ABSTRACT

            The Illinois Course Evaluation Questionnaire (CEQ) is
an instrument used to collect student attitudes towards a course. Its
purpose is to enable faculty members to collect evaluative
information about their traching. The data are collected and
processed by section but may also be processed by course, department,
college, etc. The student responses are anonymous, and two copies of
the questionnaire results are returned to the instructor only. He may
submit one copy, if he chooses to do so, to his department chairman
for consideration in the evaluation of his teaching. Each
instructor's results are compared to an appropriate norm group.
Comparisons are made with other instructors of his own academic rank,
with thoses at the same course level (i.e., 100 level=freshmen, 200
level=sophomore, 300 level=junior and senior, 400 level=graduate),
with other instructors in his particular department or college, as
well as with all courses at that university to all courses that have
used the CEQ throughout the United States. Conferences relative to
the interpretation of results may be arranged at the instructor's
convenience. (Author)

*ABSTRACT*

The Illinois Course Evaluation Questionnaire (CEQ) is an instrument used to collect student attitudes towards a course. Its purpose is to enable faculty members to collect evaluative information about their teaching. The data are collected and processed by section but may also be processed by course, department, college, etc. The student responses are anonymous, and two copies of the questionnaire results are returned to the instructor only. He may submit one copy, if he chooses to do so, to his department chairman for consideration in the evaluation of his teaching.

Each instructor's results are compared to an appropriate norm group. Comparisons are made with other instructors of his own academic rank, with those at the same course level (i.e., 100 level = freshmen, 200 level = sophomore, 300 level = junior and senior, 400 level = graduate), with other instructors in his particular department or college, as well as with all courses at that university to all courses that have used the CEQ throughout the United States. Conferences relative to the interpretation of results may be arranged at the instructor's convenience. The evaluation service is free of charge to instructors at the University of Illinois and is available upon request from the Measurement and Research Division, Office of Instructional Resources, 307 Engineering Hall, Urbana, Illinois 61801, (2.7) 333-3490.

# ILLINOIS COURSE EVALUATION QUESTIONNAIRE (CEQ)
## RESULTS INTERPRETATION MANUAL
### FORM 66 AND FORM 32[1]

If one assumes that the purpose of education is to change student behavior as a result of some definite course of instruction, then an objective of educational research should be to determine what procedures or techniques best produce the desired behavioral changes. If the desired behavioral changes can be identified and defined, then the educational researcher can develop instruments to measure them.

Let us also assume that if one does in fact change student behavior in the specified direction, as a result of a course of instruction, then that course has been effective. If that course has been effective, then there could be a large number of elements in that course contributing to its effectiveness, such as the instructor, textbook, homework, course content, method of instruction, student interest, student attention, general student attitude towards the course, etc.

Assuming that all of the elements enumerated above can affect, directly or indirectly, student behavior in a course, and assuming that the students are the only ones who are constantly exposed to those elements, then they appear to be the most logical evaluators of the quality and effectiveness of the course elements. In addition, student opinions should indicate areas of rapport, degrees of communication, or the existence of problems and thereby help instructors as well as educational researchers describe and define the learning environment more concretely and objectively than they could through other types of measurements.

There are various ways of sampling student opinion. Some useful information can be derived simply by determining the number of students who agree or disagree with certain statements about the course. Or, sometimes, it proves useful to ask students to write short essays about the course in order to obtain information about their experiences under specific instructional situations. Such

---

individualized procedures do not, however, provide an opportunity to compare the results of one course with results of another. Measurement is more useful when comparative results are available. More adequate interpretation may occur when: (a) the data have been collected in a standardized fashion with appropriate attention given to sampling, reliability, and validity, and (b) many instructors and instructional programs have been measured with the same instrument so that comparisons can be made.

Therefore, the primary purpose in developing the Illinois Course Evaluation Questionnaire (CEQ) was to devise an instrument which could elicit student opinions about a standardized set of statements relative to certain ʼ  ·dardized aspects of an instructional program, and to develop norms which would enable an instructor to adequately compare his results with the results of other instructors.

