ABSTRACT
        The evaluations of the Summer Program and Phase II of
Project C.H.I.L.D. are provided in this final report of the project.
The objectives of the project were to: (1) improve the behavior of
preschool children enrolled in the project; (2) increase the ability
of teachers and parents to objectively evaluate the status and growth
of children; (3) develop parental attitudes that are favorably
disposed towards presentations designed to help them better
understand themselves and their children; (4) develop parental
attitudes that are favorably disposed towards the project as a whole;
and (5) evaluate each of these objectives; numerical and Likert-type
rating scales were developed, which included measures of a Behavior
Check List for Teachers and Parents, a Speaker Evaluation Form for
parents, and a Final Evaluation parent form. The evaluation of each
of these objectives is provided for the Summer Program in the first
section of the report. In the second section of the report, the
objectives of Phase II of the project are evaluated. These objectives
were to: (1) increase the parents' bank of knowledge on means to
assist their children to become more successful in school; (2)
assist, through teacher and parent training, children in building a
stronger self-image and other social-emotional skills; (3) develop a
core of elementary teachers trained in methods of interaction in
Early Childhood Education and increase their ability in identifying
and implementing strategies to handle classroom problems. The report
contains numerous tables, charts, and forms. (For related document,
see TM 003 097.) (DB)

1971 TITLE III EVALUATION (SUMMER PROGRAM)

The objectives of Project C.H.I.L.D. are:

1. To improve the behavior of children enrolled in the Project;

2. To increase the ability of teachers and parents to objectively evaluate the status and growth of children;

3. To develop parental attitudes that are favorably disposed towards presentations designed to help them better understand themselves and their children,

4. To develop parental attitudes that are favorably disposed towards the Project as a whole;

5. To evaluate each of these objectives, numerical and Likert-type rating, scales were developed. These scales included measures of each of the following:

   (a.) a Behavior Check List for Teachers and Parents;*

   (b.) a Speaker Evaluation Form for parents; and

   (c.) a Final Evaluation parent form.

OBJECTIVE 1: TO IMPROVE THE BEHAVIOR OF CHILDREN ENROLLED IN THE PROJECT

This objective was evaluated by asking both parents and teachers to respond to a twenty-item questionnaire measuring such aspects of child development as <u>Input Training</u> (ability to learn quickly, good attention span, ability to distinguish differences, ability to understand emotions; <u>Concept Development</u> (ability to understand complex ideas, clear grasp of reality, ability to rank order objects, understand numbers and number processes, recognizes letters, uses appropriate vocabulary, understands himself and his reaction with others); and <u>Expressive Skills</u> (uses complete sentences appropriately, has well-developed vocabulary, uses appropriate gestures in expressing himself, cares for himself efficiently such as in dressing and cleaning, ability to coordinate small muscle movements such as in tracing and coloring, has positive outlook on life and on his own abilities, gets along well with others of his own age, gets along well with adults, and generally is well prepared for school).

*Appendix – Contains an example of the <u>Behavior Check List for Teachers and Parents.</u>

Behavior improvement was evaluated in a number of different ways. Most directly, it was desirable and necessary to determine what gains were realized by those children participating in the Project. Table 1 presents the means, standard deviations and t-ratios of the teacher ratings before and after the program began.

It should be noted that Table 1 was prepared by converting ratings from a scale with a range of +3 to -3 to a 7-point scale as follows:

Original Scale	Converted Scale	Maximum Points
+3	7	140 Most Favorable
+2	6	120
+1	5	100
0	4	80 Average
-1	3	60
-2	2	40
-3	1	20 Most Unfavorable

Thus, the maximum mean score for any of the six teachers would be 7n where n=number of items (20 per student) or a value of 140; average would be 4n or 80; a minimum would be 20.

From Table 1 it can be seen that the average initial rating made by each teacher was at least at an average value, the lowest mean rating being 80.50 for Teacher 2. The highest initial rating was 99.00 for Teacher 3. The grand mean rating over all six teachers was 86.18 or approximately an average item rating of 4.31. At least as perceived by the teachers, the students generally were rated as average when they entered the program. Only 23 students out of the 66 (2 papers had incomplete data and were not included) had initial ratings below 80.

Because the Behavior Check List for Teachers and Parents is a continuous graphic scale, it is possible to respond to categories between any two rating points. Where a mark was clearly closer to one value than to its contiguous category, the item was scored as if the respondent had marked the closest category; however, where marks were equidistant, the flip of a coin determined which of the two values would be recorded.

Table 1 also shows the mean ratings by teachers at the end of the program. Teacher 5 reported the greatest amount of gain (7.67 ponts) against a low of an increase of 4.00 reported by Teacher 1. However, the rank-order correlation between teachers' rankings on pre and post forms was 1.00 indicating that teachers who tended to rank either high or low initially, continued this practice on the post evaluations.

The t-tests (for correlated groups) are presented in Table 1 for each of the six teachers. All groups showed significant improvement except for Teacher 1 where differences are not statistically significant at the .05 level. For all six teachers combined, the t-test was 7.59, a highly significant different ($P < .01$).

Tables 2 through 7 provide further information concerning gains and losses made by each student in the six classes. Columns headed "Differences in Means" represent the differences in mean ratings obtained for each student by subtracting the pre-mean from post-mean values. Negative t- values indicate that students were rated lower at the end of the program than at the beginning.

Table 8 summarizes the gains and losses, both significant and non-significant, by teacher and for the total group. Some 47.% of the students made gains that were statistically significant whereas only 1 case showed a significant decline; 32.% showed some improvement, but not enough to be statistically significant; 12% or 16 students showed a non-significant loss; and 5 students (7.%) neither gained nor lost. Some 79.% of the students, therefore made some gain and only 9 students (13.%) showed any loss.

Still another way to examine the data is to evaluate how students were rated on each of the 20 items on the Behavior Check List. The means and standard deviations of item responses by teacher are presented in tables 9 through 14. Again, it whould be recalled that the Behavior Check List contains 20 items and that all negative ratings have been eliminated by adding 4 points to the original category numbers thus yielding a revised scale with +7 as a maximum for each item and +1 as a minimum.

For Teacher One (see Table 9), the lowest pre and post-rating occurred on item 11 of the Behavior Check List (understanding emotions; the highest pre and post-ratings was on item 3 (distinguishes differences). Parents, on the other hand, rated item 2 lowest (flighty attention) and item 19 highest (gets along with adults). Tables 10 through 14 summarize item means and standard deviations for teachers (both post and pre-ratings) and for parents.

Table 15 is a summary of the item responses over all six teachers. In general, teachers at the outset of the program believed that students were weakest in understanding emotions (item 11) and highest in understanding concepts of order (item 11). Parents, in contrast, believed that the inability to express oneself (item 10) was the weakest characteristic of their children while the ability to distinguish differences was most readily perceived by their children (item 3). It should be noted that the minor discrepancies between the total means presented in Table 15 and in Table 1 occur because of the differences in numbers of cases for whom data were available.

OBJECTIVE 2:   TO INCREASE THE ABILITY OF TEACHERS AND PARENTS
                TO OBJECTIVELY EVALUATE THE STATUS AND GROWTH
                OF CHILDREN:

This objective is closely related to the first but refers

more specifically to the agreement between teachers and parents.
Tables 9 through 15 indicate the means and standard deviation
of item responses for teachers and for parents but the degree
of agreement or disagreement is examined more closely for this
second objective by examining Tables 16, 17, and 18.

Table 16 shows the median correlation coefficients between
pre and post-ratings of students by teachers and for all six tea-
chers combined. Teacher Six, for example, tended to rate stu-
dents in essentially the same rank order both on pre and post
measures, except for Student Eight where the correlation is
slightly negative. The median correlation between pre and post-
rankings by teachers on the Behavior Check List was .738 indica-
ting a high degree of stable ratings.

Table 17 presents the median correlations between pre-
measures of teachers and pre-ratings by parents on the Behavior
Check List. In many ways, this is a crucial test of this second
objective since it directly compares the perceptions of parents
and teachers at the initial stage of the program. Here it can
be seen that the median correlation is only .171 indicating a
general lack of agreement between parent and teacher perceptions
of the children's behaviors. The ranges of these correlations
vary from -.331 to .747 suggesting some disagreement among tea-
chers and parents for some children but rather high agreement for
others. It should be noted that the value of N also is somewhat
lower in Table 17 than in Table 16. This occurred because six
of the parents either failed to rate their children or because
ratings were invalidated.

These correlations cannot, of course, indicate whether the
teachers or the parents were evaluating students more accurately
but merely the extent of agreement or disagreement. Table 15
clearly indicates that parents tended to rate their children
much higher than did the teachers, at least on the pre-measures.
However, since post ratings by parents were not available, it is
not possible to compare the pre and post-correlations for parents
and teachers.

Table 18 indicates the correlations obtained by parents
(pre) and teachers (post). The median correlation over all six
teacher and parents was .277 indicating slightly more agreement
was obtained when parents' initial responses were compared with
the teachers' responses at the end of the program. Furthermore,
the data shows that the mean ratings over 20 items for teacher
(post) ratings was extremely close to the initial responses
of parents, 92.74 and 92.63, respectively.

Tables 16, 17, and 18 do not, of course, present any data
regarding the extent of agreement between parents and teachers
for any specific child. Tables 19 through 24 were designed to
provide specific information on extent of agreement (or disagree-
ment) between pre and post-ratings by teachers, teacher pre-and
parent-post evaluations, and teacher post- and parent-pre ratings
for each student in each of the six groups.

Table 19, for example, indicates the degree of agreement
or disagreement between Teacher One and the parents in her group
as they both evaluated the children on the Behavior Check List.
Initially, the parent and teacher of Student One agreed substan-
tially ($r = .731$) on their responses to the twenty items of the
Behavior Check List; at the end of the program, the correlation
between their responses was even closer ($r = .831$); and the
correlation between the teacher's pre- and post-judgments
of Student One was .883. A correlation of zero would mean that
parent and teacher agreed by chance only, and negative correlations
indicate various degrees of disagreement. Similar types of inter-
pretations may be made for Tables 20 to 24 which present the same
information except for Teachers Two to Six.

About two thirds (41 out of 62) of the correlations pre-
sented in Tables 19 to 24 which compare teacher-parent pre-data
correlations with teacher-post and parent-pre correlations are
higher in the latter group. This is further evidence that at
the end of the program teachers agreed with parent evaluations
to a much greater degree than they did at the beginning of the
program. Unfortunately, no data are available that allow a com-
parison with parent evaluations of their children at the end of
the program. It appears (see Table 15) that teachers tended to
rate children lower than did the parents at the beginning of the
program, but that at the end of the program the later perceptions
of the teachers tended to agree more with the pre-evaluations by
the parents.

