AESTRACT

This document on course goals in health education is one part of a critique series of eight documents dealing with the development and evaluation of course goals in six subject matter areas for grades K-12. The series provides an initial pool of course-level goals that are expected to be of considerable value in assisting educators with goal definition related to curriculum planning and development, instruction, evaluation, and accountability. Course goals in health education are organized according to four broad subject matter areas: mental health, physical nealth, community health, and safe living. Mental health goals include goals in the area of values, determinants of mental health, behavior, drug use, and interpersonal relationships. Physical health goals are divided into goals on personal care, growth and development and individual differences, nutrition, dental health, physical fitness, and health products and services. Community health goals include goals in environmental health, community resources, health careers, and regulations. Safe living goals cover accident prevention and safety goals at home, in school, on the job, and in the community. Related documents are EA 004 941-946, EA 004 948, and ED 061 043. (Author/DN)

INTRODUCTION

A detailed description of the needs to which this collection of resources is responding, the background, the goal types, the goal codes, and the potential uses of this collection of course goals and their supporting materials are to be found in the accompanying booklet, Course Goals General Introduction .. The aim of that booklet is to provide users of the course goal collections in Art, Biological and Physical Science, Health Education, Language Arts, Mathematics, Music, Social Science, and Physical Education with a comprehensive guide to the use, revision, and further development of these planning and evaluation resources.

This brief additional introduction has the more practical goals of: presenting a brief orienting overview of the purposes, nature, and potential uses of the products of the Goal Development Project, and (b) demonstrating how to read and interpret the materials in this collection.

Following is a guide to the contents of the introduction:

	Page
The purposes, nature, and potential uses of this Course Goal collection:	
Why do we need to state learning goals?	2
What kind of goals are in this collection?	2
How do program and course goals differ from behavioral and performance objectives?	3

Will help be available for evaluating attainment of goals in this collection?	9
Is this the final version of the program and course goals?	10
How to read and interpret the materials in this collection	11

The purposes, nature, and potential uses of this Course Goal collection.

Why do we need to state learning goals?

If the basic purpose of education is to help learners to grow and change, then educators and learners must decide and communicate to one another what directions that growth should take and what changes are possible and desirable. Parents, school boards, and the community also have a role to play in influencing educational growth and change. This responsibility can be exercised most rationally if the proposed directions of that growth and change are shared with them in clear and explicit goal statements.

This collection of program and course goals in health education is a nonprescriptive resource for educators and boards of education who wish to design and execute learning plans and policies more efficiently and effectively. It is envisioned that school systems will select from this collection those program goals they subscribe to; that schools within a system will select those course goals they believe appropriate to the needs of their communities and students; and that teachers will devise experiences and testing methodologies to meet these goals that are appropriate to the interests and abilities of their students.

What kind of goals are in this collection?

Two types of learning outcomes are included in this collection -program goals and course goals. They differ in level of generality,
with program goals describing broader outcomes and course goals the
more specific outcomes relating to them. Also, they differ in the type
of planning for which they are suited. Program goals usually serve as
guides to planning and organizing programs at district and area levels.
Course goals usually serve as guides to planning courses in schools,
departments, and classrooms.

At the classroom teacher level the course goals must undergo a final translation into instructional goals and learning experiences.

Relying upon the professionalism of teachers, the Goal Development

Project has chosen not to intrude into this level, which is concerned with the professional assembling and adapting of resources and methodology needed to achieve the course goals.

How do program and course goals differ from behavioral and performance objectives?

Figure 1 is an illustration from Health Education of four levels of goals. Examples of behavioral and performance objectives have also been added to show how they differ from the program and course goals defined in the Project.

Note that program and course goals clearly specify a desired learning outcome. But the "behavioral objective" specifies the method of measurement as well as the desired behavior, while "performance objective" adds prerequisites and proficiency level.