This manual has been prepared to help instructors who use the Illinois Course Evaluation Questionnaire (CEQ) to interpret their results. A facsimile of the computer generated CEQ report of results is included which can be referred to in the following discussion. There may be a minimum of two pages or a maximum of four pages of results, depending upon the number of optional questionnaire items used, i.e., on Form 66 (items 51-100) or on Form 32 (items 25-76). An example of Form 66 and Form 32 appear in Appendix A and B, respectively.

For both forms instructor and course identification information is presented on the top of the first page of the results, followed by the statistics for the first portion of the standard CEQ items. For examples of the first page of Form 66 see Figure 1 and for Form 32 see Figure 2. The second page of the results presents the statistics for items 29-50 for Form 66 and item 21-24 for Form 32 and summary results. If optional items are used, they would appear on additional pages as shown in Figure 3.

## Identification Information

(1) *COURSE AND INSTRUCTOR DATA*

*Instructor Name:* The instructor's ʼ,ast name appears on the first line of printing. It is circled on the sample output.

*Course Code:* A five-digit numeric course identification code is presented on the first line, just above "Expected Grade."

*Course Name and Level:* This is presented on the right side of the first line.

Figure 3 (cont.)

*Additional Identifying Information:* This may follow the *course name and level* if it is submitted by the instructor (i.e., section code, etc.).

(2) *STUDENT DATA*

*Expected Grade in the Course:* This is presented as the percentage of students who expect an A, B, C, D, or E, and who omitted (OMIT) the question.

*Sex of Student:* The percentage of males and females.

*Student Status:* The percentage of freshmen, sophomores, juniors, seniors, graduate students, and others.

*Required or Elective:* The percentage of students taking the course to fulfill a requirement or who chose it as an elective.

*College Affiliation:* The percentage of students by their college affiliation.

*Sample Size:* The number of students responding to the CEQ is presented below the summary results on the second page.

The student data are presented so that the instructor may compare the student characteristics of one class section with another. These characteristics may lead to different interpretations of results since some class sections are composed of students who are quite different from other sections. If the CEQ results differ from one section to another, the student characteristics may lead to a more adequate understanding or interpretation of these differences.

Item Responses 1-50 or 1-24

Several columns of figures reporting the students' responses for each item are presented following the *student data.* Due to the limited printing space, one must consult the CEQ Forms (Appendix A or B) to determine what the specific items are.

For explanatory purposes, the sample results presented in Figures 1, 2, and 3 have lettered codes printed at the bottom of each of the columns. The interpretation of the lettered columns is as follows:

A: Contains the ITEM number, so one can refer back to the CEQ Form for the specific item statement.

B: The proportion of students strongly agreeing (SA) with this item.

9

C: The proportion of students agreeing (A) with this item.

D: The proportion of students disagreeing (D) with this item.

E: The proportion of students strongly disagreeing (SD) with this item.

Γ: The proportion of students leaving this item blank (OMIT).

G: This column indicates the most favorable response for each item, either SA or SD. On Form 66, 24 of the items are assigned the most favorable response of SA and 26 are assigned the most favorable response of SD. On Form 32 all of the items are assigned the most favorable response of SA.

H: The numerical average (MEAN) of the SA, A, D, and SD responses is presented for each item. The MEAN is obtained by weighting the positively stated items, SA = 4, A = 3, D = 2, and SD = 1, and the negatively stated items, SA = 1, A = 2, D = 3, and SD = 4.

I: This column contains the standard deviation (S.D.) of the responses for each item.

J: This column presents the all university norm decile (DECL), i.e., a comparison of this class' MEAN responses with those obtained in other classes throughout the university. This comparison group is referred to as the "norm group." Deciles range from a low of 0 to a high of 9 and may be interpreted as follows:

   0 indicates that the course MEAN falls in the lowest 10 percent of the norm group,

   1 indicates that there are 10 to 19 percent of the norm group who received lower means,

   2 indicates that there are 20 to 29 percent of the norm group who received lower means,

   and so on, through 9.

The distribution of class results in the norms can be exemplified by using a distribution based on an item with a MEAN of 2.8 and a Standard Deviation of .40 as follows:

10

NUMBER OF CLASSES

0  1  2 3 4 5 6 7  8  9

10  18  20       25       30       35       40

MEAN CLASS RESPONSE TO AN ITEM
The distribution of scores was divided into ten
equal size groups (hence the term decile). The
highest 10% of the classes were assigned the
decile of 9; the next 10% the decile of 8; etc.
Each decile contains an equal number of classes.
The same process was followed for the subscores.
Interpretation of these deciles will be discussed
later in the manual, however, the actual norm
decile intervals for the items are presented in
Appendix C.

