DESCRIPTORS *Annual Reports; Enrollment; Enrollment Projections; *Manpower Needs; Program Costs; *Program Evaluation; *Tables (Data); Technical Education; *Vocational Education; Vocational Education Teachers

ABSTRACT

This report for 1969 highlights the changes and achievements made possible by the 1963 Act's new emphases and dimensions, and summarizes the issues that generated passage of the Vocational Education Amendments of 1968. It also includes a brief discussion of manpower trends and their implications for vocational-technical education. Based on information from the states, major sections of the report are: (1) Moving Ahead, (2) Fiscal Year 1969 in Review, (3) Manpower Trends, and (4) Statistical Tables, Fiscal Year 1969. It was noted in the review section that fiscal year 1969 revealed several patterns of growth which were consistent with the intent of the 1963 Act. (Author/JS)

DISCRIMINATION PROHIBITED – Title VI of the Civil Rights Act of 1964 states: “No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.” Therefore, any program or activity supported by grants under the Federal Vocational Education Acts, like every other program or activity receiving financial assistance from the Department of Health, Education, and Welfare, must be operated in compliance with this law.

Foreword

During the last half of the 1960's, public vocational education received support from a revolutionary piece of legislation—the Vocational Education Act of 1963. Thus, the 5-year period from fiscal year 1965 through 1969 will have significance in the history of public vocational education.

This report for 1969, the last in a series of review activities under the 1963 Act, highlights the changes and achievements made possible by the act's new emphases and dimensions, and summarizes the issues that generated passage of the Vocational Education Amendments of 1968. It also includes a brief discussion of manpower trends and their implications for vocational-technical education.

The information and data are based on material from the State reports which described activities during fiscal year 1969. Programs were financed by Federal, State, and local funds. Federal money was authorized by the several vocational-technical acts: the Smith-Hughes Act of 1917 (Public Law 347); the George-Barden Act of 1946 (Public Law 586); the Vocational Education Act of 1963 (Public Law 88-210); the Economic Development Act of 1965 (Public Law 89-136), and the Appalachian Regional Development Act of 1967 (Public Law 90-103).

CHAPTER I MOVING AHEAD

Chapter I: Moving Ahead

The Vocational Education Act of 1963 set a new pattern for Federal support of public vocational education and made training for "gainful employment" a goal for all programs it supported. The intent was to modernize and redirect the entire vocational system, put resources within reach of *all* persons in all communities, and offer training for job entry or career advancement in virtually every occupation below the professional or 4-year degree level.

From fiscal year 1965 through 1969, the flow of Federal funds to the States was steadily increased to help bring about the required changes. The legislation provided funds for constructing, remodeling, or expanding facilities designated as area vocational schools. The act also required each State to use part of its Federal allotment for supporting services, such as professional development, program evaluation, guidance and counseling, curriculum development, State administration and leadership, and research and training.

Most significantly, focus shifted from the traditional occupational categories to the diverse training needs of youth and adults in certain population groups. Special reference was made to high school students, persons who had completed or left high school, persons in the labor market who needed training or retraining to achieve job stability or advancement, and the handicapped and disadvantaged.

SOME RETURNS

Considerable progress was made in redirecting program emphases and practices, especially in the traditional occupational programs—agriculture, home economics, and trade and industry. Authorizations for these programs were continued under the Smith-Hughes and George-Barden Acts, but the 1963 Act permitted States at their option to transfer funds from one category to the other. Given this flexibility, State and local educational agencies expanded the traditional programs to re-

flect the change in job options and labor market needs.

Agriculture. for the first time, trained persons for employment in the off-farm, agribusiness occupations such as ornamental horticulture, sales and services, management, and forestry. Supervised on-the-farm practice was no longer required.

The new dimension for *home economics education* was preparation for gainful employment in the personal and community service occupations. These included food-service management and supervision in private and public institutions, tailoring, institutional housekeeping and management, child care and guidance for employment in nursery schools or day-care centers, and home and institutional care of elderly persons.

Trade and industrial education expanded full-time pre-employment training at the high school level, post-secondary study, and special classes for training in the single-skilled and semiskilled occupations.

Furthermore, the act made permanent *technical education* and added *office occupations education*. The States developed new curriculums for various technologies, including agriculture. In addition, emphasis was placed on reorienting teachers of agriculture and home economics and on developing guidelines for teachers of the business and office occupations.

Distributive education, formerly restricted to serving only employed adults and secondary students in extension or part-time high school courses, received support for preemployment training, junior executive training at the postsecondary level, and the continuation of cooperative programs.

In an effort to ease the shortage of qualified support personnel in the health services, *health occupations education* moved in two directions. Existing programs were updated, and States gave considerable attention to the development of new career-objective programs which would serve current and emerging manpower needs in the health occupations. Secondary programs offered job-entry training or preparation for postsecondary study. Postsecondary training prepared students for

Table A
Percentage Increase in Enrollments, By Levels: Fiscal Years 1965-1969

	1965	1966	1967	1968	1969
Total	18.9	11.8	16.1	6.9	5.9
Secondary	31.7	8.1	15.8	8.8	6.2
Postsecondary	21.3	113.4	13.0	18.6	19.1
Adult	5.5	6.4	16.2	1.5	2.1
Special Needs	-	91.1	50.3	50.7	29.2

employment as semiprofessionals or technicians, and adult programs offered supplementary training to upgrade the skills of health workers. In addition, increased Federal funding assisted States in centralizing training resources for adults and in school youth.

Enrollments

From 1965 through 1969, enrollments grew at each educational level and in programs for persons with special needs (see Table A).

Over the 5-year span, enrollment growth in total numbers of students was largest at the secondary level. Enrollments rose from 2,819,250 in 1965 to 4,079,395 in 1969, an increase of 1,260,145 students (see Table B).

Percentage changes in enrollments by occupational program ranged from an increase of 162 percent in health occupations to 17 percent in home economics. Enrollments increased 151 percent in office occupations, 60 percent in distributive education, 58 percent in trade and industrial education, and 40 percent in technical education. In agricultural education, however, enrollments declined 4 percent between 1965 and 1969.

The growth pattern is quite different when based on the number of students enrolled in each program rather than on percentage changes in enrollment totals. The largest increase in number of students occurred in office occupations. Enrollments rose from 730,904 in 1965 to 1,835,124 in 1969, an increase of 1,104,220 students. In contrast, agriculture lost 36,824 students—from 887,529

in 1965 to 850,705 in 1969. Trade and industry accounted for the second largest number of students, climbing from 1,087,807 in 1965 to 1,720,859 in 1969. Enrollments in home economics increased from 2,098,520 to 2,449,052; distributive education from 333,342 to 563,431; health occupations from 66,772 to 175,101; and technical education from 225,737 to 315,311.

Expenditures

As Federal expenditures increased for vocational education, so did State and local expenditures. In 1965 State and local funds accounted for nearly 71 percent of total expenditures for vocational education and about 81 percent in 1969. This means that State and local educational agencies spent approximately \$2.90 for every Federal dollar in 1965, and \$4.37 in 1969.

A breakdown shows that:

- In 1964, the year before funds were allotted under the act, expenditures for vocational education totaled \$332,785,115, including only \$55,016,875 in Federal money. Local funds totaled \$152,783,668 and State funds, \$124,974,572.

- In 1965, the total increased to \$604,645,724, with a Federal contribution of nearly \$157 million. Local funds totaled \$260,974,879 and State funds reached \$186,734,833.

- In fiscal year 1969, local-State-Federal expenditures for vocational education totaled \$1,368,756,523, with

Table B
Enrollment Totals by Level: Fiscal Years 1965-1969

	FY 1965	FY 1966	FY 1967	FY 1968	FY 1969
Totals	5,430,611	6,070,059	7,047,501	7,533,936	7,979,366
Secondary	2,819,250	3,048,248	3,532,823	3,842,896	4,079,395
Postsecondary	207,201	442,097	499,906	592,970	706,085
Adult	2,578,522	2,530,712	2,941,109	2,987,070	3,050,466
Special Needs	25,638	49,002	73,663	111,060	143,420
(No. in Regular Programs)	-	(53,154)	(92,925)	(107,942)	(144,274)

State and local funds once again exceeding the Federal contribution. Federal funds totaled \$254,676,376; local, \$646,907,266; State, \$467,172,881.

Training Resources

The act stipulated that vocational-technical programs could be conducted in any type of school. Beginning in 1965, people had access to training during evening or regular school hours in the classrooms, shops, and laboratories of comprehensive secondary schools, specialized secondary vocational-technical schools, combination secondary-postsecondary schools, private schools, community or junior colleges, and 4-year colleges and universities.

Although the act excluded support for occupational preparation at the professional and bachelor-degree level, its emphasis on postsecondary study and ancillary services had an impact on colleges and universities. Junior and 4-year colleges conducted short-term programs, and 1- and 2-year postsecondary programs in all the major vocational-technical occupational categories.

Both colleges and universities trained vocational teachers, teacher-educators, supervisors, and administrators. In addition, these institutions developed or strengthened vocational counselor-training programs, provided vocational guidance services, engaged in research, developed curriculums and various instructional materials, and conducted special demonstration and experimental programs.

Construction

Shortage or obsolescence of facilities created serious obstacles to the development and expansion of vocational education. Thus, the 1963 Act included support for construction of area vocational facilities, to assist States in meeting the cost of constructing, remodeling, and expanding vocational schools and facilities. Additional Federal funds for construction projects were authorized under the Appalachian Regional Development Act of 1965 and the Economic Development Act of 1965.

Facilities designated as area vocational schools increased from 405 in 1965 to 1,303 in 1969. Within the same time span, local-State-Federal expenditures totaling over \$1.1 billion went toward the construction, remodeling, or expansion of more than 1,500 projects.

Teacher Education

The vocational teaching staff was expanded and improved at all levels to keep pace with the rapid develop-

ment of program offerings. Teachers in training between 1965 and 1969 totaled 444,788.

In 1965, enrollees in teacher-education programs totaled 69,051 of whom 33,771 were in preservice training and 35,280 were in inservice programs. The occupational categories in which the largest number of teachers received training were: trade and industry, 22,306; home economics, 20,587; and agriculture, 10,103.

