needs of the state in relation to the scope of opportunities now available, it then will be relatively easy for the governing bodies having responsibility in the public institutions to arrive at what should be the role and scope of each institution. In making these determinations, it is to be hoped that the trustees and others of the private institutions will be involved so that the private sector in higher education may also benefit by providing them specific and unique areas of service which are not duplicative of the public institutions. Both public and private institutions working cooperatively can agree on role and function for each institution so that each makes its own contribution. Under this pattern then, no institution may provide all elements in higher education for all people. Such cooperative action is not always easy but the benefits to citizens of the state and the improvement in the efficiency of operation which will lead to better programs of education based on justified need makes it eminently worth the effort.

In establishing the role and scope for the higher educational institutions of South Dakota, several suggestions based on experiences in other states may be in order:

1. Approach the task of assigning role and function to each institution as objectively as possible. Avoid special interests and

political considerations unless they are shown to be educationally sound and for the best interests of the citizens of South Dakota.

2. Lay careful and orderly plans for assigning role and scope to institutions so that the state may have a well rounded quality program of higher education as efficiently and economically as possible.
3. Allocate functions to the several institutions on the basis of justified need.
4. Develop procedures for preparing asking budgets in a manner so that each institution will receive its fair allocation of funds appropriated keeping in mind variations necessary because of role and scope. As illustration, a medical education program will require more funds per capita than is true of teacher education or business education; engineering education is more costly than liberal arts education; etc.
5. Be sufficiently flexible in the administering of role and function so that assignments among institutions may be made properly in response to the growth of the state; new industrial, agricultural, and economic developments; new knowledge and other pertinent considerations. As needs in education change, so should role and scope.
6. Develop procedures for reviewing and evaluating proposed new programs before they are authorized and initiated. Evaluation of all offerings from time to time is desirable.
7. Arrange for and finance a competent professional staff to work with the institutions in continuing studies which will provide essential data required for basic policy decisions. Among such continuing studies will be enrollment projections, faculty load, space utilization, demographic developments, economic trends, etc.
8. Keep calm, cool, and collected. Avoid emotional clashes. Recognize the value of patience. *Above all, make decisions based on what is judged to be the best for the citizens of South Dakota.*

OFFICE OF EXECUTIVE SECRETARY

PIERRE, SOUTH DAKOTA 57501

STATE CAPITOL BUILDING

STATEWIDE COMPREHENSIVE PLAN OF HIGHER EDUCATION IN SOUTH DAKOTA

EDUCATIONAL OFFERINGS

1968-69

EXPLANATIONS AND INSTRUCTIONS

COMPLETION INFORMATION:

A. RESPONDENT: This form is to be completed by the President or such person or persons designated by him. If you need additional clarification on any of the items, please contact your institution Project Coordinator or call Dr. L. A. Clarke, Chairman, 622-2524, Northern State College, Aberdeen.

B. NAME OF INSTITUTION: _____

C. NAME AND TITLE OF RESPONDENT: _____
NAME

_____ TITLE

D. DATE COMPLETED: _____

GENERAL INSTRUCTIONS:

A. TIME PERIODS COVERED: Information requested is for the 1968-69 academic year for all areas except the summer offering which is to have 1968 as the period to be reported.

APPENDIX B: CURRICULUM EVALUATIVE INSTRUMENT

- B. **SCOPE AND PURPOSE IS TO:** (1) conduct exhaustive research of the educational offerings in the seven state and the eight private institutions of higher education in South Dakota; (2) identify their proposed educational offerings; and (3) develop a source of data for continuing curricular research.
- C. **NEED FOR ESTIMATES:** If there is nothing to report, leave the item blank.

SPECIFIC INSTRUCTIONS:

- A. If a further explanation is necessary to describe the institutional offering or listing of courses, additions are to be included at the bottom of each page.
- B. Numbers of persons completing programs need not be reported.
- C. Proposed educational offerings are to be reported by years through the 1975-1976 academic year. Curriculum projects through 1980-1981 and through 1990-1991 are to be described on the last page of the instrument.

DEFINITIONS:

- A. A Field of Study is an offering specifically described in the College Catalog.
- B. Proposed programs are those planned or projected through 1975-1976, even though not presently authorized.
- C. Extension and continuing education courses are those offered outside the regular class schedule.
- D. Teacher certification refers to a four-year baccalaureate program.
- E. Research: Contractual research - supported by outside funds.
Departmental research - sponsored by a department.
- F. Summer offering is interpreted to include courses provided during the summer session and does not imply that a major or minor could be completed by attending the summer sessions exclusively.

CURRICULUM RESEARCH COMMITTEE

A. The following members of the Curriculum Research Committee wish to express their appreciation for your assistance in completing this important form of the Statewide Comprehensive Plan.

B. Curriculum Research Committee

1. Dr. L. A. Clarke, Chairman, Dean of the College, Northern State College
2. Dr. Dale Hanke, Dean, General Beadle State College
3. Sister M. Jeanette Klimisch, Academic Dean, Mount Marty College
4. Dr. Maynard Berk, Chairman of the Music Department, Sioux Falls College
5. Dr. Robert Strong, Dean of the College, Southern State College
6. Dr. J. B. Culpepper, General Consultant, Texas Woman's University

This research for information includes projections through 1980-1981 and 1990-1991. It is recognized that future curriculum developments normally emerge from existing and on-going programs, and thus it is essential that planning be a continuous process. Such continuous planning insures expansion on the basis of need and building strength on strength. Long range projections can only be stated in general and it is understood that as new knowledge develops modification will be necessary. Under these circumstances, please summarize your plans through the years indicated below.

1. Projections through 1981.
2. Projections through 1991.
