ABSTRACT
                   A guide used by inservice teachers and agency
caseworkers in thre 2-week summer institutions (1973) for teaching
visually handicappe. children and adults how to read with the
Optacon, a portable optical-to-tactile-converter, is presented. The
institutes are said to have been of a two-year special education
pilot project to demonstrate usefulness of the Optacon. Institute
personnel and participants are listed. The Optacon is described in
terms of development through a government/university/industry
program, unaided reader use with any type between six and 20 points,
and portability (4 pounds). Operation is discussed whereby a reader
tracks regular print with a camera and reads on a tactile array which
contains vibrating pins. Listed in the course outline for teaching
reading with the Optacon are components such as instructional
materials, strategies, and psychological factors. Competencies for
teaching integration of motor, perceptual, and cognitive skills are
specified for teachers and such techniques as remembering a serial
sequence of letters to recognize a word are suggested. Appendixes
comprise more than half the document and contain the following
components: instructions for presenting letters to Optacon readers
such as describing lower case "h" with "left ascenter is attached to
one hump"; tapes listed by type font and record speed in areas such
as word recognition, building, and speed skills; sample training logs
including information given by tracking aid used, control settings,
camera materials, and comments/difficulties; and lists of books,
publishers, training materials, and tests to evaluate student
potential for learning to read with the Optacon. (MC)

University of Pittsburgh

CONTENTS

INTRODUCTION

The purpose of three separate, two week, Special Study Institutes
conducted by the Department of Special Education and Rehabilitation,
University of Pittsburgh, was to provide professional preparation for
selected participants from schools and social agencies to teach read-
ing with the Optacon to children and adults. These institutes were
an integral component of a larger project developed through the Richard
King Mellon Foundation of Pittsburgh, Pa., which is sponsoring a two
year pilot project to demonstrate the usefulness of the Optacon. The
Richard King Mellon Foundation supported the institutes, and provided
training equipment for the Department of Special Education and
Rehabilitation to use for these institutes and for the future pro-
fessional preparation of teachers of the visually handicapped enrolled
in the graduate program of that department. To the author's knowledge,
this is the first university training which has been offered for
preparation of teachers of the Optacon.

Those who attended the first two institutes were selected by the
educational institutions and social agencies which were participating
in the Richard King Mellon Foundation project. All 27 participants
held degrees in education, or were social case workers who had previous
experience teaching blind clients. The third institute was conducted
for University of Pittsburgh students in the master degree program

in the Department of Special Education and Rehabilitation. These
students all received degrees in August, 1973, and are presently
teaching visually handicapped children in Pennsylvania, Massachusetts
and Rhode Island. In addition to participants who were preparing to
teach reading with the Optacon, five blind social case workers
volunteered to serve as subjects for the teachers' practical exper-
iences. The institutes were visited by administrators of the schools
and agencies.

Telesensory Systems, Inc (TSI), the developers and producers of
the Optacon, cooperated directly with the Department of Special Educa-
tion and Rehabilitation in the development of curriculum and presenta-
tion of the material. Mrs. Nancy Tavis, a teacher in the Palo Alto
Optacon Training courses conducted by Telesensory Systems, Inc., served
as an active consultant through the first institute. Mr. Phillip Davis
who is responsible for the maintenance of all Telesensory equipment in
Western Pennsylvania, served as a consultant through all three institutes.

This overview of the institutes presents a model developed for
a university course to prepare teachers to teach Reading with the Optacon
and a brief discussion of the material included in the course.

THE OPTACON[1]

The need for a direct translation reading machine for the blind
has been apparent for many years, and several machines have been
developed for this purpose. The Optacon (Optical-to-Tactile-Converter)
was originated by Professor John G. Linvill, Chairman of the Electrical
Engineering Department, Stanford University. Together with Dr. James
C. Bliss, who had been working through Massachusetts Institute of
Technology of stimulation through tiny air jets, Dr. Linvill first
developed a tactile screen utilizing an array of vibrating pins which
can be considered the most critical feature of the Optacon. At that
stage, the pins were driven by a computer. The ability of blind
students at Stanford University, who volunteered to be subjects for the
experiment, to learn to read the images produced on the tactile screen
established the feasability of the machine. In 1968, the U.S. Office
of Education awarded a five year grant to Stanford Research Institute
and Drs. Bliss and Linvill and their colleagues developed the necessary
integrated circuits, camera, and silicon retina to produce a portable
reading machine. In 1970, ten of these first model machines were

