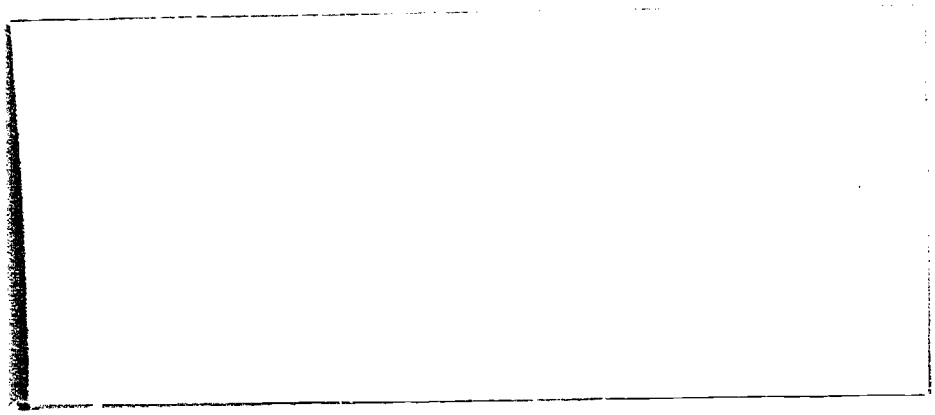
DESCRIPTORS *Computer Oriented Programs; *Computers; *Educational Planning; *Higher Education; Models; *Planning; Research; Simulation
IDENTIFIERS *Minnesota University (CAMPUS M)

ABSTRACT

PRIME is an acronym for Planning Resources in Minnesota Education. The project's primary objective is to test the implementation of CAMPUS (Comprehensive Analytical Methods for Planning University Systems) in one State College, one Junior College, and in one school at the University of Minnesota. The CAMPUS model was developed by the Institute for Policy Analysis in the University of Toronto and through a Ford Foundation grant made available to the public. The latest model, CAMPUS-V, was programmed on an IBM 360/85 computer. CAMPUS-MINNESOTA (CAMPUS-M) is identical to CAMPUS-V except it is operational on the University of Minnesota's CDC 6600 Computer. CAMPUS-M is a resource simulation model with the ability to represent "reality" in considerable detail. This report discusses: (1) the inputs needed for a single course or activity; (2) the process in terms of (a) instruction programs; (b) support programs; and (c) research and public service programs; (3) the 3 major groupings of output: input data reports, cost center reports, and overtime reports; (4) some areas where the model may be a valuable tool for analysis; and (5) the research in progress, including program costing, resource analysis models in higher education, analysis of faculty activities, faculty activity information system, and curriculum cost benefit analysis. Exhibits and input data sheets are included in the report. (AF)



PROJECT PRIME

Planning Resources In Minnesota Education

Project PRIME Report No. 2

An Introduction to Project PRIME and CAMPUS MINNESOTA

David C. Cordes

November 1970

Project PRIME Research Coordinated by the
Minnesota Higher Education Coordinating Commission

An Introduction to Project PRIME and CAMPUS MINNESOTA

I. BACKGROUND

PRIME is an acronym for Planning Resources in Minnesota Education. Project PRIME is a one year project jointly funded by the Minnesota State College System, Minnesota Junior College System, the University of Minnesota, the Hill Family Foundation, and the Minnesota Higher Education Coordinating Commission. The project's primary objective is the test implementation of CAMPUS (Comprehensive Analytical Methods for Planning University Systems) in one State College (Bemidji - Behavioral Science Division), in one Junior College (Lakewood) and in one school at the University of Minnesota (School of Business Administration).[1/]

The CAMPUS model was developed under a Ford Foundation Grant by the Institute for Policy Analysis in the University of Toronto. The Institute has an extensive research program entitled "Systems Analysis for Efficient Resource Allocation in Higher Education." The program consists of six integrated projects: (1) Program Planning and Budgeting in Universities, (2) Planning and Financing Higher Education, (3) Models for University Planning (CAMPUS), (4) Integrated University Information Systems, (5) Models for planning and use of physical facilities, and (6) Planning and Management Systems for University Information Resource Centers.[2/]

Because of the Ford Foundation Funding, the CAMPUS model is available to the public. The latest version available to the public is known as CAMPUS-V.[3/] CAMPUS V was programmed on an IBM 360/85 computer. CAMPUS-MINNESOTA, hereafter called "CAMPUS-M", is identical to CAMPUS V except that it is operational on the University of Minnesota's CDC 6600 Computer.[4/]

[1/] For further information on the Project see "Test Implementation of CAMPUS (A Computer Based Simulation Model) for Higher Education Administration and Planning in Minnesota", February 1970. Project PRIME Report No. 1 March 1970.

[2/] For a description of each project, their objectives, and their status at the end of 1969 see Judy, Richard W. "A research progress report on Systems Analysis for efficient resource allocation in higher educations", University of Toronto, January 1, 1970, 24 pp.

[3/] Another version of CAMPUS, labelled either CAMPUS VI or CAMPUS-CONNECT is available from the Systems Research Group (SRG). SRG is a corporation whose principles are former associates of the Institute for Policy Analysis. CAMPUS VI is available in an interactive mode, and costs approximately $50,000 per installation.

