ABSTRACT

GRADES OR AGES: High school. SUBJECT MATTER: Consumer education especially as it concerns the consumer's desire for beauty. Included are considerations of cosmetics, health spas, reducing salons, wigs, and jewelry. ORGANIZATION AND PHYSICAL APPEARANCE: The guide is discursively organized through the topics listed above. The physical appearance of each page is three columns; they are labeled "Understandings (Desired)," "Suggested Pupil and Teacher Activities," and "Source." OBJECTIVES AND ACTIVITIES: Under the column heading "Suggested Pupil and Teacher Activities" are listed sample teacher questions, random ideas, and possible assignments. INSTRUCTIONAL MATERIALS: Under the column heading "Source" are listed reports, books, and articles, some of them referring specifically to the listed activities and some of them serving as recommended readings. STUDENT ASSESSMENT: No provisions indicated. OPTIONS: The guide is suggestive only. (JA)

## F O R E W O R D

In 1967, the State Education Department published "Consumer Education — Materials for an Elective Course." This material has since been introduced into more than 500 of the New York State high schools. As a result of the interest in Consumer Education in the State and Nation, the Department has begun the preparation of a series of modules — Expanded Programs of Consumer Education. This module, Beauty Products and the Consumer, is the eighth to be produced. Those already distributed are:

Consumer Issues and Action  
Education and the Consumer  
The Consumer and Recreation  
Consumer Problems of the Poor  
The Consumer and His Health Dollar  
The Consumer Looks at His Automobile Insurance  
The Consumer and Transportation

Other modules will be produced in these fields:

The Consumer Copes With the Problems of a  
Technological Age  
The Consumer and His Tax Dollar  
The Consumer and Credit

Nothing touches the lives of the disadvantaged more than the constant struggle to stretch limited financial resources to meet the increasing costs of living. These modules are designed in the hope that they will help the poor to make better use of their income, as well as with the expectation that those of higher income will be more understanding of their own problems and of the problems of their fellow citizens.

Unlike the original syllabus, where 12 units covering various phases of Consumer Education were bound together, the modules in Expanded Programs of Consumer Education are being prepared as separate publications to provide greater flexibility. Each of the modules in the series may be used as a discrete unit, or with other units in the series. The modules may be presented as a semester or part of a semester course, or presented in conjunction with the original syllabus which covers such areas as the purchase of food; shelter; appliances; automobiles; and a consideration of credit; money management; fraud, quackery, and deception; banking and savings; life and health insurance; security programs; and consumer law.

It is hoped that the presentation of the modules as separate publications will tend toward flexibility in their use as mini-courses in such fields as social studies, business education, home economics, industrial arts, agriculture, and other areas of the curriculum.

The suggestions to the teacher found in "Consumer Education — Materials for an Elective Course," pages 1-4, apply equally to each of these modules. The reaction and suggestions of those using these materials in the field will be helpful to the Department in planning further materials for Consumer

Education and in making necessary revisions of the material.

Hillis K. Idleman, associate in Secondary Curriculum Development, designed and wrote the module. Mrs. Marie Dizer, home economics teacher at Utica Free Academy, Utica, served as consultant and assisted in the writing.

The Department acknowledges with appreciation the suggestions of those who reviewed the manuscript and in particular the following who made substantial contributions:

M. C. Phillips, Consumers' Research, Washington, New Jersey  
Elaine Spector, consumer protection specialist, Federal Trade  
Commission

Various members of the staff of the Better Business Bureau,  
both in the New York City office and in the Trade Practices  
Section in Washington, D.C.

Gordon E. Van Hooft  
Director, Division of  
School Supervision

## INTRODUCTION

### BEAUTY PRODUCTS AND THE CONSUMER

The desire to be well-groomed, to look attractive, is important to most people. The manufacturers of beauty products, grooming products, and those who sell jewelry to enhance appearance do a big business. There are many reasons why a large proportion of income is spent for such products. Rightly or wrongly we may think that our acceptance by others, our job or job advancement, and our chances for romance and marriage depend upon maintaining an attractive appearance. "Save the surface and you save all" is the slogan of one large paint manufacturer. Unconsciously perhaps, millions of Americans are trying to preserve their youthful exterior in the hope that they too can "save all."

Products that will help us to look better, smell better, and even taste better proliferate on the market. Almost \$140 million worth of perfume, toilet water, and cologne is sold annually in the United States. Other millions of dollars go for deodorants, antiperspirants, after-shaving lotions, hair sprays, dyes, rouges, powders, eye shadow materials, false lashes, creams and lotions, sprays, shampoos, lacquers, hair tonics, dandruff removers, freckle removers, skin peelers, skin bleaches, depilatories, wrinkle removing preparations, and other toilet sundries.

In addition to the millions spent on cosmetics, other millions go to purchase personal care appliances. These appliances range all the way from common electric irons and hair dryers to exercise bicycles, rowing machines, belt massagers, roller massagers, slant boards, portable steam baths, whirlpool baths, heat lamps, sun lamps, hand massagers, shavers and clippers, electric combs and brushes, manicure sets, oral water appliances, facial mist appliances, sauna baths, electric clothes brushes, and electric shoe polishers.

Similarly, the jewelry business has a thriving market. The desire to adorn oneself is as old as mankind. Yet in the purchase of gems, the average consumer lacks the technical knowledge or equipment to judge the worth of an article. It is in this field particularly that a merchant's integrity and reputation for honest and fair dealing are extremely important. Agencies such as the Better Business Bureau can aid the consumer in this regard.

An unscrupulous jewelry dealer can easily trick a customer into accepting an inferior stone. Most of us have been conditioned, for example, to think that a diamond's value is based upon its size and weight—the number of karats or fraction of a karat that it represents. Many other factors enter into the value including the manner in which the gem is cut, the clarity of the stone, and the presence or absence of flaws. Consumers contemplating the purchase of such a gem are well advised to check the reputation of the merchant first, and then to rely on his judgment and professional ability. As is always the case, the consumer should understand the costs of credit if the purchase is not on a cash basis. Finally, the consumer will want to avoid "come ons" such as the offer to accept a trade-in of the gem at purchase value on a larger stone. Some merchants hook consumers into a lifetime expenditure by repeatedly taking in smaller stones on the purchase of yet bigger ones.

The study of the module should help students to:

- Recognize the high value most Americans place upon appearance and the large expenditures made to enhance appearance
- Name the Federal protective agency that attempts to guard consumers against grooming and beauty product hazards
- Name the requirements set up by the Food and Drug Administration to safeguard cosmetics
- State what areas of concern to consumers are not covered by the regulations under which the Food and Drug Administration operates
- Understand the potential hazards of cosmetics and health devices
- Exercise better judgment in the selection of personal grooming and beauty aids
- Name the agencies that attempt to control false advertising and other unfair practices in the beauty salon field
- Recognize that decisions regarding the purchase of beauty aids should be based on individual values, goals, needs, wants, patterns of living, available funds, and other personal and family requirements.

## CONSUMER COSMETIC POLL

It is suggested that the cosmetics poll which follows be given to the class before and after the study of this module to see what differences in thinking, if any, result from the study. Answers are not provided since many responses will be value judgments for which there are no "right" answers. (The poll may be photocopied or otherwise reproduced for ease of administration.)