Enrollees in teacher-education programs in 1969 totaled 110,674, including 25,294 who completed State plan requirements. Preservice programs enrolled 58,324 trainees and inservice programs served 52,350 teachers. Almost 32,000 were trained for teaching trade and industrial education, some 30,000 for home economics, and over 16,000 for office occupations. Those trained for technical education numbered 5,212 in 1969 compared to 1,750 in 1965, and 2,318 for health occupations compared to 758 in 1965.

For Comparison

In 1965, the first year of funding, over 5 million persons were enrolled in vocational education programs, and were taught by 109,136 teachers (estimated unduplicated count) in 16,890 schools. In 1969, enrollees totaled nearly 8 million. Vocational programs were taught in 18,492 schools by 166,898 teachers (unduplicated count).

A PAUSE FOR EVALUATION

After almost 2 years of operation under the 1963 Act, it became apparent that little or no attention had been given to several priorities. Postsecondary programs, work study for needy vocational students, adult programs, and programs and services for persons with special needs had not expanded according to the act's intent because of insufficient funding.

In December 1967, the Advisory Council on Vocational Education submitted its report to the Secretary of Health, Education, and Welfare for transmittal to the President and the Congress. The Council's report, *Vocational Education: The Bridge Between Man and His Work*, summarized major program achievements and limitations and outlined recommendations for program improvement.

Among the limitations were:

- Reporting of vocational education data was suffering from the lack of a fully developed data collection and reporting system.

- Vocational education programs and services had not expanded rapidly enough in response to the needs of people in metropolitan areas, particularly the culturally and economically disadvantaged and residents of slum and ghetto neighborhoods.

- The total Federal vocational education fund was entirely too small to expand and develop programs in accord with the need.

- Teacher educators had not been developed in sufficient numbers nor in keeping with a plan that encompasses research, curriculum theory, leadership skills, and evaluation techniques.

- Adequate staff at the national level had not been made available to give leadership either for the curriculum development effort at the national level or to coordinate curriculum development at the State level.

- Vocational education funds were forced to compete at a disadvantage with the more favorable funding available through other Government agencies.

- Despite the significant development in leadership activity, the extent of this activity did not measure up to national need.

- All youth did not receive the benefits of vocational guidance; commitment was needed among schools to provide vocational guidance as a recognized part of the total educational process.

- Vocational guidance had not been provided for out-of-school youth and adults.

The Congress, however, had begun to consider proposals for new legislation as early as 1966. From spring 1966 through summer 1968 the General Subcommittee on Education of the House Committee on Education and Labor held a series of hearings to examine the administration of vocational education under the 1963 Act and earlier legislation, and to identify weaknesses in programs and services. Thus, the sheer pressure of need and change, coupled with the Advisory Council's recommendations and the subcommittee's deliberations, shaped the provisions of the Vocational Education Amendments of 1968.

RENEWED COMMITMENT

When funded, the 1968 legislation will call for profound changes. Its provisions are aimed at making

occupational preparation a major goal of the Nation's public school system, beginning in elementary school and continuing through postsecondary school.

The new legislation authorized increased support for vocational programs designed to reach both the college-bound and work-bound student, the untrained and underemployed youth and adults, the hard-to-teach, and the disadvantaged and handicapped. The law extended the definition of vocational education by encouraging total integration of the academic, general, and vocational curriculums so that no person will be denied an opportunity to prepare for an occupation that suits his aptitudes, talents, and interests.

It also included:

- A separate authorization for the support of consumer and homemaking education, requiring that one-third of the funds be used to help individuals and families in depressed inner-city and rural areas to improve their home environments and the quality of family living.

- Provisions for stipends to encourage professional development through inservice training and participation in leadership development programs.

- Support for special institutes to familiarize teachers with new curriculums.

- Funds for construction and operation of residential vocational schools for youths 15 to 21 years of age.

- Support for cooperative work-study or work-experience programs, and funds to reimburse employers for added costs of on-the-job training.

- Funds for exemplary programs and projects aimed at reducing the high rate of unemployment among youth, particularly those who have academic, social, or other handicaps.

- Funds for research and training projects, especially in the development of new careers.

- Support for guidance and counseling, personnel recruitment and training, curriculum development, and evaluation.

Congress more than doubled past authorizations to help the Nation's schools assume responsibility for orienting the young to the world of work and for producing workers who can compete for jobs in a changing occupational structure.

CHAPTER II
FISCAL YEAR 1969 IN REVIEW

Distribution and marketing program for persons with special needs. This youth learns how to check oil in service station training.

Chapter II: Fiscal Year 1969 in Review

Specific accomplishments in fiscal year 1969 revealed several patterns of growth which were consistent with the intent of the 1963 Act. Total enrollments were up almost 6 percent over 1968. By educational level the 19.1-percent increase in postsecondary enrollments was the largest. Enrollments rose 6.2 percent at the secondary level, 2.1 percent at the adult level, and 29.2 percent in programs for persons with special needs.

Increased enrollments of 24 percent in health occupations education and 17 percent in technical education reflected a growing awareness among State and local vocational educators of the urgent need for semiprofessional health workers and technicians. Marked enrollment growths in the off-farm agricultural curriculums and in gainful home economics programs showed that States were still making efforts to redirect these traditional categories and gear offerings to job opportunities in the local, State, and regional labor markets.

Enrollments in "other" programs, reported for the first time in fiscal year 1968, increased from 49,297 to 69,783 in 1969. This category includes, among other programs, prevocational and multioccupations training.

Another specific evidence of progress was the increase of 20,346 teachers in 1969, bringing the total for the fiscal year to 166,898. Secondary teachers increased by 10 percent, postsecondary by 39 percent, and teachers of students with special needs by 69 percent.

SECONDARY PROGRAMS

In 1969, secondary programs received about 31 percent of the funds spent for vocational education under the 1963 Act. Total expenditures rose from \$364,978,936 in 1968 to \$451,033,667, with Federal expenditures totaling \$70,602,561 as compared with \$67,969,615 in 1968.

The number of students in secondary vocational programs increased from 3,842,896 in 1968 to

4,070,395, representing 31.4 percent of the total high school enrollment in 1969.

Growth by occupational program ranged from a low of 1.5 percent in agriculture to a high of 10.8 percent in health occupations, and increases of 4.8 percent in distributive education, 5.9 percent in office occupations, 7.2 percent in home economics, and 8.7 percent in trade and industry. Enrollments in technical education decreased 12.3 percent in 1969. With the shift in emphasis from secondary to postsecondary technical study, many high schools began updating and strengthening curriculums in the physical sciences, mathematics, and English to prepare students for technician programs at the postsecondary level.

Several States with large and sparsely populated rural areas reported enrollment growth in health occupations education. Enrollments in vocational health programs in Alaska, Maine, and New Hampshire increased well over 30 percent. Missouri, Indiana, Nebraska, and Kentucky were among those States reporting enrollments in excess of the 1968 rate of 6.2 percent.

A total of 723,931 students completed secondary vocational requirements, of whom 368,910 or 51 percent were available for job placement. Of these, 271,424 or 73.6 percent were employed in the field for which they were trained or in a related one; 61,592 or 16.7 percent were employed in an unrelated field; 14,794 or 4 percent were placed in part-time work; and 21,100 or 5.7 percent were reported to be unemployed.

Of the 251,626 graduates unavailable for placement, 16.8 percent entered the Armed Forces, 70.8 percent continued full-time study, and 12.4 percent were not available for "other reasons." Data on 103,395 students who completed high school vocational programs were not available.

POSTSECONDARY EDUCATION

The impressive growth in postsecondary program enrollments in 1969 continued a trend spurred by yearly

0/7

increases in expenditures since 1965. Postsecondary programs accounted for 23.2 percent of all vocational education expenditures under the 1963 Act, slightly above the projected 21.1 percent. Combined Federal-State-local expenditures rose from \$185,459,370 in fiscal year 1968 to \$252,826,178 in 1969.

Particularly significant was the increase in postsecondary teachers: 22,234 full-time and 14,373 part-time teachers, a 39.1-percent increase over 1968 when the breakout was 16,841 full-time and 9,479 part-time teachers. The percentage increase for postsecondary teachers in 1969 was more than twice the enrollment percentage increase.

New programs emerged in response to present-day manpower needs. Some of the new offerings reported in 1969 were: nursery education and child-care specialist, educational media assistant, mental health technician, social or community service assistant, surgical technician, urban planning assistant, water and wastewater technician, pesticide technician, air pollution technician, laboratory animal care technician, biomedical equipment technician, and police science and crime laboratory specialist.

Postsecondary enrollments showed an additional 113,115 students in 1969, from 592,970 to 706,085. Postsecondary vocational education enrollment made up 60.3 percent of the enrollments in 2-year public colleges, which totaled 1,170,000 students.

States with large rural areas showed enrollment increases which exceeded the 19.1 national average. Among these were Maine, Illinois, South Dakota, Texas, Alabama, Missouri, Kansas, Iowa, Minnesota, Vermont, New Hampshire, Arkansas, New Mexico, and Kentucky.

Enrollment growth in most States was influenced by the increase in junior colleges, technical institutes, and area technical colleges. For example, Pennsylvania's postsecondary enrollments increased 166 percent over the 1968 enrollments; South Dakota, 100.4; Illinois, 80.7; Maine, 74.9; and Vermont, 50.8.

The occupational program with the largest enrollment increase, 206.9 percent, was home economics. Enrollment rose from 4,395 in 1968 to 13,490 in 1969. Of the 13,490 students in postsecondary home economics education, 10,764 were enrolled in gainful employment curriculums.

Agriculture's enrollment of 15,816 represented a 43.3-percent gain over 1968. Of these, 10,873 were enrolled in off-farm programs. A 42.3-percent increase occurred in health occupations, the largest increase since 1965; distributive education showed a 35.5-percent increase; and trade and industry enrollments increased 26.5

percent. Enrollment in office occupations declined 3 percent in 1969, a result of changes made by some States in reporting enrollments by program level.

All States and outlying areas, except the Virgin Islands, conducted postsecondary vocational education programs during 1969. However, the Virgin Islands reported that fiscal year 1969 funds had been used for program planning and development.

Of the 135,678 postsecondary students who completed program requirements, 89,113 or 65.7 percent were available for placement. Ninety percent of these students, or 80,241, were employed in their field or in a related field; 4.6 percent or 4,097 were employed in an unrelated field; 2.4 percent or 2,138 were employed part time; and 3 percent or 2,637 were unemployed.