[4/] For futher details see Milton S. Fisher and Patrick Davitt, "Converting CAMPUS V to CAMPUS-MINNESOTA", (Project PRIME report No. 11)

II. INPUTS

CAMPUS-M is a resource simulation model with an ability to "represent reality" in considerable detail. As an indication of the level of detail, let's examine the data needed for a single course (or activity):

(1) Staff - academic e.g. professor and academic support e.g. teaching assistant.
(2) Space - classroom, instruction lab, or special lab.
(3) Teaching equipment - projectors, bunson burners, computers, etc.
(4) Type of course - lecture, lab.
(5) Staff Specialization - accounting, philosophy, art, etc.
(6) Schedule time - hours per session and sessions per week.
(7) Success factor - probability of completing courses with a passing grade.

Exhibit 1 provides a listing of the types of input required by CAMPUS-M. These sections are examined briefly below.

DEFINE: This section "defines" or structures the institution's programs and cost centers (departments). Exhibit 2 is a program structure for a typical School of Business Administration and Exhibit 3 is a corresponding cost center structure.

ACTIVITY: Activities are primarily courses. Resources required for each course were discussed above.

PROGRAM: Activities (courses) are related to programs (degrees), through the use of participation rates. Also established are the length of the degree programs - 2 years, 4 years, etc.; and the number of credits needed for graduation.

STUDENT: Actual entering students both freshmen and advanced standing students are input in this section. Drop-outs and transfers from major to major are also entered in this section.

STAFF AND XSTAFF: Staffing units required for each teaching and non-teaching duty are entered here; plus salary and office space. Hiring and promotion policy variables are also part of this input.

SPACE AND AVLSPACE: There are four types of space in this section: classroom, instructional labs, special labs, and service department space. Operating costs, construction costs and service characteristics (e.g. air-conditioning) are also needed.

SERVICE: Inputs are needed for staff, space, cost, and equipment associated with service departments.

EQUIPMENT: Cost and type of teaching equipment

REVENUE: By source and use

MISCELLA: Forms for developing miscellaneous resources, e.g. benefits, travel expenses.

III. PROCESS

(A) INSTRUCTION PROGRAM: A schematic of the use CAMPUS-M makes of the input data for the instructional programs is shown on Exhibit 4. The process begins with students entering the system as shown on the left.[5/] They enter, either as freshmen or advanced standing students and select a program (or major). Each program in CAMPUS has a curriculum. A curriculum is defined for each quarter, and for each study level (Junior, Senior) as: "a set of activities (courses) and a set of participation rates". The participation rates for an activity represent the probability that students in this program and in this quarter will select this activity. The combination of curriculum, program, and students determines a demand on activities. The resources required to "teach" these activities (e.g. staff, equipment space) are drawn from the cost centers or departments.

(B) SUPPORT PROGRAMS: Developing resources for the support programs involves using the concept of a service department. A typical example of a service department is the computer center. To determine the "supplies" (one resource type) needed for this department, CAMPUS-M can use a relationship of the following type:

$$\begin{aligned}\text{Computer Center Supplies} &= \$20{,}000 + \$100 \text{ per student} \\ &\quad + \$500 \text{ per faculty member} \\ &= \$20{,}000 + \$100(100) + \$10(500) \\ &= \$35{,}000\end{aligned}$$

The number of students and faculty "drawing" supplies from the computer center for any quarter would be determined from the instruction process, as explained above. CAMPUS-M refers to the "per student" and the "per faculty member in the above equation as the "functional basis". The 49 functional bases available in the model are shown on exhibit 5. Note from the exhibit that one basis is "(1)" or the absolute amount (the $20,000 in the example). A maximum of three functional bases can be used for each resource at each cost center (or program). The use of functional bases gives the model-builder a very flexible vehicle for determining resources in support programs.

(C) RESEARCH AND PUBLIC SERVICE PROGRAMS: If the research or public service activity is carried on by a specified organization e.g. MISRC or department, e.g. single quarter leave; determination of required resources can be handled analogously to those for support programs. If the research or public service is a "faculty activity", CAMPUS-M develops the required resources using a non-teaching duty category. Two possibilities are available: (1) Using a fixed % of faculty time or (2) using the "functional basis" on a resource called "staffing units".

[5/] An inventory of students in the system at start-up is a required input.