K: The *Decile Profile* is presented in this column by
   printing an asterisk corresponding to the appropriate
   decile. The asterisks which are found on the
   right side of the column (deciles of 7, 8, or 9)
   should be considered "good." Those to the left
   (deciles of 0, 1, or 2) should be considered "poor."
   Those in the middle (deciles 3, 4, 5, or 6)
   should be considered "average."

## Subscale Responses

The second page of the results presents the questionnaire
SUBSCORES. You will note that there are six subscores and one
total score. The items which are grouped into each subscale are
presented in Table 1. The total score is a score made up of all
items.

L: The number of ITEMS comprising the subscore.

M: The percentage of students who responded (RESP) to
   the items included in the subscale.

N: The MEAN response based on the items in each subscale.

0: The standard deviation (S.D.) of the responses.

P: The reliability (REL) is based on a split-half
   correlation (odd-even) and indicates the confidence

TABLE 1

CEQ Items Grouped by Subscales

01. *General Course Attitude*

   2.  It was a waste of time.*
   3.  Overall, the course was good.
 11.  Not much was gained by taking this course.*
 20.  The course increased my general knowledge.
 25.  It was a very worthwhile course.
 29   One of my poorest courses.*
 3?.  Cour: was not very helpful.*
 49.  The course was quite useful.

02. *Method of Instruction*

   1.  I learn more when other teaching methods are used.*
   6.  More courses should be taught this way.
   8.  I would have preferred another method of teaching in this course.*
 27.  The way in which this course was taught results in better student learning.
 36.  I think that the course was taught quite well.
 37.  I would prefer a different method of instruction.*
 48.  Another method of instruction should have been employed.*
 50.  I would take another course that was taught this way.

03. *Course Content*

 13.  The course material seemed worthwhile.
 19.  The content of the course was good.
 26.  Some things were not explained very well.*
 28.  The course material was too difficult.*
 30.  Material in the course was easy to follow.
 39.  At times I was confused.*
 40.  Excellent course content.
 44.  The content of the course was too elementary.*

*These items appear on Form 66 only.

TABLE 1 (Continued)

04. *Interest and Attention*

    7. The course held my interest.
    9. It was easy to remain attentive.
  14. It was difficult to remain attentive.*
  22. Held my attention throughout the course.
  24. Uninteresting course.*
  35. It was quite interesting.
  45. Some days I was not very interested in this course.*
  46. It was quite boring.*

05. *Instructor*

    5. The instructor seemed to be interested in students as persons.
  10. The instructor did not synthesize, integrate, or summarize effectively.*
  12. The instructor encouraged the development of new viewpoints and appreciations.
  15. Instructor did not review promptly and in such a way that students could understand their weaknesses.*
  18. The instructor had a thorough knowledge of his subject matter.
  23. The demands of the students were not considered by the instructor.*
  31. The instructor seemed to consider teaching as a chore or routine activity.*
  47. The instructor exhibited professional dignity and bearing in the classroom.

06. *Specific Items*

    4. The textbook was very good.
  16. Homework assignments were helpful in understanding the course.
  17. There was not enough student participation for this type of course.*
  21. The types of test questions used were good.
  32. More outside reading is necessary.*
  33. Course material was poorly organized.*
  38. The pace of the course was too slow.*
  41. The examinations were too difficult.*
  42. Generally, the course was well organized.
  43. Ideas and concepts were developed too rapidly.*

one can place in the results for this group of
students. Reliability figures over .90 can be
considered very good; .70 and above are probably
acceptable; and below .70 are questionable. Re-
liability figures below .70 may be due to small
samples of students.

Q: The RANK norm compares the course to all courses
of instructors at chat same rank. The actual
norm decile intervals are presented in Appendix D.

R: The LEVEL norm compares the course to all courses
at that same course level (i.e., Freshmen, Sopho-
more, Junior, Senior, or Graduate). The actual
norm decile intervals are presented in Appendix E.

