## ABSTRACT

Since the enactment of the Manpower Development and Training Act (MDTA) of 1962, the Bureau of Manpower Development of the New York State Education Department has provided training for 75,782 unemployed and underemployed individuals in 257 occupations at a total anticipated cost of \$95.1 million. During the period covered by this report, multi-occupational programs accounted for the largest proportion (73%) of the approved training slots, with regular programs (15%) in second place. Individual referral service accounted for the smallest proportion (2%) of the programs; special projects accounted for 10%. The report includes information on the following programs: on-the-job training, correctional institutional, redevelopment area residents, special work incentive, state training, and health occupations. Manpower program supervision activities and program problems are also reported. Recommendations include expansion from semiskilled and service into technical occupations, provision of social services in occupational centers, and preservice and inservice teacher training. There are numerous statistical tables. (NL)

## INTRODUCTION

The greatest concentration of effort in history to remove economic, educational and social disadvantage from the American scene was made during the 1960's. Many functions of Federal, State, and local government, as well as many private enterprises and foundations, have played a part in helping the disadvantaged of our society obtain their share of the abundance existent in the country. While gains have been reported from all organizations engaged in this effort, progress has been painfully slow. Probably the greatest deterrents to rapid progress in upgrading the disadvantaged have been the lack of techniques for testing, training, and teaching them and the inadequacy of funds for the task to be accomplished.

Persons born and raised under poverty or welfare conditions, particularly in families which have lived under these conditions for several generations, develop standards quite different from members of families having higher economic capabilities and standards. Malnutrition, educational underachievement, failure, substandard housing, and chronic unemployment are a normal way of life for the disadvantaged. In such a setting, there is no single approach which will successfully assist these people in improving their socioeconomic status. This annual report is concerned with a particular aspect of the total effort being made to help disadvantaged persons help themselves; namely, institutionalized training or retraining of unemployed or underemployed persons to fill shortages in the labor market.

### Legislation Approved for Training the Disadvantaged

The first major national legislative action in the current efforts to assist disadvantaged persons in the United States was enacted by Congress in March 1962 under the title of the Manpower Development and Training Act of 1962 (MDTA). Since that time, the act has been amended several times to improve its effectiveness in

Reaching and developing this underutilized pool of national human resources. In 1966, the New York State Legislature enacted Article 23A of the State Labor Law which expanded and improved upon MDTA to better satisfy the needs of New York State's disadvantaged people in relation to New York State's labor market. This article has become popularly known as the State Manpower Training Act or simply as the State Training Program (STP). In 1967, the concept of training or retraining individuals to meet labor market shortages was further extended when Congress amended the Social Security Act to establish Work Incentive Programs (WIN). These programs coordinate social welfare services with training programs for recipients of aid to families with dependent children and children of unemployed parents.

#### Goals

Succinctly stated, the goals of MDTA, STP, and WIN are to improve the socioeconomic status of unemployed and underemployed persons by training or retraining them to fill shortages in the labor market.

#### Procedures

Under MDTA, STP and WIN, the function of identifying and anticipating shortages in the labor market is assigned to the New York State Employment Service. Additionally, the Employment Service is responsible for locating people who can be prepared to fill the labor market shortages after exposure to basic education and/or pre-vocational training and skill training or retraining. When these two operations have been completed, the Employment Service requests the Bureau of Manpower Development of the State Education Department to develop the required training programs in public or private training

institutions and to supervise the administrative operation of the programs. The Employment Service is responsible for placing individuals in jobs once training is completed.

In order to satisfy the individual needs of persons referred for training and to be able to provide training in an urban, sub-urban or rural setting, several types of programs have been developed and are listed below with a brief description of each.

1. Regular Programs: Under this type of program, referrals are made in class-size groups for institutional training in the skills and related technology required for placement in known job opportunities. Basic education in communications and mathematics is included when necessary. While basic education may be offered before skill training is started, it has been found that instruction in basic education is more effective when conducted concurrently with the skill training. Regular programs may be offered in either public or private institutions.
2. Multi-Occupational Programs: In areas of the State where there is an adequate supply of unemployed or underemployed persons who could profit from skill training and there is sufficient industrialization to create a need for a constant supply of skilled or semi-skilled labor, training centers are organized, equipped and staffed to handle larger than class-size group referrals in several different occupations. The training centers are staffed to provide the special services, such as individual and group counseling, and social, medical, and psychological services needed by the educationally, socially, and economically disadvantaged.

Aside from being particularly well suited to help resolve individual trainee problems, the multi-occupational center can provide skill training to the limit of individual abilities. For example, where a group of related occupations can be arranged from least to most difficult, as with the clerical occupations (stock clerk; clerk, general office; clerk-typist; keypunch operator; and stenographer), a trainee may enter the lowest-ordered training course and advance through a series of courses ending with the highest-ordered course. Each course of training completed increases the trainee's earning capacity.

3. Individual Referral Programs: In situations when the number of trainees having the aptitude and desire to enter a specific occupation is less than class-size (usually only one or two people) or where there are insufficient job vacancies to accommodate a full class, the trainee is referred usually to a private trade or business school for the necessary occupational training.
4. On-the-Job Training Programs: An increasing number of individuals are being referred directly to a prospective employer who has the facilities and inclination to provide on-the-job training. Unfortunately, many of these trainees are not educationally equipped to take advantage of such on-the-job training programs. Under such circumstances, the on-the-job training program is combined with an institutionalized prevocational program which may include basic and remedial instruction, guidance, and medical or psychological service as required by the trainee. Such arrangements are called "coupled

OJT programs."

5. Correccional Institution Programs: Under MDTA skill training, courses may be established for the inmates of correccional institutions. The concept underlying this amendment is that the lack of job success is a significant factor in the high rate of recidivism among former inmates of the institutions. Lack of funding has prevented any programs from becoming operational under this amendment (MDTA, Title II, Part C, Section 251).