Of the 22,029 who were not available for placement, 27.4 percent entered the Armed Forces, 56.4 percent continued full-time schooling, and 16.2 percent were not available for "other reasons." Data on 24,536 (18.1 percent) were unavailable.

ADULT PROGRAMS

Total expenditures for adult education rose from \$57,086,189 in 1968 to \$72,008,987 in 1969. Although adult program enrollments and expenditures grew in 1969, the States reported the need for additional funding because of the growing demands for programs in pollution control, child care and development, management training, the health occupations, technician training, and other occupations with manpower shortages.

Adult participation in vocational-technical education grew from 2,987,070 in 1968 to 3,050,466 in 1969. The percentage growth in enrollments by occupational program was: technical education, 19.1; office education, 8.7; health occupations, 7.1; home economics, 6.0; and trade and industry 1.1. State reports showed that adult enrollments declined 12 percent in distributive education and 4.9 percent in agriculture.

Data from State reports revealed no consistent growth pattern for adult enrollments during 1969. Arizona, for instance, reported a 36-percent enrollment increase in distributive education, trade and industry, office education, and technical education. New Jersey's 36 new adult programs attracted an additional 69,915 adults during 1969. Many States reported that lack of funds for program operation and expansion had caused declines in adult enrollments. Kansas, however, passed legislation to remove certain requirements which had limited

participation of adults and out-of-school youth in tuition-free vocational programs.

Occupational programs for adults were expanded across the country, indicating that increasing numbers of adults were requesting supplementary and preparatory training. In Florida, enrollments rose 65 percent in preparatory industrial programs and 24 percent in the supplementary programs. Kentucky's adult enrollments in distributive and marketing programs jumped 141 percent over the 1968 enrollments, and enrollment gains in Virginia's new travel-service programs shifted the State's position from 29th to 5th among the States offering courses in cooperation with the American Hotel-Motel Association diploma programs.

Washington State conducted two new adult classes for farm-labor supervisors, and Iowa offered special classes to prepare farmers for off-farm job opportunities. Young and adult farmer groups in Virginia received five lessons in agricultural mechanics through the State-sponsored educational television series. Supplements for these lessons were distributed to all vocational agriculture teachers in Virginia. Florida offered supplementary training programs in agricultural production, supplies, mechanics, products, ornamental horticulture, and forestry.

New adult programs in distributive education included: cashier-checker training and job placement following completion of the course; shop-lifting prevention clinics as part of the distributive education program; and food service training for State park supervisors.

An increasing number of preparatory and supplementary programs were offered in the health occupations. Louisiana offered programs in practical nursing, geriatric nursing, intensive coronary care, medical-surgical nursing, and pharmacology. A total of 1,479 adults enrolled in these courses, 1,170 in preparatory programs and 309 in supplementary programs. Missouri offered new programs for nursing assistants which emphasized care of the mentally retarded. Florida conducted refresher programs for nursing assistants, practical and registered nurses, laboratory technicians, and health workers employed in nursing homes.

Area vocational schools in Louisiana conducted preparatory programs in home economics education to train adults in clothing alteration and for employment as visiting homemakers, food service workers, and aides to the elderly. An additional 276 adults enrolled in West Virginia's expanded program for upgrading school lunch cooks. Adults employed in jobs related to nutrition, including school lunch workers, and personnel in mental health and correctional institutions benefited from Maine's educational television programs.

Florida offered technical education courses in pollution control, and Washington State developed supplementary programs for adults employed in water and wastewater treatment plants.

Several States cooperated with business and industry in developing adult managerial and apprenticeship programs. Iowa conducted prejob apprenticeship programs for bricklayers and related programs for 1,502 apprentices. Michigan continued to expand programs in management and labor relations training and in foremanship education.

PROGRAMS FOR PERSONS WITH SPECIAL NEEDS

The 1963 Act dictated that persons with special needs were to be served by vocational education. It defined this target group as "persons who have academic, socioeconomic, or other handicaps that prevent them from succeeding in regular vocational education programs." This definition included: (1) Those whose physical, emotional, or mental handicaps retard personal achievement; and (2) those whose environments and cultural background inhibit personal, social, and economic advancement.

Persons with special needs, served either in separate classes or in regular classes, totaled 287,694 in 1969. This represented a 32-percent enrollment increase over 1968 and 3.6 percent of the total vocational education enrollment for 1969.

Expenditures for programs serving these persons totaled \$33,848,189, a 37.4-percent increase in 1968 expenditures. Federal funds under the 1963 Act amounted to \$7,884,454, or 3.5 percent of all Federal expenditures for vocational education in 1969.

Most States in 1969 had at least one person assigned to special needs programs, and several had staffs large enough to provide the State leadership needed to develop programs for the handicapped and disadvantaged. State reports showed that nearly half of the States had staff members working full time or part time in special needs programs.

Home economics programs for disadvantaged adults were begun or expanded in several States: Courses for migrant workers in Minnesota; a class for adults with special needs and nine classes for low-income senior citizens in Ashland, Ky.; 22 classes for disadvantaged adult groups in Fayette County, Ky.; and job-training and work-experience programs in New Jersey for persons in the Work Incentive Program (WIN).

Some States, Minnesota and Florida, for example, offered prevocational classes to motivate potential dropouts to continue their schooling. The District of Columbia and New York City provided child-care services for welfare mothers enrolled in vocational programs.

Ohio and Florida combined on-the-job experience and inschool vocational education to motivate underachievers and enable needy students from low-income families to continue their training. New Jersey, New Mexico, Maryland, and New York continued using mobile trailers to reach persons in isolated regions. These mobile units provide occupational orientation programs, skill development classes, and student evaluation services to migrant farm workers or other persons to whom vocational education had been inaccessible.

Many programs begun during the past few years for the handicapped and disadvantaged were developed jointly with agencies or groups concerned with vocational rehabilitation, compensatory education, and special education. Cooperative funding arrangements, when made, stretched the limited resources available for special needs programs and services.

THE OCCUPATIONAL PROGRAMS— ENROLLMENTS AND TRENDS

During 1969 the States continued to recruit new students, and vocational educators introduced new programs and expanded offerings for persons of all ages at all educational levels.

Trade and Industrial Education

In 1969 enrollments, funding, and offerings were greater than at any time in the history of the vocational program of trade and industrial education. The 1,720,859 persons who received training in this program represented an enrollment increase of 92,317 over the 1968 enrollments. The financial support, excluding construction, reached a combined total of \$318,300,000 of which \$62,396,000 came from Federal funds.

Secondary programs served 458,554 students, 36,000 more students than were served in 1968. These high school students received instruction from 13,420 full-time teachers and 4,254 part-time teachers.

The most popular programs were: automotive mechanics, drafting, machine shop, graphic arts, carpentry, cosmetology, construction and maintenance, automotive industries, welding, and masonry. Enrollments in these 10 basic programs ranged from more than 66,000 in

automotive mechanics to 12,048 in masonry. Auto body and fender repair, electricity, electronics, millwork, and cabinetmaking also had large enrollments.

Several States reported improved or new secondary programs. New York reduced many 3-year trade courses to 2 years and used short-unit courses, programmed learning and interdisciplinary approaches more frequently in 1969 than in 1968. Illinois completed a 3-year experimental program in the diversified metals occupations which had been offered in 15 high schools. In Florida, overaged 9th and 10th graders who had been identified as potential dropouts were taught clusters of related mechanical skills in the diversified mechanics program.

A total of 39,301 high school students participated in cooperative programs which offered work experience in 92 trades. The cooperative programs with the largest enrollments were auto mechanics, machine shop, graphic arts, cook/chef, and drafting. New Jersey conducted 322 cooperative industrial education programs; the Chrysler Corporation in Detroit continued participation in cooperative work-experience programs for inner-city youth; and Florida began a cooperative industrial education training program for secondary students who had completed at least 540 hours of preemployment classroom and shop training.

Persons with special needs totaled 67,890, a 43-percent increase over 1968 enrollments. Of this number, 22,148 attended regular classes. Special needs teachers totaled 1,736—991 taught full time and 745 taught part time. The Portland School District in Oregon expanded the Vocational Village School for students with special needs. In New York, secondary curriculums were developed for urban students with special needs, and handicapped and disadvantaged students in Highland Park, Mich., attended a 10-week summer program which offered training in auto mechanics and electronics.

Postsecondary enrollments totaled 174,201 as compared with 137,732 in 1968. The programs with the largest enrollments included: law enforcement, automotive mechanics, drafting, welding, machine shop, foremanship and supervision, aircraft maintenance, graphic arts, cosmetology, commercial art, and auto body and fender repair.

Postsecondary programs in trade and industrial education were offered at 26 institutions in Illinois, with the largest enrollments in automotive mechanics, drafting, and law enforcement. Florida reported sizable enrollment increases in electro-mechanical assembly, dimensional quality control, automotive mechanics, and air conditioning. Hartford State Technical College in Connecticut added a nuclear technology program.

Enrollments in postsecondary cooperative programs grew from 201 students in 1968 to 4,833 in 1969. Postsecondary cooperative programs in sheet metal, auto mechanics, welding, construction and maintenance, and communications had large enrollments. Of the 11,213 teachers employed at this level, 6,867 were full time and 4,346 were part time.

Of the 1,042,362 adults in trade programs, over 878,000 were in supplementary training and more than 164,000 were in preparatory training. Of the 25,985 teachers for adult programs, the majority, 18,942, were from business and industry and taught part time.

Efforts to expand or improve courses for adults were reported by several States. New York updated and developed new short-unit trade courses for adult programs in Rochester and New York City, and introduced programmed learning for classes conducted in Utica. Delaware broadened trade-extension programs to prepare adults for job opportunities in regions served by vocational high schools. All 22 area vocational-technical schools in Georgia employed industrial coordinators to analyze the training needs of employed adults so that programs could be developed or modified to meet their needs.

Distributive Education

This program served 563,431 persons in 1969, or 10.0 percent of all *gainful* enrollments. Out-of-school youth and adults, who attended short-termed courses on a part-time or intensive basis, were the largest group reached by distributive education. The 11.9-percent drop in enrollments for this group almost canceled out the 15-percent gain reported in 1968. The adult enrollments totaled 307,976 in 1969, dropping from 349,730 in 1968. As a result, the total distributive education enrollment for 1969 fell 2 percent below the 1968 enrollment.