IV. OUTPUT

There are three major groupings of output reports available in the present version of CAMPUS-M: (1) Input Data reports, (2) Cost Center reports and (3) Over-Time reports. The first group of reports are provided to collate the input information and develop it in a logical report format, thus facilitating an examination of the input data. There are 44 report formats (exhibit 6) available in 9 major categories as follows:

INPUT DATA REPORTS

Report Category	Description	Number of Report Formats
1	Program Structures and Departments	4
2	Activities	6
3	Programs and Students	4
4	Staff	7
5	Space	7
6	Space	6
7	Service Departments	4
8	Revenue	4
9	Miscellaneous Resources	2
		44

The second group of reports, the "COST CENTER Reports", are provided to aid the institution's managers e.g. department heads, deans, etc. The present version of CAMPUS-M has seven major report types and 48 report formats (Exhibit 7) as follows:

COST CENTER OUTPUT REPORTS

Report Category	Description	Number of Report Formats
1	Students and enrollees	2
2	Staff	5
3	Equipment	2
4	Service	2
5	Space	19
6	Space	8
7	Summary	10
		48

A third group of available reports are called "OVERTIME Reports". These reports are for a session (year) as contrasted with the preceeding two groups which are "Single period (Quarter)" reports. Up to 10 sessions are possible. Five categories of reports are available (Exhibit 8):

OVERTIME REPORTS

Report Category	Description	Number of Report Formats
1.1	Student and Enrollee Load	1
1.2	Staff Costs	1
1.3	Space Requirements	1
1.4	Operating Costs	1
1.5	Summary Report	1
		5

V. ANALYSIS WITH CAMPUS-MINNESOTA

As with all simulation models, "its real value depends on the ability of the user to recognize situations in which the model can be used and to devise alternatives for investigation."[6] The developers of CAMPUS suggest five different problem areas where the model may be a valuable tool for analysis:[7]

1. SCALE OF OPERATIONS - Problems in this area are mainly concerned with the impact of altering the levels at which various programs are carried out. Typical investigations would assess the impact of changing student enrollment or student graduation goals.

2. GENERAL STRUCTURAL DECISIONS - Structural decisions occur on two levels. The first of these concerns the composition of the institution itself in terms of the educational and research programs that are pursued by the university. The second level of structural decisions occurs within the program level and is concerned with the activity composition of the program. Alterations of this kind involve adding or deleting particular activities.

3. PEDAGOGICAL DECISIONS - A number of decisions relating to activities have to be made with respect to the way in which they are going

---

[6] Systems Research Group, Seminar on University Administration, March 17 and 18, 1969.

[7] Ibid.

to be carried out. For instructional activities these might include class sizes, the type, qualifications and mixture of staffing to be used, and teaching equipment (ETV, CAE) requirements.

4. ADMINISTRATIVE DECISIONS - The various activities place loads on the cost centers or departments and these departments have a number of administrative decisions that must be made. Such matters as professional staffing policy, use of support staff, renumeration and tenure policy and various other financial and administrative questions need to be assessed.

5. GENERAL POLICY - General policy decisions can be characterized as university level administrative decisions. Such matters as a change in the semester system, addition of new schools and faculties, and the introduction of new scheduling techniques are representative of the kinds of decisions faced at this level.

VI. RESEARCH IN PROGRESS[8/]

(A) PROGRAM COSTING: Although impressive, the output reporting capability of CAMPUS-M suffers from a major weakness - the available reports are for cost centers only and not programs (exhibit 2). The essence of program budgeting is to report resources (and of course, effectiveness) by "programs". Exhibit 10 is one example of a desirable program report. It shows "total" resource requirements for a typical program element e.g. Ph.D. degree in MIS. Other reports providing "unit" cost, e.g. per degree, per credit hour, etc., are also planned. Fortunately, most of the basic data needed for "program costing" is generated and available in the model. Two reports are in progress explaining Project PRIME's efforts in this area.[9/]

(B) RESOURCE ANALYSIS MODELS IN HIGHER EDUCATION:[10/] The research being conducted in this area involves a synthesis and analysis of four resource analysis models: (1) CAMPUS; (2) Program Budgeting; (3) Leontief's input-output analysis; and (4) Linear programming. Each model will first be individually explained, followed by a theoretical synthesis using the input/output framework as the key integrating structure.

To ascertain the value of structuring the data as proposed above,

---

[8/] Exhibit 9 is a bibliography of Project PRIME reports.

[9/] Davitt, Patrick Program Accounting with CAMPUS-M, unpublished master's thesis (Also available as Project PRIME report Number 8) and Gary M. Andrew and David C. Cordes, Program Costing and Resource Analysis with CAMPUS-MINNESOTA: A Philosophic note, Project PRIME report Number 5 in progress.

[10/] David C. Cordes Resource Analysis Models in Higher Education, Project PRIME report No. 10 in progress.

an analysis will be conducted using test data from the three institutions involved in Project PRIME. To facilitate this analysis we have a computer program known as "EL FYD". The model's peculiar name stems from its association with the Department of Defense's Five Year Defense Program (FYDP).[11] Physically the model consists of two groups of computer codes - one a "generalized cost model" in input/output format and the second a "report generator" that provides flexibility in writing tables; both for staff analysis, and management reporting.

An analysis of the usefulness of the proposed synthesis for improving and integrating planning for various levels of a statewide education system e.g. departments within colleges, is planned.