	<u>Agree</u>	<u>Disagree</u>
1. The cosmetic business has more good features than bad.	_____	_____
2. Cosmetic advertisements try to persuade consumers to buy products they don't really need.	_____	_____
3. The cost to consumers of cosmetics is about double the cost of manufacture.	_____	_____
4. Cosmetics with well-known brand names are "best buys."	_____	_____
5. Cosmetic manufacturers spend about 10 percent to 50 percent of the retail cost for advertising.	_____	_____
6. It is reasonable to expect that cosmetic manufacturers would not reveal the ingredients of their products lest competitors copy them.	_____	_____
7. The Food and Drug Administration provides all the protection the cosmetic user needs.	_____	_____
8. Most cosmetic advertisements make exaggerated claims.	_____	_____
9. When one buys cosmetics he usually gets his money's worth.	_____	_____
10. So few people are allergic to cosmetics that such allergies are no real problem.	_____	_____
11. It would not help for cosmetic advertisers to list the ingredients of the product, for few people would bother to look at the ingredients and fewer still would understand whether they were good or bad.	_____	_____
12. Consumers can't do much about influencing the cosmetics that are produced. Advertising is too powerful to change existing practices.	_____	_____
13. It is possible to have one's skin rejuvenated and regain a youthful appearance.	_____	_____
14. The history of cosmetics is as old as the recorded history of man.	_____	_____
15. "Special ingredients" in cosmetics can often dramatically change appearance.	_____	_____

	<u>Agree</u>	<u>Disagree</u>
16. A consumer can save money in the cosmetics used without sacrificing appearance.	_____	_____
17. The market for cosmetics for males is increasing rapidly.	_____	_____
18. Charm is not something that can be purchased at the cosmetics counter.	_____	_____
19. "Hope" is what is sold as cosmetics.	_____	_____
20. Cosmetic manufacturers are not required to prove the safety of their products or label ingredients on their packages.	_____	_____

UNDERSTANDINGS

SUGGESTED PUPIL AND  
TEACHER ACTIVITIES

SOURCE

HOW IMPORTANT IS THE  
BEAUTY BUSINESS?

The urge to be attractive to other people - most univers

- . Take a secret poll of the class. Ask each member to rate in order of importance to him or her the following values:
  - Being a sports hero
  - Being an honor student
  - Having an attractive appearance
  - Being well-off financially
  - Having a hobby
  - (Add other choices that occur to you.)

- . Forum. J.C. Penney Co. Spring-Summer 1971 "Consumer Behavior - What influences it?"

Which value rated highest?  
How important was appearance?

- . Millions of dollars are spent annually to maintain, regain, or achieve a pleasing appearance.

- . Have pupils keep track for a week of the amount of money that each spends to maintain appearance, excluding clothing expenditures. Include soaps, lotions, perfumes, sprays, rinses, mouthwashes, dental creams, razor blades, reducing and exercising equipment. What is the high, the low, and the median expenditure?
- . Cut out pictures of the various products purchased and construct a bulletin board to illustrate the wide range of beauty-related purchases.

- . "Youth Market Consumer Survey," Scholastic Magazine, 1972
- . "The Dynamics of Youth Explosion," Los Angeles Chamber of Commerce, Research Committee, 1967
- . "Study of Beauty Products," Co-ed Magazine, May 1969
- . "Topics," Life Insurance Institute, 1968
- . "The Teenage Girl Today," Seventeen Magazine, Triangle Publications, 1968

## UNDERSTANDINGS

- . The emotional urge of teenaged girls for beauty aids may be as great as their physical urge for food.

- . Because youth from 13 to 22 buy more than 1/4 of the cosmetics sold, advertisers make a special attempt

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- . In a recent survey made by the Nassau County Office of Consumer Affairs, from 7-11 percent (depending on age) of female teenagers reported that the largest share of their weekly income is spent on cosmetics. Approximately the same number stated that if they had additional income it would be spent on cosmetics. How do these figures compare with expenditures for girls in your class? How much do boys spend on cosmetics?
- . Interview a store manager to see how important cosmetics sales are to his total business.
- . Keep scrapbooks of advertisements of beauty products clipped from magazines and newspapers.
- . Keep track of the number of TV or radio commercials for beauty products advertised in 1 day.
- . Have other class members collect ads of beauty products aimed at older people which hint that the youthful look can be regained.

## SOURCE

- . "Beauty is big business in the United States. With confidence that a new shade of nail enamel, an intoxicating scent, or 'covering the gray' may lead to romance, social acceptability, job advancement or other elusive goals, Americans spend billions of dollars every year on cosmetic products." FDA Fact Sheet
- . Estimated consumer expenditures for toilet preparations are \$7 billion a year. The growth rate of the cosmetics industry is 10 percent a year. Additional millions are spent for devices and equipment to enhance appearance.
- . There are more than 1,230 firms in the toilet preparation industry.
- . "When a U.S. Teen-Ager Goes Out Shopping. The \$25 Billion-a-Year Accent on Youth," Newsweek, November 30, 1964

## UNDERSTANDINGS

to appeal to the youth market.

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- . Look for examples of ways in which merchants try to influence the youth market such as:
  - Ford Motor Co.'s Caravan
  - Miss Teen-Age America Contest
  - High school fashion boards
  - Teenage consultants
  - Teenage charge cards
  - Teenage interviewers
- . Plan a skit to illustrate the ways in which advertisers use youth to influence other youth.

## SOURCE

## WHAT IS A COSMETIC?

- . Cosmetics are articles, except for soap, which are intended to be applied to the human body for cleansing, beautifying, or altering appearance.
- . The term "cosmetic" means:
  - (a) Articles intended to be rubbed, poured, sprinkled, or sprayed on, introduced into, or otherwise applied to the human body, or any part thereof for cleansing, beautifying, promoting attractiveness,

- . Have pupils give their ideas of what cosmetics are, then compare their ideas with the definition in the Understanding column.

- . By types (sprays, lotions, etc.) see who can compile the longest list of cosmetics.
- . Comment on the fact that while soap is not officially listed as a cosmetic, it is probably the single most effective beauty

"Federal law—the Food, Drug and Cosmetic Act—does not require that a cosmetic fulfill all the hopes and dreams that may be encouraged by its advertising. The law does require, however, that a cosmetic be labeled: without false, or misleading representations, with informative information about

## UNDERSTANDINGS

or altering the appearance.

(b) Articles intended for use as a component of any such articles, except that the term shall not include soap.

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

aid, to say nothing of the fact that its use promotes good health.

- Ask pupils to define cosmetics as they believe they should be defined, rather than as the law defines them. Would they include soap? Do they believe that the distinction between a cosmetic and a drug as defined by law is valid?
- Why should articles defined as drugs (see Source column) have to prove their effectiveness while other cosmetics do not? To what extent, if any, do pupils feel that a strong cosmetic lobby might have influenced the cosmetic regulations?

## SOURCE

the product, its manufacturer, packer, or distributor, and the quantity of its contents. The law also provides that a cosmetic must be free of substances that may make it injurious, that it be packaged in a safe and non-deceptive container, and that it be produced in a sanitary plant.

"If a toilet article is offered to prevent or cure an ailment, or to affect the structure or function of the body, it is a drug as defined by Federal law, even though it may be promoted and sold as a cosmetic. Some examples are products that are claimed to grow hair on bald heads, to remove wrinkles, to cure a skin disease or to treat and prevent dandruff. Certain other products, such as hormone creams or antibiotic deodorants, are defined as drugs because their ingredients affect the function of the human body. New drug products must be demonstrated to be effective, as well as safe, before they can be marketed.

"Many cosmetics—such as lipstick, rouge, and mascara—are intended to color the human body. Under Federal law, all cosmetics which are, or

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
		which bear or contain, color additives are required to be used under safe conditions as established by the Food and Drug Administration." FDA Fact Sheet

**WHAT KINDS OF PRODUCTS ARE INCLUDED AMONG COSMETICS?**

- . See how many types of cosmetics pupils can list. A typical wholesale beauty service catalog will list hundreds of items in a catalog of 30 or more pages. Items will include: bleaches, hairsprays, color removers, hair conditioning items, lotions, permanent wave materials, neutralizers, shampoos, foams, lip colors, hair sets, bath lotions, gels, rouges, rinses, enliveners, enamels, eye shadows, blushers, mascaras, eyeliners, astringents, waves, hair straighteners, lacquers, and even aspirins, antacids, and cough syrups.
- . Included in the field of cosmetics are: creams to soften the skin; lipstick to color lips; powders to smooth the skin; rouges to tint the cheeks, lotions to cleanse, bleach, or tighten the skin; bleaches to lighten the shade of the hair; dyes to tint the hair.
- . Equipment will include dryers, combs, blowers, irons, mirrors, vibrators, outliners, atomizers, caps, bibs, capes, aprons, wigs, pins, lashes, braids, clips, rollers, visors, nets, nippers, scissors, tweezers, razors, ear pads, gloves, emory boards, rods, sprayers, etc.