---

[1] The author is indebted to Telesensory Systems, Inc., for the
material included in this section.

produced and were used, and are still being used, by Stanford students,
SRI Computer Programmers, and students in the Monroe School District,
California. This first model weighed nine pounds. In 1971 a smaller
four pound Optacon was developed and Telesensory Systems, Inc. was
formed to produce the machines. This symbiotic combination of govern-
ment, university and industry to produce an effective adjunct to braille
and recordings for reading by the blind has been unique in the field.

While reading with an Optacon is relatively slow, the advantages
of direct personal reading, thus eliminating the necessity for dependence
upon a reader, recorder or translator, are many. To look at the Optacon
from a potential employment aspect, blind persons can do most tasks that
sighted persons can do, except read. In industry, many employers do
not want volunteer or paid readers coming into their plants and learning
plant or business operations. In social agencies, the confidentiality
of records must be maintained and some blind persons are rejected
because they must have "outside" readers. Reading with the Optacon
does not impose another person between the material and the blind
employee.

From an educational viewpoint, the Optacon enables a blind student
to have access to critical material when he needs it. With the proper
accessories, it enables the student to read computer terminal print outs
and to utilize electronic pocket calculators which facilitate success
in the math and computer courses which many blind students are choosing.
For the younger student, the Optacon can be utilized for the development
of a sighted perspective to rather difficult material such as math and
science, enhancing learning of these subjects.

The privacy and personal independence which the machine makes possible for a blind person is invaluable. Independent management of personal finances, private written communication with sighted friends, and organization of personal papers and records are possible when the blind person can read print. Loren Schoof, blind research associate in Stanford's Applied Electronics Laboratory, used his Optacon to vote in the national election, which was probably the first time a blind person has been able to cast a secret ballot!

The Optacon converts light energy which involves the camera, to mechanical energy which involves the electronics and the tactile array. Each of 144 photocells in the silicon retina portion of the camera is capable of making a light-dark decision which tells a corresponding tactile pin on the tactile screen to vibrate or not to vibrate. The 144 photocells in the silicon retina are arranged in a matrix of six columns and 24 rows which corresponds, one-to-one, with the pins in the tactile screen arranged in the same matrix. In the normal mode, the photocell which makes a "dark" decision results in a vibrating pin. Thus a dark letter upon a light background will be exactly reproduced on the tactile array. A complete guide to the principle and structure of the Optacon, accessories, and teaching aids is contained in the curriculum materials available from Telesensory Systems, Inc.

There have been developed alternative machines for direct translation. The Optaphone, Visatoner, and more recently, the Stereotoner are machines which convert print to auditory response. These machines necessitate that the reader learn the auditory responses produced. They are somewhat

limited in the type font and spatial format of the material which can be read. For instance, they are not adequate to reading math, since math is wirtten in two dimensions and the position of a symbol above, below or on the line is meaningful.

Another instrument, the Transicon, utilizes a computer terminal, automatically scanning the print and producing output in braille or in voice simulation (spelling or words). This instrument is limited in the type face which can be read. Disadvantages include cost of operating the system and loss of confidentiality of material which is processed through the computer.

The present Optacon is completely portable, being carried in a small leather case with a shoulder strap. It operates on batteries or AC current. It is not limited in the type face which can be read. It is capable of reproducing any type between 6 point and 20 point in size. The versatility of material which can be read is limited only by the perceptual and interpretive abilities of the reader.