(C) ANALYSIS OF FACULTY ACTIVITIES:[12] Faculty resources represent a major portion (77% in SBA, University of Minnesota 69-70) of the total variable input in higher education. Of this amount only a small percentage (class time) is easily measured. The remaining amount is difficult to measure due to the large range of activities, the number of activities involved with at any one time, and the varied working schedule of the faculty. Current attempts to measure these activities using questionnaires do not appear to be sufficiently accurate. Research will be done to explore the accuracy of the questionnaire, and the feasibility of using activity self sampling to improve current methods of data collection. Activity self sampling is a process of recording activity engaged in at random points over a period of time. This is done with the aid of a small random alarm device carried by the individual to signal the points.

If the data collected via a questionnaire proves to be too inaccurate for use in resource allocation models, then further work will be necessary to develop systems that will provide the desired accuracy.

(D) FACULTY ACTIVITY INFORMATION SYSTEM:[13] Information systems and resource allocation models in higher education require coordinated subsystems. These subsystems include (see exhibit 12): (1) input subsystems, (2) the data base management subsystem, and (3) analysis and reporting subsystems. Work must be done on defining the various subsystems so that

---

[11] The FYDP is the "programming" system associated with the Department of Defense's Planning, Programming, and Budgeting System (PPBS). For a detailed explanation of PPBS see Cordes, David C. Planning, Programming, and Budgeting Systems in Education: Concept, Operation, Status, and a School of Business Administration Example, Research Monograph No. 1, Management Information Systems Research Center, May 1970, 68 pp. (Also available as Project PRIME Report No. 4)

[12] For further information on this research see Lorents, Alden C. Analysis of Faculty Activities for Resource Allocation Models, Project PRIME Report No. 6, in progress.

[13] For further information on this research see Lorents, Alden C. A Faculty Activity Information Subsystem and CAMPUS-MINNESOTA, Project PRIME Report No. 7

there is compatibility:

(1) with the WICHE[14] data element definitions
(2) with the Resource Analysis Model
(3) with the Data Processing Systems.

The proposed faculty activity information system to be designed in this research project will consider the campatibility as noted above. The design will include definitions of the input system, data elements, file design and outputs. It will also include definitions to interface the data elements in the subsystem with CAMPUS.

(E) CURRICULUM COST/BENEFIT ANALYSIS[15] Research is needed on a methodology for performing a cost benefit analysis on an academic curricula. The CAMPUS model is ideally suited for the costing side. However, little work has been done in the area of educational outputs. In a recent paper presented before the WICHE-MIS conference on educational outputs, David Brown sketched out a framework for an educational output index.[16] At the present time it appears that placing a dollar value on an educational output is infeasible, however Brown's index approach is very promising. The index approach will not tell administrators how well they are doing in absolute terms but it will allow them to see how they are doing with respect to the past and it will allow them to compare expenditures with a quantifiable measure of output.

---

[14] WICHE is Western Interstate Commission in Higher Education. The MIS section is working on defining information systems in higher education.

1/ Aggregate = Total at a cost center considering all the affiliated cost centers below the referenced cost center.

Exhibit 6

Input Data Reports

Report No.	Title and Contents
1.0	PROGRAM STRUCTURES AND DEPARTMENTS
1.1	SIMULATION CHARACTERISTICS: Institution name, Simulation periods per session, Length of simulation period, and Comments on this run.
1.2	COST CENTERS - LEVEL/NODE STRUCTURE: The levels, nodes and nodes of affiliation of the cost centers reflecting the flow of funds and resources.
1.3	PROGRAMS - LEVEL/NODE STRUCTURE: The levels, nodes and nodes of affiliation of the programs, reflecting the flow of teaching resources.
1.4	AFFILIATION OF PROGRAM NODES TO COST CENTER NODES: Program nodes affiliated to cost center nodes reflecting the flow of funds and resources to the programs.
2.0	ACTIVITIES
2.1	ACTIVITY CHARACTERISTICS: Activity and specialty types.
2.2	ACTIVITY CHARACTERISTICS-SCHEDULE AND SECTION SIZE RANGES: Schedule range codes - day or night classes, hours per meeting, meetings per week, duration in weeks; section size range codes - minimum, desired, and maximum section sizes.
2.3	ACTIVITY CHARACTERISTICS-RESOURCE COMBINATION Resource combination codes, and three possible resources, types and categories.
2.4	ACTIVITIES: Activity numbers, names, cost center node of affiliation, specialty and activity type codes, success factors, credit values, schedule and section size range codes, and resource combination codes.
2.5	EXCEPTION ACTIVITIES: Similar to 2.4 except dealing with exception activities. Schedule and section size range codes and resource combination codes are not present. Day or night code, hours per meeting, meetings per week, durations and section sizes (minimum, desired, maximum) are added.
2.6	EXCEPTION ACTIVITY RESOURCES: Exception activities, names, resource requirements (types and categories), cost centers of affiliation, functional codes, quantitites in proportion an day-night codes, hours per meeting, meetings per week and durations for the resource schedule.
3.0	PROGRAMS AND STUDENTS
3.1	PROGRAM CURRICULA AND ACTIVITY PARTICIPATION: Program nodes, names, credit ranges (academic years), credits per credit ranges; program curriculum codes and activity number codes and participation rates that constitute each curriculum.
3.2	INITIAL DISTRIBUTION OF STUDENTS INTO PROGRAMS: For each simulation period there is the total number of new entrants with no academic credit entering all programs, folloed by a breakdown by program node and credit range (academic year) of the number of new students entering without and with academic credit.
3.3	STUDENT TRANSITIONS: For each program node and academic year,

possible destinations (other program nodes and credit ranges) and the transition rates; also a test if enrolment was updated prior to simulation period.

