*Vocational Education

ABSTRACT

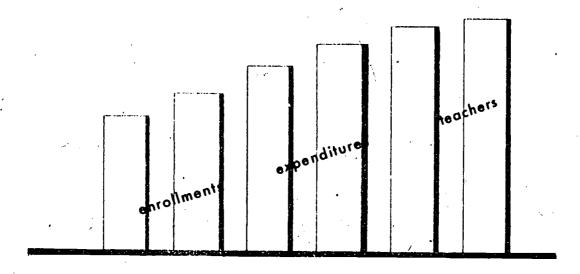

This government report, the second in the "Vocational Education Information" series for fiscal year 1971, includes numerous tables and graphs to present data concerning various trends in vocational education for fiscal year 1965 and other selected fiscal years through 1971. Vocational education trends in enrollments, expenditures, and teacher employment are given separately, including the United States and outlying areas. This statistical information, derived from annual reports published by the Division of Vocational and Technical Education and unpublished data from state annual reports and state plan projections, will prove useful for those interested in the nature and scope of vocational education in the United States, especially program administrators. Projected data are provided for fiscal year 1976, and changes and adjustments from previous reporting methods are explained. The data show significant growth in vocational education, such as curriculum improvements, expanded enrollment, and increased expenditures. In addition, new facilities and equipment and better reporting techniques also reflect the impact of the Vocational Education Acts of 1963 and 1968, although their influence is not fully apparent until fiscal year 1971. FOREWORD

This document, the second in the "Vocational Education Information" series for fiscal year 1971, includes tables and graphs to show trends in enrollments (Section I), expenditures (Section II), and teachers (Section III) for the United States and outlying areas.

Statistical information was derived from annual reports published by the Division of Vocational and Technical Education and unpublished data compiled by Harold F. Duis, Reports and Data, from State annual reports and State plan projections. The actual data cover fiscal year 1965 and other selected fiscal years through 1971, and the projected data are for fiscal year 1976.

Several changes have been made in the vocational education reporting system to reflect new priorities in legislation. Consequently, compatible data are not available in a few instances. In others, adjustments have been made so that data are compatible and are explained in the text or in the tables.

The tables and graphs show that vocational education has experienced significant growth, particularly after the Vocational Education Act of 1963. The full impact of the Vocational Education Amendments of 1968 was not apparent until fiscal year 1971, since funds first became available late in the 1970 fiscal year. In addition to expansion in enrollments and increased expenditures, positive changes have occurred in the quality and scope of vocational programs. New facilities and equipment have been provided, curriculums have been updated, and improvements in the reporting system are developing.

This information on trends should be useful to all persons interested in the nature and scope of vocational education in the United States, and particularly to those individuals involved in program administration.

MICHAEL RUSSO Acting Director Division of Vocational and Technical Education

ROBERT M. WORTHINGTON
Associate Commissioner
Bureau of Adult, Vocational,
and Technical Education

SECTION I. VOCATIONAL EDUCATION ENROLLMENTS

Figures 1 and 2 picture the growth of vocational enrollments for selected periods. Figure 1 traces enrollment trends from 1918 to 1971, showing the influence of major legislation on enrollment growth. Within the 53-year period, enrollments grew from 164,168 to shout 10.5 million. Figure 2 charts the year-to-year changes in enrollments from 1965 through 1971. Large yearly increases in total enrollment occurred in 1965, 1967, and again in 1971; secondary enrollment in 1965, 1970, and 1971; post-secondary enrollment in 1966 and 1970; and adult enrollment in 1967. Yearly gains in total enrollment after 1965 were about 500,000 except for increases of about 1 million in 1967, 800,000 in 1970, and 1.7 million in 1971.

Table 1 shows that total vocational education enrollments increased from 5,430,611 in 1965 to 10,495,411 in 1971. The 1963 Act went into effect in 1965 and total enrollment jumped 18.9 percent, the largest percentage increase for any one year until 1971 when the increase was 19.4 percent.

