Studies

ABSTRACT

These two subunits on Western Europe are part of one of four resource units for an eleventh grade area studies course. The subunits cover foreign policy and the political, social and economic systems of Britain, France, and Germany, and a summary section for the entire unit on Western Europe. Generalizations, skills, and attitudes are listed. The subunit is set up in a double-page format relating objectives to pertinent content, teaching procedures, and instructional materials. The subunit dealing with social, political and economic systems calls for comparison among the three countries and uses ideal types to help pupils make comparisons. The last part of the unit on foreign relations looks at attempts to bring about closer economic and political relationships among the countries of Western Europe and presents concepts of international trade. Pupils also examine the problems raised for the United States in some of these developments as well as other policy conflicts facing this country in relationship to Western Europe. The teacher's guide for the entire course is SO 006 320; other subunits on Western Europe are SO 006 322 and SO 006 323. (Author/KSM)

OBJECTIVES

This sub-unit should make progress toward helping pupils learn the following

GENERALIZATIONS

- Social scientists set up classifications to suit their purposes; the use of different criteria result in different classifications.
 - Sociologists set up ideal-type societies to make easier comparisons between societies.
 - 1) A secular-pluralistic society is marked by: a high degree of industrialization; an advanced technology; rapid social change; an open class system; many secondary contacts; a heterogeneous population; horizontal mobility; many volunteer associations and social movements; and changing norms and values. A number of countries approach this ideal-type of society, although they may not have all of these characteristics.
- Whenever things valued by a society are scarce, there will be differential access to and control of these valued and scarce things by sub-groups within

the society.

- a. Class membership has on life and behavior lates).
- Status may be acquir achievement, or some of birth and achieve
- Members of a class can m class by various means, lity may be up or down.
 - The amount of vertic varies from society

OBJECTIVES

hould make progress toward helping pupils learn the following:

the society.

- a. Class membership has certain effects on life and behavior (class correlates).
- b. Status may be acquired by birth, achievement, or some combination of birth and achievement.
- . Members of a class can move out of the class by various means, and this mobility may be up or down.
 - a. The amount of vertical mobility varies from society to society.
 - 1) The more widespread the system of education, the greater the mobility between classes.
- to the amount of class conflict is related to the degree of difference among classes, the degree of vertical mobility possible, and the degree to which propaganda is used to arouse class conflicts.
- 5. Any organized group delegates responsibilities and rights; they assign certain role behaviors. This division of labor creates hierarchical authority relation-

- ntists set up classificait their purposes; the erent criteria result in lassifications.

are related: because of this interrelationship, a change in one institution is likely to affect other institutions. (Changes in the family are reflected in other institutions, and changes in other institutions are reflected in the family.)

Some values are conducive to change;

some make change more difficult.

People usually do not discard a

trait completely; they are more likely to modify it to fit into new situations. 10. In political conflict there is a struggle over control of scarce values or goals; these goals may be economic or non-economic. The conflicting sides attempt to use the authority of the political system

The political system is the authoritative allocator, the mechanism by which society finally and ultimately decides which interests, goals, and wants shall be enforced on and in society. It is marked by universality, legitimacy, and a monopoly and finality of force. The political system includes a a.

to win the conflict.

nERICitions in a society

number of major components: individuals, political organizations, institutions, and decisionmakers. Each component affects the other components.

- 12. Continued engagement in conflict tends to bring about the acceptance by both parties of common rules regulating the conduct of conflict.
- 1?. Compromise is more easily achieved in those political systems in which there is agreement on questions touching the fundamental social, economic, and political institutions.
 - a. The presentc of heavy ideological commitments in a political system complicates the ask of accommodation and compromise.
 - conflict is cumulative, and a society divided along x axes will more easily achieve compromise than a society divided along 5x axes; resentments are easily transferred from one issue to another.
 - c. Many political systems have promoted compromise by withdrawing certain fundamental areas of disagreement (such as the place and role of religion) from the poli-

tical arena.

- 14. Compromise is related to the political power of the disputs most likely to occur where a relative equality of power fore, something approaching the decision.
- 15. Democracy as a political for on the assumption that major citizens are the best judges good for them and that they to have it.
 - a. Democracy is a complicat and consensus system in sent may move from gover citizen as well as from government.
- 16. The contrast between democra non-democratic political sys looked at as a conflict in t lying values.
- 17. Political scientists have lead that there are social conditional society must meet before make a go of democracy; they agree on what they are, but common values, a communicat a stable society, and a min omic well-being.

is cumulative, and a livided along x axes easily achieve compronal society divided along resentments are easily

red from one issue to

itical systems have pronpromise by withdrawing fundamental areas of dist (such as the place and religion) from the political arena.

14. Compromise is related to the relative political power of the disputants; it is most likely to occur where there is a relative equality of power and, therefore, something approaching deadlock in the decision.

15. Democracy as a political form is based on the assumption that majorities of citizens are the best judges of what is good for them and that they are entitled to have it.

a. Democracy is a complicated consent and consensus system in which consent may move from government to citizen as well as from citizen to government.

16. The contrast between democratic and non-democratic political systems may be looked at as a conflict in basic underlying values.

17. Political scientists have long assumed that there are social conditions which a society must meet before it can make a go of democracy; they hardly agree on what they are, but most suggest common values, a communication system, a stable society, and a minimum of economic well-being.

- 18. The individual citizen or participant in the political process approaches the political process with a complex of political attitudes, outlooks, values, and goals.
 - a. Different patterns of political socialization are often the product of different experiences of socio-economic status groups; they are, therefore, related to class and status differences.
 - b. The agencies of political socialization include those within the political system as well as those without.
 - c. The process of political socialization is a continuous process; the indivudual continually acquires new values and patterns of behavior, and a sharp change in his life may result in resocialization.
- 19. Political activity by which the individual seeks his goals and interests through the political system takes any number of forms, depending on the nature of the system, and varies greatly in incidence.
- 20. The interest group operates and at-

- tempts to bring in ever in the polition

ss of political socials a continuous process; udual continually acw values and patterns or, and a sharp change ife may result in re-

ivity by which the indivis goals and interests o'itical system takes any ms, depending on the nature , and varies greatly in tempts to bring influence to bear wherever in the political system public policy is being made.

a. The interest group attempts to bring aggregates of influence to bear on decision makers by attempting to frame the possible choices the decision makers have, by direct influence, by education, and by attempts to control the selection of the decision makers.

No interest group pursues its goals entirely through the political system; it is drawn into political activity only in specific instances of goal seeking.

The interest group serves an important role in the activating and socializing of its members into political activity.

The electoral and ideological functions of a political party are almost always in competition with each other; in order to build majority electoral support, the party in a plural society has to make compromises to the conflicting attitudes, interests, and ideologies in the society.

22. The relative centralization or de-

g operates and at-

26.

centralization of power within political parties reflects in great part the centralization or decentralization of authority within the political system as a whole.

23. The number of political parties in the system will depend on the basic nature of the cohesions and conflicts within the society, on the governmental structure, and on the elec-

toral system.

- a. There tend to be more political parties where there are violent conflicts, unless the government has become totalitarian.
- Plural constitutencies and proportional representation tend toward multiparty systems.
- 24. Control of the process of nomination is essential in order to control the election of public officials; any limitation on party nomination tends to diminish the party role in the political system.
- 25. The institutions of government constitute the arenas or the structure within which the authoritative decisions of the political process are made. They thus affect decision-making.

making.

rocedures of decision-

- m**a**king.
 - They set the powers of the decisionmakers.
 - c. They set the boundaries and dimensions of the political playing field and fix the rules of the game played in it.
 - 26. The separation of powers is intended to and does produce institutional deadlock and delay more often than parliamentary systems do. Deadlock is ruled out of the operation of parliamentary systems by the dependence of the cabinet on the ongoing support of a majority of the legislators.
 - a. Parliamentary systems, which depend on legislative majorities to support cabinets, compel the parties to greater organizational efforts on legislators than does the American system.
 - b. In parliamentary systems the increasing power of the cabinet has enabled the parties of the cabinet to demand cohesive support by their members in parliament.
 - 27. Federalism pays greater homage than unitary systems to local differences and autonomy, but is also pays the greater price in inconsistency, diversity, and competition.

