ABSTRACT

A systematic approach to management procedures necessary to independent study programs focuses on six control instruments. They include: (1) an independent-study contract agreement, (2) a time-record sheet, (3) a syllabus of learning objectives, (4) a learning-objectives contract agreement, (5) a learning-objectives challenge agreement, and (6) a learning-objectives evaluation form. Twenty-five summaries of patterns and forms treating pronunciation, morphology and syntax, and idiomatic expressions in introductory German study are presented. Material in this section is adapted from the "Teacher's Manual of German A," books 1-5, by Ernest E. Ellert, et al. (BL)

## A SYSTEM OF INSTRUMENTS FOR THE MANAGEMENT OF INDEPENDENT STUDY

### Purpose

This paper will attempt to show how an integrated system of management might be developed for independent study by secondary school students in which most if not all of the actual "teaching" is done through a medium or through media, and in which a teacher, in effect, ceases to be a teacher and becomes instead a guide, a counselor, and, optimally, a true manager of the learning processes. The thesis is that independent study will not be efficient and may not be effective without management, and that management is a form of engineering that does not take place accidentally or incidentally. Management of independent learning processes will require more indirect than direct means, and hopefully the instruments proposed will suggest techniques of effective indirect control. In this paper, instruments for managing self-instruction in beginning German using programmed materials (texts and tapes) are used by way of examples. The system to be proposed, however, is not thought of as limited in application either to independent study of foreign languages or to input by way of any particular medium.

The need for an integrated system for the management of independent study at the early secondary level was perceived by the author in ex-

perimentation using programmed materials in several foreign languages.<sup>1</sup>

The programmed materials alone and by themselves seemed to provide very efficient and effective structuring for both the time and the effort actually expended on real study. From this experience, the author has determined not to diminish the role of programmed learning in future independent study experimentation.

Viewed as a total human activity, however, independent study using programmed materials turns out to be much more than the process of programmed learning alone, and the day-by-day unfolding of that activity may reveal certain weaknesses for many students which seem to follow in some measure from the very nature of programmed materials as they appear in bits and pieces to the student. It is assumed that this might be true of the use of other media as well. Although programmed materials are themselves written upon a scrupulously precise analysis and definition of learning objectives, in daily progress through the frames of the materials, the student may not be conscious of either the objectives or the broad scope of the program on which he is working segmentally. Also, since the guide, counselor, or manager is not structured as a component into the flow of the program, he may remain an outsider or, worse, an

intruder so far as the comprehensive human activity of independent study is concerned.

The integrated system of instrumentation to be proposed will hopefully remedy these two weaknesses by capitalizing on the precision and definition of learning objectives inherent in the programmed materials, and by actualizing the teacher's potentially significant and creative role as a manager of independent learning processes.

It is recognized in many quarters that basic research has so far outstripped practice as to threaten to discredit itself. It has been seriously proposed that educational leaders cease preoccupation with some other areas to work on the problems involved in managing the learning of others by using present knowledge of learning.<sup>2</sup> This paper aims to be a modest contribution to that end.

#### The Instruments

The following instruments are proposed for an integrated system of management of independent learning processes. Each is discussed separately and illustrated beginning on the page cited:

6) Learning Objectives Evaluation Form..... 63Definition of Some Terms Employed

- 1) instruments -- devices and related procedures used by a manager to formalize the structure and processes within which a student pursues a set of educational goals; the instruments and techniques are designed to assist the student in assuming "heavy" uncontrived responsibility for achievement of goals
- 2) management -- reasonable and continuous care exerted by one or more educational leaders that the pertinent rights of the student, his parents, peers, society in general, and the educational institution are adequately safeguarded
- 3) independent study -- self-paced self-instruction within a structured form; the student may or may not be involved in the development of the structure; steps may be taken, however, to implicate the student in acts of volition by which he continuously accepts the structure and its goals, or by which he may intelligently modify the structure to accord with his own unique needs
- 4) terms such as teacher, counselor, guide, supervisor, manager, etc. do not refer to discrete individuals in an educational hierarchy; they refer rather to whoever is in charge of independent learning experiences with stress on discrete functions; none of these terms appears to describe the totality of functions involved in the management of learning processes and all of them are somewhat objectionable

### The Independent Study Contract Agreement

#### Rationale

The student should be properly oriented to the processes of independent study and, at the beginning, should make some sort of strong commitment, even though tentatively, to them.

The orientation procedure and the formality of signing an agreement are a golden opportunity to create a strong set-to-learn.<sup>3</sup> For this reason they should be as individualized as possible. In creating a set-to-learn, the manager should thoroughly analyze the processes whereby a given student will responsibly enter the proposed independent study program. These will be different enough to rule out a standardized contract agreement form.