**THE MARKET BY AGE**

	14-24 Years of Age 19.7 million women (Add 000)	25-44 Years of Age 24.4 million women (Add 000)	45 Years and Up 21.7 million women (Add 000)
Fragrance	\$210,000	\$225,000	\$160,000
Cosmetics	300,000	400,000	180,000
Treatment	115,000	220,000	153,000
	<u>\$625,000</u>	<u>\$845,000</u>	<u>\$493,000</u>

Beauty Fashion, August 1971

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
OF WHAT DO FRAGRANCE PRODUCTS CONSIST?	<ul style="list-style-type: none"> <li>. Conduct a discussion to see what knowledge the class has concerning the nature and source of fragrance products. Record the findings on the chalk or bulletin board under the title "This Is What We <u>Thought</u> Fragrance Products Consist of and Where They Come From." Then assign a research committee to find out the facts. On a parallel chalk or bulletin board, list the finding of the committee under the title: "This Is What We <u>Learned</u> About Fragrance Products."</li> <li>. Invite a cosmetologist to discuss fragrance products and demonstrate typical products.</li> <li>. Conduct a blindfold test to see which fragrances are most appealing. Do boys' judgments agree with girls' opinions?</li> </ul>	<ul style="list-style-type: none"> <li>. "Fragrance products are made up of raw materials from all corners of the globe, and sometimes as many as 200 or more ingredients are used in one perfume. Synthetic substances have been developed, some to duplicate natural oils and others to provide new fragrances. But perfumers still rely largely upon natural oils from around the world. "The classic eau de Cologne, for instance, is a mixture of citrus oils derived from the fruit, not the blossoms, of the orange, lemon, lime, and bergamot trees as well as oil of petitgrain from the leaves and twigs of the orange tree. "Lemon and orange oil from Sicily and California, lime oil from the West Indies, bergamot oil from Calabria in Italy, oil of petitgrain from Paraguay. "In addition to these, a fixative agent is required to bind the ingredients together so that the volatile oils will not evaporate too soon. Otherwise, the scent is likely to change drastically as the first oils evaporate. This is disastrous to perfume quality, since one</li> </ul>

## UNDERSTANDINGS

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

## SOURCE

criterion of a good perfume is that any change in the fragrance be gradual and harmonious.

"The fixative may be gums or resins, from Arabia or the forests of Thailand or Central and South America. Or it may be of animal origin - civet from the civet cat of Africa, musk from the musk deer of Tibet, or ambergris, the excretion of the sperm whale which roams most frequently off the coast of Sumatra or Madagascar. Synthetic fixatives also are used, some of which closely resemble natural fixatives like musk and ambergris." Snyder, Jean Maclean, "Fragrance Products," Reprinted from October 1969 issue of The Dental Assistant.

- . Unless the manufacturer states differently, eau de cologne, cologne, and toilet water are essentially the same.
- . They are less concentrated than perfume, usually contain lower-priced ingredients than perfume, cost less, and the scent does not last as long as perfume.
- . Have interested class members discuss their selection and use of perfumes and colognes. What element present in larger degree in colognes than in perfumes gives a tingling, refreshing, cooling feeling to the skin? (alcohol)

## UNDERSTANDINGS

- . The selection of perfumes and colognes to meet individual tastes is so personal a matter that researchers are unable to find an answer to the question of what gives a fragrance a universal and lasting appeal.

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- . Have a specialist in perfumes from a department or perfume store explain the varieties of perfumes and colognes available. What does she find motivates customers to buy certain perfumes? What is a "top note" (a strong odor release, when first applied) Why should one delay purchase until the "top note" has disappeared? Do cheaper perfumes change aroma an hour or so after application? Should a woman stick to one perfume or use a variety of perfumes, depending on the occasion?
- . In what forms are fragrance products produced? (Have the class prepare other questions for discussion.)

## SOURCE

- . Fragrance products come in many forms: bath crystals, salts, oils, perfumes, colognes, bath oils, scented talcums, dusting powders.

## OF WHAT IMPORTANCE IS THE COSMETIC MARKET FOR MALES?

- . In nature, the brightest plumage is reserved for male birds.
- . The bright colors of current male garments and the use of cosmetics by males are not new, but these practices have had a resurgence in modern days.
- . Provide a display of currently used male cosmetic products, using empty cosmetic containers.
- . The sale of men's toiletry items has increased remarkably since 1900 and now amounts to \$697 million a year.

## UNDERSTANDINGS

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

## SOURCE

- . From sources such as an encyclopedia, prepare cartoons of male glorification through the use of exotic dress and perfumes in bygone days. Examples:
  - the use of musks by Chinese mandarins
  - Emperor Hamurabi of Persia's order for his troops to wash themselves with perfume
  - Assyrian King Assurbanipal's order to his men to curl their hair and beards with scented oils
  - the elegant apparel of men in the pre-revolutionary French and English courts
  - the scented handkerchiefs of 18th century gentlemen
- . "Two centuries ago men of fashion used freckle creams, cold creams, hair brillantine, fragrant powders, scented mouth waters, lip salve, and a variety of fragrant liquids. The assortment on such a dandy's dressing table equalled or exceeded that of the woman of the day." Givaudanian, September 1968
- . "Since the end of the nineteen forties, good grooming products of all types have been selling at all-time highs and the top of the pyramid is still nowhere in sight. But, there's really been nothing like the mad-cap high jump of men's toiletry sales. And, this grand event has come about in what is probably the shortest period of time any knowledgeable marketing man would have dared predict. Yes, the male animal is changing his plumes and he's doing it all by himself...without the urging or help of the opposite sex. Men's toiletries are indeed on the move." Ibid.

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
<ul style="list-style-type: none"> <li>. Men now buy and use toilet products that formerly they would have denied owning.</li> <li>. Men's fragrance products are basically the same as women's, but different scents are advertised.</li> </ul>	<ul style="list-style-type: none"> <li>. Comment on the following quotations from a trade magazine: "The 'new kind of man' that has emerged on the American scene will be using products ranging from hair sprays to foot preparations, hair colorings to bath oils, scented soaps to skin creams and then some. We have just scratched the surface. "We don't expect the man, even though his fragrance tastes are changing, to like a product that would be considered for 'women only'. There will have to be toiletries scented for the man and advertised for the man. "When it comes to colorings and hair sprays we are just making slight dents in the hard shell of man's resistance but we are breaking through. "The man is just coming out of his shell and it will not be too long before he -- will buy as many or more toiletries than does the woman."</li> </ul>	<ul style="list-style-type: none"> <li>. The market for men's products includes shaving preparations, colognes, deodorants, scented soaps, hair colorings, talcum products.</li> <li>. Men's colognes cover a full gamut of odors from the spice, woody, leather, floral types to the more exotic scents that are popular today.</li> <li>. Special men's products are now marketed which are, in effect, the same types as those used by women but which are given masculine names. They include face bronzers, facial cleansing creams, lotions, "glow sticks," nightcap massages, wrinkle creams, moisturizers, and sun screens.</li> </ul>

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE

- . What do pupils envisage as the extent of the market for men's cosmetics in the years ahead? Will males make increasing use of cosmetics?
- . Does the increased use of cosmetics indicate that men are any less masculine?

**Background Material:**

"Men who regularly use deodorant, toothpaste, shampoo, shave cream, and after-shave lotion, are likely to think of these items as medicine-cabinet staples—but they're nonetheless cosmetics in every sense of the word. And if the cosmetic industry has its way, it's only a matter of time before the American male will wash his hands with specially perfumed soap, shampoo his hair with special male shampoo; bathe or shower with specially perfumed soap and/or bath foam, foaming or non-foaming oil; rub, spray, or dust himself with after-shower lotion, cologne or talcum; spray, squirt, roll, dab or pat on deodorant, cologne deodorant, anti-perspirant, deodorant talc, stick or cream, toilet-water deodorant or deodorant cologne; prepare his face for shaving with pre-shave cleanser, lotion or conditioner; shave with lather or brushless shave cream, or instant foam; pat, squirt or smooth on after-shave lotion, gel, stick, cream, medicated lotion, conditioner, 'toner,' 'facial' and/or moisturizer; apply liquid bronze, face-colored or green talc 'to neutralize a florid skin tone' and perhaps a wrinkle-smoothing lotion; and then splash, spray or roll on all manner of colognes and toilet waters. After all this, the cosmetic industry expects him to manage his hair with dandruff lotion, tonic, color restorer, hair cream, lotion or oil, and brilliantine. And before this much-perfumed male hits the fresh air, the cosmetic marketeers hope he'll protect himself with hand lotion, wind-sun-cold weather lotions and creams, lip pomade, and a hair spray or fixative. In between, the industry will urge him to take time for a facial masque. And so that he won't skip his treatments when he travels, a number of manufacturers have made up kits like box lunches filled with grooming items. Elizabeth Arden packed ten of her 20 'Arden for Men' products with the suggestion that the kit could later be turned into a sewing box—perhaps to hold his embroidery."

