ABSTRACT

This 16th annual national survey of public elementary and secondary school statistics presents data as of fall 1969 for each State, the District of Columbia, 14 of the nation's 15 largest cities, and several outlying areas, including American Samoa, the Canal Zone, Guam, Puerto Rico, and the Virgin Islands. Summaries of trends are presented with the compendium of tables which constitutes the main body of the report. The survey covers basic data on the number of local school districts, pupils, high school graduates, teachers, and instruction rooms in public elementary and secondary day schools. The survey itemizes estimated school expenditures by major purpose, average salaries of instructional staff and classroom teachers, and average daily attendance. Data were furnished by State education agencies on two report forms, samples of which are appended. (DE)

FOREWORD

The 16th annual fall survey of public elementary and secondary day schools is part of the regular U.S. Office of Education program to collect and disseminate timely and useful information about the largest segment of the educational system in the United States. The survey provides current data on the number of local school districts, enrollment by grade, high school graduates, teachers, instruction rooms, estimated expenditures, and average salaries of the staff. These data are given for each State and outlying area and for 15 of the largest cities.

The U.S. Office of Education is indebted to the State education agency officials, listed below, who were responsible for supplying the data for this survey:

Alabama	W. H. Kimbrough, Director, Division of Administra- tion and Finance

12—Estimated expenditures for public elementary and secondary day schools, by major purpose, current expenditure per pupil, and average annual salary of instructional staff members and classroom teachers, by region, State and other areas: 1969-70	27

NATURE AND CONDUCT OF THE SURVEY

In cooperation with State education agencies, the U.S. Office of Education presents its 16th annual report in the fall statistics series on public schools. This survey collects basic data on the number of local school districts, and the numbers of pupils, high school graduates, teachers, and instruction rooms in public elementary and secondary day schools. In the fall of 1964, the survey was expanded to include estimated school expenditures by major purpose, average salaries of instructional staff and classroom teachers, and estimated average daily attendance and average daily membership.

To the fullest extent available, data are shown for each of the 50 States, the District of Columbia, and five outlying areas. The outlying areas are American Samoa, the Canal Zone, Guam, Puerto Rico, and the Virgin Islands. Although the Department of Defense schools operated overseas for minor dependents of military and civilian personnel, and the Trust Territory of the Pacific Islands were in the survey, data for these two areas were not received in time to be included in this report. Most of these data are also provided for 141 of the 15 cities which ranked highest in total population in the 1960 census. City data appear at the end of the State listing in the appropriate tables. Data for Washington, D.C., are shown both in the State listing as one of the 51 jurisdictions comprising the total for the United States and also with the large cities to facilitate intercity comparisons.

Totals for the United States include data for the 50 States and the District of Columbia. Data for the outlying areas are shown separately and are not included in the national totals. National and State totals for fall 1968 are provided in this report for comparisons. Some of the data differ from those originally published in the fall 1968 report because more complete data became available after that report was issued.

11969 data were not received from Detroit in time for inclusion in this report.

The data in this report were furnished by the State education agencies on two report forms designed by the U.S. Office of Education. One of the forms pertains to pupil membership, teachers, and schoolhousing, and the other contains estimated data on expenditures, average salaries, average daily attendance, and average daily membership. (See appendix for a facsimile of these forms.)

Each State report was reviewed for internal consistency and for comparability with information received in previous surveys, State publications, and related U.S. Office of Education studies. Letters and telephone calls were used to obtain data from respondents and to resolve outstanding questions.

As in any survey that employs the mail questionnaire, latitude for interpretation of instructions and directions by respondents may exist. Because public elementary and secondary education is a State and local responsibility, any statistical total for the Nation as a whole is necessarily a composite of the heterogeneous educational practices existing in the United States. The use of a standard form and definitions in collecting the data tends to minimize these variations. To the extent that State deviations from prescribed definitions and instructions are known, they are indicated in the footnotes to the various tables.

The U.S. Office of Education encourages each State to obtain the data for its report by conducting a fall survey of local school districts and by using an adaptation of the Federal form and accompanying instructions. Some State education agencies find this approach impractical for a variety of reasons; i.e., funds and staff may not be presently available for conducting the survey, or similar data for a recent period may already be available at the State level. Although most of the States used adaptations of the Federal report form, some of them collected the data in regular end-of-year annual reports, and a few submitted estimates based primarily on records. Financial

estimates for 1969-70 were prepared in the State offices generally without recourse to survey efforts. However, State appropriations and budgets filed by local school districts often serve as bases for these estimates.

