ABSTRACT

IDENTIFIERS

A racial and ethnic survey of California public schools, conducted by the State Department of Education in October 1971, included not only a count of pupils in each school but also a count of professional staff by racial and ethnic group categories. This report presents the results of the survey of teachers, principals, and other professional staff, the first such State survey since October 1967. While nearly 29 percent of all public school pupils in California were members of racial and ethnic minority groups, minorities were represented by 10.5 percent of the teaching staff and 6.5 percent of the principals. The Spanish-surnamed accounted for 16 percent of the pupils, but only 2.6 percent of classroom teachers, 2.4 percent of principals, and 2.7 percent of total professional staff at schools. Blacks comprised 9.3 percent of all pupils, 5.1 percent of teachers, and 2.9 percent of principals. Asians provided the only example of parity, with 2.2 percent of pupils and 2.2 percent of teachers, but 0.6 percent of principals. Asian and Spanish-surnamed pupils and professionals alike were about twice the State average in their proportions in minority-group isolated schools. Black pupils and professionals were nearly four times the state average at such schools. (Author/JM)

RACIAL AND ETHNIC DISTRIBUTION OF PROFESSIONAL STAFF

IN CALIFORNIA PUBLIC SCHOOLS

FALL, 1971

A Report to the State Board of Education

I. INTRODUCTION

The latest racial and ethnic survey of California public schools, conducted by the State Department of Education in October 1971, included not only a count of pupils in each school but also a count of professional staff by racial and ethnic group categories. This report, which follows the one on the racial and ethnic distribution of pupils submitted to the Board last month, presents the results of the survey of teachers, principals and other professional staff, the first such survey since October 1967.

For more than a dozen years, since the establishment of the former Commission on Equal Opportunities in Education, the State Board of Education and the Department of Education have been actively concerned with nondiscrimination; with improving employment opportunities for teachers and other certificated personnel of all racial and ethnic groups; and with achieving the educational benefits to be gained by wider representation of Spanish-surnamed, Black and other minority

groups in the staffing of schools. One of the program objectives of the Bureau of Intergroup Relations is to assist school districts in affirmative action to improve the representation of minority groups in certificated employment.

This report and the survey on which it is based provide data by means of which California's progress in this field of activity may be measured and the development of plans and programs may be facilitated. The report has been compiled by the Bureau of Intergroup Relations. Data processing was accomplished by the Department of General Services. More detailed information is on file in the Bureau of Intergroup Relations.

II. STATEWIDE DISTRIBUTION OF STAFF

While nearly 29 percent of all public school pupils in California at the time of the survey were members of racial and ethnic minority groups, minorities were represented by 10.5 percent of the teaching staff and 6.5 percent of the principals. The main cause of the disparity was within the Spanish-surnamed group. The Spanish-surnamed accounted for 16 percent of all pupils, but only 2.6 percent of class-room teachers, 2.4 percent of principals, and 2.7 percent of total professional staff at schools.

("Professional staff" referred to in this report, with the exception of Table 2, is the certificated staff employed at individual school sites, such as classroom teachers, principals and assistant principals, specialist teachers, some counselors, some school nurses and the like. It does not include certificated staff shared by several schools or working out of the district central office.)

Elacks comprised 9.3 percent of all pupils, 5.1 percent of teachers and 2.9 percent of principals. Asians, the third largest minority group, provided the only example of parity, with 2.2 percent of all pupils and the same percent of teachers, although with relatively few principals (0.6 percent). American Indians, together with Filipinos and other Nonwhites, comprised 1.5 percent of the pupil population and 0.6 percent of professional school staff. (Appendix, Table 1.)

The racial and ethnic composition of staff at county and school district central offices resembled that at the schools, with an overall minority total of 10.5 percent. Spanish-surnamed professional staff was slightly better represented at the central offices than at the schools (3.3 percent compared with 2.7 percent), and Asian staff was not as well represented (1.2 percent compared with 2.1 percent).

There were few minority-group members, however, who were employed at the highest level in the central offices. They included only 54 minority-group superintendents and assistant superintendents, or 4 percent of the total. (Appendix, Table 2.)