- 28. Any decision is, in part, a product of the internalized values, perceptions, and the experiences of the persons making the decision.
- 29. The decision-maker reacts to pressures from those outside government.
- 30. The representative faces conflicting demands to represent the district which elected him, the party on whose ticket and symbol he ran, and the entire political system to which he takes his oath of office.
- 31. A law or policy must be effectuated and applied; in that process the whole decieion-making and influence process goes on again.
- 32. Political power is unevenly distributed through a population even in a democracy; the concept of political equality or one man--one vote insures only a minimum opportunity for influence.
 - a. The unequal distribution of political power reflects the basic unequal distribution of resources, skills, and motivation in the society.

Political leadership is usually

- drawn from high soc status groups.
 - 1) Upper middle-ci groups in most; the education vi necessary skill power.
 - Political power may governmental posit not.

unequal distribution of pocal power reflects the basic qual distribution of resources, is, and motivation in the ety.

tical leadership is usually

drawn from high social and economic status groups.

- Upper middle-class and upper class groups in most countries acquire the education which leads to the necessary skills for political power.
- c. Political power may rest in formal governmental positions, but it need not.
 - Every decision-maker is dependent on advice, knowledge, information, political intelligence, etc. and as a result those advisors who can provide him with these have an important base for exerting power and influence on the official.
- 33. As government becomes larger, more active, and more complex, legislatures increasingly lose policy initiative to executives and bureaucracies.
 - a. Selective recruitment of bureaucracy may be and often has been responsible for its definition of its political role.
- 34. The role of the judiciary depends on the system of law and the nature of the constitution it must expound.

- The political importance of the judiciary depends largely on whether or not it has responsibility for declaring acts of the other two branches unconstitutional.
- constitutions must have an ultimate interpreter, since they are of nature ambiguous and non-specific. However, courts need not be the final interpreter; this function may reside in the legislative body.
- 35. Constitutions change by formal amendments, but more importantly by changes in custom and interpretation.
 - a. Constitutions may be written documents, but in some cases they exist wholly or in large part as custom and tradition.
- 36. Taking the policy-making process as a whole, the general strategic advantage usually lies with the status quo.
- 37. Every economic system faces scarcity or lack of enough productive resources to satisfy all human wants.
 - If resources are used to satisfy one want, they cannot be used to satisfy another. Misallocation of resources costs consumers what they could otherwise have had.

- 38. Certain basic economic que to allocation are answere some fashion by every sociperhaps in no other way to These questions are: (1)

he policy-making process as a he general strategic advantage lies with the status quo.

onomic system faces scarcity of enough productive resources by all human wants.

esources are used to satisfy ant, they cannot be used to fy another. Misallocation esources costs consumers what could otherwise have had.

- 38. Certain basic economic questions related to allocation are answered or decided in some fashion by every society, although perhaps in no other way than by tradition. These questions are: (1) What and how much of each good should be produced? (2) How much shall be produced in total? (3) How shall these goods and services be produced? (4) How shall these goods and services be distributed among the population?
- 39. In all societies people have certain economic goals. Although some economic goals are very much alike, different societies place differing emphases upon them.
 - a. People generally would like to see their economic systems provide both economic growth (and so higher levels of living) and stability (and so economic security).
 - b. People differ in the degree to which they desire a reduction in inequalities of economic opportunity or income.
 - c. People differ in the degree to which they desire freedom of economic choice.
 - d. Economic goals may not be compatible if efforts to achieve them are carried too far. (Taxes to increase economic justice may reduce private investment and growth.)

- 40. Living levels in the U.S. are very high compared to those in most countries.
- 41. At any specific time the total output is affected by the quantity and quality of productive resources (land or natural resources, labor, and capital goods), by the level of technology, andy by the efficiency of the organizational structure.
 - a. The ability of a country to produce is limited in part by available natural resources; however, a country may be able to acquire resources from other countries by selling goods and services which it can produce.
 - b. Output can be increased by technological progress in the development of tools and machines and power to replace manpower.
 - c. Capital formation through savings is a major means of increasing an economy's total output over time, because it increases productive capacity.
 - d. Output can be increased by a more efficient combination of productive resources (by the way in which production is organized).

- 42. In the long run, a ribe achieved only by a ductivity.

- t can be increased by a more ient combination of productive rces (by the way in which proposity organized).

- 42. In the long run, a rise in real wages will be achieved only by a rise in labor productivity.
- 43. Economic systems are usually mixed, with both public and private ownership and with decisions made both by government and by consumers and businessmen.
 - a. In a private enterprise system it is the market which translates demand and supply into a price system and which is chiefly responsible for the way in which basic economic questions are worked out. The market serves to determine largely what shall be produced, how it shall be produced, and who shall get what part of the production. However, government policies and factors which interfere with perfect competition also affect the allocation of resources and goods.
 - Government taxation policies affect who gets what share of the national income.
 - Government policies can either help reduce or exaggerate fluctuations within the business cycle and can promote or hinder economic growth.
 - Monopolies can keep prices of goods high by reducing the quantity pro-

duced. They thus interfere with the mechanism by which production is altered to suit consumer demands.

b. Most economic systems are in the process of constant change.

44. Specialization of individuals, regions, and countries makes for interdependence.

SKILLS

- Attacks problems in a rational manner.
 - Sets up hypotheses.
 - Considers the relevance of social science disciplines, and uses types of questions asked and analytical concepts used in the relevant disciplines to help him
- . 2. Locates information efficiently.

- A. The British social, political, and economic systems are interrelated.
 - 1. Britain comes closer to the ideal type of a secular-pluralistic society than to a traditional or mass society; however, it has more traditional characteristics today than does the United States.
 - a. There are a number of ways of comparing social systems. This unit uses two of them.
 - Sociologists set up ideal-types for comparing societies. These types do not describe any one society but describe frequent and significant traits common to certain kinds of societies. Any society can then be compared with these ideal types to see how closely it conforms to one of them, and different societies can be compared to see which of them conforms most closely to one of the ideal types.
 - a) A <u>traditional society</u> is slow to change, has a caste or rigid class system with little vertical mobility, is characterized by many intimate, face-to-face relations and

TEACHING PROCEDURES

MATERIALS

- Point out that the class is now about to study the social, political, and economic systems of some of the Western European countries in order to make comparisons between them. Ask: How might we compare social systems? Let pupils make suggestions. Then analyze suggestions. (What might be the underlying purpose of each kind of comparison?) Try to help pupils see that there might be many ways of comparing systems, and that social scientists have tried to develop ways to suit certain purposes.
- 2. Write on the board the three ideal-types of societies which sociologists have developed for comparing societies. After each, write some of the characteristics of the society, or have pupils try to suggest some of the characteristics for at least the first two types and compare their list with that prepared by Rose. Discuss: Do you think you would find many societies which fit completely any one of these ideal types? Why or why not? If not, what is the advantage of such a classification? Suggest that pupils try to compare each social system studied during the year with these ideal-types as one means of comparing social systems.

See C. Rose, backgroin appendix.

- a) English people have a strong sense of national identity. This may be due in part to the fact that its island location helped prevent repeated invasions. It also helped reduce movements of population of different nationalities to England.
- b) The English managed to settle three important kinds of cultural conflict, which cause political conflict in some countries, prior to the industrial revolution and to the extension of suffrage.
 - (1) It developed a strong central government.
 - (2) It defined its national borders (although Ireland later became a matter for dispute).
 - (3) It worked out a settlement of the religious disputes.
- 2) The English developed its political institutions gradually over hundreds of years. These institutions have been modified, but they are deeply imbedded in the English culture.
- 3) Beginning with the Reform Act of 1832, the English began the process of adapting its political and later its econo-

Germany. Now quote Rose and/or Holt about the importance of the fact that some of these kinds of conflicts have been removed from the political arena or resolved to a large extent in Britain.

45. Have pupils list some of the Botish political institutions on the chalkboard. Then have them review what they Powers, pp. 18 have learned about the history of England to try to identify the length of time that each has existed in some form in England. Discuss: How have some of these institutions changed over time? How do you think their longevity might contribute to stable government?