The Tri-county Goal Development Project has chosen to produce program and course goals which are suitable for instructional planning, without being constrained by the measurement demands of behavioral objectives or the prerequisites and proficiency levels of performance objectives. Thus, teachers and students are provided explicit statements of possible learnings for which they can accept accountability in ways most suitable to their instructional circumstances. The teacher and student are free to select those methods of achieving selected outcomes which seem most promising within the constraints of their resources and capabilities. This provides for more flexible teaching and learning than teaching machines and other teaching systems based on behavioral and performance objectives. Such an approach places greater demands on the

Figure 1

System Goal

The student meets his personal and community health obligations in a responsible way.

Program Goal

The stude. has the knowledge and skills needed to insure the physical and mental health of himself and others.

Course Goal

K. The student knows some positive ways of relieving stressful amotions (e.g., talking with someone, playing, working, enjoying a hobby).

P. The student is able to evaluate health products and services in terms of their reliability or unreliability.

Instructional Goal

- K. The student knows some positive ways to cope with the emotion of anger.
- P. The student is able to evaluate nonprescription cold remedies in terms of their reliability or unreliability.

Behavioral Objective (Method of Measurement Specified) Given a list of five nonprescription cold remedies the student is able to rank them in order of their comparative aspirin content as revealed by the label.

Performance Objective (Prerequisites and/or Proficiency Levels Specified) Given a list of five nonprescription cold remedies the student is able to rank them in order of their comparative aspirin content as revealed by the label with 100% accuracy.

ingenuity and professionalism of teachers but has far greater potential because of its consistency with motivational principles and its reliance on the trained judgment of the professional on the scene.

Where did the program and course goals come from?

The program goals were prepared by the Portland School District Evaluation Department in consultation with administrators, teachers, and curriculum specialists throughout the metropolitan Portland area. The course goals were developed by outstanding teachers guided by such models and guides as were available, and supported by tri-county and Oregon State Board of Education curriculum and evaluation personnel.

More than 40 local school districts in the tri-county area of metropolitan Portland are active in the Project. This has been achieved through
the leadership of the intermediate education districts of the three
counties. Representatives from Oregon school districts outside the metropolitan Portland area, from Washington State, and from private school systems have also made valuable contributions.

Its broad base of participation strengthens the Project in a number of ways. First, it provides greater financial and personnel support than any single participant could provide. Second, it makes it possible to draw upon a large and nationally representative pool of teacher talent in organizing goal development committees. Third, it provides a widely representative testing ground for the theories and products of the Project. In less than two years there have already been substantial payoffs.

Reports indicate that even the critique collections have been used extensively in curriculum development and evaluation the past year and summer.

School districts contribute services of teachers to the Project, using local curriculum funds. Other current sources of support are the Oregon Board of Education, the Small Grants Program of the Regional

Office of the U.S. Office of Education, and curriculum and evaluation funds of the Multnomah, Clackamas, and Washington County Intermediate Education Districts and the Portland Public Schools.

The contributions of the Oregon State Department of Education and USOE are small in terms of the total budget of the Project, but the involvement is significant. The Project's goals are consistent with the State's interests in better educational management practices and instructional improvement. State involvement has already proved important in disseminating products, and the Project has had an influence on state developments in PPBS and educational goals at the legislative and state board level. Finally, USOE involvement provides future potentials for national dissemination and involvement.

What can the goals in this collection be used for?

School systems may use the collections as a yardstick by which to measure the adequacy of goals and objectives already in use. Goals and objectives of local courses of study and textbooks can be contrasted with the goals in this collection to see how complete they are and how well they provide for different interests, abilities, and levels of achievement. They can also be evaluated for conciseness, clarity, and accuracy using these course goals as models.

These kinds of studies can be undertaken by teachers from all levels of a school system (to assure articulation and philosophic unity); across grade levels, divisions, or high school departments (to assure agreement as to goals and ways and means of attaining them) or by individual teachers.

A related use of the goals is as a starting point for reviewing what the schools should teach and the materials to be used to support teaching. The logical sequence of discussions about what is important to teach and learn is to move from broad policy goals to program goals to course goals,

with appropriate community-board-staff-teacher-student representations at each level. The taxonomic classifications of this collection can serve as a check on higher order goal formulations, and the goals themselves can function as generators of lower order objectives and instructional plans.

