Universities, *Tax Allocation

ABSTRACT

The preface of this report on state appropriations for higher education discusses the financial problems faced by many of the state institutions because of the failure of state appropriations to keep up with rising costs, expenditures, enrollments, demands and expectations. The report presents a table of appropriations of state tax funds for operating expenses of higher education in all states for fiscal years 1961, 1969, and 1971, with percentage gains over the most recent 2 years and over the last 10 years. The rest of the report is devoted to tables of state tax fund appropriations for operating expenses of higher education by state for each of its public institutions for fiscal year 1970-71. (AF)

Appropriations of State Tax Funds for **Operating Expenses of Higher Education** 1970-1971

PREFACE

APPROPRIATIONS FOR HIGHER EDUCATION MOUNT BUT FAIL TO MATCH INFLATIONARY PRESSURES

The National Association of State Universities and Land Grant Colleges is pleased to publish this new edition of the annual report by Dr. M. M. Chambers on state tax appropriations for operating expenses of higher education.

This marks the 11th consecutive year that Dr. Chambers has surveyed state efforts in support of higher education and his work in this area has provided a rare and valuable insight into this vital subject.

Throughout its history, the "Chambers Report," as it has come to be called, has recorded a steady growth in tax support for higher education. Again, this year, appropriations are up, but the gains—as impressive as they are—have not been able to keep pace with the soaring demands, costs and inflationary pressures which have buffeted public institutions of higher education this year.

Budget Cuts Force Austerity

Austerity operations are becoming a fact of life for a growing number of institutions. Reductions in faculty and staff size, a dearth of new programs, and a streamlining of activities in vital areas such as extension, state services and research are the ways in which universities are forced to economize.

In California, needed funds for academic salaries were not provided for either the university or the state colleges—an action termed by the university as having both short—and long-term effects, detrimental to higher education in the state. A university report on the budget noted:

"The University's competitive position in the academic market place will deteriorate as salary levels fall further behind those institutions with which we compete for faculty. The elimination of the faculty salary increases comes at a time when inflation is seriously reducing the purchasing power as measured by the cost-of-living index rising at an annual rate of six percent."

At the University of Colorado, President Frederick P. Thieme has informed the university community that a tight budget appropriation, demanding expenditure curtailment, has made it necessary to cutback in the hiring of new faculty and staff. New positions and existing positions now vacant will not be filled unless offers were outstanding. Exceptions to this rule can be made only by a vice president or the dean of the faculties "after the showing of special problems by the school or college dean."

Aggravating the staff situation at many universities is the fact that in some states faculty salaries have not been able to keep pace with the rapidly mounting cost of inflation. This problem has been particularly acute in the case of public universities, where faculty salaries and compensations have trailed behind those for private institutions by almost 15 per cent, according to the American Association of University Professors.

Programs Threatened by Cuts

In Pennsylvania, the governor's 1970-71 budget proposal for Pennsylvania State University was the same as a year ago. The University had sought \$80,100,000, earmarking in advance the anticipated increase in funds for admission of more disadvantaged students, increases in wages and salaries, launching new research and instructional programs, and offsetting the cost of inflation. The budget proposed by the governor was \$69,163,000.

Appropriations for Fiscal Year 1970-71 had not been made by the Pennsylvania legislature when this publication went to press. In addition, delay in the state appropriation for 1969-70, which was not signed into law until March 13, 1970, cost the university \$1,034,000 in interest charges on loans the institution was required to make to meet operating costs. These changes had to be absorbed in the education and research programs of the university.

An example of how inflation is affecting university costs was cited by Purdue University's Business Manager, Frederick R. Ford, who reported the inflationary spiral has taken a heavy toll of routine supply and expense budgets.

"In several cases," Ford reported, "supply and equipment item prices are up from four per cent to as much as ten per cent this year."

Ford has singled out another cause of rising costs--hikes in insurance premiums traceable to destructive campus disruptions.