LOCAL SCHOOL DISTRICTS

As a result of reorganization laws, the consolidation of small districts, and the elimination of nonoperating school districts, the number of school districts (local basic administrative units) continued its steady decline. The number of school districts decreased from 20,440 in the fall of 1968 to 19,169 in the fall of 1969, down 6 percent. From fall 1965 to fall 1969, the number of local basic administrative units has decreased more than 29 percent (table 1). The decrease of 999 districts in the Great Lakes and Plains region accounted for 78.6 percent of the total national decrease in number of administrative units between fall 1968 and fall 1969.

Four States having more than 1,000 school districts each (California, Illinois, Nebraska, and Texas) account for 27.9 percent of all the school districts in the Nation (table 2).

Of the 19,169 districts existing in the fall of 1969, the number performing their prescribed function by operating public schools was 18,224, or 95.1 percent of all districts. The other districts did not operate schools but sent their pupils to nearby operating districts on a tuition basis.

CLASSROOM TEACHERS

Full-time and part-time classroom teachers

In the fall of 1969, there were 2 million full-time and part-time public elementary and secondary school teachers (table 3). This total represented an increase of 77,500, or 4 percent over the number in the fall of 1968. Since 1965, the total number of classroom teachers has increased 17.7 percent. The reported number of part-time teachers

accounted for approximately 1 percent of the total number of teachers in the fall of 1969.

The annual increase in the number of secondary teachers was relatively greater than that for elementary teachers (5.3 percent compared with 3.0 percent).

Teachers with less than standard certificates

Because of the shortage of fully qualified teachers, the States have permitted the employment of teachers who do not have all the qualifications necessary to obtain regular teaching certificates. The emergency certificates issued to these teachers are usually for a period shorter than that for regular certificates. Many of these provisionally employed teachers are working toward standard certificates.

In the fall of 1969, there were an estimated 100,000 full-time teachers with less than standard certificates (table 4). These teachers constituted 5 percent of the total teaching staff in 1969, as compared with 5.6 percent a year earlier. Analysis of the data by organizational level indicates that the proportion of elementary teachers with substandard certificates was 5.1 percent, as compared to 4.8 percent of the secondary teachers. On the basis of 25 pupils per teacher in elementary schools and 20 in secondary schools, it is estimated that over 2.3 million pupils are being taught by teachers with less than standard certificates.

Some of these teachers meet the general education requirements of their respective States but may lack one or more of the care State-prescribed requirements. Although most States require at least a bachelor's degree to obtain a regular teaching certificate at both the elementary and the secondary levels, there is considerable variation in the other requirements. For this reason, the data on the number of teachers with substandard certificates are useful in calling attention to the situation in individual States but do not readily permit significant interstate comparisons. Since the current requirements relate to the issuing of new certificates, teachers who obtained regular certificates when the requirements were

lower are not considered as holding substandard certificates.

It should be noted that the total number of teachers with substandard certificates does not represent the so-called "teacher shortage." To arrive at the size of the teacher shortage, the number of teachers needed to reduce class size, eliminate multiple sessions, fill vacant positions, and expand and improve educational services would also have to be included.

PUPILS

Population growth²

From October 1, 1968, to October 1, 1969, the estimated school-age population (ages 5–17 years, inclusive) rose from 52,426,000 to 52,859,000, an increase of .8 percent. During this period, the estimated total resident population increased from 200,449,000 to 202,540,000 persons, or 1 percent. The total school-age population represents a little more than one-fourth of the total population.

Enrollment

A record 45.6 million pupils were enrolled in full-time public elementary and secondary day schools in the fall of 1969, an increase of 675,000, or 1.5 percent over the fall of 1968 (table 5).

Changes in enrollment among the States varied considerably. Enrollment increases from 1968 to 1969 ranged from less than I percent in 11 States and the District of Columbia to 4 percent or more in five States. Enrollment decreases of 2 percent or less were recorded in nine States (in two of the four regions) (table 5).

Even though total enrollment for the elementary and secondary levels combined has constantly increased in recent years, the relative distribution between levels has been changing. The percent of total enrollment in elementary schools has been decreasing while the percent of total enrollment in secondary schools has been increasing.

Table 5 gives enrollment by organizational

²Data from U.S. Bureau of the Census.

level of the school. Grades 7 and 8 were reported either in the elementary or secondary level depending upon the organization of the school of which they were a part.

Table 5 also includes estimated 1969-70 data for average daily membership (ADM) and average daily attendance (ADA). Estimated ADM for the school year accounts for 98 percent of the total number of pupils enrolled in the fall, and ADA is 94.6 percent of ADM. Because there are State variations in computing attendance data, the ratios of ADA to fall enrollment are not strictly comparable between the States.