Stabile, Toni, "Cosmetics: Trick or Treat?" Hawthorn Books/Publishers, New York

\*

"Barring some unforeseen national catastrophe—such as the current nostalgia craze ushering in a Yul Brynner look in men's hair styling—it appears the explosive growth of male aerosol hair grooming products is certain to continue.

"The parade of new aerosols for men has reawakened a hair grooming market which had been dormant despite rising national population in the 1960's. As one product manager described it: 'Before men started to wear their hair long a couple of years ago, young people weren't using hair grooms. Users of long established products were losing their hair or dying off.'

"There's the Dry Look, the Natural One, the Clean Look, Dry & Natural and Dry Control among the new brands. Remarkably similar packaging of at least four aerosols also adds to the confusion."

Advertising Age, May 24, 1971

\*

"Much of this new awareness of appearance concerns the hair. Once a haircut was a haircut, and one hoped that the barber not only cut off the excess but combed the remaining hair with some skill—or else one took no chances and had the whole head clipped down to crew-cut conformity. Now the hair is worn longer and very often 'styled,' in salons as elaborate as many women's hair parlors. The razor is employed, supplementing scissors and clippers, and hand dryers and nets and European techniques that 'sculpt' the hair to a flattering and individual style."

"Esquire Good Grooming for Men," by the Editors of Esquire Magazine, Grosset and Dunlap, New York 1969

\*

\*

\*

"In conclusion, it is appropriate to go back to the source of all revolutions—the mind. Psychologically, men are becoming more fastidious—at least in their attitude toward grooming. For instance, many men will no longer face the world without cologne, much as many women will not go out of the house without makeup. This trend represents more than just the establishment of habit, but also a feeling that fragrance is appreciated by others, even expected of the civilized man. With continued education, men may adopt this attitude in other areas, also begin to consider bath and treatment items as necessities, rather than luxuries."

Beauty Fashion, April 1971

**PRACTITIONERS  
OF THE  
COSMETIC ARTS  
OVER THE AGES**

UNDERSTANDINGS

SUGGESTED PUPIL AND  
TEACHER ACTIVITIES

SOURCE

WHAT IS THE HISTORY  
OF COSMETICS?

. Cosmetic arts and practices date back at least to the fifth century B.C. Although not so defined in the legal sense, the modern science of cosmetology comprises all substances, preparations, treatments, appliances, or operations used to improve the appearance of a person, including miscellaneous preparations, accessories, and devices used for bathing, hair-dressing, massage, and embalming.

. In the earliest period of the use of cosmetics, these products were associated with religious practices. Common even in ancient days were the practices of burning incense, and the use of oils and unguents for anointing the living and the dead. What evidences of the use of cosmetics are there in modern religious practices? in preparation of the dead for burial?

. How many pupils can cite examples from early history of the use of cosmetics?

. The second phase of the use of cosmetics was their use by physicians. Cosmetics are no longer supplied by physicians. What name is now given to those who apply cosmetics to patrons of their establishment?

Cosmetics have been in use for thousands of years. The Bible cites examples of anointing the head and body with oils. Cleopatra, an early Egyptian figure, was noted for her ability to make and use cosmetics. The physicians of ancient Rome, Greece, and Arabia supplied cosmetics to their patrons. Indeed the word "cosmetics" comes from the Greek work *Kosmetikos*, meaning skilled in decorating.

. While most historical studies attribute the first use of cosmetics to the early Egyptians, researchers in anthropology, archeology, and ethnology reveal that civilizations at least as old as that of Egypt, including India and the Orient, used cosmetics.

WHAT SIGNIFICANCE, IF ANY, CAN BE ATTACHED TO THE VITALITY OF A CIVILIZATION AS JUDGED BY ITS ATTENTION TO THE BEAUTIFYING ARTS?

. Some observers look upon the increasing preoccupation with the beautification of the body as a sign of softening of the character of the Nation.

. The arts of cosmetology and the use of cosmetics reached unprecedented heights during the height of the Roman Empire. Do pupils see any significance or parallel in

. "The magnificent Roman baths were like club houses, where the elegant gentlemen of the period liked to be steamed, anointed, massaged, and perfumed, while the elegant ladies

HAS THE TYPE OF DRESS  
AND USE OF COSMETICS  
HAD SOCIAL SIGNIFICANCE  
THROUGHOUT THE AGES?

. Just as "clothes make the man," so the type of apparel worn and the use of cosmetics to enhance appearance tend to create a favorable or unfavorable impression on the observer.

. To what extent do the type of dress and the type of cosmetics used characterize social groups today? Have the class demonstrate their agreement or disagreement with the statement in the form of a skit, bulletin board display, or other method.

. "Throughout the Hellenistic period, hairdressing was considered very important. Every item of dress, for both men and women, was prescribed. The number, size, shape, and colors of garments, not only for persons in various social groups—rulers, aristocrats, commoners, soldiers, tradesmen, prostitutes, slaves—but also for those of different ages—young people, married women, dowagers, widows—were planned so that there would be no mistake in placing anyone correctly.  
"Coiffure was always included in these regulations. For a man, this meant the length of his hair and the size and shape of his beard and moustache, if any. For a woman, it meant the size and position of a chignon, the type and position of ornaments, and the size, shape, color, and position of a veil, if any."  
Wall, Florence, "Cosmetic Science and Technology"

## UNDERSTANDINGS

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

## SOURCE

- . Many civilizations and nations have contributed to the art of cosmetology.
- . The separation of cosmetics from the field of medicine began to take place in the 13th century.
- . Poll the class to see what type of cosmetic is most commonly used by both boys and girls.
- . The class may find it interesting to learn the origins of commonly used cosmetic elements. For example, we are indebted to the Arabian pharmacists for the introduction of metallic salts in the treatment of skin conditioners, and the use of ambergris, camphor, and musk as perfumes. Research the source of other commonly used cosmetics.
- . Is the line between medicine and cosmetics clearly drawn now? Consider the advertisements of certain salves, lotions, and ointments. Do they make a dual appeal both to health and beauty? How many such products can the class identify? Make a bulletin board display of such advertisements. (Dial soap, Noxema ointment, Crest toothpaste, etc.)
- . "Of all the items related to modern cosmetics and cosmetology, perfumes—aromatic materials in general show the longest continuous record. Unquestionably, perfumes were the first products of the industry to be offered for barter and sale."
- . The Arabian world contributed much to the science of cosmetology through stress on improvements of general health and applications of various branches of science, notably chemistry, physics, botany, and mathematics to the problems of health. Among other contributions were introduction of apothecary's weights, the compounding of drugs, spices, and sweet-meats, and the extended use of herbs, spices, and aromatics.
- . "Henri de Mordeville, a Thirteenth Century Frenchman and noted lecturer on medicine and anatomy, was among the first to distinguish between pathological conditions of the skin that merited medical treatment and the application of cosmetics for embellishment only. In his book 'Doctrina decorationis,' de Mandeville gave many recipes for depilatories, dyes,