## DEVELOPMENTAL ACTIVITIES

Manpower Development and Training Act of 1962: Since the enactment of the Manpower Development and Training Act of 1962, the Bureau of Manpower Development of the New York State Education Department has provided training for a total of 75,782 unemployed or underemployed individuals in 257 occupation titles at a total anticipated cost of \$95.1 million or an average cost of approximately \$1,225 per trainee. The yearly fluctuations of these data from September 1962 through June 1969 are shown in Table 1 on page 11. An annual increase in the number of approvals for training and the total allocated educational cost may be noted from 1963 through 1966. After 1966 both of these figures have decreased annually. This reduction in the number of approvals for training persists in spite of the 3.5 percent unemployment rate in New York State during 1968 estimated by the U.S. Department of Labor\*. Among reasons given for the reduction are the steadily increasing educational costs without corresponding increases in appropriations to permit program expansion for New York State and the increasing emphasis on training the "hard core" unemployed.

As pointed out in the introduction to this report, New York State utilized MDTA funds to support several types of training programs to assist the economically deprived. While each type of program is discussed later in this report, it is appropriate to examine, at this point, the scope of each type of program in relation to the total 1968-69 MDTA effort in the State. Chart 1 shows how the total number of approved training slots was distributed among five types of projects funded. From the chart, it may be seen that the multi-occupational programs accounted for the largest proportion (73 percent) of the approved training slots, regular programs accounted for the second largest (15 percent) proportion, and individual referral programs accounted for the smallest proportion (2 percent). Special projects accounted for 10 percent of the program.

\*Statistics on Manpower, a supplement to the Manpower Report of the President, J.S. Department of Labor, March, 1969, Page 61.

TABLE I  
 Summary MDTA Data for New York State  
 September 1962 through June 1969

Fiscal Year Ending June 30	Total Approvals for Training	Total Allocated Educational Cost in Millions	Average Cost Per Trainee*	Number of Different Occupations*
Total	75,782	95.1	1,255	257
1969	8,011	10.3	1,288	80
1968	12,868	15.7	1,223	94
1967	13,914	17.1	1,235	150
1966	16,301	27.9	1,710	217
1965	12,784	14.9	1,167	70
1964	7,562	6.9	932	38
1963	4,342	2.3	543	20

\* Non-additive

CHART I

Distribution of Approved Training Slots  
 Among Types of Programs Funded, 1968-69

Coupled OJT \*

The distribution of allocated 1968-69 MDTA funds among the five types of programs is shown in Chart II. The chart shows that individual referral and coupled OJT programs received a slightly larger proportion of the distribution of funds than of approved slots. Regular programs received a slightly higher proportion of money allocated than approved training slots.

CHART II

Distribution of Allocated Funds Among Types of Programs, 1968-69

\*Coupled OJT Programs = 1.1%

Regular Programs: The concept of developing a specific occupational skill training program, together with any necessary ancillary services, for a class-size group of disadvantaged individuals is sound as long as there is a sufficient manpower shortage locally in the skill to assure placement of graduates of the program, aggressive recruitment of persons with an aptitude for the specific skill, and adequate funding to provide programs whenever and wherever needed. Unfortunately, inadequate funding since fiscal year 1965-66 has brought about extensive cutbacks in the number of regular programs which could be developed and correspondingly severe reductions in the number of persons who could be trained. Table 2 shows the extent of reductions in regular programs under MDTA using fiscal year 1965-66, the peak year for institutional skill training, as the base year.

Table 2 also shows the percent reduction each year over the base year. It may be seen from the table that in 1968-69, the number of communities in which regular programs were operated was reduced by 54 percent from the base year, the number of programs offered was reduced by 71 percent, the number of sections required to accommodate the trainees was reduced by 82 percent, the number of trainee slots was reduced by 82 percent, and the amount of MDTA funds available was reduced by 77 percent. It also may be noted from the table that all categories were reduced in total amount annually since the base year.

TABLE 2

Regular MDTA Programs  
1965-66 through 1968-69

Fiscal Year	Total Number of Communities		Total Number of Programs		Total Number of Sections		Total Number of Trainee Slots		Total Budgeted Educational Expenditure	
	No.	% chg. over 65-66	No.	% chg. over 65-66	No.	% chg. over 65-66	No.	% chg. over 65-66	Amount	% chg. over 65-66
1968-69	15	-54	22	-71	65	-82	954	-82	1,552,806	-77
1967-68	20	-37	40	-48	134	-64	2,029	-61	3,758,370	-43
1966-67	28	-12	56	-27	243	-34	3,611	-30	4,629,149	-30
1965-66	32	Base Year	77	Base Year	369	Base Year	5,177	Base Year	6,581,749	Base Year

1. Excludes nine programs operated in 1969 with 1968 deobligated money.
2. Includes cost of Licensed Practical Nurse Program approved in Massena funded with money deobligated from the New York City Multi-Occupational Skill Center.

The 22 regular programs developed for 958 trainee slots during 1968-69 provided training in eight different occupations. The eight occupations are listed in rank order from most to least expensive by average estimated cost per trainee hour in Table 3. The table shows that the 200 trainee slots provided for patrolman were the most expensive at \$1.49 per trainee hour, while the least expensive program was for meat cutter at \$0.96 per trainee hour. The average cost per trainee hour for all 22 programs was \$1.30.