IV

INSTRUCTIONAL PROGRAM

The strategie. ployed in teaching reading with the Optacon seem
to indicate that the teacher should be competent to: assemble and care
for the Optacon and the various teaching aids; free track, keeping the
image consistently in the optimum position for reading; describe letters
and words in terms which enhance tactual recognition; select or develop
curriculum materials for remedial instruction; and develop language and
reading skills unique to Optacon reading. The blind teacher of a blind
student needs to be a competent reader with the Optacon; however, the
sighted teacher who will utilize a Visual Display to monitor the
activities of the blind student need not necessarily be a competent reader
with the Optacon. The objectives of the Special Study Institute course
were developed on the assumption that the entering students were teachers
who were prepared to teach other subjects, including braille reading,
to blind children and adults. In the future, the Department of Special
Education and Rehabilitation will include instruction in teaching reading
with the Optacon in the master's degree program for the Education of the
Visually Handicapped. This instruction will be coordinated with, and in
addition to present courses in braille reading and writing.

Previous preparation of teachers of reading with the Optacon, has
been based upon an apprentice type model, with the teacher observing,
practice teaching under supervision, and eventually taking responsibility

for the entire teaching of one blind student. The university model

presented here has been developed for the instruction of a class of

sighted teachers, and endeavors to develop required competencies using

didactics and simulation.

TEACHING READING WITH THE OPTACON
COURSE OUTLINE

I Introduction to Optacon
  a. History of Development
  b. Educational & Vocational Application
  c. Structure of Optacon, Teaching Aids & Accessories
   1. Tracking Aid
   2. Visual Display
   3. Optacon Cassette Trainer
   4. Master-Slave Cable

II Instructional Materials
  a. TSI published curriculum
  b. AIR curriculum
  c. Tobin's curriculum
  d. San Diego Public Schools curriculum
  e. Independent Reading Materials

III Instructional Strategies
  a. Introduction of Machine to Blind Student
  b. Development of Tracking Skills
  c. Teaching Recognition of Letters and Words
  d. Speed Building Techniques
  e. Logging Techniques
  f. Problem Solving Techniques

IV Psychological Factors
  a. Screening Procedures
  b. Assessment
  c. Affective Factors
  d. Perceptual & Interpretive

V Relevant Research

VI Administration of Agency and Educational Programs

Objectives: Teachers will:

1. Demonstrate check-out procedures for Optacon & Teaching aids
2. Free track camera on curriculum materials & selected books
3. Describe upper and lower case letters in terms of critical features
4. Correct selected tracking and recognition errors of students
5. Teach recognition of at least nine upper case and nine lower case letters to blindfolded (or blind) subjects.

Reading with the Optacon involves the integration of motor, perceptual and cognitive skills, and a teacher must have teaching competencies in all three areas. Simulated teaching experiences under blindfold were provided to develop sensitivity to the fine camera movements necessary to keep the image of a letter in the optimum position on the tactual screen, and to develop awareness of interaction of the magnification-threshold controls to produce the most readable image. Each participant also served as teacher to another and practiced the teaching strategies employed with blind students which develop the coordination of motor skills with perceptual skills for reading. The teacher needs to develop personal motor skills to free track with the camera for the student. Each participant practiced this skill with his own Optacon and Visual Display. Reading Braille and reading with the Optacon are involved with tactual perception of spatial relationships within characters. However, reading Braille is in some ways easier, since the components of letters are simplified and spacing is consistent. The teacher of reading with the Optacon must be able to develop the perceptual skills of students to discriminate the critical features of letters which identify them. The use of precise language is important and teachers were provided with guides for this instruction. (See Appendix).

Ashcroft[1] has presented the premise that "reading; no matter what the medium, fundamentally involves the same psychological processes, and has as its purpose the communication of meaning. The literature on conventional reading is in rather general agreement that the minimum essential factors in reading are perception and interpretation... What differences there are, lie largely in the differences in modality that is, touch in contrast to vision..." These differences determine, to some extent, the skills necessary for effective reading.

A normal visual field enables the reader to process the information given by about a seven letter span in a single fixation, and in visual reading, the eyes proceed in saccadic movements as they track along a line of print. The individual letter is not the informational unit; words and groups of words are treated as informational units. Foulke[2] has pointed out, "Because of the limited sensory area on an index fingertip, not much more than one Braille character can be sensed at a time... tactual perception requires movement of cutaneous tissue, and little movement takes place while the fingertip is at rest, as it would be during periods of fixation." Nolan and Kederis[3] showed that the time required to identify a word written in Braille is usually greater than the sum of the times required to identify the Braille characters of which that word is constituted. To speed this information gathering process in braille, a system of contractions has been

[1] Ashcroft, Samuel C. "Errors in Oral Reading of Braille at Elementary Grade Levels," in Report of Proceedings of Conference on Research Need in Braille. New York: American Foundation for the Blind, 1961.

