ABSTRACT

This content analysis schedule for the Chinese Bilingual Pilot Program of the San Francisco Unified School District presents information on the history, funding, and scope of the project in its second year. Included are sociolinguistic process variables such as the native and dominant languages of students and their interaction. Information is provided on staff selection and the linguistic background of project teachers. An assessment is made of the duration and extent of the bilingual component, and the methods of second language teaching in general. Included is an analysis of materials, student grouping, tutoring, curriculum patterns, and cognitive development. The report also discusses self-esteem, learning strategies, the bicultural and community components, and means of evaluation. This schedule has been verified by the project. (SK)

the following:

- a. Those children who were the most recent arrivals from Hong Kong.
- b. Those pupils who were obviously non-verbal in the English language, as determined through kindergarten and first grade teacher observation.

Pupils who were selected for the first year's pilot program included 14 new arrivals from Hong Kong, and 11 pupils who had resided in the United States anywhere from less than one-half year up to 5 years; and whose difficulty with the English language led to their inclusion in the program through teacher recommendation.*

3. Baseline Data and Evaluation

a. During the first month of the pilot program a battery of six teacher-made tests was given each child to measure his "language starting point" relative to the program objectives as spelled out in the program proposal.

b. Pre-tests

The pre-tests that were used to assist in the development of baseline data for the program evaluation consisted of the

2) the great number of foreign-born children.

^{*}The staff chose to fill up the entry class with non-English speaking children over the option of having both non-Chinese speaking and non-English speaking in the same class because

¹⁾ the former presented a smaller range of needs than the latter;

following:

- 1) An interview, in English, was held with each pupil participant at the beginning of the school year in order to make teacher evaluation of the individual pupil's oral response to social questions. (For interview format, see page A1 of Appendix.)
- 2) An interview was introduced in Cantonese and carried out in English to determine the individual puril's oral command of basic English language structure. This interview was tape recorded, and this pre-test tape recording at the end of the year will be used as part of the program evaluation. (See page A2 of Appendix.)
- 3) Class exercises introduced in Cantonese and conducted in English were instituted to obtain a "paper and pencil" record of each child's aural understanding of the basic English language structure. (See page A3 of Appendix.)
- An interview was constructed half of which was conducted in Cantonese and half of which was conducted in English so as to obtain a record of each pupil participant's oral responses to questions utilizing basic English.

 (See page Al of Appensix.)
- 5) An interview was developed and utilized to test each pupil participant's English and standardized Cantonese idioms. A record has been made of this pre-test also

and will be used in the program's evaluation. (See Appendix, page A5.)

- 6) A "paper and pencil" test was utilized to obtain a record of each pupil participant's ability to write at least 81 basic Chinese characters. (See Appendix, page A6.)
- c. During the last two months of the project (May and June, 1970), post-tests utilizing items mentioned above will be given to each pupil in the program. The program's instructional team has also evaluated individual pupil progress within the program by using a staff devised check-list of pupil accomplishment.

 (For further information see page A7 of the Appendix.)
- d. During the months of May and June, 1970, the pupils in the Chinese bilingual pilot program will also participate in the state-wide reading test required of all first grade children. A study made of reading scores of the first grade population of Commodore Stockton School using scores of last year's statewide reading tests showed:
 - The average Hong Kong born child reads half a year below grade level (in this case grade level being at 2.0).

 Whereas the average English speaking United States born pupil reads, on the average, at the 2.0 grade level.
 - 2) The same Hong Kong child reads at a 1.5 grade level in comparison to the 1.7 grade level score for the average United States born child regardless of language spoken at home.

5d

- a year or less of kindergarten reads at a 1.2 grade level in comparison to his peers who have had a year of kindergarten experience. Those who have had kindergarten training read on the average of a 1.5 grade level.
- based upon the fact that 60 percent of the bilingual pilot class at the end of the year will read at the 1.2 grade level and that 20 percent of the class will read at the 1.5 level. The remainder, 20 percent of the class, will read at the 1.7 level. One of the major objectives of the pilot program is to achieve an over-all class reading score of 1.5 in reading. For further information on the reading survey upon which the above figures are based, see page A9 of the appendix.
- f. Although baseline data is now available to program staff
 members, an <u>actual</u> evaluation of the program has not yet been
 completed. The evaluation based on the aforementioned base-

