ABSTRACT

Based on introspection and interview techniques of occupational analysis, pedagogical performance requirements were identified for teacher-coordinators of cooperative education programs. Another specific objective of this phase of the project "Model Curricula for Vocational and Technical Teacher Education" was to determine which performance elements were common to a majority of the six programs (off-farm agricultural, distributive, wage-earning home economics, office occupations, special needs, and trade and industrial education), and which were unique to one on a few of the programs. The findings led to the conclusion that performance requirements were very similar for teacher-coordinators of all six secondary-level vocational cooperation programs. Recommendations generated by the study were: (1) Core offerings should be considered in developing model curricula for the preparation of teacher-coordinators of cooperative education, and (2) Several related and supplemental research and development activities should be completed in the project series. ### PREFACE

As part of the programmatic thrust in teacher education, The Center has engaged in the project "Model Curricula for Vocational and Technical Teacher Education." This project was launched to design, develop, and test career-oriented and performance-based teacher education curricula with core offerings to meet the needs common to all vocational teachers and specialized offerings to serve the needs unique to teachers of each vocational service. The designing activity for the model curricula was divided into two parts: Phase I--determining the pedagogical performance requirements for teachers of conventional types of programs and Phase II--identifying the pedagogical performance requirements of teacher-coordinators of cooperative programs, including new and emerging types.

This report on the Phase II study describes the results of methodology used to determine pedagogical performance requirements of teacher-coordinators of vocational and technical cooperative programs.

The services of the following are recognized in completing Phase II of the project: Calvin J. Cotrell, principal investigator; Walter A. Cameron, Charles R. Doty, and Anna M. Gorman, associate investigators; Shirley A. Chase, coordinator of the study; Eloise J. Law, Elfriede Matejisik, Marilyn J. Molnar, and Roger J. Wilson, assistant investigators. Appreciation is also extended to Donald C. Findlay, coordinator of development at The Center, for his role in acquiring reviews of the manuscript. The services of the coordinator of research at The Center, Edward J. Morrison, are also appreciated. The assistance of Dorothy C. Ferguson, consultant, in manuscript revision and synthesis of reviews is also acknowledged.

We wish to acknowledge the assistance and cooperation provided The Center by the personnel of the state departments of vocational and technical education and the 300 local teacher-coordinators (task force members) from the following states: Arizona, Florida, Georgia, Illinois, Iowa, Michigan, New Jersey, New York, Ohio, Texas, and Virginia.

The contributions of the following reviewers for this publication are appreciated: Warren G. Meyer, Professor of Distributive Education, University of Minnesota; George L. O'Kelley, Chairman, Division of Vocational Education, University of Georgia; and C. R.

### **SUMM ARY**

Identifying the performance requirements of teacher-coordinators, the substance of this study, constituted Phase II of the project "Model Curricula for Vocational and Technical Teacher Education." The project was designed to develop, demonstrate, and test performance-based teacher education curricula in collaboration with an institution of higher education.

The purpose of the study was to determine the pedagogical performance requirements of teacher-coordinators of cooperative programs in off-farm agricultural, distributive, wage-earning home, economics, office occupations, special needs, and trade and industrial education. Specific objectives of the study were:

1) to identify the pedagogical competencies (performance elements) required for teacher-coordinators of the six vocational programs studied, and 2) to determine which performance elements were common to a majority of the six programs and which were unique to one or a few of the programs.

The pedagogical performance requirements of teacher-coordinators of cooperative programs were obtained through introspection and interview techniques of occupational analysis. Via a mailed instrument, a 300-member national task force of outstanding teacher-coordinators (50 from each program) rated the performance elements to determine the degree of importance of each of the elements for each of the programs. The task force subsequently identified the common, mixed, and unique performance elements. A follow-up conference was held with a representative random sample of the task force to interpret and verify the ratings, which resulted in confirmation of the classification of the performance elements and interpretation of some of the task force ratings which were unclear.

Through the occupational analysis, 385 performance elements were identified. Ratings of the importance of these elements by the 300-member national task force resulted in classifying 31.8 percent of the performance elements as common requirements of the six programs. Only 5.45 percent of the elements were classified mixed, i.e., important in two to four of the programs. Less than one percent (.77 percent) were found to be unique (important to one of the six programs).

It was concluded that performance requirements were very similar for teacher-coordinators of all six secondary-level vocational cooperative education programs. Recommendations generated by the study were: 1) core offerings should be considered in

developing model curricula for the preparation of teacher-coordinators of cooperative education, and 2) several related and supplemental research and development activities should be completed in the project series.

# MODEL CURRICULA FOR VOCATIONAL AND TECHNICAL TEACHER EDUCATION: REPORT NO. III

PERFORMANCE REQUIREMENTS FOR TEACHER-COORDINATORS

## CHAPTER I BACKGROUND FOR THE STUDY

Pressure for curriculum change in vocational and technical teacher education has been apparent for some time. An increasing number of departments of vocational and technical teacher education have been evolving as administrative units in colleges of education across the nation. The forces for change have come from a variety of economic, legislative, sociological, pedagogical, and psychological sources. Shortages of adequately prepared teacher education personnel, demands for more qualified vocational and technical teachers (including conventional as well as new and emerging types), the need for more inservice education programs for personnel, and overlap in offerings from one vocational service to another within an institution are representative of the concerns which indicated the need for a study of the pedagogical performance requirements of vocational and technical teachers.

#### RATIONALE FOR STUDY

The rapidly expanding programs of vocational-technical education on the secondary and post-secondary levels have produced a critical need for preparatory and inservice education for all types of vocational-technical teachers; there is an increasing demand for personnel for the new and emerging programs as well as for the conventional programs. A strategy for meeting these needs and for increasing the efficacy of teacher education is to identify the pedagogical performance competencies common to all vocational services and those unique to each service. Curricula based on such a design would help institutions of higher learning develop optimum use of teacher education personnel and avoid nonessential elements and duplications in the professional education effort.

The project, "Model Curricula for Vocational and Technical Teacher Education," was designed to develop, implement, and test curricula for the preparatory and inservice education of all types of vocational and technical teachers. The curricula to be prepared were to emerge from a career-oriented, performance-based study of the pedagogical needs of all vocational teachers. Phase I of this project was limited to determining the performance requirements of conventional types of teachers at the secondary and post-secondary levels. Phase II (the subject of this report) was limited to determining the performance requirements of teacher-coordinators of secondary-level cooperative education programs.