Comparing the statewide count in 1971 with that in 1967, we find a general shift toward more minority-group teachers, principals and assistant principals, and their percentage increase in every category. Minority-group classroom teachers numbered 16,329 in 1967 and 18,997 in 1971, or an increase of 16.3 percent. Minority-group principals and assistant principals numbered 407 in 1967 and 742 in 1971, or an

increase of 82.3 percent. There was a decrease in the number of White-majority-group professionals.

On balance, however, the proportion of minorities in the total school work force showed only a 1.4 percent increase for teachers and a 3.7 percent increase for principals and assistant principals. During the same four-year period, minority-group pupil enrollment increased 3.6 percent. (Appendix, Table 3.)

III. CONCENTRATIONS OF MINORITY-GROUP STAFF

As in the case of pupils, educators who are members of minority groups tend to be concentrated in certain geographical areas and in certain categories of school districts, usually in or near the population centers for their groups. Figure 1 (see Appendix) shows in which counties the average composition of professional school staff exceeded the statewide average for the three largest minority groups.

Schools in three counties, Alameda, Los Angeles and San Francisco, reported above-state-average employment of Black professional staff. Schools in seven counties employed Asian staff above the state average: Alameda, Kings, Los Angeles, San Francisco, San Joaquin, San Mateo and Santa Clara. Schools in 14 counties employed Spanish-surnamed staff above the state average: Fresno, Imperial, Kings, Los Angeles, Madera, Merced, Monterey, Riverside, San Benito, San Bernardino, San Francisco, Santa Barbara, Santa Clara and Tulare.

The number of Spanish-surnamed, Black and Asian teachers, principals and other professional staff employed at schools in each of the 58

counties appears in Table 6 (see Appendix). Schools in a few metropolitan counties reported most of the minority professional staff in
the state, with Los Angeles County alone reporting 59 percent of all
Blacks, 46 percent of all Asian staff, and 35 percent of all Spanishsurnamed staff. At the other end of the ranking by numbers, Table 6
shows that there were 24 counties with no Black teachers, principals
or other professionals at schools; 16 counties with no Asian staff;
and three counties with no Spanish-surnamed staff.

The state's 14 Standard Metropolitan Statistical Areas are listed in Table 4 (see Appendix). SMSA's, with 89 percent of all professional school staff, reported nearly 96 percent of the minority-group members so employed. Schools in two SMSA's, Los Angeles and San Francisco-Oakland, employed 80 percent of all the Black professional staff in the state, 67 percent of all the Asian staff, and 48 percent of all the Spanish-surnamed staff.

Pupil and staff data for the 52 largest school districts (those enrolling 15,000 or more pupils) are presented in Table 5 and Figure 2 (see Appendix). Those districts, which reported about half of all the pupils and staff in the state, employed 69 percent of all minority-group school professionals and nearly 82 percent of all the Blacks.

The 12 largest districts employed nearly 71 percent of the state's total of Black teachers, principals and other school professionals; and the three largest districts employed nearly 47 percent of them. Minority averages for school staff, compared with 10.6 percent in

the state as a whole, were 19.9 percent in the 12 largest districts and 21.5 percent in the three largest.

IV. MINORITY REPRESENTATION IN SCHOOL STAFFING

The issue most often raised in regard to the distribution of minorities in school employment is that of adequate representation. Lack of representation is seen not only as a problem of discriminatory treatment, past or present, but as a problem of providing educational resources and opportunities. Minority-group students, particularly, it is argued, benefit from the presence of role models and of individual teachers and administrators who, because of their racial or ethnic identity, their experience and their other qualifications, can make a significant contribution to motivation, self-image, empathy and understanding of the cultural heritage and learning needs of these children. In addition, children of the White-majority group benefit from cross-cultural, interethnic and interracial contacts and experiences.

The remaining tables and figures in the report are concerned with aspects of racial and ethnic representation in school staffing.

In a period (1967 to 1971) when the ratio of teachers to pupils showed general improvement, the ratio of minority-group teachers to pupils of their own group and to all pupils also improved, although only slightly in some cases. Table 7 (see Appendix) compares results of the latest survey with those from October 1967. While White-majority-group teachers changed from a ratio of 1 to 22 to a ratio of 1 to 20 with

respect to White pupils, Black teachers changed from 1 to 50 to 1 to 46 with respect to Black pupils, and Spanish-surnamed teachers from 1 to 165 to 1 to 152 with respect to Spanish-surnamed pupils.