Table 1 shows that 51.9 percent of the vocational enrollees in 1965 were in secondary programs, a proportion which remained constant until the 58.2 percent in 1970 and 61.9 percent in 1971. Postsecondary enrollment, only 3.8 percent of the 1965 enrollment, passed the 1-million mark in 1970 and made up 11.5 percent of that year's total. Conversely, sdult enrollment dropped from 43.8 percent of the 1965 enrollment to 27.2 percent in 1971 and the 1976 projection forecasts a declining trend to 25.3 percent.

The first year for reporting services to persons with special needs was 1965, during which 25,638 of these persons were enrolled in separate classes. After that year, and until 1970, enrollment data reported (1) those in separate classes and (2) those who received special services in regular classes. The 1968 Amendments changed this breakdown by stipulating programs specifically for the handicapped and for the disadvantaged. Thus, Table 1 shows inclusion of disadvantaged and handicapped persons in in the enrollment levels and totals for 1970 and 1971.

Table 2 compares secondary vocational enrollment to the total secondary enrollment (grades 9-12 only). Vocational enrollment for the 1965-1971 period increased more rapidly than the total secondary enrollment, from 24.2 percent to 37.6 percent. For the same period, enrollment in vocational programs which prepare for gainful employment increased from 11.9 percent to 24.3 percent. Enrollment projections show that in 1976 over half (54.3 percent) of the Nation's secondary school population will be enrolled in vocational education.

Table 3 shows the percentage distribution of male and female enrollees by level and by program for the years data are available. The proportion of female enrollees increased from 54.5 percent in 1965 to 55.7 percent in 1971. By level, however, females account for almost two-thirds of the secondary enrollment. Male enrollees at the postsecondary level decreased in proportion, but constitute over 60 percent of the total. The proportion of females at the adult level increased from 42.7 percent in 1965 to 46.1 percent in 1970.

A look at enrollment distribution in the several vocational programs reveals a new trend in agriculture enrollment. In 1960 no females were enrolled in agriculture, but in 1965 females constituted 0.4 percent of the program's enrollment. This trend accelerated and by 1971 they represented 4.1 percent of the enrollment in agriculture. Male enrollment in health increased from 4.9 percent to 12.3 percent between 1965 and 1971, and in home economics from 3.1 percent to 7.2. The enrollment distribution by sex remained relatively stable in other vocational programs.

Enrollments by OE instructional programs, as shown in Table 4, reveal some rather significant trends over the period 1966-1971. The decline in agricultural production programs was largely offset by increases in the off-farm occupational programs in agricultural mechanics, ornamental horticulture, agricultural resources, and forestry.

The ten programs with the largest enrollment (over 81,000) in 1966 were agricultural production, stenographic and secretarial, filing and office machines, accounting and computing, metalworking, fireman training, auto mechanics, general merchandise, and electrical occupations. All but fireman training and electrical occupations remained in the top ten in 1971, being replaced by business data processing and drafting.

The largest percentage increases from 1966 to 1971 were in agricultural resources, associate degree nurse, inhalation therapy, care and guidance of children, clothing management, and other automotive. Other programs with large percentage increases in enrollment included agricultural mechanics, ornamental horticulture, advertising services, dental laboratory technician, medical laboratory assistant, health assistant, radiologic technology, food management and production, home furnishings, equipment, and services, personnel training and related, supervisory and administrative management, air conditioning, appliance repair, blueprint reading, drafting, electronics occupations, and small engine repair. The following programs decreased enrollment: agricultural production, agricultural products, agricultural supplies, home furnishings, mechanical technology, metallurgical technology, materials support, electrical occupations, real estate, and custodial services.

1973 1968 Vocational Education Amendments of 1968 1963 P.L. 88-210 Vocational Education Act of 1963 With Legislation Providing Federal Support 1958 85-864 National Defense Education Act To Vocational Education 1917-1971 Figure 1. SECTION II. EXPENDITURES FOR VOCATIONAL EDUCATION

As shown in Table 5, the funds available for vocational and technical education increased significantly. Federal allotments rose from \$57 million in 1964 to \$169 million in 1965 and increased to \$413 million in the six succeeding years.