#### PURPOSE AND OBJECTIVES OF THE STUDY

The purpose of Phase II of the project was to identify the pedagogical performance requirements of vocational and technical teacher-coordinators of cooperative programs in off-farm agricultural, distributive, wage-earning home economics, office occupations, special needs, and trade and industrial education (See the Glossary of Terms, pp. 27-28, for definitions of these programs).

Objectives for this phase included: 1) to identify the performance elements required for teacher-coordinators in each of the six programs, and 2) to identify the performance elements common to a majority of the programs studied and those unique to one or a few programs.

#### LITERATURE REVIEW

Although the pedagogical performance requirements for teacher-coordinators of certain specific vocational service areas have been previously identified, a search of the literature revealed that no research had been done to determine the performance requirements for teacher-coordinators on the same basis across service areas or for any combination of service areas.

Several related research studies were reviewed. States Cooperative Program in Educational Administration (1966) originally conceived and developed a competency-pattern approach to the improvement of preparatory programs for educational administrators. A study by Beamer (1956) reconstructed the professional courses in a vocational agriculture teacher education curriculum at the University of Tennessee by gathering data on the importance of certain abilities in teaching vocational agriculture. Walsh (1960) identified 107 teaching competencies for trade and industrial teachers in a study which used an occupational analysis approach. Courtney (1967) developed an instrument for determining the common training requirements for teachers in the five traditional areas of vocational education. Crawford (1967) identified the competencies needed by distributive education teacher-coordinators to effectively conduct a secondary school distributive education program.

The efforts of Morsh and Archer (1967) on occupational analysis applications in conducting studies of various occupations, including teaching in the United States Air Force, were helpful in developing criteria for writing the performance elements.

The proceedings and outcomes of the University of Minnesota National Conference on Cooperative Vocational Education (1969) were found helpful for current information on cooperative education.

## CHAPTER II PROCEDURES

An occupational analysis and evaluations by a national task force of teacher-coordinators were the procedures used to accomplish the objectives of Phase II. Through introspection and interview techniques of occupational analysis, the pedagogical competencies of teacher-coordinators of cooperative programs were obtained. To identify the pedagogical performance elements common to a majority of the vocational programs studied and those unique to one or a few of the programs, the national task force members rated the performance elements with respect to degree of importance for teacher-coordinators in each of the vocational programs.

#### RATIONALE FOR SELECTION OF PROCEDURES

Introspection and interview techniques of occupational analysis were selected for this study because they corresponded with the procedures employed in Phase I of the project. The investigators were familiar with these techniques, and their use had been found successful in Phase I (Cotrell, et al., 1971).

To obtain information from persons directly involved in cooperative programs, it was decided to select a nationwide task force of teacher-coordinators at the secondary level. This was a completely new group of professionals, who, in addition to the project staff, reacted to and provided inputs for determining pedagogical performance requirements.

The relative merits of each of the procedures used in the study are discussed in Chapter III.

#### OCCUPATIONAL ANALYSIS

Since a system of occupational analysis had been developed by the project staff during Phase I of the study, it was only necessary to review and refine that procedure for use in Phase II.

To facilitate the analysis, pedagogical activity was divided into blocks which were based upon the major duties or functions of teacher-coordinators. These blocks of activity (called categories) were given appropriately descriptive titles. The following 10 categories were identified: 1) program planning, development and

5

evaluation; 2) planning of instruction; 3) execution of instruction; 4) evaluation of instruction; 5) management; 6) guidance; 7) school-community relations; 8) student vocational organizations; 9) professional role and development; and 10) coordination.

The analysts then concentrated their attention upon determining sub-categories within each category. (Sub-categories are not reported in this publication because they were used only as temporary guides in the identification of teaching competencies.) The identification of specific competencies was facilitated by concentrating attention on the activities within a sub-category as opposed to the total category.

The basic competencies identified through introspection and interview techniques of occupational analysis were labeled "performance elements." A performance element was defined as a statement of an observable behavior which describes what a person will be doing as he functions in the teacher role. The performance element may be further defined by the following specific statements:

1) A performance element consists of teacher behavior which may be divided into components which are organizable and teachable;

2) A performance element is an entity in itself but has greater meaning and utility in combination with other elements; and

3) A performance element is a statement of teaching behavior recognized and understood by a majority of the members of the teaching profession.

To expedite identification of the performance elements, one asks, "What behaviors of a teacher-coordinator constitute a particular sub-category of activity?" Subsequently, the same question is asked to help identify performance elements for the remainder of the sub-categories in a category. A simplified outline of the step-by-step identification process for performance elements is provided in Figure 1. An example of the identification process is shown in Appendix A.

To guide the development and writing of performance elements, the following set of standards was established. The performance element must: 1) be a clear, concise statement; 2) contain no abbreviations or ambiguous words; 3) begin with one action verb; 4) be a simple statement without unnecessary qualifiers; 5) be capable of being divided into sub-topics; 6) differentiate teaching behaviors; and 7) contain current teacher education terminology applicable to all vocational service areas.

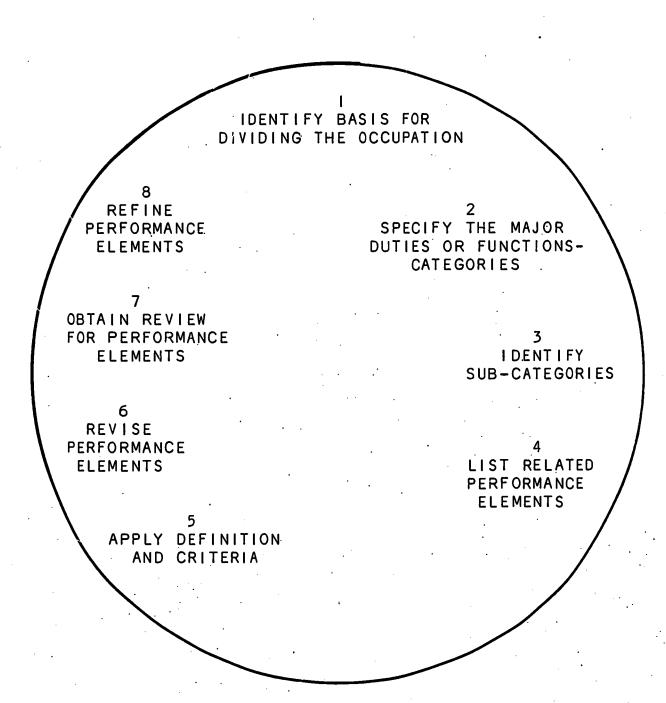

#### VERIFICATION OF PERFORMANCE ELEMENTS

To determine if any gaps had occurred in the listing of performance elements, interviews and literature reviews were utilized to verify the information obtained through introspection techniques of occupational analysis. Teacher-coordinators from the Columbus area were interviewed when questions developed about specific

