IDENTIFIERS \*Michigan

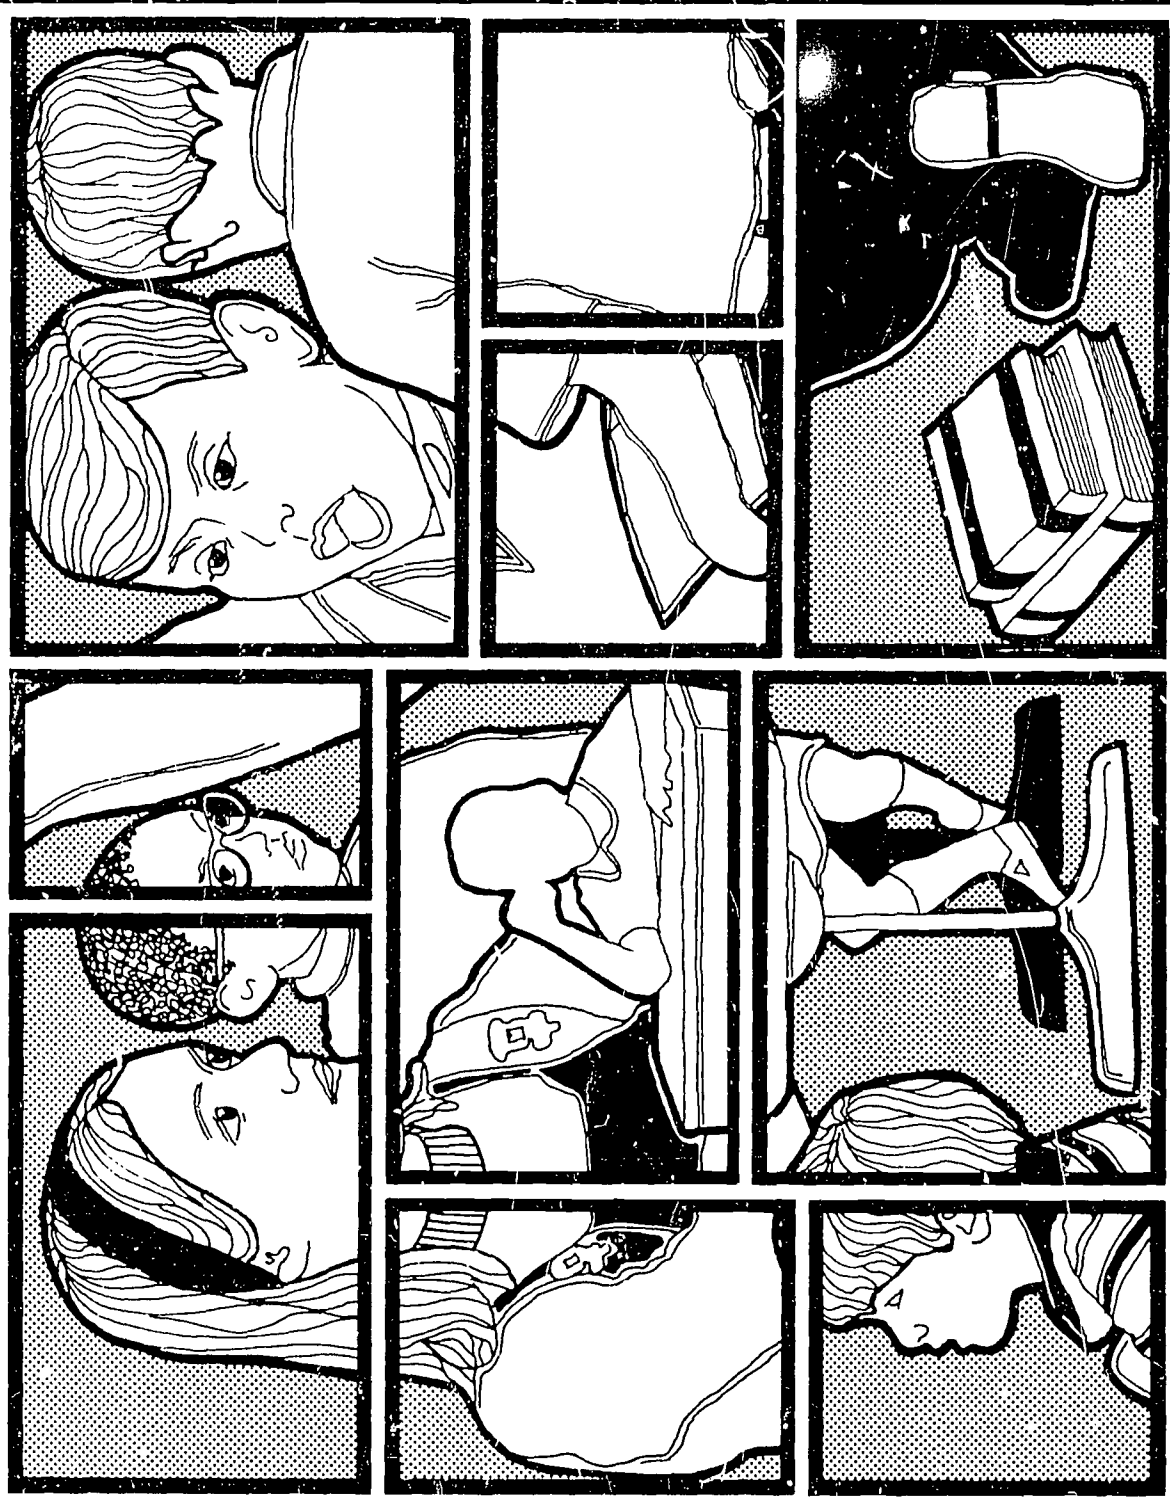

## ABSTRACT

The 1971-72 educational assessment results from each of the school districts in Michigan are presented. Information on each of the district measures used in the 1971-72 Michigan Educational Assessment Program is presented in two ways. First, a figure is shown that represents the district's "score" on each measure. For example, the average "years" of teaching experience, the average instructional expense (in dollars) per pupil and the average reading score of each district are shown. Second a percentile rank is shown for each measure except the basic skills achievement measures. This percentile rank indicates how each district fared in relation to the state's other districts. Information about each district's composite achievement is presented in a third way. Decile distributions are included to show the number of each district's fourth and seventh grade pupils earning composite achievement scores in each tenth of a statewide ranking of pupil scores. These decile distributions show what number of each district's pupils fell into each of ten general achievement levels. Statistical terms used in this report are defined in Appendix A. Appendix B contains definitions of the educational assessment measures and Appendix C contains a list of the county code numbers used as a part of the identification of local school districts. LOCAL DISTRICT RESULTS

MICHIGAN EDUCATIONAL ASSESSMENT PROGRAM

The Fourth Report of the 1971-72 Series

Michigan Department of Education 1972

## FOREWORD

The Michigan Educational Assessment Program was initiated by the State Board of Education by the Governor, and funded by the legislature initially through enactment of Act 38 of 1969, and subsequently under Act 38 of the Public Acts of 1970.

The State Board of Education has adopted a six-step process as a guide to the development of education. The six steps are: the identification of common goals, the development of the assessment of educational needs, the analysis of delivery systems, the evaluation of delivery systems or programs, and recommendations for educational improvement. This report covers the third step--the assessment of educational needs. Educational assessment is based on student needs which, along with other information gathered by local educational agencies, identify areas of need on the part of local schools and pupils.

The purpose of this report, the fourth in the 1971-72 series, is to provide information regarding the average scores on the educational assessment measures of all public schools in Michigan. The information provides a general indication of areas within the local districts which need attention. The Michigan Educational Assessment Program is not to be viewed as an evaluation of schools; it is to provide information on certain school/student needs which along with other information for citizens and local school officials the needs of local schools and children in certain areas so identified may be initiated by local school people in order to determine if changes in curricula and resource allocations are justified. Thus, the educational assessment is intended to contribute to the improvement of educational programs for Michigan children.

Thanks are due to a large number of individuals and groups for making the Michigan Educational Assessment Program a reality and for continuing to work with it in its third year, 1971-72. Special recognition for initially proposing it and continuing to support it, to the Governor for supporting it, and to Michigan educators for assisting with it. The program was developed by the Research, Evaluation, and Assessment Services Unit, Michigan Department of Education, with the assistance of the Educational Testing Service of Princeton, New Jersey, and the counsel of several individuals.

This report was prepared by Dr. David Donovan, Mr. Robert Huyser, Dr. Thomas J. Dr. Daniel E. Schooley. Questions or requests for additional information related to the program should be directed to the educational assessment staff.

John W. Porter  
Superintendent  
Public Instruction

## FOREWORD

Assessment Program was initiated by the State Board of Education, supported by the legislature initially through enactment of Act 307 of the Public Acts and Act 38 of the Public Acts of 1970.

The Commission has adopted a six-step process as a guide or model for improving Michigan education: the identification of common goals, the development of performance objectives, the determination of needs, the analysis of delivery systems, the evaluation and testing of these systems, and the development of recommendations for educational improvement. This report presents information for the determination of educational needs. Educational assessment provides general information which, with other information gathered by local educators, will assist in identifying educational needs of local schools and pupils.

This report, the fourth in the 1971-72 series, is to provide the public with information on the educational assessment measures of all public school districts in Michigan. It provides a general indication of areas within the local district which may need closer study. The Assessment Program is not to be viewed as an evaluation of Michigan schools. Instead, it is to identify certain school/student needs which along with other information may identify areas of concern to officials of local schools and children. Specific evaluations of the program are initiated by local school people in order to determine the need and extent to which resources are justified. Thus, the educational assessment data are intended to improve the quality of educational programs for Michigan children and youth.