Employed persons in refresher, updating, or developmental training made up 76.7 percent of the adult enrollment. Adults being retrained or prepared for employment in part-time or intensive courses totaled 71,578. Those in preparatory and supplementary training accounted for 54.5 percent of the distributive education enrollment, and 10 percent of the total vocational adult enrollment.

High school students in the regular vocational program of distributive education totaled 184,206, representing 32.7 percent of the program's total enrollment. About 43 percent of these students were in cooperative work-experience programs.

Followup studies revealed that 51 percent of the high school students in distributive education completed the program, an increase of 3.2 percent over 1968. Among those available for employment, almost 76 percent were employed in the field for which they were trained or in a related occupation. Only 4.7 percent were unemployed, and 22 percent continued their education on a full-time basis.

Programs for inschool youth and adults trained primarily for employment opportunities in general merchandise, general retailing, miscellaneous services, food services, and goods distribution. The most popular marketing programs were general merchandise and real estate, both of which had enrollments of over 55,000. General management courses attracted almost 25,000 persons and general retailing some 24,000.

Postsecondary programs in distributive education included different levels of occupational preparation. Some programs prepared trainees for positions which required more than a high school diploma, but less than a 4-year college degree; others prepared high school graduates for job entry. Postsecondary enrollments increased 35.5 percent over 1968, reaching 60,718 in 1969. More than 43,000 enrollees were first-year students, 6 percent more than in 1968.

Some 22,000 disadvantaged or handicapped persons received training in 1969. Special classes or programs served 10,531 trainees, over 6,000 more trainees than in 1968.

The unduplicated count of teachers was 9,741, an increase of 1,199 over the 1968 count. Distributive education had 4,407 full-time teachers and 6,768 part-time teachers. A national study of teacher-preparation programs, conducted in 82 different colleges and universities in 1969, showed a 9-percent increase over 1968 in bachelor's and master's degrees in distributive education.

Expenditures for distributive education totaled \$58,108,000, of which nearly \$53 million was spent for instruction and equipment. Over \$1,650,000 was spent for State and local supervision; \$1,518,000 for teacher education; and \$1,473,000 for State and local administration. Expenditures for research were somewhat less than \$270,000, and guidance accounted for \$319,185.

Agriculture

The expansion of off-farm, agribusiness programs continued in 1969. Of the 850,705 persons enrolled in vocational agricultural education, 205,846 received training for employment in the off-farm occupations—a

20-percent increase over the 1968 off-farm enrollments.

Growing job opportunities in the urban labor market led to the expansion of off-farm offerings in urban high schools. Miami, Philadelphia, New York, Los Angeles, and Cleveland added ecology, veterinary science, golf course and turf management, and landscaping to secondary curriculums. Ornamental horticulture, however, remained the most popular subject.

High school enrollments totaled 536,039 in 1969, with slightly more than 30 percent or 162,103 students in off-farm programs. Most States revised production agriculture courses to emphasize management and reorganized related subject units—soils, plant and animal nutrition, and agricultural mechanics—so that curriculums would permit instruction in both production agriculture and agribusiness.

The greatest upswing in agricultural enrollments occurred in postsecondary programs, showing a 43.3-percent gain over the 1968 postsecondary enrollments. Some 11,000 of the 15,816 students in postsecondary agriculture programs were enrolled in off-farm curriculums.

Programs for adult farmers and farm workers served 290,336 persons in 1969, about 15,000 less than in 1968. The courses with the largest enrollments were farm management and agricultural mechanics. Several States expanded adult farm-management programs to include computer training for recordkeeping, and teachers of adult programs in Virginia, North Carolina, and Alabama used closed-circuit television to supplement classroom instruction.

Vocational agricultural programs reached 35,729 disadvantaged and handicapped persons, of whom 11,470 were enrolled in off-farm occupational programs. Several States reported new programs specifically designed to serve the disadvantaged and handicapped. Oklahoma, for example, had 13 special schools which served 3,992 disadvantaged and handicapped students in 1969. New Mexico's 1,114 special needs students were served in six vocational agriculture departments, two of which were added in 1969. South Carolina reported that one-third of the student enrollment in vocational agriculture were classified as disadvantaged or handicapped. This State also reported new programs for these students at the secondary level.

Several States expanded vocational agriculture facilities or set up new agriculture department. New Mexico added two new secondary vocational agriculture departments to serve Navajo Indians; Arizona added two secondary departmental programs to train specifically for off-farm employment; and Oklahoma built 45 vocational agriculture facilities and remodeled 35 school facilities.

Health Occupations

In fiscal year 1969, public vocational education offered new health occupations and training programs and, in some instances, greatly expanded existing programs. The vocational health program served 175,101 youth and adults who received either short-term, job-entry training or technical preparation for careers as semiprofessionals in the health-medical occupations. The enrollment total for 1969 was 24 percent higher than the 1968 total.

Reports show that secondary curriculums were being changed in those States using the health occupation core guidelines. Ohio, Georgia, and Wisconsin were among the first States to use the "core" guidelines for entry-level job training programs and for career exploration programs. In 1969, core programs were offered in high schools in Oregon, Arizona, Kentucky, Massachusetts, Florida, Illinois, Indiana, and Pennsylvania. Several other States reported plans to use this program during fiscal year 1970.

High school cooperative and single-purpose programs for practical nurses and dental assistants increased during the year, and prevocational health-career programs were offered in junior and senior high schools. Illinois reported that 40 percent of the 1,317 high school students who completed health occupation curriculums in 1969 entered postsecondary health programs, and that most had planned to use their basic core training in part-time work. In Pennsylvania, secondary enrollments increased 150 percent during 1969, with enrollments in the dental assistant, practical nursing, and general health-assistant core programs accounting for the largest proportion of the percentage increase.

Trainees at the postsecondary level totaled 91,920, a 42.3-percent increase over 1968 enrollments. New postsecondary offerings included: medical emergency assistant, pharmacy assistant, psychiatric and mental health technician, hospital supply clerk, and geriatric care aide.

Recruitment of licensed practical nurses for 2-year associate degree programs met with some success, especially when credit was given for previous training and experience. However, the high rate of academic failures and dropouts in the 2-year program prompted many States to include prevocational and prenursing courses for those who scored low on entrance tests and remedial programs for students enrolled in the program but had low achievement levels.

The trend toward expanding health curriculums offerings continued. In 1969, more than 200 postsecondary

institutions offered from 3 to 11 training programs in the health occupations. For example, Milwaukee Technical College offered training in the following occupations: health technician, medical office assistant, dental assistant, dental laboratory technician, certified laboratory technician, associate degree nurse, licensed practical nurse, inhalation therapy technician, nursing aide, medical secretary, and child-care aide.

All States conducted adult programs, serving 56,603 adults who made up 32.3 percent of the total enrollment in health occupations education. Several States conducted special programs to upgrade practical nurses who had been licensed by waiver. Upon completion of the program these workers are prepared to take the State's licensing examination to remove the waiver and become full-fledged licensed practical nurses (LPN). Massachusetts, which pioneered the program, and other States, including New York, Tennessee, Iowa, and Oklahoma, conducted these special programs.

Louisiana served 1,170 adults, most of whom were being trained for health-service jobs in preparatory courses. The medical center at Rio Pedras, Puerto Rico, trained 104 adults as clinic aides, hospital "guides," and hospital supply clerks.

Many States, in cooperation with health service agencies, developed new approaches to meeting the training needs of adults. Nevada worked with the community and family health services agency in planning programs for training home-health aides who were desperately needed in the State's urban and rural communities. Florida began programs for training nursing home personnel, and Illinois worked with its Health Career Council in developing short-term programs for workers in neighborhood health centers.

Persons with special needs were enrolled in a variety of health programs during 1969. Enrollees totaled 7,612, a 30-percent increase over 1968. Special classes served 3,369 and 4,243 attended regular classes. In Puerto Rico, nurses-aide training was offered to penitentiary inmates; one State trained blind students as health assistants; and several others offered medical laboratory training to physically handicapped persons.

The teaching staff grew 36 percent, from 6,521 in 1968 to 8,876 in 1969. The majority, 5,993 taught at the postsecondary level; more than 60 percent were employed full time. Forty-six colleges and universities conducted teacher-education programs in vocational health occupations for 2,318 enrollees. Of this number, 931 enrollees completed requirements for certification.

Office Education

Twenty-three percent of all vocational education students were enrolled in office education during 1969. This program reached 1,122,198 high school students, 218,448 postsecondary students, and 482,160 adults. Over 12,000 handicapped and disadvantaged persons received instruction in special classes, and 35,517 attended regular classes.

By level, enrollment in office occupations made up 27.5 percent of the secondary vocational enrollments, 29 percent of the postsecondary, 15.8 percent of the adult enrollments, and 8 percent of the enrollments in special needs programs.

Cooperative office education programs provided work experience for 57,635 students, some 3,000 more students than in 1968. In Georgia, 1,646 students participated in 78 cooperative programs. These students were employed in 167 different businesses and earned a combined total of \$1,452,324. Of those completing the program and available for placement, 90 percent were employed in occupations for which they had been trained or in a related one.

Flexibility and new approaches to learning and teaching characterized office occupations education in 1969. Methodology included modular scheduling, giving emphasis to block-time programs, individualized instruction, and simulated programs for the hard-to-reach.

Ohio and New York provided cooperative office education and block-time programs for the academically handicapped. Colorado's postsecondary program used visual instructional materials to teach deaf students who had been placed in regular classes. A three-period, block-time program in clerical office procedures was conducted in Chicago for 2,255 academically disadvantaged students.

Simulated office education programs were developed in 15 counties of New Jersey. The State's mobile training units, equipped to demonstrate basic office skills, served migrant youth during summer months and high school students with special needs who were enrolled in regular classes. Arizona and Texas expanded bilingual office education programs, and California continued bilingual programs for youth and adults of Indian and Spanish ancestry.

Emphasis on training for the traditional office occupations changed to education for a career objective in fields related to business data processing systems, information communications, personnel, and supervisory and administrative management. However,

the objective of training students for job entry in the office occupations still received more attention than career exploration and preparation for study at the postsecondary level.

Teachers of vocational office education totaled 37,923 in 1969, compared to 31,428 in 1968. At the secondary level, 28 percent of the 18,011 full-time teachers were office educators. Teacher-training for office occupations education was conducted in 154 institutions by 503 teacher educators—285 full-time and 218 part-time teacher educators. Enrollees in teacher-training programs totaled 16,232, with 10,312 preservice enrollees and 5,920 inservice enrollees.