Effects of Disruption

Ohio State University also cited damages from campus disruptions among factors driving costs upward. To bring its 1970-71 budget into balance, it was necessary for the university to increase student fees while making major cutbacks as well. Some \$1.2 million in previously approved new programs had to be eliminated. There was a reduction in the amounts of proposed salary increases, a number of vacant staff positions weren't filled and operating and equipment increases were eliminated.

Iowa State University reported program deficiencies resulting from a lack of of funds. The unmet needs during the 1969-71 biennium totaled about \$18 million for operating expenses and \$25 million for construction. Iowa State had sought an appropriation of \$69,159,000 for the university's general 1970-71 operations. The state appropriated \$51,268,000, leaving a deficit of \$17,981,000.

In Michigan, Wayne State University had informed the legislature that it could hold the line on student tuitions if the lawmakers provided the \$41,721,339 requested by Gov. William G. Milliken for the university's operation. However, the legislature appropriated only \$45,050,000, which was inadequate to take care of basic increases caused by inflation and cost of living increases. These were basic requirements to furnish the volume of services provided last year. The appropriation will not cover costs of operating new university buildings or for hiring additional staff to teach the increased number of students enrolled for the year.

Facilities Shortage

It is important to note that, since Chambers' figures deal only with appropriations for operating expenses, they fail to reveal the serious situation facing public universities regarding funds for new construction and other capital improvements.

The constantly changing complexion of education demands that universities provide new or updated facilities. Enrollment growth produces a continuing need for expansion while new developments to instruction, research and public service require specialized facilities that differ from those that were adequate in the past. Funds available are far from adequate to meet these needs.

For example, the capital budget for the University of California was almost eliminated this year. Only \$900,000 in appropriations for minor capital projects was left from the original request. This means that the university will face very critical problems in 1973-76 on each of the growing campuses for lack of facilities which should have been started in 1970-71.

North Carolina State University requested building funds of approximately \$41 million for the 1969-71 biennium but got only slightly over \$3 million. The university has been requesting funds to use in the construction of three major buildings since 1965.

President David Henry of the University of Illinois notes that there will be an estimated reduction of at least 1,800 places at his university by 1972-73 occasioned by the building delay already in force on his campus. Further delays will make the situation even more drastic.

In a similar position, the University of Kansas had to purchase six temporary buildings to use for classroom and offices this year.

"Today the university stands in need of a dozen major facilities to accommodate today's students and today's programs," said Chancellor Larry Chalmers. These buildings would cost at least \$50 million to construct today, and of course we cannot construct them today; we cannot even plan them today. And these needs do not include facilities for tomorrow's students who are coming to us at the rate of more than 1,000 additional students each year."

In the current inflationary spiral and cost bind it is the student who comes out the loser.

Student Bears the Burden

Not only are many young people kept from attending college because of a lack of funds, but those who do make it frequently are forced to put up with grave overcrowding due to lack of facilities. Most important of all, it is the student who bears more and more of the cost of getting a college education. As the costs of higher education keep rising as part of the general inflationary trend, the price charged to students and their families for getting a higher education also goes up. Overall, the cost borne by the student in many states this year has risen from 25 to 35 per cent.

In the decade 1959-69, tuition and required fees in public degree-granting institutions doubled while at the same time the consumer price index of the Department of Labor rose less than 28 per cent.

This means that economic barriers to higher education are being raised through demands that individual students and their families pay more and more of its costs.

Low Tuition Principle Threatened

It is ironic that this trend is developing at a time when one of the great national endeavors in American higher education is to open up new opportunities for the disadvantaged.

In prospect is a serious erosion of the principle of low tuition, which has been basic to the whole concept of public higher education in the United States.

Also ahead are more pressures as enrollment thrusts continue into the Seventies. Dr. Chambers predicts that in another decade at least 12 million students will crowd into our universities and colleges compared with 7 1/2 million today.

Of these new students, 80 per cent will be in tax-supported institutions, Dr. Chambers reports.

Today about 70 per cent of all college students are enrolled in public institutions of higher education, including community colleges. As more and more people attend college, it costs more and more to provide for their instruction and for the facilities for that instruction.

