ABSTRACT

In the fall of 1972, 80,277 seniors in the public and private schools of Florida responded to a questionnaire titled "Plans Beyond High School." The survey instrument contained items relating to the students' intended courses of action subsequent to graduation. Responses of the students to the questionnaire items in terms of frequencies and percentages are reported. Results indicated a decline in the percentage of the senior classes indicating an expectation to enroll the following fall in a college or university on a full-time basis. This drop in stated plans was accompanied by a drop in the percentages of high school classes actually entering college. Results are categorized according to composition of high school class by race and sex, trends in post high school plans by sex and race, trends in types of institutions named by students, level of family income, intended plans versus actual courses of action, and noncollege bound respondents. Statistical data are included. (MJM)

A STATEWIDE SURVEY OF FLORIDA

HIGH SCHOOL SENIORS

Fall 1972

September, 1973 Florida Board of Regents Tallahassee, Florida 32304

ACKNOWLEDGMENTS

This report is based on the responses of approximately 80,000 high school seniors in Florida, class of 1973, who participated in the annual survey "Plans Beyond High School."

We are indebted to the student participants and to the teachers and principals who aided in administering the survey. We hope that the results of the survey will be helpful in some degree to these students and their teachers and principals.

This year, as in the previous four years of the survey, Dr. William Hunt, Director of Institutional Analysis, Florida Atlantic University, and his colleagues analyzed the survey, and provided us with cameraready copy of the results. We are most grateful.

Finally, to our own staffs who have contributed to the preparation of this report, and especially to Margaret Crawford who typed the final copy and to David Saunders, who supervised the printing, we express our gratitude.

Robert M. Feinberg Director Twelfth Grade Testing Program G. Emerson Tully Director of Educational Research Florida Board of Regents Tallahassee, Florida

PLANS BEYOND HIGH SCHOOL

A Report of a Statewide Survey of Florida High School Seniors - Fall, 1972

1. Introduction

Responses of Florida high school seniors to the eight-item survey entitled "Plans Beyond High School" (Figure 1) conducted in the fall of 1972 are reported in this booklet.

The survey became a part of the Florida Twelfth Grade Program (FTGT) in 1968. The 1972 administration of the survey marked the fifth and final year in an unbroken series of annual surveys, in which the same questionnaire was used. In the fall of 1973, a much longer questionnaire (73 items), developed by Educational Testing Service, Princeton, New Jersey, was administered. The new instrument replacing "Plans Beyond High School" incorporated the items contained on the shorter questionnaire, together with additional items that inquired about a student's educational background, attitudes, and future educational plans.

The FTGT battery is given to seniors in Florida high schools (public and private) during the fall of each year and is composed of a test of academic ability and achievement tests in English, social studies, natural sciences, and mathematics. A reading index, based on performance on verbal sections of the battery, is also provided. The test results are utilized for a variety of purposes by the following groups of people:

 High school seniors and parents - in making plans beyond high school.

- 2. High school administrators and teachers in evaluating curriculum.
- 3. Guidance counselors in assisting students to evaluate their strengths and weaknesses and to formulate their post high school plans.
- 4. College admissions officers in selecting a well-qualified student body.
- 5. State Department of Education in identifying perspective students as recipients of financial aid.
- 6. Educational researchers in studying achievement in high school and its relationship to success in college.

The following objectives of the survey are similar to but not identical with the objectives of the FTGT battery:

- 1. To document annually the post high school plans of Florida high school seniors.
- 2. To establish a basis for viewing differences in the plans of high school seniors and the courses of action taken after the seniors graduate.
- 3. To obtain data useful to guidance counselors in advising high school seniors during the time that post high school plans are being shaped.
- 4. To provide information that will contribute to the development of post secondary educational and training programs that are keyed to the aspirations and needs of Florida's young people.
- 5. To furnish colleges and universities with information to assess admissions procedures and financial aid policies.

2. Post Secondary Enrollment Trends

Through the 1960's, the percentages of June high school graduates in Florida entering colleges and universities the following fall rose steadily (Table 1). Documentation of this trend was made possible by a continuing series of research reports published by the Bureau of

Research, Division of Elementary and Secondary Education, Department of Education. 1

The percentages shown in Table 1 of high school graduating classes in the state enrolling in an institution of higher learning after an intervening summer reached a high-water mark in 1969, then began to decrease. The significance of this trend in college enrollments merits citing the factors that may have contributed to the upward swing in the percentages in between 1964 and 1969, and the downward turn after 1969.

Although causative relationships are hazardous, several conjectures appear sound. Perhaps the principal reason for an expanding enrollment of high school seniors in college up to 1969 was the shortage of persons with college degrees available to business, education, and government. Beginning in the immediate post World War II period, Florida's economy expanded, creating a demand for college trained persons that outstripped the supply. State government responded to this shortage of college educated manpower by planning and implementing an expansion of its post high school education facilities.