S: The institution (INSTI) norm compares the course
to all courses at that university (i.e., University
of Illinois). The actual norm decile intervals
are presented in Appendix F.

T: The college (COLL) norm compares the course to all
courses in the appropriate college within a
university (e.g., Liberal Arts and Sciences).

U: The OVERALL norm compares the course to all courses
that have used the CEQ throughout the United States.
The actual norm decile intervals are presented in
Appendix G.

## The Interpretation of Results

The results of both item responses and subscores and total
scores are reported in deciles (see columns J and K for item
deciles and columns Q, R, S, T, and U for total and subscore
deciles). *These are the most important results to look at to
adequately understand and interpret the results.* Deciles at the
upper end of the scale (i.e., 7, 8, 9) can be considered highly
positive and indicative of good instructors and courses, while
deciles of 0, 1, or 2 can be considered quite negative and indi-
cative of relatively poor instructors and courses. Deciles
between 3 and 6 should be considered average. Although no manual
can set forth an explicit interpretation of results under all
conditions, for all classes and all instructors, some general
guidelines can be offered. Individual interpretation can be ex-
plored in greater detail in conference with the Measurement and
Research Division staff. Generally, however, the higher an
instructor's decile, the more satisfied he can be; the lower his
decile, the more concerned. The research on the CEQ (Spencer &
Aleamoni, 1969; Swanson & Sisson, 1971; Aleamoni, 1972) and other
student evaluation systems (Costin, Greenough & Menges, 1971) has

shown that students are, to a considerable extent, valid judges of instructors and instruction; at the least, the opinions of the students contribute to a better understanding of the instructional process. There may be many factors beyond the instructor's control that could affect the student responses. If the instructor is aware of such factors operating within the instructional setting, he should keep them in mind when interpreting the results.

Student opinion polls may suffer varying degrees of invalidity such as:

1. Each student may have different expectations and personal goals for a course.

2. Students' frames of reference may be considerably different.

3. The possibility that student opinions may not be a completely valid criterion of teaching effectiveness.

4. A valid concept of good teaching may not be available so that the identification of good teaching by any means may not be appropriate.

5. Students may be indifferent or insincere when answering the questionnaire.

However, students do observe teaching more than anyone else. Insofar as learning is a function of the attitudes and opinions held by learners, student opinions *may* indicate areas of rapport, degrees of communication, or the existence of problems. Information gathered from student questionnaires, therefore, may help instructors describe and define the learning environment more concretely and objectively than they can through other measurements. The evidence in research (Spencer & Aleamoni, 1969; Swanson & Sisson, 1971) on the subject indicates quite strongly that overall they tend to agree with "expert" judges on the effectiveness of instruction.

There are various ways of sampling student opinion. Some useful information can be derived simply by determining the number of students who agree or disagree with certain statements about the course. Or, sometimes, it proves useful to ask students to write short essays about the course in order to obtain information about their experiences under specific instructional situations. Such individualized procedures do not, however, provide an opportunity to compare the results of one course with results from another. Measurement is most useful when comparative results are available. More adequate interpretation may occur when the data have been collected in a standardized fashion, and when many instructors and courses have been measured with the same instrument.

Therefore, the primary purpose in the development of this questionnaire was to devise an instrument which elicits opinions about a standardized set of statements relative to standardized aspects of an instructional program and to develop comparative and representative norms which would enable an instructor to adequately compare his results with the results of other instructors.

One may also look at the different results for the subscales to obtain an indication of major areas of strengths and weaknesses in the course. Similarly, one may look at the item results as indicative of areas that need improvement. The CEQ is not completely diagnostic of teaching or instruction--no instrument can be. There are too many specific variables in a learning environment which can be scrutinized to measure or evaluate them all on a questionnaire, and some would be valuable in one set·ing and not in another. The CEQ provides a means whereby some evaluation of the teaching process can occur; other means can be arranged, and are available such as asking more diagnostic questions in the optional item section. This is only one of tne many pieces of information which can contribute to a better learning environment. It is important to recognize, however, that student opinions are in existence and do affect learning--and they do provide a source of quite reliable data relative to the effectiveness of instruction.