The project provides an important resource for improving the quality and extent of participation of students, parents, teachers, school boards, and other citizens in deciding the mission of the schools. An intensive look at the roles of each participating group in generating, reviewing, contributing to, and approving goals will be a future task of the Project.

Another use of the collection is to provide a basis for teachinglearning accountability. If a school approves all or part of the course goals for its students, grade level, divisional, or departmental representatives may choose from them those that are best suited to individual or group aptitudes and interests.

It is possible for teachers to review goals with each student and contract for their attainment if a completely individualized program is desired. Or, it is possible to stake out a set of goals for target groups (regular classes, special classes, mini-courses, etc.). In any event, the goals themselves are sufficiently explicit that means of teaching them and of evaluating their attainment can be devised and applied individually or to groups to suit the needs of teachers and management.

Another use of the collection is the <u>rewriting and development of</u>

<u>courses and curricula</u>. By making curricular options explicit and sharable,
the collection can help in the development of new or modified courses of
instruction and the design or redesign of curricular experiences. One
important example of curriculum development fostered by this collection
is cross-disciplinary education. Probably no concept is currently more

abused than "interdisciplinary education." While the goals of subject matter learning are at least implicit in the textbooks and other materials used by teachers, the goals of interdisciplinary education do not have even that questionable point of tangible reference. The Tri-county Project, through its extensive coding and retrieval systems, permits selection of goals in terms of various combinations of subject matter, educational level, types of knowledge and process, career education program goals, concepts and values, and index words. This system provides important cues for interdisciplinary planning. The goals, although printed in subject collections such as science, social science, mathmatics, music, etc., may be related and grouped in and across subjects through computer retrieval by requesting those goals bearing one or more of the seven code parameters. Thus, for example, a teacher interested in a unit on marine biology can request goals dealing with related concepts in science, social science, language, mathematics, or any other subject field.

A final use of this collection is for long-range planning and systematic control of educational development. The past few years in education have demonstrated that few results of experimentation and development are transportable. The inability of educators to define clear, unambiguous statements of desired learning outcomes is an important underlying cause. The Tri-county Project is establishing sets of goals that may be used consistently for instructional planning and evaluation. The sets are open and are added to each time teachers or curriculum planners specify appropriate learnings not represented in the original collections. However, any statement admitted to the collection undergoes a rigorous process of statement, definition, and coding to insure that its utility to teachers is equal to goals already in the collection.

These collections will support all curriculum development activities in the Portland School System within a year or two, and in many other school districts in the tri-county area as well. The stability this will provide educational experimentation and development is apparent. The power of the goal collections themselves in promoting good educational planning and the ease and convenience it affords teachers in that planning is equally evident.

Other uses can be cited, but districts will discover these. In all of the above activities, districts are invited and encouraged to use the collection selectively and to add their own goals wherever this collection is insufficient to their needs. We hope that where they do add and modify, they will use the feedback forms and contribute to the expansion and improvement of the original collection.

Will help be available for evaluating the attainment of the goals in this collection?

The principal measurement-related product sought by the project developers is a set of test items related to each course goal. This set is to be so comprehensive that any teacher who selects a course goal and translates it into one or more instructional goals will be able to retrieve items, or at least examples of items, appropriate to assess the attainment of his instructional goals.

The Project is beginning to define evaluation models appropriate for assessment of goals in each of the classes of knowledge and process. These models will be used to guide both psychometricians and teachers in the development of criterion referenced test items appropriate for measuring each type of knowledge and process. Teachers using the course goals during the period the items are being developed will be asked to supply copies of their periodic and final examinations to provide materials for a comprehensive set of test items. Teacher aids for test item development based on

the different goal types are being prepared to insure the quality of the item bank. As soon as theoretical formulations relating to values, generalizations, and concepts are refined and consistent, similar work will begin in developing evaluation models and items for those classes of learning. This work should take two to five years to complete, depending on resources.

Is this the final version of the program and course goals?

No. In the development of both the program and the course goals, an effort was made to make them comprehensive, realistic, and immediately applicable to schools as they are currently organized. At the same time, these goals and the taxonomy are to be revised and improved as they are subjected to use and scrutiny by teachers and curriculum personnel. This is to be accomplished through the feedback instrument distributed with these goals. The large amount of blank space on many pages of this health education collection is waiting to be filled with your help.