In 1950, there were three state universities with a combined enrollment of 20,000 students. In less than 20 years, the state opened
four additional state universities and planned for establishing two more
institutions, bringing the State University System to a total of nine
institutions. During the same period, the state successfully implemented
a boldly drawn plan for establishing two-year community colleges in
every populous section of the state.

Plans Beyond High School, Florida Board of Regents, Tallahassee, July, 1973. Source:

GET:mc

The thrust to provide greater access to higher education put forth by the state in the 1950's and 1960's was not pell mell, but reflected planning and coordination among public higher education officials. To avoid unnecessary competition between the new state universities and the new community colleges, four of the universities added to the State University System were upper division institutions, designed to enroll at the junior year students who had completed the freshman and sophomore years at a community college.

Several factors may have brought about a reversal in 1969 of the trend toward greater college enrollment. By 1969, the cost of going to college had shot upward, squeezing out some students in marginal financial circumstances. Also, as the decade of the 1960's drew to a close, the end of the involvement in Vietnam was in sight, which seemed to have reduced the pool of high school graduates seeking to enter college. Then too, by 1969, a surplus of college graduates in some fields of study and training had emerged, marking an end to the shortages in the manpower pool of the college graduates.

With an apparent leveling-off of college enrollments, which may well be the beginning of a continuing trend in view of a declining birth rate, educators are assuming that the existing number of colleges and universities in Florida will suffice for a number of years. Instead of seeking ways to encourage more high school graduates to enter college, the emphasis now seems to be on a comprehensive program of career education at all levels of schooling designed to enable students to formulate long-range educational plans based on forecasts of manpower needs. If career education is effectively implemented, such a development may contribute to bringing about an increase in the percentage of high school graduates

entering directly into labor force, foregoing the opportunity to seek a college degree.

3. Number of High School Seniors Surveyed

During the five years (1968-1972) when the survey instrument "Plans Beyond High School" was administered to high school seniors along with the Florida Twelfth Grade Test Battery, the number of students surveyed rose steadily (Table 2). This growth of the survey program was directly a result of the increases in twelfth grade enrollment.

Table 2: Number of Seniors Tested, Surveyed, and Graduated in Florida: 1968-1972

	Fall '	Геrm	Following Spring Term		
Year	Number of Students Com- pleting Tests	Number of Students Surveyed	Number of Graduates		
1968	80,000	75,548	70,487		
1969	82,000	77,850	76,795		
1970	83,158	70,003*	80,688		
1971	82,226	78,601	84,057		
L972	79,462	80,277	85,423 (project		

^{*}An analyses of survey results was made before all survey responses were tabulated. Actually, the number of students in the 1970 survey totaled approximately 80,000.

The figures shown in Table 2, which are close approximations rather than exact counts, show that large numbers of high school seniors during the years 1968-1972 took the tests as well as responded to the survey instrument. During the first three years of the survey, the number of students participating in the fall exceeded the numbers of graduates the following

spring, providing a rough index of the magnitude of dropouts among students during their senior year.

In the fall of 1971, district superintendents in Florida recommended that the Twelfth Grade Tests be given on a voluntary basis in the schools. Although there was never a requirement by the state nor by the Director of the Twelfth Grade Testing Program that all schools participate in the testing program, or that all students in a school take the tests, there is no question but that some schools and school systems participating in the testing program administered the tests in a way to require the participation of their seniors.

In the school years 1971-1972 and 1972-1973, the number of graduates excreded the number of students tested (and surveyed). Even so, the figures in Table 2 reveal the comprehensiveness of the survey (and the testing program) for each year during the five-year span covered by the survey.

4. Discussion of Results

Composition of High School Class - Race and Sex

In Table 3 are shown percentages that reveal the racial mix of the graduating classes each year. As will be noted, the percents of whites, blacks, and others rose slightly after 1968. These increases came about as a corresponding decrease in the percentage of blank and invalid responses occurred.

The 1972 survey, which had the lowest percent of blank and invalid responses to the race item may give a truer picture of the racial composition of the high school seniors than the surveys in the previous

years. When the survey was begun (1968) the students were asked to indicate race by checking one of the following three responses: White, Negro, and Other. In 1969, the race item was changed to include the three response positions of white, black, and other. From 1969 to 1972, the percent of blank and invalid responses declined to reach 3.7%, a percentage point nearly half of the blank and invalid percentage figure for 1968.