Another way of examining the relationships between teacher
and parent perceptions of the children is to run t-tests between
the mean ratings of these two groups. Tables 25 presents these
pre-data for each teacher and for the group as a whole. No sig-
nificant difference is found between the mean ratings for Teacher
One and the parents of children in her group. In all other in-
stances, there are highly statistically significant differences
between parent and teacher pre-evaluations. Teacher Three was
the only one to assign higher initial ratings to students than
did the parents, and this difference was significant at the .01
level. Teachers Two, Four, Five, and Six consistently rated
the pupils lower as compared to the parent ratings. When data
from all six groups were combined (see Total on Table 25), $t = -3.05$;
with $df = 59$, the difference was highly in favor of lower initial
ratings by teachers than parents.

Table 26 presents a comparison of the parent mean ratings
obtained at the beginning of the program and ratings obtained
by the teachers at the end. Contrasting this Table with Table 25
provides further substantiation of the hypothesis that teachers
tended to rate students low at the beginning of the program in
comparison to the parents' ratings but that these differences
were reduced to zero (except for Teacher Three) at the end of
the Program. However, the lack of data on parent perceptions
at the end of the Program makes it difficult to fully substantiate
this hypothesis.

OBJECTIVE 3:   TO DEVELOP PARENTAL ATTITUDES THAT ARE FAVORABLY
               DISPOSED TOWARDS PRESENTATIONS DESIGNED TO HELP
               THEM BETTER UNDERSTAND THEMSELVES AND THEIR
               CHILDREN.

This objective was evaluated by constructing a semantic
differential-type rating scale for each of the five speaker
presentations. The concept being evaluated was "Your conception
of this session." Parents were asked to indicate their reactions
to bipolar traits on an eight-point numerical scale where 1 always
signified a favorable aspect of the presentation, 4 was neutral,
and 8 was the most negative response. The Appendix contains
an example of the Speaker Evaluation Form.

An examination of Table 27 indicates that Speakers Two and
Three received extremely high ratings by attending parents--the
average being about half-way between the two most favorable cate-
gories. However, Speaker Three received a few more extremely
negative responses (category 8) than did the second speaker,
and this is reflected in the increased standard deviation. Still,
it should be pointed out that Speaker Three had the largest num-
ber of parents at the session which might account for the greater
variability in response.

No speaker received an average rating of more than 2.0
points (high points are unfavorable), and the mean rating over
all five speakers was 1.699. Considering the small standard
deviation of responses for Speaker Two and the highly favorable
mean rating (1.506), this was probably considered to be the best
presentation followed very closely by Speaker Three, and then by
Speakers Five, Four, and One, respectively. However, even
Speaker One was considered to be excellent. Thus, each speaker
was rated very highly by the parents.

Parent comments were also encouraged by asking three ques-
tions on the Speaker Evaluation Form:1-How might this session
have been improved; 2-What was the most important idea you recei-
ved from this session; 3- What was the least important idea you
received from this session.

Table 28 summarizes the comments of the parents to Session
One. Most parents chose not to respond to any of these questions,
and of those who did, question three, in particular, seemed to
evoke the fewest responses. Question two, in contrast, led to
a great variety of different responses, but many were so brief
that interpretation was very difficult. None-the-less, the two
points brought out most often were that the early years of
development were most important for mothers and that children
are unique. The remaining responses were extremely general and
could not be categorized more specifically. Of the 12 persons
responding to question one, 8 responded that either it was too
hot in the room or that the program should start on time.

Table 29 contains the responses of the parents to Session
Two. Again, the pattern of responding was similar to the first
session's. Thirty-three out of 42 parents gave no response to
the first question concerning how the session might have been
improved; 5 stated the session was excellent; 1 wanted the session
to begin on time; 2 wanted to talk to more parents; and 1 wanted
an outline of the speaker's presentation.

Question two (most important idea) for the second session
led to a great variety of responses. Twenty-three chose not to
respond; 5 persons stated the main idea of the session to be
the value of praise; another 5 believed the purpose of the session
was to ask children better questions; and 9 had very general re-
sponses that could fit into no specific category.

Question one in Table 30 concerns methods of improving
Session Three. Of the 58 parents attending, 39 did not respond
to the question; 7 indicated that the presentation was excellent
or needed no improvement; 3 persons each wanted the temperature
in the room lowered, for parents to be given more time to talk,
and for the ideas to be explained more clearly; 1 suggested hav-
ing more time; 1 wanted a larger attendance; and 1 suggested
not having the same session again.

Question two for Session Three had 33 parents not respond-
ing with 12 others believing the main point of the presentation
was to improve oneself to see changes in others; another 7
persons mentioned the importance of love; 5 papers could not be
categorized ("humans are neat," "imprint," etc.); and one person
believed that the most important aspect of the presentation was
that attendance was manditory on her(his) part if the child was
to continue in the program.

Forty-eight persons did not respond to question three;
4 more believed that everything about the program was fine; and
the remaining responses had frequencies of only one each.

Table 31 includes the responses of parents to the fourth
session. This session seemed to encourage more common responses
among parents than did the others although many still did not
respond to any of the questions. Sixteen parents, for example,
out of the 23 present, did not respond to question one; 4 wanted
more time to talk to teachers about individual children; and 1
each wanted more parents to come, or believed that they should
have been informed about the topic to better prepare questions,
or to lower the classroom temperature.

On question two, 16 parents did not respond, and of the
remaining 7, there were 6 who thought the main idea was feedback
on their own children. One parent stated that the most important
idea learned was that parents are trained by their children.

Nineteen parents did not respond to question three, and two more believed that everything was important and one parent stated that the least important thing learned was the need for reinforcement.

Table 32 reports the results of the parental written responses to Session Five. On question one, 30 parents did not respond out of a total of 37; 4 wanted more time for questioning by the audience; and one each wanted to start sooner after the coffee break, to have more parents attend, and to fix the road leading to the school.

On Question two, 24 parents did not respond; 9 indicated that the purpose of the session was to learn to ignore undesirable behavior rather than punish the child; 2 persons referred to the types of services that are avilable to help children with handi-caps; 1 believed the purpose of the session was to point out that tax money was being used incorrectly; and one stated that the session was designed to teach parents to carry out threats to children.

The third question was not answered by 33 out of the 37 parents; an additional 3 stated that everything was important; and 1 felt that the least important aspect of the presentation was the emphasis on not correcting a child when he did something wrong.

An examination of the parent written responses as summar-ized on Tables 28 to 32 indicates that most of the parents did not express their beliefs. Of those who did, many of the comments will not prove to be of much value in planning for additional speakers in the future. None-the-less, there were some excellent suggestions given, especially when the parents were not asked to indicate negative comments. Certainly it was the second question that encouraged parents to evaluate what they had heard.

OBJECTIVE 4:   TO DEVELOP PARENTAL ATTITUDES THAT ARE FAVORABLY
               DISPOSED TOWARDS THE PROJECT AS A WHOLE.

The fourth objective of Project C.H.I.L.D. was evaluated by asking parents to complete a Final Evaluation Form (See Appendix) which consisted of 5 Likert-type items. In all instances, option A was the most favorable and option D the least favorable. To be consistent with other instruments developed for this Pro-ject, option A was accorded 1 point, B was given 2 points, etc. Tables 33 and 34 summarize the responses to the Final Evaluation Form for parents of the Pre-Kindergarten sample and Pre-First Grade sample, respectively.

Table 33, item 4 ("After being involved with Project
C.H.I.L.D. during the summer of 1971, I feel that the overall
program was:") was perceived most favorably by parents in the
Pre-K Group followed by item 5 ("This is the last summer in which
Project C.H.I.L.D. will receive Federal support. Continuation
of the program, next summer, will require the use of local funds.
As a parent, I feel that the school board and administrators
should consider its continuation:"), Item 1 ("As a result of
Project C.H.I.LD., my knowledge of human development and child
rearing practices in general has:"), item 2 ("As a result of Pro-
ject C.H.I.L.D., my knowledge concerning the social, emotional,
and educational abilities of my hild has:"), and finally, by
item 3 ("As a result of Project C.H.I.L.D., I feel that my
child's social, emotional, and educational abilities have:").
The means are 1.100, 1.241, 1.724, 1.800, and 2.069, respectively
with the overall mean being 1.585. Some 84% of the parents
responded to options A and B (highly favorable) and no parent
responded to any of the five items by checking option D (highly
unfavorable). As far as the parents of the Pre-K Group is concerned,
therefore, Project C.H.I.L.D. is perceived by them in a most
favorable light.

The responses of the parents of the pre-first graders are
summarized as these parents tended to evaluate Project C.H.I.L.D.
somewhat higher than did the parents of those children enrolled
in the Pre-K Group. Again, it appears as if the weakest part
of the Program was elicited by item 3 (increase in emotional,
social, and educational abilities). Parents saw items 4 and 5
as being equally favorable (means = 1.136). The rank orders of
items rated by the parents in the two groups are almost identical--
what is perceived as valuable for the one group was seen as
valuable by the other. The greatest difference in the responses
of the two groups occurred on item 1 which yielded a mean differ-
ence of .315 in favor of the Pre-K parents. Since these parents
are probably a younger and less experienced group, the advantages
of Project C.H.I.L.D. in increasing their knowledge of human
development and child psychology over the more experienced group
seems obvious.

Of the 30 parents who responded to the Final Evaluation
Form (Pre-K Group), 8 or about 27% made no written comments at
all. Eighteen commented favorably about different aspects of the
program such as:

-My girl is more aware of things around her.
-Every school district should have a program like this
 all the time.
-I no longer slap my children..but tell them how I feel.

-My child learned to get along better with himself
and friends.
-This was very important for my child.
- The speakers and their ideas made me stop and think
about the way I react to my children and their everyday
problems.
-I have good feelings about the program; new insights--
personal.

The four parents who made suggestions or who had negative
feelings responded to the program in the following way:

-A longer session would have been more beneficial.
-I think it would be a much more important program if
you could reach some of the children whose parents don't
have time or the interest to bring them.
-The only suggestions concern external problems: possibly
a list, program phone number or such to formulate car
pools; more publicity prior to the sessions..., possibly
an outline on the parent's [sic] meetings.
-It was an interesting program, but I don't feel it is
important enough to be continued by local funds. I feel
the funds could be better used to lower the student-tea-
cher ratio.

Of the 22 parents comprising the Pre-1st Group, 8 parents
(36%) made no written comments on the Final Evaluation Form.
Some of the typically favorable comments made by parents inclu-
ded the following:

-Speakers were well chosen.
-I have a more open mind about my child's abilities. I
don't expect so much.
-The Program should definitely be continued.
-My child seems to look forward to going to school more
than he did.

