ABSTRACT

For the 19th consecutive year the U.S. Office of Education, assisted by education officials from the 50 States, the District of Columbia, and the outlying areas of the United States, has conducted a fall survey of public elementary and secondary day schools. Included are national trend data since fall 1968 on selected items of information. Data are collected on the numbers of pupils, high school graduates, and pupils on curtailed sessions due mainly to shortage of classroom space or instructional staff. This survey was expanded to include total instructional and noninstructional staff and classroom teachers, and estimated average daily attendance and average daily membership. To the extent available, data are shown for each State and the District of Columbia, and also for five outlying areas: American Samoa, Canal Zone, Guam, Puerto Rico, and the Virgia Islands. Also provided is information on the school systems located in the 20 largest cities that ranked highest in total population according to the 1970 census. Statistics for the outlying areas are shown separately and are not included in the national totals. National and State totals for fall 1971 are provided for comparison purposes. Data were furnished by State education agencies on two report forms, samples of which are appended. (Pages 18 and 19 may reproduce poorly.) (Author)

HIGHLIGHTS

School districts.—The decline in the number of operating and nonoperating local school districts continued, to 16,956 in fall 1972 from 17,289 reported in fall 1971.

Instructional and noninstructional staff.—About 3.6 million employees (full-time equivalents), professional and nonprofessional, were serving elementary and secondary public day schools in the United States in fall 1972.

Classroom teachers.—About 2.1 million classroom teachers, in full-time equivalents, were employed in these schools in fall 1972, an increase of approximately 1.6 ercent over those in fall 1971.

Enrollment.—For the first time since school-year 1943-44, elementary and secondary enrollment, as reported in fall 1972, decreased. From fall 1971 to fall 1972 enrollments decreased from 46.1 million to 45.8 million, down 327,000, or 0.7 percent.

Pupil-teacher ratio.--Because the number of classroom teachers continued to increase at a higher rate than enrollment, the number of pupils per teacher decreased to the lowest on record--21.8.

Curtailed sessions. -- 21 States reported 349,475 pupils attending school for less than a full or normal school day.

High school graduates.--2.7 million students completed the 12th grade in regular day schools during the 1971-72 school year, representing 77.2 percent of the ninth-grade enrollment 4 years earlier.

Expenditures.—Of the estimated \$51.9 billion dollars in total expenditures for public school purposes for 1972-73, \$43.5 billion was for current expenditures for elementary and secondary day schools, \$1.8 billion for current expenditures for other programs, \$5.0 billion for capital outlay, and \$1.6 billion for interest on school debt.

Estimated current expenditures per pupil.—For the first time since collection of these estimates was begun in fall 1964, the national average current expenditure per pupil in average daily attendance exceeded \$1,000. Based on average daily membership, the estimated per pupil expenditure was \$961.

Average salary.—The estimated average annual salary of the total professional instructional staff in public elementary and secondary schools in 1972-73 was \$10,608. The estimated average salary for classroom teachers was \$10,082.

INTRODUCTION

This report presents fall 1972 basic educational data on all free public elementary and secondary day schools in the United States, the District of Columbia, and the outlying areas under U.S. jurisdiction. Included are national trend data since fall 1968 on selected items of information. Detailed data, by State or other area, are also provided on the numbers of local school districts, staff, and pupils in fall 1972 as well as, for the 1972-73 school year, the estimated expenditures for school maintenance and operation and the average salaries paid to instructional staff. Most of the data also are shown separately for the 20 most populous cities.

The information was gathered in the 19th consecutive fall survey of public elementary and secondary day schools conducted by the U.S. Office of Education in cooperation with education officials of the States, the District of Columbia, and U.S. outlying areas. Descriptions of survey procedure, other methodology, and coverage appear in the section on "Nature and Conduct of the Survey." A replica of the report form, including totals for the 50 States and the District of Columbia, and instructions to respondents is shown in the appendix.

LOCAL SCHOOL DISTRICTS

Primarily as a result of reorganization laws, the consolidation and annexation of school districts, and the elimination of nonoperating school districts, the number of school districts (local basic administrative units) continued to decline. The number of school districts decreased from 17,289 in fall 1971 to 16,956 in fall 1972, down 1.9 percent. From fall 1968 to fall 1972, the number of local basic administrative units decreased by 3,484, or more than 17 percent (table 1).