[2] Foulke, Emerson, "Non-Visual Communication: Reading by Touch", Education of the Visually Handicapped, 1970, II, n. 3, p. 88.

[3] Nolan, C.Y. and Kederis, C.J. Perceptual Factors in Braille Recognition. New York: American Foundation for the Blind, 1969.

devised which enables a single character to convey the information which would ordinarily be contained in several letters. This contracted system has created sources of error in reading and questions about the teaching of Braille reading which have concerned educators for some time. Since the Optacon is employed with print medium, the informational unit is a single letter. Experiments with two-finger reading and with presentation of two letters to a single finger have indicated that the reader does not gain in speed by these methods. At the present time, little research has been done to establish the specific cognitive skills which need to be developed to increase the speed of reading with the Optacon. Since it is not practical with the Optacon to scan ahead in a sentence for contextual clues to the meaning of a word, other skills of word analysis and anticipation of words and word endings would seem to be important. Familiarity with letter blends, frequent combinations of letters, prefixes, and suffixes will increase speed of reading. To recognize a word, the reader with the Optacon is required to remember a sequence of letters presented serially. The ability to process the information of individual letters in "chunks" or phonetic groups is important. One of the problems with the development of the phonic skills in the teaching of reading with Braille is the lack of one-to-one correspondence between the print and braille symbols. For example, it may be confusing to a beginning reader to recognize the existence of a long "O" in the word "stone" which employs a two-cell contraction ordinarily pronounced as "one". It may be that Braille readers will lack some phonetic skills which are important to Optacon readers. Through discussion and a review of pertinent research, participants in the Institutes were encouraged to consider such problems and their influence

in the preparation of appropriate and meaningful curriculum materials
for the wide range in age of the students they were planning to teach
to read.

One teaching accessory developed by TSI is the Optacon Cassette Trainer
(OCT) which is a portable, computerized machine through which pre-recorded
tapes can present images to the Tactual Screen without the camera and at
variable speeds. Practice exercises and stories have been recorded at
TSI (See Appendix). The teachers at the Institute utilized this machine
to assist them in establishing proper finger position, size of letters, and
optimum positioning of letters on the Visual Display and to use in speed
building.

To enable the teachers to become familiar with all the curriculum
materials and to have some experiences with typical problems and methods
of solving them, the teachers used a system of daily activity logging
which has been employed at the TSI Training Center. The teachers also
learned to keep careful records of the specific difficulties displayed
by each student for communication with other teachers and/or to enable
them to use their own teaching time efficiently. The teachers would
probably need to adapt or modify the TSI logging system to suit their
particular administrative patterns; however, during the Institutes, these
logs served as vehicles for their training. Case study logs with problems
incorporated were devised and the teachers were required to provide
references to specific remedial materials or remedial teaching strategies
to solve these problems. (See Appendix).

Instructional materials for the use of teachers of Reading with the
Optacon are available from several sources. The San Diego City Schools

developed materials for use in an Optacon Project and these materials
are available through them.[1]   The sequence of presentation in these
materials is: (1) non-meaningful shapes and symbols, (2) upper case letters
presented in six letter groups OIBSTG, EUDFNP ..., (3) simple words and
short sentences within each letter group, (4) lower case letters presented
in the same order as upper case, (5) reading rate building exercises,
and (6) exercises involving complex type styles. Goals for each lesson
are stated and criteria given.

Michael Tobin[2], developed materials to be used in a research project
conducted through St. Dunstan's in England. These materials are not,
thus far, available in this country. The sequence of presentation is:
(1) lower case letters, (2) numerals, (3) upper case letters contrasted
one-to-one with lower case letters, and (4) prose practice. These
materials are presented according to Gagne's model in which aims are
stated in measurable or objectively identifiable terms and pre-tests
and post-tests are provided.