The table also shows total expenditures by source of funds and that State and local expenditures consistently overmatched the Federal dollar. The ratio increased from a low in 1965 when it had declined because of the influx of new Federal funds. State and local expenditures accounted for more than 80 percent of the total, except in 1965. In all years except 1965 and 1971 State and local funds increased at a faster rate than Federal funds.

It should be noted that the Federal funds expended in 1970 were considerably less than the allotment because the appropriation was not available until late in the fiscal year. The funds in the amount of \$65 million, however, were carried forward by the States for expenditure in 1971. Again States carried forward from 1971 for expenditure in 1972 about \$80 million.

Figure 3 shows graphically the increase in total expenditures from 1965 through 1971, including the actual totals spent by source.

Table 6 shows expenditures and percentage distribution by function. The 1968 Amendments provided more flexibility in funding which resulted in the rearrangement of several categories. The proportion for instruction, although declining from 1965 to 1970, still constituted about two-thirds of the total expenditures in 1971. Expenditures for instructional equipment and administration rank next. It is interesting to note that administrative expenditures were only 6.8 percent of the total. Other expenditures reported separately in 1970 and 1971 included student transportation, space rental, insurance, teacher travel, and utilities.

Table 7 shows the allocation of Federal funds expended for the various purposes outlined in the 1963 Act, as amended. Of significance is the percentage decrease in expenditures for secondary programs and construction and the accelerated percentage increase in funding programs for the disadvantaged and the handicapped. Also noteworthy is the increased proportion, 23 percent, expended for postsecondary programs, which was above the 15-percent minimum required by the 1968 Amendments. The 10-percent minimum required for programs for the handicapped was not met in 1970, but sufficient funds were carried over to more than meet this requirement

in 1971. Reporting was changed in 1971 to allocate expenditures for ancillary services by level and accounts for some of the increase in proportion of the total being spent by level of education.

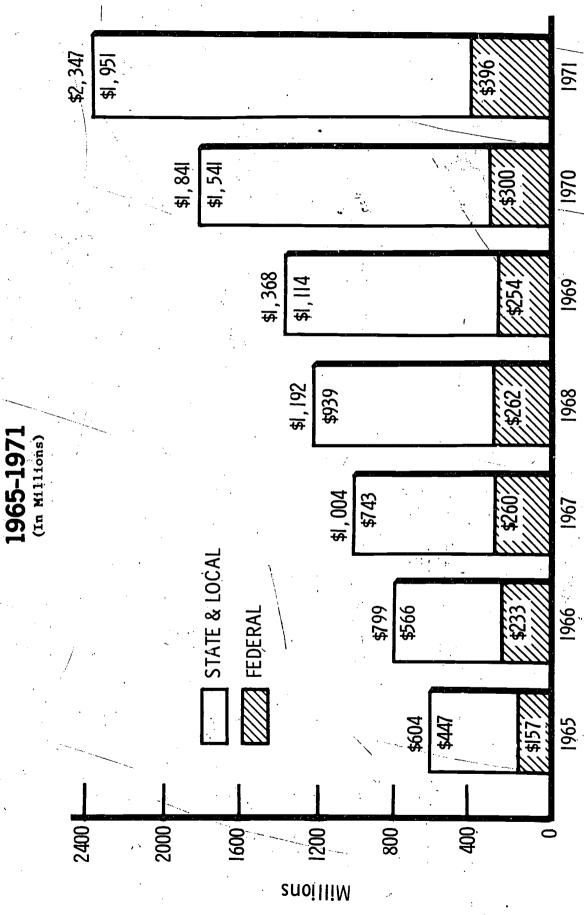

Table 8 indicates total expenditures for all programs allocated to a level of education. These data were first reported by States in 1970. In 1971, 66.5 percent of the expenditures were secondary, 24.2 percent postsecondary, and 9.3 percent adult compared to 62.9, 30.8, and 6.3 respectively in 1970. It can be noted that the ratio of Federal funds to State and local funds is somewhat higher for postsecondary than the other levels. Also the rate of increase in both Federal and State and local funds from 1970 to 1971 was less at the postsecondary level than at the other levels.