Only one parent had any comments that could be judged as
negative. This parent seemed to have had a good deal of under-
standing about her (his) child prior to the training sessions,
and therefore only had expectations confirmed. Another parent
had only favorable comments to make but offered some suggestions
for persuading the Board of Education to continue the local
financing of Project C.H.I.L.D.

Question One   How might this session have been improved?

No response = 39

Excellent as presented = 7

Lower the temperature in the room = 3

Let parents talk more = 3

Make ideas clearer; too vague = 3

Need more time = 1

Have more people attend = 1

Improve session by not having it again = 1

Question Two   What was the most important idea you received
from this session?

No response = 33

Improve oneself to see changes in others = 12

Importance of love = 7

Miscellaneous ("Listening to people's thoughts," "woman's
    role as mother," "humans are neat," "imprint,") = 5

Attendance is mandatory if child is to continue in school = 1

Question Three   What was the least important idea you received
from this session?

No response = 48

Everything was important = 4

Treat every member of family as a guest = 1

Repetitious material about love = 1

Speaker is wrong about love producing a perfect child = 1

Percentages = 1

That potential of self is covered up = 1

Things I already know about = 1

TABLE 31

Parent Written Responses to Session Four
N=23

Question one   How might this session have been improved?

No response   = 16

Wanted time to talk to teachers about individual child = 4

More parents should come   = 1

Should have been told topic in advance to prepare better   = 1

Lower classroom temperature   = 1

Question two   What is the most important idea you have received
from this session?

No response   = 16

Feedback on individual child   = 6

Parents are trained by their children   = 1

Question three   What was the least important idea you received
from this session?

No response   = 19

Everything was important   = 2

Need for reinforcement   = 1

TABLE 32

Parnet Written Responses to Session Five

N=37

Question One"   How might this session have been improved ?

No response   = 30

More Time for questions = 4

Start sooner after coffee break = 1

Have more parents attend = 1

Fix road into school = 1

Question Two   What was the most important idea you received from
                  this session?

No response = 24

Ignore bad behavior = 9

Services available for all kinds of handicaps = 2

Tax money being used wrong = 1

Carry out threats to children = 1

Question Three   What was the least important idea you received
                  from this session?

No response = 33

Everything was important = 3

Not to correct child when they do something wrong = 1

PROJECT C.H.I.L.D.

Phase II
1971-72

Phase II

Project C.H.I.L.D.
1971-72

Phase II of Project C.H.I.L.D. began in January and terminated in June of 1972, the last year of the contract award. This phase involved a series of teacher workshops and workshops for parents. The objectives and methods employed to evaluate the goals of this phase of the project include the following:

Objective 1: To Increase the Parents Bank of Knowledge On Means
To Assist Their Children To Become More Successful
In School

A subjective semantic-differential rating sheet is being used to measure the influence of Project C.H.I.L.D. on parental attitudes and knowledge. This instrument is administered to all parents attending the evening meetings. Questions relating to the usefulness, importance, and interest value of the discussion, as well as important ideas gained by parents, are obtained in this manner. These will be tabulated on a sliding one to eight scale, with numerical as well as anecdotal values being obtained.

Objective 2: Assist, through Teacher and Parent Training, Children in
Building a Stronger Self-Image and Other Social-Emotional
Skills Which Promote Success in School

During the last several months of Phase II all teachers who have been involved in the training will be asked to evaluate the progress of their children in social-emotional skills. A modified version of the developmental profiles which accompanies the Human Development Program will be used. This instrument is intended to measure the following areas of competence.

(A) Awareness

1. Self-Awareness - The aware child knows how he feels, what he thinks, and what he is doing. Although he is conscious of himself, he is not self-conscious, insecure or embarrassed. This awareness does not produce anxiety. He accepts and can acknowledge how he really feels, thinks and acts.

2. Sensitivity to Others - The sensitive child is concerned about the well-being of other people. He readily ascertains what others are feeling and adjusts his behavior in ways that are thoughtful and beneficial to them without relinquishing his personal identity or beliefs.

(B) <u>Mastery</u>

1. Self-Confidence – The confident child is eager to try new things. He is self-assured and realistic when coping with challenge. His acceptance of himself permits freedom of expression which is natural and uninhibited without being overly dramatic or exhibitionistic.

2. Effectiveness – The effective child copes appropriately. He is emotionally stable and flexible enough to successfully implement his own desires or meet the external demands of his environment.

(C) <u>Social Interaction</u>

1. Interpersonal Comprehension – The child possessing this ability is better able to comprehend the effects of his behavior on other people. He knows how to help other people understand his emotions, thoughts and behavior.

2. Tolerance – The tolerant child recognizes and accepts individual differences. He accepts and gives full regard to others who have different feelings, thoughts and reactions than his own. But he does not necessarily approve or yield to their influences.

Objective 3: Develop a Core of Elementary Teachers Trained in Methods of Interaction in Early Childhood Education and to Increase Their Ability in Identifying and Implementing Strategies to Handle Classroom Problems

As with parents, a semantic differential method of measurement will be used to evaluate the effectiveness of Phase II in meeting this objective. All teachers enrolled in the workshops will complete this measure and submit it for tabulation on the eight point sliding scale. Anecdotal remarks are also requested and these will be summarized in the evaluation.

In addition, video tapes have been made with all teachers in the workshops. Groups of involved teachers are meeting to discuss the effects of their particular teacher-student style of interaction. Comments from these discussion sessions indicate that this is a very valuable experience for teachers. This will provide additional data on the effectiveness of the program.

The format and timeline for the Phase II workshops is detailed in the

following chart:

	SUNDAY	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY

PROJECT C.H.I.L.D. WORKSHOPS

1971-72 School Year

	Grade	Date	Consultant
I.	Initial Training Workshops		
	Kindergarten, First Grade, Primary Special Education, and Junior Primary	Jan. 16-21, 1972	Dr. Mike Trujillo
	Second and Third	Jan. 23-28, 1972	Berni Nelson
	Fourth, Fifth and Sixth, and Intermediate Sp. Ed.	Feb. 13-18, 1972	Jim Ballard
II.	Follow-Up		
	All Grades	One week in late April	Jim Ballard

All of the Initial Training Workshops were designed to provide a maximum

of both theory and actual in-class help by the Consultants while, hopefully,

not placing unrealistic time expectations on teachers who already are crowded

for available time. The attached diagram illustrates the design which is

being used to incorporate these desirable characteristics.

Consultant Activities and Evaluation

Between January 16 and January 21, 1972, Dr. Mike Trujillo, University of
California (San Diego, Extension), held a series of workshops on human develop-
ment for kindergarten, first grade, primary special education, and junior
primary teachers. The outline of activities and the evaluation is as follows:

Flow Chart for 1st and 2nd H.D.P. Workshop

		SUNDAY	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
A.M.	9:00	THEORY	Notices to Go Out to Parents				
	10:00	AND					
	11:00	METHODS					
	12:00		CLASSROOM		DEMONSTRATION		
				AND			
P.M.	1:00		VIDEOTAPING				
	2:00	TRAINING					
	3:00						
	4:00	DAY	AFTER SCHOOL TRAINING SESSION (Video Tape Playback and Discussion)				
EVENING	5:00						
	7:30					Parent's Meeting With Consultant	
	9:00						

Staff participation in this workshop was considered to be excellent since all but four teachers attended who were eligible. In addition to the eight teachers who participated in the workshop, the district nurse and district speech and hearing specialist also attended. Of the four teachers unable to attend, two indicated that they would be able to participate in the February workshop.

To evaluate this session, all participants were asked to complete a semantic differential scale containing nine bi-polar adjectives to evaluate the concept "This Workshop." The N for this phase of the evaluation was 11. A sample of the semantic differential scale appears below as Figure 1.

		1	2	3	4	5	6	7	8	
A	Good									Bad
B	Important									Unimportant
C	Useful									Useless
D	Pleasant									Unpleasant
E	Valuable									Worthless
F	Strong									Weak
G	Beautiful									Ugly
H	Interesting									Boring
I	Fair									Unfair

Fig. 1

Sample of the Semantic Differential Scale
Used to Evaluate "This Workshop"

Each of the nine categories of the semantic differential received a mean rating of 1.0 rounded to the nearest integer with the exception of scale G ($\bar{x} = 2.0$). At least as far as the participants were concerned, the workshop was enthusiastically received.

In addition to the semantic differential, participants were asked to respond to three questions:

1. How might this session have been improved?

2. What was the most important idea you received from this session?

3. What was the least important idea you received from this session?

Examples of typical comments follow:

How might this session have been improved?

- "We could have had more time with Mike in our rooms watching us — encouraging."

- "By having more attention and thus detail focused on sound... audio, especially when the sharing process is a learning experience for its leader."

- "I think the week was great like it was."

- "This was the best session I have ever been to."

- "More time for individual sessions with Consultant."

- "I guess the time element is the only drawback. If we had had more time for more dem ;trations perhaps we would have benefited."

- "Fewer group games."

What was the most important idea you received from this session?

- "That I was better than I thought I was and I actualized my talents."

- "The ease of accenting the positive. Good can be found in all of us."

- "Asking open-ending questions."

- "The over-all importance of mental health has been shockingly ignored and the H.D.P. theory seems to do a very comprehensive job of covering development of mental health."

- "A super-valuable and practical program (HEP). Since a child is often "self-centered" it is important he learn the skills of social inter-action. The importance of self awareness and self-expression for each individual. How a child's understanding of his own "mastery" can help him avoid much frustration in life. Workshop was very pleasant, infor-mative and well organized. Much good feedback."

- "Working with groups is an invaluable aid to the classroom teacher as a preventative tool toward mental health."

-"That I am not afraid to try new techniques, and this has helped me get a better look at myself in relation to my work with children. I've known that I heartily agree with these approaches, but this session cemented everything more firmly, and will help me be more aware of my reactions with all people, not only in the classroom. I find that most teachers and parents have difficulty handling the "open end" questions, and I felt the techniques used here were most helpful."

-"The program strengthened my belief in the need for communications; i.e., verbalizing emotions, etc., in the classroom. It supplied a guide to do this —— very important to me."

What was the least important idea you received from this session?

-"This session was extremely valuable to me as a person and as a teacher. Everything that was presented was important and guiding."

-"That HDP has no therapeutic value."

-"Nothing was unimportant!"

-"Too much time spent in individuals discussing past, personal teaching experiences rather than focusing on the here and now."