Large-scale Federal student aid programs which embrace borrowing, grants, and work-study provisions, have not produced solutions to the financial squeeze on students. They have, in fact, involved substantial administrative costs and Federal matching requirements which have siphoned money from college revenues that might have been used to keep down the general charges to students.

The view that education is a commodity to be paid for by the buyer is not consistent with the ideal of genuine equality of opportunity. The long-term benefits of higher education, as Dr. Chambers points out, go to the general public, not to satisfy personal ambitions.

In sum, while tax sources contribute substantially to the quality of both public and private institutions of higher education, there still is much that can be done.

At the state level, public institutions are finding adequate support increasingly hard to obtain. Long the financial bulwark of public higher education, state tax dollars today are subject to pressing, urgent demands. At the same time, demands on public colleges and universities increase each year.

Public institutions are in the forefront in the struggle to deal with the vexing educational questions of the day. Over the years, these colleges and universities have been able to make significant contributions to the nation. But increased support is needed, now more than ever, if they are to maintain their momentum and further develop their capacity to offer opportunity to the young people of this nation.

A Note to Users of This Report

Detailed information about the procedures used in compiling this report are found in the appendix. We would like, however, to emphasize the following three points about the material contained in this booklet.

First, this report covers only appropriations of state tax funds for operating expenses of higher educational institutions. The Office of Institutional Research believes that these figures are a more valid measure of state support of higher education than total appropriations made by state legislatures since the latter may include reappropriated income received by institutions from student fees and other non-tax sources. The report does not include appropriations for buildings and other capital purposes.

Second, users of the data contained in this report should keep in mind that appropriations from state tax sources listed herein include support not only for instructional programs, but also for research, including agricultural and engineering experiment stations, and a great many public services such as general extension, county agricultural and home demonstration agents, adult education programs, hospitals, and other activities assigned by state legislatures to institutions of higher education.

And finally, the data contained in this report are in preliminary form and subject to verification and change. In several of the state tabulations the items may not add up to the indicated total. Minor discrepancies may be attributed to rounding. Where the discrepancies are substantial, the investigator, while reasonably confident of the total, may have encountered difficulty in obtaining from his sources consistent reports of such items as state scholarship programs, expenses of central governing boards, supplementary budget increases or decreases. To check and verify every item would be a costly and time-consuming project which would delay the publication of this report beyond the time when it is most useful. While the tabulations are subject to change, they provide a reasonably accurate picture of state tax funds appropriated for 1970-71.

INTRODUCTION

LOOKING INTO 1971 AND BEYOND

In October it is scarcely possible to predict the outcome of the state and national elections which will follow within a month. The membership of the state legislatures and Congress may be considerably changed. The governorship in many states is also at stake.

From the standpoint of state tax support of higher education, the dominant factor is not altogether a question of the partisan complexion of the legislative and executive branches after 1970 becomes history. More accurately, it is a question of what proportion of the newly elected legislators and governors recognize that universal higher education is now imperative; that its long-term benefits accrue more largely to the whole general public than to selfish private ambitions; that thus there is no more just method of providing funds for its operation than through equitable taxation of the whole public; and that this is a productive investment which pays large returns.

Higher education means any and all types of formal schooling beyond the high school—anything from a few weeks of training in some relatively simple occupational skill, to the several years of study and internship required for credentials in the top graduate and graduate-professional fields. If universal higher education is inevitable, it is important to know that on a nationwide basis we are only half way up the mountain in 1970. The next decade will see continued rapid expansion and improvement. We shall see hundreds of new public two-year colleges. Existing institutions, including graduate and professional schools, will continue to grow.

It Is Impossible To Have Too Many Educated People

Any fears that we may have too many well-educated people, either as a whole or in specified categories, are specious. The need for much greater numbers of physicians, nurses, and other professional and paraprofessional health workers has been patent and growing worse for decades.