TABLE 3

Occupations in Which MDTA Regular Programs Were Offered in 1968-69  
Ranked in Descending Order by Estimated Cost Per Trainee Hour

Occupation	Average Estimated Cost Per Trainee Hour	Number of Programs	Number of Slots	Total Trainee Hours of Instruction	Total Allocated Cost
Patrolman	\$1.49	1	200	298,200	\$443,514
Production Mach. Op.	1.40	2	70	28,800	40,344
Auto Mechanic	1.39	2	35	41,400	57,405
Machine Set-up Operator	1.34	2	35	25,800	34,569

Typist	1.02	1	20	12,800	13,069
Police Assistant	1.08	1	30	25,500	27,677
Meat Cutter Retail	0.96	1	120	72,000	69,135
<b>Total</b>	<b>\$1.30*</b>	<b>22</b>	<b>958</b>	<b>\$1,193,061</b>	<b>\$1,552,806</b>

Multi-Occupational Programs: Organizing, equipping, and staffing skills centers in urban or heavily populated suburban areas where there are concentrations of disadvantaged persons and an adequate number of employers to absorb the disadvantaged when they have been trained to enter an occupation is a sound educational and economic concept. This is true only so long as a level of funding is maintained which provides for normal increases in educational costs as well as necessary expansion of occupational and ancillary service offerings to attract and hold large numbers of the people whom the centers are intended to serve. The centers provide basic and remedial education; individual and group counseling; special social, medical, and psychological services; aptitude and attitude testing; and prevocational training as well as training in a variety of skills for which there is a known labor market.

Although the several phases of training (basic education, prevocational training and skill training) are easily identifiable, the programs are structured to maintain a feeling of continuity while avoiding intensification of the "failure habit" which generally has been instilled from past experiences in most of the persons referred to the centers.

Table 4 shows selected summary data for Multi-Occupational Centers from July 1, 1965 through June 30, 1969, together with the percentage change each year, using 1965-66 as the base year. The table shows that after a severe cutback between 1965-66 and 1966-67, gains were registered in the number of programs, trainee slots, and the amount of money budgeted for the next two years.

Comparing 1968-69 with the base year in the table shows that the total number of programs was reduced by 49 percent, the total number of trainee slots was down 35 percent, and the total money budgeted was down 10 percent. There are several reasons why the total money budgeted has approached the base year level more rapidly than either the total number of programs or trainee slots. Some of the reasons are:

- (1) the increasing cost of education, including such items as the

- rental of space, necessary equipment and supplies, and salaries;
- (2) the difficulty in recruiting trainees from among the more severely disadvantaged, many of whom have simply stopped trying to seek employment which would improve their situations; and
- (3) extensive time lags between the time of initial contact with a potential trainee and the approval of a program, frequently brought about by mandated procedures and methods of funding.

TABLE 4

Multi-Occupational Skill Center MDTA Programs  
1965-66 through 1968-69

Fiscal Year	Total Number of Multi-Skills Centers		Total Number of Programs		Total Number of Trainee Slots		Total Budgeted Educational Expenditure	
	No.	% chg. over 65-66	No.	% chg. over 65-66	No.	% chg. over 65-66	Amount	% chg. over 65-66
1968-69	9	+12	105	-49	6,394	-35	\$7,576,598	-10
1967-68	9	+12	111	-46	4,480	-54	7,241,949	-14
1966-67	7	-12	161	-22	3,747	-61	5,381,576	-36
1965-66	8	Base Year	207	Base Year	9,692	Base Year	8,443,090	Base Year

Chart III shows the proportional distribution of the 6,394 approved trainee slots and the \$7,576,598 budgeted among New York State's nine Multi-Occupational Centers during 1968-69. As might be expected, New York City had half of the total training slots and nearly half (48 percent) of the money budgeted. The most noteworthy observation to be made from Chart III is the difference in proportions when comparing funds to trainee slots within the eight other centers in the State.

For example, Albany had 6.4 percent of the budgeted money but only 3.6 percent of the trainee slots, while Utica had only 5.9 percent of the money budgeted but had 11.7 percent of the trainee slots. A full explanation of these differences in proportional distributions would require a special evaluation and cost study of the skill centers. A partial explanation, however, is given in Chart IV on page 14, together with its interpretation.

CHART III

Proportionate Distribution of the Approved 6,394 Trainee Slots and \$7,567,000 Budgeted Among New York State's Nine Multi-Occupational Centers 1968-69

Chart IV shows the proportion of the total budget allocated to supervision and building rental and to basic education, guidance, and skill training in each of the nine New York State Multi-Occupational Centers for the 1968-69 fiscal year. The chart shows that there is a range from 22 percent in New York City to 45 percent

in Albany in that portion of the budget allocated to supervision and building rental. At least part of the reason for this wide range is whether the programs are conducted in publicly-owned or rented facilities. In New York City, many of the Multi-Occupational Center activities are conducted in public buildings so that building rental requires only 6 percent of the total skill center budget, while in Albany, rental of space for skill center activities requires 30 percent of the total budget.

CHART IV

Proportion of Total Budget Allocated to Supervision and Building Rental and to Basic Education, Guidance, and Skill Training in Each of the Nine New York State Multi-Occupational Centers 1968-69

During 1968-69, the Multi-Occupational Skills Centers provided training in 46 occupations. The 46 occupations are listed in rank order by average cost per trainee hour in Table 5. Also shown for each occupation are the average cost per trainee hour, the total number of programs offered, the total number of trainee slots provided, the number of trainee hours of instruction, and the total budgeted cost for skill training. Information concerning training hours and program cost at the Syracuse Multi-Occupational Center was not available since that center was on annualized funding and did not need to report these data for each program. In Table 5, Syracuse is included only in the number of programs column. Occupational titles which were offered by the Syracuse center are preceded by an asterisk in the table.

The range of program costs was from a high of \$1.63 per trainee hour for tractor trailer truck driver to a low of \$0.19 per trainee hour for grocery checker. The median cost of all programs was \$0.59 per trainee hour. Pro-rated costs for supervision, building costs, guidance, and basic education are not included.

1/ Skill training costs only. Excludes facility, administrative and supervisory costs. Programs conducted in Syracuse are excluded from body of table.