46. Review what pupils learned about the causes of the Reform Act of 1832. Ask: Why did those in power agree to the extension of the vote and other electoral reforms?

Rose, Politics p. 31.

3. The British have a mixed economy with more government ownership and welfare activities than does the U.S.

the differences between the British and the American systems of government. What do the two systems have in common?

- 71. Have pupils pretend that they were Englishmen living in the earlier 17th century. They fell asleep and like Rip Van Winkle did not wake up for many years. They awaken today and write an article for a British newspaper about their impressions. The article should compare the British government today with that in the early 17th century.
- 72. Review what pupils learned in earlier grades about basic economic questions facing all societies and the way in which these questions are worked out in the U.S. economic system.

is the market which translates demand and supply into a price system and which is chiefly responsible for the way in which basic economic questions are worked out. The market serves to determine largely what shall be produced, how much shall be produced, how it shall be produced, and who shall get what part of the productions. However, government policies and factors which interfere with perfect competition also affect the allocation of resources and goods.

G. Economic systems are usually mixed, with both public and private ownership and with decisions made both by government and by consumers and businessmen.

G. Monopolies can keep prices of goods high by reducing the quantity produced. They thus interfere with the mechanism by which production is altered to suit consumer demands.

- a. Britain is primarily a man although it has more nation of industry than does the States, and there has been dency toward monopolistic than in the U.S.
 - The great majority of tries and of land are privately and subject
 - 2) Prior to World War II, trends became quite no were subjected to litt British firms were prohigh tariffs from fore

re tend to be more political ties where there are violent flicts, unless the government become totalitarian.

ral constitutencies and protional representation tend ard multiparty systems.

- a. Ever since the French Revolution, French history has been marked by violent overturns in the form of government. The republics faced serious problems which the British government did not face, such as continuance of serious religious conflict, industrialization following rather than preceeding the establishment of a democratic government, serious foreign crises and wars before the governments had become thoroughly accepted. While the British people had come to accept a peaceful way of settling conflicts over specific issues, the French people did and still do differ on the basic ground rules of society and settling disputes.
- b. The French political system is marked by numerous political parties which pay much more attention to ideology than do many parties in other systems and which have tended to withdraw support from temporary coalitions set up to gain control of the cabinet. The party system is marked by little discipline. It is probably the result of the basic conflicts in French society more than on the kind of electoral system.

pupils set up hypotheses. Quote authors on basic disagreements about a republican form of government. How does this differ from Britain? the U.S.?

Where possible, have pupils develop scatter-grams to test hypotheses about the comparative instability of France and other countries as related to various socio-economic factors. (See above.)

105. Have a pupil prepare a dittoed outline of French political Godfrey, Gov't. of parties today. He should then tell the class a little more about these parties and about how they operate, including the degree to which there is party discipline. Discuss: Why does France have a multiple party system rather than a two party system as in Britain or the U.S.?

es ideal types in analyzing econic systems. b. Following World War II, the French developed a system of planning which involves a planning board that makes recommendations but that cannot issue orders. The board has had great influence upon the government and upon private industry.

aws inferences from tables.

c. France has had a more rapid rate of economic growth since World War II than has Britain. Between 1953 and 1958 the French GNP rose by over 50%, while the British GNP rose only 14 per cent. This increase was made possible by a 40% increase in output per man hour as well as by longer working hours.

120. Now have a pupil prepare an oral report on the system of economic planning established after World War II. Then discuss: How much control does the planning board have over industry? How successful has it been in getting private industry to go along with its plans? Does economic planning in France when combined with the nationalization of a number of industries mean that France is a command economy? Why or why not?

At this point it might be wise to remind the class of what they learned in the ninth and tenth grades about different "types" of economic systems. Ask: Did any of the societies you studied fit any of these types exactly? Remind pupils of the need to use a continuum or even a triangle to show where economic systems might lie between market, command, and traditional economies. Now have pupils compare this use of ideal types with the ideal types of social systems which sociologists use. By making this comparison, it may help pupils understand the use of ideal types in both situations.

- 121. Once more project the table on indices of production and output in the United Kingdom, Western Germany, and France. Review the meaning of index numbers. Now ask: How did production increases compare in Britain and France? What factor shown in this table probably accounts in part for this big increase in France and the slower increase in Britain? What might explain the increase in productivity per man hour? Also tell pupils about the increase in hours of work. Ask: How might this help explain the rise in GNP?
- 122. Project a table showing the average annual rate of growth in GNP during the 1950's. Ask: How does the French rate compare with that of Britain? of the U.S.? How can you explain a rate of only 4.5 per cent

URIOUS ABOUT SOCIAL DATA.

- V. Each of the Western European countries faces serious international problems; the countries have reacted by and large by moving toward greater political and economic cooperation with each other and with the United States.
 - A. Each of the major Western European countries faces some problems which affect it differently from the others; however, the others have a stake in their outcome.

plizes from data.

ns may pool their power behind n goals in varying systems of nces and combinations. 1. Britain has faced the loss of colonies and has had to try to readjust commonwealth relations.

inferences from a comparison ferent map patterns of the rea.

TEACHING PROCEDURES

MATERIALS

- 1. Discuss: In the light of what you learned about the history of Western Europe and what you have studied about Britain, France, and Germany thus far, what problems do you think these countries faced internationally after World War II? What issues do you think the U.S. must have faced in its relations with Western European countries?
- 2. Give pupils a chance to read in class on problems related to relations among Western European countries, relations between these countries and other countries, and U.S. policies related to Western Europe. Before pupils begin, give them a series of suggested individual and small group activities and let them suggest others. Make assignments and give pupils a schedule indicating when their projects must be ready.
- 3. Have a group of students present a panel discussion on the British Empire and Commonwealth prior to World War II. They should explain the organization of the Commonwealth, and they might discuss the pros and cons of such an organization for the British and for the Commonwealth countries.
- 4. Have a pupil prepare two maps showing what has happened to the British Commonwealth and empire since World War II. Then have another pupil give a report on the reasons for the decline of the empire.

Or they should prepare a series of background news articles for a newspaper making such comparisons.
- 32. Have several pupils give reports on other Western European countries in which they are interested. They should contrast the social, political, and economic systems of the country studied with those of Britain, France, and Germany. (Or show films and make such contrasts.)
- 33. Hold a general class discussion summarizing differences between Britain, France, and Germany, and other Western European countries studied. Then discuss: Why do you think social scientists still group these three countries together when talking about a Western European culture? Why do you think they have so many things in common? (Return to the questions raised in the sub-unit on geography.)
- 34. Have a pupil prepare a bulletin board pointing up similarities and differences between the U.S. and Western Europe.

THE POLITICAL SYSTEMS OF WESTERN EUROPE

by Robert Holt

There are major problem, that accompany any effort to adopt an area study of Western Europe. Although the cultural unity of Western Europe is as great (or greater) than that of, for example, the Indian sub-continent, the existence of a dozen nation-states with quite different types of political organization makes it difficult in a short period to present an adequate picture. One possible solution is to identify problems worth studying and focus attention alternately on the countries the study of which best Illuminates the problem.

The United Kingdom

Many of the roots of the American political system are found in English political theory and practice of the 17th and 18th centuries. Yet while today, both the United States and the United Kingdom have democratic systems, there are significant differences in the way in which they operate. Some of the differences in English practice are important to bring to the attention of the American student. They are practices which the popular American political mythology holds to be vir-

tually incompatible with democrac fundamental to the British system portant can be enumerated.

l. In popular American mythotwo fundamental pillars on which of system rests is that of a separation Governmental authority must be sislative, executive and judicial bolations between these branches go system of checks and balances. Of ious charges that can be made againg branch of government is that if the proper balance. Any concentris viewed with alarm.

In the English system of gove is no separation of power between legislative. All significant legisla by the Cabinet drafted under its stroduced by one of its members; arrigidly controls the timetable of the It is exceedingly rare that a piece supported by the cabinet is not passive.