In the teaching profession at all levels from pre-school through university there is currently some talk of an ample supply, or of a prospective oversupply, for the first time since World War II. This is a misconception that could produce damaging consequences. What we have is a supply of new applicants such as to enable us to begin to rectify the cumulative deficit of a generation, and to expand and improve the services of the schools of all types.

Public pre-schools and kindergartens, increasingly indispensable, are shockingly few. Elementary school enrollments are beginning to level off, but overcrowding in the classrooms is widely prevalent, traditional ratios of teachers to pupils are much too high, and paraprofessional teachers' aides are still rare. In some difficult "central city" schools these conditions have produced a crisis of failure. The obvious remedy is to add enough good teachers and supporting personnel to establish decent person-to-person tutorial relationships with every pupil. In this enterprise, twice as many teachers as we now have could be profitably employed.

Similar conditions prevail in many high schools, and here enrollments will continue to rise until the late seventies, due to the fact that although the annual numbers of births began to level off in 1957, there was no really substantial drop until after 1962. The 1963 crop of babies will enter high schools in 1977 and be graduated in 1981.

At all levels of higher education there are many reasons for rapid increases in enrollments up to 1980: (1) increased numbers of persons in the age-group 18-22, (2) larger proportions of this age-group getting some education above high

school, and (3) much larger numbers of students above the age of 22. The salient complaint in the colleges now is that there are so many students and so few teachers that the atmosphere of an impersonal bureaucracy prevails, and hostility grows among students and faculty and administration. The remedy is becoming obvious: organize the large institutions so they contain many clusters of manageable size, and provide enough teachers and tutors so there will be some reasonable opportunity for personal association of student and teacher. Formal education should not be a mass treadmill, wherein all must move in lockstep or be discarded. We can avoid that.

The "Manpower Model" Is Not Everything

A factor in the theory of secondary and higher education in the United States is the idea that the numbers of jobs of different kinds to be filled in future decades must be predicted, and the purpose of schools and colleges must be to train exactly the right numbers of persons to fill those jobs. This concept not only ignores the aesthetic and humanistic aspects of education; it is also largely impracticable for its own narrowly materialistic purpose. No one can predict precisely what competencies will be needed decades ahead in a society in rapid flux. How can one know in 1970 exactly what work skills will be needed in 1980 and what skills will be obsolete?

A better reliance is on the broader concept of raising the levels of competency among the whole population; elevating the general education of all. There are those who say a good school of law is an excellent place to pursue a liberal education. There have always been thousands of law graduates who do not practice that profession, but make contributions to society through other occupations. Likewise many engineering graduates, and most of all, persons educated for the teacning profession, who never practice it or do so only for a short time. Is it a calamity that we have this so-called surplus of educated people? Would it be better if they had not been educated beyond high school? To ask these questions is nonsense. The states and the nation are the richer for having these people, and there never can be too many of them. This is equally true of the millions of persons who are pursuing a general education and having two years or four years or more of instruction in liberal arts and sciences not intended to fit them exclusively for any one specific occupation. John W. Gardner has summed this up in a striking way: "In a world in which talent is increasingly constrained by the fetters of organizational life, the university man may emerge as a uniquely and valuably free spirit, independent in action and judgment, flexibly available for a wide range of assignments."

Another Decade of Great Progress Begins

This eleventh consecutive annual summary of Appropriations of State Tax Funds for Operating Expenses of Higher Education eports for fiscal year 1970-71 a 50-state total of \$7 billion. This turns out to be exactly five times the comparable sum of eleven years ago (for 1959-60) which was \$1.4 billion. Within another ten years we shall have at least 12 million students (compared with 7 1/2 million now), and this means we shall have many new colleges and junior colleges, and much larger universities. Eighty per cent or more of all students will be in tax-supported institutions.

Five years ago I wrote: This is not cause for fears or alarms, but matter of congratulation. In some quarters there is worry about quality, and in many quarters there are qualms about costs. But these annual expenditures for the building of human capital in the form of educated citizens are not unrecoverable costs at all. They are investments that will pay large returns.