On-the-Job Training Programs: MDTA makes provision for coupling institutional training with on-the-job training, allowing a prospective employer to provide skill training, while a public or private training institution provides basic and job-related education and necessary ancillary services. Although this has consistently been the least expensive way for the Government to train people (the prospective employer pays for the skill training), only 90 trainee slots were provided for this type of training under MDTA at a total cost of \$29,163 during 1968-69. Sixty of the trainee slots were for apprentice cook, while the remaining thirty were for dry wall tapper.

At least part of the reason for this low number of referrals to coupled OJT programs was the increasing emphasis on the Job Opportunities in the Business Sector (JOBS) program sponsored by the National Alliance of Businessmen (NABS).

Under the NAB's JOBS program, an employer or group of employers acting as a consortium enters into contract directly with the United States Department of Labor to hire and train disadvantaged persons. When entering into a contract, the employer must give priority to a skills center (if one is available) for providing educational services.

Correctional Institutional Programs: On October 25, 1968, President Johnson signed into law a bill to extend and amend the MDTA of 1962. Section 251 of this act provides programs for inmates of correctional institutions, and it extends the authority for correctional institutional programs to June 30, 1970.

In New York State, seven correctional institutions (Auburn State Prison, Erie County Penitentiary, Greenhaven State Prison, Federal Community Treatment Center - New York City, Onondaga County Penitentiary, New York City Penitentiary - Rikers Island and the Westchester County Penitentiary) expressed an interest in submitting a preliminary proposal under Section 251 of the act. After consultation with these institutions, Rikers Island, Onondaga Penitentiary, and the Community Treatment Center developed proposals for their inmate population to meet area labor

demands.

The Rikers Island proposal for basic education and prevocational training was designed to determine whether a short-term (ten weeks) program of remediation in education, employment skills, and supervised release and post-release services is effective in facilitating released offenders re-entry into the community and their adjustment to social conditions. In addition, the proposal was designed to test which approach is most effective: MDT training plus work release, MDT training alone, or work release alone. Trainees who completed the ten-week period would be released, placed on work-release projects, paroled, assigned to OJT institutional training, or referred to continued skill training in an MDTA Skills Center. After considerable time spent in development of the proposal, the Interagency Review Committee rejected the proposal. The committee felt it was not a sound program for a demonstration and experimental project. In their opinion, no significant contribution could be made in ten weeks. This decision was reached without the institution being given an opportunity to demonstrate program effectiveness.

The Onondaga County Penitentiary and the Community Treatment Center proposals also were rejected by the Interagency Review Committee after many man hours had been spent by Federal, State, and local officials in preparing information for Section 251 proposals. The problems of Section 251 lie with the many uncertainties, frustrations, and the time spent in trying to second guess the type of program the Interagency Review Committee wants, not to mention the small amount of money and the inadequate number of training slots available to the 50 states.

The FBI in its report "Careers in Crime" for a five-year period found 63 percent of 17,000 convicts had records of previous arrests. Half of these inmates had been arrested within a year of their previous release from prison. At the time this report was released, Chief Justice Warren Burger stated, "We must search for new incentive programs to permit reduction of sentences for those who will educate and train themselves in skills which will give man pride and identity."

On the basis of this statement, it is lamentable that nothing has been approved for New York State.

Redevelopment Area Residents Programs: Except for the manner of approving and funding RAR programs and defining the target population, the programs are similar to regular programs. Referrals are made in class-size groups for training in specific occupations. The training may be carried out by either a public or nonpublic institution. After being developed at the local training agency and being reviewed at the state level, programs to be conducted in redevelopment areas are approved and funded at the national level. Funding of RAR programs does not affect the state's allocation for other types of programs.

Comparing RAR programs offered in 1968-69 with the base year 1955-66 in Table 6 shows a modest increase of two communities and two programs. The table shows that while 34 percent fewer training slots were offered in 1963-69 than in 1965-66, there was a 57 percent increase in money allocated for the programs. Yet the average unit cost (cost per trainee hour) was not out of line with program costs discussed elsewhere in this report.

TABLE 6

RAR Programs  
1965-66 through 1968-69

The eight programs developed for the 236 training slots during 1968-69 provided training in five different occupations. These five occupations are listed in Table 7 in rank order by average estimated cost per trainee hour of training. The most expensive programs offered were the four for licensed practical nurse at an average cost of \$0.98 per trainee hour, which was less than the average cost for similar plans offered in regular programs (\$1.26) shown in Table 3.

TABLE 7

Occupations in Which RAR Programs Were Offered, 1968-69,

\*Computed Average

Special Programs: Under MDTA, special programs which are experimental in nature may be approved by the Bureau of Manpower Development through normal channels but are funded by the U.S. Department of Labor from unallocated funds. During 1968-69, three such programs were conducted in New York State (all in New York City), enrolling 860 trainees at a total cost of \$998,361.

The common element of all three programs is that they aggressively recruit

trainees from among the hardcore unemployed, most of whom are school and social dropouts living in the most severely depressed areas of the city. Additionally, all three programs concentrate heavily on individual and group counseling. The programs differ in the particulars of operation.

Harlem Teams for Self-Help is operated by the New York City Board of Education. This program concentrates on prevocational adjustment providing whatever basic education and counseling are necessary to prepare an individual to enter one of the city's skills centers.

Training Resources for Youth (TRY) is incorporated as an independent agency and is assisted by the YMCA of Greater New York. TRY offers a comprehensive program of counseling, basic education, remedial courses, vocational training, and employability skills.

The Board of Youth operated a program to train duplicating machine operators at Camp Madison-Felicia in Putnam Valley, New York. The innovative aspect of this program has been the degree to which it exercised environmental control. The trainees were removed from a depressed environment and placed in the camp for about three months to provide opportunities for desirable attitudinal changes. Although programs of this nature are quite expensive to operate, great successes have been reported from all environmental control experiments.