6

#### FIGURE I

### STEPS OF INTROSPECTION ANALYSIS FOR IDENTIFICATION OF PERFORMANCE ELEMENTS

competencies. Each member of the project staff reviewed the literature for a particular vocational program to facilitate the development of the most comprehensive list of pedagogical performance requirements.

#### .TASK FORCE SELECTION

Based on the belief that persons actively engaged in an occupation should be most knowledgeable about the tasks related to that occupation, the project staff concluded that the best source of information about the pedagogical performance requirements of teacher-coordinators would be teacher-coordinators themselves. To locate the necessary quantity and quality of teacher-coordinators for the study, a review was conducted of pertinent reports from state and federal sources on the vocational programs to be studied. The U.S. Office of Education was contacted to verify information when needed. After the review and much deliberation, ll states were chosen as potential sources of participants. (For a listing of these states and the programs utilized in each state, see Appendix B.)

Early in 1970 contacts were made with directors of vocational education in states with experience in cooperative vocational education who had reported a substantial number of programs in operation in 1969. The state directors were sent brochures (Appendix C) explaining the study and their aid was solicited in obtaining cooperation from the state supervisors of each program (off-farm agricultural, office occupations, distributive, wage-earning home economics, special needs, and trade and industrial education). The ll state directors were contacted and all agreed to participate in the study.

In March, 1970, the participating state supervisors of each vocational area from each selected state were contacted by mail with a letter explaining the study, a brochure describing the project, and a guide for selecting outstanding teacher-coordinators to serve on the task force for the study. The project staff developed criteria to be used by the state supervisors in the selection of outstanding teacher-coordinators. The criteria included successful experience in the following: teaching related classes, coordinating on-the-job training, sponsoring student vocational organizations, and participating in professional organizations of vocational educators. The state supervisors were contacted by telephone to obtain the names of the teacher-coordinators they nominated for the task force.

From the lists of outstanding teacher-coordinators nominated by the state supervisors from the ll states, 50 teacher-coordinators were identified for each of the six programs (Appendix B). Each

8

teacher-coordinator was contacted by mail, informed of his selection, and asked to indicate his willingness to participate by completing a reply form and returning it in a pre-addressed envelope.

#### INSTRUMENT DEVELOPMENT

After completing the occupational analysis to identify the pedagogical performance requirements of teacher-coordinators, a data collection instrument was developed. This instrument consisted of a total of 385 performance elements which were divided into 10 categories (Appendix D). Each element was to be rated by the teacher-coordinator for its degree of importance according to the following scale: 1 = not important, 2 = very low, 3 = low, 4 = moderate, 5 = high, and 6 = very high.

Space was provided on the instrument at the end of each category for the teacher-coordinator to write and rate additional performance elements. Background information on the task force members was obtained by requesting them to check items on the first two pages of the instrument.

The data collection instrument was pilot tested to determine the clarity of the statement of each of the performance elements and to obtain suggestions for additional elements. Selected Center staff members other than the project staff first reviewed the instrument. Then the instrument was filled out by 12 local teacher-coordinators (two from each of the six programs). Each teacher-coordinator was then interviewed by a member of the project staff. The information obtained from the reviews in this pilot test was used to revise and finalize the instrument for data collection.

#### TASK FORCE RECOMMENDATIONS BY MAIL

During April and May, 1970, instruments containing the identified performance elements to be rated were mailed to the 300 participating teacher-coordinators. During late May and early June, telephone contacts were made with the teacher-coordinators who had failed to return their instruments. An honorarium was paid each teacher-coordinator after his completed instrument was returned. As soon as completed instruments were returned, the data from each instrument were coded and recorded on optical scanning forms for processing. The computer cards punched from the optical scanning forms were checked for accuracy by comparing the punched data with the instrument data.

ç

#### DATA ANALYSIS PROCESS

The data collected in this study were analyzed to determine the means and standard deviations for each performance element as rated by the 300 task force members in total and also by the 50 representatives for each of the six programs, using the BMDOlD computer program with the IBM 360/75 computer.

A BMD03M program was used to group related performance elements into clusters. Since the BMD03M was limited to an input of 80 variables, analysis was made by computing each of the 10 categories as an entity. This procedure was a logical one to follow, since the 10 categories were the basis of the framework for identifying the performance elements.

As a second check to locate related performance elements, various categories were combined to determine if a different set of clusters could be identified. From this second factor analysis, no meaningful clusters resulted. Therefore, results from the first statistical test were subjected to logical interpretation by the project staff, which resulted in 82 clusters of related performance elements.

#### TASK FORCE CONFERENCE

From the 300-member national task force, a 10 percent random sample (five representatives from each program) was selected to attend a two-day conference in Columbus, Ohio, July 15-16, 1970. Last-minute conflicts prevented two of the 30 selected from attending (Appendix E).

Before being further oriented to the study, the participants were asked to re-rate the items on the instrument that they had completed by mail approximately six weeks earlier (See pp. 16-17). The purpose of this second rating was to check the reliability of the instrument. They were also asked to rate new performance elements obtained from suggestions given by the 300-member task force. After re-rating the items on the instrument, the participants were given an orientation to the project which included a presentation of definitions of the terms used in the study and the objectives of the two-day conference.