Home Economics

Home economics enrollments rose from 2,283,338 in 1968 to 2,449,052 in 1969. Students in gainful employment programs totaled 113,272, a 55.1-percent increase over 1968 "gainful" enrollments.

Secondary programs continued to serve the largest number of enrollees in vocational home economics. High school students totaled 1,670,347, of whom the majority were enrolled in food-service programs. The States also reported enrollment increases in child care and interior decoration.

Increased enrollments and course offerings at the secondary level were reported by several States. For example, all North Carolina high schools with 100 or more enrollees offered vocational home economics education, including the newly added family economics and consumer education programs. Ohio reported an additional 18,032 students in family living programs and in other programs of special interest to high school students. In the State of Washington, over 70 percent of the girls in grades 9 through 12 were enrolled in vocational home economics programs.

In Forsyth County, boys and girls identified as potential dropouts because of absenteeism were placed in classes limited to 15 pupils. All classroom activities were related to laboratory assignments in either home economics or industrial arts. Absenteeism declined 39 percent. The success of this program for potential dropouts influenced 13 other school systems in Georgia to start similar programs.

The greatest boost in enrollments occurred at the postsecondary level, from 4,395 in 1968 to 13,490 in 1969—a 206.9-percent increase. Of the 13,490 postsecondary students, 10,764 were in gainful home economics.

Some changes which contributed to the increased demand for home economics education programs included:

flexible curriculums and scheduling; new approaches to reaching different population groups, particularly inner-city adults, high school students, and students with special needs; and additional programs for students interested in employment in the personal and community service occupations. The cost per student in occupational programs was more than twice the cost per student in homemaking programs, because training for gainful employment required additional services and equipment.

The Milwaukee Skills Center in Oregon, which serves three district high schools and offers homemaking programs, reported enrollment increases in the child-care program. In Missouri, enrollments in occupational home economics increased 41 percent over the previous year. Several States, including Mississippi, Colorado, Texas, Ohio, and Michigan, expanded their cooperative programs.

State reports indicated that community and junior colleges increased offerings in occupational home economics, and that enrollments grew rapidly in both useful and gainful home economics programs. The Portland Community College in Oregon offered a 1-year certificate or a 2-year associate degree in early childhood education. Wisconsin introduced a 1-year postsecondary program to train persons as home economists and child-care assistants, and expanded the associate degree program to include interior design and child care and development.

The number of adults served in home economics classes rose from 677,478 to 718,217, a 6-percent increase over the 1968 enrollments.

Participation in the Connecticut adult programs grew steadily. Adults completing the "early childhood" program were employed as assistants in Head Start. Connecticut also offered classes in nutrition, family health, consumer interests, and home management skills for housewives.

In Kansas, adult gainful home economics programs included courses in power sewing-machine operation, clothing alteration, tailoring, and drapery construction. The State also offered useful homemaking classes in clothing and tailoring, interior decoration, home management, and child development for rural housewives.

Food-service supervisor programs were conducted for adults in Florida, Georgia, Oklahoma, and Tennessee and included job-placement services.

Kentucky continued emphasis on developing urban and countywide programs for homemakers in need of special services, especially for parents who had children in Head Start. One region offered 16 classes, including

courses in health and nutrition, caring for the home, meal management, and children's clothing, for 235 of these parents.

- New York City launched a pilot program aimed at improving the homemaking and consumer skills of disadvantaged women. Individualized instruction and special events were part of the 5-day week class sessions, which were held in a typical inner-city apartment.

- Adults from 23 public housing projects in Puerto Rico and those in depressed rural areas attended classes in homemaking. A home economics training center was established in the new public housing developments at Ponce and San Juan.

- Homemaking education was offered in the parent-child centers in Atlanta, Ga., in cooperation with the Office of Employment and Opportunity, Model Cities, Community Action, and the United Fund Organization of Atlanta.

- A pilot program for adults on nutrition for the aging was conducted in Salt Lake City, Utah, in cooperation with Community Services.

Technical Education

The total enrollment in technical education programs rose almost 17 percent, from 269,832 in 1968 to 315,311 in 1969. Enrollment increases ranged from over 24 percent at the postsecondary level to 19 percent at the adult level. However, secondary enrollments fell 12.3 percent below the 1968 figure. The number of persons with special needs rose from 1,950 in 1968 to 4,501 in 1969, of which 1,200 attended special classes and 3,301 were served in regular programs.

Total expenditures for technical education programs increased from \$87,779,000 in 1968 to \$101,192,000 in 1969. The Federal expenditures increased 9.3 percent; State and local expenditures rose 17 percent.

Secondary enrollments continued to decline, down to 31,833 in 1969 from 36,286 in 1968. Many States now consider secondary training as preparation for postsecondary study and, therefore, no longer report high school enrollments in technical education.

During fiscal 1969, postsecondary enrollments reached a total of 130,564 students, a 24.6-percent increase over 1968 enrollments. Adult enrollees rose from 127,418 in 1968 to 151,714 in 1969. The majority was employed and had enrolled in technical education courses to update their skills or to learn new ones.

Only 27,332 women were enrolled in technical education programs. Scientific data processing programs accounted for some 11,000 women and electronic technol-

ogy for over 1,000. States reported that the women who completed training as mechanical, civil, chemical, or electronic technicians usually found immediate employment.

Approximate enrollment figures show the most popular technical programs in 1969:

Electronics Technology	75,000
Scientific Data Processing	36,000
Mechanical Technology	32,000
Architectural Technology	16,000
Electrical Technology	14,000
Civil Technology	14,000
Police Science Technology	8,000
Commercial Pilot Training	6,000
Industrial Technology	6,000
Oceanographic Technology	4,000
Automotive Technology	4,000
Chemical Technology	3,800

Police science, marine science-oceanography, and commercial pilot technician programs—the new emphases in technical education programs—were requested by both students and administrators. Other popular programs were environmental and ecological education, which had enrollments of over 2,500, forest and wildlife conservation, and fire science and fire prevention.

Enrollment and program growth in technical education may be attributed to the planning and surveys undertaken in many States following the passage of the 1963 Act. Experience shows that at least 2 years of planning must precede enrollment in a postsecondary technical program. It takes a year for program administrators and advisory committees to examine local and regional job-market demands and determine the training needs of the people in a given area. The second year is used for staff training and development, acquiring facilities and equipment, and public relations.

Youth Organization Activities

In addition to participating in extracurricular activities open to all high school students, enrollees in vocational programs are eligible for membership in the following youth organizations: the Future Farmers of America (FFA), the Future Homemakers of America (FHA), the Distributive Education Clubs of America (DECA), the Vocational Industrial Clubs of America (VICA), the Office Education Association (OEA), and the Future Business Leaders of America (FBLA).

The *Future Farmers of America*, the oldest of these organizations, had a membership of 449,457 in 8,281 high school chapters in fiscal year 1969. More than

10,000 members attended the 3-day national convention in Kansas City, Mo., at which an award for outstanding accomplishment in vocational agribusiness was presented for the first time. In addition, 450 State and local chapter officers participated in four 1-week leadership and citizenship conferences in Washington, D.C. FFA officers continued efforts to strengthen the business-industry and agriculture partnership through the annual coast to coast, good-will tour.

The organization expanded its international exchange program to include FFA Work Exchange Abroad (WEA). This program placed 27 American students on farms and in agribusiness programs in eight European countries, and 13 European students from five countries with American "host families" for on-farm work experience. FFA members also helped Panama and the South Vietnamese to organize a Future Farmer youth group. Representatives of the South Vietnamese Ministry of Education attended the 1969 FFA Convention.

The *Future Homemakers of America*, the largest high school vocational group, totaled 603,907 members in 11,901 chapters. State reports showed that:

- 413 of the chapters were in 35 metropolitan cities with populations over 350,000.

- More than 800 male students joined the FHA in 1969, increasing male membership at the secondary level to approximately 4,000.

- FHA achieved 100-percent State affiliation in 1969 with the addition of Rhode Island. Other chapters affiliated with national FHA headquarters are in the Virgin Islands, the Canal Zone, and in the American Overseas Schools in Germany, Iran, and Japan.

The most significant FHA activity in 1969 was the development of a 4-year national program of work. Its two major objectives were (1) to help strengthen family and community life and (2) to help youth understand today's social problems and to contribute to the solutions. The theme of the 1969 National FHA meeting was "Action for Accomplishment," which focused on interpreting and putting into action the 1969-73 national program of work.

The *Distributive Education Clubs of America* provide high school and postsecondary students opportunities for leadership development. Chapter activities complement instruction and encourage cooperation between the school and business community.

In 1969, membership in DECA's 2,935 high school chapters totaled 84,953 students or 45 percent of the enrollments in secondary distributive education. Although some States restricted membership to high school seniors, or to students enrolled in cooperative

distributive education programs, approximately 84 percent of the 12th-grade distributive education students were DECA members.

The States reported 185 postsecondary DECA chapters with 4,640 members, an increase of 920 over the 1968 membership. The postsecondary organization, still relatively new, began developing special activities in 1969 which included its first national leadership conference.

DECA started two national projects in 1969: (1) a pilot project to determine the influence of a national youth group on unemployed ghetto youth; and (2) teenage shopping centers, financed by local investors, in which distributive education students would be job-holders and shareholders.

The *Vocational Industrial Clubs of America*, composed of school-age youth enrolled in trade and industrial programs and organized in May 1965, had 82,451 members in 1969. The Illinois Association of Vocational Industrial Clubs of America had 111 clubs with a membership of 3,197 students in 1969, a 17-percent boost in the number of clubs and a 32-percent membership increase over 1968. Within fiscal year 1969, Colorado's high school clubs grew from 17 to 25 and membership increased from some 300 to more than 700.

Student members of the *Office Education Association* and the *Future Business Leaders of America* gain work experience related to their vocational study and receive opportunities for leadership development through personal contact with representatives of the business community.

Delaware organized a State OEA during 1969, Idaho reported its first secondary school chapters, and Illinois organized an OEA State advisory council which developed guidelines for OEA youth activities. In Texas, each secondary vocational office program was encouraged to organize a local OEA chapter and to include activities related to community understanding, safety and health habits, student recruitment, public relations, career development, fund raising, self-improvement, and cooperation with other youth groups.