3.4 STUDENT CREDIT LOAD: Student credit loads and percent of students taking each credit load by program node and simulation period.

4.0 STAFF

4.1 ACADEMIC STAFF CHARACTERISTICS: Academic staff ranks, salaries, staffing units, office space, and time profiles for all cost centers ('COMMON'), and for particular cost centers ('EXCEPTIONS').

4.2 ACADEMIC STAFF ACTIVITY DUTIES: Activity type names and staffing units credit per contact hour for all cost centers ('COMMON') and particular ('EXCEPTION') cost centers.

4.3 ACADEMIC STAFF NON-ACTIVITY DUTIES: Non-teaching duties rank codes and names required, staffing units, functional bases and quantities in proportion for all cost centers ('COMMON') and for particular ('EXCEPTION') cost centers.

4.4 ACADEMIC STAFF INVENTORY, TRANSITIONS, AND HIRING CRITERIA: Staff rank codes, names, initial inventory, transitions, hiring criteria and per cent distribution by cost center node.

4.5 ACADEMIC STAFF OPTIMIZATION AND UPDATE POLICIES: General staffing and optimization policies, and transition policy by simulation period and by cost center.

4.6 ACADEMIC SUPPORT STAFF: Support staff codes, names, average salary, contact hours available, and office space.

4.7 NON-ACADEMIC STAFF: Non-academic staff type codes, names, average salaries, office space, functional bases and quantities in proportion by cost center level and node.

5.0 SPACE

5.1 AVAILABLE CLASSROOM SPACE BY COST CENTER: Classroom types available by size (stations) by cost center node.

5.2 AVAILABLE INSTRUCTIONAL LABORATORY SPACE BY COST CENTER: Instructional laboratory types available by size (stations), by cost center nodes.

5.3 AVAILABLE INSTRUCTIONAL SPECIAL LABORATORY SPACE BY COST CENTER: Special laboratory types available by size (stations) by cost center nodes.

5.4 AVAILABLE COST CENTER SPACE BY SPACE CATEGORY: Space category numbers and square feet and stations available, by cost center node.

5.5 ROOM SIZES AND PLANNING FACTORS (SQUARE FEET PER STATION): Station sizes for classrooms and instructional laboratories with the type and number of each. Equipment size codes and number of each size for instructional special laboratories.

5.6 CLASSROOM AND INSTRUCTIONAL LABORATORY CHARACTERISTICS BY TYPE: Classroom and instructional laboratory inventory room type codes, names, maintenance costs, and service characteristic codes.

5.7 INSTRUCTIONAL SPECIAL LABORATORY CHARACTERISTICS BY TYPE: Inventory room type codes, numbers, names, maintenance costs per square foot, service characteristic codes and equipment size codes for instructional special laboratories.

Exhibit 6 (Cont.)

6.0 SPACE
- 6.1 SERVICE SPACE CHARACTERISTICS BY TYPE: Inventory codes, names, type numbers, maintenance cost per square foot and service characteristic codes for service space.
- 6.2 COST CENTER TEACHING WEEKS AND SPACE UTILIZATIONS: Laboratory and classroom teaching hours per week and utilization by cost center level and node.
- 6.3 SERVICE CHARACTERISTIC CODES: Names and codes of service resources.
- 6.4 CONSTRUCTION AND MAINTENANCE COSTS BY SPACE CATEGORY: Inventory space category numbers, codes, names, and costs per square foot for construction and maintenance.
- 6.5 MISCELLANEOUS SPACE INPUT: Classroom manipulation required by type and size. Instructional laboratory manipulation required by type and size (both yes or no). Net/gross space percentage, net to gross construction cost ($/sq. ft.), Office Maintenance cost ($sq. ft.) and office service characteristic codes.
- 6.6 TEACHING SPACE CONTROL CENTERS: Cost center code and name, space control center for classrooms, instructional laboratories and special laboratories.

7.0 SERVICE DEPARTMENTS
- 7.1 SERVICE DEPARTMENTS: Service department codes, names, and cost center nodes of affiliation.
- 7.2 SERVICE STAFF: Service staff codes, names, salaries, space planning factors, functional bases, and quantities in proportion, by service department.
- 7.3 SERVICE SPACE: Service space type codes, names, functional bases and quantities in proportion, by service department.
- 7.4 SERVICE EQUIPMENT: Service equipment codes, names, operating costs per unit, functional bases and quantities in proportion, by service department.

8.0 REVENUE
- 8.1 CHARACTERISTICS OF REVENUE: Revenue types and sources and functional bases; unrestricted or restricted.
- 8.2 REVENUE AT COST CENTERS: Revenue types, names, functional bases, value (restricted or not) by cost center nodes and levels.
- 8.3 REVENUE AT PROGRAMS: Same as 8.2, except by program nodes and levels.
- 8.4 REVENUE AT SERVICE DEPARTMENTS: Same as 8.2 and 8.3, except by service departments.