Four States having more than 1,000 school districts each (California, Illinois, Nebraska, and Texas) accounted for 27.7 percent of all the districts in the Nation (table 2). Eight States ranged from 506 to 754 total school districts. The remaining 38 5 ates and the District of Columbia each reported 452 or fewer operating and nonoperating school districts.

Of the 16,956 districts in fall 1972, the number performing their prescribed function by operating schools was 16,514, or 97.4 percent. The other 442 districts did not operate schools but provided for their pupils by other means, such as transferring them to nearby operating districts on a tuition basis.

PROFESSIONAL AND NONPROFESSIONAL STAFF

In addition to the traditional collection of the full-time-equivalent (FTE) 1/ numbers of classroom teachers, the fall 1971 survey was expanded and continued in fall 1972 to include all other instructional and noninstructional staff (also FTE), both professional and nonprofessional. Combined, they amounted to about 3,566,000 school employees in the United States.

The professional instructional staff includes principals, assistant principals, supervisors of instruction, classroom teachers, teachers of the homebound, radio and television instructors, librarians, guidance staff, psychological staff, and audiovisual staff. The nonprofessional instructional staff includes teacher and library aides, secretarial and clerical assistants, and other nonprofessionals directly assigned to support instruction.

The professional noninstructional staff is composed of administrative and health personnel, social workers, attendance personnel (including visiting teachers), and other noninstructional professional personnel. The nonprofessional, noninstructional staff includes staff such as health aides; clerical, secretarial, operation, and maintenance personnel; bus drivers; and food service workers.

Instructional Staff

In fall 1972, an estimated 3.6 million (FTE) instructional and noninstructional professional and nonprofessional persons were serving elementary and secondary public day achools in the 50 States and the District of Columbia (table 3). The reported total instructional staff was estimated to be 2.6 million, which represents more than 73 percent of the total working force of elementary and secondary public school systems in the United States. Of the total instructional staff, classroom teachers accounted for 2.1 million, or 80.3 percent. Other professional instructional staff amounted to 236,000 persons, or 9.0 percent. The nonprofessional staff serving instruction amounted to 279,000, or 10.7 percent of the instructional ataff.

Classroom Teachers in Full-Time Equivalents

The estimated 2.1 million (FTE) public elementary and secondary school teachers in fall 1972 represented an increase of approximately 34,000, or 1.6 percent, over the number in fall 1971 (table 3). Since 1968, the total number of classroom teachers increased by 8.3 percent (table 1), or an average annual rate of 2.0 percent (compounded). From 1967 to 1971, the total number of teachers increased by 11.2 percent. Probable reasons for the reduction in the rate of increase for these two periods are decreases in enrollment, budgetary problems, and the fact that some districts have met their quota of teachers needed.

^{1/} Full time plus the full-time equivalent of part time.

Noninstructional Staff

The estimated FTE total noninstructional staff amounted to 954,000 employees (table 3), representing 2.7 percent of the persons employed in public élementary and secondary achool systems. The professional segment of the noninstructional staff was estimated to be 93,000 persons, or 9.7 percent of the total noninstructional staff; the "other" nonprofessional group, 90.3 percent.

PUPILS

School-Age Population 2/

From October 1, 1971, to ctober 1, 1972, the estimated school-age population (ages 5-17 years, inclusive) declinedfrom 52,170,000 3/th 51,658,000, a decrease of 512,000 or 1.0 percent. During this period, the estimated total resident population increased from 206,812,000 persons to 208,698,000 persons, or 0.9 percent. The total school-age population represented a little less than one-fourth of the total population.

Enrollment

Almost 45.8 million pupils were enrolled in full-time public elementary and secondary day schools in fall 1972, a decrease of - approximately 327,000, or 0.7 percent, from the record number in fall 1971 (table 4). The increase from fall 1970 to fall 1971 was 178,000 or 0.4 percent. Table 1 shows that, while enrollment continued to increase until fall 1971, the amount of annual increase had diminished from year to year. Historical records of the Office of Education indicate that in fall 1972, for the first time since school year 1943-44, enrollments in public schools decreased. Since the first biennial survey, begun in 1869-70, reports show that enrollments increased until 1933-34; decreased, 1935-36 through 1943-44; and increased again, 1945-46 through fall 1971. (The annual fall survey began in fall 1954.)