Table 3: Racial Composition of High School Senior Class (1968-1972) in Percents

Year	White	Black	Other Races	Blank, Invalid
	%		%	<u> </u>
1968	77.5	14.4	.20	7.9
1969	80.8	14.7	.30	4.2
1970	80.8	15.0	.30	3.9
1971	79.7	14.7	.40	5.2
1972	79.8	16.0	.49	3.7

The percentages of white males and white females responding to the survey remained practically unchanged over the five-year period (Table 4). Among black students, however, the proportion of black males in the total black enrollment of high school seniors declined to 43.3%, down about three percentage points from 46.5% in 1968. In the "other race" category (American Indian. Chinese, Spanish speaking Americans, etc.), the percentage of males in 1972 dropped below that of females for the first time in the five-year span covered by the survey. Assuming that the male-female birth ratios are about 50-50 for all racial categories, the data in Table 4 revealed that white males were subject to less attrition than either black males or other category males as the three racial groups progressed through the grades to reach the senior year.

Table 4. Composition of High School Senior Class - Sex and Race (in Percents)

Year and Sex	White	Black	Other Races	All Races Combined
	%	%	%	%
1968 Male	48.3	46.5	51.4	44.7
Female	50.9	50.8	44.6	47.3
Blank, Invalid	.8	2.6	4.0	8.0
1969 Male	48.8	46.0	51.7	46.7
Female	50.1	51.8	42.2	48.5
Blank, Invalid	1.1	2.2	6.1	4.8
1970 Male	48.6	46.9	54.5	46.9
Female	51.1	51.3	42.4	49.4
Blank, Invalid	. 4	1.9	3.1	3.6
1971 Male	48.5	44.3	49.8	45.9
Female	50.8	53.3	47.8	48.9
Blank, Invalid	.7	2.4	2.5	5.2
1972 Male	48.4	43.3	46.8	46.2
Female	51.0	54.4	51.2	50.0
Blank, Invalid	.6	2.2	2.0	3.8

Trends in Post High School Plans - By Sex and Race

During the five years 1968-1972, the general trend in the percentages of students stating an intention to enter college has feen downward, usually by a percentage point or so annually (Table 5). From 1968 to 1972, the number of white students planning on going to college on a full-time basis dropped from 57.3% in 1968 to 51.6% in 1972; for black students, the drop over the same five-year period was from 45.8% to 42.0%. In contrast, there was a slight shift upward in the percentage citing plans for part-time college study; up from 11.0% to 13.9% for white students, and from 13.3% to 13.8% for blacks.

Apparently, high school seniors of both races encountered increasing difficulty in deciding what their post high school plans should be:

in 1968, 14% of the white students reported themselves as undecided; five years later, this percentage figure was 19.4% (Table 5). For black students, the percentage of undecided students rose from 22.4% in 1968 to 28.9% in 1972 (Table 5).

Table 5. College Entry Plans of High School Seniors - by Race

Year and Rac	Full-Time e College	Part-Time College	Full-Time and Part-Time	No College	Undecided
	%	%	%	*	 %
1968 White	57.3	11.0	68.3	17.7	14.0
Black	45.8	13.3	59.1	18.5	22.4
Total	55.0	11.6	66.6	18.0	15.4
1969 White	55.9	11.8	67.7	17.5	14.7
Black	45.3	14.8	60.1	17.8	22.1
Total	54.0	12.4	66.4	17.7	15.9
1970 White	52.8	13.0	65.8	17.5	16.7
Black	45.2	13.9	59.1	16.5	24.4
Total	51.4	13.2	64.6	17.4	18.0
1971 White	51.3	13.7	65.0	16.4	18.6
Black	44.8	13.0	57.8	15.1	27.1
Total	50.0	13.7	63.7	16.3	20.0
1972 White	51.6	13.9	65.5	15.2	19.4
Black	42.0	13.8	55.8	15.3	28.9
Total	49.8	13.9	63.7	15.3	21.1

For male and female of both races, there were smaller percents of students indicating an intention to enter college full-time in 1972 than in 1968 (Table 6). Over the same five-year period, there were minor shifts in intentions to enroll part-time, but no discernable trends were revealed.

Table 6. College Entry Plans of Florada High School Seniors by Sex and Race; 1968-1972 (in Percents)

Trends in Types of Institutions Named by Students

Indications of the types of institutions that the student hoped to enter remained remarkedly stable over the five years 1968-1972 (Table 7), except for a slight increase in the preference of black students for state universities in Florida, and a correspondingly slight decline

in the interest of black students in private colleges and universities in Florida.

Throughout the five-year period, white students manifested more of an interest in public two-year colleges than black students (Table 7). The preference of both white and black students for out-of-state colleges and universities remained stable over the five-year period. Private two-year colleges, however, registered a steadily declining appeal for students of both races.

Level of Family Income

During the first two years of the five years that "Plans Beyond High School" was administered as a part of the Twelfth Grade Test Battery, no information was sought from the students concerning level of family income. In 1970, a level of family income item was added. The very next year, however, the format of the item was changed to conform with similar items used by the U.S. Office of Education to obtain information about level of family income. No change in the item was made in the 1972 survey.