1. Classroom Teachers

- a. The classroom teachers involved in the Chinese bilingual program are all bilingual in Cantonese and English, as well as experienced in teaching within a bilingual-bicultural environment.
- b. The teaching staff in the program has collectively had many year's of teaching experience within the Chinatown area. They are experienced first-and second grade elementary teachers and are highly competent in teaching in either the English or the Cantonese language.
- c. During the first year of the program, the instructional staff,

evaluation method for measurement of classroom teacher effectiveness within the program. Also, the classroom teachers in the first year of operation of the bilingual program developed many teacher-made tests for the pupils enrolled in the program. The experience derived from the development of these tests will be used by the staff in the coming year for the development of similar pupil-evaluation instruments for the second grade. Also, of course, the staff will use California standardized tests to assist in measuring pupil progress in such subject areas as reading and mathematics.

c. Bilingual Classroom Teachers

Responsibilities:

The teachers will teach the bilingual classes and will act as coordinators of the bilingual curriculum and materials development.

Qualifications:

1) Must be an experienced teacher with a valid California

Vironment.

- year's of teaching experience within the Chinatown area. They are experienced first and second grade elementary teachers and are highly competent in teaching in either the English or the Cantonese language.
- c. During the first year of the program, the instructional staff,

evaluation method for measurement of classroom teacher effectiveness within the program. Also, the classroom teachers
in the first year of operation of the bilingual program developed many teacher-made tests for the pupils enrolled in the
program. The experience derived from the development of these
tests will be used by the staff in the coming year for the
development of similar pupil-evaluation instruments for the
second grade. Also, of course, the staff will use California
standardized tests to assist in measuring pupil progress in
such subject areas as reading and mathematics.

c. Bilingual Classroom Teachers

Responsibilities:

The teachers will teach the bilingual classes and will act as coordinators of the bilingual curriculum and materials development.

Qualifications:

- 1) Must be an experienced teacher with a valid California Elementary Teaching Credential.
- 2) Must be fluent in both English and Cantonese.
- 3) Must have experience in working with Chinese children.
- h) Must demonstrate strength in teaching English as a second language.
- 5) Must demonstrate knowledge of curriculum development
- 6) Preferrably has experience in curriculum development.

<u>--</u> --

STAFF DEVELOPMENT

To develop improved staff competences, nine all-day staff meetings were held and four outside consultants were employed. The evaluator, present at five of the nine meetings, observed a very favorable reaction of the staff to the various consultants. In fact, the evaluator considered the lectures an education for himself. The staff, while ethnically Chinese, were also educated in the areas of culture, history, festivals, and language. There were many healthy discussions relative to goals, objectives and direction as a result of this stimulation, and if combined with the data analysis, the gap between middle class teachers and working class children could be substantially narrowed.

One very important recommendation this evaluator has relative to staff development is that management not have a staff composed entirely of Chinese. While at first glance this alternative looks inviting, the results would probably be stifling to what is now a very energetic and dynamic program.

It is also recommended that the staff more effectively use their consultants. Rather than have a person lecture for a given period of time the staff should, in addition, be prepared to use the consultants as input to their formulae for solving their own classroom problems as well as those of the overall program. This past year there appeared to be a detachment on the part of the consultants from classroom activities.

I. Abstract

- A. The primary objective of this bilingual pilot program is to develop an educational prototype which may serve as the replicable model for the development of a full scale bilingual (K-12) program within the Chinatown-North Beach target area, as well as serving as a model for other areas in the State and nation that exhibit a similar educational problem.
- B. Other major objectives of this bilingual pilot program are to utilize an experimental class of 25 first grade students in which:
 - 1. Bilingual curriculum and materials (in English and Cantonese) will be developed.
 - 2. The students will be offered special, intensified instruction in both English and Cantonese.
 - 3. Materials will be developed and refined so that an expanded bilingual program (K-12) may be developed for the target area.
- C. Primary procedures to Achieve Stated Objectives:
 - 1. To establish a first grade class of 25 foreign born Chinese children at Jean Parker School.
 - 2. To hire a fully qualified bilingual (English and Cantonese) teacher and paraprofessional to operate the classroom aspect of the program.
 - 3. To employ a bilingual (English and Cantonese) curriculum writer and a clerk to develop a bilingual curriculum and education materials.
 - 4. To develop, under the program, a variety of bilingual materials and teaching strategies for the classroom.
 - 5. To devise and produce appropriate test instruments and procedures for evaluating student progress in English, Cantonese, and the general first grade curriculum.
 - 6. To establish a screening process for students and appropriate educational materials to be used within an efficient and effective bilingual program.
 - 7. To involve, through existing structures, interested agencies and organizations located within the target area so that strong community backing for the program may be achieved. This community backing will play a primary role in the development of a future, comprehensive bilingual program.
 - 8. To utilize fully a number of expert consultants in the field of bilingual education so as to assure for the effective success of the pilot program.

