ABSTRACT

As educational and cultural centers, public libraries are in the mainstream of American life. Persistent library crime, such as pilferage, theft and vandalism, represents much more than financial loss. It deprives the public of access to irreplaceable books, rare manuscripts and other reference materials. Equally important, it inflicts hardships on tudget-tight libraries wishing to replace increasingly expensive books. In recognition of such factors, Burns Security Institute, a private research unit devoted to the study of crime and how to better cope with it in the institutional, industrial and commercial areas, undertook a national survey on library security. Two-page questionnaires were returned by 255 public libraries in 39 states with annual circulation totaling more than 92 million volumes. The items covered in the survey, and reported upon in this volume, are: book theft, security controls, fire alarms, burglary alarms, guards, book recovery, overdue books, exhibits protection, violent crimes, major security problems, and improving security. SEPTEMBER, 1973

As educational and cultural centers, public libraries are in the mainstream of American life. Persistent library crime, such as pilferage, theft and vandalism, represents much more than financial loss.

It deprives the public of access to irreplaceable books, rare manuscripts and other reference materials. Equally important, it inflicts hardships on budget-tight libraries wishing to replace increasingly expensive books.

In recognition of such factors, Burns Security Institute, a private research unit devoted to the study of crime and how to better cope with it in the institutional, industrial and commercial areas, undertook a national survey on library security.

The Institute gratefully acknowledges the cooperation of 255 officials who returned questionnaires making this report possible. Directors and chief librarians, concerned with the problems of adequate safeguards and maintaining high standards of service to their communities, have contributed to a better understanding of library protection problems and their possible solution.

D. Bruce Burns Chairman Burns Security Institute

OVERVIEW:

Directors and chief librarians of 255 public libraries in 39 states with annual circulations totaling more than 92 million volumes returned two-page questionnaires covering some 60 individual items of information. Of the 255, 215 are municipal libraries. The others are county and regional libraries, and one state library.

These cooperating libraries reflect a representative cross-section ranging in size from 12,500 annual book circulation to 12 million.

Of 249 libraries reporting circulation, 200 are in the under - 500,000 annual category and 49, over. Twenty-four libraries with one million and more circulation account for 54 of the nearly 93 million total circulation.

The great majority of systems regard book theft and vandalism as the same or worse than five years ago.

Almost half the libraries reporting on protection measures have neither guards nor alarm systems. While vulnerable to pilferage, theft and vandalism, libraries are remarkably safe for staff and public. Crimes of violence reported on premises are negligible.

BOOK THEFT:

Book theft ranks as the top security problem, seven of ten library officials state. However, many concede they can only guess at the extent of losses. The difficulty: no regular inventories.

In relation to inventories, respondents volunteer such comments as "new building opened two years ago and no inventory yet," 'not enough staff to observe book stealing," and "we have not inventoried in the last five years."

A large majority of responding officials -- nine of ten -- are nearly equally divided on whether book theft is the same or worse than five years ago. Sixteen of 242 responding on this point see such thievery abating.

Only one of two venture to put a dollar figure on annual book losses. Many again point out they have no way of keeping a count on books that disappear and cannot give an accurate evaluation.

Of 140 libraries making estimates, annual losses total \$437,400, or an average of \$3,120 per library.

How many out-of-print or irreplaceable books are stolen each year? For 104 responding systems the total estimated figure is 8,900, an average of 85 books per library. In relation to internal theft, one of ten officials is willing to venture an opinion as to employee dishonesty; 24 go on record as believing employees are pilfering books or being dishonest in other ways.

SECURITY CONTROLS:

One of 25 libraries considers its security procedures "strict.". The others are divided between "moderate" and "loose."

When it comes to registration systems, however, officials feel they are in a better position. One of four libraries rates its registration as strict; one of two as "moderate," and only one of five as "loose."

In relation to physical protection, more than half the 226 responding on this matter have neither guards nor burglary and fire alarms.

Smaller libraries -- eight of ten of those under 100,000 circulation -- lack such safeguards.

Going up the circulation ladder, security gets somewhat better:

CIRCUL	ATION	NEITHER GUAL	RDS	NOR	ALARMS
200,000 - 300,000 -	499,999	Six Four	of	ten	
50 0, 000	Plus	Thr e e	ot	ten	

FIRE ALARMS:

The best overall record in any one phase of protection involves fire alarms -- with fewer than four of ten libraries having systems.