According to the responses of the students, black families with incomes of less than \$3,000 per year outnumbered white families at that income level more than two to one (Table 8). In the upper levels of income, white families greatly outnumbered black families.

The percentage of students indicating that they cannot estimate family income (as shown in the tabular data on pages 21-65) was approximately 33% for white students and 37% for blacks. These "cannot estimate" percentages closely approximated the percentage of students responding to similar items in surveys in other states.

Table 7. Types of Institutions Students Intended to Enter (1968-1972)

Blank & Invalid	8,222	77.9	21.6	5.	100.0

The frequencies and percents of students (by race) who reported family income in the seven categories ranging from below \$3,000 to above \$20,000 are snown in Tables 9 and 10.

Table 9 shows racial composition (in frequencies) for each income level category. In Table 10 the percents of students by race in each category as a function of the 43,800 students who reported family income, are shown. The family income level reported by the largest number of white students was in the \$12,000 to \$19,999 category. The family income level reported by the largest number of black students was the \$3,000 to \$5,999 category.

Intended Plans Versus Actual Courses of Action

A sound research approach for comparing the intended plans of seniors with actual courses of action followed upon graduation consists of asking a sample of seniors to report their post high school plans, and then obtaining follow-up information of the same sample of students after graduation. Stafford used this approach in 1971, finding that generally students engaged in the same post high school activities that they reported as their intentions when surveyed.²

In the present volume, and in preceding volumes of <u>Plans Beyond High School</u>, published in 1969, 1970, 1971, and 1972, a much less defensible approach was used for equating stated plans and actual courses of action than the approach used by Stafford. The percentages of high school seniors that reported intentions to enter a public

university, enroll in a private school or college, etc., were computed and compared to the percentages of high school graduating classes that actually followed such courses of action. Follow-up information of high school graduates was obtained from the series of research reports title. Florida High School Graduates, published annually since the early 1960's by the Bureau of Research, Department of Education, State of Florida. Such a comparison of intended plans with follow-up information fell short of yielding precise findings, as the group of seniors who reported their intended plans and the group of graduates who were subjects of the follow-up reports were not composed of the same individuals. Most of the individuals in one group, however, were also in the other, and group to group comparisons, therefore, have some value. The comparison of intended plans and actual courses of action resulting from the method described above are reported in Table 11.

Non-College Bound Respondents

According to the data shown in Table 12, lack of interest is the reason most frequently cited by white students for not attending college. Early in the series of surveys (1968) lack of money was the principal reason cited by black students for not going on to college. By 1972, however, lack of the terest was the principal reason given by black students as well as whites for having no plans to attend college.

Full-time work had greater appeal for students of both races in 1972 than in 1968 (Table 13). Student choices of other courses of action listed in Table 13 were relatively stable over the five-year per10d, except for a decrease in the percents of white students looking to enter the armed forces and in the percents of students in both races looking to enter vocational-technical training.

6. Summary and Conclusions

In the fall of 1972, 80,277 seniors in the public and private schools of Florida responded to a questionnaire titled "Plans Beyond High School." The survey instrument contained items relating to the students' intended courses of action subsequent to graduation. Responses of the students, in terms of frequencies and percents, to the questionnaire items are reported on pages 21-65.

Beginning in the fall of 1973, a questionnaire containing 73 items, replaced the "Plans Beyond High School" questionnaire, which contained only eight items, as a part of the Twelfth Grade Testing Program. Inasmuch as the responses of the high school seniors to the 1973 form of the survey instrument will be reported in a different format than used for reporting the responses to "Plans Beyond High School," the present volume marks the end of a series of reports published from 1969 to 1973, covering the administration of "Plans Beyond High School."

Perhaps the most significant trend documented by this survey that began in 1968 and ended five years later was a decline in the percentage of the senior classes indicating an expectation to enroll the following fall in a college or university on a full-time basis. This drop in stated plans was accompanied by a drop in the percentages of high school classes actually entering college, as documented from research bulletins published by the Department of Education.

An analysis of the responses of the students participating in the survey was made by sex and race. The percentages of students in racial groups other than white and black were so small, however, that most of the discussion of results related only to the frequencies and percentages of white and black students responding to the item.

In the four previous surveys, a comparative analysis was made of the test performance of students entering colleges and universities in Florida, and that of students electing to seek their college degree at an out-of-state institution. This analysis was not made of the 1972 data because of the stability of the results of the 1970-1971 data. The findings of those two surveys revealed that approximately 85% of students who scored below the 80th percentile on the Twelfth Grade Test Battery enrolled in a college or university in Florida. Above the 80th percentile, the precentage of students continuing their education in Florida dropped but only from 85% to 72%. One would infer from this finding of the earlier surveys that in-state institutions were the preference of a substantially larger proportions of students at all levels percentile range than were out-of-state colleges and universities.