^{2/} Estimates based on data published by the U.S. Bureau of the Census in Current Population Reports, p-25 series, Nos. 490 and 493.

^{3/} Revised from earlier estimates.

In fall 1972, a total of 33 States and the District of Columbia reported enrollment decreases, ranging from less than 0.1 percent to 5.6 percent. Of the remaining States, Arizona reported the largest enrollment increase of 4.4 percent over fall 1971, whereas the other States reported small increases from less than 0.5 percent to 2.4 percent. Data were not available for Montana and New Jersey.

While enrollment in the public elementary and secondary levels combined increased in recent years until fall 1972, the relative distribution between levels has been changing. Until fall 1971, the percent of total enrollment in elementary schools has been decreasing, while that in secondary schools has been increasing. In fall 1971, this trend changed slightly with a minor increase in the percent in elementary, which possibly was due to changes in State reporting methods, resulting in reclassification of the seventh and eighth grades between elementary and secondary levels. Fall 1972 data reflect a shift in the distribution pattern prior to fall 1971 (table 1).

Table 4 gives enrollment by organizational level of the school. Grades 7 and 8 were to be reported either in the elementary or secondary level, depending upon the organization of the school of which they were a part.

Table 5 shows enrollment by grade arranged within the traditional grade group of preprimary, including nursery and kindergarten, through grade 8 and grades 9 through 12. Beginning in fall 1971, the survey requested data on the number of elementary and secondary pupils enrolled in special education. The total number of special education pupils in membership accounted for 1.8 percent of total number of pupils in membership.

Enrollment in Grades 7 and 8 by Organizational Level

Most States have been able to report the number of seventh— and eighth—grade pupils by the types of schools they attend—elementary or secondary. In the fall 1972 survey, 26 States furnished such information (table 6). Enrollment in this group of States comprised 45.0 percent of the Nation's total enrollment; 68.0 percent of their seventh—graders and 70.8 percent of their eighth—graders were reported in secondary schools.

Pupil-Teacher Ratio

In recent years, the teaching staffs have been growing at a slightly higher rate than enrollments. Consequently, the national pupil-teacher ratio based on enrollments has decreased to 21.8 pupils per teacher in fall 1972 (table 1) from 27.7 reported for 1954. Data in table 7 for fall 1972 show the national ratio based on average daily attendance (ADA) to be 20.2 pupils per teacher.

At the national level and even at the State level, pupil-teacher ratios have only limited value and should be used with caution. The average number of pupils per classroom teacher, often used as a measure of teacher workload, is not a valid measure of average class size. Furthermore, pupil-teacher ratios do not reflect the educational services provided in varying degrees by staff outside the classroom. The ratios shown in table 7 serve only as rough guidelines in studying the State-by-State situation, and more detailed information on other aspects of school staffing would be needed in order to make valid judgments.

Pupils on Curtailed Sessions

Data on the number of pupils attending school for less than a full or normal school day include numbers on so-called "half-day sessions," "curtailed sessions," "double shifts," or "reduced time." Extended sessions are not considered as curtailed sessions when all students attend for a full day with some overlapping of the sessions. In reporting data on kindergartens, where the half-day session is considered the normal school day, the count includes only pupils on triple shifts.

In fall 1972, 21 States reported a total of 349,475 pupils on curtailed sessions, of which 19.5 percent were in elementary schools and 80.5 percent in secondary schools. Twenty-one States and the District of Columbia reported no pupils on curtailed sessions, two States did not submit reports, and data were not available for the six remaining States (table 8). In fall 1971, 18 States reported 370,786 pupils on curtailed sessions. Although there were more States reporting pupils on curtailed sessions in fall 1971 than in fall 1972, the number of pupils decreased for this period by 21,311, or 5.7 percent.

The use of curtailed sessions is only one of several administrative expedients adopted by school administrators who are faced with the condition of having more pupils than the available physical facilities and/of staff can accommodate. They also may cope with these problems by the use of overcrowded classrooms, improvised or makeshift facilities, obsolete facilities, and/or rented quarters. Together, these various categories of expedients would be more indicative of the total needed for additional classrooms than is the number of pupils on curtailed sessions.