It will be noted that the sample contract agreement which follows contains a rationale, an explanation of the reason for independent study, some basic information about the medium and the program as it has been developed by some responsible agent, some basic conditions, etc. in a form which is at once simple and comprehensive.

The contract agreement form will not be impersonally handed out to students for their signatures, but will be used only after careful personal orientation to the proper use of materials and equipment,

conditions of study, procedures of self-evaluation and consultation, etc. In advance of signing, the student will have been made aware of rules and regulations, and perhaps will have passed a test proving 100% familiarity with all possible risks that may exist. A meeting with parents will also have been held during which these risks will have been thoroughly aired.

Note: If it is not specifically mentioned in discussion concerning each of the instruments suggested for this system, it should be understood that no instrument will be used without adequate counseling and consultation.

TUCSON PUBLIC SCHOOLS  
FOREIGN LANGUAGES  
INDEPENDENT STUDY CONTRACT AGREEMENT

Being a duly enrolled student of \_\_\_\_\_ School,  
I, \_\_\_\_\_, agree to enter into the study of  
(name) \_\_\_\_\_ with full knowledge and acceptance of the following  
(language) provisions:

- 1) Because of low or unstable enrollment, or other sufficient reason, my chosen language cannot be offered at my school or at the desired level, during the current school year, under a teacher, or under the usual classroom conditions.
- 2) A process called "programmed learning" makes it possible for me to control most if not all of the factors of both teaching and learning. My chosen language at this level can be offered to me by independent or semi-independent study using programmed learning materials.
- 3) Tucson Public Schools have developed a recommended system of independent study of foreign languages which may involve not only the use of programmed materials, but also the use of learning objectives, self-evaluation, consultation, etc., all of which may be put at my personal disposal in some form.
- 4) In view of the above facts, I recognize and acknowledge that I accept the following conditions of study:
  - a) Language skills are developed in and through time. I will, therefore, keep an accurate record of time spent in the use of the programmed materials.
  - b) I will inform myself of learning objectives and will contract to achieve them in keeping with my own goals and self-pacing needs.
  - c) I will make suitable use of self-evaluation systems, consultation, and supplementations offered to me, in keeping with my own goals and self-pacing needs.

(over)

I will make use of forms provided by Tucson Public Schools to record these data.

Signed: \_\_\_\_\_

\_\_\_\_\_  
Teacher

I have read the above contract agreement and hereby consent to my child's participation in the proposed independent study program. I have received other information concerning the program, and I understand that I will receive evaluative data upon request.

For the benefit of both parents and the student, attention is called to the following risks which may exist in this program:

- 1.
- 2.

Time Record SheetRationale

The precise meaning and cruciality of time in the proposed independent study program needs to be clearly defined by the manager and communicated to students. Perhaps some of the following questions may be pertinent:

- 1) For how long is the initial stimulus of the set-to-learn expected to last? Does the program have a built-in renewal system? What is it and how is it to work?
- 2) Is the student held accountable for use of time? Which time? Spent where? Discrete periods of time or cumulative time? School time only, or school and home time? How are these determinations made?
- 3) Is the student in violation of a regulation if he spends "committed" time doing something else? What else may he do lawfully?
- 4) Is the expenditure of so much time an essential condition of learning, or is it relatively immaterial because only results will be judged? Has this been analyzed from the standpoint of accountability and effect on morale?
- 5) If time is an essential condition of learning, does the program require keeping a record of time spent? If not, why not?

If the answer to the last question is "Yes", a Time Record Sheet such as the sample which follows may appear desirable.

TIME RECORD SHEET**

Name of Student: \_\_\_\_\_

Instructions: On this sheet you are to record each day only the actual time you spend working on the programmed materials and the number of frames you complete. Do not include the time you spend on supplementation or in consultation.

Syllabus of Learning ObjectivesRationale

Probably the most important component of the system is an instrument which concisely communicates the objectives and scope of the structure within which the student is to study and provides a means of handy reference and review. From the standpoint of the manager, it affords access to the heart of the learning processes and opens up a variety of techniques for involving the manager in the student's learning experiences.

The sample syllabus of learning objectives which follows will be seen to consist of a summary of behavioral objectives, brief yet comprehensive, which are related to each individual item in the following analysis of program content (i.e. language patterns) in the order of their introduction in the programmed materials. This analysis has been taken directly from the teacher's manual for the German A program. The instrument has been modified so that the frame number of the first appearance of each of about 240 patterns is given. Space is provided for checking off the achievement of objectives item by item by both the student and the consultant, and for comments which either the student or the consultant might wish to make.