Future Business Leaders of America in Connecticut sponsored a leadership workshop and a statewide conference. The FBLA in Maryland operated as an intracurricular activity to promote the total vocational-technical program and provide a base for the continued growth and expansion of vocational education in Maryland.

SUPPORTING SERVICES

Total expenditures for ancillary services, excluding construction and work study, increased from \$973,707,388 in 1968 to \$1,152,121,442 in 1969. Table C shows the breakdown by function and percentage distribution for fiscal years 1968 and 1969.

Curriculum Development

Progress in curriculum revision and development varied from State to State, but the methods used by the States may be generally classified as follows:

- State education departments added professional curriculum specialists who work with teachers and administrators at local, area and State levels to revise and develop curriculum materials.
- State supervisors of vocational education services worked with selected groups of teachers in revising curriculum materials.
- Specially qualified persons were employed by State education departments as consultants to develop scientific curriculum materials.
- Curriculum development centers operated as divisions within the State departments of education.
- State departments of education supported curriculum laboratories operating at selected universities, either as specialized service centers or as parts of the teacher education services of the universities.
- Workshops for curriculum revision and development were conducted in a number of States as an integral part of the teacher-education program or as a State education department activity.
- Patterns for cooperative action in curriculum revision and development in the States included involvement of members of professional associations, consultants from business and industry, professional personnel from

colleges and universities, teachers from local school districts, State education department personnel, and members of advisory committees.

Among the States reporting major curriculum revisions were California, Florida, Georgia, Kentucky, Minnesota, New York, and Ohio. Wisconsin organized a State advisory committee for curriculum development. Local advisory committees were organized to help educators to develop and evaluate curriculum, improve facilities and equipment, and conduct public relation activities. Texas requested that local advisory committees be established to assist in updating program offerings in all schools conducting vocational programs.

Oregon prepared and disseminated manuals for secondary curriculum clusters: clerical, stenographic, accounting systems, health occupations, building construction, marketing, agriculture, food service, mechanics, and electrical-electronics. Other States, including Alabama, Maryland, and Illinois, also developed occupational-cluster curriculums for secondary programs.

States sponsored curriculum development workshops for teachers and distributed new and revised curriculum and course guides to secondary teachers and administrators. Curriculum materials produced by the State staff, teacher-educators, and teacher staff at the curriculum laboratory in Tennessee included 25 course guides for teachers.

Many States revised curriculums to reorient training for specific occupations in business-distributive education, trade and industry, home economics, and agriculture. A secondary curriculum offering home economics programs in *Food and Nutrition*, *Clothing and Textiles*, *Housing and Management*, and *Family and Child Development* was completed. Arkansas updated course outlines for Agriculture I and II programs, and Kentucky developed a curriculum for forestry. Basic materials were developed by Louisiana for off-farm agriculture programs

Table C
Total Expenditures by Function and Percentage Distribution (Excludes Construction and Work Study): Fiscal Years 1968 and 1969

Function	FY 1969	Percentage Distribution	FY 1968	Percentage Distribution
TOTAL	\$1,152,121,442	100.0	\$973,707,388	100.0
Administration	83,811,037	7.3	73,679,256	7.6
Supervision	21,315,407	1.8	19,279,942	2.0
Teacher Education	20,552,426	1.8	18,690,333	1.9
Instruction	923,325,739	80.1	759,343,730	78.0
Research	7,709,925	0.7	9,139,519	0.9
Instructional Equipment	69,299,284	6.0	74,708,998	7.7
Vocational Guidance	26,107,624	2.3	18,865,610	1.9

at the secondary level, including farm mechanics as basic to dairy production and ornamental horticulture. North Carolina revised three course guides *Pulp Production*, *Forest Management*, and *Agricultural Sales and Services* and developed course outlines and supporting teaching materials in home landscaping, pesticides, farm equipment management, and farm recordkeeping for adult programs.

Media centers were set up to provide new and improved secondary curriculums for trade and industry in industrial mechanics, metals, electricity-electronics, and industrial woodworking. Trade and industrial teachers in Georgia contributed 14 curriculum guides for various specialized training programs now available in the State.

Several States developed new curriculums or revised curriculums for distributive education. Ohio developed a project which placed emphasis on identifying career levels and produced nine manuals for teachers. Fifty coordinators in Virginia developed *A Participation Activities Manual* for students and teachers. The manual supplements a suggested curriculum for job-entry preparation at the 10th-grade level.

Iowa's Research Coordinating Unit conducted a "survey of instruction" in the State's distributive program, and secondary teacher-coordinators cooperated with the University of Northern Iowa in curriculum development and the preparation of audiovisual material. The Texas Instruction Materials Laboratory published *Project Assignments in Preemployment Laboratories* to support expansion of project-method training, and completed a guide, *Data Processing in Distribution*, for high school and junior college programs.

The States also reported increased activity in curriculum development at the postsecondary level. Georgia revised postsecondary curriculum guides in *Child Development* and *Food Services* and developed and field-tested seven technical education curriculum guides. Other States reporting postsecondary curriculum activities included New York, California, New Jersey, Kentucky, Florida, and Ohio. Emphasis on postsecondary curriculum improvement and revision in the majority of States was attributed to the expansion of vocational-technical programs in junior and community colleges.

The following technical education publications, developed by the Division of Vocational and Technical Education, U.S. Office of Education, became available for distribution in 1969.

1. *Criteria for Technician Education, A Suggested Guide, OE-80056*. Useful to Federal, State and local administrators of technical education pro-

grams, advisers and teachers, teacher-educators, employers, accrediting agencies, and others concerned with technician education. It describes the types of technicians and the related work; special problems in defining, initiating, and operating programs; the use of advisory committees; the library and its required facilities; the facility; student selection and services; and the curriculum.

2. *Food Processing Technology, A Suggested 2-Year Post High School Curriculum, OE-82016*.
3. *Metallurgical Technology, A Suggested 2-Year High School Curriculum, OE-81012*.
4. *Water and Wastewater Technology, A Suggested 2-Year Post High School Curriculum. OE-80057*. (Published jointly by the Department of Health, Education, and Welfare, U.S. Office of Education, and the Department of the Interior.)
5. *25 Technical Careers You Can Learn in 2 Years or Less*.

Professional Development

Teacher-training programs and continuing inservice training for professional development are crucial to the development and expansion of instructional programs. During 1969 concerted effort was made by States to prepare and upgrade professional personnel, increase expenditures for teacher education, and update teaching techniques.

Expenditures for teacher education totaled \$20,552,426, a 10-percent increase over 1968 expenditures. Likewise, the number of vocational teachers increased, growing from 146,552 in 1968 to 166,898 in 1969 (see Table D).

The growth in student enrollments stimulated commensurate teacher-training activity and intensified teacher-training recruitment. Office, trade, and technical education recruited competent personnel from the ranks of business and industry. States with sufficient personnel reported considerable movement to areas where the demand was greater. Home economics, distributive education, health, and agriculture intensified recruitment efforts.

Teacher education and professional development programs, including related training for guidance counselors, were offered in 301 different colleges and universities, and taught by 1,203 full-time and 2,120 part-time teacher-educators. Preservice trainees totaled 58,324 and inservice trainees totaled 52,350. Of the 25,294 persons completing requirements, 18,735 prepared for secondary-level teaching, 3,083 for postsecondary teaching, and 3,476 for adult-level teaching (see Table E).

Table D
Number and Distribution of Teachers of Vocational Education
Classes, By Level of Class
Fiscal Year 1969

<i>Level of Education</i>	<i>Number</i>	<i>Percentage Distribution</i>
(1)	(2)	(3)

Total number of different institutions—301

The demand for teachers still exceeds the supply. States reported shortages of qualified teachers for health, distributive education, technical education, and for special needs programs. In addition, vacancies existed in State staffs, teacher-education institutions, and in administrative and supervisory positions at the local level.

Alabama planned a series of leadership development conferences to upgrade its State staff. It also planned to reorganize the State department of education, including the division of vocational education. Oklahoma State University held a workshop for administrators and prospective administrators or area vocational schools;

Tennessee conducted leadership conferences for State employees and orientation sessions for new staff. Several States also employed teacher-education coordinators to improve preservice and inservice training programs.

Programs for persons who were proficient in an occupation but lacked formal teaching skills were started in several States. Oklahoma State University employed a health occupations educator to conduct teacher-training programs for persons in the health services who could qualify as teachers. Oklahoma also permitted persons who had successfully taught trade and industrial programs for 3 years to take an advanced-standing examination for which they would receive 24 hours of college credit. Teacher-educators graded the written tests and a group selected from industry evaluated the skills test. The Rochester Institute of Technology trained 15 new instructors for engineering technology programs.

Alaska's summer institute retrained teachers with at least 2 years of classroom experience in electronic data processing and computer programming, developed suggested course units and teaching guidelines, and helped administrators to set up courses in data processing in their schools.

Teacher-training programs in technical education and trade and industry were conducted at Northern Montana College. New York held a State conference for directors and teacher-educators from the 11 State institutions that prepare home economics teachers to consider current trends in education and their implications for the State's vocational and teacher-training programs.

Preservice and inservice programs for several occupational categories focused on practical experience. For example:

- Nineteen Texas colleges and universities arranged for prospective home economics teachers to work with low-income families, teach gainful employment programs, and participate in interdisciplinary community programs for adults. Increased emphasis was placed on consumer education, management, housing, and human development. Twelve of the 19 institutions were involved in self-appraisal, followup, and major curriculum-revision studies.

- Ohio sent agriculture teachers to work in selected agribusinesses for 2 weeks.

- Puerto Rico placed several teachers in industry to gain a semester of practical work experience.

- Utah included monthly visits to industry in the inservice training program for guidance counselors to acquaint them with current job opportunities and requirements.

- Automotive teachers in Colorado received college credit for study at the General Motors Institute Workshop.

- California expanded and refined its inservice programs, using workshops, seminars, conferences, multimedia training packages, and programmed instruction to meet a variety of training needs. The State also developed and distributed a "Learn to Work" package on employment opportunities in home economics; the package contained a set of color-slides, a synchronized taped track, and an assortment of printed information.

Many States conducted inservice workshops and conferences for teachers and vocational coordinators. A 3-week workshop for distributive education teachers was held at the University of Rhode Island, followed by a coordinator's workshop in which all distributive teachers participated. Oregon State University offered a 2-week workshop for health occupations instructors and supervisors on program planning and operation at the secondary level. The annual summer workshop in Massachusetts attracted nearly 1,000 vocational teachers. Special attention was given to upgrading teachers of evening courses in practical arts, and teachers of trade and industrial education, adult programs, distributive education, and agriculture.