HIGH SCHOOL GRADUATES

A record of more than 2.7 million public high school graduates from regular day school programs was reported for the 1971-72 year--again of 71,000, or 2.7 percent, more than the preceding year (table 9). States also reported more than 29,800 graduates from all other public school programs (e.g., evening schools and adult education programs) and a total of 169,000 persons receiving high school equivalency certificates.

In 1971-72, girls represented 50.3 percent of the total number graduated from regular public high school programs. A slight excess of female over male high school graduates has been noted over a period of years.

Although the retention rate of public high schools remains high, the percentage ratio of 1970-71 high school graduates (reported in fall 1971) to students enrolled in the ninth grade 4 years earlier was greater than the similar ratio for 1971-72 graduates. The 1970-71 graduates represented 77.8 percent of the class that entered the ninth grade in fall 1967. But the 1971-72 graduates represented 77.2 percent of the ninth-grade class in fall 1968, which may indicate a coming change in trend. Five years earlier the 1966-67 high school graduates represented 77.1 percent of the fall 1963 ninth-grade class.

ESTIMATED EXPENDITURE AND SALARY DATA, 1972-73

Total Expenditures

Estimated total expenditures for all public school purposes in 1972-73 amounted to \$51.9 billion. Included in the grand total were current expenditures for elementary and secondary day schools (\$43.5 billion) and for other programs (\$1.8 billion), capital outlay (\$5.0 billion), and payment of interest on debt (\$1.6 billion). Debt retirement was not included, since it would be a duplication of expenditures made and reported in prior years.

Current Expenditures per Pupil in ADA and ADM

The average estimated current expenditures per pupil in average daily attendance (ADA) for school year 1972-73 was \$1,026, the first time it has exceeded \$1,000. Based on average daily membership (ADM), the estimated amount was \$961 per pupil.

Average Salary of Classroom Teachers and Instructional Staff

For the United States, the average estimated annual salary of classroom teachers in 1972-73 was \$10,082. An analysis of average salaries among States indicates wide differences, ranging from \$6,924 for Mississippi to \$12,380 for New York. (Although \$14,678 is shown for Alaska, it is not here considered the highest, since the purchasing power of the dollar in Alaska is significantly lower than in other areas of the United States.) In addition to the averages first mentioned, the District of Columbia reported an average of \$12,126. In 3 States the average salary was in the range of \$11,000 to \$11,999; 12 States, \$10,000 to \$10,999; 12 States, \$9,000 to \$9,999; 13 States, \$8,000 to \$8,999; and 5 States, \$7,000 to \$7,999. One State reported that salary data were not available and one State did not submit a report for this survey.

The 1972-73 estimated average annual salary of the total professional instructional staff (supervisors of instruction, principals, teachers, and other instructional staff members) was \$10,608. Aside from Alaska, the highest average salary was reported for New York, followed by 18 States and the District of Columbia reporting salaries from \$10,000 to \$12,700 and the remaining States reporting less than \$10,000.

LARGE-CITY DATA

The problems of the Nation's large cities have been receiving increasing attention in recent years. Since 1962 the States have been requested to furnish separate data in the fall survey for the 15 cities with the highest total population in the 1960 Decennial Census. Beginning in fall 1971 the number of cities was expanded to include the 20 with the largest population in the 1970 Decennial Census. One of these cities, Washington, D.C., has always been included in this survey, as it is in other national surveys that cover all State jurisdictions. Data were requested from the 15 States in which the other 19 cities were located.

At the time of the 1970 Decennial Census (April 1970), the combined population of the 20 cities, ranging from 7.9 million in New York to 581,562 in Phoenix, comprised approximately one-seventh of the total population in the United States.

The 20 cities reporting for fall 1972 had 14.1 percent of the 1970 population and in fall 1972 had a combined enrollment of 4.8 million, or 10.6 percent of the Nation's public school pupils. Reported data for each of these large cities appear below the outlying areas in the appropriate tables.

NATURE AND CONDUCT OF THE SURVEY

For the 19th consecutive year the U.S. Office of Education, assisted by education officials from the 50 States, the District of Columbia, and the outlying areas of the United States, has conducted a fall survey of public elementary and secondary day schools. This report is the latest in the annual series of fall statistics on public day schools dating from fall 1954.