## SOURCE

### HOW SAFE ARE COSMETICS?

- . In 1906, when the first Pure Food and Drug Law was passed, the need for consumer protection as regards cosmetics was not apparent.
- . In the 1930's, many consumers suffered from reactions to the dyes, metals, and chemicals used in cosmetics.
- . Between 1900 and 1938, annual cosmetic sales grew from \$5 million to \$366 million. Cosmetic injuries were reported with increasing frequency.
- . Kallet and Schlink, in their book "100,000,000 Guinea Pigs," 1933, pointed out the grave hazards present in certain cosmetics. Other writers, such as M. C. Phillips in her book "Skin Deep," confirmed the findings of earlier writers.
- . The result of the publicity regarding potential hazards to health from cosmetics led to the passage in 1938 of the Federal Food, Drug, and Cosmetic Act.
- . If these publications are available, have pupils read: "Skin Deep" by M. C. Phillips or "100,000,000 Guinea Pigs" by Kallet and Schlink for revealing reports of hazardous ingredients used in cosmetics and the unfortunate consequence of the use of cosmetics containing these substances.
- . How does the government protect consumers today from hazardous cosmetic products?
- . What precautions must consumers still take?
- . Ask pupils to recount examples of reactions to cosmetics. Have any found it necessary to discontinue the use of antiperspirants, deodorants, hair bleaches, hair dyes, nail lacquers, eye makeup, perfumes, or soaps?
- . "The 1938 Food, Drug and Cosmetic Act prohibits the marketing of any cosmetic that is harmful to the user. The law, however, does not require declaration on the label of the essential ingredients of the product—information that would be extremely useful to many persons, especially those who are allergic to certain substances. Nor does the 1938 Act require pretesting of a product before it is distributed. Fly-by-night manufacturers can put alluringly advertised products on the market, make a quick killing, and then dissolve their organization when the Food and Drug Administration begins checking on complaints of unhappy experiences from users of such products." Consumer Bulletin Annual, Consumers' Research, Washington, N.J., 1968
- . The American Medical Association's Committee on Cutaneous Health and Cosmetics has estimated that 5 to 30 percent of patients have skin problems - some of which are caused by reactions to cosmetics.

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
<ul style="list-style-type: none"> <li>"A number of physicians specializing in skin disorders report that they are seeing an appreciable number of people who have been made allergic to sunlight by some of the big-selling after shave lotions and by the deodorant toilet soaps that contain germ-killing chemicals other than hexachlorophene. The doctors aren't certain what ingredients in the lotions cause the allergy, but with the soaps they claim that a chemical known as tribromosalicylanilide (TBS) is the main offender." Wall Street Journal, February 1972.</li> <li>Some authorities in the field feel that regulations to protect consumers need to be strengthened.</li> </ul>	<ul style="list-style-type: none"> <li>Do pupils feel that the present regulation of the industry provides sufficient safeguards to consumers?</li> <li>Are pupils aware of any cases of consumers who still suffer injury from cosmetic use? If so, what further steps should be taken?</li> <li>Comment on the following quotation from Consumer Bulletin Annual, 1973, Consumers' Research: "Since cosmetics are not required to list their essential ingredients on the label it is often difficult for medical men to treat a patient for dermatitis or other allergic reaction suspected to be caused by some cosmetic. The demand for a list of the ingredients on the label has been met by the trade with a proposal of the Cosmetic, Toiletry and Fragrance Association for voluntary <i>registration</i> (listing) of the names of cosmetic product ingredients with the Food and Drug Administration, the information to be made available to consumers who indicate a valid need for requesting it."</li> </ul>	<ul style="list-style-type: none"> <li>Food and Drug Administration</li> <li>The Medicine Show, Consumers Union, Mt. <p>. There is considerable evidence that the claims made for many cosmetics are overstated and that some cosmetics may indeed be harmful.</p>		

## UNDERSTANDINGS

- FDA has certain restricted authority to regulate the cosmetic industry. It does not have the power to require the manufacturer to state the ingredients of his product. However coal-tar hair dyes must be labeled as follows:  
"Caution: This product contains ingredients which may cause skin irritation on certain individuals and a preliminary test according to accompanying directions should first be made. This product must not be used for dyeing the eyelashes or eyebrows. To do so may cause blindness."

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- Obtain from the Food and Drug Administration copies of the Food, Drug, and Cosmetic Act. Note what powers are given to the Administration and what powers are not given. Should stricter controls be written into the law?
- Comment on the following statement by FDA Assistant Commissioner Winton B. Rankin: "The problem today is not so much the products that are known to harm, but the cosmetics that are not known to be safe."

## SOURCE

- "Coal-tar hair dyes are exempt from this (the coloring) requirement, however. It is known that these hair dyes can cause allergic reactions in some persons. The law requires the label of this kind of hair dye to bear a conspicuous warning that it contains ingredients which may irritate the skin, and to give adequate directions for the user to make a preliminary sensitivity test, called a 'patch test.' This is to enable a person to tell whether she will be sensitive to the dye, and to avoid its use if she is." FDA Fact Sheet
- "FDA officials say that mercury compounds as active ingredients may be found in certain skin bleaching or facial creams and lotions. Mercury compounds have also been widely used as preservatives in a number of cosmetics, including certain hand and body creams and lotions; hair shampoos, hair rinses, hair straighteners, hair colorings; bath oils, bubble bath; makeup; antiperspirants and deodorants.  
"There is evidence that prolonged use of mercury-containing products may result in

mercury poisoning with symptoms such as numbness or aching extremities, weakness, nervousness and difficulties in speech, vision or hearing." Consumer News, U.S. Office of Consumer Affairs, August 1, 1972

- . "The Food and Drug Administration, over the protests of consumer groups, is expected to authorize soon a controversial and far-reaching experiment in self-regulation by the \$6 billion-a-year cosmetics industry. "Within a few weeks, the agency plans to approve formally a proposal by the Cosmetic, Toiletry and Fragrance Association, the industry's major trade group, for voluntary registration and disclosure to the government of hitherto highly secret cosmetic formulas. As a result, the FDA expects to be far more able to identify cosmetic hazards and require the removal of dangerous products from the market. The agency wouldn't disclose the secret formulas, however. "Critics of the plan note that the companies will still remain largely free of federal controls. Indeed, the industry-devised system is obviously designed

to ward off firmer regulation by the government."  
 "FDA, Cosmetics Firms Work Out a Program For Spotting Hazards,"  
 The Wall Street Journal, February 2, 1972

"Virginia H. Knauer, special assistant to President Nixon for consumer affairs, has announced the start of a national campaign requiring the \$6-billion-a-year cosmetics industry to label its products with all chemical ingredients.

"Mrs. Knauer said an average of 60,000 women a year develop reactions to cosmetics serious enough to consult skin specialists. Many more treat themselves, she said.

"If all the ingredients were labeled,' she said, 'the ones causing allergic reactions could be identified and eliminated.'

"Mrs. Knauer said she hopes that with sufficient pressure the cosmetics manufacturers will comply voluntarily."

- . As the following news release indicates, cosmetic manufacturers are beginning to indicate a willingness to reveal the ingredients in their products. Should such a requirement be written into law or regulation?  
 "The Office of Consumer Affairs has received letters from 19 cosmetic manufacturers indicating that they are considering ingredient labeling of their products. The letters were in response to inquiries made by OCA about the companies' policies on ingredient labeling. Virginia Knauer, OCA Director, has been urging cosmetic makers to provide ingredient information because (1) ingredient labeling will allow consumers to avoid products containing noxious or allergy-causing substances; (2) such information will help doctors to diagnose allergies; (3) consumers "have a right to know what is in a product before buying it; in particular, they are entitled to know precisely what is in something being put on their skin, hair, or near their eyes."  
 Consumer News, Office of Consumer Affairs, September 1, 1972
- . Congress is now considering premarketing safety clearance of types now required for new drugs, food additions, and color additives.
- . "There is always an occasional person who is allergic to a particular cosmetic or cosmetic ingredient, and no law can be written that would completely protect all such persons. However, if a product causes injury to an appreciable number of persons - even though injuries appear to be of allergic origin - then the product is deemed to be injurious and is removed from the market."  
 Fact Sheet, Food and Drug Administration
- . "What does the term 'hypoallergenic cosmetics' mean? Dr. Charles Edwards, commissioner of the Food and Drug Administration, testifying before the house appropriations committee, is quoted as saying that the phrase means nothing except a low incidence of allergic reactions. In other words, the person with a particular sensitivity to some basic cosmetic substance may be unable to use any product, for example nail lacquer, that