As time passes, new goals will be called for. For this reason a provision is being made for the continual review and revision of the goals. This will be largely dependent on feedback from the field. Thus, what is being created is a complete, dynamic, open system for goal-based learning and evaluation. Such a system will be a useful resource to all those seeking to improve their understanding of what should be learned, how it should be learned, and how evaluated.

How to read and interpret the materials in this goal collection.

Following this introduction there are four sets of indexes for retrieving course goals (indicated) by four different colors: subject matter taxonomy, pink; knowledge and process classifications, yellow; subject area program goals, blue; and career education program goals, green.

Codes on the course goals refer to the materials on the colored pages. The colors are to help you find the meaning of a code found beside a course goal.

Below is a description of how to read and interpret a page of course goals and its codes.

The bulk of the pages in this collection are taken up with the course goals themselves and their codes. Since our aim here is to learn how to read, interpret, and use these goals, let us look at and discuss a sample page of them from the Health Education collection. (Please see following page.)

The number headings of the left hand column (1.0 Mental Health, 1.4 Determinants of Mental Health and 1.43 Psychological Determinants) are those sections and subsections of the subject matter taxonomy under which the goals on this page are classified. The subject matter taxonomy which is to be found on the pink pages in the front of the book serves as a table of contents for this collection.

By looking through the taxonomy, a user can find what topics are covered and can turn to those in which he is interested. Also, the headings may be used along with one or more of the other codes to retrieve subsets of goals from the computerized storage system. Finally, the taxonomies form a comprehensive but brief overview of the topics in each subject area judged important in K-12 curricula. As such, they form a valuable and convenient tool for curriculum and materials review and planning.

The next thing we note in column (1) under the heading "1.431 Concept of Self and Others (Cont.)" are the <u>Course Goals</u> themselves. Some goals in this column have a bracket to their left. The goals inside the bracket are logically related and may be viewed as a unit.

HEALTH

(1)	HEALTH					
1.0 Mental Health 1.4 Determinants of Mental Health 1.43 Psychological Determinants		. (2)			(4) (5)	(6) (7)
COURSE GOALS	-suci	JIP JEGG	S CASTLE	Color Color	Second Second	Core Andrew
1.431 Concept of Self and Others (Cont.)

PIUH	· G2 К8	1 3	la lb lc 2c		(C) Interpersona relations (C) Self-concept (C) Mental healt (VI) Social concern (VI) Social sensitivity
		-				(VI) Respect for others (VI) Self-respect (VI) Weighing costs 5 benefits
The student is able to recognize and accept the accomplishments of others and reinforce their feeling of self-worth (e.g., complimenting on accomplishments, expressing pleasure at other's success or good fortune).	PIUH	P61 P65	1. 2	la		(C) Self-concept (C) Mental health (C) Maturity (V1) Social sensitivity (V1) Respect for others (V1) Self-respect (V1) Self-worth

The column (2) on the page as we move from left to right is headed
"Level P/I/U/H" (primary, intermediate, upper, and higher). This code provides the teacher or curriculum planner an estimate of the level or levels at
which the learning is appropriate. Many times the nature of the goal suggests
continued learning over several levels, in which case all levels involved are
coded. These indications of level are suggestive only, for it is evident that
the appropriate time for learning varies with the interests and abilities of
students.

The third column (3) is headed "Knowledge or Process Classifications."

The classifications referred to are described at the front of the book on the yellow pages. All goals are roughly classified as knowledge or process depending upon whether they deal with something that is to be known or something the student is able to do. All goals, therefore, begin with the words, "The student knows..." or "The student is able to..."

The familiar knowledge/process distinction is further subdivided into twelve knowledge and seventy-nine process categories to which all course goals have been coded. It will be noted that these classifications owe a partial debt to earlier researchers; notably, Benjamin Bloom, David Krathwohl, Robert Glaser, Henry Walbesser, and Ralph Tyler in Education; Robert Gagné and Robert Miller in Psychology; Jean Piaget and Jerome Bruner in Child Development; and others.