²Page 117 in Freedom and Repression in Higher Education (1965), 126 pp. Now out of print but available in many libraries.

¹In "The University in Our Civilization," an address at the annual meeting of the American Council on Education, October 1959, published in <a href="https://doi.org/10.1007/jhep-10.2007

"You have heard that a four-year college graduate, on the average, may expect to have a lifetime earnings of some \$200,000 more than those of his contemporaries who have never been in college. If we accept this at face value, it requires no elaborate computation to indicate that on these added lifetime earnings the college graduate will eventually pay, in the form of federal and state income taxes, and to some extent in other forms of taxation, much more than his college or university paid out to provide the facilities and instruction for his four-year college career.

"And surely we do not forget that the major values in higher education have little to do with any exact financial accounting. When a home economist or a biochemist or a veterinary scientist, or perhaps a team of all three discovers a method of processing certain foods so that two hundred million people may have on their tables a product that is safer, more attractive, more nutritious or more economical than anything known before, just how will you estimate the value of the educated curiosity that led to that discovery?

"Will someone estimate for me the value of the medical research and teaching that have extended the average expectation of the human life-span by more than twenty years during my own time? Can anybody put an exact dollar value on the work of the land-grant colleges and their agricultural experiment stations and extension services, which has not only made us the best-fed and best-clothed people in all history, but has also liberated tens of millions of persons from physical drudgery on farms, and given us huge surpluses of foods and fibers?

"There are other examples that equal or almost equal these in magnitude. Each one has literally revolutionized society. We can sense that in the future greater discoveries and swifter revolutions are coming. Today millions of young students have caught this view. We must move on confidently with the expansion and improvement of higher education until all thoughtful citizens have seen this vision."

The Story of Public Higher Education in the Sixties and Beyond

It has been a pleasure to prepare these annual summaries, of which this present one is the eleventh. It has been a privilege to be in communication, by correspondence and telephone, with key persons in every state. I have large files of letters and documents that have been sent over the years to keep me informed of developments in tax support of higher education in their respective states and regions. From these sources have developed the small monthly reports known as GRAPEVINE, currently aggregating 147 issues and 932 pages, from which these summaries have annually been drawn.

From this congenial enterprise has now come another product, in the form of a 453-page hardback volume, <u>Higher Education in the Fifty States</u>, published in September 1970. Following three introductory chapters which place emphasis on the decade of the Seventies, this volume consists mainly of separate stories of each state, of from three to thirty pages, roughly in proportion to the size of the state. These are focused principally on the decade of the Sixties, but include also some flashes of earlier history. They note and document many of the important statewide studies and survey reports, and summarize the legislation which followed. They mention benchmarks in the evolution of the state revenue systems, and tabulate in brief form the statistics of state tax support of higher education for alternate years, 1960-1970, mentioning occasional pertinent demographic data. There is much information on relationships between statehouse fiscal offices and higher education, and consideration of the optimum state-level structure.

Altogether it is a fascinating and significant story.

- * Unconditional appropriations. Additional conditional appropriations payable only if the condition of the Alabama Special Educational Trust Fund is adequate and with the approval of the governor, aggregated \$2,356,000 for 1969-70 and \$6,537,000 for 1970-71. Payment is problematic, at least for some time. Similar conditional appropriations for the preceding biennium were not paid.
- ** \$24,294,000 and \$25,192,000. *** \$19,161,000 and \$19,892,000.
 - + Four former state colleges now officially named regional state universities.
- ++ Seventeen state junior colleges.

* A lump-sum appropriation, to be allocated to the several institutions by the Board of Trustees of State Institutions of Higher Learning.

** The Mississippi Research and Development Center is a non-degree-granting institution, with its program intimately related to those of the state universities.

The legislature has adopted the practice of having annual sessions; hence the report for 1970-71 is for the one fiscal year only.

The legislature appropriates a large lump-sum for "general support" (to be allocated among the teaching institutions by the Board of Trustees of State Institutions of Higher Learning), and a number of other direct appropriations to various agencies of research and service, including the medical school and the schools of nursing. Most of these are appendages of the respective teaching institutions.