## WORK INCENTIVE PROGRAM (WIN)

The Work Incentive Program (WIN) was authorized by the 1967 amendments to the Social Security Act. Its purpose is to provide welfare recipients an opportunity to achieve productive employment.

Under the program, local welfare agencies refer clients to a WIN team which develops an employability plan for each individual in an effort to determine what services and/or training are necessary for the client to become a wage earning member of society, thus restoring the family to independence and a useful role in the community. If it is determined that training is required for employment, the person may be referred to ongoing programs such as Neighborhood Youth Corps, New Careers, and MDTA projects, or other programs where slots are available. New programs may be authorized using WIN funds, should trainee numbers warrant it.

The Bureau of Manpower Development became involved in the WIN program during the last half of fiscal year 1969. The initial responsibility at that time was to develop, in cooperation with State WIN personnel, who are a component part of the State Labor Department, an outline of material to be covered during a 60-hour basic orientation training session designed to prepare the client for the "world of work." This phase of training is referred to as Employability Orientation. The bureau is also involved in the approval and processing of Employability Orientation proposals and skill training proposals.

By the close of fiscal year 1969, a multi-occupational program had been funded, along with nine Employability Orientation projects and three specific skill training projects with education costs totaling \$3,065,097.

The outlook for fiscal year 1970 indicates that there will be a significant expansion in the program, with a greater number of trainees to be served.

STATE TRAINING PROGRAM

Since its inception, the State Training Program (STP) has provided training slots for 3,736 individuals at a total cost of \$3,705,088 or an average cost of \$992 per trainee. Although STP is a smaller program than MDTA, it has experienced steady increases in the number of trainee slots and in the amount of money allocated, while the number of trainee slots under MDTA has declined.

Regular Programs: During 1968-69, 25 regular programs were developed for 943 training slots in 14 different occupations for a total allocated cost of \$1,207,877. The 14 occupations are ranked from most to least expensive based on average estimated cost per trainee hour in Table 8. The three programs providing 100 training slots for structural steel worker were the most expensive at \$4.56 per trainee hour, while the program for 20 training slots for mechanical draftsman was the least expensive at \$0.45 per trainee hour. The average cost of all STP regular programs was \$1.47 per trainee hour.

\*Computed Average of all Programs

On-the-Job Training: During 1968-69, a total of 300 training slots were approved for coupled OJT programs at a total cost of \$98,046 in STP funds.

Individual Referral: Three hundred twenty-two training slots were provided through STP individual referrals into 37 occupations at a total cost of \$320,909 in 1968-69. In Table 9, the 37 occupations are ranked from most expensive to least expensive on the basis of average estimated cost per trainee hour. The average cost per trainee hour of all STP individual referrals was \$0.98. The most expensive occupation was tractor-trailer truck driver at \$6.47 per trainee hour, while the least expensive was licensed practical nurse at \$0.26 per trainee hour.

## HEALTH OCCUPATIONS

The Bureau of Manpower Development approved 1,685 training slots in 55 programs preparing for employment in nine health occupations during the fiscal year ending June 30, 1969. These included practical nurse, dental assistant, dental laboratory assistant, dental laboratory technician, medical assistant, medical laboratory assistant, nurse aide, nurse aide/orderly, and surgical technician. The health occupations account for 9.4 percent of the total training slots in the Manpower Program and 8.3 percent of the total number of occupations approved by the Bureau of Manpower Development for the same period. The single most popular and successful health occupation program is practical nursing for which the enrollment is shown in Table 10. It is one of the longest Manpower programs and the only one requiring the separate approval of the Division of Professional Education and leading to licensure by the State Education Department. Of the 105 practical nursing programs registered in New York State, 32 were conducted by Manpower. Of a total of 4,919 practical nursing admissions, 1,682 were Manpower enrollees. Of 2,684 graduates, 646 were Manpower students.

The attrition rate for Manpower practical nursing students was 41 percent compared to an attrition rate of 29 percent for all practical nursing students. A major reason for this discrepancy is the eighth grade admission requirement for Manpower programs, in contrast to high school preparation for other programs. It may be noted in Table 11 that of those trainees who do successfully complete the programs, a comparatively high percentage do pass the L.P.N. examination. To date, all of the Manpower practical nursing programs have been conducted by Boards of Education, with the exception of one offered at the State University of New York Agricultural and Technical College at Delhi.

In 1968-69, Manpower offered a unique program to prepare practical nurses licensed by waiver for entrance to the State Board of licensing examinations to meet new requirements imposed by the Medicare Amendment of the Social Security Act.

Of over 12,000 waiver nurses identified by a New York State Health Department survey, 300 were referred by the New York State Employment Service to special 300-hour programs in ten cities across the State at an education cost of \$260 per trainee.

Although the demands for health care increased, the actual number of requests for related training was reduced. Two reasons are the relatively high cost of instruction due to the low student-teacher ratio in the clinical areas and the lack of status with low pay for entry level occupations.

No training agency expressed interest in developing refresher courses for registered nurses because of previous experiences with limited funds. However, as a measure of successful training in the health occupations, the majority of the trainees were committed to jobs prior to completion of their training. Characteristically, in upgrading programs, trainees continued employment in the institution where they worked prior to training.

Despite obstacles, especially those resulting from late fundings, the bureau aims to provide the best training possible with the limited funds available for those trainees who can best benefit from the program offered and to promote expansion of existing programs.

TABLE 10

Number of Practical Nurse Trainees

## MANPOWER PROGRAM SUPERVISION ACTIVITIES

The following section describing activities of the Bureau of Manpower Development has been adapted from material prepared for the mandated evaluation of programs funded under Section 160 (7) 3, Evaluation of Institutional Training of the Manpower Development and Training Act of 1962, as amended. Although the material refers specifically to federally supported programs under MDTA, the assumption can be made that all narrative statements are applicable to both STP and WIN programs.