Data are collected on the numbers of pupils, high school graduates, and pupils on curtailed sessions due mainly to shortage of classroom space or instructional staff. Prior to the 1971 survey, statistics on classroom teachers (in full-time equivalents) were the only staff data collected. This survey was expanded in fall 1971 to include total instructional and non-instructional staff, both professional and nonprofessional. Also included are estimated school expenditures by major purpose, average salaries of instructional staff and classroom teachers, and estimated average daily attendance and average daily membership. Data on the numbers of local school districts, operating and nonoperating, are included in this report even though the item was not an integral part of the survey forms in fall 1972.

To the extent available, data are shown for each State and the District of Columbia, and estimates for missing data are included in the national totals. Data are also shown for five outlying areas: American Samoa, Canal Zone, Guam, Puerto Rico, and the Virgin Islands. Data for Montana, the Trust Territory of the Pacific Islands, and the Department of Defense Overseas Schools were not received in time to be included in this report. Also, New Jersey submitted only one part (on expenditures and average salaries) of the two-part survey in time for inclusion in this report.

This survey also provides information on the school systems located in the 20 largest cities that ranked highest in total population according to the 1970 census. Data for Washington, D.C., are shown both in the State listing as one of the 51 jurisdictions comprising the total for the United States and with the large cities to facilitate intercity comparisons. Data shown for Phoenix, Ariz., are not for the Phoenix elementary and secondary school districts only, but represent a composite of data for those schools located in the city limits of Phoenix.

Statistics for the outlying ateas are shown separately and are not included in the national totals. In several tables, national and State totals for fall 1971 are provided for comparison. Some of the data differ from those originally published in the fall 1971 report and the advance fall 1972 report4/ because more complete data became available after those reports were issued.

^{4/} See Related NCES Publications, inside back cover.

The data in this report were furnished by the State education agencies on two report forms designed by the Office of Education. One of the forms requested data on pupil membership, staff, and high school graduates; and the other requested estimated data for the current year on expenditures, average salaries, average daily attendance, and average daily membership. (See appendix for a facsimile of these forms.)

Each State report was reviewed for internal consistency and for comparability with information received in previous surveys, State publications, and related Office of Education studies. Letters and telephone calls were used as necessary to obtain data from respondents and to resolve outstanding questions.

As in any survey that employs the mail questionnaire, variations in interpretation of instructions and definitions by respondents may exist. Because public elementary and secondary education is a State and local responsibility, any statistical total for the Nation as a whole reflects a composite of the heterogeneous educational practices existing in the United States. The use of standard forms and definitions in collecting the data tends to minimize these variations. To the extent that State deviations from prescribed definitions and instructions were known, they are indicated in the footnotes to the various tables.

The Office of Education encourages each State to obtain the data for its report by conducting a fall survey of local school districts and by using an adaptation of the Federal form and accompanying instructions. Many of the States used adaptations of this form; however, some State education agencies find this approach impractical for a variety of reasons; e.g., funds and staff are not available for conducting the survey, or similar data for a recent period may already be available at the State level. Some States collected the data from regular annual reports, and a few submitted estimates based primarily on records. Financial estimates for 1972-73 were prepared in the State offices generally without recourse to survey efforts. However, State appropriations and budgets filed by local school districts often served as bases for these estimates.

Data shown in some of the basic tables may not always agree with data reported in other NCES publications. The "as of" reporting dates sometimes differ from one report to another, which may cause slight variations in published data.

- -- Quantity zero, unknown, or not applicable.

NOTES

DOD Overseas Schools are elementary and secondary schools operated in foreign countries by the Department of Defense for minor dependents of military and civilian personnel in the Department who are stationed overseas.

The Trust Territory of the Pacific Islands is administered by the United States by agreement with the United Nations Security Council.

Kansas and Wisconsin: Data for vocational schools which are not a part of the regular public school system are not included.

Data Include nursery schools and kindergarten operated as part of the regulat Public school System. Include essemants for nonreporting States. Elementary and Secondary special education included in Staded distribution. Secondary special aducation included in elementary special education. Elementary and secondary marraded included in graded distribution. State estimated by reporting State.

Column 13 included in column 14.

Column 21 included in column 22.