The American Institute of Research in Palo Alto,[3] after a "compre-
hensive review of existing educational strategies for the teaching of
reading ... study of approaches utilized by TSI and San Diego Project ...
and proposed strategy laid before Gagne and others," developed materials
to be used in conjunction with a U.S. Office of Education supported

    School of Education, University of Birmingham, Birmingham, England,
    1973.

[3] American Institutes for Research, P.O. Box 1113, Palo Alto, California.

evaluation project being conducted throughout the U.S. Fifty Optacons have been placed in approximately thirteen sites and feedback data is being collected. Thus far, no report has been issued on this research project. The AIR is revising these materials and will offer them for commercial sale in the near future. The sequence, developed on the basis of frequency of use of letters in the English language, is: (1) numbers in order, (2) upper case letters A T R E, (3) lower case letters a t r e, (4) upper case I H O S, (5) lower case i h o s, etc. Supplementary exercises include remediation exercises, common words, sentences and additional type fonts. Criterion exercises are included, but criterion is not stated.

Telesensory Systems, Inc.[1] has developed curriculum materials for instruction of blind readers, which are available through this company. (See Appendix).

The materials were developed originally from experience with students at Stanford and were tested with high school students and, In 1971, a student at the University of Oklahoma. Iterative revisions have been produced based upon experiences with adult students at Seeing Eye and adults at the TSI training center in Palo Alto.

The sequence of presentation was developed according to order of difficulty as experienced by blind readers: (1) upper case letters O C I S E, T H A M ..., through the entire alphabet, (2) lower case letters o c i s e, t h a m ..., in the same order, (3) numbers. Required and optional practice exercises and criterion tests are provided. Letters are first presented as separate letters, then connected into words and

---

[1] Telesensory Systems, Inc.. 2626 Hanover Street, Palo Alto, California.

sentences. Practice exercises of different type styles, frequent letter confusions and unique reading problems are included in the Student Manual. The Independent Practice Manual can be used for reinforcement of skills or for remediation. The Stage Two Manual consists of examples of difficult format materials, different type fonts and difficult reading materials such as mathematics. A complete Teacher's Guide is now available. The TSI materials were used as curriculum for the Institutes at the University of Pittsburgh.

Teachers need, also, to have a library of commercial books in appropriate type styles and reading levels to be used by student readers for "real-life" practice. An annotated Bibliography of books was prepared and distributed to the participants. (See Appendix).

Some investigation with adults has been made into the development of a battery of tests which could be used for screening or for predicting success in reading with the Optacon. Michael Tobin, in an experimental investigation into the relationship of certain psychological variables to successful reading, found I.Q., tactual discrimination and age to be significant. His population, however, included only adolescents and older blind persons. The participants at the Institute considered some tests (See Appendix) which could be utilized for assessing capabilities, but since, at the present time, no valid predictive criteria exist, it seems probable that the most suitable method of prediction would be to try the candidate on the Optacon itself.

Experiences in the University of Pittsburgh Special Study Institutes have been incorporated into the TSI Teaching Guide (See Appendix). This

-17-

publication presents in further detail the mechanics of the equipment
and teaching strategies. It will be an invaluable aid for teachers.

It is hoped that this overview of the Institute which was conducted
by the Department of Special Education and Rehabilitation, University
of Pittsburgh, will provide some background for the establishment of
other University and college level training courses. Members of the
Department of Special Education and Rehabilitation welcome requests
for further information, and offer their assistance to any future
training programs.

APPENDIX I

Whether or not the student is familiar with print, time and care must be taken to present an accurate image of the letters as they will appear tactilely on the Optacon. Contrary to many new teacher's thinking, formerly sighted students who know letter shapes are not necessarily at an advantage in learning Optacon reading. Students often have a faulty memory of letter details (direction of diagonals, descenders, etc.) Some confuse lower case print with handwritten letters. Others have difficulty transferring their memory of the total letter as perceived visually to a tactile image moving from right to left across the array.

When describing the letters to students, care should be taken to talk of them as a moving image, "coming in" and "going out". Students feel the left edge of the letter first, then the middle, then the right edge. Questioning should be, "What do you feel 'coming in'? What next? etc."