Because of the time limitation, it was considered impossible for each participant to review and discuss each of the 385 performance elements. Therefore, the performance elements were reviewed in the 82 clusters which had been obtained by the factor analysis and staff interpretation. The participants worked in program groups to discuss and rate the clusters. At least one project staff member met with each group to aid in clarifying any misunderstandings concerning the meaning of the performance elements and to record on

the established form the decisions of the group concerning the clusters (Appendix F).

Each cluster was rated for its essentialness to preservice teacher-coordinator education and the level of competency considered necessary before accepting employment. Each cluster was also rated for its essentialness to inservice education.

On completion of the cluster ratings, the participants came together as a group to discuss the final ratings and to resolve any differences which might have occurred due to misinterpretation. Particular attention was given to those clusters which were rated as essential or not essential to all but one or two programs. Attempts were made to find legitimate differences among the six groups and to substantiate those differences. In fact, the initial structure of the review sessions which divided the task force members into the six programs to evaluate the clusters tended to emphasize individual program differences. These final ratings by the task force were then summarized (Appendix G).

# CHAPTER III RESULTS

The content of this chapter will be devoted to a presentation and discussion of the results of the methodologies (occupational analysis and task force evaluation by mail and conference review) which were applied in this study, Phase II of the project.

#### OCCUPATIONAL ANALYSIS

The procedure of analyzing the pedagogical duties of teacher-coordinators for the six programs was a challenge for the project staff. This time-consuming analysis resulted in an initial list of 385 performance elements.

Although there still may have been some omissions, the investigators believed the new list of performance elements was more comprehensive than the one developed in Phase I of the project. In Phase II, greater care was given to the development and application of criteria for writing the performance elements.

#### TASK FORCE RATINGS

The results of the task force ratings of the importance of each of the performance elements for teacher-coordinators of secondary programs are presented in Appendix H. These ratings were obtained after mailing the instrument to 300 outstanding teacher-coordinators.

Scoring of ratings. Mean scores were computed for the ratings (with a scale of 1-6) of the 50 task force members from each program. It was difficult to interpret the mean scores for each of the programs for determining common and unique performance elements because of the slight variations between the mean scores. Therefore, to facilitate interpretation of the degree of importance ratings of the performance elements by program, the following code was used:  $x = high (\ge 4.85)$ , / = moderate (4.0-4.85), - = low (< 4.0). (For rationale and ratings, see Appendix H).

Common, mixed, and unique elements. The analysis of the ratings of the task force members resulted in the classification of the performance elements as common, mixed, unique, and not

important. The <u>common</u> performance elements were those which were found to be of moderate to high importance to five or six of the programs. The <u>mixed</u> performance elements were those of moderate to high importance for two to four of the programs. <u>Unique</u> performance elements were those found to be important to only one program. Some performance elements were found to be <u>not important</u> to any of the six programs.

Summary of task force ratings. An analysis of the data in Appendix H was completed to examine the number and percentage of each of the four classifications of performance elements across all programs (Table 1).

TABLE I
SUMMARY OF TASK FORCE RATINGS OF PERFORMANCE ELEMENTS

Classification	<u>Number</u>	Percent
Unique	3	.77
Mixed	. 21	5.45
Common	353	91.68
.Not Important	8	2.10
Totals	385	100.00

Most of the performance elements (91.68 percent) were considered common to all the programs. The investigators could determine no justification for some of the ratings of the unique and mixed elements. It seemed logical to assume that some of the "not important" ratings resulted from listing a performance element that was new to the teacher-coordinators (e.g., Element No. 363, Establish a cooperating employer's qualifications for reimbursement for training a student-learner). While many of the state plans for vocational and technical education have cited the provided-for financial support to employers in cooperative education, apparently the provision has not been implemented or discussed in most states.

Because of communication and curriculum organization problems created by the magnitude of performance elements, the investigators moved toward the process of clustering the elements. It was believed that working with clusters of performance elements would facilitate communication of performance requirements and perhaps expedite curriculum development. By the clustering process, the

385 performance elements were divided into 82 clusters of related elements (Appendix I). The clustering was accomplished through the interpretation of a computer printout produced by a Biomedical Computer Program (BMD03M) for factor analysis (Dixon, 1969).

#### TASK FORCE CONFERENCE

In July, 28 members of the original 300-member task force met at The Center. The rating of each of the clusters (Appendix G) was completed by the 28 task force members in their respective program groups. Each group rated each cluster for its preemployment essentialness to a prospective teacher-coordinator. The desired level of competency (oriented or skilled) was specified and the need for inservice training was also designated.

Summary of task force ratings. The data (Appendix G) obtained through the ratings of the clusters during the July task force conference were analyzed to determine the number and percentage of essential clusters classified as unique, mixed or common and those rated as not important for both beginning and experienced teacher-coordinators (Table 2).

Most of the 82 clusters (78-89 percent) were rated as being essential to teacher-coordinators (both beginning and experienced) in a majority of the six programs and there are were labeled as common performance elements. Only eight to 20 percent of the clusters were classified as mixed, i.e., essential to teacher-coordinators in from two to four of the six programs. From 0-two percent of the clusters were essential to personnel in a particular program, i.e., unique. Even fewer clusters (0-one percent) were found to be not important to teacher-coordinators.

TABLE 2

SUMMARY OF TASK FORCE CONFERENCE RATINGS
OF CLUSTERS OF PERFORMANCE ELEMENTS

	<u>Beginning</u>		Experienced	
Classification of Rating	Number of Clusters	<u>Percent</u>	Number of Clusters	<u>Percent</u>
Unique	2	2.44	0	0.00
Mixed	7	8.54	17	20.73
Common	73	89.02	64	78.05
Not Important	0	0.00		1.22
Totals	82	100.00	82	100.00

Only two clusters of performance elements were rated as unique to a particular program for preparation before entering a position. Task force members of the off-farm agricultural program rated the cluster "Traditional Technology" as essential for preparation before entering a position at the skilled level of competency. The off-farm agricultural program also rated the cluster "Student Teaching" as essential for preparation before entering a position, but only at the oriented level of competency.

The only cluster rated as not important by all programs for preparation after entering a position was "Traditional Technology."

Although there were seven clusters which received a mixed rating (important to two to four programs), the clusters included a total of only 28 performance elements. At the experienced level, 17 clusters were rated as mixed, indicating that some programs considered either that preparation should be given at the preservice level or that no preparation was needed at any level.