Other racial and ethnic groups showed similar improvement by this measure, slightly narrowing the gap in representation. The single exception is that of Filipino and Other Nonwhite teachers to pupils of that group who changed from 1 to 60 to 1 to 63. This exception may not be significant, as it probably results from a modification in the survey format which was followed by a rather sharp one-year increase in the reported number of Filipino and Other Nonwhite pupils.

Figure 3 (see Appendix) provides a graphic view of the proportions of teachers and pupils of each racial and ethnic group in the public school population. The White-majority group was the only one in which the proportion of teachers exceeded that of pupils, and Asians were the only example of parity. In other groups the proportion of pupils exceeded that of teachers, with the Spanish-surnamed the most extreme case.

The report of the 1967-68 survey stated that there were 47 school districts with more than 10,000 enrollment, each of which employed three or fewer Black teachers, and that 16 of those districts employed no Black teachers at all. Four years later, there were 33 districts with more than 10,000 enrollment, each of which employed three or fewer Black teachers, and 12 of those districts employed none.

V. STAFF AT IMBALANCED AND MINORITY-GROUP-ISOLATED SCHOOLS

On the assumption that the most urgent need for more minority-group teachers and other professionals is to enhance the education of minority-group pupils, we have inquired into the racial and ethnic composition of staff at imbalanced schools and at minority-group-isolated schools which are responsible for the education of such a large proportion of Black and other minority-group children. As in earlier surveys, the proportion of Black, Asian, Spanish-surnamed, and Filipino and Other Nonwhite staff was significantly higher in such schools than the statewide average in all schools.

Table 8 and Figures 4, 5 and 6 (see Appendix) present the details of that comparison. Asian and Spanish-surnamed pupils and professionals alike were about twice the state average in their proportions at minority-group-isolated schools. Black pupils and professionals were nearly four times the state average. The difference was not as great in imbalanced schools because, although they included predominantly minority schools, about half of the imbalanced schools were predominantly White (other than Spanish-surnamed) in enrollment.

Three-quarters of all the Black pupils and of all the Black professional staff in the state were assigned to minority-group-isolated schools, as were 42 percent of all the Asian pupils and of all the Asian professional staff. For the Spanish-surnamed the relationship was almost the same: 42 percent of the pupils and 39 percent of the professional staff of that group were reported at minority-group-isolated schools.

(An imbalanced school was one which deviated by more than 15 percentage points from the mean in its district for any racial or ethnic group, including the Anglo-majority group. A minority-group-isolated school was one in which minority-group pupils comprised 50 percent or more of the total enrollment. For more information on such schools, see the report dated September 1, 1972, "Racial and Ethnic Distribution of Pupils.")

VI. SUMMARY

- A. Racial and ethnic minority groups, comprising 29 percent of all pupils, were represented in 1971-72 by 10.5 percent of all teachers, 6.5 percent of all principals, and 10.6 percent of all professional staff in California public schools. At the highest level in school district and county central offices, 4 percent of superintendents and assistant superintendents were members of minority groups.
- B. The widest disparity between proportions of pupils and of teachers and other professionals was that in the Spanish-surnamed group, with 16 percent of all pupils, 2.6 percent of all teachers, and 2.4 percent of all principals. Blacks comprised 9.3 percent of all pupils, 5.1 percent of all teachers, and 2.9 percent of all principals. Asians comprised 2.2 percent of all pupils, 2.2 percent of all teachers, and 0.6 percent of all principals.
- C. In numbers and percentage points, all racial and ethnic minorities increased their representation, at least slightly, on school

staffs between 1967 and 1971. The ratio of teachers of each group to pupils of the same group and to all pupils also improved slightly during that period.

- D. Minority-group school professionals were concentrated in certain counties and in large metropolitan-area school districts. The state's three largest districts employed nearly half of all Black teachers, principals and other educators.
- E. There was a close correlation between the school assignment of pupils and the school assignment of professional staff of the same racial and ethnic minority groups. Three-quarters of all Black pupils and three-quarters of all Black teachers and other staff were at minority-group-isolated schools. At imbalanced schools, the percentage of minority-group professionals was nearly twice the statewide average at all schools.