Explain the relationship of the letters to a line - letters "sit" on an imaginary line that should be two-thirds down the array. Demonstrate with a horizontal line of print.

Language should be geared to the language level of the student. Descriptions presented here assume an understanding of the terms "ascender", "descender", "horizontal", "diagonal", "vertical", "hook", and "hump". Simpler terms such as "hats", "tails", "balls", "sticks", etc. could be used with children. Once the terminology is chosen and understood by the student and teacher, it should be used consistently throughout training.

Steps in letter presentation:

1. Student looks at the letter as often as he likes.

2. Student describes only what he feels. (Discourage naming what letter he thinks it is).

3. Student looks at letter again - question "What else do you feel?" "Top"? "Bottom?" etc.

4. Teacher reaffirms oral description of letter shape, and names the letter. Give alternate descriptions if unclear.

5. Methods for reinforcing the student's image of the letter shape (do as needed)

   -- check shape on raised plastic tile

   - using your finger, draw letter on student's hand - have him draw it on your hand

   - student draws letter on thermoform paper

NOTE-Even students who think they know letters thoroughly should draw the letter for the teacher.

6. Student again looks at the letter several times with the Optacon.

Upper Case Letters in groups most often confused by Optacon readers:

Horizontals

P B R E F H S

Circles

C G O Q D

Verticals

I J L T U

Diagonals

M N V A W X K Y Z
NOTE: Upper Case Letters should fill the top 2/3 of the array and should "sit" on an imaginary line 2/3 of the way down the array.

Description of Upper Case Letters - general description (from left side to right side)

C.F. Critical features of letters for avoiding confusions.

A — Diagonal from lower left to upper right, forming a point with a reverse

   diagonal; a horizontal connects the diagonals at mid-point

   CF. point at top (V)

B — left vertical with two curved sideways humps connecting top, middle and

   bottom (may be seen as 3 horizontals closed on right by curved lines)

   CF. — closed on right (E)

      — closed on bottom (P,R)

C — large circle with opening on the right

   C.F. opening on the right (O)

D — left vertical with curved sideways hump to the right, connecting top and bottom

   C.F. — flat vertical on left (O)

E — left vertical with 3 small horizontals attached at the right top, center,

   and bottom (center horizontal is sometimes slightly shorter)

   C.F. — bottom horizontal (F)

      — open on right (B)

      — closed on left (S)

F — left vertical with short horizontals to the right from the top and middle

   of the vertical

   C.F. — no bottom horizontal (E)

      — open at right (P)

G — large circle with opening on the right and a small internal horizontal

   attached to the lower right opening

   C.F. — small horizontal — (C)

H — left vertical with small center horizontal connecting a right vertical

   C.F. — open top and bottom (B)

      — horizontal connector (N,M)

I - vertical line (sometimes has small feet top and bottom) - same as "small L"
    in many prints

    C.F. - no horizontals top (T) or bottom (L)

J - bottom left hook connecting with right vertical (sometimes has a small
    horizontal "hat" on top)

K - left vertical line with two diagonals fanning to the upper right and lower
    right from its mid-point

    C.F. - vertical on left (X)

       - open on top (R)

L - left vertical with small horizontal attached at the bottom right

    C.F. - bottom horizontal (I)

M - left vertical; diagonal from upper left to bottom right; reverse diagonal;
    right vertical (widest letter - usually won't go on screen all at once)
    NOTE - diagonals are sometimes only half the depth of the verticals

    C.F. - 2 diagonals (N)

       - vertical on sides - (W)

N - left vertical; diagonal from upper right to lower left; right vertical

    C.F. - one diagonal (M)

O - large closed circle

    C.F. - no openings (C,G)

       - curved on left (D)

P - left vertical with curved sideways hump to the right connecting the top
    and middle

    C.F. - open on bottom (B)

       - closed on top right (F)

Q - large circle with small diagonal line intersecting at the lower right
    ("tail" sometimes extends down from center bottom in some type fonts)

    C.F. - "tail" (O)

R - left vertical with curved sideways hump to the right connecting the top

a and middle, and a diagonal line extending from the hump to the lower right

    C.F. - <u>Open</u> on bottom (B)