THE POLITICAL SYSTEMS OF WESTERN EUROPE

by Robert Holt

re major problems that accompany adopt an area study of Western Eurgh the cultural unity of Western Eureat (or greater) than that of, for examinan sub-continent, the existence of a i-states with quite different types of canization makes it difficult in a short esent an adequate picture. The United Kingdom

the roots of the American political found in English political theory and the 17th and 18th centuries. Yet while the United States and the United Kingmocratic systems, there are significes in the way in which they operate differences in English practice are bring to the attention of the merithey are practices which to opun political mythology holds to be vir-

tually incompatible with democracy, yet they are fundamental to the British system. The most important can be enumerated.

l. In popular American mythology, one of the two fundamental pillars in which our democratic system rests is that of a separation of powers. Governmental authority must be solit between legislative, executive and judicial branches and relations between these branches governed by a system of checks and balances. One of the serious charges that can be made against a man in any branch of government is that he is upsetting the proper palance. Any concentration of power is viewed with alarm.

In the English system of government there is no separation of power between executive and legislative. All significant legislation is initiated by the Cabinet drafted under its supervision, and introduced by one of its members; and the cabinet rigidly controls the timetable of the legislature. It is exceedingly rare that a piece of legislation supported by the cabinet is not passed.

This fusion and concentration of executivelegislative authority is not an accident nor is it considered undesirable. The British fear the diffusion of responsibility as much as Americans fear the concentration of power, and to concentrate responsibility in a stable system, authority must also be concentrated. In the American system of government the capricious use of power is prevented (theoretically by preventing any man or small group of men from monopolizing too much power: while in Britain the capricious use of power is controlled by institutional devices that hold those who exercise power accountable for their acts. (The degree to which it is difficult to hold men responsible for their political actions in the United States can be neatly illustrated by drawing attention to a piece of legislation that the public opinion polls indicate has the backing of a majority of the electorate but which fails to pass in session after session of Congress. Ask the students who are responsible for this thwarting of the will of the majority. It will be difficult for anyone to come up with a clear-cut answer, but a number of different men or groups who share responsibility might be identified. Next ask how they can be held accountable for their acts? The point can be made dramatically by indicating how such a problem is unlikely to a 'se in England and if it did arise how it would be quickly solved.)

2. To most / mericans the division of power

in our federal system is equally as cru of democracy as is the separation of po studying the United Kingdom, the stude ly be getting his first look at a democrathat is unitary rather than federal. The "sovereign states," no constitutional "rest that reserve for the states or for the themselves powers not explicitly assign tral government authorities in Britain delegal actuarity from Parliament and a sity in the House of Commons can create or modify local government authority.

It should be possible to generate in some interest in how democracy survive flourishes) in the absence of these two tures of American government. The proof the answer might well be presented it text of a further set of contrasts between and America.

l. The Cabinet - The plural execut inet composed of members of legislativ and collective responsibility are all im features of British government that mu derstood if the operation of British gov is to be appreciated. They all are signidifferent from American practice. Mcr

on and concentration of executivethority is not an accident nor is it desirable. The British fear the difonsibility as much as Americans entration of power, and to concenability in a stable system, authoribe concentrated. In the American ernment the capricious use of powed (theoretically by preventing any group of men from monopolizing er; while in Britain the capricious s controlled by institutional devichose who exercise power accountacts. (The degree to which it is ld men responsible for their politithe United States can be neatly illuswing attention to a piece of legislation e opinion polls indicate has the backrity of the electorate but which fails sion after session of Congress. Ask tho are responsible for this thwarting the majority. It will be difficult for he up with a clear-cut answer, but ifferent men or groups who share might be identified. Next ask how eld accountable for their acts? The hade dramatically by indicating how n is unlikely to arise in England rise how it would be quickly solved.)

in our federal system is equally as crucial a pillar of democracy as is the separation of powers. In studying the United Kingdom, the student will likely be getting his first look at a democratic system that is unitary rather than federal. There are no "sovereign states," no constitutional "reserved" powers that reserve for the states or for the people themselves powers not explicitly assigned to the central government or prohibited to the states. All local government authorities in Britain derive their legal authority from Parliament and a simple majority in the House of Commons can create, destroy, or modify local government authority.

It should be possible to generate in the student some interest in how democracy survives (indeed, flourishes) in the absence of these two valued features of American government. The presentation of the answer might well be presented in the context of a further set of contrasts between Britain and America.

l. The Cabinet - The plural executive, the cabinet composed of members of legislative bodies, and collective responsibility are all important features of British government that must be understood if the operation of British government is to be appreciated. They all are significantly different from American practice. More impor-

st Americans the division of power

tant to emphasize than any of these, however, is the cabinet as a deliberative body and the seat of authoritative policy making.

- 2. Parliament A bicameral legislature in which one house is greatly inferior to the other is perhaps the most spectacular difference between the American and British legislature. More important to an understanding of the British system, however, are the relatively powerless non-specialized committees and the non-partisan Speaker.
- 3. Relations between Cabinet and Commons
 There are two aspects of this relationship to be
 highlighted. One is the degree and kind of control
 that the Cabinet exercises over the time and activity of the Commons. The second is the institutions through which the cabinet is held accountable for its actions to the Commons and through
 the Commons to the electorate. The question
 period, the role of the Opposition as the "critic"
 (not the obstructor) of the government and the Opposition as the "educator" of the electorate are
 points to discuss.
- 4. Political Parties and the Commons How the system as described thus far can operate can be explained only through a description of the role

- of political parties in Commons. The majority party is the Prime Mi Prime Minister and his Cabinet co of Commons through their control political party. In American terms P. M. 's are "rubber stamps" votin according to the dictates of the par But most Englishmen would argue ish system of disciplined parties I ter realization of the democratic id tion and responsibility than does tem of undisciplined parties. The I should be presented.
- 5. Parties and elections Dities in Commons require a certain organization outside of Parliament between central direction and consomy should be treated along with of the way in which the party syste attention on issues rather than upo At this point the importance of the festo (party platform) and the way manifesto of the victorious party g to legislation with dispatch can be
- 6. Cabinet and Civil Service ment of the Cabinet in the administ be included to balance the role of t

bhasize than any of these, however, net as a deliberative body and the horitative policy making.

rliament - A bicameral legislature in house is greatly inferior to the other the most spectacular difference bemerican and British legislature. More to an understanding of the British sysver, are the relatively powerless non-it committees and the non-partisan

e two aspects of this relationship to be i. One is the degree and kind of control binet exercises over the time and activalent of the cabinet is held accountagh which the cabinet is held accountactions to the Commons and through ons to the electorate. The question e role of the Opposition as the "critic" structor) of the government and the Opticus.

litical Parties and the Commons - How as described thus far can operate can ed only through a description of the role

of political parties in Commons. The leader of the majority party is the Prime Minister. The Prime Minister and his Cabinet control the House of Commons through their control of a disciplined political party. In American terms, almost all P. M. 's are "rubber stamps" voting on the floor according to the dictates of the party leadership. But most Englishmen would argue that the British system of disciplined parties leads to a botter realization of the democratic ideal of representation and responsibility than does the American system of undisciplined parties. The British argument should be presented.

- 5. Parties and elections Disciplined parties in Commons require a certain kind of party organization outside of Parliament. The balance between central direction and constituency autonomy should be treated along with a discussion of the way in which the party system focuses the attention on issues rather than upon personalities. At this point the importance of the election manifesto (party platform) and the way in which the manifesto of the victorious party gets enacted into legislation with dispatch can be discussed.
- 6. Cabinet and Civil Service Some treatment of the Cabinet in the administration should be included to balance the role of the Cabinet in

legislation that has already been discussed. Most Cabinet Ministers are heads of the great departments of government. The relative absence of political appointments to Departmental administrative positions, the crucial role of the treasury in the total administrative organization and the important characteristics of the civil service should be mentioned.

*** ** ***

Two further features of the British government deserve some mention.

- l. The British Constitution is unwritten. It is composed of certain acts of Parliament, some important judicial decisions and a number of conventions. Any aspect of it can be changed by a simple majority of the House of Commons (with two minor exceptions which require also the consent of the House of Lords.).
- 2. Great Britain is a monarchy, and although the monarch has no significant political power, the role and importance of the Crown should be discussed.