Two of ten with circulations under 200,000 have fire alarms with the proportion going up to six of ten in the over 500,000 class.

For all but the largest libraries in the over 500,000 range, water sprinkler coverage is negligible -- slightly more than one of ten. This ratio rises to four of ten in the larger systems.

BURGLAR ALARMS:

A low ratio -- one of four libraries -- has an antiintrusion alarm system, although burglary alarms rate as the fourth most desired item to improve security.

Electronic systems directly connected to police, or otherwise bringing prompt response, are seen as an answer to the break-in problem.

GUARDS:

report on the number of guards employed, a total of 198. Of these systems, 37 or four of ten, have no guards. Seventeen systems in the 500,000-plus circulation category employ 148, or 75 per cent of all guards. Thirty-three smaller libraries employ 48 guards, averaging 1.4 guards per system. Average employment jumps to 8.7 guards for larger systems; however, four of 21 larger systems are without guards. Another four employ an aggregate 121 guards, or six of ten of the total.

BOOK RECOVERY:

Two of three libraries have no detailed recovery plans. Books damaged from fire, smoke, water or rough handling must be restored and those damaged beyond repair, reordered.

Are restorations handled by staff, outside professionals, supervised volunteers or a combination of these?

What priority of restoration, particularly in out-ofprint-volumes, is advisable? These and other questions
seemingly go unanswered until a conflagration or other
disaster prods decision-making -- meanwhile delaying
the process of getting the library back to full service.

OVERDUE BOOKS:

Another phase of book recovery, getting back overdue volumes, is rated the third most troublesome problem

The large majority depend primarily on written notices to accomplish this. Additional steps are taken, sometimes in combination; but not exceeding 15 per cent for any one procedure.

Thirteen per cent turn to city police for collection;

12 per cent follow up by telephone; another 12 per cent dispatch library security officers; eight per cent use messengers while 15 per cent follow other procedures, such as a city collection agent, credit bureau, city solicitor. One library declares a week of amnesty during which books may be returned without fines.

EXHIBITS PROTECTION:

Other than books the one item most commonly on view in a library is the permanent or special exhibit. Every library has an exhibit some time in the year. Three of ten say they have permanent ones; the others temporary ones.

Seven of ten report they have no special protection for valuable displays. The ratio is virtually the same when it comes to safeguarding manuscripts, reference books and periodicals.

SECURED BOOK AREAS:

Secured book stacks are intended to restrict access to valuable, historic or other rare volumes. Reporting libraries indicate a liberal open door policy prevails for patrons.

Of 240 libraries reporting on access, 68 have open stacks only. The remaining 172 give closed stacks entry as shown in the following table:

Persons Admitted	No. of Libraries
Librarians	172
Researchers	78
Writers	51
Curators	38
Others	38

Some libraries admitting patrons to secured stacks comment it is done only under supervision. Others give access to "any responsible library user" or to anyone who can "prove a need." Still others admit on signature.

KEY CONTROL:

Most libraries consider their lock and key control systems as adequate or better, judging from response by 241 officials.

One of two, rate their systems 'moderate," one of four "strict" and one of five "loose." Lock and key control ranks ninth as a security problem.

VIOLENT CRIMES.

Libraries can still be considered sanctuaries where the occurrence of violence is a rarity, according to officials. In response to a question about the seriousness of assaults, 187 of 200 respondents classify violence as "negligible." Only two consider assaults, "serious," while 11 rate them 'moderate."

Statistics bear out the "negligible" majority opinion.
Only 41 assaults in the past year are tallied for 136
reporting systems, 115 of whom say they have had no
crimes of violence.

Nine of ten libraries under 500,000 circulation escaped such crime; one of two in the larger systems. Of the 21 systems listing assaults, 22 occurred in ten under-500,000 circulation libraries; 19 in eleven larger ones.

MAJOR SECURITY PROBLEMS:

In response to the question "what are your top three security problems?" 205 officials pinpoint book theft, vandalism and non-return of books as the major concerns.