The Commission would like to thank the number of individuals and groups for making the Michigan Educational Assessment Program possible. We are continuing to work with it in its third year, 1971-72: to the State Board of Education for its support, to the Governor and legislature for actively supporting it, and to the local school district educators for assisting with it. The program was designed and administered by the Assessment Services Unit, Michigan Department of Education, with the assistance of Princeton, New Jersey, and the counsel of several ad hoc advisory groups.

The report was prepared by Dr. David Donovan, Mr. Robert Huyser, Dr. Thomas Fisher, Mrs. June Olsen, and other staff. Questions or requests for additional information relative to this report should be directed to the Assessment staff.

John W. Porter  
Superintendent of  
Public Instruction

## INTRODUCTION

It is the purpose of this report to present the 1971-72 educational assessment results for the school districts in Michigan. Information on each of the district measures of the Educational Assessment Program is presented in two ways. First, a figure is given for each district's "score" on each measure. For example, the average years of teaching experience, the average instructional expense (in dollars) per pupil, and the average reading score on the Educational Assessment Program. Second, a percentile rank is shown for each measure except the basic skills achievement test. A percentile rank indicates how each district fared in relation to the state's other districts. For example, a district whose score on a given measure has a percentile rank of 75 would be better than 75 percent--of the state's districts on that measure. A percentile "band" is also shown for each district's achievement score mean. This band is a range of percentile ranks within which the district's mean is expected to fall. For example, a percentile band of 45-55 for a district mean reading score indicates that the true mean reading score for that district would be expected to fall between 45 and 55 percent of the time if the testing could be repeated many times on the same district.

Information about each district's composite achievement is presented in Appendix B. Appendix C contains information on the number of pupils included to show the number of each district's fourth and seventh grade pupils in each tenth of a statewide ranking of pupil scores. These deciles show the distribution of each district's pupils into each of ten general achievement levels.

Statistical terms used in this report are defined in Appendix A; Appendix B contains a list of the educational assessment measures; and Appendix C contains a list of the county names and the identification of local school districts.

## INTRODUCTION

This report to present the 1971-72 educational assessment results from each of Michigan. Information on each of the district measures used in the 1971-72 Michigan assessment is presented in two ways. First, a figure is shown that represents the measure. For example, the average years of teaching experience, the average dollars per pupil, and the average reading score of each district are shown. This is shown for each measure except the basic skills achievement measures. This figure shows each district fared in relation to the state's other districts. For example, if a district on a given measure has a percentile rank of 75 would be above 75 percent--and below 75 percent of the districts on that measure. A percentile "band" is shown for each basic skills measure. A percentile band is a range of percentile ranks within which the "true" mean score is expected to fall. For example, a percentile band of 45-55 for a district mean score on reading indicates that for that district would be expected to fall between the 45th and 55th percentile on that measure. If testing could be repeated many times on the same student under the same conditions, the district's composite achievement is presented in a third way. Decile distributions show the number of each district's fourth and seventh grade pupils earning composite achievement scores in a statewide ranking of pupil scores. These decile distributions show what number of pupils fall into each of ten general achievement levels. The definitions of the measures in this report are defined in Appendix A; Appendix B contains definitions of the measures; and Appendix C contains a list of the county code numbers used as a part of the school districts.

## SECTION I

### QUALIFYING INFORMATION

It is the purpose of this section to discuss qualifying information regarding assessment data, including certain cautions that should be exercised in their interpretation. It should be noted that Appendix A contains definitions of selected statistical terms which should be understood in order to interpret the educational assessment data.

The following qualifying information will be discussed: scope of educational assessment data; cautions to be exercised in interpretation; value of other data; and accuracy of district assessment data.

#### Scope of the Educational Assessment Data

Defining the goals of education: Michigan's schools as they presently function are designed to benefit a large number of many individuals by providing instruction in the basic communication and computation skills of reading, writing, and arithmetic. However, Michigan's educational goals encompass more than these basic skills. The basic course, and school offerings commonly include at least six other areas, namely, social studies, music, fine arts, health, physical education, and occupational skills. The 1971-72 educational assessment, however, dealt only with the basic skills and therefore measured the performance in these areas. The assessment relationships, reading, ability to use the mechanics of written English, and mathematics.

Measuring school/pupil performance: It is difficult to build tests that are valid and reliable for students from varied cultural and economic backgrounds. Therefore, the reader should be cautioned that the achievement battery yield only an approximate index to the skills of children.

## SECTION I

### QUALIFYING INFORMATION

In this section to discuss qualifying information regarding the use of educational assessment data. It should contain certain cautions that should be exercised in their interpretation. It should also contain definitions of selected statistical terms which the reader will need to interpret the educational assessment data.

The following information will be discussed: scope of educational assessment data; cautions in interpretation; value of other data; and accuracy of district and school mean scores.

#### Assessment Data

Education: Michigan's schools as they presently function are meeting the needs of providing instruction in the basic communication and computational skills of reading, writing, and mathematics. However, Michigan's educational goals encompass more than the basic skills, of which the most commonly include at least six other areas, namely, science, social science, physical education, and occupational skills. The 1971-72 educational assessment effort measured the basic skills and therefore measured the performance of children in word recognition, reading, writing, and mathematics.

Test performance: It is difficult to build tests that are equally valid for children from different economic backgrounds. Therefore, the reader should be aware that responses to any test are only an approximate index to the skills of children.

Measuring student background: Student's socioeconomic status is often thought to be major factors: (1) family income; (2) parents' educational levels; and (3) parents' occupation. Such factors as (4) housing quality and crowdedness; (5) family structure and stability; and (6) population density are thought to be indicators of SES.

Student's estimates, anonymously collected, were the data source for the 1970-71 project. The composite estimate of socioeconomic status reported for the 1971-72 assessment program is based on the results. A full description of the 1971-72 composite estimate of socioeconomic status can be found in the report.

Although students' estimates of socioeconomic status have been shown to be valid for the method may be limited in that some young children do not know important things about their families including income and occupation. Hence, the socioeconomic status scores reported here must be interpreted as estimates of the average social-economic background of groups of students.

Measuring school resources: The selection of school resource information for large-scale studies such as the 1971-72 Michigan Educational Assessment Program is limited by the unavailability of a limited understanding of relationships between those resources and educational performance.

It is not possible to state with certainty what impact school-related factors have on educational outcomes. It is also impossible to measure all outcomes of educational programs. Therefore, there are many educational system crucial to learning which are not included in this educational assessment. Each measure included was selected because some evidence suggests that it may be related to educational outcomes.

#### Cautions to be Exercised in Interpretation

Interpretation of percentile ranks: Percentile ranks are used in this report in order to

Background: Student's socioeconomic status is often thought to be a function of three factors: (1) family income; (2) parents' educational levels; and (3) parents' occupations. Additionally, other factors such as (4) housing quality and crowdedness; (5) family structure and stability; and (6) population density are also indicators of SES.

Data were anonymously collected, were the data source for the 1970-71 program. The composite socioeconomic status reported for the 1971-72 assessment program is based on those prior year's data. Information on the 1971-72 composite estimate of socioeconomic status can be found in Appendix B. Research estimates of socioeconomic status have been shown to be valid for groups of children, although it is recognized that some young children do not know important things about their families, income, and occupation. Hence, the socioeconomic status scores reported here must be considered and interpreted in terms of the average social-economic background of groups of students.

Limitations: The selection of school resource information for large-scale assessment efforts in the Educational Assessment Program is limited by the unavailability of data and by our knowledge of the relationships between those resources and educational performance. We cannot state with certainty what impact school-related factors have on educational performance. We cannot measure all outcomes of educational programs. Therefore, there may be elements of an educational program that lead to learning which are not included in this educational assessment report. However, these are included in the report because some evidence suggests that it may be related to educational performance.

### Interpretation

Percentile ranks: Percentile ranks are used in this report in order to give the reader

an idea of where each district stands in relation to other districts on each of the achievement measures. It must be understood that this method of reporting some districts will rank very low. However, a low percentile rank on a measure where the district is inadequate. It does indicate that most districts score higher. For example, a low percentile ranking on average years teaching experience does not indicate inadequacy on the part of the district in question, but it does indicate that most districts have more years of teaching experience.

A district which ranks high or low on a measure compared to other Michigan districts is only in relative terms if the absolute difference between high-and low-scoring districts is used for ranking. An example is the ranking on percent of racial-ethnic minority students. It shows that a district with 2.6 percent racial-ethnic minority students ranks at the 5th percentile, while a district with 0.1 percent racial-ethnic minority students ranks at the 5th percentile. A high percentage of racial-ethnic minority students is a high percentage only when compared to the percentage of racial-ethnic minority students in other districts with an even lower percentage; and by ordinary standards the difference between the percentages of racial-ethnic minority students is small.