-"When you become as emotionally involved as I feel I did in this week's session, I can't pick out anything that wasn't important to me. I'm sincere in this, and it was all important to me.

The public information meeting accompanying this workshop was held on Wednesday, January 19, 1972, from 7:30 - 10:30 p.m. in Unit A of Shadow Lake Elementary School. The following information is a summary of data collected at that meeting:

1. Number of Persons Attending the Evening Discussion Session - 55

2. Number of Evaluation Responses Received - 45

The semantic differential data indicated a mean rating of 1.5 over the nine bi-polar adjectives. Only on the pleasant-unpleasant ($\bar{x} = 2.5$), strong-weak ($\bar{x} = 2.5$) and beautiful-ugly ($\bar{x} = 3.0$) scales were mean responses not equal to 1.0. The responses of the participants at this session included the following comments:

How might this session have been improved?

-"Less sharing more facts about what is going to happen."
-"All children and teachers should be included."
-"I would have liked to have seen and heard more experiences of Project
    C.H.I.L.D. with the children themselves."
-"Factual feedback from areas where the program has worked."
-"We might have had more dissenters."
-"People listening "thoroughly" before asking questions."
-"Less discussion of personal philosophy. Parent's being more receptive
    to info. presented before jumping to conclusions."
-"Many points that were of most interest to the group were not explained
    fully to their satisfaction — many important areas were presented
    weakly."
-"I think considering the nature of the end of this session, we need stronger
    information on the part of the people presenting the program so that
    you won't get so many bad feelings coming out."
-"Have all the school board attend."
-"For the parents to see more films or examples with the children."
-"I would have liked to see a film of the kids in the circle. A chance to
    read the teachers materials on this."
-"If the same questions hadn't been asked so often."
-"Educating the public."
-"By starting on time."
-"Eliminate some of the "John Birchers: — no not really — it's a democracy."
-"See movies of actual magic circles in class rooms.
-"Have everybody see the curriculum."
-"Not to have introduced this program at all."
-"Questionable."
-"If the magic circle would have been more seriously conducted and the one
    person disrupting it would have been removed."
-"A different speaker than Mr. T. because of the repetition of points of
    common knowledge."
-"Start on time (class was not prepared (training aids)."
"Get to the point of your program."
-"Separate groups and have a teacher or counselor with each group."

What was the most important idea you received from this session?

-"That I don't want my children in this program."
-"That it isn't sensitivity training."
-"It helps them to realize they aren't really alone in their feelings.
    Very Important!"
-"Am disappointed that Project C.H.I.L.D. will not continue this summer."
    Also very disappointed that all classrooms will not be using the system."
-"How children need to interact with others in their environment."
-"My child will be helped by this program."
-"Both sadness and happiness can be shared."
-"That this program is like your own dinner table talk. Safe!"
-"Explanation of program's use in the classroom."
-"The many facets of sharing."
-"The value of the HDP program as it is being presented in our school!"
-"Reinforcement of awareness of others."

-"That there is going to be "team work". The child is going to feel the teacher is a friend who cares about everybody."

-"That the one's who need the program most weren't here or didn't understand its values."

-"That this is a very good program."

-"People are afraid of change."

-"You can't talk to a blockhead."

-"I like the program and am really glad my children will get to participate."

-"All my questions were answered."

-"The simple idea that something so straight forward can be so controversial to some people."

-"Group generates good feelings."

-"The idea of helping the children."

-"Learning the boundaries of the program."

-"I have received some degree of assurance that my child will not lose her individualism. (Still not to clear how much assurance I received.)"

-"That further and more explicit explanation of your goals from the program."

-"The program is logical and would have worked for me if I would have had the chance to participate."

<u>What was the least important idea you received from this session?</u>

-"Not any that I can think of."

-"None that were apparent."

-"Some of the utterly "stupid" remarks made from individuals."

-"Personal biases from parents. Parent's non-response to info. presented due to blockage resulting from personal philosophy.

-"Ideas from some members of the audience."

-"Consciousness of other's ignorance of children."

-"None."

Between January 23 and January 27, 1972, Miss Berni Nelson, school psychologist (San Rafael School District) and instructor of in-service training for teachers (Sonoma State College) met with teachers (grades 2 and 3), the staff, and public.

Activities during this Workshop were very similar to those conducted during the first. However, the heavy snow during this week required three major changes in format:

1. All videotaping in classrooms had to be done on Monday, Thursday, and Friday because of the closure of schools on Tuesday and Wednesday.

2. A three hour Workshop was held on Wednesday for the six teachers and teacher aides who were able to get through the snow. This substituted for the two 1-1/2 hours after school meetings which were planned for Tuesday and Wednesday.

3. No parents were able to get through the snow to attend the evening meeting on Wednesday.

Six teachers and three teacher aides from Lake Wilderness Elementary and two teacher aides from Shadow Lake Elementary attended the Workshop. This means that of the total number of teachers at these grade levels, one from Lake Wilderness and all six from Shadow Lake chose not to attend. Of this number, only the Lake Wilderness teacher has indicated a desire to attend the February Workshop.

Semantic differential data indicate enthusiastic reception by the professional staff. In all instances except scale G ($\bar{x} = 2.0$), the mean rating assigned to each bi-polar adjective was 1.0. Some typical comments follow:

How might this session have been improved?

-"By better weather. Participation by more teachers."
-"More group experiences with mastery and social interaction."
-"More discussion on what children think."
-"I don't think the teachers will have enough time to make good use of the program."
-"Only way I felt it could have been improved is if it could have been longer."
-"Maybe another weekend day and then not the theory after school...those times for rehashing the circles of that day. Would like to have seen my video tape."
-"More people from the other school could have participated and could have gotten their views."
-"More circles and group experiences ... more time."
-"Maybe with some pictures of kids in the magic circle, etc. Maybe some shots of their expressions, reactions. To emphasize some part of the program. I don't know, maybe this wouldn't impress teacher as perhaps they see these things often enough. I really like these kinds of pictures."

What was the most important idea you received from this session?

-"Not to make value judgements. Or remarks, made by habit, that sound like value judgements. It's important not to pretend that negative feelings don't exist."
-"It helped me to be more aware of myself. That every child must be aware of his own person. ...through this self confidence he (child) will know his own abilities and how to use them. Also the questions that will help the child to be aware of himself. Think, feel, do questions."

-"I think that the most important idea was learning to think a new way. Just going to the session made me realize that I wasn't using all my senses."

-"If done properly everyone will have a chance to be a part of the group, and express themselves and eventually continue to do so through life."

-"The importance of letting the children express their own feelings not the feelings that the teacher wants them to express. In the circle the child teaches the teacher."

-"How easy it is to initiate and reinforce judgmental attitudes — not only by using words such as good, bad, nice, etc., but in other nonverbal ways. And how this decreases the chances of a child feeling acceptable. Also, matching the dynamics of the circle."

-"How to get responses from your children—the phrasing and creativity were very interesting to me and now I can apply these things even without a magic circle.

-"Three questions ... feelings, thought, behavior. Tell my needs; let you do your behavior accordingly (if you will)."

-"That a kid learns to hide his feelings from others from possibly his first experience with other kids. This program if used in the home as well as the early grades could change that."

What was the least important idea you received from this session?

-"It must have been so unimportant that I've forgotten it."
-"No waste of time."
-"I don't think we received any unimportant ideas."
-"There weren't any. This was a fantastic workshop! It taught me alot about myself .. which is important to me as a teacher."
-"When we're doing something for the first time in a situation which is without precedent for us, we go in entirely cold."
-"All were important to me. I learned a great deal!"
-"No waste of my time!"
-"I didn't attend the entire program. All of what I did participate in was interesting. I didn't think it was really important to catch the entire program as I would never really have the opportunity to use it in the classroom. I would suppose that's what this session was for. I did get out of it what I was looking for, and that was just a basic understanding of what it is and how it's used."

The public information meeting for this workshop was held on Wednesday, January 26, despite the heavy snowfall. It was impossible for the date to be changed and parents to be notified on such short notice. No parents were able to participate, and consequently, no evaluation was possible.

The third workshop was held between February 14 and 18 for fourth, fifth, and sixth grade teachers. The consultant for these workshops was Mr. James Ballard, a consultant and Training Director for the Institute for Personal Effectiveness in Children. The flow chart for this third workshop follows:

Flow Chart for 3rd H.D.P. Workshop

		SUNDAY	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
A.M.	9:00		Notices to Go out to Parents				
	10:00						
	11:00			CLASSROOM DEMONSTRATIONS AND			
P.M.	12:00			VIDEOTAPING			
	1:00						
	2:00						
	3:00			AFTER SCHOOL TRAINING SESSION			
	4:00			(Video Tape Playback and Discussion)			
EVENING	5:00						
	7:30				Parent's Meeting	(With Consultant)	
	9:00						

Five staff members and 25 teachers participated in this workshop. Two of the five staff who were participants were teacher aides, a reading coordinator, and two elementary school principals. Only five teachers were unable to attend this workshop.

The semantic differential data were highly satisfactory for this phase of the program. Mean ratings were 1.0 for all scales, suggesting that all participants rated the consultant and his topic in a most favorable manner. Some typical comments follow:

How might this session have been improved?

- "More circles involving us!"
- "More variety."
- "More commentary on more circles. More actual involvement.
  Do more and listen less. The MEDIA is the MESSAGE."
- "Sorry, I can't help you here. I enjoyed every minute of it."
- "Divide group up in circles — a way from each other —
  separate rooms."
- "I felt the session was too short. I would have liked more time
  to observe and experience magic circles. Also I feel a need
  for more feedback such as getting together once or twice as
  a group a week or two after the Workshop for discussion, etc."
- "Teachers had not had enough experience in the "magic circle"
  to discuss at length any problems. Therefore, the instructor
  could have given more information from the manual or his experi-
  ences rather than call on teachers to discuss the problems
  they had had. I thought the instructor was very good! I
  enjoyed him."
- "Have a meeting about a week afterwards to see how things are
  going; to compare experiences; to encourage if need be."
- "Smaller group."
- "By having Jim demonstrate in each room which I know wasn't
  possible."
- "I feel it could have been improved with more information from
  the book mixed with the games."
- "Encourage the silent minority to speak their feelings — they
  are intimidated by the loud mouths."
- "Group too large."
- "It might have been more helpful to use students in the sessions
  instead of teachers role playing."
- "Perhaps more actual work with students in the circle would be
  helpful, but this may be impractical."
- "More magic circles for we the students."
- "More demonstrations on video. More music?"
- "More observation."
- "You involved everyone and sessions were interesting so very
  little improvement can be seen at this session."
- "Less lecture-type stuff: there were times the leader was not
  sensitive to needs of group."
- "Perhaps involving some parents and/or students at the beginning."
- "More work in the classroom, eg., more observations of circles by
  Jim and Buzz with the kids; more observation of me conducting
  circles; more work on tying awareness, mastery and social
  interaction together (I'm still fuzzy here)."
- "More time for practice sessions with adults of children.
  More discussion of video tapes of sessions."