The section on government in the Undom might well end up by placing empha fact that many of the characteristics of a ment that many Americans hold to be esto the continuation of democracy are lacked England and yet the government is democrated that would suggest that some other feating might be far more important. We can pridentify some of those features by looking countries where democratic government less successful; namely. France and Ge

The literature on Government in Gratain is enormous. One little book, however tains much of what is suggested above. (nings, The British Constitution.) This bobe easily comprehensible by teachers an of the students.

The Continent

It would certainly be undesirable to to present a brief survey of all of the vaccountries of Western Europe in a single some limitation has to be made, it is im to be explicit about the rationale of the cone could, for example, continue to explains of problems that were discussed in tionship to the United Kingdom. Attentio

at has already been discussed. Most sters are heads of the great departernment. The relative absence of pintments to Departmental administrative organization and the aracteristics of the civil service intioned.

her features of the British governsome mention.

of certain acts of Parliament, some licial decisions and a number of convaspect of it can be changed by a city of the House of Commons (with ceptions which require also the House of Lords.).

Britain is a monarchy, and although has no significant political power, mportance of the Crown should be

The section on government in the United Kingdom might well end up by placing emphasis on the fact that many of the characteristics of government that many Americans hold to be essential to the continuation of democracy are lacking in England and yet the government is democratic. This would suggest that some other features might be far more important. We can probably identify some of those features by looking at countries where democratic government has been less successful; namely, France and Germany.

The literature on Government in Great Britain is enormous. One little book, however, contains much of what is suggested above. (Ivor Jennings, The British Constitution.) This book should be easily comprehensible by teachers and by many of the students.

The Continent

It would certainly be undesirable to attempt to present a brief survey of all of the various countries of Western Europe in a single unit. If some limitation has to be made, it is important to be explicit about the rationale of the choice. One could, for example, continue to explore the kinds of problems that were discussed in relationship to the United Kingdom. Attention in this

case would be focused on the Scandinavian countries, the Low Countries and Switzerland. One could also take an opposite course, concentrating attention on the dictatorial political systems, in which case Germany, Italy and Spain would come in for primary emphasis.

My recommendation is that attention be focused on the evolution and operation of democratic systems under quite different social and cultural environments from those of the United States or the United Kingdom. Germany and France provide excellent illustrations.

The section could well be introduced by a brief review of the political history of England, France and Germany. This review could draw attention to the fact that since the 17th century there has been no dramatic political revolution in England. The twentieth century Englishman, if thrust back into the 18th century could recognize the basic institutions of cabinet government in operation. In the process of becoming more representative and more responsible, the basic mold of parliamentary and cabinet government was changed remarkably little. And the major changes which have been caused by the development of a disciplined two party system came slow—One cannot date more accurately than within

twenty --perhaps fifty years-- when occured.

In France and Germany, by contr tic change rather than slow evolution tern. France, for example, experience changes in the form of government in 1815, 1848, 1852, 1870, 1940, 1945, 195 argue that throughout the 19th and 20th France has been "searching" for a state able constitutional form. The pendulu from monarchy to republic, from street to weak executive without ever finding equilibrium. In Germany the pattern is

ilar, but of course, has been confineshorter time period. There was no un political entity before 1870, and since change has hardly been smooth and promade with democratic systems alternautocratic systems.

If this historical review is present it should be easy to raise the question does England which shares so many cacteristics with France and Germany strikingly different political history? of developing an answer to this question be possible to teach the student some

ent illustrations.

the political history of England, rmany. This review could draw fact that since the 17th century no dramatic political revolution to the 18th century Englishman, into the 18th century could recognistitutions of cabinet government in the process of becoming more and more responsible, the basic mentary and cabinet government emarkably little. And the major have been caused by the developplined two party system came slowdate more accurately than within

twenty --perhaps fifty years-- when the change occured.

In France and Germany, by contrast, dramatic change rather than slow evolution was the pattern. France, for example, experienced major changes in the form of government in 1789, 1799, 1815, 1848, 1852, 1870, 1940, 1945, 1958. One can argue that throughout the 19th and 20th centuries France has been "searching" for a stable and suitable constitutional form. The pendulum has swung from monarchy to republic, from strong executive to weak executive without ever finding a point of equilibrium. In Germany the pattern has been sim-

ilar, but of course, has been confined to a shorter time period. There was no unified German political entity before 1870, and since that time change has hardly been smooth and predictable. In 1918, 1933, 1945, and 1952 major changes were made with democratic systems alternating with autocratic systems.

If this historical review is presented properly, it should be easy to raise the question, "why" Why does England which shares so many cultural characteristics with France and Germany have such a strikingly different political history? In the process of developing an answer to this question it should be possible to teach the student some things of in-

terest about France and Germany, some things of importance about politics, and some things of significance about the way in which evidence is collected and knowledge built up in the social sciences.

Before trying to answer any question, it is important to find out if one has the "right" question. In many ways the question as posed is not the "right" question --primarily because it is too broad. If we can start by asking a question that is somewhat more limited it may be easier to answer. One way of proceeding would be to inquire into the circumstances in which there were major constitutional changes in Germany and France. Several striking similarities are observable.

1. Virtually all of the major constitutional crises in France and Germany occurred either during periods of major economic stress or foreign policy crisis. (Vitness France: 1958, Algerian crisis; 1946, liberation; 1940, military defeat following period of prolonged economic stress; 1870, military defeat. Witness Germany: 1952, dropping of much Allied direct supervision of government, 1945, military defeat; 1933, major economic crisis; 1918, military defeat.)

- 2. The army in each country was tant factor in domestic political life will cratic institutions were threatened or
- 3. Religious issues were deeply i domestic political conflicts.

In England major foreign policy as problems were solved without precipit lutionary constitutional changes. Some reasons for this are that (1) In England gious question was "solved" long before lem of expanding the franchise was falong before the pressing conflicts of a society had emerged. (2) During a cruin which democratic institutions were England had few major foreign policy. The basic "rules of the game" which ghow executive control was transferred faction to another were worked out be franchise was expanded and the problem industrial order emerged.

In other words, in England jor religious and constitutional proble political significance were resolved be expansion of the franchise and the begwidely based representative government many and France newly founded demo

rance and Germany, some things about politics, and some things of out the way in which evidence is nowledge built up in the social

ring to answer any question, it is nd out if one has the "right" question as posed is not estion --primarily because it is we can start by asking a question nat more limited it may be easier e way of proceeding would be to incircumstances in which there were tional changes in Germany and al striking similarities are observ-

ly all of the major constitutional ce and Germany occurred either of major economic stress or forisis. (Vitness France: 1958, Alger6, liberation; 1940, military defeat od of prolonged economic stress; defeat. Vitness Germany: 1952, 10th Allied direct supervision of 1945, military defeat; 1933, major is; 1918, military defeat.)

- 2. The army in each country was an important factor in domestic political life when democratic institutions were threatened or overthrown.
- 3. Religious issues were deeply involved in domestic political conflicts.

In England major foreign policy and economic problems were solved without precipitating revolutionary constitutional changes. Some important reasons for this are that (1) In England the religious question was "solved" long before the problem of expanding the franchise was faced and long before the pressing conflicts of an industrial society had emerged. (2) During a crucial period in which democratic institutions were evolving England had major foreign policy crises. (3) The basic "rules of the game" which governed how executive control was transferred from one faction to another were worked out before the franchise was expanded and the problems of an industrial order emerged.

In other words, in England certain major religious and constitutional problems of great political significance were resolved before the expansion of the franchise and the beginnings of widely based representative government. In Germany and France newly founded democratic re-

gimes had major religious and constitutional problems to solve at the same time attempts were being made to develop democratic "rules of the game." The first widely representative English governments also were not faced with major foreign policy crises. Democratic governments floundered in Germany and France because they could not deal with the major issues of public policy. But it must be recognized that the early democratic governments in England did not have the same kinds of problem to solve.

With this bit of history and historical interpretation as background, attention can be given to some of the specific institutions of government. Attention should be concentrated on the democratic or protodemocratic institutions of government that have been characteristic of these two countries and not on those that happen to exist the particular year in which the course is taught. An examination of France during the 3rd, 4th, and 5th Republics (1875-1940 and 1946 - date) and Germany of the Weimar and Bonn periods (1919-1933 and 1952 - date) enables one to analyze the following:

1. Weimar Germany and France under all three Republics had multi-party systems. Reasons for a multiparty system and its implications should

be discussed. Pedagogically useful be drawn with the United Kingdom States.