### Field Supervision and Reporting

Field supervision of MDT programs is provided by the Bureaus of Agriculture Education, Home Economics Education, Business and Distributive Education, Trade and Technical Education, Basic Continuing Education and Guidance. Approximately 120 supervisory visits to Manpower programs were made in 1969. During the visits field supervisors observed classes, examined facilities, equipment and instructional materials, counseled instructors, and made recommendations for improvement of the local program.

The general consensus of field supervisors is that the prime factor contributing to the successful training of the disadvantaged is a competent, sensitive, dedicated classroom teacher.

### Deobligation: Purposes and Procedures

A deobligation procedure is in operation to assure continuous recovery of unexpended Manpower funds for reassignment to additional approved projects.

Eight weeks after the start of a program, local directors are asked to deobligate funds, based on their experience with the project to that date. Again, at the end of six months, and then two weeks before the end of each project, contact is made with the training agencies for the purpose of deobligation. This

frequent re-examination of program budgeting requirements at the local level encourages the voluntary returning of unencumbered funds to the State allocating pool. To further facilitate the deobligation, a Division of Educational Finance form for Federally Aided Programs (Monthly Expenditure Report and Monthly Quarterly Request for Funds) is used, requiring local directors to assess current financial resources before making regular requests for payment. The use of the form, coupled with the periodic deobligation procedure, has made possible the recovery of funds as shown in Table 12.

TABLE 12

Deobligated Federal Funds 1965-1969	
Year	Federal Funds Deobligated
1965-66	\$1,051,312
1966-67	300,541
1967-68	339,000
1968-69	1,849,396
	TOTAL \$3,540,249

Out of the total funds deobligated, \$1,108,965 was used to fund additional Manpower programs within the State. The balance was reassigned to Washington for utilization elsewhere.

Equipment: Acquisition and Accountability

The purchase of equipment for MDT projects has been declining steadily for the past several years. The various training facilities throughout the State, having been supplied with modern industrial equipment in the past, need only specialty items to keep programs operating efficiently. A continuous effort is made in New York State to comply with federal directives limiting equipment purchases.

Since much of the equipment presently in use was purchased in the first years of the MDT program, local agencies are faced with the necessity for replacement

of worn out or obsolete equipment. Through constant use and repeated repairs, some items have become too costly to maintain in working order. Procedures to replace this type of equipment over a five-year period have been initiated.

The transfer of equipment from terminated projects in other facilities continues. This procedure is in line with efforts to make the most efficient use of available equipment. Equipment from 27 centers, with an acquisition cost of \$65,426.00, was involved in such transfers for this fiscal year.

Complying with Federal directives, New York State has submitted equipment in excess of its needs to the Regional HEW Office for placement with MDT programs nationwide. Equipment from 25 projects was offered to the regional office in 1969 for this purpose. A procedure for public sale of excess equipment has been initiated.

Federal Government Surplus Administration excess property continues as an important source of auxiliary equipment, supplies, and material. The equipment acquired from this program is on loan and, in most instances, requires expenditures of Manpower funds only for transportation and installation. For this fiscal year, the total original cost of the equipment and material so received was \$163,550.00.

The loss through promotional transfer of a key office person and the inability of the State Education Department Division of Personnel to supply a replacement has halted further progress in the conversion of the equipment inventory accounts to the machine record system. With increasingly more equipment now being involved in multiple transfers, the machine record system, which depends on continuous checking of results, is being affected to its detriment.

Considerable difficulty has been experienced in implementing the machine record system as originally devised. An excessive amount of time has been necessary to verify the accuracy of each printing. This was due to the number of operations involved in effecting a final printout and the possibility of error at each step.

Consideration is being given to revising the system for the purpose of simplifying the steps required to effect a serviceable printout. The main feature would be to organize the listing of the various projects by community instead of by fiscal year and to eliminate the need to account for equipment in projects being recycled.

Individual Referral Programs

The individual referral programs satisfy a very real need in the total MDTA picture. When less than a class-size group of individuals shows a desire and an aptitude for training in an occupation and there would be a lengthy delay in forming a class or there is insufficient demand to form a class, the individuals may be referred to a public or a private school for the necessary training. Usually such individuals are prepared to go directly into skill training so there is seldom concern for prevocational or basic education courses.

The numerical and percent changes which have occurred in the individual referral programs since the base fiscal year 1965-66 are shown in Table 13. The year 1965-66 is used as the base year because it was the peak year of individual skill training.

TABLE 13

Individual Referral MDTA Programs 1968-69

Fiscal Year	Total Number of Schools		Total Number of Programs*		Total Number of Trainee Slots		Total Budgeted Educational Expenditure	
	No.	% chg. over 65-66	No.	% chg. over 65-66	No.	% chg. over 65-66	Amount	% chg. over 65-66
1968-69	78	+11	123	-15	246	-42	\$228,302	-35
1967-68	73	+ 4	117	-19	269	-36	218,078	-38
1966-67	75	+ 7	125	-14	352	-17	293,915	-16
1965-66	70	Base Year	145	Base Year	422	Base Year	349,970	Base Year

\* A program consists of the referral of one or more trainees, at the same time, to a course of vocational training.

Comparing 1968-69 with the base year 1965-66 in Table 13 shows an 11 percent increase in the number of different training agencies used but a 15 percent decrease in the number of programs offered, a 42 percent decrease in the number of trainee slots, and a 35 percent decrease in the amount of money allocated to this type of program. The greater decrease in trainee slots than in money allocated is attributable at least partially to increased training costs.