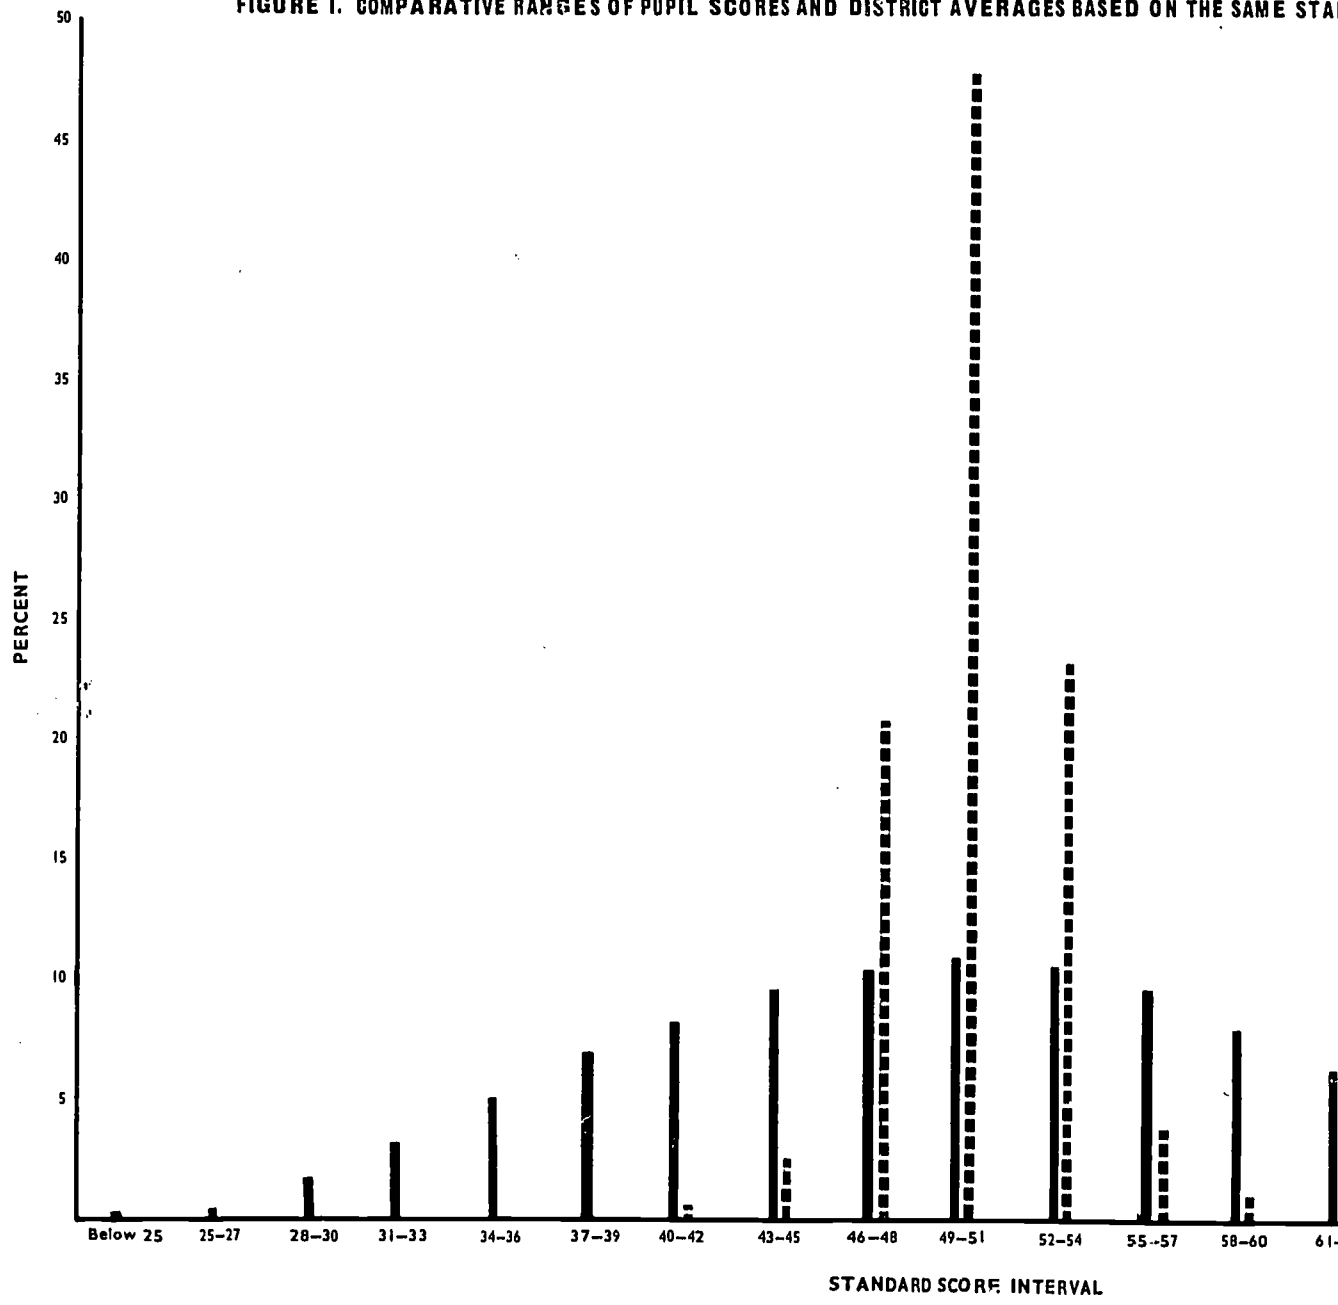

Differences in district mean achievement scores also tend to be small in relation to the range of pupil scores on these same measures. In other words, test scores of individual pupils are more widely dispersed than the mean scores of subgroups of these same pupils. Figure 1, which shows seven data on the mechanics of written English test, illustrates this phenomenon. The range of pupil scores on that test range from below 25 to above 75 (a range of over 50 percent), while the district mean scores are concentrated between 40 and 63 (a range less than half the range of pupil scores).

stands in relation to other districts on each of the assessment measures except must be understood that this method of reporting insures that on each measure low. However, a low percentile rank on a measure does not necessarily imply that does indicate that most districts score higher than the one under consideration. Ranking on average years teaching experience does not necessarily imply any in-district in question, but it does indicate that most other districts' teachers have ce.

high or low on a measure compared to other Michigan districts may be high or low absolute difference between high-and low-scoring districts is small on the measure as the ranking on percent of racial-ethnic minority students. Statewide data percent racial-ethnic minority students ranks at the 65th percentile while a racial-ethnic minority students ranks at the 5th percentile. Obviously 2.6 percent is a high percentage only when compared to the rather large number of districts and by ordinary standards the difference between 2.6 percent and 0.1 percent points is small.

achievement scores also tend to be small in comparison to the distribution measures. In other words, test scores of individual pupils cover a wider range of subgroups of these same pupils. Figure J, which was prepared from grade written English test, illustrates this phenomenon. It shows that grade seven from below 25 to above 75 (a range of over 50 standard score units), while graded between 40 and 63 (a range less than half as large). Yet these comparatively