What was the most important idea you received from this session?

- "You don't have to <u>prove</u> something or teach something at each circle."
- "People have similiar feelings, wants and needs."
- "Learning how to feedback into the circle."
- "Teacher as a reflector. Stressing <u>skills</u> of listening and speaking."
- "I liked the feeling that the leaders in this class totally accepted and enjoyed each individual in it, and I hope that this same kind of accepting, friendly, relaxed atmosphere may pervade the "Magic Circle" which I will try to lead. I also loved the guitar playing and the singing. How I wish for the children's benefit that all of us had talents such as that!"
- "The most important idea seemed to be that in the circle the child's feelings are accepted and not evaluated or rejected. A "positive" atmosphere should be created."
- "That there is something positive that can be done for a child to help them grow up to be a 'well adjusted' adult."
- "To talk and be listened to. To listen when someone else talks. Not to worry about what you say."
- "I need to <u>listen</u> to my students!"
- "The importance of <u>listening</u>."
- "The most important idea I received from this session was that a 'magic circle' need not be heavy on feelings for it to be considered a successful circle."
- "How a magic circle should be run, plus its purpose in reference to the child."
- "To be innovative when running a circle group. Let the kids suggest topics for group interaction."
- "That the whole idea really isn't anything so 'far out'. Teachers have been doing this type of thing all along; only without the specific training. The 'ground rules' are most important as the circle could become unruled without them. The materials given at the class."
- "That we need more people like Jim Ballard in the world. Also in the district."
- "It was significant to me to learn that my responses to students in the magic circle are most meaningful when they are non-evaluative."
- "I will list them:
  1. The technical aspects of the magic circle — the demonstrations.
  2. An interesting class, the most fun class I've ever taken — conducted on such friendly terms.
  3. Such neat leaders — where all people are equal.
  4. I liked the singing.
  5. The unusual thing — <u>useful</u> and <u>neat</u> at the same time.
  6. I was so relaxed.
  7. I was myself.
  8. I owned the feeling, 'I <u>enjoy</u> a leadership role when I am sure of myself."
- "Listening, feed-back, awareness application to academics.

-"Better understanding of others feelings and how we could hurt a person without really meaning to. The idea to share our feelings good or bad and to help one another to feel better. Methods of application has helped better me as a teacher."

-"Skill and purpose in doing 3 areas of circles. Good personal stuff, a week to remember."

-"That I do have four different kinds of relationships with my kids. I really think I can begin to help kids see themselves and others and understand what they see and feel and appreciate themselves."

-"That we can and should work with children in the areas of feelings and social interaction. These areas are not taboo and need only be dealt with at home. 'I can help!' Thank you for the curriculum. The cues will be very helpful."

-"Listen to each child."

What was the least important idea you received from this session?

-"Tin cans."

-"This particular question."

-"Didn't feel comfortable at social thing. (You do good in a circle group)."

-"Some of the small group activities (such as "yes" and "No" game) seemed relatively unimportant at the time."

-"There is nothing I consider "least important."

-"I really can't say — I enjoyed all of it."

-"I feel that the session didn't have an idea that was "least important" to me."

-"That teachers should unduly trouble themselves by "bored" circle members. We can't please everybody."

-"Uses of a tin can!"

-"I have taught this method since 1949 and worked my academics in beautifully but only difference was I have never tried feelings of individuals or to fantasize. You can never say least important ideas because we learn from others whether right or wrong."

-"Few that weren't valuable."

The evening meeting for parents was held on Wednesday, February 16, 1972, from 7:30 - 10:00 p.m. in Unit B of Shadow Lake Elementary School. The meeting included (1) a presentation by Jim Ballard on the goals and methods of the Human Development Program, (2) a one and a half hour session for questions and answers, and (3) a video tape playback of several "Magic Circles" in the Classrooms.

As before, this meeting was fairly well attended. However, the people in the community and on the Board of Directors who have been most vocal in their opposition to Project C.H.I.L.D. did not attend and have not attended any of the public meetings where consultants and teachers were present and video tapes of "Magic Circles" were shown. It would seem that their questions and concerns could have been best responded to at these times.

Although 63 persons attended this meeting, only 39 evaluation responses were submitted. This is the smallest percentage of returns of any of the parent meetings. This small percentage raises some doubts as to the validity of the results obtained.

Public responses to this session were rated highly but not quite so favorably as other meetings. Mean ratings of 1.0 were given to all scales except B (2.0), C (2.0), F (2.0), and G (3.0). Modal responses, however, were 1.0 except for scale G (4). The mean was 1.4 over all nine scales, still considered highly favorable. Some typical comments follow:

How might this session have been improved?

  —"Only the positive views were presented. They sounded great.
    Common negative views should have been disclosed along with the
    proper explanations as to their validity."
  —"Having live children or more taped classroom stuff with better
    sound."
  —"I feel that I learned very little of such a complex subject.
    Underlying philosophy very vague. More specifics as to
    purposes are needed."
  —"Wish parents could have more information on this program."
  —"There is always room for improvement but I can't think of
    anything for this session."
  —"More parent turn-out."
  —"Only one side present — entertaining."
  —"Variation of topics from people in the circle."
  —"Had tea for the ones who can't drink coffee."
  —"The session was very good."
  —"Divide into groups so that everyone might have a chance to
    participate in the circle."
  —"Perhaps a little more time to watch tapes and discuss."
  —"Very good! — but couldn't hear the tapes too well."
  —"Improved meaning of session."
  —"Have the tape ready to role."
  —"Better TV."

What was the most important idea you received from this session?

- —"Training a child to communicate. Children become adults. In this way, in life after formal schooling a person can more easily fit into society, in a useful productive capacity."
- —"The possibility of looking for similarities among all of us human beings."
- —"That it is important to listen to other people's feelings and then tell them, perhaps in different words what they think and feel."
- —"The personality of the teacher would be the entire determinant of effectiveness. Her morality and beliefs of prime importance."
- —"I'd still like to know more but I don't believe I'll be afraid to have my child in the program."
- —"That as parents we have to listen to what our kids have to say and feel."
- —"To listen to others."
- —"With 7 kids I'm spread thin. I have to find the time to spend with each one, to just listen."
- —"Each child had a chance to be listened to."
- —"Effective communication (listening to feelings)."
- —"It's good to listen."
- —"Teaching the child to listen to others and remember what was said."
- —"Parents want to learn too! Yes."
- —"It is experimental — not scholarly presented.
- —"Communication of feelings."

- —"To not just listen to words but the feelings behind the words."
- —"That the idea is interesting for adults or in the family but I've met all of both my kid's teachers and none will handle my kids in a magic circle."
- —"That people (the majority) do want to be listened to and communicate and like to be told what their thoughts and ideas are."
- —"That each individual's feelings are important (teachers, parents, children). I personally feel that being able to listen to others the most important thing we can teach our kids."
- —"People like to hear their thoughts expounded back to them. To hear what they said."
- —"Each child gets a chance to share."
- —"That there was a lot of acceptance from the group.:"
- —"Useful characteristics of a person."
- —"I now have an idea of what the magic circle is all about. Summed up it's keeping open communication."
- —"Effectiveness of program depends on each teacher."
- —"The importance of listening, understanding others feelings, as well as being listened to and understood."
- —"Consideration for others."
- —"Being aware of the other person's feelings, being able to communicate trust and feelings and love for one's family."

What was the least important idea you received from this session?

--"The Program Federal funding runs out at the end of this
  school year."
--"I can't remember."
--"Self expression achieved could be effected in other way --
  story writing, etc. Will have to see textbooks to make a
  valid judgment."
--"I do not feel this is a proper subject for public schools and
  I haven't heard anything tonight to change my mind."
--"It all seemed very important to me."
--"All was great! We need more!"
--"Making mistakes in equipment."
--"I don't believe there was one."
--"It was all important."
--"I don't believe it will or could always be constructive.
  That it could possibly be detrimental to some people, and have
  bad effects."
--"The circle of parents demonstration was most effective!"
--"Sewing makes a housewife feel good."

Distribution of Children Not Participating in Project C.H.I.L.D.

The following frequencies indicate the number of children in participating

teachers' rooms whose parents requested that they not participate in the Project:

Grade Level		
	Kindergarten	2
	Junior Primary	2
	Primary Special Education	0
	First Grade	5
	Second Grade	9
	Third Grade	13
	Fourth Grade	20
	Fifth Grade	17
	Sixth Grade	22
	Intermediate Special Education	0
	Total	90

Responses from thirty-four of the thirty-six teachers involved indicate that the children not included in the "Magic Circles" have been provided with alternate activities, chosen by their teachers, which coincide with or supplement the ongoing activities of that particular classroom. Of course, the exact content of these activities is dependent upon the grade level, classroom schedule, and achievement level of the students. Activities have been provided which the teacher feels will be most productive for the student.

In most cases the child remains within the classroom and works at his seat, but when parents have requested it, their children have been sent to the Library or other areas for study. Less than five such requests have been received; in all cases, they have been honored. The following information was obtained on March 7th from thirty-four of the thirty-six teachers who have taken the workshops:

A. Question: "Have you used the "Magic Circle" since the Workshop?"

    Response: Yes - 31
              No - 3

B. Question: "If yes, try to remember and record the dates of these circles, approximately how long each circle took, and what activities the other students were engaged in while you ran the circles."

    Response: Teachers' responses to the first part of the question, which related to frequencies of circles, indicated that: (1) Use of circles varied greatly; some teachers had conducted only one circle since the workshop while others had made it a daily part of the curriculum. (2) The average frequency of "Magic Circles" in classrooms is about twice a week.

    When asked how long the circles took, thirty of the thirty-four teachers placed the time period at ten to twenty minutes. This is the average time indicated in the training materials. Two teachers with Special Education classes and two in open-area classrooms placed the average time at twenty to thirty minutes.

    Activities for children not in the circles has, as mentioned before, varied from room to room but all teachers have used this time for educational activities.

C. Question: "Do you have "Magic Circles" on a regular basis in
                your classrooms."

   Response: Yes - 16
                No - 18

D. Question: "Some of the Board Members have expressed an interest
                in visiting classrooms during circle time and getting
                a firsthand look at what is going on. Would you be
                willing, with a few days notice, to have this sort
                of visitation to your room?"