Grades 1, 2, and 3 included in elementary ungraded.

Included in grades 1 through 6.

NOTE. -- Because of rounding, detail may nor add Co totals.

^{11/43/415/67/18/6/6/}

 $[\]underline{\mathbf{J}}/$ Data estimated by reporting State.

NOTE. -- Date are shown only for States that reported a division of 7th and 8th grades in elementary and secondary enrollment. Some changes observed from Year to Year in part reflect changes in organization of grades by level. Some States have indicated continuing reclassification of grades by level and report date as provided by the local school districts.

Includes value of commodicies donated by the U.S. Department of Agriculture, except as indicated by footnote 8/.
Includes expenditures for summer schools, adult education, community services (auth as public libraries operated by school districts, expenditures for nonpublic schools where authorized by law, community centers, and recreational attivities, and community colleges and technical institutions under the jurisdiction of local boards of education). Includes supervisors, principals, classroom teachers, and other professional instructional staff.
Includes eachaites for nonteporting State or States.

Previously published data have been revised.
Amounts for Alaska cannot readily be compared with those in other States since the purchasing power of the dollar in Alaska is significantly lower than in other steas of the United States.

Because excused absences are counted as present for the State of California, average daily attendance is not strictly

NA Not avallable.

Ataska is significantly lower than in other ateas of the United States.

[7] Because excused absences are counted as present for the State of California, average daily attendance is not strictly comparable with ADA for other States.

[8] Does not include value of commodities donated by the U.S. Department of Agriculture.

[9] Does not include data for junior colleges controlled by the local education agencies.

[10] Data represent median salaties tather than arithmetic average.

[11] Includes salaries paid to teachers with little or no college preparation.

[12] Includes salaries for both Professional and nomprofessional instructional staff.

APPENDIX

Survey Report Forms

1.10

INSTRUCTIONS

The report is due in the Office of Education on January 31, 1973. If complete data for all local reporting units are not available in the State department of education in time to meet the due date, please forward promptly the best figures for the whole State by including an estimate for nonrespondents.

The information for this report should reflect the facts on or about October 1, 1972 or the nearest date thereto when member, ship can be considered stabilized.

It is important that the States incorporate in their own Auestion, naires all basic definitions contained in the Federal form. Where reported data do not conform to prescribed definitions, deviations should be explained.

If data have been essimated in whole or in part, please indicate the basis of the estimate.

THE FIGURES REPORTED THIS YEAR SHOULD BE COM-PARED WITH THOSE FOR LAST YEAR. Reasons for unusual increases of decreases should be noted by attaching an explanation, e.g., change in method of reporting, change in standard used, etc.

LINE 1. A classroom teacher is defined as a person employed to instruct cupils in a situation where the teacher and the pupils are in the presence of each other.

LINE 2. Other professional instructional staff includes persons with assignments such as principal, counselor, librarian, curriculum consultant, etc.

LINE 3. Nonprofessional instructional staff includes such personnel as school clerks, secretaries, teacher and library sides, etc.

LINE 4. Sum of lines 1 through 3.

Line 5. Professional noninstructional staff includes school system administrative personnel such as superintendents, assistant superintendents, business managers, etc., responsible for system-wide management of the school district.

LINE 6. Nonprofessional, noninstructional staff includes such personnel as electeal, secretarial, operation, and maintenance staff, bus drivers, food services workers, etc.

LINE 7, Sum of lines 5 and 6.

LINE 8. Sum of lines 4 and 7.

LINE 9. Report the total number of 1971-72 school year menschool graduates from the regular public day school programinclude 1971 summer school graduates, exclude 1972 summer school graduates. If 1971-72 high school graduates exceed the 12th grade enrollment reported for fall 1971, please explain.

LINE 10. Report the total number of graduates from all other public achool programs, evening school, adult, etc., during the 1971-77 school year.

LINE 11. Report the total number of persons receiving high school equivalency certificates during the 1971-72 school year

LINE 12. Self explanatory.

LINE 13. Puptls should be reported by grade as "elementary" or "sceondary" according to State and local practice. However pupils classified as "elementary" should not be reported in grades higher than grade 8, and pupils classified as "secondary" should not be reported in grades lower than grade? It is possible to report some 7th and 8th graders as "elementary" and others as "secondary" if a single classification of stem is not state-wide.