Proposal

The state of the s

DADE COUNT PUBLIC SCHOOL SYSTEM

PROGRAM FEATURE	RELEVANT	IRRELEVANT
Students who were native speakers of English in Class.		Prefer to reach more immigrant Chinese speakers whose needs to learn are more urgent.
Large staff and many Classes.	مله	Only one pilot class with one teacher and one paraprofessional and supportive services.
Six week workshop for Administrators and Teachers.		Lack funds and time.
Detailed linguistic sequences for English as a second language and Spanish as a second language were developed	Need detailed linguistic sequences for English as a second language.	No involvement of non- Chinese students.
Spanish as the vernacular given special attention		
In all areas of curricu- lum, bilingual curricu- 'um in harmony with egular Dade County program as it appears in curriculum bulletins	Bilingual curriculum in harmony with regular SFUSD program.	but there may be in ind year adoughter
Special ESL materials were provided.	Same.	Spanish dira
Spanish thesal reader, Spanish translation of science, health, math series. Spanish library books.	Same but in Chinese.	د در ،

B. An Analysis of Successes and Failures in Meeting Performance Objectives:

1. Although it is a bit early to talk in terms of pupil successes and failures in the Chinese Bilingual Pilot Program, it is still possible to point to a few instances of success. As example:

The class had a conversation period in which children shared news

items in either Chinese or English. At first the Hong Kong children spoke exclusively in Chinese. Six week after the semester began, however, the Hong Kong children started to use English. At this time almost all of them are using English within the conversation period. This conversation time was developed so as to utilize as fully as possible pupil participation. Now all of the pupils can ask questions, make comments, react to what is shared, and chime in (in English or Chinese) with any information they feel is relevant to the discussion. When the conversation period is structured to be carried out in the Cantonese language, the teacher is careful to guide the discussion so that even during the "Cantonese period" English is also being used. This particular activity has increased English proficiency of the Hong Kong born children beyond the expectations of the program staff. The fact should be emphasized that with the program only 8/10th of one year old the Hong Kong children in the class show a great willingness and ability to speak English. They are continually "trying out" their English on others and they no longer appear to be as subdued or passive as they were on entering the program.

The Hong Kong children now can read English with a fluidity and an intonation pattern that is not sing-song or recited in merely a word-for-word fashion. They appear to be finding the English language a comfortable medium in which to express themselves.

items in either Chinese or English! At first the Hong Kong children spoke exclusively in Chinese. Six week after the semester began, however, the Hong Kong children started to use English. At this time almost all of them are using English within the conversation period. This conversation time was developed so as to utilize as fully as possible pupil participation. Now all of the pupils can ask questions, make comments, react to what is shared, and chime in (in English or Chinese) with any information they feel is relevant to the discussion. When the conversation period is structured to be carried cut in the Cantonese language, the teacher is careful to guide the discussion so that even during the "Cantonese period" English is also being used. This particular activity has increased English proficiency of the Hong Kong born children beyond the expectations of the program staff. The fact should be emphasized that with the program only 8/10th of one year old the Hong Kong children in the class show a great willingness and ability to speak English. They are continually "trying out" their English on others and they no longer appear to be as subdued or passive as they were on entering the program.

The Hong Kong children now can read English with a fluidity and an intonation pattern that is not sing-song or recited in merely a word-for-word fashion. They appear to be finding the English language a comfortable medium in which to express themselves.

On the other hand, the non-standardized Cantonese speaking child-ren in the program are progressing quite well in the Cantonese section of the class. Their basic Cantonese vocabulary has

increased and supplementary educational activities such as Chinese folk tales told in Cantonese; Chinese cartoon booklets; American folk tales retold in standard Cantonese; and basic Chinese vocabulary as developed on language master cards by the classroom teachers have proven to be most successful in terms of increasing the standard-Cantonese proficiency of the non-standardized Cantonese speaking children.

Under the social studies program component, the children experienced six first hand experiences with other American children during the year. A monthly program of visits to a neighboring school gave the children personal experiences with American holidays, with Americans. This relationship with English speaking pupils provided continuing motivation to be bilingual. The time spent together gave content and detail to their original vague impression of what being American was.

Every tradition celebrated at home was carefully observed in the classroom. Information, background, vocabulary were developed in conjunction with six Chinese holidays. As a result, parents say that their children are contributing to discussions at home. Parents may not know how much progress their children are making in understanding American life, but they surely recognize their child's growth in knowledge about their own Chinese customs.