- 2. Weimar Germany and Frathree Republics had significant "sitions" which made the operation difficult.
- 3. France under the three reused to illustrate the operation of with a strong legislature and a we Germany under Weimar can be us the operation and constitutionally tive. Both can be contrasted with dom.
- 4. The French governments Republic and the German government Bonn republic can be used to example which some of the traditional consiguernmental instability of these been dealt with. The issues of rement, representative government tion of powers first raised in the English political institutions could reviewed in this broader context.

(NOTE: Another approach cou

be discube discub

this bit of history and historical interas background, attention can be given if the specific institutions of government. Should be concentrated on the demoprotodemocratic institutions of government have been characteristic of these two and not on those that happen to exist the year in which the course is taught. An on of France during the 3rd, 4th, and lics (1875-1940 and 1946 - date) and Germe Weimar and Bonn periods (1919-1933 date) enables one to analyze the follow-

eimar Germany and France under all ublics had multi-party systems. Reasons iparty system and its implications should

be discussed. Pedagogically useful contrasts can be be drawn with the United Kingdom and the United States.

- 2. Weimar Germany and France under all three Republics had significant "non-loyal oppositions" which made the operation of government difficult.
- 3. France under the three republics can be used to illustrate the operation of a government with a strong legislature and a weak executive. Germany under Weimar can be used to illustrate the operation and constitutionally strong executive. Both can be contrasted with the United Kingdom.
- 4. The French governments under the 5th Republic and the German governments under the Bonn republic can be used to examine the way in which some of the traditional constitutional and governmental instability of these countries has been dealt with. The issues of responsible government, representative government, and separation of powers first raised in the treatment of English political institutions could fruitfully be reviewed in this broader context.

(NOTE: Another approach could be taken in

treating government and politics in Western Europe. Instead of concentrating on political institutions, their evolution and operation, attention could be focused on major issues of public policy and how they have been dealt with in several countries. If this approach were taken, the Scandinavian countries and Italy should also be treated. The way in which governments in these countries deal with problems of health, education, welfare government in the economy and foreign policy could be covered with interesting contrasts made with the American scene.)

WESTERN EUROPE SOCIOLOGY AND THE STUDY OF MODERN SOCIAL STRUCTURE

Caroline Rose

It is assumed that an area study of three modern societies will draw on all the social sciences, and that it will have three aims:

- 1. to teach social science skills
- to introduce and reinforce social science concepts
- 3. to give an accurate picture of the development and the present situation of the area.

This paper will show what sociology has to contribute to an area study of modern England, France, and Germany. The writer has found it very difficult to include Italy in this analysis, both because of its relative late development as a national state and industrially, and because Northern and Southern Italy have very different histories. It is also assumed that some attempt will be made to give the student a broad, general picture of trends and changes. In social organization classes, the writer finds that students have a very unclear idea of how medieval Europe differs from modern Europe, of the effect of industrialization or of the wars, or of the differences between Europe and America in class structure, economic development and political structure.

SOCIAL SCIENCE SKILLS

The Comparative Method: scientific way to study a 1 modern society is to compare society, remembering that no identical. In social organization writer finds that students have er idea of how medieval Europe modern Europe, of the effect of ation or of the wars, or of the between Europe and America in re, economic development and potture.

SOCIAL SCIENCE SKILLS

The Comparative Method: The only satisfacto scientific way to study a large, complex, modern society is to compare it with a similar society, remembering that no two societies are identical. Societies often differ in ways whi have been crucial for their development. The differences may be high-lighted by comparison. For example, England is an island. She has bea great sea power. She industrialized before France and Germany did. Her social structure was more influenced by her Empire than was true in the other two countries. Among other consequences of these differences is that England is less "European" than " France and Germany because of the nature of har ties with her over seas colonies and former colonies. It would certainly be fruitful to compare the colonial policies of all three of these countries, emphasizing the attitudes of the home population and the effect on them of imperialism. The effect on the colonial countries will no doubt be studied in area studies of Africa and Asia.

All three of these countries are highly industrialized and lend themselves to a comparative study of the effects of the Industrial Revolution. If the industrialization process

is studied in only one society, a condition-let us say the growth of labor unions--may be attributed to industrialization, although it may have occurred, at least in part, because of other events. If, however, the same condition is present in all three societies, one can feel much surer about generalizing that the growth of a labor movement is one of the major results of industrialization at least in Europe.

If a labor movement is present in all three societies but its structure differs from one country to another, the comparative method helps isolate the reasons for the difference. In England the labor movement became the major founder of one of two important political parties. In Germany, part of the labor movement, in its early days, became the creature of a paternalistic government; part of it became the core of a revolutionary movement. Hitler destroyed the labor movement. the labor movement still accepts paternalistic policies, but it also supports a political party along the English pattern. In France, the labor movement fragmented, each part attaching itself to a different political party. In the United States, the labor movement became a non-partisan, pressure group.

Although one might conclude the zation does lead to the format movement, one might also conclustructure varies with the poli of the society. One could also movement in relation to the cleach country.

illustrate the way a buld go about doing comies. Although one might conclude that industrialization does lead to the formation of a labor movement, one might also conclude that its structure varies with the political structure of the society. One could also study the labor movement in relation to the class structure of each country.

A labor union is a kind of voluntary association. Voluntary associations are present in all pluralistic, secular societies, such as the societies being studied. The number of voluntary associations, their structure, and the purposes they serve vary from country to country. One cause of variation is the attitude of the law toward voluntary associations. and Germany, for example, they were first forbidden by law and then strictly regulated. This was not true in England, but the American Constitutional encouragement that citizens had the right "to assemble and peacefully petition for redress of grievances" (first Amendment) was not present. The development of voluntary associations cannot be attributed solely to the legal attitues toward them, but it is suggested that students might be introduced to the comparative study of law this way rather than more formally. They can then see that differences in law cause differences in behavior.

Sociologists have one specialized technique for doing comparative studies--the ideal-type method. An ideal type is not just another word for concept or generalization. Ideal types are empirical constructs, used for comparing

complex, social phenomena. The traits included are those most frequently present and of causal significance. A useful set of ideal types describes kinds of societies.

- 1. A traditional society is slow to change. It has a caste or rigid class system with little or no horizontal or vertical mobility. Relations among people are determined by custom and tradition and are most usually of an intimate, face-to-face kind. Because of the rigid class divisions and lack of physical mobility, most people do not meet people different from themselves. The leadership of the society is legitimized by custom and tradition. Medieval Europe is an excellent example of a traditional society. Its leaders, kings and religious leaders, and, on a lower level, the petty nobility are traditional leaders.
- 2. A secular-pluralistic society has an open class system in which people can move freely from one class to another. It has a cheap and universal educational system which serves as a ladder for upward vertical mobility. Although there are areas in which intimate, face-to-face relationships take place, as in the family, some neighborhoods, and peer groups, just as in a traditional society, many contacts for many people are secondary. Secondary contacts are formal, impersonal and transitory, such as occur in buying and selling, on work situations, or as tourists. Or second-ry contacts may be conducted through the mass

media. Some members of the about them in the newspaper them on the radio or TV. If only listens, he is engaging havior. value in which people can move one class to another. It has a versal educational system which ladder for upward vertical mobility there are areas in which into-face relationships take place, mily, some neighborhoods, and just as in a traditional society, s for many people are secondary. Intacts are formal, impersonal and such as occur in buying and selling, ations, or as tourists. Or second-may be conducted through the mass

media. Some members of the society may learn about them in the newspaper or hearing about them on the radio or TV. If the listener only listens, he is engaging in audience behavior. If, however, he is very much intereste in some particular aspect of the society, follows what goes on in that sector, discusses it with his family and acquaintances, and tries to influence what is going on, he is a member of a public. There are many publics--the baseball public, the ballet public, the political public, and individuals may belong to many of these. The formation and influence of active public opinion on a variety of affairs is one of the important ways that communication is maintained in a plural society.

A plural, secular society is heterogeneous. Its members may have a variety of religious, racial, and nationality backgrounds. Since stratification is not rigid, people are likely to be identified by occupation, interest, income, education and so on. Mobility, both vertical and horizontal, is great. This also produces heterogeneity, because it mixes people in various regions and levels of society.