9.0 MISCELL RESOURCES
- 9.1 EQUIPMENT RESOURCE CHARACTERISTICS: Equipment type codes, names, hours available per week and annual operating costs.
- 9.2 MISCELLANEOUS RESOURCE CHARACTERISTICS: Miscellaneous resource type codes, names, and functional bases.
- 9.3 MISCELLANEOUS RESOURCES BY COST CENTER: Miscellaneous resource type codes, names, and quantities in proportion by cost center nodes and levels.

Exhibit 7

Cost Center Output Reports

Report No.	Title and Contents
1.0	STUDENTS AND ENROLLEES
1.1	DIRECT ENROLLEE LOADS BY PROGRAM: A breakdown of student and enrollee loads in programs affiliated to the cost center.
1.2	SUMMARY AND AGGREGATION OF ENROLLEE LOADS FROM LOWER LEVELS: Gives aggregate enrollee loads from directly affiliated cost centers and total accumulated enrollee load at the cost center.
2.0	STAFF
2.1	STAFF REPORT ON ACTIVITY CONTACT HOURS PER WEEK: Number and type of contact hours required by activity.
2.2	ACADEMIC STAFF INVENTORY BY RANK: Shows the number of staff before and after promotion and the number of staff hired to meet requirements.
2.3	DETAILED BREAKDOWN OF DIRECT ACTIVITY AND NON-ACTIVITY LOAD AMONGST ACADEMIC STAFF: Gives type of load, and the number and cost of staff required to meet demand.
2.4	ACADEMIC SUPPORT STAFF NON-ACADEMIC SUPPORT STAFF: States number and cost of staff requirements.
2.5	SUMMARY STAFF REPORT: Gives staff requirements and costs for affiliated cost centers and aggregate totals at this cost center.
3.0	EQUIPMENT
3.1	EQUIPMENT REPORT: Types and cost of equipment required for this cost center.
3.2	SUMMARY OF EQUIPMENT OPERATING COSTS: Equipment costs aggregated at this cost center.
4.0	SERVICE
4.1	SERVICE DEPARTMENT REPORT: One report for each service department used by the cost center. Gives: number and cost of service staff, space required in square feet and cost, number and operating cost of equipment.
4.2	COST CENTER SERVICE DEPARTMENT SUMMARY REPORT: Gives all service departments used by the cost center.
5.0	SPACE
5.1	SPACE - NIGHT
5.1.1	CONTACT HOUR SUMMARY FOR NIGHT CLASSROOM ACTIVITIES: This report shows the contact hours required for each size and type of classroom by night activities.
5.1.2	CONTACT HOUR SUMMARY FOR NIGHT INSTRUCTIONAL LABORATORY ACTIVITIES: This report shows the contact hours required for instructional laboratories of each size and type by night activities.

5.1.3 CONTACT HOUR SUMMARY FOR NIGHT INSTRUCTIONAL SPECIAL LABORATORY ACTIVITIES: This report gives the contact hours required by night activities for instructional special laboratories by each size and type of laboratory.

5.2 SPACE - DAY

5.2.1 ACTUAL SPACE REQUIRED FOR DAY CLASSROOM ACTIVITIES: This report shows the actual space required for day classroom activities.

-The activity number is the internal CAMPUS model code.

-The sections expected represents the number of sections for that activity based on the enrolment and desired section sizes.

-It also reports on the type of classroom required, the number of classrooms of that type, and the size of classroom required.

-The station occupancy represents the percentage of seats occupied in the size of the room chosen when a section of the size indicated is scheduled in that room.

-The number of hours per week the rooms are required represents the total number of hours per week in that size and type of room for all sections for this particular activity.

-The number of equivalent square feet represents the theoretical amount of space required by that activity based on the length of the teaching week at the institution and the utilization of rooms experienced with the institution's scheduling system.

-The actual square feet required by an activity is computed after analyzing all the requirements for a similar type and size of classroom from all other activities. For example, if no other activity required that type and size of classroom, then the physical size of the room in square feet would be charged completely to that activity.

-The square foot difference is the equivalent square feet subtracted from the actual square feet. Where this difference is very small the activity utilizes space efficiently: i.e. many other activities require a similar size and type of room during the week.

5.2.2 DAY CLASSROOM ACTIVITIES - CONTACT HOUR SUMMARY: This report shows the contact hours required for each type and size of classroom for day time activities requiring classroom space.

5.2.3 DAY CLASSROOM ACTIVITIES - ROOMS REQUIRED: This report is the number of classrooms required of each size and type.

-The number of classrooms required is computed by dividing the total contact hours by the length of a teaching week in hours and multiplying by the reciprocal of the room utilization of the institution.

5.2.4 DAY CLASSROOM ACTIVITIES - STATION OCCUPANCY: This report shows the average station occupancy that would be experienced by loading the particular section sizes of all day activities requiring classroom space into each size and type of classroom.