   Response: Yes - 26
                   No - 3
             No Response- 5

        Seven of the eight teachers who did not respond or who
responded negatively had previously indicated that they had not
been using the "Magic Circle" on a regular basis. This seems to be
part of the reason why they did not wish Board Members to observe
them at this time.

                        Teacher Evaluation

At the end of the academic year 1971-72, teachers who participated in

Project C.H.I.L.D. and a control group of non-participants completed a Teacher

Evaluation Form that was designed to measure attitudes towards education and

teaching (F. N. Kerlinger and E. Kaya, "The Construction and Factor Analytic

Validation of Scales to Measure Attitudes Toward Education," Educational and

Psychological Measurement, 1959, 9, pp. 13-29). In addition, experimental

teachers completed three questionnaires on HDP Training, Program Materials,

and Content. The Appendix contains a copy of all instruments used in this

evaluation.

Twenty-five teachers participated in the evaluation by submitting answers

to questionnaire items anonymously. Each item was in the form of a Likert-type

scale with response (A) meaning "Strongly Agree," (B) "Agree," (C) "Uncertain,"

(D) "Disagree," and (E) "Strongly Disagree." The most favorable response for

each alternative is indicated by an asterisk (*). Item means were attained by

weighting the most favorable response by 5 and the least favorable response
by 1. The Project Director keyed all items.

Section IV: EDUCATION SURVEY

Items 121 to 140 were compiled by 25 out of 38 experimental and nine out of 12 control teachers. These correspond to samples of 67 percent and 75 percent, respectively. Frequencies and proportions of experimental and control teachers responding to each category are reproduced below. Item means are presented for experimental and control groups.

		A	B	C	D	E	(Item Means)
121.	Frequencies (E)	17*	7	0	1	0	4.60
	Proportion (E)	.68	.28	0	.04	0	
	Frequencies (C)	6*	3	0	0	0	3.66
	Proportion (C)	.67	.33	0	0	0	
122.	Frequencies (E)	8*	12	3	0	2	3.96
	Proportion (E)	.32	.48	.12	0	.08	
	Frequencies (C)	4*	4	1	0	0	4.33
	Proportion (C)	.45	.45	.11	0	0	
123.	Frequencies (E)	1	2	1	11	10*	4.08
	Proportion (E)	.04	.08	.04	.44	.40	
	Frequencies (C)	0	3	0	4	2*	3.55
	Proportion (C)	0	.33	0	.45	.22	
124.	Frequencies (E)	1	4	7	7	6*	3.52
	Proportion (E)	.04	.16	.28	.28	.24	
	Frequencies (C)	2	1	2	4	0*	2.88
	Proportion (C)	.22	.11	.22	.45	0	
125.	Frequencies (E)	5*	8	7	5	0	3.52
	Proportion (E)	.20	.32	.28	.20	0	
	Frequencies (C)	2*	3	2	2	0	3.55
	Proportion (C)	.22	.33	.22	.22	0	
126.	Frequencies (E)	0	10	3	9	3*	3.20
	Proportion (E)	0	.40	.12	.36	.12	
	Frequencies (C)	3	3	0	3	0*	2.33
	Proportion (C)	.33	.33	0	.33	0	
127.	Frequencies (E)	3*	13	5	4	0	3.48
	Proportion (E)	.12	.52	.20	.16	0

	Proportion (C)	0	.22	.11	.67	0	

		A	B	C	D	E	(Item Means)
139.	Frequencies (E)	6*	16	3	0	0	4.12
	Proportion (E)	.24	.64	.12	0	0	
	Frequencies (C)	3*	6	0	0	0	4.33
	Proportion (C)	.33	.67	0	0	0	
140.	Frequencies (E)	2	2	13	7	1*	3.12
	Proportion (E)	.08	.08	.52	.28	.04	
	Frequencies (C)	0	3	0	6	0*	3.33
	Proportion (C)	0	.33	0	.67	0	

Means and standard deviations for each of the four sections of the question-naire are reported below. Data for the control group are reported only for Section IV, since other sections are not applicable. Maximum values were obtained by weighting the number of items on each section by 5. Thus, one hundred percent of maximum means that everyone responded in the most favorable category.

Means and Standard Deviations for Sections I-IV of the Teacher Evaluation Survey

	Section I	Section II	Section III	Section IV (E)	Section IV (C)
Means	40.88	53.34	46.98	70.76	71.70
Maxima	55	70	60	100	100
% of Maxima	74.3	75.7	78.2	70.8	71.7
SD	8.04	5.2	5.6	9.8	9.3
N	25	25	25	25	9
Items	11	14	12	20	20

These data suggest that, relative to the number of items, Section III (Content) is perceived most favorably by respondents while Section IV (Attitudes towards education and teaching) is seen least favorably. Nonetheless, differences among the four sections vary no more than by eight percent.

Because Sections I-II were concerned exclusively with items related to the project itself, they were not applicable to control teachers. However, responses to Section IV could be compared since they consisted of general attitudes toward teaching and education. To compare the two means, a t-test was computed. The computed value was -.31, not significant at the .05 level.

Section I: HDP TRAINING

Section I contained 11 items measuring attitudes towards HDP Training. The most favorable consideration was given to item 5 ("Watching the consultant do 'magic circles' was useful") followed by item 1 ("My HDP Training workshop was an exciting experience"). No item in this section received an unfavorable response.

Section II: PROGRAM MATERIALS

Fourteen items comprised Section II. The most enthusiastic response by teachers was to item 47 ("I think the aims of the program are useful to children's learning"). Again, no item was rated low.

Section III: HDP CONTENT

Among the twelve items comprising this subtest, item 90 ("The HDP is primarily for emotionally troubled children") received a highly negative response by the teachers. Since this response is favorable, the mean was high (4.56 out of a possible 5 points). The greatest disagreement also occurred on this section where the meaning of social interaction was not clear to many of the respondents (mean = 2.76).

Section IV: EDUCATION SURVEY

Of the twenty items in this section, there were a number of items that tended to separate teachers who participated in the HDP from control teachers who did not. Items 121, 126, 134, 137, and 138 were most discriminating.

121. On this item, experimental teachers believed that the goals of education should be determined by the needs of children and by the larger demands of society to a much greater extent than did control teachers.

126. As might be anticipated, experimental teachers tended to disagree with the notion that "subject matter" is the single most important phase of education, while the control teachers generally agreed.

134. The keyed response to this item was "Strongly Agree" meaning that "discipline should be governed by long-range interests of children and well-established standards." On this item, control teachers agreed to a greater extent than did those in the experimental group. The meaning of this item is, however, open to question since it contains two conditions that are not necessarily compatible.

137. A "Strongly Agree" response to this item means that teachers believe that children should be allowed more freedom in the classroom. Control group teachers did not agree with this item, while experimental group teachers did.

138. Agreement with this item presumes that learning is primarily a cognitive function. Experimental group teachers disagreed with this contention, while it was accepted among the control group.

Summary and Conclusions

During the summer of 1971, 68 pupils took part in Project C.H.I.L.D. As initially perceived by their teachers, these students were rated about average on the Behavior Check List for Teachers and Parents. At the outset of the program, teachers and parents did not rate children in the same way. At the end of the summer program, teachers judged that 79 percent of the students improved somewhat or markedly while others either failed to improve or were rated lower (six pupils). By the end of summer, parents and teacher ratings

were in much greater accord. Parent responses to each workshop session were obtained and analyzed. All ratings were highly favorable.

In Phase II, three workshops for parents and teachers were scheduled. Using a bi-polar rating scale, participants were asked to evaluate each workshop. Mean responses indicated a high evaluation for each session by all participants. In June 1972, teachers who had participated in the project were asked to evaluate its effectiveness using four Likert-type scales. Item analysis data and means for each of the four scales demonstrated a high degree of teacher satisfaction. In comparison with a control group of teachers not participating in the project, no significant differences were found on the scale that measured general attitude toward teaching. Where there were item differences that were large, however, they favored teachers who participated in the project.

TEACHER EVALUATION OF PROJECT C.H.I.L.D.

Gil Sax, Educational Psychology, University of Washington

Dear Teacher:

     I have been asked to gather information from teachers on Project C.H.I.L.D. It is essential that we get this information before school is out. Please respond to the following questions using a No. 2 pencil and the enclosed I.B.M. form and return to me in the addressed envelope.

<div align="center">

Thanks,

Gil Sax, Ph.D.
Educational Psychology Department
University of Washington

</div>

INSTRUCTIONS:

     Fill in grade and school. Use the following scale to indicate your agreement or disagreement on each question:

Strongly Agree:	"a"	Disagree:	"d"
Agree:	"b"	Strongly Disagree:	"e"
Uncertain:	"c"		

For example, if you strongly agree with a statement, you would pencil the short space beneath the letter "a" in the appropriate section with the IBM answer sheet and question numbers corresponding. However, if you should happen to disagree with it, you would pencil the short space beneath the letter "d". Please use the back of the IBM form for your additional comments. Do not fold the IBM sheet.

SECTION 1: H.D.F. TRAINING

_____1. My H.D.F. training workshop was an exciting experience.

_____2. I felt that the leader of the Workshop was not effective.

_____3. I felt that the workshop lead to constructive changes in my style of teaching.

_____4. The video-tape recording and playback of demonstration "magic circles" was a useful part of the workshop.

_____5. Watching the consultant do "magic circles" was useful.

_____6. The sequence of learning during the workshop was useful.

<div align="center">

Continued....