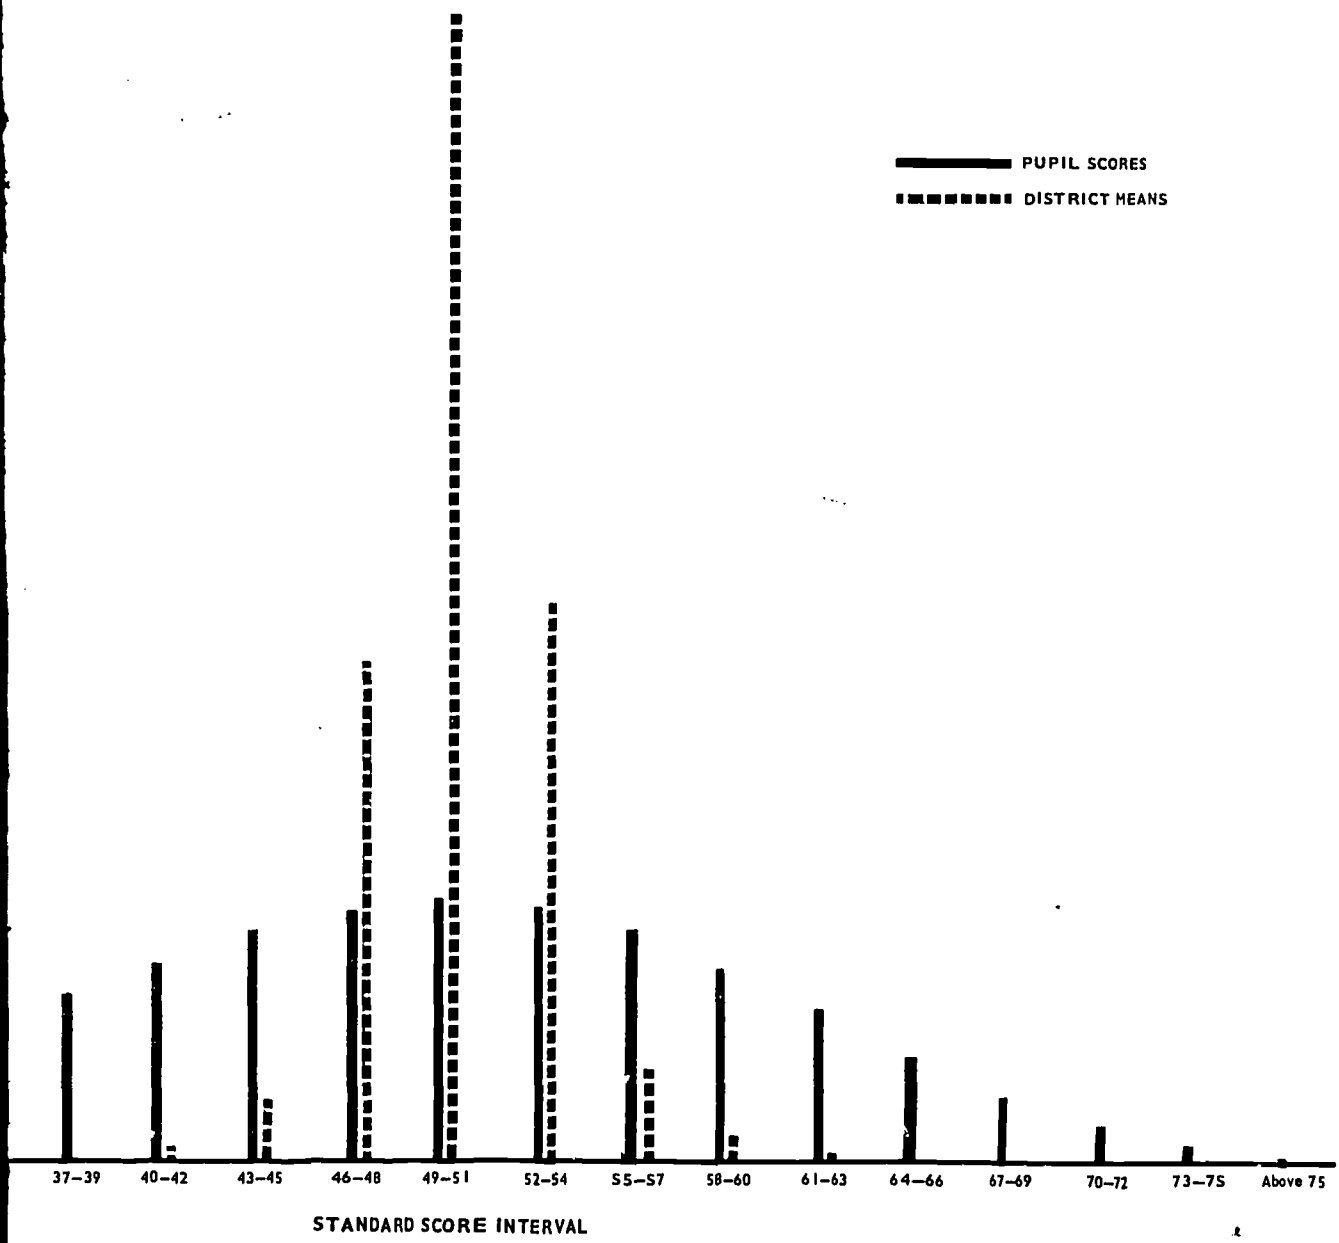

FIGURE I. COMPARATIVE RANGES OF PUPIL SCORES AND DISTRICT AVERAGES BASED ON THE SAME STA

\*DATA ILLUSTRATED REFLECT STATEWIDE PUPIL SCORES AND DISTRICT MEANS ON MECHANICS OF WRITTEN ENGLISH FOR GRADE 7

ANGES OF PUPIL SCORES AND DISTRICT AVERAGES BASED ON THE SAME STANDARD SCORE INTERVALS\*

AND DISTRICT MEANS ON MECHANICS OF WRITTEN ENGLISH FOR GRADE 7

small differences can be significant both statistically and educationally.

Interpretation of percentile bands: A percentile "band" is shown for each basic skills. This percentile band defines a range of percentile ranks within a score mean--a true score is a hypothetical score without measurement error--within the error of measurement associated with the pupil scores on which it is determined by a method that will enclose 95% of the "true" score means.

It will be noted that the band is wide for small districts and narrow for large districts because of the fact that in districts which test many pupils the errors of measurement tend to have a small influence on the district mean will be small; but in districts which test few pupils the errors of measurement may be quite large.

Percentile bands are shown only for test score means. Nevertheless, they can be used for other measures also. For example, appraising the value of real property involves many factors which contribute an element of error to the state equalized real property value per cent. The procedures for estimating the magnitude of those errors are not as highly developed as those for estimating the error components in test scores.

#### Accuracy of District and School Average (Mean) Scores

Size of groups tested: When making interpretations of assessment data, the measures used and their ability to produce meaningful and stable information are important. The school average in reading will be quite stable from year to year if the number of pupils tested is large. But if the number of pupils tested in a district or school is small--

significant both statistically and educationally.

Percentile bands: A percentile "band" is shown for each district mean score on the test. The band defines a range of percentile ranks within which the district's true score, a hypothetical score without measurement error--would fall after making an allowance for the error associated with the pupil scores on which it is based. That range has been determined to enclose 95% of the "true" score means.

The band is wide for small districts and narrow for large districts. This reflects the fact that in districts which test many pupils the errors of measurement tend to "average out" so that their magnitude will be small; but in districts which test few pupils these errors of measurement

are shown only for test score means. Nevertheless, there are sources of error in the process. For example, appraising the value of real property involves judgemental factors that can vary from year to year or from one appraiser to the next. In contrast to the state equalized real property value per pupil for a district. However, the magnitude of those errors are not as highly developed as are the procedures for determining differences in test scores.

#### School Average (Mean) Scores

When making interpretations of assessment data it is important to bear in mind the district's ability to produce meaningful and stable information. For example, a district or school will be quite stable from year to year if the number of pupils taking the test is large. If the number of pupils tested in a district or school is small--say 30 or less, the absence of a

few of the best readers could lower the average reading score for that district had critical absences, that district should include this fact in any interpretation of this concern, The Michigan Educational Assessment Program has deleted from the districts whose average scores were based on fewer than five pupils.

Representativeness of groups tested: School and district mean scores may be tested are not typical of the school population. They could be atypical if the in ability from the general school enrollment. In this case the results would formance of the entire student body of the district or school. As a rule of the variation in pupil ability three to five times as large as the allowance for error should be exercised in generalizing the fourth and seventh grade educational assessment levels if the fourth or seventh graders are atypical of the overall district or

Reliability of scores on which means are based: The basic skills achievement Educational Assessment Program are regarded as reliable enough to warrant the report and thus will also produce highly reliable group scores. The percentile band produced due to unreliability. The SES measure is a group estimate and is regarded by many as reliable for the reporting of district or school mean scores.

#### Value of Other Data

Care must be taken not to interpret educational assessment scores in isolation and school districts. It must be remembered that other relevant school and community mobility, educational attitudes and aspirations of the community, density and sp

lower the average reading score for that district or school. If a small district or school should include this fact in any interpretation of its data. Also, because the Educational Assessment Program has deleted from this report decile data from schools that were based on fewer than five pupils.

Groups tested: School and district mean scores may be unrepresentative if the groups tested are not representative of the school population. They could be atypical if the pupils in the grades tested differ significantly from the school enrollment. In this case the results would not faithfully reflect the performance of the body of the district or school. As a rule of thumb, an allowance for year to year variation may be five to ten times as large as the allowance for error may be made. Thus, caution should be exercised in generalizing the fourth and seventh grade educational assessment results to other grade levels if the fourth and seventh graders are atypical of the overall district or school.

Which means are based: The basic skills achievement tests used in the Michigan Educational Assessment Program are regarded as reliable enough to warrant the reporting of individual pupil scores as well as the reporting of highly reliable group scores. The percentile band provides an allowance for errors in the reporting of a group measure is a group estimate and is regarded by measurement experts as sufficiently reliable to report as district or school mean scores.

Do not interpret educational assessment scores in isolation when comparing schools. It should be remembered that other relevant school and community data (e.g., population, income, and aspirations of the community, density and sparsity of population, etc.)

are also important to consider when drawing conclusions based on educational  
be unfair to expect basic skills levels alone to provide adequate comparisons  
the districts are similar on all other factors.

ider when drawing conclusions based on educational assessment results. It would  
skills levels alone to provide adequate comparisons of schools and districts unless  
on all other factors.

## SECTION II

### THE EDUCATIONAL ASSESSMENT MEASURES USED IN THIS REPORT

It is the purpose of this section to list the 22 1971-72 educational assessment measures. The purpose of the measures and the sources of the data for the measures can be found in Appendix B.

#### Listing of Educational Assessment Measures

For the reader's convenience the 22 measures used in the Michigan Educational Assessment Report are listed on the next page. These measures are grouped into six major categories: A. District Financial Resources, B. District Financial Resources, C. Student Background, D. Dropout Rate, E. District Financial Resources, and F. District Financial Resources. Those measures which are newly added since the 1970-71 educational assessment report are indicated by an asterisk (\*). Data which were necessary to compute each measure are listed in Appendix B. (1) Michigan Department of Education records, such as the "Fourth Friday Report" are used for the educational assessment battery. Data for all measures are reported at the district level in the district report. Data on the school level measures were provided to each district for the district report of the 1971-72 series--Local District and School Report: Explanatory Material

---

<sup>1</sup>Membership and enrollment for state aid programs is reported by Michigan public schools as of the fourth Friday after Labor Day. This report is commonly referred to as the "Fourth Friday Report".

## SECTION II

### EDUCATIONAL ASSESSMENT MEASURES USED IN THIS REPORT

In this section to list the 22 1971-72 educational assessment measures. Definitions are found in Appendix B.

#### Listing of Educational Assessment Measures

The 22 measures used in the Michigan Educational Assessment Program are listed in this section. These measures are grouped into six major categories: A. Human Resources, B. Student Resources, C. Student Background, D. Dropout Rate, E. Achievement, and F. Size of School. The measures which are newly added since the 1970-71 educational assessment program are indicated by an asterisk. Data which were necessary to compute each measure came from one of two sources: (1) Michigan Education records, such as the "Fourth Friday Report"<sup>1</sup>, or (2) the Michigan Educational Assessment Program. Data for all measures are reported at the district level and constitute this section. District level measures were provided to each district for its own schools with the third report--Local District and School Report: Explanatory Materials.