5.2.5 DAY CLASSROOM ACTIVITIES - SQUARE FEET REQUIRED: This report indicates the number of square feet of each type and size of classroom required by the cost center.

-This figure is computed by multiplying the number of rooms required of each type and size times the space planning factor in terms of the number of square feet per station.

Exhibit 7 (Cont.)

5.3 INSTRUCTIONAL LAB SPACE - DAY

5.3.1 ACTUAL SPACE REQUIRED FOR DAY INSTRUCTIONAL LABORATORY ACTIVITIES: This report shows the space requirements for day activities requiring instructional laboratory space.
-The description of each column on the report is the same as that described for the identical report on day classroom activities. The report number is 5.2.

5.3.2 DAY INSTRUCTIONAL LABORATORY ACTIVITIES - CONTACT HOUR SUMMARY: This report gives the number of contact hours required for each type and size of instructional laboratory for day activities requiring this type of space.

5.3.3 DAY INSTRUCTIONAL LABORATORY ACTIVITIES - ROOMS REQUIRED: This report shows the number of instructional laboratories of each type and size required by this cost center for the day activities it supports requiring this type of space.

5.3.4 DAY INSTRUCTIONAL LABORATORY ACTIVITIES - STATION OCCUPANCY: This report shows the average station occupancy in instructional laboratories of each type and size for day time activities that will be scheduled into this particular type of space.
-The average station occupancy is computed by examining the station occupancy for all the individual activities requiring different sizes and types of instructional laboratories.

5.3.5 DAY INSTRUCTIONAL LABORATORY ACTIVITIES - SQUARE FEET REQUIRED: This report indicates the number of square feet required for each type and size of instructional laboratory for the day time activities that this cost center supports.
-The number of square feet required is computed from the number of rooms required multiplied by the number of square feet per station required for each size and type of laboratory.

5.4 SPECIAL LABORATORY SPACE - DAY

5.4.1 ACTUAL SPACE REQUIRED FOR DAY INSTRUCTIONAL SPECIAL LABORATORY ACTIVITIES: This report shows the space requirements for each activity requiring instructional special laboratory space.
-A description of each column on the report can be found on the description of the identical report used for day activities requiring classroom space.

5.4.2 DAY SPECIAL LABORATORY ACTIVITIES - CONTACT HOUR SUMMARY: This report shows the number of contact hours required for each size and type of laboratory for all activities supported by this cost center that require instructional special laboratory space.

5.4.3 DAY SPECIAL LABORATORY ACTIVITIES - ROOMS REQUIRED: This report shows the number of instructional special laboratories required of each type and size.
-The number of rooms required is computed by dividing the number of contact hours for each size and type of laboratory by the length of the teaching week in hours and multiplying by the reciprocal of the room utilization experienced through the institution's scheduling system.

5.4.4 DAY SPECIAL LABORATORY ACTIVITIES -STATION OCCUPANCY: This report shows the average station occupancy expected for each type and size of special laboratory.

5.4.5 DAY SPECIAL LABORATORY ACTIVITIES - SQUARE FEET REQUIRED: This report shows the number of square feet required for each type and size of instructional special laboratory.
-The total number of square feet of instructinnal special laboratory space required by a cost center is computed by adding all the elements of this matrix.

5.5 OFFICE SPACE REQUIREMENTS: This report indicates the number of square feet of office space required by a cost center broken out by each type of rank of staff.
-A subtotal is given for academic staff, academic support staff, non-academic staff, and service department staff. These four subtotals are added to get the total office space requirements for the cost center.
-On the lower part of the report the office space requirements for directly affiliated cost centers at all levels are shown and added in to get the aggregate office space requirements for this cost center.

6.0 SPACE

6.1 COST CENTER SPACE REQUIREMENTS

6.1.1 COST CENTER SPACE REQUIREMENTS: This report shows the square foot requirements for classroom, instructional laboratory, instructional special laboratory, office, and service space.
-The maintenance cost for each category of space is also reported in dollars.
-The total space requirements and maintenance budget for the cost center are shown.

6.1.2 COST CENTER SPACE REQUIREMENTS AND MAINTENANCE COST SUMMARY: This report shows the space requirements and maintenance cost for the particular cost center being considered, and for directly affiliated cost centers.
-The aggregate requirements for cost centers up to and including this particular cost center are shown.
-The total maintenance cost and the subtotal for each affiliated cost center are rounded to the nearest thousand dollars.

6.2 COST CENTER SPACE REQUIREMENTS

6.2.1 COST CENTER SPACE REQUIREMENTS BY SERVICE CODE

6.2.2 TOTAL SPACE REQUIREMENTS BY SERVICE CODE FOR ALL COST CENTERS: This report shows the total space required by a cost center broken out by various services or utilities that would have to be provided for the space.
-This information is assembled by examining the total characteristic codes attached to each type of space.
-We can thus see the number of square feet and the percentage of the total square feet required that must be air-conditioned, carpeted, have a heavy duty floor, etc.