- Some consumers are allergic to certain cosmetics that do not have adverse effects on the majority of consumers.
- Have the class poll family and friends to determine if any adverse reactions have been noted which might be due to cosmetic usage. Among the symptoms which dermatologists have noted are the following:

  - "Skin - Contact dermatitis, urticaria photosensitivity may be traced to nail polish, nail polish remover, cosmetic creams, lotions, perfumes, perfumed cosmetics, colognes, soaps, deodorants, astringent lotions, dry shampoo, liquid shampoo, permanent wave solutions, hair dyes, hair tonics, hair lacquers, eyebrow and eyelash dyes, depilatories, skin peeling preparations, bleaching creams,
- "A 'patch test' should never be omitted when the label of the product calls for it. The adverse reactions can be quite serious. Since sensitivity can be built up by repeated applications, there is no way except the patch test to determine the reactions of any individual at any time. Do it before each application." Fact Sheet, Food and Drug Administration
- Perfumes, which are often a blend of a number of substances, are the most common cause of unfavorable cosmetic reactions when used by certain consumers.
- Unscented cosmetics often provide relief for allergy sufferers.
- It is estimated that 7 million American women have sensitive or allergic skin. Some firms now specialize in producing hypoallergenic cosmetics to meet the needs of this large group of consumers.
- "Safety Guidelines to Hair Bleaching" and "Guidelines for Straighter Hair" leaflets from the Committee on Cutaneous Health and Cosmetics, American Medical Association, 533 North Dearborn Street, Chicago, Illinois 60601

## UNDERSTANDINGS

- Some cosmetics also regarded as drugs may affect the body.

- Wild and extravagant claims are often made for products. By the time the case is taken to court and proof is made that the product will not do what is claimed for it, the promoter may have made a fortune. Indeed he may once again make such claims for a similar product under a different name and once again bilk consumers.

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- freckle creams, shaving cream, wave sets, tooth paste, tooth powder, rouge, liquid face powders, cake face powders.
- Nails - Cracking, splitting, damage to nail bed (onychosis, paronychia) may be caused by nail lacquers, nail lacquer base coat, nail lacquer removers.
- Lips - Chronic dryness, chapping, cracking (chelitis) can come from lipsticks containing indelible dyes.
- Eyelids - Dermatitis may be caused by nail polish, soap detergents, astringents, eyebrow and eyelash dyes.
- Scalp - Dermatitis of the scalp may be caused by soap, shampoo, hair tonics, hair dyes, permanent wave solutions, wave sets, hair lacquers.
- Ears - Auricular eczema may come from soap, shaving soap, shaving cream, shampoo, hair tonics, hair dyes.
- Conjunctiva - Conjunctivitis may be traced to scented cosmetics, perfumes, toilet waters, dusting powder, face powder, wave set, dry shampoo,

## SOURCE

"Give particular attention to warnings on labels for cosmetics intended to alter the structure or function of the body. Such cosmetics--including hormone creams, skin bleaches, and certain types of deodorants -- are also regarded as drugs. Observe warnings and follow directions on the label of these cosmetics as carefully as you would for any other medicines!" Food and Drug Administration Fact Sheet

- "In evaluating the claims made for cosmetic products, many persons are so influenced by the natural desire to improve the appearance that they are inclined to accept as fact what amounts to wishful thinking. Consumers should be skeptical of extravagant claims and should know that surface applications to the skin or hair cannot produce deep physiologic changes -- or at least if they did they would be dangerous and could be used safely only under medical supervision. The Food and Drug Administration knows of no scientific evidence that any cosmetic will grow hair on bald heads, remove wrinkles, eliminate freckles, restore lost youth to

Thus the consumer consumes not things, but expected benefits—not cosmetics, but the satisfactions of the allurements they promise ... not low-cal whipped cream, but self rewarding</li> </ul> |
|--|---|--|

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
<p>. Hope is what is sold as cosmetics.</p>	<p>. Comment on the following quotation: "Women gladly pay high prices for that look of youth or that lemon-fresh feeling they expect from cosmetics. In her book <i>Cosmetics: Trick or Treat?</i> author Toni Stabile says 'The fancy jars, the perfume, the expensive advertising and promotion—and the markup—bring the price to whatever the manufacturer thinks he can persuade women to pay.' The perfume is probably more expensive than the other ingredients combined, and yet, says Miss Stabile '...it adds nothing to the efficacy of a cream.'" <i>Everybody's Money</i>, Spring 1972, CUNA International, Madison, Wisconsin</p>	<p>indulgence combined with sophisticated convenience." Levitt, Theodore, Harvard Business School, in <i>Advertising Age</i>, quoted in <i>Consumer Reports</i>, March 1972</p> <p>. "The ads have a way of making women feel guilty for not pampering themselves with all those magic mysteries. Stephen Mayham, lifetime honorary president of the Toilet Goods Association, says 'Hope is what we sell in cosmetics.' The manufacturers say women want the snob appeal of high-priced cosmetics, so the industry obliges them with 'psychological pricing.'" <i>Everybody's Money</i>, Spring 1972, CUNA International, Madison, Wisconsin</p>

HOW DO FIRMS PROMOTE THE SALE OF COSMETICS?

<p>. Advertisers use many appeals to promote their products.</p>	<p>. Name at least five commonly advertised beauty aids and indicate the appeal each makes. Examples: Brut - after shave lotion - ("he man" appeal) Hai Karate after shave lotion - (irresistible to opposite sex)</p>	<p>. "What is charm? The dictionary tells us it has something to do with magic and the casting of spells. For example, a girl with charm will often be described as enchanting. "Actually, charm is a very down-to-earth sort of 'magic' that can be cultivated. It is</p>
--	--	--

## UNDERSTANDINGS

- Charm is a magic ingredient that can be created more within than from without.
- Charm is a quality that makes girls lovely to know as well as to look at. A beautiful girl attracts others, but it is her charm that holds them.

- Individual's motives for purchasing differ.

## SUGGESTED PUPIL AND TEACHER ACTIVITIES

- Conduct and tape record a shoppers' quiz at a well-known store. Find out from shoppers why they buy the brand they do. What are the major influences on their buying habits: brand loyalty? testimony of friends? price? influence of young people? articles in fashion magazines or newspapers? the appeal of various scents? the packaging of the product? the salesmanship of the clerks? Share the tape recordings with the class. List the reasons given for buying particular products. Does any one pattern for buying emerge — in other words are there one or two most important reasons for buying particular brands? What relationship is there between price and quality of the article selected?
- Role play this situation:  
A group of boys are discussing the face lotions they use. Have each tell why he uses the brand he does and what, if any, he thinks the reaction of girls is to the use of that particular brand. Let the girls act as the

made of a warm personality, poise and a genuine interest in the feelings and thoughts of others.

"Of the main elements that make up charm, poise is the most difficult for many girls to attain. This is where good grooming comes in. A girl who is well-groomed knows she has nothing to be self-conscious about. She becomes free to give her attention to others and to let her personality shine through.

"In essence, a self-confident girl is one who will be able to act 'natural,' and that is the most endearing feminine quality of all. You will find the rewards that come with the achievement of charm and beauty well worth the efforts you have made."

"Charm - The 'Magic' Ingredient," Create Your Own Beauty and Charm, Lever Brothers Company

- "Charm is caring about others and the world around you. Charm comes from recognizing your own individuality and self-worth and that of others. Charm means manners that match the

Remembering your own reaction to advertisements and promotional campaigns, help the national manufacturer plan his campaign.