Data for state aid programs is reported by Michigan public school districts annually after Labor Day. This report is commonly referred to as the "Fourth Friday Report."

A LIST OF THE TWENTY-TWO MEASURES<sup>2</sup> REPORTED AT THE DISTRICT OR

MEASURES

A. Human Resources

- (1) Professional Instructional Staff per 1,000 Pupils
- (2) Teachers per 1,000 Pupils
- (3) Average Years Teaching Experience
- (4) Percent of Teachers with Master's Degree or Above
- (5) Average Contracted Salary per Teacher

B. District Financial Resources

- (6) State Equalized Valuation per Resident Member (1970-71)
- (7) Local Revenue per Pupil (1970-71)
- (8) State School Aid per Pupil (1970-71)
- (9) K-12 Instructional Expense per Pupil (1970-71)
- (10) Elementary Instructional Expense per Pupil (1970-71)\*
- (11) Total Current Operating Expense per Pupil (1970-71)

C. Student Background

- (12) Percent of Racial-Ethnic Minority Students
- (13) Composite Estimate of Socioeconomic Status

D. Dropout Rate

- (14) School Dropout Rate (1970-71)

E. Achievement (Provided separately for grades 4 and 7)

- (15) Word Relationships
- (16) Reading

### SECTION III

#### READING AND INTERPRETING THE TABLES

It is the purpose of this section to explain how the public may read and interpret the tables in Section IV which contain the actual Michigan educational assessment data. This explanation makes use of tables containing fictitious educational assessment data. Example 1 contains a partial listing of districts by community type, and fictitious data about those districts. Example 2 shows these same districts with their achievement scores divided into deciles.

#### Explanation of the Table of Educational Assessment Results and Percentile Ranks

Example 1 contains two rows of data for each district. The top row provides information on each assessment measure; the bottom row provides the district's percentile ranks or percentiles.

As an example of how to read the information in this listing, the reader is invited to examine the entry, Venice Public Schools. It may be seen from column 2 that the number of teachers per pupil is 36.0 which is at the 5th percentile in a ranking of Michigan's districts on this measure. This means that Venice Public Schools has more teachers per 1,000 pupils than 5 percent of the state's schools.

As a further example, column 9 shows that the Venice Public Schools had a K-12 instructional expenditure per pupil of \$600. This expenditure is at the 77th percentile in a ranking of the state's districts on this measure. As a final example, it may be seen from the entry "GRADE 7" that the district had an average score of 50.0 on seventh grade composite achievement. This score when based upon the scores of 1,138 pupils has a percentile band of 34-38 which means that there is a 95% confidence that the true mean of the district's seventh graders falls not lower than

### SECTION III

#### READING AND INTERPRETING THE TABLES

This section is to explain how the public may read and interpret the tables in Section III of Michigan educational assessment data. This explanation makes use of two examples of Michigan educational assessment data. Example 1 contains a partial listing of fictitious districts and their educational assessment data. Example 2 shows these same districts' composite scores broken down into deciles.

#### Table of Educational Assessment Results and Percentile Ranks by District

Each row of data for each district. The top row provides information about the district and the bottom row provides the district's percentile ranks or percentile band.

To read the information in this listing, the reader is invited to look at the first example. It may be seen from column 2 that the number of teachers per 1,000 pupils was at the 5th percentile in a ranking of Michigan's districts on this measure. In other words, there were fewer teachers per 1,000 pupils than 5 percent of the state's school districts. Column 9 shows that the Venice Public Schools had a K-12 instructional expense per pupil whose structure is at the 77th percentile in a ranking of the state's districts--higher than 77 percent of the districts on this measure. As a final example, it may be seen from column 19 under the heading of Achievement that the Venice Public Schools had an average score of 50.0 on seventh grade composite achievement. This mean score for the district of 1,138 pupils has a percentile band of 34-38 which means that we can state with confidence that the mean of the district's seventh graders falls not lower than the 34th percentile

percentile nor above the 38th percentile.

#### Explanation of the Decile Distribution Table

Information about each district's composite achievement scores is presented in the following table. The table shows the distribution of scores for each district and for those throughout the state. The table also shows the percent of pupils in each decile of a statewide tabulation of pupil's scores. These decile distributions show the percent of a district's pupils scored in each of ten composite achievement levels. A district that is above the state average would have approximately ten percent of its pupils in each decile throughout the state would have approximately ten percent of its pupils in each decile. In most districts, however, somewhat more or less than ten percent will actually be in each decile. Districts whose average composite achievement scores are higher than the state average will have a higher percent of their pupils' scores in the higher deciles, and correspondingly lower percentages in the lower deciles.

The decile distribution is valuable because it can show whether the scores are concentrated in one part of the score distribution, or distributed more evenly across the range of scores. This information is valuable to the local educator as he designs delivery systems to meet the needs of the school population.

However, the reader is cautioned that for districts testing small numbers of pupils, the percent of pupils in each decile can be noticeably affected by small differences in scores. In keeping with the confidential nature of individual pupil's scores, and in recognition of the unreliability of average scores based on very small numbers, decile distributions based on small numbers are not reported.

h percentile.

#### Explanation of the Decile Distribution Table

A district's composite achievement scores is presented in the form of decile distribution of the fourth and seventh grade pupils earned composite achievement scores in a tabulation of pupil's scores. These decile distributions show what percent of each of ten composite achievement levels. A district whose pupils are typical of the state would have approximately ten percent of its pupils' scores in each decile. For some districts, what more or less than ten percent will actually fall into each decile. Districts whose composite achievement scores are higher than the state average will find higher percentages of pupils in the higher deciles, and correspondingly lower percentages in the lower deciles. This information is valuable because it can show whether the scores of pupils in the district are normally distributed, or distributed more evenly throughout the range of decile scores. This information is also valuable to the local educator as he designs delivery systems to meet the varying needs of the pupils.

It is cautioned that for districts testing small numbers of pupils (e.g., less than 30) the distribution of scores in each decile can be noticeably affected by small differences between pupils' scores. This is due to the normal nature of individual pupil's scores, and in recognition of the unrepresentativeness of scores based upon very small numbers, decile distributions based upon fewer than five pupils are

The interpretation of the decile distribution can best be illustrated by Example 2. The fictitious data presented in this example show that the hypothetical District had a mean score of 47.1 on composite achievement at the seventh grade level, which is relatively low among all of the district means as is shown by a percentile band of scores. Example 2 indicates that, of the 264 pupils tested in the seventh grade of the district, 6 percent scored in the tenth decile in every decile. For instance, 6 percent of the students scored in the tenth decile.

As yet another example, the Baalbek School District had an average composite score of 45.2 on composite achievement at the fourth grade level. However, the 262 students tested did not all score in the same decile. As shown in Example 2, 3 percent of the students scored in the first decile, 15 percent in the second decile. Also, 12 percent of the students scored in the third decile and 12 percent in the fourth decile.

To illustrate their meaning and interpretation, decile data can also be displayed on a graph similar to the one in Figure 2. The graph in Figure 2 compares the decile distribution for the Venice Public Schools fourth grade composite achievement scores with the decile distribution of fourth grade composite achievement scores throughout the state. This comparison illustrates that the distribution of scores for Venice Public Schools closely parallels the statewide distribution of fourth grade composite achievement scores containing approximately the same percentage of scores. This finding is consistent with the Venice Public Schools' fourth grade average score on composite achievement.

decile distribution can best be illustrated by examining the table presented. The data presented in this example show that the hypothetical Calvert Hills School District had an average composite achievement score of 57.1 on composite achievement at the seventh grade level. This score is representative of the district means as is shown by a percentile band of 6-7 (from Example 1). However, of the 264 pupils tested in the seventh grade of the district, some could be found in the tenth decile, 6 percent of the students scored in the tenth or highest decile.

The Baalbek School District had an average composite achievement score of 52.4. However, the 262 students tested did not all score in the fifth and sixth deciles. Only 15 percent of the students scored in the first decile, 15 percent scored in the tenth decile, 12 percent scored in the third decile and 12 percent scored in the seventh decile.

Using this data and interpretation, decile data can also be displayed graphically by plotting a profile similar to the one in Figure 2. The graph in Figure 2 shows a profile of the decile distribution of the Public Schools fourth grade composite achievement scores. The profile compares the distribution of the Public Schools with the decile distribution of fourth grade composite achievement scores from the statewide distribution of fourth grade pupil scores--each decile has the same percentage of scores. This finding is consistent with the observation that the fourth grade average score on composite achievement was 50.4.

FICTITIOUS DATA

**FIGURE 2**  
**PERCENT OF COMPOSITE ACHIEVEMENT SCORES BY DECILE:**  
**VENICE PUBLIC SCHOOLS, GRADE FOUR**

It is hoped that Example 2 and Figure 2 will facilitate explanations of the data by district personnel. By having access to the information in Table 2 and Figure 2, district personnel can demonstrate to interested educators and administrators that an average score is only summarizing what is usually a wide range of pupil scores.

It is the purpose of the next section in this report to present the achievement data for Michigan's public school districts through the use of two tables. The first table presents Michigan districts arranged alphabetically within community type and presents information on human resources, financial resources, student background, dropout rate, enrollment, and its fourth and seventh grades on the Michigan educational assessment battery. The second table is an arranged listing of districts and presents the number of fourth and seventh graders, the mean composite achievement scores and the number of composite achievement scores.