Table 6 gives enrollment by grade arranged within the traditional grade groups of kindergarten through grade 8 and grades 9 through 12.

Enrollment in grades 7 and 8 by organizational level

In the fall of 1962, the Office of Education began to collect enrollment data by grade as well as by organizational level. Most States have been able to report the numbers of seventh- and eighth-grade pupils by the types of schools they attend — elementary or secondary. In the fall 1969 survey, 34 States were able to furnish such information (table 7). This group of States, representing 59.8 percent of the Nation's total enrollment, reported that 66.5 percent of their seventh-graders and 70.4 percent of their eighth-graders were in secondary schools.

PUPIL--TEACHER RATIO

In recent years the teaching staff has been growing at a slightly higher rate than enrollment. Consequently, the pupil-teacher ratio for the Nation has decreased from 24.7 pupils per teacher in 1965 to 22.7 in 1969 (table 1). However, at the national level, and even at the State level, pupil-teacher ratios have only limited value and should be used with caution.

The average number of pupils per classroom teacher, often used as a measure of teacher workload, is not a valid measure of average class size. Furthermore, pupilteacher ratios do not reflect the educational services provided in varying degrees by staff outside the classroom. The ratios shown in table 8 serve only as rough guidelines in studying the State—by—State situation, and more detailed information on other aspects of this problem would be needed in order to make valid judgments.

PUPILS ON CURTAILED SESSIONS

Data on the number of pupils attending school for less than a full or normal school day include pupils on so-called "half-day sessions," "curtailed sessions," "double shifts," or "reduced time." Extended sessions are not considered as curtailed sessions when students attend for a full day with some overlapping of the sessions. In reporting data on kindergartens, where the half-day session is considered the normal school day, the count includes only pupils on triple shifts.

In the fall of 1969, 28 States reported a total of 386,000 pupils on curtailed sessions, of which '7.1 percent were in elementary schools and 32.9 percent in secondary schools. Seventeen States and the District of Columbia reported no pupils on curtailed sessions, and data were not available for the 5 remaining States (table 9).

The use of curtailed sessions is only one of several expedients adopted by school administrators who are faced with the condition of having more pupils than the available classrooms can accommodate. They usually cope with the problem by the use of overcrowded classrooms, improvised or makeshift facilities, obsolete facilities, and/or rented quarters. Together, these various categories of expedients would be more indicative of the need for additional classrooms than is the number of pupils on curtailed sessions.

HIGH SCHOOL GRADUATES

A record 2.5 million public high school graduates were reported for the 1968-69 school year, a gain of 128,000 or 5.3 percent over the prior year (table 10).

The girls who were graduated from high school in 1968-69 represent 50.2 percent of the total number graduated; boys accounted for 49.8 percent. This distributional pattern has been rather constant over a period of years with only minor fluctuations.

The increasing retention rate of public high schools is indicated by the improvement taking place during the most recent 5-year period. The high school graduates in 1968-69 represented 78.5 percent of the class that entered the ninth grade in the fall of 1965. Five years earlier, the 1963-64 high school graduates represented 73 percent of the fall 1960 ninth-grade class. States reported 41,000 graduates from all other public school programs (e.g., evening schools and adult educational programs) and a total of 122,000 persons receiving high school equivalency certificates.

INSTRUCTION ROOMS

Instruction rooms completed during 1968-69

The number of instruction rooms completed during the school year includes not only newly constructed rooms but also rooms converted from other uses to instructional purposes. During the 1968-69 school year, 69,700 instruction rooms were completed, a decrease of 5,700 from the 75,400 completed in the previous year (table 1).

Instruction rooms abandoned during 1968-69

The States reported that 18,300 instruction rooms were abandoned during the 1968-69 school year — 1,100 less than in the preceding year (table 1). Included in the number of rooms abandoned are those destroyed by fire, earthquake, tornado, urban redevelopment, and other causes, as well as rooms converted from instructional purposes to other uses. The abandonment of rooms also reflects the elimination of unsafe or obsolete structures and the closing of schools as a result of school and school district reorganization and consolidation.

Instruction rooms available, fall 1969

The States reported a total of 1,836,000 publicly owned instruction rooms available and in use at the beginning of the 1969-70 school year, an increase of 71,000 over the number in the preceding year (table 1).

Based on the average national pupil-room ratio, an additional 7,800 classrooms are needed to house the pupils reported on curtailed sessions.