2. On the other hand, there have been some failures thus far encountered in the program. It is really unfair at this point to call any particular aspect or component of the program a failure

since a full year has not been expended on the program, and it is neither scientific nor just to talk in terms of success or failure until the full measure of time has been utilized by the program staff. However, the one major weak point thus far discovered in the program is in the area of using cuisenaire rods in the arithmetic section of the class.

There wasn't enough time to let children have many experiences using the rods. A more direct route to conceptualizing might lie in the use of the abacus.

Even without the first hand experiences, the teacher compensated with explanations in Chinese of "greater than - less than" and "place value". After children had understood the operation, they quickly learned the English labels.

At the present time, most of the children are working at grade level, using the Greater Cleveland Math Books, supplied by the State.

C. Modifications of Long Range and/or Five Year Objectives as a Result of the First Year's Operations:

There will be no major modifications of the program's long-range goals or the five-year objectives. The over-all educational goal of the program to "develop an educational prototype which may serve as a replicable model for the development of a full-scale bilingual (K-12) program within the Chinatown-North Beach target area as well as to serve as the model for other areas within the State and Nation that exhibit similar educational problems' is still the primary aim of the program.

An important modification of the program as Originally approved:

An important modification of the program as originally approved has been suggested by the staff. The class size of 25 foreign born children, written into the original proposal, is thought to be excessive by the staff members. Small children brought together in a bilingual and a bicultural situation need greater supervision as well as an environment that will allow them to work in small groups. Because the teacher in the entry classroom did not have the assistance of a paraprofessional and was unassisted for most of the day in her duties, it is the recommendation of the staff that two classroom teachers be assigned to the entry classroom in order to have the time needed during the day to try out educational innovations as well as revising teaching strategies.

An important clarification of the program objectives as originally approved for the entry class has been ammended by the staff. With the entry class composed entirely of Chinese speaking children, here objectives referring to directions, social questions, etc. in Cantonese are for the children speaking non-standardized Cantonese dialects. Furthermore, two of the language skills mentioned on page 11 of the original proposal —as is now determined—should read:

"6. To read and write in English the words and sentences developed in the oral language activities. "

The reason for dropping "as well as Cantonese" is that in the Chinese language system, spoken and written language are not equivalent forms; that is, Chinese words are pronounced one way in speech and are pronounced another way when they are written.

Finally the objective having to do with Chinese writing should read:

"7. To read and write in Chinese the words and sentences chosen for stroke count and utility."

The reason is that many simple words in English are very hard to write in Chinese. It would be difficult to write many of the words mastered in English.

2a-inductive -generative approach: through listening to communication, perhaps of peers, and attempting the new language in situations which call for the student to generate sentences - test his understanding. (the way native language is acquired)
Includes direct association between object, picture or action and word in second language.

2b-deductive - the cognitive code approach: through initial formal study and analysis of grammatical structures, then applying them through examples, i.e. answering questions, or transforming affirmative sentences to negative, declarative to intermogrative active to entermogrative active active to entermogrative active active

examples, i.e. answering questions, or transforming affirmative senter to negative, declarative to interrogative, active to passive.

C-Grammar - Translation Method

Formal study of rules of grammer and translation from first language to second. Emphasis on reading in second language rather than using it for oral communication.

4-to be developed by bilingual curriculum writer

C. Modifications of Long Range and/or Five Year Objectives as a Result of the First Year's Operations:

There will be no major modifications of the program's long-range goals or the five-year objectives. The over-all educational goal of the program to "develop an educational prototype which may serve as a replicable model for the development of a full-scale bilingual (K-12) program within the Chinatown-North Beach target area as well as to serve as the model for other areas within the State and Nation that exhibit similar educational problems' is still the primary aim of the program.

the Summer of 1970, will be given preferential placement in the program's first grade. Also, because there is no bilingual kindergarten program in operation, all immigrant children within the kindergarten classes in Commodore Stockton School will be initially eligible for selection into the program's new first grade class.

All of the pupils who will be included within the three bilingual, bicultural classes next year will have a common educational need to learn, to think, and to express themselves in English as well as in Cantonese. Based on last year's experience, the program staff has found that bilingual instruction has proved to be extremedly useful in:

- a. Teaching first grade level content in the native language (Cantonese), as well as developing greater facility and competency in that language, and greater understanding of basic English vocabulary.
- b. Introducing the English language to the "foreign born" as well as developing a basis upon which they may build a facility for the use of the English language. This held true not only for the "foreign born" pupils but for the "native-born" speakers as well.
- c. Teaching the skills of reading, writing, and speaking a second language to all pupils who were included in the program. The children's improved comprehension was evidenced by their questions and comments after every reading, presentation, and story.
- 7. The instructional staff of next year's Title VII Chinese bilingual program will consist of:
 - a. Six classroom teachers
 - b. Two curriculum writer-developers
 - c. Four full-time paraprofessionals
 - d. One calligrapher
 - e. One part-time resource teacher
 - f. One part-time paraprofessional