The research on student opinion questionnaires, in general, would seem to indicate that there is some reasonable relationship between teaching effectiveness and student judgments of this effectiveness. However, it is far from perfect; and in some cases, the relationship is completely absent. It is, therefore, of extreme importance that the results of this questionnaire be considered quite tentative. First, one must assume that the questionnaire is only a tentative indication of "real" student attitudes. It is not a perfect measure. Secondly, the questionnaire collects *some* opinions only. It does not sample all opinions that may exist about a course. Thirdly, the opinions that develop about a course are developed through a variety of causes and not because of the instructor alone.

It is recommended that the results of a one semester sample be treated quite tentatively until validated by measures over two or more semesters.

On the basis of the research evidence to date and the CEQ's high reliability, extremely low scores on a particular subscale should indicate problem areas needing immediate attention. On th² other hand, stable high scores should point to an effective instructional program as viewed by students.

If you have any questions regarding your particular results, please consult with the Measurement and Research Division, Office of Instructional Resources, 307 Engineering Hall, Urbana, Illinois 61801, (217) 333-3490.

| 43 | SA A D SD | Ideas and concepts were developed too rapidly. |
| 44 | SA A D SD | The content of the course was too elementary. |
| 45 | SA A D SD | Some days I was not very interested in this course. |
| 46 | SA A D SD | It was quite boring. |
| 47 | SA A D SD | The instructor exhibited professional dignity and bearing in the classroom. |
| 48 | SA A D SD | Another method of instruction should have been employed. |
| 49 | SA A D SD | The course was quite useful. |
| 50 | SA A D SD | I would take another course that was taught this way. |

**SAMPLE MARKS:**

USE PENCIL ONLY

a) SA ▮ D SD
b) SA A ▮ SD
c) ▮ A D SD
d) S A D ▮

**RESPONSE CODE**

MARK **SA** IF YOU STRONGLY AGREE WITH THE ITEM

MARK **A** IF YOU AGREE MODERATELY WITH THE ITEM

MARK **D** IF YOU DISAGREE MODERATELY WITH THE ITEM

MARK **SD** IF YOU STRONGLY DISAGREE WITH THE ITEM

APPENDIX B

*Illinois Course Evaluation Questionnaire*
*(Form 32)*

# ILLINOIS COURSE EVALUATION QUESTIONNAIRE — FORM 32

Measurement and Research Division, Office of Instructional Resources, UNIVERSITY OF ILLINOIS © By Richard E. Spencer 1965

| # | | Item |
|---|---|---|
| 1 | SA A D SD | Overall, the course was good |
| 2 | SA A D SD | The textbook was very good |
| 3 | SA A D SD | The instructor seemed to be interested in students as persons |
| 4 | SA A D SD | More courses should be taught this way |
| 5 | SA A D SD | The course held my interest |
| 6 | SA A D SD | It was easy to remain attentive. |
| 7 | SA A D SD | The instructor encouraged the development of new viewpoints and appreciations. |
| 8 | SA A D SD | The course material seemed worthwhile |
| 9 | SA A D SD | Homework assignments were helpful in understanding the course |
| 10 | SA A D SD | The instructor had a thorough knowledge of his subject matter. |
| 11 | SA A D SD | The content of the course was good. |
| 12 | SA A D SD | The course increased my general knowledge |
| 13 | SA A D SD | The types of test questions used were good |
| 14 | SA A D SD | Held my attention throughout the course |
| 15 | SA A D SD | It was a very worthwhile course |
| 16 | SA A D SD | The way in which this course was taught results in better student learning |
| 17 | SA A D SD | Material in the course was easy to follow |
| 18 | SA A D SD | It was quite interesting |
| 19 | SA A D SD | I think that the course was taught quite well. |
| 20 | SA A D SD | Excellent course content. |
| 21 | SA A D SD | Generally, the course was well organized |
| 22 | SA A D SD | The instructor exhibited professional dignity and bearing in the classroom |
| 23 | SA A D SD | The course was quite useful. |
| 24 | SA A D SD | I would take another course that was taught this way |

(Decile columns 1–9)

[1]The normal approximation (N.A.) means were obtained by using the raw score mean and standard deviation (S.D.) in the normal curve equation.