Following the name of each district is a number which indicates the district's county. A reference to Appendix C, which is a listing of counties and their code numbers, will confirm similar names can be confirmed.

It is important to note that Table 1 and 2 should both be consulted in order to get a picture of what the data can indicate about a specific district.

Table 2 and Figure 2 will facilitate explanations of educational assessment data. Having access to the information in Table 2 and by using graphic devices such as a computer terminal can demonstrate to interested educators and citizens that a district's performance is not surprising what is usually a wide range of pupil scores.

In the next section in this report to present the actual educational assessment data for Michigan school districts through the use of two tables. Table 1 contains a listing of school districts alphabetically within community type and presents information about each district's resources, student background, dropout rate, enrollment and achievement scores for students on the Michigan educational assessment battery. Table 2 contains an identical listing of districts and presents the number of fourth and seventh grade composite achievement scores, the number of composite achievement scores and the number of composite achievement scores in each decile.

Each district is a number which indicates the district's location by county. By referring to a listing of counties and their code number, the identity of districts with a specific number is indicated.

It is recommended that Table 1 and 2 should both be consulted in order to have a more complete picture of the information available on Michigan school districts.

It is recommended that Table 1 and 2 should both be consulted in order to have a more complete picture of the information available on Michigan school districts.

APPENDICES

## APPENDIX A

### Statistical Terms

The definitions of the statistical terms identified below will assist the data presented in this report.

#### Average (Mean)

An average or mean score is the average of a particular set of scores and of the scores in the set and dividing the sum by the total number of scores.

#### Standard Deviation

The standard deviation is a method of indicating how much "spread" there is. Two groups of scores could have the same mean but the "spread" be quite different. One group might have children whose scores on composite achievement are very similar to a mean score of 50. In this district the "spread" of scores would be small. Another group of children with high scores and a number with low scores and still have a mean score of 50. The "spread" of scores would be large.

One common way of indicating the "spread" of scores is to calculate a standard deviation. Two-thirds of the scores will fall between one standard deviation above and one standard deviation below the mean. The larger the standard deviation, the larger is the "spread" or variability of the scores. In the example above, the district with the mixture of high and low scores would have a larger standard deviation than would the district with similar scores.

## APPENDIX A

### Statistical Terms

the statistical terms identified below will assist the reader in interpreting the report.

score is the average of a particular set of scores and is obtained by adding all and dividing the sum by the total number of scores.

tion is a method of indicating how much "spread" there is in a distribution of scores. could have the same mean but the "spread" be quite different. For example, one district the scores on composite achievement are very similar to one another and have a mean district the "spread" of scores would be small. Another district might have a number scores and a number with low scores and still have a mean score of 50. In this district could be large.

indicating the "spread" of scores is to calculate a standard deviation. Usually about will fall between one standard deviation above and one standard deviation below the standard deviation, the larger is the "spread" or variability in the scores of a dis- ple above, the district with the mixture of high and low scores would have a larger would the district with similar scores.

### Standard Scores

Standard scores are scores that are derived from "raw" or response scores and standard deviation. In the Michigan Educational Assessment Program, standard scores were computed for all pupils at the same grade level. For example, a pupil with a reading score was one standard deviation below the state mean; a pupil with a score was one standard deviation above the mean; a pupil with a standard score of 65 was one standard deviation above the mean; and so forth. The use of standard scores facilitates the comparison of scores. The mean score for each district was computed by averaging the standard scores for each grade level in that district.

### Percentile Distribution

A percentile distribution is a ranking of scores which is divided into 100 equal parts--one percent--of the total number of scores. Percentile ranks indicate where a particular score lies in relation to other scores. For example, a score at the 50th percentile on a distribution of assessment scores would be at the median. A district score at the 75th percentile would be above 75 percent--and below 25 percent--of the scores in the distribution.

### Percentile Band

A percentile band is a range of percentile ranks within which a district score is expected to fall a certain percentage of the time (a "true" score is a hypothesis).

cores are scores that are derived from "raw" or response scores using the mean and standard deviation. In the Michigan Educational Assessment Program, standard scores were developed so that the mean score from any assessment battery measure was 50 and the standard deviation was ten, when compared to all pupils at the same grade level. For example, a pupil with a standard score of 40 on a test was one standard deviation below the state mean; a pupil with a standard score of 60 was one standard deviation above the mean; a pupil with a standard score of 65 was one and one-half standard deviations above the mean, and so forth. The use of standard scores facilitates the comparison of scores on different tests. For each district was computed by averaging the standard scores of the pupils tested at the same time in that district.

#### Distribution

A percentile distribution is a ranking of scores which is divided into 100 equal parts, each having one percent of the total number of scores. Percentile distributions are useful in showing how a particular score lies in relation to other scores. For example, a school district score at the 50th percentile on a distribution of assessment scores would be at the median--or middle--of the distribution. A score at the 75th percentile would be above 75 percent--and below 25 percent--of the district scores.

A confidence band is a range of percentile ranks within which a district's "true" score mean may be expected to fall a certain percentage of the time (a "true" score is a hypothetical score without error.) The

limits of the percentile bands in this report have been determined by a method that estimates the district "true" score means within the band.

It will be noted that the bands are wider for small districts than they are for large districts. This reflects the fact that in large districts the errors of measurement tend to "average out" and their influence on the district mean is small; but in small districts the errors of measurement tend to be larger.

#### Decile Distribution

A decile distribution is a ranking of scores which is divided into ten equal parts, each representing an equal number--ten percent--of the total number of scores. When deciles are computed for a state, ten percent of the state's pupil will fall into each decile. Pupils in the first decile constitute the lowest scoring ten percent of the pupils tested throughout the state, and pupils in the tenth decile on composite achievement constitute the highest ten percent of the pupils tested. Decile distributions are valuable because they can show whether the scores of pupils are concentrated in one part of the score distribution or another, or scattered over the full range of possible decile scores.

le bands in this report have been determined by a method that places 95% of the means within the band.

that the bands are wider for small districts than they are for large districts. This in large districts the errors of measurement tend to "average out" so that their district mean is small; but in small districts the errors of measurement may not average out.

ion is a ranking of scores which is divided into ten equal parts. Each part has an equal number of the total number of scores. When deciles are computed on a statewide basis, each district's pupil will fall into each decile. Pupils in the first decile on composite achievement are the lowest scoring ten percent of the pupils tested throughout the state. Pupils in the tenth decile on achievement constitute the highest ten percent of the pupils tested. District and school achievement are valuable because they can show whether the scores of pupils in the district or school are a part of the score distribution or another, or scattered more evenly throughout the score distribution.

APPENDIX B  
DEFINITIONS OF THE EDUCATIONAL ASSESSMENT MEASURES

For the reader's information, the 22 measures reported in the 1971-72 Michigan Educational Assessment Program are defined below. Three measures, *elementary instructional expense per pupil*, *Grade 4 membership*, and *Grade 7 membership*, were added since the 1970-71 assessment program. The title *word relationships*, in the achievement measures, was formerly *vocabulary*; and *total membership*, in the size measures, replaces the 1970-71 measures called *number of students in school*, reported at the school level, and *district state aid membership*, reported at the district level.

Seven measures have been substantially changed since the 1970-71 educational assessment program. These measures are listed and the changes explained below:

1. Professional instructional staff per 1,000 students

This was *pupil/professional instructional staff ratio* in the 1970-71 assessment program. Information used to compute the measure is unchanged. Only the method of computation is changed. To convert professional instructional staff per 1,000 students to pupil/professional instructional staff ratio, divide the figure for professional instructional staff per 1,000 students into 1 and multiply the result by 1,000. For example, if the professional instructional staff per 1,000 students is equal to 40.0, the pupil/professional instructional staff ratio will be 25.0;  $(1 \text{ divided by } 40.0) \times 1000 = 25.0$ .

2. Teachers per 1,000 students

This measure was formerly *pupil/teacher ratio*. The explanation of the change is the same as that above. The formula given above can be used for converting from teachers per 1,000 students to pupil/teacher ratio.

3. Average years teaching experience

This measure has been updated to use most recent available information. The 1970-71 assessment program used information from the 1969-70 teacher certification records for computing this measure. Information from the 1971-72 "Fourth Friday Report" was used for the 1971-72 computation.

5. Average contracted salary per teacher

Information for this measure, too, has been updated so that contracted salary figures for 1971-72 could be used in the 1971-72 assessment program. Only full time classroom teachers are counted in computing the 1971-72 average. The 1970-71 assessment program used information from 1969-70 district financial reports for computing this measure. Information from the 1971-72 "Fourth Friday Report" was used for the 1971-72 computation.

13. Composite estimate of socioeconomic status

This measure has been changed from *students' estimate of socioeconomic status*. The title reflects the change in method of arriving at an estimate of socioeconomic status.

14. School dropout rate

This measure has been updated by two years. Information used is from the 1970-71 School Dropout Report. This provides the dropout rate for the 1970-71 academic year. The 1970-71 educational assessment program used dropout data for the 1968-69 academic year.

22. Total membership

This measure replaces *number of students in school* at the school level, and *district state aid mem-*

**3. Average years teaching experience**

This measure has been updated to use most recent available information. The 1970-71 assessment program used information from the 1969-70 teacher certification records for computing this measure. Information from the 1971-72 "Fourth Friday Report" was used for the 1971-72 computation.