In Table 14, the 44 occupations in which training was offered in fiscal year 1968-69 through the MDTA Individual Referral program are ranked in descending order by average estimated cost per trainee hour of instruction. The programs of tractor-trailer driver were the most expensive at \$6.96 per trainee hour. The least expensive program was for licensed practical nurse at an average of \$0.50 per trainee hour, while the computed average cost per trainee hour for all programs offered was \$1.12. Although not shown in the table, it may be noted that the single most expensive program offered was for tractor-trailer driver in Buffalo at a cost of \$15.00 per trainee hour, while the least expensive program was for barber in Syracuse at \$0.37 per trainee hour. Additionally, it may be noted that the nine occupations in which training was offered for ten or more trainees accounted for 60 percent of all trainee slots.

TABLE 14

Occupations in Which MDTA Individual Referral Programs Were Offered in 1968-69 Ranked in Descending Order by Estimated Cost Per Trainee Hour

#### Linkages with Other Agencies

Throughout the year continuous efforts were made to carry out and improve a system of linkages with programs and agencies related to skill training for the disadvantaged. Particular emphasis was placed on maintaining a cooperative working relationship with the regional Employment Service offices.

A composite picture of MDT activities within the State reveals linkages with a variety of programs to meet local needs. Some of the agencies reached and the nature of the contacts made, are:

#### Social Services

- . A social worker is a member of one local Manpower staff.
- . Close liaison with the County Departments of Social Services is maintained in order to insure that the trainees receive necessary and adequate help in welfare and child care assistance.
- . One County Department of Social Services has been extremely active in assisting trainees with financial difficulties, home problems, and individual counseling matters. They have assisted in the recruitment, motivation, and retention aspects of the program. The retention of approximately 35 trainees, in the past eight months, in one program alone is attributable to the efforts of this exceptionally dedicated agency.

#### Health Organizations

- . Local nursing organizations in one community have drawn plans for the best use of available facilities to provide nursing students experience, thereby minimizing overburdening any one institution.
- . One County Department of Health has provided free material for the necessary immunizations of practical nurse trainees.
- . Local police departments frequently have presented programs on crime problems and related subjects. In past cycles, they also have covered drug abuse in depth.

#### Business, Industry and Labor

- . Trade unions and the industrial community have presented talks on the demands of industry on a periodic basis.
- . One local Chamber of Commerce has contributed to the MDT program through a recruitment program structure and guest speakers.
- . In the Binghamton Training-Ready Program, the help of the Binghamton OJT and Opportunities for Broome projects has been enlisted with good results.

#### New York City states:

"Our relationships with employers and unions continue to grow. In the past year we have continued old contacts, (i.e., Meat Cutters, Iron Workers, Culinary Workers) and made some new ones (i.e., Investment Brokerage Industry, Department Stores, Electrical Contractors, Drapery Manufacturers). Similarly, we

continue to work cooperatively in various projects and capacities with the Harlem, Bedford-Stuyvesant, Chinese, Puerto Rican, Jamaican and other communities.

"Other organizations linked to Manpower through referral in a spirit of cooperation and an awareness of shared mutual interests included community action organizations, professional groups, business, news and labor organizations and many governmental and quasi-governmental agencies.

"These agencies have been used with varying frequency, depending on their availability and the needs of the trainees. Agency cooperation is excellent. In addition to the direct benefits to trainees, the community agencies have become aware of the objectives, educational philosophy and training methodology of MDT. The agencies are helped to realize that the team effort of which they are a part can help to alleviate the multi-faceted problems which disadvantaged trainees face in becoming employable."

#### Use of Advisory Committees

A major reason for the formation of occupational advisory committees is the need to keep MDT training abreast of the requirements of the employing community. Committee members are drawn from a broad base of local businesses, trade associations, industry, and labor. Individuals serve without recompense in an effort to acquaint Manpower staff with current needs of business and industry for persons trained in the specific skills and knowledge that are most in demand. Advisory committees are organized for each occupation to provide assistance and advice in course development, staff recruitment, occupational orientation and information, and evaluation of instruction and equipment. It has been the practice to include program advisory committees from various disciplines and community groups.

The use of advisory committees is limited, however, by lack of funds for planning and coordination, resulting in accomplishments of variable quality. During the past year, advisory committees have worked on student recruitment, provided speakers for group counseling sessions, offered awards for accomplishments, and helped in public relations. Each committee defines its own activities and area of interest.

The development of trainee councils, staff councils, and community councils

to enrich the thought and action involved in Manpower training also has been encouraged.

Industry has provided large quantities of supplies and equipment, either gratis or on loan. Employers also donate awards to graduates and money to trainee emergency loan funds.

The busy and knowledgeable men who are asked to serve on advisory committees cannot be expected to spend long hours rubber stamping faits accomplis of the MDT staff, but they do serve a very valuable purpose through providing jobs for trainees and by helping to validate the courses of study formulated by educators.

### Inservice Training

#### Area Manpower Institutes for Development of Staff

The Washington Technical Institute was designated as one of five national centers to train instructors, supervisors, and administrators of MDT Programs, under a project funded by the United States Office of Education, Division of Manpower Development and Training.

The AMIDS program was designed to train Manpower staff in methods of coping with and understanding the special needs and problems of the disadvantaged. In addition to the various sessions of the training center in Washington, D.C., the AMIDS staff conducted a satellite program in May at Albany, entitled, "A Symposium on a Person-Centered Approach for Teaching Undereducated Adults."

The 191 participants from New York State attending various AMIDS sessions represented Manpower Training agencies, Education Department Bureaus involved in MDT, related government agencies, and private organizations as shown in Table 15.

State University of New York at Oswego

During fiscal year 1969, the bureau received and reviewed the Summary Reports on Inservice MDTA Training and MDTA Curriculum Materials Development Study, prepared under contract with the Division of Vocational Technical Education, State University of New York at Oswego. Also received and distributed was the publication, "Guidelines for the Occupational Training of the Disadvantaged." Individual copies of these two documents are available upon request.