Through use of the syllabus, the student can know precisely what the objectives of the program are, which objectives he is approaching, which he has achieved, and how and where needed modifications may be made.

SYLLABUS OF LEARNING OBJECTIVES

FOR USE IN THE INDEPENDENT STUDY OF BEGINNING GERMAN

SEPTEMBER, 1970

## GERMAN A

## SYLLABUS OF LEARNING OBJECTIVES

Summary

The student will...

1. ...mimic sounds and intonation occurring in the patterns;
2. ...discriminate audially among the sounds occurring in the patterns;
3. ...from non-verbal cues, produce sounds occurring in the patterns;
4. ...in oral reading, associate the sounds with the graphic symbols in the patterns;
5. ...pronounce and intone while reading aloud from the patterns;
6. ...spell from dictation of the patterns;
7. ...understand the meaning conveyed by the patterns both in listening and in reading;
8. ...utter suitable answers or rejoinders from oral cues based on the patterns;
9. ...in writing, manipulate structures from the patterns, e.g. change of person, number, etc.
10. ...demonstrate in understanding, speaking, reading, and writing the ability to use the structures and patterns in communicative interchange with other students and the consultant.

SUMMARY

Constructions 1 - 17 cover the following material:

1. PRONUNCIATION
  - a. Introduction of some German vowels and syllables (contrastive technique)
  - b. German "w" resembles English "v"
  - c. German "j" resembles English "y" in initial position
  - d. Diphthongs "ei", "au"
  - e. German "sch"

S | C

SUMMARY (cont.)

- f. German "ch" in ich.
- g. Initial German "s" resembles English "z."

2. MORPHOLOGY AND SYNTAX

- a. The only "grammatical" note introduced is that nouns are capitalized. No grammatical terminology is introduced. In general, the German syntax closely parallels the English.
- b. Incidental notes include the fact that haben Sie? means DO YOU HAVE ?, with capitalization of the second person pronoun in German.
- c. Neuter nouns are used in the singular with the definite and indefinite articles ( or possessive adjective) as subject and direct object. Masculine nouns are used in the singular with the indefinite article or possessive adjective as the subject of the sentence.

PATTERNS AND FORMS II

- 18. Pronoun + verb + neg. adv. + pred. adj.
- 19. Third pers. neut. pron. + verb + pred. adj.
- 20. Art. + noun + conj. + art. + noun

EXAMPLES

- 18. Ich bin nicht alt. (204)
- 19. Es ist weiss. (211)
- 20. Ein Schiff und ein Auto (223)

SUMMARY II

Constructions 18 - 27 cover the following material:

1. PRONUNCIATION

- Final German "r"
- Unvoicing the final "b" (resembles English "p" -- gelb)
- Pronunciation of "ch" after a back vowel-- Buch

SUMMARY (cont.)

2. GENDER

- a. Introduction of masculine singular definite article in nominative case--der
- b. Introduction of masculine singular indefinite article in accusative case--einen
- c. Introduction of masculine singular personal pronoun in nominative case--er

3. MORPHOLOGY

Masculine accusative singular ending of indefinite article and possessive adjective

4. SYNTAX

- a. Position of negative adverb (nicht) after a verb and preceding a predicate adjective or adverb
- b. Accusative case used for direct object
- c. Compound sentences joined with und and aber

Learning Objectives Contract AgreementRationale

If independent study is to lead to excellence of achievement, something must replace the goad of competition and pressure from the teacher that characterizes the traditional classroom. Clear perception of objectives and the triumph of achieving them are known to be strong motivating forces. To reach this happy state of affairs, the student must be brought to the point of projecting his own achievement of perceived objectives over time and by a stated future time. Thereby he goes into the keenest sort of competition with himself and becomes involved in self-development of the highest order. On the other hand, without the means for doing this, independent learning becomes the same sort of drift that any other purposeless learning has always been. While these means seem inherent in programmed materials, they must be formalized to produce the desired results.

The Learning Objectives Contract Agreement is a way of formalizing the student's capacity to project his achievement of certain specified objectives which have been clearly defined in the Syllabus of Learning Objectives. As he becomes acquainted with his own powers and the demands of programmed learning, the student needs practice in holding himself accountable for precise performance. He also needs a way of comparing the objectives of the programmed materials with his own objectives to determine how they may differ. He needs a way of recording these differences. All these things are permitted by the form.