6.3 REQUIRED VERSUS AVAILABLE SPACE BY SPACE CATEGORY: This report groups the total space requirements of a cost center into various space categories and matches the required space to that available to that cost center.
-The maintenance cost is also given for each space category in dollars.
-A square foot shortage or surplus is computed and printed when the required space is compared to the available space.

6.4 SPACE MATCHING

6.4.1 SPACE MATCHING REPORT FOR CLASSROOMS AND INSTRUCTIONAL LABORATORIES: This report indicates the results of matching requirements for classrooms and instructional laboratories to the number of rooms available.
-The shortage or surplus of rooms for each type and size of classroom and instructional laboratory is printed.
-Information is given on a report which indicates if a classroom or laboratory manipulation is performed across type or size of room. For example, a shortage of a small size room could be fulfilled by an extra room of some larger size. There would be a marked drop in station occupancy, but this may be tolerated instead of building an extra small size room. However, currently these manipulations are not programmed in the model.

6.4.2 SPACE MATCHING REPORT FOR INSTRUCTIONAL SPECIAL LABORATORIES: This report shows the results of matching requirements for instructional special laboratories to the available laboratories.
-The shortage or surplus of special laboratories for each size and type of laboratory is given.
-Because of the highly specialized nature of instructional special laboratories, no manipulation by size or type is performed.

6.5 SPACE CAPITAL COST REPORT: This report indicates the capital required to construct any shortage of space.
-The space shortage in square feet is multiplied by a dollar per square foot construction cost to give the capital required.
-The space shortage by space category is an accumulative array. The space shortages are accumulated over time if no construction takes place during the particular session. The message at the bottom of the report indicates that that policy has been simulated.
-The net to gross space is an added amount of space reflecting wall thickness, etc.

7.0 SUMMARY

7.1 DIRECT LOAD GENERATED BY ACTIVITIES (CONTACT HOURS): Resource requirements of each activity in contact hours.

7.2 DIRECT LOAD GENERATED BY ACTIVITIES - SUMMARY (DOLLARS AND SQ. FT.)

7.3 DIRECT LOAD GENERATED BY ACTIVITIES

7.3.1 DAY CLASSROOM ACTIVITIES SPACE REPORT

7.3.2 NIGHT CLASSROOM ACTIVITIES SPACE REPORT

7.3.3 DAY INSTRUCTIONAL LABORATORY ACTIVITIES SPACE REPORT

7.3.4 NIGHT INSTRUCTIONAL LABORATORY ACTIVITIES SPACE REPORT
7.3.5 DAY SPECIAL LABORATORY ACTIVITIES SPACE REPORT
7.3.6 NIGHT SPECIAL LABORATORY ACTIVITIES SPACE REPORT: This report is produced for day and night classroom, instructional laboratory, and instructional special laboratory activities.
- -The report is produced as each cost center is processed and shows the number of equivalent square feet required for each activity supported by that cost center.
- -The activity number is the internal CAMPUS model code.
- -The enrolment is the number of students taking that course.
- -The desired section size is the number of students desired in each section of that activity.
- -The section sizes show the actual number of students in each section of the activity.
- -The number of the particular type and size of classroom required is shown.
- -The station occupancy represents the percentage of stations in the classroom that would be filled by the particular section size.
- -The hours per week that the rooms are required is the total hours for all sections.
- -The total square feet represents the number of square feet required by this activity based on the current room utilization and the length of the teaching week.

7.4 SUMMARY OPERATING REPORT (FOR THIS COST CENTER ONLY): Summary of student loads, space requirements and operating costs for this cost center.

7.5 SUMMARY OPERATING REPORT (AGGREGATE REPORT): as 7.4 with totals including all affiliated cost centers.

Exhibit 8

Overtime Reports

1.1 STUDENT AND ENROLLEE LOAD: Included in it are the arrays summed over each period and averaged for the period, for a maximum of ten periods. They are written out with values for the particular cost center, the cost centers affiliated to it, if any, and totals where necessary.

1.2 STAFF COSTS: It indicates staff costs, a breakdown of academic staff number and aggregate staff cost. Each of these sections are broken down even further. Totals and subtotals are also included. This report is written for each cost center requiring it.

1.3 SPACE REQUIREMENTS: Data is broken down into the space categories of office, classroom, instructional laboratory, special laboratory and service department with a total. This report is written out for any cost center requiring it.

1.4 OPERATING COSTS: Included in this report are staff, equipment, maintenance, miscellaneous, space and service costs. The actual numbers are printed out with total staff cost, total equipment cost as subtotals, and total operating cost as the grand total. In the same report, there is a section for total aggregate cost.

1.5 SUMMARY REPORT: This section summarizes data in report 1.1 to report 1.4 inclusive. It illustrates staff costs in some detail. However only totals are given for equipment, miscellaneous, and maintenance costs. The total aggregate cost is also included. The space (in square feet) is shown in some detail: that is, shown by space type category. The affiliated students are also shown in this report as they appeared in report 1.1. The revenue is written for each cost center requiring it. A section of indicators occurs at the end of this report, including such itens as 'cost per student ($)', 'space per student (sq. ft.)' etc.