A series of five inservice workshops were conducted in Washington State for administrators, counselors, and teachers who received credit after completing a project on occupational information or career planning in their schools. As a result, some constructive changes were made in guidance, career planning classes were begun in high schools and community colleges, and units in career planning were used in English and social science curriculums.

Facilities

The effectiveness of vocational-technical education is dependent, to a large extent, on the quality, quantity, and use of vocational facilities.

During fiscal year 1969, Federal, State, and local funds totaling over \$307 million were committed for 345 construction projects. Federal support for these projects came from the Vocational Education Act of 1963, the Appalachian Regional Development Act of 1965, the Economic Development Act of 1965, and the Coastal Plains, Four Corners, New England, Ozarks, and Upper Great Lakes Regional Development Commissions.

Table F shows construction expenditures by source.

Federal funds, \$27,341,726, from the Economic Development Act of 1965 were committed for 54 projects in 20 States and Puerto Rico. Funds from the

Table F
Total Construction Expenditures for 1969, By Source

<i>Source</i>	<i>Federal</i>	<i>Combined State & Local</i>
Vocational Education Act of 1963	\$ 50,909,869	\$165,725,212
Appalachian Act of 1965	42,243,349	
Economic Development Act of 1965	27,341,726	20,921,537*
TOTALS	\$120,494,944	\$186,646,749

*Not included in construction figures in the Appendix.

Appalachian Act, \$42,243,349, supported 75 projects in 13 States.

If construction trends remain unchanged, the vocational education program will lack facilities to accommodate the projected student enrollment for 1975. Vocational educators must consider alternatives, such as—

- Using different time frames for courses.
- Streamlining programs.
- Expanding cooperative education programs.
- Increasing involvement with business and industry.
- Clustering occupations.
- Applying new approaches to curriculum content.
- Developing or expanding team teaching.
- Using existing facilities to the maximum.

Guidance and Counseling

The combined State, local and Federal expenditures for vocational guidance and counseling increased from about \$18.9 million in 1968 to about \$26.1 million in 1969. Federal support for these services dropped from \$4,390,861 in 1968 to \$4,146,904 in 1969, but combined State and local expenditures increased from \$14,474,749 to \$21,960,720.

Steady progress was made in extending and improving guidance and counseling services, including occupational orientation and exploration, student appraisal, placement, and followup for "non-college-bound" students, out-of-school youth and adults, and the disadvantaged and handicapped.

Gains in guidance personnel were small, growing from 6,544 in 1968 to 6,674 in 1969. Nearly 36 percent of the local positions reported for 1969 represented part-time assignments to guidance activities, involving many vocational education teachers.

Nearly all States strengthened or developed new activities concerned with curriculum modification for career development, job placement and followup, and conferences and workshops on counselor education and evaluation. All efforts were calculated to reach students in high school and postsecondary institutions as well as youth and adults in the labor market who need vocational guidance.

At the Federal level, the Division of Vocational and Technical Education cooperated with the University of Missouri in planning and conducting a program of work to stimulate nationwide interest in career guidance, counseling and placement. Phase I included a national conference on Guidance, Counseling, and Placement in Career Development and Educational-Occupational Decisionmaking, scheduled for fall 1969. Participants at followup conferences in each HEW region would refine the recommendations made at the national conference, to provide a basis for a handbook on organization and management of career guidance, counseling, and placement programs. The handbook would be addressed to vocational educators and administrators.

Research

In 1969 the U.S. Office of Education spent \$11,570,000 under section 4(c) of the 1963 Act to finance 134 research and development grant projects. Over 90 percent of this amount funded 121 on-going projects and the remainder, \$813,000, went toward funding 13 new projects.

Support for individual projects in the "general research" category accounted for 71.8 percent of the section 4(c) funding; 47 State Research Coordinating Units (RCU's), 12.5; and the national centers for research and development at Ohio State University and North Carolina State University, 15.7. These project categories were funded through grants to 51 colleges and universities, 44 State departments of education, 22 local educational agencies, and 17 nonprofit agencies.

Individual or general research projects included:

- A 2-year curriculum in electromechanical technology for training persons as computer and business machine technicians.
- A teacher's manual on the operation, maintenance, and repair of air-cooled gasoline engines.
- An occupational opportunities and labor-market trends for junior high school students.
- Dissemination of multimedia training materials, guides, and bibliographies for training programs funded under the Education Professions Development Act.

• "New Careers" projects to identify employment opportunities and skill requirements for job entry and advancement in the personal and public service occupations; and projects to identify technical skill requirements for career opportunities in the electromechanical, biomedical equipment, nuclear-medical, electro-optical, and other technologies emerging from new industries and services.

• Program evaluation models for large-city school systems, and a model at the State level for vocational program planning and budgeting.

• Design and validation of an evaluation system for local vocational education programs.

• Cost-benefit and cost effectiveness analyses of vocational programs and use of teacher aides.

Long-term research projects continued during 1969. Project TALENT, for example, sponsored by the American Institutes of Research, received both vocational and cooperative funds to continue research designed to test career development and vocational maturity theories of the 1960's. The project's goal includes 1- and 5-year followup studies, based on information compiled on a 5-percent sample of the Nation's 1960 high school population. During 1969, Project TALENT completed a 5-year followup study on persons who were 10th graders in 1960.

In addition to research development, the national centers at the State universities in Ohio and North Carolina provided technical assistance to States and sponsored leadership development conferences. The State RCU's developed and refined research procedures, set priorities, stimulated new research, and disseminated the findings of local school systems and of other agencies engaged in vocational education research.

Although States received no Federal support specifically for research activities, 32 States and Puerto Rico spent a total of \$2,969,302 from their vocational program allotments, plus \$4,740,623 from State-local sources, for research activities.

New Jersey spent over \$1.5 million of its vocational allotment, Pennsylvania and Indiana each spent over \$200,000, and Puerto Rico used \$170,000 of its vocational allotment for research. The lowest amount expended was \$287.

In information collection and dissemination, several States started microfiche/document libraries of research materials and others developed computer-based research and resource information systems. All used the Educational Resources Information Center (ERIC) microfiche collection. Some States, including Minnesota and Arkansas, developed automated systems for followup

studies on vocational education students who had left school. Colorado reported development of a statewide followup system.

The disadvantaged continued to receive attention. Studies and projects tended to concentrate on local problems. Colorado provided tutors for migrant youths in postsecondary programs. Illinois funded a project to motivate students to complete high school in which a social worker will assist and advise students through field trips, parental and community contacts, and activities in and out of class. Another Illinois project provided classroom experiences in a learning center and a survey of various occupations for students who were under-achievers in reading. A New Jersey pilot distributive education project for boys in correctional institutions used classroom instruction and cooperative on-the-job training. Major problems were transportation and job placement for boys under 16 years of age.

Career education activities, which provide exploratory experiences and occupational information, were reported by several States. Although these activities were not widespread in 1969, new career education programs were included in the research and development efforts of States and ongoing programs such as North Carolina's *Introduction to Vocations* for junior high school students were being started by other States.

Arkansas adapted a home economics course, "Preparation for the World of Work," to a general exploratory course for junior high school girls. For one of four courses which introduced junior high school students to the world of work, Colorado used educational television. Kentucky's interdisciplinary program offered students exploratory experiences in agriculture, business and office, distributive, and home economics education.

Minnesota funded some basic research into "Use of Simulation Material for Creating Occupational Awareness for Non-College-Bound Persons." New Jersey continued its nationally known Technology for Children project which gives elementary children a look at the world of work through hands-on experiences and enhances learning in the normal disciplines by capitalizing on student interest. This State also developed, as part of the Technology for Children project, 47 Learning Episodes and 4 subject areas and 7 grade levels. Each episode provided a detailed curriculum and guidelines for the teacher.

Florida continued implementation in Brevard County of the Introduction to Vocation program for junior high students, which had been developed in North Carolina. A pilot project evaluated the effect of this elective on ninth graders. In Georgia, Waycross Area Vocational

School held a summer program to orient students to clusters of occupations. Students also were provided training for semiskilled jobs within a specific occupation.

Manpower Reporting

Cooperative efforts between government, labor, and educational agencies at the Federal, State, and local levels were continued in 1969. There was also an increasing interchange of information between State employment services and vocational education agencies. At the national level, joint efforts resulted in the issuance of forms and a technique for supplying manpower and occupational information to vocational educators by the Department of Labor. The Department of Labor report, *Manpower Requirements in Occupations for Which Vocational Education Prepares Workers*,

estimated the number of workers needed each year through 1975 in occupations for which vocational education offers preparatory programs.

Efforts were continued during fiscal 1969 to relate manpower and occupational information to vocational education programs and develop tools to assist vocational educators in planning, developing, and evaluating programs. *Vocational Education and Occupations* (OE-80061), published jointly by the Office of Education and the Department of Labor, provided a means for planning and evaluating occupational education programs. The publication also offered suggestions for designing curriculum content, planning education facilities in relation to job market needs, summarizing information on manpower resources and requirements, and improving guidance, counseling, and placement services.

CHAPTER III MANPOWER TRENDS

DO NOT WRITE IN THIS SPACE

A high school student trains for gainful employment in clothing services.

Chapter III: Manpower Trends

One of the greatest problems in education today has grown from the belief that a college degree is the passport to happiness, success, and a good measure of security. This belief has caused the public school system to bypass those who cannot or do not aspire to a college education, leaving many unprepared for achieving and living in a work-oriented society.

School retention data compiled by the Office of Education, and reported on in the May 1970 issue of *American Education*, showed that young people are staying in school longer than ever before. The proportion of young people who graduated from high school rose during the past decade from less than two-thirds to more than three-fourths.

About 96 percent of the fifth-graders in the fall of 1961 reached the ninth grade, 86 percent reached the 11th grade, 76 percent received high school diplomas in 1969, and 45 percent entered college in fall 1969. However only 22 percent are likely to earn 4-year degrees in 1973.

These facts pointed up the urgent need for including occupational exploration and preparation in the total educational experience of each student. Basic job-entry training in high school, work experience, and preparation for postsecondary study provide optional ways to learn, especially for the non-college bound, and a choice to reenter the educational system for more learning and retraining.