LINE 13-O. Report as postgraduate only those pupils who have graduated from the 12th grade and have recented for additional high school courses. Do not include pupils in grades 13 and 14

LINE 13-P. Pupils not assigned to grades should be reported as ungraded. DO NOT report ungraded special education pupils here.

LINE 13-Q. Report only handicapped pupils served by programs specifically designed to meet the needs of handicapped children (where handicapped refers only to either educable mentally retarded, transable mentally retarded, haid-of-hearing, doat, speech impaired, visually impaired, sectionally emotionally disturbed, learning disabled, cripple, or other health-related handicaps). Do NOT include in items 13A through 13p pupils reported here.

D

LINE 13-S. Report here the unduplicated count. #s of the beginning of the year, the total of all pupils entolled in schools operated by local public school systems.

INSTRUCTIONS

The report is due in the Office of Education on January 31, 1973, if complete data for all local reporting units are not available in the State department of education in time in meet the due date, please forward promptly the best figures for the whole State by including an estimate for nonrespondents.

The information for this report should reflect the facts on or about October I. 1972 or the nearest date thereto when member, ship can be considered stabilized.

It is important that the States incorporate in their own question-naires all basic definitions contained in the Federal form. Where reported data do not conform to presented definitions, deviations should be explained.

If data have been estimated in whole of in part, please indicate the basis of the estimate.

THE FIGURES REPORTED THIS YEAR SHOULD BE COM-PARED WITH THOSE FOR LAST YEAR. Reasons for unusual increases of decreases should be noted by attaching an explanation, e.g., change in method of reporting, change in standard used, etc.

LINE 1. A classroom teacher is defined as a person employed to instruct pupils in a situation where the teacher and the pupils are in the presence of each other.

LINE 2. Other professional instructional staff includes persons with assignments such as principal, counselor, librarian, cur.

LINE 3. Nooprofessional instructional staff includes such personnel as school clerks, secretaires, teacher and library aides, etc.

LINE 4. Sum of lines 1 through 3.

Line 5. Professional noninstructional staff includes school system administrative personnel such as superintendents, assistant superintendents, business managers, etc., responsible for system-wide maria@ement of the school district.

LINE 6. Nonprofessional, noninstructional staff includes such persunnel as elerical, secretarial, operation, and maintenance staff, bus drivers, food services workers, etc.

LINE 7. Sum of lines 5 and 6.

LINE 8. Sum of fines 4 and 7.

LINE 9. Report the total number of 1971.72 school year high school graduates from the regular public day school prortaminelude 1971 summer school graduates, exclude 1972 summer school graduates, exclude 1972 summer school graduates. If 1971-72 high school graduates exceed the 12th grade enrollment reported for fall 1971, please explain.

LINE 10. Report the total number of graduates from all other public achool programs, evening schools adult, etc., during the 1971.77 school year.

LINE 11. Report the total number of persons receiving high school educations; certificates during the 1971-72 school test.

LINE 12. Self explanatory.

LINE 13. Pupils should be reported by grade as "elementars" or "secondary" according to State and local practice. However pupils classified as "elementary" should not be reported in grades higher than grade 8, and pupils classified as "secondary" should not be reported in grades lower than grade 7 it is possible to report some 7th and 8th gradets as "elementary" and others as "secondary" if a single classification is setten is not state-wide.

LINE 13-O. Report as poststaduate only those publis who have staduated from the 12th grade and have re-enrolled for additional high school courses. Do not include pupils in grades 13 and 14

LINE 1.1.P. Pupils not assisted to grades should be reported as ungraded. DO NOT report ungraded special education pubils here.

LINE 13-Q. Report only handicapped pupils served by pto. Stams specifically designed to meet the needs of handicapped children (where handicapped refers only to either educable mentally retarded, trainable mentally retarded, hard-of-hearing, dost, speech imparied, visually imparied, seriously emotionally disturbed, learning disabled, empile, or other health-related handicaps). Do NOT include in items 13A through 13p pupils teported here.

LINE 13-S. Report here the unduplicated count, as of the beginning of the yest, the total of all pupils enrolled in schools operated by local public achool systems.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE OFFICE OF EDUCATION WASHINGTON, O.C. 20202 O.M.B.