S - large upper left sideways hump connected to lower right sideways hump

    (Can be seen as 3 horizontal closed by diagonal curved lines upper left

    and lower right)

    C.F. - openings bottom left and top right (B,E)

T - top horizontal line with a vertical extending down from its midpoint

    C.F. - horizontal at the top (I)

U - left vertical with a curved line from the bottom connecting a right vertical

    C.F. - connector on bottom (H)

       - <u>curved</u> on bottom (V)

V - diagonal from upper left to lower right, forming a point with a reverse

    diagonal

    C.F. - one point on bottom (W)

W - two V's connected

    C.F. - diagonal edges (M)

       - wide letter (V)

X - two diagonals intersecting at midpoint

    C.F. - open on left (K)

Y - small -V in upper half of the array with a vertical extending down from

    the point

    C.F. vertical below (V)

Z - horizontals top and bottom connected by a diagonal from lower left to

    upper right

Lower case letters in groups most often confused by Optacon readers.

basic circles

a c e o s

pot porri

b d h m n u

verticals

f i l r t

descenders

g j p q

diagonals

v w x y z k

NOTE: lower case letters should
fill the middle 1/3 of the array
with ascenders touching the top
of the array, and descenders touching
the bottom

a - small circle with hook above, attached vertical on the right

   C.F. opening on upper left ("coming in") (e,s)

b - left ascender attached to small circle

   C.F. - ascender on left ("coming in") (d)

   - closed on bottom (h)

c - circle with opening on right

   C.F. - opening on right ("going out") (o)

d - circle with right ascender attached

   C.F. - ascender is on right (b)

e - circle with horizontal line through middle and opening in lower right

   C.F. - opening lower right (a,s)

   - horizontal (a,s)

f - tall vertical with right hook at the top and crossbar in the middle

   C.F. - hook at the top (t)

   - tall (r)

g - two circles, one above the other, connected on the right with a line (can be

   described as "eyeglasses turned on their side") C.F. connected on the right

   (B) - descends below the line opening between circles (8)

h - left ascender attached to one hump

    C.F. - ascender on left (n)

        - open on the bottom (b)

i - short vertical with a dot above it

    C.F. - gap between line and dot (l)

        - no hook or descender (j)

j - vertical descender with bottom hook to the left; dot over it

    C.F. - descends below line (i)

k - left ascender with a small "v" fanning outward in lower portion

l - tall vertical

    C.F. - tall, solid line (i)

        - no hooks or crossbars (f,t)

m - short left vertical with two humps attached to the right

    C.F. - two humps (won't all fit in array) (n)

        - humps are closed and rounded on top (w)

n - short left vertical with one hump attached

    C.F. - one hump (m)

o - small circle

    C.F. - closed on right (c)

        - no verticals attached, no gaps

p - left descender attached to small circle

    C.F. - descender (b) on left (g)

q - small circle attached to a right descender (sometimes has small upward

    rt diagonal at bottom of descender)

    C.F. - descender on right (p)

r - short vertical with hook to right attached at the top

    C.F. - short - (f,t)

        - hook only not hump (n)

s - upper left hump connected to lower right hump seen.

Can be seen as 3 horizontals attached by curved lines upper left and

bottom right)

C.F. - openings lower lefr and upper right (a,e)

t - tall vertical with bottom right hook and small crossbar in the middle

C.F. - hook on bottom (f)

Tall (r)

u - short left vertical that hooks to the right into a short right vertical

("upside-down" n)

C.F. - rounded on bottom (v)

v - short diagonal from upper left to lower right; forming a bottom point with

a referse diagonal.

C.F. = no descender (y)

- one point only (w)

w - two v's attached

C.F. - open at top, diagonal lines (m)

x - two short intersecting diagonals

y - short diagonal from upper left to lower right, connecting to a reverse

diagonal descender with left hook on bottom

C.F. - has a descender (v)

z - two parallel horizontals attached by a diagonal from lower left to upper

right.