In some programs there seemed to be discrepancies between the task force ratings of performance elements by mail and the cluster ratings by the July task force conference members. The reader should take into account the fact that the July task force was smaller (28 members compared to 300) and that they rated clusters rather than rating each performance element and that this was done on a different basis—essential for preparation before entering the position (oriented and skilled) and essential for preparation after entering a position. The 300-member task force was not asked to differentiate between levels.

Rating of additional elements. Through the 300-member task force ratings obtained by mail, additional performance elements were suggested. These suggestions were compared with the existing list of performance elements and were otherwise considered for their potential as new elements. By the time of the July conference with the 28 task force members, the list was reduced to 11 potentially new elements. During this conference, the task force members rated these on the six-point scale (Appendix J). After examining these ratings, the investigators decided to scrutinize the potential additions more carefully and found that all but three of these potentially new performance elements were contained within the original list of 385. The elements which offered good inputs to the list were:

- 1. Involve students in the preparation of some of the instructional materials used in the classroom.
- 2. Maintain close liaison with state department personnel in regard to new rulings (safety and others) affecting the cooperative education program.

16

3. Present information by the use of conference or speaker phone with leaders in industry.

#### RELIABILITY OF RATINGS

The reliability of the original data collection instrument was determined by a test-retest exercise. Since the 28 members were a representative and random sample of the complete task force, the investigators made use of the opportunity to retest this group when they assembled for the conference to react to the investigators' analysis of the ratings by mail and the clusters of performance elements. It should be noted that there was considerable time lapse between the original ratings by mail and the ratings during the conference. The BMDO3D was used to obtain the Pearson product-moment correlation coefficients for the test-retest scores. The correlations of scores by categories ranged from .45 to .71 (Table 3). For individual performance elements, the correlations of the scores ranged from -.26 to .86.

#### TABLE 3

While the correlations on the scores for the categories were higher than the investigators expected, as indicated by the low

correlations on scores for the individual performance elements, it was apparent that certain items in the instrument were not consistently interpreted. Of particular concern were the differing frames of reference of the teacher-coordinators who rated the instrument, a problem which was discussed with the 28 participating in the July conference. It was discovered, for example, that as some of the members of the task force rated the importance of a given element to success as a teacher-coordinator, they were rating performance elements which they had not experienced. However, they believed these same elements to be important. On the other hand, some teacher-coordinators did not rate an element as being important if it was not a part of their personal experience. In other words, many of the performance elements which were labeled important to the successful operation of a cooperative program may not have been a part of the experience of certain teacher-coordinators rating them as important. It was understood by the investigators prior to using the instrument, however, that the best data to be obtained would be advice from practicing teacher-coordinators of cooperative programs. It was realized, too, that if the instrument had asked teacher-coordinators whether or not they engaged in certain performances, many would have found it difficult to say that they did not when to them the activity seemed to be important to the success of a cooperative program.

#### DISCUSSION OF TASK FORCE PROCEDURES

Valuable assistance was obtained from the national task force ratings and the 28-member task force recommendations. Both procedures were successful, but some minor problems were encountered.

A problem arose in communicating the investigators' definition of the special needs program. Different terms are used throughout the country for the same type of program and sometimes the same terms are defined differently. Although some educators often include the mentally retarded and the handicapped in the special needs program, the investigators did not include these two groups in their definition. Also, it was found that the special needs program was often under the auspices of trade and industrial education. This presented a problem for the staff because some state supervisors included in their listings of nominees the names of teacher-coordinators of both programs, without indicating which specific program (trade and industrial education or special needs) the teacher-coordinator represented.

For the programs of off-farm agricultural and wage-earning home economics education, difficulty was experienced in finding teacher-coordinators who were involved exclusively with cooperative programs and not also teaching programs of production agriculture and homemaking and consumer education. Also, since these two

18

programs were relatively new, it was difficult to find enough experienced teacher-coordinators for participation in the study.

Since the data collection instruments were mailed rather late in the school year when the teacher-coordinators were very busy, several follow-up telephone calls had to be made as reminders to return the completed instruments. Eventually all but two of the instruments were completed and returned.

Although valuable assistance and recommendations were obtained from the participants of the July task force conference, both the project investigators and the participants felt that more time would have been advantageous. Additional time would have allowed the participants to work in groups composed of members from each of the six programs. The participants could have used more time in reviewing the individual performance elements to provide more specific recommendations for improvement.

In spite of the minor difficulties encountered, the results from the procedures used in the study were considered to be useful in identifying and verifying the pedagogical performance requirements of teacher-coordinators.

# CHAPTER IV CONCLUSIONS AND RECOMMENDATIONS

This study was designed to identify the pedagogical performance requirements to serve as a foundation for developing performance-based professional education curricula for cooperative vocational education personnel. The conclusions and recommendations developed for the study were based upon evidence obtained from a national task force evaluation of the pedagogical performance requirements of teacher-coordinators of vocational and technical cooperative programs in off-farm agricultural, office occupations, distributive, wage-earning home economics, special needs, and trade and industrial education.

#### SUMMARY OF FINDINGS

Three hundred eighty-five pedagogical performance elements were identified for teacher-coordinators of six secondary-level cooperative vocational education programs through application of occupational analysis techniques.

A 300-member national task force rated these performance elements to determine their importance to the success of cooperative education teacher-coordinators. An analysis of those ratings indicated that a majority (91.8 percent) of the performance elements were important to at lease five of the six cooperative programs studied and therefore were labeled common elements. The remaining performance elements were classified as mixed (5.45 percent important to two to four of the programs) and unique (.77 percent important to only one program).

A follow-up conference with a 10 percent random sample of the original 300-member national task force resulted in confirmation of the original findings. Also, the differences in ratings that were difficult to explain were clarified. Grouping the 385 elements into 82 clusters served to expedite the review of the performance elements and ratings during this conference.

#### CONCLUSIONS

With consideration of the fact that the study was limited to the pedagogical performance requirements of teacher-coordinators

20/21

for particular types of secondary-level cooperative programs, the following conclusions were formulated:

- 1. Performance requirements tended to be the same for teacher-coordinators from the six secondary cooperative vocational education programs represented in the study.
- 2. No support was found in this study for projecting specialized professional education curricular offerings for each of the cooperative vocational programs represented.
- 3. A performance base was generated for the development of teacher education curricular offerings, certification requirements, and evaluation systems for teacher educators and secondary-level teacher-coordinators in cooperative vocational education programs.