A combined tabulation of appropriated funds and allocated funds provides totals for the institutions, comparable with those of similar institutions in other states.

State tax funds as appropriated and allocated for operating expenses of higher education in Mississippi, fiscal year 1970-71, in thousands of dollars.

APPENDIX I

WHAT THE FIGURES ARE INTENDED TO MEAN

The data are supplied by key persons in each state who report them to the small monthly mimeographed newsletter GRAPEVINE. Their cooperation is indispensable. The ground-rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practice among the fifty states make it impossible to eliminate all inconsistencies and accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness, but have value if correctly interpreted.

(1) We exclude appropriations for capital outlay.

(Nevertheless, GRAPEVINE appreciates informative statements and documentation regarding appropriations, bond issues, or other devices for providing capital funds. We can make occasional separate stories or exhibits of these, but never commingle or confuse them with appropriations for operating expenses.)

- (2) We exclude any sums appropriated which clearly originated from sources other than state taxes, such as student fees or other institutional receipts. (Some states capture these non-tax funds for the state treasury, and appropriate them to the institutions as a part of the total appropriations for operating expenses; but many states do not. Hence, it is necessary to peel off the non-tax institutional receipts in order to report Appropriations of State Tax Funds.
- (3) We include any sums appropriated for the annual operating expenses of the institutions of higher education, even if appropriated to some other agency of the state for ultimate allocation and payment to the institutions. (Some states appropriate, either occasionally or habitually, sums for such items as faculty fringe benefits under conditions such that only the total made available at the time can be known, and the actual allocations to several institutions cannot be known until after the end of the fiscal period. GRAPEVINE wants to report the total made available at the time of appropriation, and generally does not wait for subsequent institutional allocations unless they are obtainable without delay. GRAPEVINE's thrust is the prompt reporting of appropriations; not later reporting of actual expenditures.)
- (4) We <u>include</u> any pre-allocated state taxes whose proceeds are dedicated to any institution of higher education, bypassing the process of periodic appropriation by the legislature. (For example, West Virginia has a tax of approximately one cent per boutle on the sale of soft drinks, currently producing about \$4.5 million per year, which automatically goes to the West Virginia University Medical Center without legislative appropriation.)
- (5) We would like to <u>include</u>, whenever practicable, <u>separate</u> appropriations for medical centers (including schools of medicine, dentistry, nursing, teaching hospitals, and other appropriate appurtenances of a medical education complex); <u>separate</u> appropriations for agricultural experiment stations and cooperative agricultural extension services; and <u>separate</u> appropriations for branch institutions, regional campuses, and any other off-campus outposts of universities or land-grant institutions. We cannot request this except in instances where it is easily practicable and would not involve delay in reporting.
- (6) We include sums derived from state tax funds and appropriated for state scholarships. This is regardless of whether such scholarships are tenable in public or private institutions, or tenable within or without the state.
- (7) We include sums appropriated to statewide governing or coordinating boards regardless of whether for the expenses of the board or for ultimate allocation to the institutions.

APPENDIX II

LATE REPORT FOR PENNSYLVANIA

For Fiscal Year 1969-70

Pennsylvania's complete appropriations for fiscal year 1969-70 were made too late for inclusion in the 1969 edition of this document (preceding the present issue), and the report is consequently inserted here to complete the record.

PENNSYLVANIA

State tax-fund appropriations for operating expenses of higher education in Pennsylvania, fiscal year 1969-70, in thousands of dollars.

- * For all practical intents and purposes, the Pennsylvania State University is the principal state university in Pennsylvania, as its name implies. Technically, however, it is said to be not "state-owned"; and is designated a "state-related university" in the category with Temple University and the University of Pittsburgh, both of which are private corporations, state-subsidized. These three universities are called "the Commonwealth Segment" of higher education in Pennsylvania.
- ** See immediately preceding footnote.
 *** Formerly Jefferson Medical College.