**WHAT CAN A CONSUMER WHO WISHES TO SAVE MONEY ON COSMETICS DO?**

- . One solution to the problem of cosmetic costs is to buy more discriminately and to use fewer expensive cosmetics.
- . Ask students for their suggestions of how to save money on cosmetics. Make illustrations of their ideas and prepare a bulletin board display with a catchy title such as BEAUTIFUL BUT NOT DUMB.
- . Joseph Robinson, a University of Wisconsin pharmacy professor, says:  
"99 percent of cosmetics are virtually the same except for different perfumes and color blends. Facial creams, for example, all do essentially the same thing: prevent moisture loss. Cleansing creams, cold creams, and lubricating creams," says Professor Robinson, "all have mineral oil as their

	<p>What are pupils' reactions to the following statements from the same source? How can consumers, armed with this information, save money?</p> <p>"Astringents all have water, alcohol and aromatics. The latter ingredient gives the cosmetic its fragrance, which can be a nice perfume smell or a 'hospital' smell to make you think the cosmetic is therapeutic. The alcohol gives the skin that 'tightening feeling. 'It makes people think something is happening,' says Professor Robinson, but 'the feeling is only psychological.' "Exotic mysteries like royal jelly, orchid pollen, mink oil, turtle oil and placenta are also pooh-poohed by scientists. The American Medical Association's special committee on cosmetics says there is no evidence that these ingredients have any cosmetic value. The AMA urges women to use the same good judgment when buying cosmetics as they do when buying other products."</p>	<p>has been particularly annoying. Because of the apparent promotional appeal of ingredients in cosmetics which have sexy connotations, it isn't surprising to find materials such as placental extracts and pregnenolone finding their way into cosmetics in the same way as have the female sex hormones."</p> <p>Lorincz, Allan L., M.D., "Dermatological Research and Cosmetic Formulation," Department of Medicine, University of Chicago</p>

Background Material:

"Do High Prices and Brand Names Assure Top Quality?"

"The consumer's propensity to follow price as a guide to quality has been profitably used by the sellers of cosmetics. Buyers are unable to judge quality on the basis of performance. The satisfaction which may be derived from using such products may be in part a result of ideas which have been implanted by advertising. Large sums of money are spent for competitive advertising by the sellers of cosmetics. The margins between cost of manufacture and selling price are high; one face cream which costs \$1 to make sells at retail for \$6.

"Cosmetics are basically similar. Many private brands are made by companies that produce the expensive nationally advertised brands. But retail sellers have learned that lower prices do not necessarily increase sales. This is because national brand advertising has succeeded in convincing many buyers that a high-priced brand assures high quality.

"It is not necessary to pay a high price to obtain good cosmetics. Many products selling at low prices contain pure, high-quality ingredients and are skillfully blended. Manufacturers of paraffin and petrolatum blends manufacture the basic cream for face cream by the ton. Except for differences in perfuming and packaging, high-priced and low-priced creams may come from the same batch."

Gordon, Leland J. and Lee, Stewart M., "Economics for Consumers," Fifth Edition, American Book Company

The following advice is offered by Consumers' Research:

"Cosmetic products are currently pretty well policed by the Federal Food and Drug Administration for safety, but allergic reactions and sensitivity to certain ingredients are not always taken into consideration promptly. Extravagant claims may take their toll of the consumer's pocketbook before proper action can be taken by federal, state, or local bodies. When one is lured by some promise of quick and glamorous results, it will be easier on the pocketbook to keep in mind that competent experts hold:

- Vitamins in cosmetics cannot be absorbed through the skin in sufficient quantity to be beneficial to the skin of the user.
- The skin cannot be fed or nourished by any external application.
- No preparation applied externally can dissolve fatty tissue or effect a reduction in weight.
- There is no known preparation that will actually prevent or remove blackheads.
- Chemical depilatories applied externally cannot permanently remove hair. Permanent removal can be accomplished safely by electrolysis.
- Good cosmetics can be obtained at low or moderate prices that will be just as effective in their application as high-priced luxury brands.

Sometimes only the container and color or perfume will be different."  
Consumer Bulletin Annual, 1970, Consumers' Research, Inc., Washington, N.J.

difficult of all to measure, <u>psychic satisfaction</u> .	<ul style="list-style-type: none"> <li data-bbox="765 394 1099 555">. How might reducing salons capitalize on the desire to firm muscles or lose weight?</li> <li data-bbox="765 586 1140 2042">. Comment on the following experience of an investigation conducted by the Toronto Star newspaper. A reporter, Bonnie Cornell, went to a clinic, posing as a housewife interested in reducing her weight. She was told by an "analyst" that she needed to reduce a total of 31 2/8 inches from approximately 18 body measurements. The company guaranteed her the loss if she took 22 treatments at a cost of \$495. Miss Cornell said that the treatment seemed expensive. She was told that she was lucky; there was a special reduction in effect that evening and it would cost her only \$330. She secretly tape-recorded the conversation with the "analyst" and submitted the tape to a physician who heads the Obesity Clinic at Women's College Hospital. The physician's response to the tape recording included this concluding statement: "My medical opinion of a program of this type is that it's a very expensive gimmick. If a person</li> </ul>	<p data-bbox="1168 394 1530 1653">despised. Instead of signifying affluence (as it still does in poor countries), it is merely a product of it, and now indicates 'lack of self-respect'. "Every day, millions of words about reducing are fed to the American public, with before-and-after pictures and 'true stories' of beauty queens, housewives or celebrities. Bookstores have entire sections devoted to diet books; many different diet magazines are available on most large newsstands. Radio, television — all contact with society-bring constant reminders of the fat fetish. To live properly in America, you must be slim. That's the only way to marry, get a job, be respected, have opinions, communicate, relate and date. Everyone's out to help you — from the makers of soft drinks to social psychologists.</p> <p data-bbox="1168 1659 1530 2042">"A short explanation for those mythical people who have never worried about weight: food can become an addiction, and there are more food addicts than any other. It leads to guilt, self-hatred, general misanthropy, discomfort, tiredness, aches, sickness and loneliness." Perutz, Kathrin, "Beyond the Looking Glass - Life in the Beauty Culture," Pyramid Books, New York

ARE CLAIMS FOR REDUCING PARLORS VALID? OPINIONS DIFFER.

On one hand

And on the other

- . So called "health salons," slimming parlors, and reducing salons are sometimes guilty of false and misleading advertisements and promotional devices.
- . Just as in all lines of business, while there are unscrupulous operators, there are also scrupulous establishments that make no false claims or promises.
- . Real weight losses of a permanent nature are rare. Most of the weight loss is due to moisture loss which is soon replaced. However, the real question is whether or not similar results could have been obtained without the expense of a reducing salon. In other words, was it the diet that produced the results or was it the salon's programs. A person can diet at home without the expense of a salon.
- . Some patrons claim permanent weight loss and proprietors state that in cases where this has not been so the patrons have failed to attend the physical fitness sessions regularly or have not observed reasonable dietary precautions.

- . Promotional claims of "free" prizes, and reduced membership fees are "come ons" to attract customers.
- . Claims of reduction of health problems, including the alleviation of constipation, arthritis, and high blood pressure, are false and misleading. Some programs actually aggravate, rather than alleviate, an ailment.
- . Testimonials and pictures of satisfied customers are often faked.
- . The cost of "regular" memberships is overstated in order to make prospective patrons feel that the "reduced" price (which may be the regular price) is a bargain which must be seized.
- . Some "health spas" fail to notify the customer that he is signing a promissory note that will be turned over to a third party for collection even if the contract is not fulfilled. It is often more difficult to cancel a contract even for legitimate reasons if a third party is involved.
- . Since the operators of the salon take the customer's weight and measurements before and after treatments, it is easy to falsify results. Many spas are guilty of misrepresenting expiration dates of special offers. Often "limited-time" offers are not limited in time at all.
- . Such promotions may be used by some advertisers, but reputable reducing parlors do not advertise falsely.
- . Whether or not medical testimony agrees, many patrons feel that their health problems have been lessened by attendance at such clinics. It is always wise to pursue any weight reduction program under the direction of a physician.
- . This may be true in some cases but it is not true of reputable slimming clinics.
- . All businesses have their fringe of dishonest operators; such practices are no more common in the reducing business than they are, for example, in car sales.
- . This practice may be true in some cases, but it is not true of reputable spas. In any case, such a practice is common in other lines of business.
- . Some patrons claim that, by their own measurements and weight watching, substantial gains have been achieved.

#### CONSIDERATIONS BEFORE JOINING A HEALTH SALON

The representatives of some spas engage in high pressure tactics to entice prospective members into signing long-term membership agreements. They often play on a person's weaknesses. The following are common statements made by salesmen:

"You know, Mary, your husband is probably embarrassed to be seen with you."

"You are really much too fat to wear a bikini."

**"THE BEST EXERCISE FOR YOU IS  
PUSHING AWAY FROM THE TABLE."**

"Each month that you put off membership in our spa will shorten your life span."