#### RECOMMENDATIONS

Based upon the findings and conclusions of this study, the investigators developed the following recommendations to guide future efforts in this project series as well as for other research and development:

- 1. Core offerings for professional education curricula should be considered for the preparation of teacher-coordinators for all types of secondary-level cooperative programs represented in this study. Such a curriculum would provide the same instructional offerings for personnel in all vocational services. It should be understood, however, that this recommendation is based upon the hazardous assumption that no other confounding variables (e.g., teaching strategies, personal views, time of offering, etc.) would interfere with attainment of the curricular objectives.
- 2. Performance-oriented general objectives should be prepared for each of the 385 performance elements judged by the task force to be important to the success of teacher-coordinators of cooperative programs. The product of this effort would provide better communication of the intent of each performance element and also provide a test for the existence of each element as an entity with observable and measurable behavior.
- 3. Data from this study should be merged with the data from Phase I to formulate a consolidated and integrated set of performance elements for all types of secondary and post-secondary vocational teachers. (Phase I was

22

concerned primarily with the performance requirements of vocational teachers of in-school laboratory programs.)

- Pedagogical performance requirements of teachers of inschool laboratory-type programs for youth with special needs should be determined in a manner similar to the approach used in this study.
- 5. Facilitating devices, in addition to performance-oriented general objectives, should be prepared to expedite teacher education curriculum development for the series of studies in this project. Such devices might be matrices or banks of conditions, criteria, and teaching strategies to aid teacher education curriculum developers in writing performance goals and units of instruction.
- 6. Samples of specific performance goals representing the psychomotor, cognitive, and affective domains of teacher education objectives should be prepared as prototypes and guidelines for curriculum developers for the series of studies in this project.
- 7. Collaborative efforts for teacher education curriculum development should be arranged with a selected vocational and technical teacher education institution to begin the cooperative development and testing of professional educational curriculum units for teacher preparation and development.
- 8. Pedagogical performance requirements for other than teacher types of vocational and technical educational personnel (supervisors, teacher educators, etc.) should be determined for guidelines in the development of performance-based curricula for their preparation.
- 9. Introspection and interview techniques of occupational analysis should be applied periodically to determine pedagogical performance requirements of teacher-coordinators to keep teacher education programs up-to-date.

#### **GLOSSARY OF TERMS\***

- Category. An easily recognized major function or duty of educational personnel under which related performance elements may be identified and classified.
- Cluster of elements. A compatible grouping of related performance elements brought together for greater meaning and understanding.
- Cooperative education. "... a program of vocational education for persons who, through a cooperative arrangement between the school and employers, receive instruction, including required academic courses and related vocational instruction by alternation of study at school with a job in any occupational field, but these two experiences must be planned and supervised by the school and employers so that each contributes to the student's education and to his employability." (University of Minnesota, A Guide for Cooperative Vocational Education, September, 1969, p. 13).

#### Cooperative education programs (as used in this study) --

Off-farm agricultural - a multi-area cooperative program training students for agricultural-related occupations (other than production agriculture).

Office occupations - a single-occupation cooperative program, usually known as cooperative office education, training students for office occupations.

<u>Distributive education</u> - a single-occupation cooperative program training students for occupations related to the distribution of goods and services (selling).

Wage-earning home economics - a single or multi-occupation cooperative program training students for home economics-related occupations.

Trade and industrial - a multi-occupation cooperative program, known as diversified cooperative training, industrial cooperative training, etc., training students for trade and industrial occupations.

Special needs - a multi-area cooperative program training students, who have problems which prevent them from succeeding

<sup>\*</sup>The definitions of terms used by the staff for this phase of the project.

in regular academic programs, for occupations in any of the vocational programs (does not include the mentally and physically handicapped students).

- Core curricula. Curricula containing the pedagogical competencies needed by teachers of all vocational service areas.
- Diversified or multi-occupational cooperative program. A cooperative education program providing each student-learner with an opportunity for vocational education in a choice of occupational clusters.

#### Levels of competency--

Skilled - effective use of knowledge in execution or performance of an activity.

Oriented - awareness of or acquaintance with an activity, but not necessarily with competence in the execution or performance of the activity.

- Occupational analysis. Systematic breaking down of components of an occupation into its elements in order to project instructional needs.
- Performance element (skill, task, competency). A statement of an observable behavior which describes what a teacher will be doing as he functions in his professional role.
- Single-occupation cooperative program. A cooperative education program providing training for students in one occupational cluster.
- Specialized curricula. Curricula containing the pedagogical competencies needed by teachers of specific vocational service areas.
- Task force. A. 300-member committee composed of teacher-coordinators from 11 states and six programs who gave recommendations about pedagogical requirements of vocational teacher-coordinators.
  - B. 28-member committee selected from the 300 teacher-coordinators by stratified random sampling for participation at the July conference.
- Teacher-coordinator. A professional educator responsible for the related and technical subject matter involved in a cooperative education program who coordinates classroom instruction with on-the-job training.

# APPENDIX A STEPS OF INTROSPECTION ANALYSIS FOR IDENTIFYING PERFORMANCE ELEMENTS

#### <u>Steps</u>

- 1. Identify the teaching duty or function.
- Specify the function category under which the pedagogical requirements would be classified.
- 3. Divide each function category into function sub-categories.
- 4. List all the related behaviors (performance
  elements) required to
  complete the function subcategories and subsequently
  the categories.

#### Examples

- 1. Coordinate
- 2. Coordination
- 3. Establish training stations.
- 4. a. Identify potential training stations.
  - Establish criteria for identifying potential training stations.
  - c. Appraise the safety provisions.
  - d. Evaluate the on-the-job instructor.
  - e. Appraise educational adequacy of the facilities.
  - f. Appraise the equipment of the training station.
  - g. Arrange for a conference with an employer.
  - h. Obtain the attention and interest of the employer.
  - i. Present the program and its advantages.
  - j. Establish rapport with the employer.
- 5. Apply the performanceelement definition and criteria to each of the identified behaviors.
- 5 8.
  - Establish criteria for evaluating training station potential of an employer.