A report of the Inservice Training aspect of the Oswego program, which consisted of three courses of study, states that 533 Manpower teachers and administrators participated in the program for degree and non-degree credit. Table 16 shows the breakdown of enrollment by credit program and communities served.

#### Publicity and Public Relations

A continuing effort has been made to keep the public aware of the purpose and activities of the Manpower Training Centers. Some of the methods used are news media, open house presentation, community affairs participation, and various reports and publications.

#### Annual Conference

The Fourth Annual MDT Conference was held at Homowack Lodge, Spring Glen,

New York, May 14-16, 1969. Centered on the theme, "Programs for 1969-70," the conference featured individual presentations, panel discussions, and opportunities for responses and questions from all participants in regard to various aspects of the Manpower program. Particular emphasis was placed on program development and operation as affected by recent legislation and funding restrictions.

## MANPOWER PROGRAM PROBLEMS

Many of the problems in the Manpower program stem from unrealistic funding for the task to be accomplished. Some of these problems which affect specific types of programs have been mentioned previously in this report, while others which affect all, or nearly all, types of programs have been reserved for this section.

The requirement that Multi-Occupational Skills Centers and other ongoing programs (such as the program for meat cutters in New York City) resubmit their entire budgets each year for State and Federal review create, serious problems and unnecessary apprehension at the local level. There is always the fear that the project will not be refunded or that delays will occur in the cycling which may bring about the loss of training facilities and experienced personnel. While the loss of a training facility would create the unnecessary expense of storing equipment relevant to the program and preparing and equipping new facilities to conduct the program, the loss of experienced instructors would severely hamper a program in attaining the goals of Manpower training. The further Manpower Development Programs move from training individuals with essentially a middle class sense of values to training the underprivileged hardcore unemployed, the more vital becomes the necessity of retaining instructors who can communicate with that segment of the population. In order to retain such instructors, the ongoing program must be able to offer them uninterrupted employment, regular pay raises, and attractive fringe benefits. Resolution of this problem requires that funds be committed to maintain ongoing programs at least at a minimal level.

The concepts embodied in Manpower legislation are, for this country, innovations in the field of social legislation. In achieving the goals of MDTA, STP, or WIN, the Manpower programs have constantly had to be innovative in their education and training techniques because traditional techniques have failed to motivate underprivileged. A serious shortcoming in the financing of these programs is

the failure to provide funds for the evaluation of the programs' short - and long - term effect on the trainees as well as the failure to provide funds for disseminating information concerning the results of such evaluations.

Federal national contracts in which the Federal Government contracts directly with a private organization to provide training and/or educational services to the underprivileged continues to be a problem in duplication of services and programs which have already been developed by the State. In nearly all cases, the State is bypassed completely in the approval and implementation of national contracts. Under such conditions, contracts may well be awarded to organizations which could not meet State standards to become licensed to operate a private school in New York State. Thus, there is little or no State control over programs offered to the underprivileged under national contracts; neither is there any assurance that such contracts serve the goals of Manpower legislation.

The extent of funds made available for Manpower programs has limited effectiveness in terms of numbers served and scope of occupational training offerings. Funds are so thinly distributed among communities that in many instances only one cycling of a program can be scheduled for participation in Manpower Training Programs because the limited funds available are necessarily allotted to the larger urban areas.

A major problem in the administration of Manpower Development and Training Programs has been the delay in the implementation of Section 30<sup>1</sup>-b of the Manpower Development and Training Act with regard to on-the-job training programs. Although a sum of 3.6 million dollars was allocated for the current fiscal year, the State agency has not had access to any of these funds. They have instead been used by the Regional Manpower Administrator's Office to fund on-the-job training programs which have not been subject to review under the CAMPS system at either the local or State Committee level.

A common problem among nearly all of the Area Camps Committees is that of gathering the data required for inclusion in the quarterly reviews and Manpower plans.

Local representatives of both Federal and State agencies cooperating in CAMPS apparently have not received sufficient information regarding the nature and purpose of CAMPS from their agency heads.

## RECOMMENDATIONS

Programs should be offered in a wider variety of occupational fields either by adding new programs to the Multi-Occupational Centers or by increasing the variety of offerings for individual referrals. Thus far, program offerings have been fairly confined to semiskilled and service occupations. Programs should be developed for the technical occupations. This would require that Employment Service recruit individuals with aptitude in the technical occupations and request training programs for them.

Prevocational training should be expanded and pretechnical training should be introduced to allow greater latitude in assessing and developing individual trainee aptitudes. This would help considerably in planning more effective programs.

Social services should be provided in each Multi-Occupational Skill Center as well as in each regular program to help the trainee make the psychological readjustment necessary when leaving the ranks of unemployed or underemployed disadvantaged. The social services should extend into the trainee's home to educate the family in such basics as hygiene, money management, and nutrition.

Balanced, nutritious breakfasts and lunches should be offered all trainees free or at a nominal fee. Where food services have been provided, attendance, tardiness, and discipline problems have been substantially reduced.

Both preservice and inservice teacher training programs should be provided for instructors who are training the disadvantaged. Establishing communications with and instructing such a population requires highly specialized types of instructors which presently are few in number.

Public relations should be carried on as an important major assignment to a staff person in each of the Multi-Occupational Skills Centers. Community agencies, business, industry, and the community at large should be kept well informed of the center's activities and accomplishments.

Multi-Occupational Skills Centers and the local employment service office should work together on trainee follow-up to ascertain the degree of effectiveness of the training and counseling provided.

Multi-Occupational Skills Centers should be permitted to be prime contractors for the purpose of negotiating on-the-job training contracts.

Multi-Occupational Skills Centers and Boards of Cooperative Educational Services should be permitted to develop programs in skilled occupations for the underprivileged without having to wait for Employment Service to establish a need.