Continuation Bruestion 22.0

some regrouping of the English as a second-language class and the Chinese as a second-language class; techniques such as "small group" and "large group" instruction will be utilized in such areas as Chinese physical culture and music. However, a large part of the school day will be spent in the "homeroom" where the bilingual teachers will be able to monitor closely the language growth of the pupils in in the two classes so that neither group will become overwhelmed in its attempt to master English or Cantonese. The bilingual teachers have been and will continue to be aware of the emotional strain that many children experience in their attempts to communicate in a new language, as well as the tremendous educational motivation that may be generated by the pupil's ability to experience success in mastering a new language. Because of this, an extremely close relationship, based upon pupil faith in the teacher, is extremely necessary for the success of the program. The bilingual teachers who have operated in the first year of the program have been able to develop a strong rapport between themselves and their pupils. This rapport is based upon trust and faith in the teacher's abilities, and his interest in the pupil's academic success.

2. Because the children who will populate the two new bilingual second grade classes do not know one another very well and also because they will be separated by some cultural differences in areas such as language, common experiences, and family background, it will be encumbent upon the program to help "breakdown" the social barriers that now exist between the native-born pupil and the immigrant pupil. Within the next year's operation of the program some of the instructional thrust will be directed toward the program technicae in which each

child in the class will assist his peer in gaining language proficiency. Under the close supervision of the classroom teacher, the
child who is highly competent in the Cantonese language will spend
some of his classroom time in tutoring his American-born counterpart
and his American-born collegue will spend some of his classroom time
in tutoring the immigrant pupil in the English. Using this strategy,
not only will the opportunity for language practice multiply, but a
feeling of pupil competence can be developed. Because he will in
effect play a part in the instructional program, the "immigrant child"
may gain a feeling of greater confidence that may well lead to an alleviation of his feelings of inferiority to the native-born pupil.

Also, this "peer tutoring" aspect of the curriculum may do much to
breakdown the native-born pupil's feelings of being alienated from
the Chinese language.

In the normal course of education of immigrant children, the son outstrips the father in acculturation. To help close the cultural gap, the teacher will supplement reading instruction with stories of people and familiar places in Chinatown and with stories about the children's fathers. The social studies will consist of onsite inspections of places in the community that father and son might value, and the arts appreciated by the child's family.

main essentially the same as those described in the original program proposal entitled Chinese Bilingual Pilot Program. Also, with the changes already described, next year's first grade class will be based upon educational objectives that were developed and modified during

the year.

The educational objective (For specific types of behavior objectives see pages AlltoA21in the Appendix.) for the second grade bilingual classes are based upon the pupil achievement of the following skills:

Hong Kong Children

U.S. Children

Language Arts (English)

Language Arts (English)

1) Listening

1) Listening

- - a. 'To discriminate beginning sounds of words.
 - entre, mains To discriminate ending sounds.
 - To hear and to remember poetry.

2) Speaking

- To ask and answer social questions.
- To give a short talk with opposite language partner, topics covered in ESL and CSL.

2) Speaking

- To converse one to one with opposite language partner, topics covered in ESL and CSL.
- b. To ask questions and answer questions in inquiry session.

Reading

- To read sight vocabulary of Dolch List depending on level of reading.
- To teach parents a word a week.
- To score between 2.0 and 3.0 in statewide reading word meaning and paragraph meaning test.

3) Reading

- To read sight vocabulary of Dolch List depending on level of reading.
- To teach parents a word a week.
- To score between 2.0 and 3.0 in statewide reading word meaning and paragraph meaning test.

will be

General Assessments of the Impact of the First Year's Operations on Participating Groups: schools, parents, teachers, community -including unexpected effects.

In general, the impact of the program at this time has had the greatest effect upon pupils and parents. As has been stated, the pupils who entered the program speaking only Cantonese are making headway toward greater facility in the use of the English language under the program. Also, many parents are becoming extremely interested in the program and are highly supportive of it. They are indeed impatient to see the program expanded to other grade levels as soon as possible. Since there is a great concern in the Chinatown area toward the education and assimilation of the "Hong Kong children", the community sees the bilingual pilot program as a method for the assimilation of the foreign born Chinese child into the Chinese-American Chinatown culture without leaving the heritage and the traditions of the home. It is not surprising that so many parents have shown such great interest and support of the Title VII Chinese Bilingual Pilot Program.