**5. Average contracted salary per teacher**

Information for this measure, too, has been updated so that contracted salary figures for 1971-72 could be used in the 1971-72 assessment program. Only full time classroom teachers are counted in computing the 1971-72 average. The 1970-71 assessment program used information from 1969-70 district financial reports for computing this measure. Information from the 1971-72 "Fourth Friday Report" was used for the 1971-72 computation.

**13. Composite estimate of socioeconomic status**

This measure has been changed from *students' estimate of socioeconomic status*. The title reflects the change in method of arriving at an estimate of socioeconomic status.

**14. School dropout rate**

This measure has been updated by two years. Information used is from the 1970-71 School Dropout Report. This provides the dropout rate for the 1970-71 academic year. The 1970-71 educational assessment program used dropout data for the 1968-69 academic year.

**22. Total membership**

This measure replaces *number of students in school* at the school level, and *district state aid mem-*

*bership* at the district level, in the 1970-71 assessment program. It reflects the number of full-time students in all grades operated by the district from kindergarten through grade twelve, except special education students. The count was taken as of the "Fourth Friday" of the 1971-72 academic year, and aggregated at the school and district levels. The 1970-71 figures included part-time students on a full-time-equivalency basis. The 1970-71 *number of students in school* did not include kindergarten pupils.

**A. Human Resources**

Five human resource measures were included in the 1971-72 educational assessment program: (1) *professional instructional staff per 1,000 pupils*; (2) *teachers per 1,000 pupils*; (3) *average years teaching experience*; (4) *percent of teachers with master's degree*; and (5) *average contracted salary of teachers*. Each measure is described below.

**1. Professional instructional staff per 1,000 pupils**

The information to compute this measure was taken from the 1971 "Fourth Friday Report." The total number of professional instructional staff was obtained by adding the number of elementary and secondary staff (expressed as full-time equivalency) in the following categories; principals, assistant principals, other administrators, (excluding district-wide administrative staff), consultants and supervisors, classroom teachers, librarians, audio-visual staff, guidance personnel and school counselors, psychological staff, radio and television instructional staff, teachers of the homebound, and other instructional staff. The total number of pupils was obtained by counting all pupils enrolled in grades one through twelve *except* special education pupils. Pupils who attended the school for a portion of the day and attended a non-public school

for the remainder of the day were included on a full-time-equivalency basis. For example, a pupil who attended the school for one-fourth of each day and attended a non-public school for the other three-fourths of each day was counted as one-fourth pupil. In order to obtain the number of *professional instructional staff per 1,000 pupils*, the total number of professional instructional staff was multiplied by 1,000 and divided by the total number of pupils.

## 2. Teachers per 1,000 pupils

The information to compute this measure was taken from the 1971 "Fourth Friday Report." The total number of teachers was obtained by adding the number of elementary and secondary classroom teachers. *Kindergarten teachers, special education teachers, and non-classroom teachers were not included in the total.* The total number of pupils was obtained by counting all pupils enrolled in grades one through twelve *except* special education pupils. Pupils who attended the school for a portion of the day and attended a non-public school for the remainder of the day were included on a full-time-equivalency basis. In order to obtain the number of *teachers per 1,000 pupils*, the total number of teachers was multiplied by 1,000 and divided by the total number of pupils.

## 3. Average years teaching experience

The information to compute this measure was taken from the 1971 "Fourth Friday Report." Excluded from the calculation of *average years teaching experience* were individuals who were employed to work exclusively in the areas of administration, special education, adult education, guidance and counseling, and nursery work. All other professional personnel employed by the district were included in calculating *average years of teaching experience*. The average was obtained by dividing the total years of teaching experience by the total number of teachers (full-time and part-time).

## 4. Percent of teachers with master's degree

The information to compute this measure was taken from the 1971 "Fourth Friday Report." It was obtained by dividing the number of classroom teachers (full-time and part-time) who had completed all of the requirements for a master's degree by the total number of classroom teachers (full-time and part-time). The resultant value was multiplied by 100 to convert to a percent figure.

## 5. Average contracted salary of teachers<sup>1</sup>

The information necessary to compute this measure was taken from the 1971 "Fourth Friday Report." It was obtained by dividing the total annual contractual salaries paid to full-time classroom teachers who work only in a school by the number of such teachers in that school. Excluded were supplemental payments such as payments for coaching, summer school, department-head bonus, etc. District level averages were obtained by adding the total annual contractual salaries for all schools in the district and dividing by the sum of full-time classroom teachers in all schools in the district.

## B. School District Financial Resources

Six district financial resources were included in the 1971-72 educational assessment program: (6) *state equalized valuation per resident member*; (7) *local revenue per pupil*; (8) *state school aid per pupil*; (9) *K-12 instructional expense per pupil*; (10) *elementary instructional expense per pupil*, and (11) *total current operating expense per pupil*. These measures are available at the district level only and are based on 1970-71 data. Each measure is described in detail below.

#### 4. Percent of teachers with master's degree

The information to compute this measure was taken from the 1971 "Fourth Friday Report." It was obtained by dividing the number of classroom teachers (full-time and part-time) who had completed all of the requirements for a master's degree by the total number of classroom teachers (full-time and part-time). The resultant value was multiplied by 100 to convert to a percent figure.

#### 5. Average contracted salary of teachers<sup>1</sup>

The information necessary to compute this measure was taken from the 1971 "Fourth Friday Report." It was obtained by dividing the total annual contractual salaries paid to full-time classroom teachers who work only in a school by the number of such teachers in that school. Excluded were supplemental payments such as payments for coaching, summer school, department-head bonus, etc. District level averages were obtained by adding the total annual contractual salaries for all schools in the district and dividing by the sum of full-time classroom teachers in all schools in the district.

#### B. School District Financial Resources

Six district financial resources were included in the 1971-72 educational assessment program: (6) *state equalized valuation per resident member*; (7) *local revenue per pupil*; (8) *state school aid per pupil*; (9) *K-12 instructional expense per pupil*; (10) *elementary instructional expense per pupil*, and (11) *total current operating expense per pupil*. These measures are available at the district level only and are based on 1970-71 data. Each measure is described in detail below.

#### 6. State equalized valuation per resident member (1970-71)

The information to compute this measure was

taken from records filed with the Michigan Department of Education. The total state equalized valuation (SEV) is equal to approximately 50 percent of the fair cash value of the real and personal property in the district. It is calculated as of May 25, 1970 (the fourth Monday in May) and applied to the 1970-71 academic year. In order to obtain a per pupil value for SEV, the total SEV was divided by resident membership for the 1970-71 academic year. Resident membership, obtained from the 1970-71 "Fourth Friday Report," includes all pupils residing in the district who attended public school in that district or in any other district; resident membership excludes pupils who attended school in the district but resided in another district, as well as excluding pupils who attended private or parochial schools.

#### 7. Local revenue per pupil (1970-71)

The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. The financial information was reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1971. The total value for local revenue included revenue from sources such as the following: property tax (the major source of local revenue), local government appropriations, tuition, transportation fees, revolving funds (i.e., revenue from food services, book stores, and student body activities), rent from school facilities, etc. Tuition from community college patrons was not included in the calculation. In order to obtain *local revenue per pupil*, total local revenue was divided by the state aid membership (the total number of pupils enrolled in the district as of October 2, 1970, the fourth Friday after Labor Day).

#### 8. State school aid per pupil (1970-71)

The information to compute this measure was taken from records provided by the local districts and

filed with the Michigan Department of Education. The financial data were taken from the Annual School District Financial Report for the fiscal year which ended June 30, 1971. The value for total state school aid represented the direct appropriations from the state, *including appropriations for state school aid, driver education, underprivileged children, and other state grants*. In order to compute the *state school aid per pupil*, the total state school aid was divided by 1970-71 state aid membership.

**9. K-12 instructional expense per pupil (1970-71)**

The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. The financial information was reported in the Annual School Financial Report for the fiscal year which ended June 30, 1971. The total K-12 instructional expense included expenditures for salaries and supplies connected with elementary education, secondary education, special education, summer school, and adult education. Expenditures associated with community colleges were omitted from the calculation. In order to obtain a value for *instructional expense per pupil*, total K-12 instructional expense was divided by the 1970-71 state aid membership.

**10. Elementary instructional expense per pupil (1970-71)**

The information to compute this measure was taken from financial reports provided by the local districts and filed with the Michigan Department of Education. Financial information was reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1971. The elementary instructional expense included expenditures for salaries and supplies connected with elementary education. In order to obtain a value for *elementary instructional*

*expense per pupil* for districts organized to operate a high school, total elementary instructional expense was divided by the elementary state aid membership, taken from the 1970-71 "Fourth Friday Report." For districts not organized to operate a high school (i.e., those that operate no grade above grade 8) total elementary instructional expense was divided by the K-8 state aid membership. Pre-kindergarten and special education pupils were not included.

**11. Total current operating expense per pupil (1970-71)**

The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. The financial information was reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1971. The total current operating expense included expenses connected with administration, attendance, health services, pupil transportation, plant operation, plant maintenance, and fixed charges, in addition to instructional expenses (including elementary, secondary, special education, summer school, and adult education instructional expenses). Community college expenses were not included in the computation of total operating expense. The value for total current operating expense was divided by the 1970-71 state aid membership.

**C. Student Background**

Two measures of student background were included in the 1971-72 educational assessment program: (12) percent of racial-ethnic minority students, and (13) composite estimate of socioeconomic status.