</div>

_____7.   I feel that we did not have enough time during the workshops.

_____8.   It is useful to watch other teachers do "magic circles."

_____9.   The workshop was well designed to teach me how to do "magic circles."

_____10. The results of "magic circles" have not been worth the time the work-
          shop required.

_____11. I feel competent in doing "magic circles" with my class.

NOTE:

Skip to
Section II   SECTION II: PROGRAM MATERIALS
of Answer Sheet:

_____41. The lesson plans are complete and meaningful.

_____42. Many lesson plans are not clear.

_____43. I can see the need for many changes in the lesson plans to make them
          more effective.

_____44. The lesson topics hold the interest of the children.

_____45. The sequence of lessons seems well planned.

_____46. I would recommend the H.D.P. program to a new teacher.

_____47. I think the aims of the program are useful to children's learning.

_____48. I am definitely going to continue using the program next year.

_____49. There seems to be good support for the program at my grade level.

_____50. Teachers should work together on this program.

_____51. I would be willing to demonstrate a circle to other teachers.

_____52. I feel that the Human Development Program doesn't fit in with the
          rest of the curriculum.

_____53. The Human Development Program should be part of training for new
          teachers.

_____54. I have used the resource materials in the Project C.H.I.L.D. Library.

SECTION III: H.D.P. CONTENT

NOTE:
Skip to
Section III
of Answer Sheet:

_____81. Feelings should be stressed more than thoughts or behavior.

_____82. In H.D.P. "Mastery" means how well a child does in school.

_____83. In H.D.P., "Awareness" runs through the entire program.

_____84. Social Interaction refers to the child's ability to adjust to society.

_____85. A withdrawn child should be excluded from "magic circles."

_____86. Teachers should model the consultant's "style" to be effective.

_____87. "Magic circles" should be a daily classroom activity.

_____88. Fifteen to twenty kids is the best size for "magic circles."

_____89. Most circles will run for 1/2 hour to do a lesson completely.

_____90. The Human Development Program is primarily for emotionally troubled
children.

_____91. A child should be strictly encouraged to reveal things that scare him.

_____92. H.D.P. is intended to prevent rather than cure social and emotional
problems.

INSTRUCTIONS: Given below are 20 statements on educational ideas and problems about which we all have beliefs, opinions, and attitudes. We all think differently about such matters, and this scale is an attempt to let you express your beliefs and opinions. Respond to each of the items as follows, making certain that your answers are placed in Section IV of the I.B.M. sheet beginning with number 121:

Strongly Agree: "a"   Disagree: "d"
Agree: "b"   Strongly Disagree: "e"
Uncertain: "c"

For example, if you strongly agree with a statement, you would pencil the short space beneath the letter "a" in Section IV of the IBM sheet, the answer sheet and question numbers corresponding. However, if you should happen to disagree with it, you would pencil the short space beneath the letter "d". Respond to each statement as best you can. Go rapidly but carefully. Do not spend too much time on any one statement; try to respond and then go on.

_____121 The goals of education should be dictated by children's interests and needs, as well as by the larger demands of society.

_____122 No subject is more important than the personalities of the pupils.

_____123 Schools of today are neglecting the three R's.

_____124 The pupil-teacher relationship is the relationship between a child who needs direction, guidance, and control and a teacher who is an expert supplying direction, guidance, and control.

_____125 Teachers, like university professors, should have academic freedom—freedom to teach what they think is right and best.

_____126 The backbone of the school curriclum is subject matter; activities are useful mainly to facilitate the learning of subject matter.

_____127 Teachers should encourage pupils to study and criticize our own and other economic systems and practices.

_____128 The traditional moral standards of our children should not just be accepted; they should be examined and tested in solving the present problems of students.

_____129 Learning is experimental; the child should be taught to test alternatives before accepting any of them.

_____130 The curriculum consists of subject matter to be learned and skills to be acquired.

_____131 The true view of education is so arranging learning that the child gradually builds up a store house of knowledge that he can use in the future.

_____132 One of the big difficulties with modern schools is that discipline
            is often sacrificed to the interests of children.

_____133 The curriculum should contain an orderly arrangement of subjects
            that represent the best of our cultural heritage.

_____134 Discipline should be governed by long-range interests and well-
            established standards.

_____135 Education and educational institutions must be sources of new
            social ideas; education must be a social program undergoing con-
            tinual reconstruction.

_____136 Right from the very first grade, teachers must teach the child
            at his own level and not at the level of the grade he is in.

_____137 Children should be allowed more freedom than they usually get
            in the execution of learning activities.

_____138 Learning is essentially a process of increasing one's store of
            information about the various fields of knowledge.

_____139 In a democracy, teachers should help students understand not only
            the meaning of democracy but also the meaning of the ideologies
            of other political systems.

_____140 Children need and should have more supervision and discipline than
            they usually get.

Behavior Check List For Teachers And Parents

Form 71-1

Name of Child _____   Relationship to Child _____

Your Name _____   Parent: _____

Teacher: _____

Other: _____
(explain)

Instructions: A series of questions about childrens' behavior are listed below. Your
job is to make accurate observations about a child, concerning each of
the areas listed. To help you do this, we have included paragraphs
describing two opposite ways that a child could behave related to each
of the questions.

Read the paragraphs for each questions. Decide where you think the
child's behavior generally fits, between these two extremes (toward
one end or in the middle). Place a check mark on the line, below the
paragraphs, indicating your choice for each question. Work through
all of the questions in this way. Please ask for further instructions
if this is not clear. Try to be as accurate and candid as you can in
describing your opinion on each question.

---

1.   (I.)

Child seems to have a great
deal of trouble with new
knowledge. Can't seem to
pay attention to new things
or pick them up very quickly
when exposed to new things.

Child is very capable of
"picking up" everything
that he sees & hears the
first time that he is ex-
posed to it. Never needs
to have things explained,
but rather, seems to spon-
taneously understand things
well.

| -3 | -2 | -1 | 0 | 1 | 2 | 3 |

---

2.   (I.A.1.)
Never seems to know what to
do. Needs constant re-explain-
ing. Flighty attention.
Poor habits of concentration.

Does not need directions
repeated often. Always
able to do work on tasks
on his own after being
shown how. Attention span
very good.

| -3 | -2 | -1 | 0 | 1 | 2 | 3 |

3. (I.A.2.)

Even after long observing
cannot distinguish obvious
differences. Observes
few or no details. Limit-
ed progress in certain
senses.

Able quickly and clearly
to see differences. Can
distinguish between shapes.
Distinguishes details
easily.

```
   -3        -2        -1        0        1        2        3
```

4. (I.B.)

Child has a great deal of
trouble understanding the
emotions or expressions of
feeling which other people
express to him. Often mis-
understands people when they
try to explain how they feel
about things.

Child seems very perceptive
of differences in the way
people act toward him. Will
often seem to "just know"
when another person feels
sad or happy, without any
verbal communications. Seems
to sense subtle changes in
the moods of others.

```
   -3        -2        -1        0        1        2        3
```

5. (II.A.)

Child seems generally unable
to "put things together" in
his mind. Forgets things
quickly and seems to have
great difficulty understand-
ing how related facts go
together.

Child picks up the relation-
ships between facts very
quickly and seems to under-
stand how facts "fit toget-
her" with little effort.
Never needs explanations
about complicated ideas.
Rather, he understands so
quickly that it amazes adults.

```
   -3        -2        -1        0        1        2        3
```

6. (II.A.1.)

Foggy grasp of reality,
material objects. Frequently
"all mixed up". Mixes up
objects. Confuses distinguish-
ing features which identify
objects.

Clear grasp of identifying
features of elements in
child's world. Able to
recognize differences be-
tween such objects as circles
and ovals. Evidences clarity
of grasp in using percepts
in conversation and in other
tasks where applicable.

```
   -3        -2        -1        0        1        2        3
```

7. (II.A.2.)

Child has great deal of difficulty in understanding ideas such as bigger, smaller, louder, softer, etc. Has trouble deciding on questions such as this; where he has to make a series of discriminations between objects and place them in order.

Child finds it easy to make a series with objects or ideas. Can quickly rank in order things or ideas according to size, shape, i   ?-tance, etc.

```
  -3        -2        -1        0        1        2        3
```
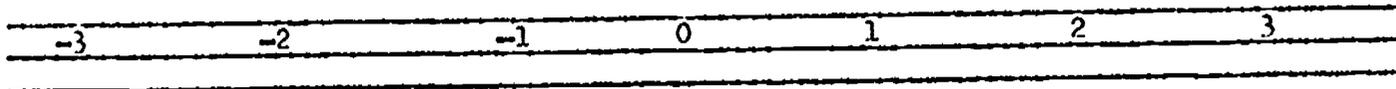

8. (II.A.3.)

Lacks understanding of meaning of even small numbers like 1, 2, 3, etc. Not able to tell age with understanding.

Good understanding of meaning of numbers. Can do simple addition, subtraction and multiplication. Applies concepts outside classroom.

```
  -3        -2        -1        0        1        2        3
```
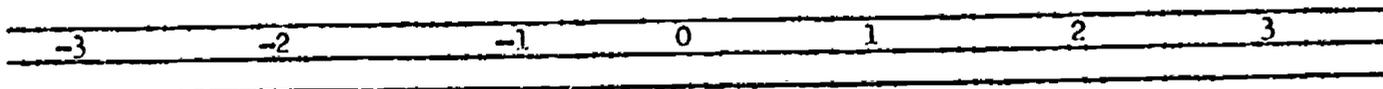

9. (II.A.3.)

Recognizes few, if any of the letters of the alphabet. Knows only a few of the sounds. Small interest in verbal tasks.

Recognizes all letters of alphabet and their sounds. Seems to recognize many different kinds of letters even though their shapes are slightly different.

```
  -3        -2        -1        0        1        2        3
```
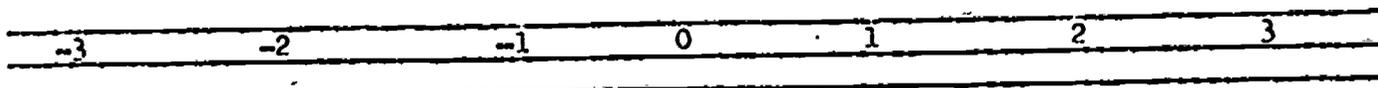

10. (II.A.4.)

Child seems to have a lot of trouble deciding what he is going to say. Words don't come easy and he is often confused about picking ideas to get across. Doesn't know what to say first & often seems unable to decide on ways to get an idea straight.

Child always picks ways of saying things that are exactly how he thinks. Has meaningful & appropriate words for what he is trying to say.

```
  -3        -2        -1        0        1        2        3
```
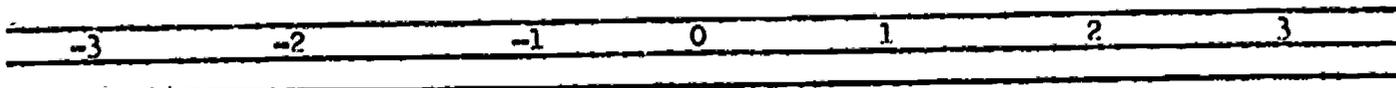

11.   (II.B.)

Child has poor idea of why
he feels the way he does.
Seems to have a great deal
of difficulty in under-
standing his own emotions.
Has trouble interpreting
how others feel about him
and seems confused about
the reactions of others.

Child always seems to have
a correct understanding of
how emotions operate and
understanding the way others
feel toward him. He sees the
reasons for his own feelings
and seems to understand and
accept his own uniqueness.
Feels comfortable with him-
self.

-3	-2	-1	0	1	2	3

12.   (III.A.)

Unable to express self.
Words come out all jumbled.
Seldom speaks in complete
sentences. Tends to be
uncommunicative. Uses mini-
mum of words to express
needs.