LEARNING OBJECTIVES CONTRACT AGREEMENT

NOTE: Before signing this agreement, please read the following observations carefully:

1. The German A program consists of 5050 frames in which about 240 separate language patterns are developed. This program is to serve as the core of your study of German 1-2 (or the equivalent of the first year of high-school German), and is fundamental to any supplementation or consultation which occurs.
2. On the average, 175 hours of work are required to complete the programmed materials alone; that is, 175 hours are required to develop the skills which are the objectives of the program. These cannot be achieved without the expenditure of effort over time.
3. By the terms of independent study, you are free to set your own pace without penalty, so long as your performance agrees with your stated objectives. Thus, by self-pacing, you may finish the programmed materials before the end of the school year, or you may not.
4. Unless you make detailed qualifications in the appropriate space below, it will be assumed that your personal objectives coincide with those of the program, found in the Syllabus of Learning Objectives.
5. It is your responsibility to inform yourself concerning the objectives of the programmed materials. These are detailed in the Syllabus of Learning Objectives. If necessary, your consultant will explain these to you further.

AGREEMENT

I, \_\_\_\_\_, agree to complete the  
 (name)  
 study of Patterns number \_\_\_\_\_ to number \_\_\_\_\_ of the German A  
 program and to present myself for evaluation according to the criteria  
 outlined in the Summary of the Syllabus of Learning Objectives by  
 \_\_\_\_\_ unless these criteria are modified by agree-

 ment with the consultant.

I qualify the above statement in the following details:

Learning Objectives Challenge AgreementRationale

After the independent study student has become well acquainted with the demands of the program and with the plateau of his own performance, he may find that he is more bored more often than he was in the beginning. He needs a challenge. Under the circumstances, it would be better if the challenge came from himself. Once again, the potentiality for this is inherent in the programmed materials, but it needs formalization.

The manager, carefully diagnosing the student's habits and needs, may work with the following form to help the student produce the desired challenge for himself.

LEARNING OBJECTIVES CHALLENGE AGREEMENT

NOTE: Before signing this agreement, please read the following observations carefully:

1. By this time in your independent study you know about how many frames you are able to complete per day or per week on the average. You also have gained some insight into how the program may be modified to meet your objectives as they may differ somewhat from those of the programmed materials.
2. By this time you may also be able to project how much of the programmed materials you will likely complete this year if you work at your present pace. (If you should complete this set of programmed materials there is a more advanced set which you may begin.)
3. You may wish at this time to challenge your present and past performance record by projecting that you are able to complete a larger part of the programmed materials by a given future date. If so, please note that you will have to consciously change your working habits to make this possible. If you wish, then, proceed to fill out the form below:

AGREEMENT

I, \_\_\_\_\_, agree to challenge my previous performance average by completing the study of Patterns number \_\_\_\_\_ to number \_\_\_\_\_ of the German A program and to present myself for evaluation according to the criteria outlined in the Summary of the Syllabus of Learning Objectives by \_\_\_\_\_ (date) unless these criteria are modified by agreement with the consultant.

I qualify the above statement in the following details:

Signed: \_\_\_\_\_ on this \_\_\_\_\_ day of \_\_\_\_\_, 19 \_\_\_\_.

Learning Objectives Evaluation FormRationale

In the experience of most educators, students tend to learn what they interpret as important. In traditional learning, students are uncanny in their ability to recognize what the teacher thinks is important. Under conditions of independent study, the values of the student are given unprecedented consideration. Since the manager has the responsibility of protecting the interests of society, however, evaluation of independent study achievement must somehow be a blend of self-evaluation and evaluation by another.

The Learning Objectives Evaluation Form, which follows, attempts to facilitate such a blend. It will be noted that the evaluation is based absolutely on the objectives summarized in the Syllabus as they pertain to specified matter.

OBJECTIVES EVALUATION**

Recapitulation: The student, \_\_\_\_\_, agreed to complete the study of Patterns no. \_\_\_\_ to no. \_\_\_\_ of the German A program and to present himself for evaluation by \_\_\_\_\_.

With respect to the above numbered Patterns of the German A program, the student, with about 80% accuracy, is able to... .

1. mimic sounds and intonation;
  2. discriminate audially among sounds;
  3. produce sounds from non-verbal cues;
  4. in oral reading, associate the sounds with the graphic symbols;
  5. pronounce and intone while reading aloud;
  6. spell from dictation;
  7. understand the meaning both in listening and in reading;
  8. utter suitable answers or rejoinders from oral cues;
  9. in writing, manipulate structures;
  10. demonstrate ability to use in all skill areas.