At this point the reader may question the reason for the rather detailed and elaborate system of classifying educational outcomes that has evolved during the Project. We have found that providing teachers with these classification systems has resulted in a more critical approach to the writing of goals. A teacher in attempting to place a goal in its appropriate category may find that its intent is clearly related to one of the categories but its form of expression does not immediately identify it with that category. By rewording the goal, the teacher brings the true intent of the goal into sharper focus, and in almost every instance improves its meaning and clarity. We have also found that the

detailed classifying of knowledge and process goals provides insight into alternative ways of using them for teaching and evaluation. For example, the G2 and K8 beside the first goal on the preceding rage indicate that it may be taught and evaluated either as a simple generalization (G2) or as a goal about the causes of mental health (K8). Work has already begun in analyzing and suggesting to teachers the types of measurement appropriate for each type of knowledge goal. This work will be extended to process learning as rapidly as resources permit.

Column (4) on the page is headed "Subject Area Program Goals." In this column we find the number of one or more of the program goals found in the front of this book on the blue pages. The definition of this type of goal and its relation to course goals was discussed earlier. Here it is enough to recall that program goals are more general than course goals and that a set of program goals should constitute a description of the major overall learning outcomes expected from a program. Each course goal is cross coded to the program goal(s) to whose attainment it is most directly related.

Column (5) on the page is headed "Career Education Program Goals." In this column we may find the code of one or more of the Career Education program goals found in the front of the book on the green pages. Career education, as envisioned by the coders, concerns the total life of an individual, including day-to-day living, vocation, avocation, and leisure. Nearly every course goal bears at least an indirect relationship to career education viewed in that manner. Only those course goals, however, which have a "direct" relationship to a career education program goal have been coded to that program goal.

A "direct" relationship was interpreted to exist between a course goal and a career education program goal if a teacher could easily and naturally attach some career meaning to the instruction relating to that course goal

and thus readily integrate the teaching of career education into teaching his subject. The restriction of the codings to direct relationships as just defined means that codings to career education program goals are relatively rare in the goals written under the more detailed and technical parts of a subject's taxonomy such as the sections of the health taxonomy dealing with Body Systems (1.731, 1.741, 2.43, 2.831, 2.851), Cell (2.42), and Safe Living (4.0).

A reader should not assume that because a course goal is cross coded to a career education program goal that he should make an effort to relate it to career education in every case. That is up to himself and the policies to which he is responsible. This coding provides suggestions, not prescriptions, for curriculum planning and teaching.

A teacher may use this coding as a help in integrating a discipline and career education and vice versa, by asking himself the following question:
"When I am teaching this goal, is there some aspect of career education that can usefully and naturally be brought to the attention of my students?" The cross coding, where it appears, suggests there may be and what the aspect is.

The career education code used with these goal collections makes them the first operational resource for "integrating career education and the rest of the curricula." Naturally a great deal of work has to be done to refine and extend the beginning which the present cross codings represent.

The relation of health education and career education is dealt with somewhat differently and more directly in the goals found under the subheadings "3.38 Occupational Environments," "3.7 Health Careers," and "4.1 Occupational Safety." The Project will continue to explore the validity and possible extensions of both the latter method of writing goals specifying the relation of a subject area and career education, and also the former complementary approach of cross coding goals throughout the collection to their point of contact with career education.

The coding "Other Related Content Taxonomy Headings" under column (6) is provided since goals are often rightly classified under more than one subject heading. The numbers in this column refer to the taxonomy on the pink pages at the front of the book. For purposes of computer retrieval, it is possible to request all goals which deal with a particular subject heading, and to extract not only the goals placed under that heading, but also all other goals cross-referenced to it wherever they are located in the collection. While this capability presently exists only within a subject field, it later will be provided among subject fields.

Column (7) on this page is headed "(C) Concept/(V1,V2) Value Words."

This form of code is one of the newest and potentially most useful ways to describe and retrieve sets of goals, especially for interdisciplinary learning. Although explicitly singling out the concepts and values dealt with in goals is theoretically very interesting and useful, in practice it is very difficult since no valid lists of such concepts and values exist in the various subject areas. Accordingly, the codings applied in this critique edition should be viewed as experimental attempts made to solicit constructive criticism.