ESTIMATED EXPENDITURE AND SALARY DATA, 1969-70

Total expenditures

Estimated total expenditures for all public school purposes in 1969-70 amount to \$40.6 billion. Included in the grand total are current expenditures for elementary and secondary day schools (\$33.1 billion) and for other programs (\$1.4 billion); capital outlay (\$4.9 billion); and payments of interest on debt (\$1.2 billion). Debt retirement is not included since it would be a duplication of expenditures made and reported in prior years.

Current expenditure per pupil in ADA and ADM

The estimated average annual current expenditure per pupil in average daily attendance (ADA) for 1969-70 is \$783. Based on average daily membership (ADM), the estimated amount is \$741.

Average salary of classroom teachers and instructional staff

The estimated average annual salary of classroom teachers in 1969-70 is \$8,520. An analysis of average salaries by State indicates that wide differences exist among the States, with State averages ranging from \$5,870 to \$10,660. In 14 States and the District of Columbia the average annual salary for classroom teachers is \$9,000 or over; in 11 States, between \$8,000 and \$8,999; in 17

States, between \$7,000 and \$7,999; in seven States, between \$6,000 and \$6,999; and in one State, less than \$6,000 (table 12).

The estimated 1969-70 average annual salary of the total instructional staff (supervisors of instruction, principals, teachers, and other instructional staff members) is \$8,840.

Regional averages show the highest average salaries in the North Atlantic followed by Great Lakes and Plains, West and Southwest, and Southeast.

LARGE CITY DATA

The educational problems of the Nation's large cities have been receiving increasing attention in recent years. Since 1962 the States have been requested to furnish separate data in the fall survey for 15 cities with the highest total population in the 1960 Decennial Census. One of these cities, Washington, D.C., has always been included in this survey, as it is in other national surveys that cover all jurisdictions. Data were requested from the 12 States in which the other 14 cities are located.

The 15 large cities are New York, Chicago, Los Angeles, Philadelphia, Detroit, Baltimore, Houston, Cleveland, Washington, St. Louis, San Francisco, Milwaukee, Boston, Dallas, and New Orleans. Data for 1969 were not received for Detroit in time for inclusion in this report.

At the time of the last Decennial Census (April 1960), the combined populations of the 15 cities, ranging from 7.8 million in New York to 628,000 in New Orleans, comprised one-seventh of the total population of the United States.

The 14 cities reporting for 1969 had 13.1 percent of the 1960 population and in the fall of 1969 had a combined enrollment of 4.1 million, or 8.9 percent of the Nation's public school pupils. Reported data for each of these large cities appear below the outlying areas in the appropriate tables.

 ^{1/} Comparisons between States cannot readily be made because of the variation in State requirements for regular teaching certificates at both the elementary and secondary levels.
 2/ Totals include estimates for the nonreporting States.
 3/ Includes city of Chicago teachers who meet State requirements, but are not fully certified by the city.
 4/ Previously published data have been revised.
 5/ Distribution estimated by Office of Education.
 6/ Data reflect changes in definition and reporting at the local level.

I/ Includes expenditures for summer schools, sdult sducstion, community services (such as public libraries operated by school districts, expenditures for nonpublic schools where sutherised by lew, community centers, and recreational activities), and community colleges and technical institutes under the jurisdiction of local boards of education.

Includes supervisors, principals, classroom teachers, and other instructional staff.

Stimated by Office of Education.

Money figures in Alaska cannot readily be compared with those in other States because the cost of living in the major cities of Alaska is about a fourth higher than in other major cities in the U.S. with the highest cost of living index.

Includes salaries paid to teachers with little or no college preparation.

GENERAL INSTRUCTIONS

- 1. The report is due in the Office of Education on November 15. If complete dats for all local reporting units are not available in the State department of education in time to meet the November 15 due date, please forward promptly the best figures for the whole State by including an estimate for nonrespondents. Final data should follow within a week or 10 days.
- 2. The Information for this report should reflect the facts on or about October 1, 1969, or the nesrest date thereto when membership can be considered stabilized.
- 3. It is important that the States incorporate in their own questionnaires all basic definitions contained in the Federal form. Where reported dats do not conform to prescribed definitions, deviations should be explained.
- 4. If data have been estimated in whole or in part, please indicate the basis of the estimate.
- 5. Data on staff and pupils are to be classified either as "elementary" or "secondary" depending upon the way in which the achool is organized rather than on a K-8 and 9-12 basis. An elementary school is one so classified by State and local practice and consists of any span of grades not above grade 8 (most commonly K-6 or K-8). Prekindergarten schools are to be included with elementary. A secondary school comprises any span of grades beginning with the next grade following the elementary school and ending with or below grade 12, including junior high schools, the different types of academic high schools, and vocational or trade high schools. Grades 7 and 8 may fall into the elementary or secondary school classification depending upon the organization of the school of which they are a part.
- 6. The figures reported this year should be compared with those for last year. Reasons for unusual incresses or decresses should be noted by struching an explanation, e.g., change in method of reporting, change in standard used, etc.