By frequency of mention, here are the ten major serious problems:

Book theft Vandalism Non-return of books	(187) (72) (42)
Book mutilation Disorderly conduct	(31)
Architectural layout & too many exits	
Theft of library/personal property	(24)
Burglary, breaking & entering	(13)
Lock & key security	`(9 <u>)</u>
Lack of staff	(9)

Eighteen library systems specify an assortment of other problems including harrassment of persons outside the library, noise, petty cash theft, sex offenders, and a complaint about "library policy that assumes everyone is honest."

SMALL VS. LARGE:

While theft generally is believed a dominant crime of the big city, library opinion seems to reverse this notion. Book theft is rated a serious problem by 62, or four of five reporting libraries under 200,000 annual book circulation, compared to 34, or three of four in the 500,000-plus category. Vandalism - including graffiti, window breakage and damage to premises and furniture - is rated a serious offense by 56, or one of four libraries under 500,000 circulation compared to 16, or one of three larger ones.

smaller libraries are in agreement with larger ones in respect to the third rated problem, book return. About one of five respondents on this matter considers non-return a major concern.

In connection with book mutilation, smaller libraries register relatively more complaints than larger institutions. Bigger libraries have a greater problem with disorderly persons, according to the response.

IMPROVING SECURITY:

Seven of ten cooperating officials believe they have answers to the security problems. One hundred seventy-two of the 255 specify wanted safeguards to prevent theft and increase safety.

The top solutions are --

Exit book detection	(86)
Uniformed guards	(39)
More functional buildings	(35)
Burglary alarm systems	(21)
Bigger staffs	(13)
Better book return systems	(13)
Stricter law enforcement	(12)
Better registration systems	(12)
Public education programs	(12)
More alert staff	`(9)
Fire alarm systems	(9)

Four of ten libraries recommending measures to improve security want exit systems, either electronic or human, to find hidden books.

Forty-one of the 74 prefer automated book detection; the others, checkpoints for personnel to inspect bags and packages.

CONCLUSIONS:

With libraries obviously needing and wanting electronic and manpower safeguards, a logical first step in obtaining improved security is the periodic inventory. Since many systems do not know how many volumes are stolen, it is difficult for them to make a case for budgeting to city fathers and funding groups for costly improvements.

Knowing what books are in stacks and those that are out and "safe" can be important as well for insurance considerations related to theft, book mutilations and fire.

In these days of high crime incidence, library systems understandably are concerned about curtailing thievery and other offenses. However, the adverse impact of the

biggest thief and vandal of all, fire, is largely overlooked by participants in this study.

The record shows six of ten libraries lack fire alarms; nearly nine of ten, automatic sprinkler systems.

Yet fire alarm devices trail the list of most-desired measures cited by libraries to improve protection, getting only nine mentions compared to the 21 for burglary alarms.

Two of three libraries have no detailed book recovery plans, in case of fire.

It is apparent therefore:

- . Libraries needing fire alarm and sprinkler systems must make every effort to win the support of authorities and public in funding such installations.
- . Officials must draft comprehensive plans for book redovery that assure prompt resumption of services after a fire.

One of the flagrant violations of good control concerns the secured stack areas. Libraries have the commendable intention of serving the broadest spectrum of patronage. On the other hand, making secured stacks available to almost everyone invites trouble and the possible loss of valuable and irreplaceable volumes.

When there is general access to an area, it is no longer secured. Entry to closed stacks should be kept at a minimum, preferably to not more than two members of the library staff, and definitely not to outsiders.

Book mutilation is another big concern, but one for which there may be a relatively simple solution. Free or tokenpriced photo copies of periodical and reference pages would do much to minimize the problem.

While actual assaults are infrequent, disorderly persons are a serious concern. Misbehavior may flare into something worse when offenders discover staff is unable to cope. On a chronic basis, disorderly conduct may discourage patrons from using library facilities.

Presence of a policeman or uniformed guard during the hours when there is apt to be disorderliness is usually enough to deter rowdyism, insolence and disruption.

If police, because of their own manpower problems, are unable to assign one or more officers on premises or provide frequent patrols, some way should be found to budget for guards.

By the same token, it is essential to seek the cooperation of local fire and police departments to survey premises and present written recommendations for effective fire and crime prevention plans.

If fire and law enforcement units are unable to do this, private security firms may be willing to provide the desired surveys without charge.

Local insurance advisers can also be helpful. Insurance rates possibly would be reduced when safeguards are implemented.