The paragraphs below describe briefly the definitions and procedures used in applying this code.

Words chosen to characterize values and concepts represent residuals of experience that influence the way individuals perceive and behave. Thus, the word freedom connotes certain behaviors associated with the ideal state. Likewise, a word like honesty characterizes a set of behaviors which viewed from a societal perspective characterizes an individual as honest. From an educator's point of view, the only resources available to help students acquire the desired concepts and behavioral tendencies are the knowledge and process learnings planned for and with students.

The words designating the major concepts to which a goal relates are written beside that goal in this fifth column. Words identifying concepts are preceded by "(C)" to distinguish them from the value words found in the same column.

A glance through the subject matter taxonomy on the pink pages at the front of the book reveals many headings which themselves are concept words. These headings have not been repeated as concepts words on every goal under that heading, but only on those which bear the most direct and general relationship to the concept designated.

Especially important in considering the nature of values is the distinction between the instrumental processes of clarifying and forming values (V2) and values as end products to be inculcated and strived toward (V1). The curricular and methodological implications of teaching toward values as end products are entirely different from those concerned with the processes of value clarification and formation.

In helping students acquire and strive to attain values (V1), the educator must rely upon teaching knowledge and skills that have a logical bearing upon these values. Where he is concerned with the teaching of value clarification and formation processes (V2), he must teach such conventional skills as verifying information, relating information to criteria, and other methods of clarifying personal and social values by which the clarification, interpretation, and internalization of information can be accomplished. These are the same processes found in the Inquiry and Problem Solving Processes Classification on the yellow pages at the front of the book and are coded in column (3).

The type of values coded in column (7) of this goal collection is type (V1). Where a goal may be used to inculcate or help a student attain a value, the value is named in this column and a "(V1)" is written in front of

it. Where a process related to value formation is dealt with in a goal, it will be a process goal. The process will be indicated by the process code in column (3). Values have also been dealt with explicitly in the several sections of the Health Education Taxonomy and the goals indexed by them; notably, sections "1.43 Outlook on Life and Values," "1.6 Values" and "1.7 Applying a Value System to Problems of Daily Living."

Another useful code is the <u>Index Word</u>. Although it does not appear on the printed pages, it is keyed to each goal for retrieval in much the way documents are coded for retrieval in the familiar ERIC retrieval system. Users will have available lists of index words by discipline and across disciplines.

A most important set of materials in this manual is the <u>Feedback Instrument</u>. This instrument calls for the <u>minimum</u> information we need from you, the user, if we are to refine and expand the collection and improve its value to all users. Additional input is welcomed by phone, word of mouth, carrier pigeon, etc., after you have discussed and tried out this resource in your district. Ultimately, the success of the Project is dependent on this input.

SUBJECT MATTER TAXONOMY

HEALTH EDUCATION TAXONOMY

1.0 Mental Health

- 1.1 Definition of mental health
- 1.2 Relationship to physical health
- 1.3 Relationship to community health
- 1.4 Determinants of mental health
 - 1.41 Physiological determinants -- physical and hereditary
 - 1.42 Environmental determinants -- physical and societal
 - 1.43 Psychological determinants
 - 1.431 Concept of self and others
 - 1.432 Psychological needs and motivation
 - 1.433 Sources and expression of emotions
 - 1.434 Outlook on life and values

1.5 Behavior influenced by mental health

- 1.51 Communicating
- 1.52 Decision making
- 1.53 Risk taking -- positive or negative
- 1.54 Behaving responsibly or irresponsibly
- 1.55 Adjusting -- Adapting
- 1.56 Problem solving

1.6 Values

- 1.61 What values are
- 1.62 How values are acquired
- 1.63 Importance of specific values to mental health
 - 1.631 Self discipline
 - 1.632 Self respect and acceptance
 - 1.633 Respect for and acceptance of others

- 1.64 How values influence decision making
- 1.7 Applying a value system to problems of daily living
 - 1.71 Nutritional choices
 - 1.72 Consumer buying
 - 1.73 Drug use (tobacco, alcohol, drugs)
 - 1.731 Body systems respiratory, circulatory, nervous (also refer to 2.43)
 - 1.732 Nature of drugs
 - 1.733 Use of drugs