- 6. Revise the performance elements.
- Obtain feedback from other members of the project staff on the performance elements.
- 8. Refine the performance elements.

- Identify prospective cooperating employers to provide on-the-job training stations.
- Establish criteria to evaluate qualifications of prospective on-the-job instructors.
- Assess training capability of the on-the-job instructor of the prospective training station.
- Assess educational adequacy of a prospective training station's facilities and equipment.
- Assess safety provisions of facilities and equipment of the prospective training stations.
- Convince an employer to provide a training station for cooperative education.

# COMMON AND UNIQUE ELEMENTS OF VOCATIONAL AND TECHNICAL TEACHER EDUCATION

# RATIONALE

The expanding programs of vocationaltechnical education have produced a critical need for the preparation and in-service education of all types of vocationaltechnical teachers; i.e., there is a demand for personnel for conventional programs as well as for new and developing
programs such as those for youth with
special needs and cooperative education.
A strategy for meeting these needs by
impacting on the effectiveness and efficiency of teacher education is to identify those performance elements (pedagogical) which are common across services
and those unique to each service. Curricult has en such a design will help
institutions to develop optimum use of
teacher education personnel and to avoid
nonessential elements and duplications
in professional education effort.

## PURPOSE

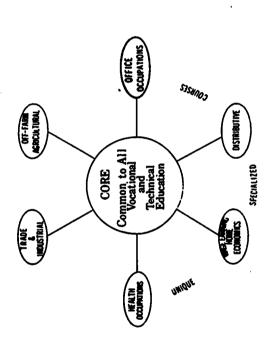

The current emphasis is to develop curricula for the professional (pedagogical) preparation of vocational and technical teachers of youth with special needs (disadvantaged) and teacher-coordinators of cooperative programs.

# Model Curricula to Prepare

Teachers of Programs for Youth With Special Needs

16

Teacher-Coordinators for Cooperative Education

# OBJECTIVES

- Identify the performance elements (pedagogical) required for successful teaching in each of six services.
- Identify the performance elements common to many vocational teaching areas and those unique to one or a few areas.
- Devise model curricula for helping teachers of all services develop the necessary competencies, making optimum use of teacher education personnel.
- Disseminate findings and products.

## PRODUCTS

- Analysis of vocational teachingcooperative education and programs for youth with special needs.
- General objectives and sample performance goals for teacher education curricula.
- Curricular models of vocational and technical teacher education.

# UTILIZATION

The materials may be used:

- For comparison purposes to evaluate and modify existing teacher education curricula to provide for new and emerging needs.
- To guide the development of teacher education curricula for new departments of vocational and technical teacher education.

## APPENDIX H TASK FORCE RATINGS OF PERFORMANCE ELEMENTS

To aid the reader in more efficient use of this Appendix, the material has been organized in the following manner: 1) definition of terms, 2) cut-off scores of task force ratings, and 3) code for program areas.

#### DEFINITION OF TERMS

- Anecdotal record a collection of written samples of a pupil's behavior in varying situations kept by the teacher. The record contains information about when, where and under what conditions the observed significant behaviors occurred without attempting to interpret the sample behaviors.
- Chapter parents specific parents selected or elected to aid in the support and direction of the student vocational organization.
- Cooperating employer (training agency) a firm or agency providing employment and on-the-job training for a studentlearner.
- Computer-assisted instruction an advanced form of programmed instruction utilizing the computer in the role of teacher.
- Frame of reference point of view by which one perceives a particular situation.
- Job sheet a written instruction sheet usually presenting directions, references and questions designed to assist the learner in mastering an assigned job.
- On-the-job instructor (sponsor; training sponsor; on-the-job supervisor) a co-worker or supervisor designated by the cooperating employer to provide the or-the-job training and supervision of a student-learner.
- On-the-job training instruction in the performance of a task or duty given to a student-learner while employed.
- Operation sheet written instructions arranged in a logical and sequential order, usually for the accomplishment of some part of a job requiring manipulative skills.
- <u>Programmed instruction</u> means by which information is provided for the pupil in step-by-step sequences, each segment of which contains a specific idea, asks a question of the student and provides feedback as to whether the correct answer was given.

- Project method a series of participatory experiences in the occupational field in which the student is preparing for employment and is supervised by the teacher-coordinator.
- Question box technique a technique whereby students submit written questions on a specific topic.
- Related instruction classroom and laboratory courses designed to increase knowledge, understanding, and the ability to solve technical and theoretical problems concerned with a particular occupation.
- Simulation (simulated experience) the provision (duplication, reproduction) of near actual situations to which the learner can react so that his actual experience with the real life occurrence will be less traumatic.
- Single concept film filmstrip or motion picture film loop that presents only one concept, the viewing of which may be repeated by the student until he understands the principle involved.
- Sociometric technique a technique wherein the teacher plots a chart of the social relationships of the individuals in a specific group based on the responses given to stimulus questions on a sociometric test.
- Steering committee a temporary committee set up to determine the need for a particular vocational program.
- Student-learner a student enrolled in a cooperative education program.
- Training station an area within the cooperating employer's facilities in which a student-learner is employed and receives on-the-job training.
- Work station a student's designated work area within the inschool laboratory.
- Training agreement an outline of learning experiences an employer agrees to provide for a student-learner enrolled in the various cooperative education programs.

68

CUT-OFF SCORES:

The cut-off scores for classifying task force ratings of performance elements are as follows:

Since most of the scores from the task force ratings tended to be at the high end of the scale, the original plan was to consider only those elements receiving a 5.0 or better rating as essential competencies for teacher-coordinators. Since several important elements were being eliminated, it was decided to lower the cut-off point to 4.85 (scores which were not significantly different from 5.0, as indicated by a t-test of mean scores with an N of 50).

After further deliberation, the investigators realized that when the task force members had given a 4.0 (moderate) rating to a performance element, they had not expected it to be eliminated. Therefore, it was decided to set the cut-off point at 4.0 (equal to the original moderate rating on the instrument).

Scale for Appendix H	Original Instrument Scale
High = X	6 very high importance 5 high importance
Moderate = /	4 moderate importance
Low = -	<pre>3 low importance 2 very low importance 1 not important</pre>
	= = • · · · · · · · · · · · · · · · · · ·

AG OE DE HE T&I SN

384. expand related instruction for student-learners on the basis of information obtained from employers on new technology.