Table 9 shows total expenditures for all programs allocated by target population and by level. These data were first reported by States in 1970. In 1971, 9.3 percent of the expenditures were for the disadvantaged, having increased from 7.7 percent in 1970; and 2.7 percent was for handicapped, the same percent as in 1970. The most significant change from 1970 to 1971 was the increase in funds for adult level programs, especially for the disadvantaged and handicapped.

SECTION III. TEACHERS IN VOCATIONAL EDUCATION

In Figure 4, the growth in number of teachers from 1965 through 1971 is presented graphically.

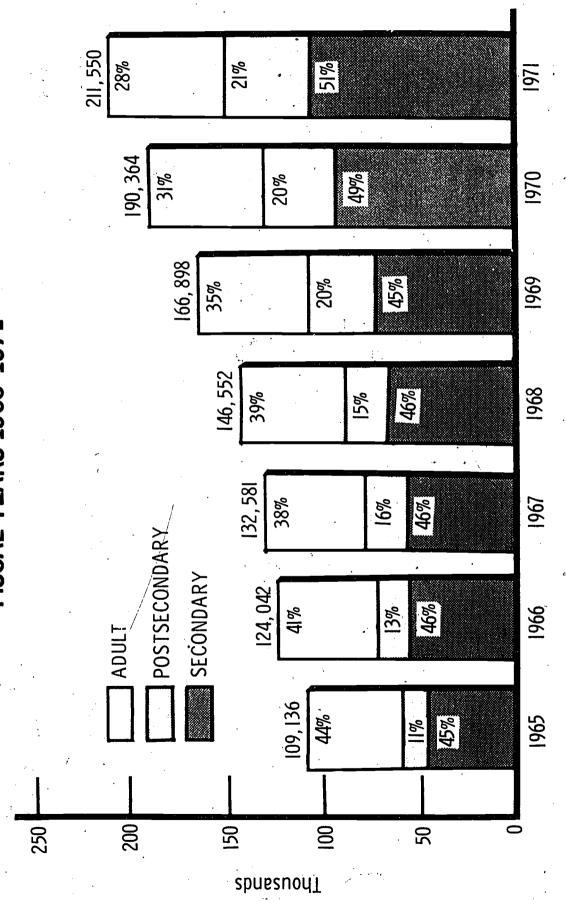

The number of individual teachers in vocational education, as shown in Table 10, grew from 109,136 in 1965 to 211,550 in 1971. For the same period, the greatest increase in number of teachers was at the post-secondary level--up about 400 percent. Secondary-level teachers doubled in number, and the number of teachers at the adult level increased only slightly. Secondary-level teachers increased to over 50 percent of the total between 1965 and 1971, but the percentage distribution for teachers at the adult level dropped from 43.8 percent in 1965 to 27.5 percent in 1971.

In Table 11, it is noted that the number of enrollees in preservice training leveled off in 1971 but enrollees in inservice training showed a substantial increase in 1971.

Figure 5 shows the total number of teachers in preservice and inservice teacher-education programs from 1965 through 1971.

Table 12 shows the number and distribution of teachers by program. Trade and industrial education accounts for the largest number of teachers, followed by office education and home economics. Significant growth in the number of health, office, technical, and trade and industrial teachers occurred from 1965 to 1971. The number of home economics and distribution teachers increased moderately and agriculture teachers declined in number. Percentages of the total number of teachers in distribution, technical, and trade and industrial show little change from 1965 to 1971. Health and office doubled in proportion to the total and agriculture and home economics showed substantial decreases in percentages during the 7-year period.