THE OCCUPATIONAL PICTURE

A multitude of exciting jobs or careers exist, and will emerge, that offer income equal to or greater than many jobs which require a baccalaureate degree.

What kinds of jobs will be available between 1970 and 1980? What fields are the most promising?

In general, job opportunities will be greater in the service-producing industries than in the goods-producing

industries. Service-producing industries are expected to grow at the rate of 35 percent, from about 44.2 million workers in 1969 to 59.5 million in 1980. Workers in goods-producing industries are expected to increase from more than 27.5 million to nearly 30 million by the end of the decade, a growth rate of over 10 percent. However, certain industries in both sectors will no doubt grow at a faster rate than others.

Service Industries

Trade is the largest division within the service-producing industries. Wholesale and retail outlets have multiplied in large and small cities to satisfy the needs of a growing urban society. Employment in trade was about 14.1 million in 1968 and is expected to grow 25 percent by 1980. Although the volume of merchandise to be distributed will increase commensurate to population growth and consumer expenditures, the demand for manpower will decrease because of labor-saving technology—electronic data processing equipment, automated warehousing equipment, self-service stores, and vending machines.

Government has grown faster than any other division of the service-producing industry, expanding by 5.5 million to 11.8 million employees between 1947 and 1968. The number of State and local employees increased more than 150 percent during this time, with employment growth being the greatest in agencies concerned with education, health, sanitation, welfare, and protective services. However, the Federal Government employed about 45 percent more people than State and local governments in the 21-year period.

Government will continue to be a major source of new jobs through the 1970's. By 1980, projections show that 42 percent more people may be employed in all types of Government jobs than were employed in 1968. Employment needs in 1980 at State and local levels may require the services of 13.8 million workers, about 52 percent

26/27

more workers than the 9.1 million employed in 1968. Employment in the Federal Government is expected to rise slowly, reaching about 3 million workers in 1980 as compared with the 1968 level of 2.7 million.

Job opportunities in the service and miscellaneous industries have been on the upswing in the maintenance, repair, advertising, domestic, and health-care occupations. Between 1947 and 1968, total employment in these service occupations doubled—rising from slightly more than 5 million to about 10.6 million workers. By 1980 more than 5 million additional workers may be employed in these services.

Transportation and public utilities jobs are expected to increase slowly through the 1970's, and employment trends among the individual industries within this employment category will differ widely. Rapid employment growth is anticipated in the air transportation industry, but the job opportunities in the railroad industry no doubt will continue to decline. Little or no change in employment trends is expected in water transportation and electric, gas, and sanitary services. Overall, employment in the transportation industries and in public utilities will probably increase to more than 4.7 million persons in 1980, 10 percent above the 1968 level.

Employment in finance, insurance, and real estate—the smallest divisions of the service-producing industry—has increased more than 90 percent since World War II, from nearly 1.8 million in 1947 to nearly 3.4 million persons in 1968. Workers in the finance-service occupations, such as bank tellers, credit agency personnel, and security exchange brokers, are expected to reach 4.3 million in 1980 or about 25 percent more workers than in 1968. Employees in banking and credit agencies will account for nearly 40 percent of the total workers in the finance-service division.

Goods-Producing Industries

Employment in the goods-producing industries—more than 27.5 million workers in 1968—has increased slowly in recent years. Job opportunities in the goods-producing industries are expected to increase to about 30 million persons in 1980, a 10-percent rise above the 1968 level. However, employment trends and needs in the major divisions—agriculture, mining, construction, and manufacturing—will differ.

• Agricultural production provided jobs for only 5 percent of the labor force, or 3.8 million workers in 1968. Employment is expected to decline 21 percent between 1968 and 1980 because of mechanization and

improved methods of agricultural production and processing.

• Jobs in the mining industries, which were filled by 610,000 workers in 1968, are expected to decline about 10 percent by 1980 because of labor-saving, technological changes. Slight employment increases are expected in quarrying and nonmetallic mining, but will not offset the employment declines in coal mining, crude petroleum, and natural gas industries.

• Government expenditures for urban renewal, school construction, and highways are likely to stimulate job growth in the construction trades, upping the level of employment from 3.3 million persons in 1968 to 4.6 million in 1980.

• Manufacturing, the largest division of the goods-producing industries, is expected to increase employment about 11 percent during the 1970's or from 19.8 million workers in 1968 to 21.9 million in 1980.

CHANGING MANPOWER DEMANDS

In 1956, for the first time in the Nation's history, white-collar and service workers outnumbered blue-collar workers. This shift reflected the expansion of occupations in the service-producing industries, which employ the largest proportion of white-collar and service workers.

Projections for the 1970's show continued increases in white-collar employees, less than average increases in blue-collar employees, above the average for service workers, and a continuing decline of farm workers. Between 1968 and 1980 total employment is expected to increase about 25 percent. However, the estimated 36-percent growth in white-collar jobs as compared to a 13-percent increase in blue-collar jobs means that in 1980 more than one-half of all workers will be employed in the white-collar or service jobs.

• Professional and technical workers, a group of more than 10.3 million in 1968, will be the fastest growing group between 1968 and 1980. Demand for persons trained in the social, physical, and applied sciences, and for needed technicians and support workers probably will raise the 1980 level of employment to more than 15 million.

• Managers and proprietors totaled about 7.8 million persons in 1968. As a group, they will increase more than one-fifth between 1968 and 1980, somewhat slower than the rate of growth for all occupations. Demands for salaried managers are likely to continue because of the need for employees with managerial skills

in business and government. On the other hand, the number of self-employed managers will drop during the 1970's as larger businesses increase.

- The demand for clerical workers, who numbered 12.8 million in 1968, is expected to increase about one-third between 1968 and 1980.

- Sales workers, accounting for about 4.6 million of the total workers in 1968, will increase by nearly 30 percent by 1980. Rapid population growth, new product development, business expansion, and rising volumes of business sales and services will open up new employment opportunities for sales workers.

- Craftsmen, numbering about 10 million in 1968, are expected to increase nearly one-fourth by 1980, somewhat slower than the growth of all occupations.

- Semiskilled workers (operatives) made up the largest major occupational group in 1968. Nearly 14 million workers were engaged in assembling goods in factories; driving trucks, buses, and taxis; and operating machinery. Employment for these workers is anticipated to rise about 10 percent above the 1968 level, despite continuing technological advances which will reduce employment in some of the semiskilled occupations.

- Employment of laborers (excluding those in farming and mining), who numbered nearly 3.6 million workers in 1968, is expected to change little between 1968 and 1980.

- Service workers totaled about 9.4 million in 1968. The size of this diverse category of workers will expand about 40 percent between 1968 and 1980 and, next to professional workers, will be the fastest growing occupational group. The service occupations may be divided into two broad classifications: human services and municipal services. Human services are concerned with the individual and his betterment, and include education, health, and social service. Municipal services involve guardianship, maintenance, sanitation and transportation, regulatory services and records, urban development, parks and recreation, public safety and correction, and other community services.

Vocational education planners should not eliminate certain programs solely because they do not seem to be tied closely to the "growth occupations." Although growth may be a key indicator of future job outlook, more jobs will be created from deaths, retirements, and other labor force separations than from employment growth between 1968 and 1980. Although the number of all workers and jobseekers will increase about 25 percent from 1968 to 1980, young men and women between 16-34 will account for about two-thirds of the net increase in the labor force for that period. Thus, in the 1970's this group will become the dominant element in the labor force. Those with vocational skills and a good basic education will have little difficulty in finding and holding jobs suited to their abilities and interests.

The continuing emphasis on higher education may decrease the flow of manpower to the skilled crafts. This, together with the high esteem in which white-collar occupations are held, may make it increasingly difficult to fill blue-collar and service jobs. Whether or not this situation materializes depends largely on:

1. A shift in attitude toward higher education to the extent that youngsters who do not want to go to college will receive vocational guidance and preparation for employment.

2. The removal of all discriminatory policies related to job entry and advancement.

3. Adjustments in salary, fringe benefits, and working conditions in the vocational-technical occupations.

4. The availability of career-development programs which provide advancement opportunities to those who enter the nonprofessional occupations.

The redirection of public vocational education set in motion by the 1963 Act, and moved forward by the 1968 Amendments (effective in fiscal year 1970) should greatly strengthen the occupational preparation received by young people who will not or cannot enter college. The goal of all vocational education is to reduce the flow of unskilled, ill-prepared youth into the labor market and to diminish the need for costly, and often ineffective, remedial programs.

APPENDIX

APPENDIX: STATISTICAL TABLES, FISCAL YEAR 1969

These titles describe information listed in each table, by State, unless otherwise indicated. The term "State" usually means the 50 States of the Union, the District of Columbia, Guam, Puerto Rico, the Virgin Islands, and American Samoa.

<i>Index to Tables</i>	<i>Page</i>
Enrollment in Vocational Education:	
1. Total Classes, by Type of Program	35
2. Secondary, by Program	36
3. Postsecondary, by Program	37
4. Adult, by Program	38
5. Persons with Special Needs, by Program	39
6. By Program and Sex	40
7. Secondary, by Program, Grade Level, and Sex	40
8. Postsecondary, by Program, Grade Level, and Sex	41
9. Adult, by Program, Type of Class, and Sex	41
10. Persons with Special Needs, by Program and Sex	41
11. All Classes and Percentage Distribution, by Level and Program, Fiscal Years 1967-1969	42
12. All Classes, by Type of Program, for Selected Years	43
Schools Offering Vocational Education Programs:	
13. By Type of Program and Type of Class	44
14. By Type of Institution	45
Teachers of Vocational Education and Ancillary Personnel:	
15. Number of Teachers, by Type of Program	46
16. Number of Teachers, by Level of Class, Full- and Part-Time	47
17. Number of Local Ancillary Personnel (Other than Teachers)	48
18. Status of Teacher Training, All Programs	49
19. Status of Teacher Training, by Program	50
Funds for Vocational Education:	
20. Allotments to States under the Smith-Hughes Act, George-Barden Act, and the Vocational Education Act of 1963	51
21. Approved Transfer of Federal Funds, As Requested by States	52
Expenditures, Total:	
22. Total Expenditures, Federal and Matching Funds	53
23. Total Expenditures, by Source of Funds (Excluding Construction)	54
Expenditures, From Vocational Education Act of 1963 and Matching Funds:	
24. Total	55
25. For Secondary Education	56