385. obtain from advisory committee information on ways to improve related instruction and on-the-job training.

# APPENDIX I CLASSIFICATION OF PERFORMANCE ELEMENTS AND CLUSTERS

#### GENERAL INFORMATION

In this Appendix, the clusters and performance elements are listed under 10 different categories which are in the same order as they appeared in the original data collection instrument. The clusters are numbered in parentheses (1-82) and are listed under each category in the order in which they appeared on the computer printout of factors in the BMD03M factor analysis program. That is, each factor consisting of a cluster of related performance elements was given an appropriate title. The performance elements under each cluster are listed in the descending order of the factor loading scores. The numbers appearing in front of the performance elements are the same as those used in the original data collection instrument.

This same format of category, cluster, and performance element listings was used by the July task force members as a guide for rating the 82 clusters. However, the materials used by the July task force contained the ratings given the performance elements by the 300 task force members as given in Appendix H in place of the classification given here.

The classifications for clusters and performance elements in this Appendix represent a summary of each of the two task force ratings. Performance element classifications were determined by analyzing the scores of the 300 task force members. The cluster classifications are the result of analyzing the ratings by the 28 members attending the July task force conference. The classifications (©, M, U, NI) resulted from the following rating analysis across the six vocational program areas:

Common (C) = important to 5-6 program areas

Mixed (M) = important to 2-4 program areas

Unique (U) = important to 1 program area

Not important (NI) = not important to any program area.

## CLASSIFICATION OF CLUSTERS AND PERFORMANCE ELEMENTS

	367.	Develop a plan for teacher- coordinator supervision of on- the-job training.	<u>C</u>	
	365.	Develop systematic training plan with the on-the-job instructor.	<u>c</u>	
(77)	Train	ing Station		CC
	351.	Establish criteria for evaluating training station potential of an employer.	C	,
	352.	Identify prospective cooperating employers to provide on-the-job training stations.	С	
	356.	Assess educational adequacy of a prospective training station's facilities and equipment.	<u>C</u>	
(78)	Persu	asion		CM
	358.	Convince an employer to provide a training station for cooperative education.	<u>c</u>	
(79)	Stude	nt Control On the Job		CC
	379.	Control student-learner absenteeism from related class and on-the-job training.	С	
	380.	Control the transfer of student- learners within the cooperative program and to other school pro- grams.	С	

P I 381. Conduct termination procedures for on-the-job training for a studentlearner when conditions demand it and at the close of a training program. (80) Union CM 353. Arrange with a union to make contract provision for studentlearners. (81) Resource Material  $\Box$ 340. Provide prospective student-learners with resource materials on occupational opportunities to aid them in C selecting a vocation. (82) Related and On-the-Job Instruction C  $\overline{\mathsf{C}}$ 384. Expand related instruction for student-learners on the basis of information obtained from employers on new technology. 383. Assist on-the-job instructor with development of teaching techniques during visits to the training stations. С 385. Obtain from advisory committee information on ways to improve related instruction and on-the-job C training. Provide teacher-training workshop to assist on-the-job instructor in techniques for teaching student-U learners. 354. Establish criteria to evaluate qualifications of prospective onthe-job instructors. M 355. Assess training capability of the on-the-job instructor of the prospective training station. M

#### FOOTNOTES FOR APPENDIX I

## Cluster (3) -- Advisory Committee.

Although the ratings by the 300-member task force resulted in classifying all except one of the performance elements in this cluster as common, the cluster was classified as mixed because of the 28-member task force ratings. A majority of the office occupations education July task force members indicated that they received the best help from the employers of their student-learners, not from organized advisory committees. Therefore, they did not consider the cluster as important in the preparation of teacher-coordinators at either the preservice or inservice level. The investigators, however, recommend this cluster as important to all services and would classify it as common.

#### Cluster (14) -- Student Involvement in Unit Planning.

The July task force members seemed to be undecided as to how much students should be involved in unit planning; therefore, representatives of three programs (AG, OE, T&I) felt it was not essential that a teacher-coordinator receive preparation at either level (preservice or inservice). This rating varies from that given by the 300 task force members. The investigators suggest that the recommendations of the 300 task force members be followed.

#### Cluster (20)--Interaction Techniques.

Two of the performance elements were classified as not important and two as mixed (important to only two to four programs), based on the rating by the 300 task force members. However, the July task force members felt that a majority of the elements were important and gave the cluster a rating resulting in a classification of common at both the preservice and inservice levels. The investigators suggest that the recommendations of the July conference be followed.

#### Cluster (21) -- Laboratory Instruction.

Although the performance elements were given a rating by the 300 task force members resulting in a classification of common, the July task force members gave the cluster a rating resulting in a classification of mixed because the programs of trade and industrial education and special needs considered it not important at either level. Neither of these programs has in-school laboratories as part of their cooperative education programs.

#### Cluster (22)--Educational Innovations.

Although some of the performance elements in this cluster were given a low rating by the 300-member task force, the 28-member

142

task force gave the cluster a rating resulting in a classification of common. They considered the items important at the oriented level, as teachers would be using these innovative teaching techniques in the future, if not now.

## Cluster (32) -- Formulation of Test Items.

The ratings by the 300-member task force were low or moderate, indicating that they were less than enthusiastic about formulating test items. However, the 28-member task force gave the cluster a rating resulting in a classification of common at both the preservice (skilled) and inservice levels. Some of the July task force members indicated by their comments that they felt the cluster had been misinterpreted (too much emphasis on term "formulate") by the 300-member task force.

## Cluster (35) -- Laboratory Tests and Rating Sheets.

Although the 300-member task force's ratings resulted in classifying the two performance elements as common, the elements received a low to moderate rating by several of the programs. The cluster received a classification of mixed at both the preservice and inservice levels because the programs of trade and industrial education and special needs rated them unimportant, indicating they maintained no laboratories for cooperative education and, therefore, used no laboratory-testing instruments.

#### Cluster (64) -- Chapter Parents.

In view of the ratings by both task forces and considering comments made by members of the July task force, the investigators believe that the performance element was misinterpreted and the validity of the ratings was very low.