INSTRUCTIONS FOR INDIVIDUAL ITEMS

ITEM 5. Exclude administrative personnel, supervisors, principals, librarians, guidance and psychological personnel, and other personnel who devote more than half of their time to nonteaching duties. Report teachers either as elementary or secondary on the basis of the principal level they serve.

ITEM 5a. Full-time classroom teachers are (s) full-time employees whose duties require them to be on the job on school days throughout the school year at least the number of hours of a regular school day, and (b) devote more than half of their time to classroom teaching.

ITEM 5b. Part-time classroom teachers are persons whose total current assignment as classroom teachers requires less than the normal school day or normal school year. This item does not refer to persons employed on a full-time basis who divide their time between classroom teaching and other duties. Report full-time equivalence of part-time teachers.

ITEM 6. Do not count as substandard those teachers who have regular certificates obtained when the requirements were lower than those currently in effect for new teachers.

ITEM 7. The number of pupils for whom less than a full or normal school day is provided includes all pupils on so-called "half-day sessions," "curtailed sessions," "double shifts," "reduced time," etc. Extended sessions do not qualify as double sessions because each extends for a full school day with some overlapping. In the case of kindergartens, special

schools for the handicapped, or others, where less than s full day session is considered as the normal school day, only pupils whose day has been reduced below this normal length would be included.

ITEM 30. Report here the total number of 1968-69 school year high school graduates from the regular public day school program; include 1968 summer school graduates.

ITEM 30a. Report here the total number of graduates from all other public school programs, evening school, adult, etc. during the 1968-69 school year.

ITEM 31. Report the total number of persons receiving high school equivalency certificates during the 1968-69 school year.

ITEM 35. Include here the total number of publicly-owned* instruction rooms available and in use, regardless of whether they are considered as satisfactory or unsatisfactory, permanent or temporary. Exclude improvised or makeshift facilities used as instruction rooms but not designed for such usage, such as hallways, storage rooms, etc.

*In the count of instruction rooms in item 35, include all those built by local schoolbuilding authorities or holding companies; city, town, and county governments; etc.

INSTRUCTIONS FOR SUPPLEMENT A TO FALL 1969 REPORT ON MEMBERSHIP, TEACHERS, AND SCHOOLHOUSING

GENERAL

- 1. This report is due in the Office of Education on Nevember 15.
- 2. All data are to be estimated for the 1969-70 school year.
- 3. In astimating expenditure data, include disbursaments from all funds (general fund, debt service fund, atc.) and from all sources (local and county, State and Federal). Estimated expenditures should be rounded to thousands of dollars.

INDIVIDUAL ITEMS

ITEM 1a. The following expenditures should be included here:
(1) Expenditures for administration by State board of aducation and State department of education (excluding expenditures for vocational rehabilitation and salaries for personnel for supplementary services such as State library, State museum, teacher retirement, teacher placement, etc.); (2) Expenditures for administration by county or other intermediate administrative unit; (3) Total current expenditures by local school districts [i.e., expenditures for: Administration; instruction; attendance, health, transportation, and food services (including value of commodities donated by the U.S. Department of Agriculture); and other nat expenditures to covar deficits for extracurricular activities for pupils; (4) Direct State expenditures for current operation [e.g., State (employer) contributions to retirement

systams, pension funds, or social sacurity on behalf of public school employees; State expenditures for textbooks distributed to local school districts, atc.].

ITEM 3a. Report hare estimated interest on short-term and long-term dabt (bonds or notes) to be paid by local aducational agancies from all funds.

ITEM 3b. Raport have estimated interest payments to be made by schoolhousing authorities or similar agencies, and payments to be made directly by State, intermediate, county, city, or other local governmental agency, where such payments will not be recorded in the local educational agency accounts.

ITEM 4. Report hars the average salary of classroom teachers enly. (Total salaries to be paid all classroom teachers divided by the full-time equivalence of the total number of classroom teachers).

ITEM 5. Report here the average salary of the total instructional staff (total salaries to be paid instructional staff divided by the full-time equivalence of the total number of instructional staff positions).

ITEM 6. and 7. Report estimated ADA and ADM for all public day-school pupils enrolled in prekindargarten through Grade 12, including postgraduates.