Reputable spas will not use high pressure sales tactics, but will rather allow prospective members to make a decision based on the facts.

The personnel of many salons misrepresent the type and quality of facilities and instruction offered. It is not uncommon for consumers to join a spa based on a verbal promise of personal instruction that is not offered or of the use of a whirlpool which might not even exist. All such promises should be put in writing.

Many spas maintain a policy of not allowing members to cancel their contracts even for legitimate reasons such as medical problems. Quite frequently, consumers are forced to pay for their membership even though they have discontinued attending the spa. For this reason, it is very important to get all of the facts in writing before signing a contract. It is also wise to consult a physician prior to joining, especially if there is any sign of a physical ailment at the time.

Many salons offer phoney "guarantees" of results to be achieved. Remember that a verbal guarantee is worthless. Consumers should also be wary of written guarantees. It is somewhat deceptive to advertise that all individuals can achieve specific results in a specified period of time. For instance - "Lose 20 pounds in 3 weeks." Remember that each person's body metabolism is different. Also, such factors as daily activity affect weight loss. Therefore, no two people will lose weight and/or inches at the same rate.

Many reducing salons offer quick and easy methods to lose weight or inches from various parts of the body (spot reducing). Many experts in physiology and physical fitness maintain that one cannot lose weight passively. Weight loss can only be achieved when more calories are burnt up through activity than are taken in. It has not as yet been proven that "passive" exercising is worthless but most experts believe that weight loss can only be achieved through dieting or active exercise or a combination of the two. A person is engaged in active exercise when he is exerting energy (when calories are being burned up).

guard reported an initial weight loss. The weight lost was soon regained. However, the patron thinks his \$1,200 life membership is a good investment.

Opportunity cost is an economic term referring to the fact that, once a choice for the use of our money is made, other opportunities are shut out. In the case of the building guard who spent 1/7 of 1 year's income, the decision to use the money for a health membership was made. Would the class agree with the guard's decision?

- . What are some of the devices and treatments offered by reducing salons?

- . Collect brochures describing the services offered by reducing salons and body building clinics. Do they offer equipment which claims to:
  - induce perspiration?
  - cleanse the pores of impurities?
  - provide relaxation?
  - provide relief from tension?
  - take weight off the midsection?
  - add to the bust line?
  - build a strong healthy torso?
  - perfect the contours of hips, thighs, calves, and ankles?
  - improve general health?
  - strengthen the heart muscles?
  - lengthen life?
  - reduce dress or suit size?

- . Check with the following agencies to see what reports they have on the operation of reducing salons:
  - New York State Bureau of Consumer Frauds and Protection
  - Better Business Bureau, Trade Practices Section, 1150 17th Street, N.W., Washington, D.C.
  - Federal Trade Commission, 26 Federal Plaza, New York, N.Y.
  - Consumer-Business Information Bureau, Toronto, Canada

Study the changes in length of men's and women's hair through history. Is long hair for men still shocking to some people? Is the crew cut "dead"?

- . How has the cost of haircuts for men changed during the last 25 years?
- . The most famous stylist for men is Jerry in New York, who charges \$50 for a haircut.

## WHAT SHOULD WE KNOW ABOUT WIGS?

- . Both men and women are now buying and wearing wigs.
- . List reasons why wigs have become so popular? (Convenience, better looking, less expensive, important to personality change — "doing their own thing")
- . Wigs are available in many colors and in long, short, curly, and smooth styles, for days and evenings — allowing instant changes in appearance and mood.
- . Have you ever heard any amusing stories of wig mishaps? Are these mishaps common?
- . Even the New York Times reported the story of an elegant man in a dinner jacket who observed his moustache plop into his martini; also the man who dived into a swimming pool before a company of distinguished guests and then came bobbing up to display the nylon base placed on his scalp for hair-weaving; and the tragic story of the woman who was separated from her wig box during a transatlantic flight who unsuccessfully argued with the airline that one's hair is a part of one's person and should be allowed to travel in the cabin.

UNDERSTANDINGS	SUGGESTED PUPIL AND TEACHER ACTIVITIES	SOURCE
. Wig making is an ancient business.	. When were wigs first worn?	<ul style="list-style-type: none"> <li>. Perutz, Kathrin, "Beyond the Looking Glass," William Morrow and Company, Inc., New York, 1970</li> <li>. The ancient Egyptian, Greek, Chinese, and Orthodox Jewish tradition of shaving a woman's head at marriage still persists in places, and then the woman wears a sheitel. Wigs not meant for religious purposes were first worn in the theater.</li> </ul>
. Both human hair and synthetics are used to make wigs.	. How are wigs made and what material is used?	<ul style="list-style-type: none"> <li>. Formerly all wigs were made of human hair and were quite expensive. A good wig was at least \$150. Construction has improved constantly and in 1972, synthetics are almost indistinguishable from human hair. They have light, well-ventilated bases that are comfortable and allow the scalp to breathe.</li> </ul>
. Length, bulk, and construction determine the cost of a wig.	<ul style="list-style-type: none"> <li>. How much does a good synthetic wig cost? Survey your friends and see how many wigs they own and the average cost. Prices have become lower due to greater demand.</li> <li>. Discuss the statement: "It isn't a question of whether to own a wig; the question is how many." Do you agree?</li> </ul>	<ul style="list-style-type: none"> <li>. A good quality synthetic wig ranges in cost from \$30-\$130.</li> </ul>

Has there been a trend among teenage males to wear more jewelry in recent years? Have tie tacs become more popular since wide ties have returned?</li> </ul>	<ul style="list-style-type: none"> <li>During and after World War II, identification bracelets were popular and they return to stores from time to time. Very fancy watch bands could be said to be a kind of bracelet. Neck chains, beads, peace symbols for casual and beach wear have had a brief flurry in recent years.</li> </ul>
<ul style="list-style-type: none"> <li>Men's jewelry usually includes cuff links, tie tacs, watches, and rings.</li> </ul>	<ul style="list-style-type: none"> <li>Do the materials from which men's jewelry is made differ from women's? Can you locate your grandfather's stickpin? Look in your crystal ball and predict the future for men's jewelry.</li> </ul>	<ul style="list-style-type: none"> <li>Department stores show cuff links and tie tacs in metals, semi-precious stones, jade, leather, enamels, ceramics, inlays, wedgwood, intaglios, cameo's, old-button effects and a host of other forms. As for rings, Tiffany's, the August Manhattan jeweler, will not stock men's diamond rings, claiming diamond rings are not meant for the male. But many wealthy men do not agree, and any other jeweler will be happy to supply them. Most usual are rings of gold, jade, lapis lazuli, onyx, topaz, garnet. These are usually worn on the little finger of the left hand." Esquire edition, "Esquire Good Grooming for Men," Grosset and Dunlap, New York, 1969</li> </ul>

## SUMMARY

So timeless and so universal is the desire to look attractive and to adorn ourselves that it is difficult to be entirely rational in considering the purchase of beauty products such as cosmetics and jewelry. Where we might, as consumers, follow all the good precepts of consumer purchasing in such matters as food buying, when it comes to "buying dreams" (as one cosmetic manufacturer describes it) our rational judgment may fail. Theoretically, the knowledge that most cosmetics are the same, that in most instances they are made from relatively inexpensive common materials, that they will not transform us into visions of loveliness, does not seem to affect consumer purchases of these products. Like Ponce de Leon's search, our quest of the fountain of eternal youth sustains a growing industry.

Since the purpose of consumer education is not to impose values on other human beings, but rather to allow them to satisfy those values they seek, this module will have served its purpose if it informs consumers and then leaves them free to use or ignore the information gained. In the quotation which follows are expressed the hopes of the consumer. These hopes are the universal pleas of all consumers, but, perhaps, have particular cogency when applied to the matter of beauty products and services:

" . . . Ad agency chief Andrew Kershaw told the Toronto chapter of the American Marketing Association, 'Our main problem is that we are in love only with the technique of marketing. We should love consumers more. I define consumerism as a movement that makes three demands of us: Don't hurt me, Don't cheat me, Don't turn a deaf ear when something goes wrong' . . ."

Marketing, March 1972.