**12. Percent of racial-ethnic minority students**

*Percent of racial-ethnic minority students* was computed for each school in the state. The information to compute this measure was taken from the

ent of Education.  
from the Annual  
for the fiscal year

*expense per pupil* for districts organized to operate a high school, total elementary instructional expense was divided by the elementary state aid membership, taken from the 1970-71 "Fourth Friday Report." For districts not organized to operate a high school (i.e., those that operate no grade above grade 8) total elementary instructional expense was divided by the K-8 state aid membership. Pre-kindergarten and special education pupils were not included.

#### 11. Total current operating expense per pupil (1970-71)

The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. The financial information was reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1971. The total current operating expense included expenses connected with administration, attendance, health services, pupil transportation, plant operation, plant maintenance, and fixed charges, in addition to instructional expenses (including elementary, secondary, special education, summer school, and adult education instructional expenses). Community college expenses were not included in the computation of total operating expense. The value for total current operating expense was divided by the 1970-71 state aid membership.

#### C. Student Background

Two measures of student background were included in the 1971-72 educational assessment program: (12) percent of racial-ethnic minority students, and (13) composite estimate of socioeconomic status.

#### 12. Percent of racial-ethnic minority students

*Percent of racial-ethnic minority students* was computed for each school in the state. The information to compute this measure was taken from the

1971 "Fourth Friday Report." The total number of racial-ethnic minority students included all racial-ethnic minority students in the school *except* pre-kindergarten students. Kindergarten students, special education students and part-time students were all included in the total. Since the information was expressed in terms of a head count, part-time students were not counted differently from full-time students. Students were classified as belonging to a racial-ethnic minority group if they were considered by the school to be of that group. The total number of students included all students except pre-kindergarten students. Again kindergarten students, special education students, and part-time students were included in the total. In order to calculate the percent of *racial-ethnic minority* students, the total number of racial-ethnic minority students was divided by the total number of students and the resultant figure was multiplied by 100.

#### 13. Composite estimate of socioeconomic status

A composite estimate of socioeconomic status (SES) for each district was computed by averaging the previous year's (1970-71) fourth and seventh grade district SES scores. Those 1970-71 SES scores had been based upon anonymous responses of fourth and seventh graders to a pupil background questionnaire which had been administered as part of the educational assessment program. The anonymous responses had been used to compute, at 4th and 7th grade levels, 1970-71 mean SES scores for each district in the state. It was these 1970-71 fourth and seventh grade district mean SES scores that were combined to produce a single weighted district mean SES for the 1971-72 program.

In a single year a district of moderate size is unlikely to experience a marked change in SES. Furthermore, both fourth and seventh grade SES scores can

be considered *estimates* of the SES level of a district. Therefore, averaging these 1970-71 fourth and seventh grade measures would be expected to produce an estimate of the 1971-72 district SES, at least as stable as the measures used in 1970-71.

#### D. Dropout Rate (1970-71)

##### 14. School dropout rate

*School dropout rate* was computed from information taken from records provided by the local districts and filed with the Michigan Department of Education. The measure was based on figures from the local districts' School Dropout Report and enrollment of students in grades 9-12 during the 1970-71 academic year. Included as dropouts were students who left school for any of the following reasons: married, sent to corrective institutions, accepted employment, or dropped from attendance roll because absent 10-30 days. *Not* included as dropouts were students who left the district because they transferred to another district, were sent to institutions for defectives, or the student was sick or died. The dropout rate is calculated by dividing the number of dropouts by the sum of the number of students enrolled in grades 9-12 on the "Fourth Friday" plus new students enrolled during the year, computed from the 1970-71 School Dropout Report. The resultant figure was multiplied by 100.

#### E. Achievement

Performance on the basic skills portion was determined by measuring the following: (15) word relationships; (16) reading; (17) mechanics of written English; (18) mathematics; and (19) composite achievement. The number of items and time limits are

indicated in the description of each test, which follows. School districts were asked to administer the tests between January 3 and January 21, 1972. Additional technical information concerning these measures will be provided in a future educational assessment report.

##### 15. Word relationships

The *word relationship* test for grade four contained 45 verbal analogy problems which were designed to measure students' knowledge of the meaning of words and the relationships between words and concepts. The seventh grade test, while similar in purposes and content, contained 50 problems which were on the average more difficult. The time allowed to work on this section was 20 minutes at both grades.

##### 16. Reading

The *reading* test contained 50 questions which assessed paragraph comprehension, ability to understand words from the context in which they are encountered, and ability to identify the correct synonym for a word. Students at both grade levels were allowed 35 minutes to work on this section.

##### 17. Mechanics of written English

The *mechanics of written English* test consisted of four parts, each separately timed. In part A, spelling, students were to identify misspelled words. The fourth grade test presented 15 items to be completed in five minutes; the seventh grade test had 20 items and allowed six minutes. In part B, effectiveness of written expression, students were required to select the best way of expressing a thought. The test contained 14 items for each grade and nine minutes were allowed for its completion. In part C of the fourth grade test, written usage, students were to recognize

#### 15. Word relationships

The *word relationship* test for grade four contained 45 verbal analogy problems which were designed to measure students' knowledge of the meaning of words and the relationships between words and concepts. The seventh grade test, while similar in purposes and content, contained 50 problems which were on the average more difficult. The time allowed to work on this section was 20 minutes at both grades.

#### 16. Reading

The *reading* test contained 50 questions which assessed paragraph comprehension, ability to understand words from the context in which they are encountered, and ability to identify the correct synonym for a word. Students at both grade levels were allowed 35 minutes to work on this section.

#### 17. Mechanics of written English

The *mechanics of written English* test consisted of four parts, each separately timed. In part A, spelling, students were to identify misspelled words. The fourth grade test presented 15 items to be completed in five minutes; the seventh grade test had 20 items and allowed six minutes. In part B, effectiveness of written expression, students were required to select the best way of expressing a thought. The test contained 14 items for each grade and nine minutes were allowed for its completion. In part C of the fourth grade test, written usage, students were to recognize

grammatical errors. It contained 14 items and was timed for eight minutes. In part D of the fourth grade test (part C in the seventh grade test), punctuation and capitalization, students were to identify errors of punctuation and capitalization. Part D of the fourth grade test presented 12 items to be completed in eight minutes, and part C of the seventh grade test presented 20 items to be completed in eleven minutes.

#### 18. Mathematics

The *mathematics* test involved mathematical reasoning, problem solving, and computation. In addition, problems in the seventh grade test involved algebraic and geometric concepts. Each grade had 30 minutes in which to answer 40 questions.

#### 19. Basic skills composite achievement

A *composite achievement* score was computed for each student. The composite score was obtained by averaging the individual's standard score on *reading*, the *mechanics of written English*, and the *mathematics* tests. The test scores were averaged in such a way that each score contributed equally to the average—despite the fact that the number of items was different on the three tests. IT SHOULD BE NOTED THAT THE *WORD RELATIONSHIPS* TEST SCORE WAS NOT INCLUDED IN THE CALCULATION OF THE *COMPOSITE ACHIEVEMENT* SCORE. The *word relationships* score is believed to respond more slowly to the influence of schooling. Therefore, the *word relationships* score was excluded to focus the composite achievement score upon those aspects of achievement that respond more readily to change.

#### F. Size Measures

*Grade 4 membership*, *grade 7 membership*, and *total membership* counts were provided as measures of school and district size. The district membership

figures were obtained by adding the membership counts for all schools in the district. Pupils who attended school for a portion of the day were not included. These size measures were taken from the 1971 "Fourth Friday Report," School Summary, Page 1, Line 1A.

**20. Grade 4 membership**

*Grade 4 membership* was obtained by counting

all full time pupils enrolled in grade 4 except special education pupils.

**21. Grade 7 membership**

*Grade 7 membership* was obtained by counting all full-time pupils enrolled in grade 7 except special education pupils.

adding the membership  
the district. Pupils who

## APPENDIX C

### COUNTY CODE NUMBERS

The following code numbers have been used in Table 4 and Table 5 to identify the county of each district. In both tables the county code appears immediately after each district's name.

01 Alcona	22 Dickinson	43 Lake	64 Oceana
02 Alger	23 Eaton	44 Lapeer	65 Ogemaw
03 Allegan	24 Emmet	45 Leelanau	66 Ontonagon
04 Alpena	25 Genesee	46 Lenawee	67 Osceola
05 Antrim	26 Gladwin	47 Livingston	68 Oscoda
06 Arenac	27 Gogebic	48 Luce	69 Otsego
07 Baraga	28 Grand Traverse	49 Mackinac	70 Ottawa
08 Barry	29 Gratiot	50 Macomb	71 Presque Isle
09 Bay	30 Hillsdale	51 Manistee	72 Roscommon
10 Benzie	31 Houghton	52 Marquette	73 Saginaw
11 Berrien	32 Huron	53 Mason	74 St. Clair
12 Branch	33 Ingham	54 Mecosta	75 St. Joseph
13 Calhoun	34 Ionia	55 Menominee	76 Sanilac
14 Cass	35 Iosco	56 Midland	77 Schoolcraft
15 Charlevoix	36 Iron	57 Missaukee	78 Shiawassee
16 Cheboygan	37 Isabella	58 Monroe	79 Tuscola
17 Chippewa	38 Jackson	59 Montcalm	80 Van Buren
18 Clare	39 Kalamazoo	60 Montmorency	81 Washtenaw
19 Clinton	40 Kalkaska	61 Muskegon	82 Wayne
20 Crawford	41 Kent	62 Newaygo	83 Wexford