Uses complete sentences in
speaking. Always knows what
he wants to say and says it
clearly. Language is easily
understood. Words follow
correct sequence.

-3	-2	-1	0	1	2	3

13.   (III.A.1.)

Still has babyish vocabulary.
Uses same words over and
over. Limited vocabulary.
Lacks interest in learning
new words.

Uses words beyond the normal
range for age and understands
meanings of these words.
Considerable interest in new
or advanced words.

-3	-2	-1	0	1	2	3

14.   (III.A.2.)

Child is very unexpressive
in his body movements, facial
expressions, etc. Generally
has one or two expressions on
his face and his ability to
communicate what he is think-
ing in this way is limited.
Seems very reserved about ex-
pressing himself. Uses ges-
tures very little when talking.

Child is very expressive in
his body movements, range of
facial expressions, etc.
It's easy to "see" what he
is thinking because he can
express a lot of things with
few words. Uses a lot of
gestures when he talks in
order to better explain him-
self to others.

-3	-2	-1	0	1	2	3

15. (III.B.1.)

Unable to accomplish most
of the practical life tasks.
Difficulty in dressing and
undressing self. Lacks con-
trol in use of broom, polish
rag, etc. Little ability in
practical life tasks.

Dresses and undresses self
efficiently. Pours without
spilling. Always uses correct
methods in practical life
tasks. Carries over learn-
ing into daily routine.

-3	-2	-1	0	1	2	3

16. (III.B.2.)

Lacks control: has trouble
holding pencil, scissors,
etc. correctly. Is unable
to cut even around large
objects, or follow large
lines. Unable to or has
difficulty in tracing
stencils. Most always out-
side lines in coloring.

Able to use pencil to draw
some details. Able to cut
around small corners, etc.
Able to trace objects well,
even those with some detail.
Able to do an excellent job
of coloring within lines.
Can use small items without
trouble.

-3	-2	-1	0	1	2	3

17. (III.C.)

Generally has the attitude
"I can't do it". Feels in-
sufficient about carrying out
any task. Is constantly asking
teacher for help. Follows
teacher or other children
around.

Has positive attitude in
doing a task. Feels confi-
dent that he can do what-
ever he sets out to do.
An individual. Prefers to
be leader.

-3	-2	-1	0	1	2	3

18. (III.C.)

Does not want anything to do
with other children. Prefers to
work alone. Rejects help from
other children. Almost no con-
sideration for others. Wants
to be boss in group activity.
Knocks down other's projects,
tattles on others continually.

Gets along very well with
peers. Very willing to share
with others. Likes to par-
ticipate in group activities.
Very considerate of others.
Enjoys working with group
on projects.

-3	-2	-1	0	1	2	3

19.   (iII.C.)

Rejects adult help. Fear-
ful or resentful in presence
of adult. Unresponsive.
Sullen. Tends to avoid con-
tact with adults if possible.

Gets along very well with
adults. Is open, friendly
and responsive. Feels com-
fortable with adult sugges-
tions & will listen to
helpful comments. Expresses
feelings openly with adults
& tries to work out disa-
greements.

-3	-2	-1	0	1	2	3

20.   In your opinion, how does this child compare with other children his age
       in his preparation for school?

Child seems to lack a lot of
the skills that other kids his
age have. Seems to be slow in
learning the academic, social
and physical skills which will
enable him to be an interested,
involved and successful student.

Child seems to be extremely
well prepared with the
academic, social, & physical
skills that kids need to be
interested, involved, &
successful in school. Seems
much better prepared than
other kids his age.

-3	-2	-1	0	1	2	3

(Rater Accuracy)

       How confident are you that you have accurately described the behavior of
       this child?

Not sure, could easily
have an inaccurate or incom-
plete picture of the child's
behavior.

Very confident. Have seen
him in all sorts of situations
& feel that I know all his
behaviors.

TAHOMA SCHOOL DISTRICT #409

Speaker Evaluation Form

Directions: Rate this session by placing an X in the space that most characterizes your conception of this session. For example, if you thought the session was good, place an X in the first box; if bad, place the X in box 8. Values may be checked from 1 to 8 depending on how strongly you feel. Please respond to all questions (A-I).

		1	2	3	4	5	6	7	8	
A	Good									Bad
B	Important									Unimportant
C	Useful									Useless
D	Pleasant									Unpleasant
E	Valuable									Worthless
F	Strong									Weak
G	Beautiful									Ugly
H	Interesting									Boring
I	Fair									Unfair

How might this session have been improved?

What was the most important idea you received from this session?

What was the least important idea you received from this session?

TEACHER EVALUATION OF PROJECT C.H.I.L.D.

Gil Sax, Educational Psychology, University of Washington

Dear Teacher:

I have been asked to gather information from teachers on Project C.H.I.L.D. It is essential that we get this information before school is out. Please respond to the following questions using a No. 2 pencil and the enclosed I.B.M. form and return to me in the addressed envelope.

Thanks,

Gil Sax, Ph.D.
Educational Psychology Department
University of Washington

INSTRUCTIONS:

Fill in grade and school. Use the following scale to indicate your agreement or disagreement on each question:

Strongly Agree:	"a"	Disagree:	"d"
Agree:	"b"	Strongly Disagree:	"e"
Uncertain:	"c"		

For example, if you strongly agree with a statement, you would pencil the short space beneath the letter "a" in the appropriate section with the IBM answer sheet and question numbers corresponding. However, if you should happen to disagree with it, you would pencil the short space beneath the letter "d". Please use the back of the IBM form for your additional comments. Do not fold the IBM sheet.

SECTION 1: H.D.P. TRAINING

_____ 1. My H.D.P. training workshop was an exciting experience.

_____ 2. I felt that the leader of the Workshop was not effective.

_____ 3. I felt that the workshop lead to constructive changes in my style of teaching.

_____ 4. The video-tape recording and playback of demonstration "magic circles" was a useful part of the workshop.

_____ 5. Watching the consultant do "magic circles" was useful.

_____ 6. The sequence of learning during the workshop was useful.

Continued....

_____7. I feel that we did not have enough time during the workshops.

_____8. It is useful to watch other teachers do "magic circles."

_____9. The workshop was well designed to teach me how to do "magic circles."

_____10. The results of "magic circles" have not been worth the time the work-
shop required.

_____11. I feel competent in doing "magic circles" with my class.

NOTE:

Skip to
Section II   SECTION II: PROGRAM MATERIALS
of Answer Sheet:

_____41. The lesson plans are complete and meaningful.

_____42. Many lesson plans are not clear.

_____43. I can see the need for many changes in the lesson plans to make them
more effective.

_____44. The lesson topics hold the interest of the children.

_____45. The sequence of lessons seems well planned.

_____46. I would recommend the H.D.P. program to a new teacher.

_____47. I think the aims of the program are useful to children's learning.

_____48. I am definitely going to continue using the program next year.

_____49. There seems to be good support for the program at my grade level.

_____50. Teachers should work together on this program.

_____51. I would be willing to demonstrate a circle to other teachers.

_____52. I feel that the Human Development Program doesn't fit in with the
rest of the curriculum.

_____53. The Human Development Program should be part of training for new
teachers.

_____54. I have used the resource materials in the Project C.H.I.L.D. Library.

SECTION III: H.D.P. CONTENT

NOTE:
Skip to
Section III
of Answer Sheet:

____81.   Feelings should be stressed more than thoughts or behavior.

____82.   In H.D.P. "Mastery" means how well a child does in school.

____83.   In H.D.P., "Awareness" runs through the entire program.

____84.   Social Interaction refers to the child's ability to adjust to society.

____85.   A withdrawn child should be excluded from "magic circles."

____86. ·Teachers should model the consultant's "style" to be effective.

____87.   "Magic circles" should be a daily classroom activity.

____88.   Fifteen to twenty kids is the best size for "magic circles."

____89.   Most circles will run for 1/2 hour to do a lesson completely.

____90.   The Human Development Program is primarily for emotionally troubled
children.

____91.   A child should be strictly encouraged to reveal things that scare him.

____92.   H.D.P. is intended to prevent rather than cure social and emotional
problems.

INSTRUCTIONS: Given below are 20 statements on educational ideas and problems about which we all have beliefs, opinions, and attitudes. We all think differently about such matters, and this scale is an attempt to let you express your beliefs and opinions. Respond to each of the items as follows, making certain that your answers are placed in Section IV of the I.B.M. sheet beginning with number 121:

Strongly Agree: "a"   Disagree: "d"
Agree: "b"   Strongly Disagree: "e"
Uncertain: "c"

For example, if you strongly agree with a statement, you would pencil the short space beneath the letter "a" in Section IV of the IBM sheet, the answer sheet and question numbers corresponding. However, if you should happen to disagree with it, you would pencil the short space beneath the letter "d". Respond to each statement as best you can. Go rapidly but carefully. Do not spend too much time on any one statement; try to respond and then go on.

121 The goals of education should be dictated by children's interests and needs, as well as by the larger demands of society.

122 No subject is more important than the personalities of the pupils.

123 Schools of today are neglecting the three R's.

124 The pupil-teacher relationship is the relationship between a child who needs direction, guidance, and control and a teacher who is an expert supplying direction, guidance, and control.

125 Teachers, like university professors, should have academic freedom—freedom to teach what they think is right and best.

126 The backbone of the school curriclum is subject matter; activities are useful mainly to facilitate the learning of subject matter.

127 Teachers should encourage pupils to study and criticize our own and other economic systems and practices.

128 The traditional moral standards of our children should not just be accepted; they should be examined and tested in solving the present problems of students.

129 Learning is experimental; the child should be taught to test alternatives before accepting any of them.

130 The curriculum consists of subject matter to be learned and skills to be acquired.

131 The true view of education is arranging learning that the child gradually builds up a store house of knowledge that he can use in the future.

_____132 One of the big difficulties with modern schools is that discipline
is often sacrificed to the interests of children.

_____133 The curriculum should contain an orderly arrangement of subjects
that represent the best of our cultural heritage.

_____134 Discipline should be governed by long-range interests and well-
established standards.

_____135 Education and educational institutions must be sources of new
social ideas; education must be a social program undergoing con-
tinual reconstruction.

_____136 Right from the very first grade, teachers must teach the child
at his own level and not at the level of the grade he is in.

_____137 Children should be allowed more freedom than they usually get
in the execution of learning activities.

_____138 Learning is essentially a process of increasing one's store of
information about the various fields of knowledge.

_____139 In a democracy, teachers should help students understand not only
the meaning of democracy but also the meaning of the ideologies
of other political systems.

_____140 Children need and should have more supervision and discipline than
they usually get.