SUBJECT AREA

PROGRAM GOALS

HEALTH EDUCATION PROGRAM COALS

- 1. The student has positive feelings about himself and all people.
- 2. The student has the knowledge and skills needed to insure the physical and mental health of himself and others.
- 3. The student makes decisions and acts in ways which contribute to good personal and community health,
- 4. The student has a basic knowledge of human growth and development.
- 5. The student has knowledge and skills relative to safe living, accident prevention and emergency care.
- 6. The student knows the purposes served by the family in providing psychological security to its members and the reasons that families have been the basic unit in most societies.
- 7. The student knows the major local, national and global health problems and some of the ways in which they might be solved.
- 8. The student is familiar with, is able to evaluate, and uses materials and services provided by individuals and/or organizations dedicated to solving health problems.
- 9. The student is knowledgeable about vocational opportunities in health and allied fields.

CAREER EDUCATION

PROGRAM GOALS

CAREER EDUCATION PROGRAM GOALS

		1.1.11	Awareness K-6	Exploration 7-10	Preparation 11-12
1.	Attitudes and Values Toward Self and Others		Х	х	· X
2.	Attitudes and Values Toward Work		X	х	X

4.	Career Exploration			Х	X
5.	Career Preparation			X	Х
6.	Career Placement and Employment				Х

Regardless the instructional level at which each group of trogram goals is introduced, continuous development and reinforcement through the remaining years of education is expected.

CAREER EDUCATION PROGRAM GOALS

1. Attitudes and Values Toward Self and Others

- a. The student knows the physical and emotional benefits of understanding and respecting self and others throughout life.
- b. The student knows that the unjoy sources of understanding, acceptance, and respect of solf are understanding, acceptance, and respect for others.
- c. The student knows that success in his career is dependent on satisfactory interpersonal relationships with employers and fellow workers.

2. Attitudes and Values Toward Work

- a. The student knows the personal, social, economic, and political reasons for work in our society.
- b. The student knows that work is a dignified human activity which gives rights to and requires responsibilities from its participants.
- c. The student knows that in our society he is dependent on the goods and services of others for his welfare and survival.

3. Career Education and the Total Curriculum

- a. The student knows that skill in job exploration, selection, and preparation can lead to continuing career enhancement and personal fulfillment.
- b. The student is able to identify career alternatives, select those consistent with his values and goals, and implement chosen courses of action.
- c. The student knows the physical and psychological reasons for seeking a balance between work and leisure activities.

4. Career Exploration

- a. The student is able to evaluate his aptitudes, interests, and abilities in exploring career opportunities.
- b. The student knows the major factors that may affect his career opportunities and decisions (e.g., physical, social, economic, educational, cultural, and technological).
- c. The student knows that individuals can learn to function effectively in a variety of occupations.

- d. The student knows that every carrier one entry, performance, physical, attitudinal, and educational requirements.
- e. The student knows that career choice may help determine friends, associates, and status in the community.
- f. The student is able to select a tentative career choice based upon exploration of a wide variety of occupations.
- g. The student knows that career choice affects the amount and type of leisure activity that may be pursued.

5. Career Preparation

- a. The student is able to develop and apply the basic skills and behaviors required to perform one or more entry level jobs.
- b. The student is able to employ the following organizational skills appropriate to the career of his choice:
 - 1) identify the objectives of a task
 - 2) specify the resources required
 - 3) outline the steps necessary for completion
 - 4) perform the actual operations
 - 5) evaluate the final product

6. Career Placement and Employment

- a. The student is able to make an assessment of the labor market to determine opportunities that will advance his career.
- b. The student knows the educational opportunities that exist beyond grade 12 for the enhancement of his career skills and his personal development.
- c. The student knows the advantages and responsibilities associated with working independently, as a member of a team, and under direct supervision.
- d. The student knows that the acceptance of a task requires the acceptance of responsibilities to himself and others.
- e. The student knows the opportunities for vertical and lateral mobility within his career cluster.