There are likely to be a great many associations of a voluntary nature. These may be recreational or expressive, like a bridge club or chamber music group. They may also have social purposes, like the PTA, the NAACP or a political club and work for reforms and social changes.

In a plural, secular society there is rapid social change. This is brought about in part by the work of voluntary associations, particularly, when they are large and effective and join with similar associations to become a social movement like the Civil Rights movement. Social movements accomplish their ends in the kind of society we are discussing by in fluencing public opinion so that changes in the institutional structure of the society can occur without too much opposition. The Civil Rights law which outlaws discrimination in the United States is an example of such institutional change.

Most secular, plural societies are industrialized societies with advanced technologies. The technology changes rapidly having a momentum of its own and produces changes in other parts of the society. For example, the invention of labor-saving devices for the home and of processes to prepare and preserve food outside the home may outmode the work women were accustomed to do at home and change their role.

All these traits of a secular, pluralistic society—change, heterogeneity, urban living, vertical and horizontal mobility—break down traditional values. This may be because the old values have no meaning in the new setting. Living within one's income, for example, rather than buying on time, is not practical if one has to have a car to pursue one's work; nor is it socially advisable, if the economy will function only when there is a high

volume of sales over a wide ma disappear because people are e values as they move rapidly ar geneous society, or increase t Traditional religious values c learn about evolution.

Sometimes individuals are un to the new demands of the socil anomic or alienated. These ar likely to engage in audience b may come about because a group cally isolated as the American the group may be cut off from pation in the society as the u tired are. socially advisable, if the
unction only when there is a high

volume of sales over a wide market. Some values disappear because people are exposed to new values as they move rapidly around a heterogeneous society, or increase their education. Traditional religious values change when people learn about evolution.

Sometimes individuals are unable to adjust to the new demands of the society and become anomic or alienated. These are the groups most likely to engage in audience behavior. This may come about because a group is geographically isolated as the American Indians are. the group may be cut off from economic participation in the society as the unemployed or retired are. Or the group may have so strongly internalized values peculiar to one part of the society that they are mable to learn new values that would enable tham to enter the fast competitive, haterogeneous society. changing, This is what seems to happen to many lowerclass children, who do poory in school. Leadership results from competition among qualified people, and its scope s determined by formal rules or by law. The President of the United States, the head of Jeneral Motors or the senior class chairman a high school are examples of secular leader.

3. A mass society is one in which audience behavior predominates. People do not interact with each other very much. This may be because their life situations are such that they are isolated from other pople. They may be unemployed or retired or ive apart from

families or belong to families, in which there is little communi cation either inside the family or with other families. They may have lost or never acquired the techniques of communication and interaction with their fellows. Or, the political situation may be such that it is dangerous to try to communicate with others. even with close friends or family members. In a mass society the government restricts public freedom, that is, freedom of speech, of the press, of religion, and of assembly. It may even control both fine and popular art, science, popular entertainment, and ways of dressing. Communication is confined largely to propaganda issued by the government through the mass media. People react to the stimulus of the propaganda as individuals but because of the barriers to communication among people, there is no formation of public opinion by discussion among the people interested in the subject. Because information is restricted and comes from only one source, people may rely on rumor as a supplement to officially distributed information. Sub-groups within the population tend to disappear. Trade unions, churches, political clubs (except those used by governments to form an elite group) are outlawed. Informal groups, like juvenile gangs, bridge clubs, chamber music societies, also disappear because conversation or unofficially sanctioned action becomes dangerous for the participants. \sim The only relationships that remain are between the individual and his gover a one-way relationship.

Because of the atomization tion, class distinctions ten The individual either resist pressures silently, or, if a himself, or rather, lets him to the pattern desired by th If he does this successfully a member of the elite or rull Mobility becomes very rapid, down. Or, the poltion may be such that it is danto communicate with others, se friends or family members. iety the government restricts m, that is, freedom of speech, of religion, and of assembly. ontrol both fine and popular popular entertainment, and ways Communication is confined opaganda issued by the governthe mass media. People react us of the propaganda as indiviause of the barriers to communipeople, there is no formation nion by discussion among the sted in the subject. Because ls restricted and comes from ce, people may rely on rumor nt to officially distributed Sub-groups within the poputo disappear. Trade unions. litical clubs (except those nments to form an elite group) Informal groups, like juvebridge clubs, chamber music so disappear because conversaficially sanctioned action erous for the participants. tionships that remain are between

the individual and his government and this is a one-way relationship.

Because of the atomization of the population, class distinctions tend to disappear. The individual either resists government pressures silently, or, if ambitious, molds himself, or rather, lets himself be molded to the pattern desired by the government. If he does this successfully, he can become a member of the elite or ruling group. Mobility becomes very rapid, both up and Acceptance of the ruling group and its ideology, rather than education, good-breeding, intelligence, or even technical proficiency, becomes the avenue for upward mobility. Loss of faith in the ideology or unwillingness to accept it in the first place results in quick downward mobility.

Many of the leaders, on all levels, are charismatic: that is, they win acceptance by their personal characteristics, including their ability to propagate the prevailing ideology.

No society has ever been a perfect example of the mass society, although Nazi Germany, Russia under Stalin, and, perhaps, modern China have approximated it. In 1984, George Orwell gives a description of a complete mass society.

These, or other, ideal types will not fit any society perfectly. Moreover, all three

of the societies being studied are and have been changing so that some parts of them are best described by the traditional model, some by the secular-pluralistic model. The ideal type methodology does enable us to handle a bewildering variety of facts analytically.

Another way of making comparisons is to compare social trands, using statistical data. One can compare the three countries for changes in birth and death rates, marriage and divorce rate, number of people in school, median number of school years completed, class origin of high school or college graduates, changes in rural-urban suburban residence, or any other change over time for which there is accurate data. It is urged that students start with a theory and from it derive hypotheses of a sort which can be supported or contradicted by statistical data.

For example, one might start with the theory that a plural-secular society, in contrast to a traditional society, will have a higher divorce rate. One might qualify this by the following hypotheses:

If a society is secular-pluralistic in structure, but the population is Catholic, the divorce rate will not fall.

If the society is traditional, but residence is largely urban, the divorce rate will fall.

Every attempt should be made a student from looking at da a social trend, and then jum conclusion as to the causes

ANALYTICAL SOCIAL SCIENCE CONCEPTS

<u>Culture</u>: Culture is the common and shared meanings and values that develop in any group whose members interact over some period of time. If the more detailed, anthropological definitions of culture are easier for students to understand, there is no reason why one of them should not be used, too.

The parts of a culture tend toward integration. If there is a change in one part of the culture, it will affect other parts of the culture. Industrialization in France affected the family structure. In turn, industrialization was hampered by the French family structure. For many years in France, and also in Italy, the two-hour lunch period was adhered to despite its negative effects on industrial productivity. The extended family system in France badly handicapped the securing of efficient personnel in French business and industry because of obligations to find jobs for family members and the desire to keep the business in the family. The size of the firm was often limited by the number of relatives who could be managers or foremen. urbanization accompanies industrialization and brings with it many changes in the structure of society and in relations among peo-Nevertheless, France has a very large

proportion of its population still working in agriculture and living in rural areas or very small towns.

A separate culture can only develop in relative isolation. To the extent that German, French, and English cultures differ, there must have existed some separation among them. The same thing is true of any sub-culture within each society. One cause of separation may be geography, most evident in England, which is an island. Language can also be a parrier. In the medieval period German and English were much closer than now and so were English and French. As national states developed and took over direction of the educational systems to increase literacy, the languages became differentiated.

The most important cause of differentiation of cultures in western Europe has been the rise of national states. The centralization of political power accelerated the separation of other institutions. As the national states developed, religious institutions which had united all Europe, took on a national character. This is particularly evident in England under Henry VIII, but can also be seen in the struggle between the Papacy and the French bishops. The rise of Protestanism intensified national

separation. Protestanism te national characteristics to Catholic Church had not. Th to Protestanism's emphasis o rights and responsibilities Catholic doctrine. It was a that Protestanism was shaped struggles between national s

ational character. This is parvident in England under Henry VIII,
p be seen in the struggle between
and the French bishops. The
cestarism intensified national

separation. Protestanism tended to take on national characteristics to an extent the Catholic Church had not. This was due partly to Protestanism's emphasis on individual rights and responsibilities in contrast to Catholic doctrine. It was also due to the fact that Protestanism was shaped by political struggles between national states.

The growth of national states also differentiated the class structure. In medieval Europe the class (or more correctly, at that time, caste) structure was everywhere the same. Different rates of industrialization in various national states resulted in a differential growth of a modern class structure, based on the division of labor rather than on traditiona categories. Each country varies, however, in the extent to which traditional caste structure continues and in how they have been modified. Cultures, peculiar to each class, are also the result of separation among classes One will find much more distinct class cultures in any European country than in the United States. There is also variation from one country to another in Europe depending on the amount and degree of separation that remains from the traditional caste structure.

Conversely, when there are similarities in the cultures of the three countries or in any two of them, one can assume some common experiences. There is a European culture that overrides national cultures, as distinct from Asian or American culture. One character-

istic is the predominance of Christianity, both Catholicism and Protestanism. To some extent class ties hold across national boundaries. This is not only true among royalty and nobility. The haute bourgeoisie realize their common interests in the economic cartels which dominate much of Europe's big business. Parallel has been the development of radical, international, political movements which unite the intellectuals and working classes across national lines. Science and art have also been the basis of international culture.

Once countries have been sufficiently isolated to develop separate cultures and then come into contact with one another, change will occur in all the cultures in contact. The contact of different cultures is one of the major causes of social change. tion is one way in which social contact is increased, and tourism is one form of migration. Recently, there has been much deliberate contact--student exchanges and seminars, scientific and artistic exchanges. Far more important, of course, was the military collaboration between England and France during World War II; the participation by all three countries in NATO, the UN, UNESCO, and other international organizations; and, finally, the common market and other agencies working toward the unification of Europe as a third force. To the extent that De Gaulle is able to break his communication, or that England decides

to cast her lot with the Common alism will be intensified. On gical level, the sense of being found strongly in post-Nazi Gerland to a lesser extent in Engla result of a rejection of both R American cultures.

Conflict, particularly war, r The three wars since 1870 have Germany from England and France to which this separation has go usually evident to Americans.

SOCIAL STRUCTURE

By social structure is meant pattern of relations that occur part of the society. For examp lations of the working to the o is different in an industrializ it is in a farming community. differently in differently stru ties, and one can compare both and the consequent behavior. istic structure of the German d created by Bismarck, can be com conflicts among political group during the same period. Anti-S political issue in both countri period, but the forms it took a were different.

To r De Gaulle is able to break tion, or that England decides

to cast her lot with the Commonwealth, nationalism will be intensified. On the ideological level, the sense of being European, found strongly in post-Nazi Germany and France and to a lesser extent in England, is the result of a rejection of both Russian and American cultures.

Conflict, particularly war, reduces contact. The three wars since 1870 have separated Germany from England and France. The extent to which this separation has gone on is not usually evident to Americans.

SOCIAL STRUCTURE

By social structure is meant the typical pattern of relations that occurs within any part of the society. For example, the relations of the working to the owning classes is different in an industrialized society than it is in a farming community. People behave differently in differently structured societies, and one can compare both the structures and the consequent behavior. The paternalistic structure of the German government, created by Bismarck, can be compared with conflicts among political groups in France during the same period. Anti-Semitism was a political issue in both countries during this period, but the forms it took and the results were different.

Another interesting contrast among the three countries is in the recruitment of

In all three countries, there was elites. until very recently a large amount of traditional leadership. In Germany this was concentrated in the Army and in the control of government and industry. Leadership came largely from <u>the aristocracy and the haute</u> bourgeoisie. One way of looking at the Nazi movement is to see it as a revolt against traditional leadership. The Nazi leaders were largely from the lower-middle class. Those leaders who came from the traditional leadership class and joined the Party for idealistic reasons soon disappeared. The Nazis introduced a tremendous amount of vertical mobility into what had been a very stable society. Entrance into the Party was made possible on all levels, down to the block leader, and Party membership immediately conferred status and prerogatives. By killing off or dispossessing a substantial part of the upper middle class, room was made for lower middle class people to move upwards. (The same process went on in the early years of the Russian revolution.)

France superimposed a modern bureaucratic system of recruitment on a traditional one. For those high positions in society which required specialized education, she established an educational system which selected out the very best of her citizens, but in small numbers. Standards were high and progress through the system was, theoretically, open to everyone. In practice, it was the

middle class which most ofte higher reaches of society th cational system, but the hol al church, noble, and <u>haute</u> on leadership was broken.

England has maintained its leadership structure to a ve at least unit 1945. By for prestige and status to those middle class origin even whe plishments lay outside tradi of endeavor--artists or busi example--the English were ab fresh blood into its ruling children of the "newly-arriv tably educated in the Britis (i.e. private) school system attitudes, values and practi leadership class. Thus while of the Establishment was con anew, the attitudes and valu more slowly than did the ecd

middle class which most often entered into the higher reaches of society through the educational system, but the hold of the traditional church, noble, and headership was broken.

England has maintained its traditional leadership structure to a very great extent at least unit 1945. By formally granting prestige and status to those of lower or middle class origin even when their accomplishments lay outside traditional fields of endeavor--artists or businessmen, for example--the English were able to recruit fresh blood into its ruling classes. The children of the "newly-arrived" were inevitably educated in the British "public" (i.e. private) school system and took over the attitudes, values and practices of the old leadership class. Thus while the personnel of the Establishment was constantly recruited anew, the attitudes and values changed much more slowly than did the economic structure.

The examples used in this paper have been deliberately kept to suggestions within the analytical framework presented. Attention could be centered on many other areas than have been used. This has been done so that the papers coming from the other social sciences can be integrated with this one without too much trouble. For example, a geographer might be very much interested in the effect of the coal and iron deposits in the Ruhr and Saar areas on the relations

between France and Germany. This could still be analyzed in terms of culture conflicts and culture contacts or in how different governmental structures affected the policies of each country toward these areas.

It might be profitable to analyze England, France and Germany in terms of the degree of centralization of their government, in relation to their legal structure, or even to their geography. Southern France lies on the Mediterranean; Eastern France on Germany's borders and there are ideological conflicts that arise from this which centralization suppresses. England had to deal with sub-cultures in both Scotland and Ireland, but did not develop the degrees of centralization that France did. Why? Centralization in Germany was deliberately created by Bismarck to weld together a number of small, disparate states. What effect did this have on Germany's future development?

One might study leadership in detail. What was the effect of Napoleon, Bismarck, Hitler, De Gaulle, Disraeli, and others? Did they "ride the times," or did they change the direction of social development by their leadership qualities and policies?

Each of these countries has undergone crises. The way in which they were met depended upon the social structure and affected the future of the country. One thinks immediately of the French Revolution, of the

rise of Bismarck, of the enclo and industrialization or the d imperialism in England.

Anyone who has lived in any countries or who is well-acqua history and literature knows t is distinctive. Each has its character or ethos. What cons character is extremely controv sociologists. Some say that e has unique patterns or themes all parts of the society. For is a society organized along r highly centralized, highly gro cious. e countries has undergone y in which they were met the social structure and affecof the country. One thinks the French Revolution, of the rise of Bismarck, of the enclosure movement and industrialization or the development of imperialism in England.

Anyone who has lived in any or all of these countries or who is well-acquainted with their history and literature knows that each culture is distinctive. Each has its own national character or ethos. What constitutes national character is extremely controversial among sociologists. Some say that every culture has unique patterns or themes which permeate all parts of the society. For example, France is a society organized along rational lines, highly centralized, highly group self-concious. On the other hand, Germany culture has been shaped by "romanticism." Others say that the divisions within a society are so great that a careful analysis of patterns or themes in culture will show that these exist only in the most powerful or articulate sectors of the society. Other sociologists feel that such common experiences as the emergence of national states and industrialization overshadow unique cultural experiences. It is doubtful whether this argument will be settled in the near future, but to introduce the argument for discussion might be an excellent teaching device.