APPENDIX II

READER EVALUATION TAPES	TYPE FONT	RECORD SPEED (WPM)
1. Test Tape	Block	10

    Side a. Upper Case Letters
              EOCSC-THAM-LRUBDNGH-KJVP-QWXYZ

    Side b. Lower Case Letters
              eoisc-tham-lfdbr-gnuv-pykw-xzjq

This follows the lessons in the training
manual with letter and word practice

2. Position Tape

    Side a.   10

    Side b. Finger position tape using
              lines, circles and crosses

Basic shapes are presented using all the
areas of the array. This is used to
check the sensitivity of the various
parts of the finger.

3. Additional Tape Exercises (lower case)	Block	10

    Side a. Exercises to follow Lessons 10,
              11, & 13 in the Training Manual.

    Side b. Exercises to follow Lessons 15,
              17, & 19 in the Training Manual.

Isolated letter and simple word exercises
follow the 6 letter groupings of lower.
case letters in the TSI Manual.

4. Limited Alphabet, Speed Building	Block	10

    Side a. Spaced stories using letters
              presented in the Training Manual
              after Lessons 12, 14 & 16.

    Side b. Spaced stories using letters
              presented in the Training Manual
              after Lessons 18 and 20.

The simple stories are spaced with 5 letter
spaces between the words. The stories use
only the letters that have thus far been
presented.

	TYPE FONT	RECORD SPEED (RPM)

WORD RECOGNITION SKILLS

1. Alphabet Tape .... Block 15

   Side a. Alphabet and Number Warm-up

   'Side b.

   The alphabet and number tape is good to
   use when the student first returns to the
   cassette unit. The sequence of upper and
   lower case letters and numbers is repeated
   for the length of the tape.

2. Confused Upper Case Letters .... Block 10

   Side a. D/O B/R M/N/W F/P V/Y

   Side b. R/K C/G C/O I/T S/Z N/H

   First the letters are presented; then the
   words using the letters.

3. Confused Lower Case Letters .... Block 10

   Side a. Letters h, n, and b

   Side b. Letters l, f, t, and r

   First the letters are presented; then
   words using the letters; then, a
   short story.

4. Confused Lower Case Letters .... Block 10

   Side a. Letters a, e, o and s

   Side b. Letters r and l

   First the letters, then words, then
   a short story.

5. Confused Lower Case Letters .... Block 10

   Side a. Letters m, w, and n

   Side b. Letters g, p, and y

   Letters presented, then words, then
   a short story.

6. Confused Lower Case Letters .... Block 10

   Side a. Letters p, d, b, and q

   Side b. Letters c and o

   Letters presented, then words, then
   a short story.

WORD SKILL BUILDING	TYPE FONT	RECORD SPEED (WPM)
1. Word Drill	Block	15

Side a. Common Words
Side b. Short Words

The Words are presented several times;
the spaces between words decrease
as the tape continues.

2. Word Drill	Block	15

Side a. Suffixes
Side b. Suffixes continued

3. Word Drill	Block	15

Side a. Compound words group 1 and 2
Side b. Compound words group 3, 4, and 5

Each group of Compound Words is presented
with increased difficulty.

4. Word Drill	Block	5

Side a. Common Words
Side b. Short Words

The common words are presented several times;
the space between words decreases as the words
are repeated. Two, three and four letters
words are presented on the short word tape.

SPEED BUILDING

1-1 Level One	Block	10/15

Side a. Paul Bunyan (10 wpm)

Side b. Paul Bunyan (continued) (15 wpm)

5 spaces between each word.

1-2 Level OXe

Side a. Napoleon -- The Inkeepers Reward	Block	10/15

Side b. Napoleon -- The Inkeepers Reward
          (continued)

The story is divided into 4 paragraphs. The first
has words spaced far apart; the 2 middle paragraphs
have progressively less spacing, and the final
paragraph has normal spacing.

		TYPE FONT	RECORDED SPEED (WPM)
1-3	**Level One**	Block	10

Side a. "The Policeman" and "Abraham Lincoln"
Side b. "The Red Cross", "The Men from Mars', and "Football"

These are short, humorous stories with greater than normal spacing between words.

2-1	**Level Two**	Block	10

Side a. Ants
Side b. Ants (continued)

2-2	**Level Two**	Pica	15

Side a. Charles Goodyear
Side b. Charles Goodyear (continued)

2-3	**Level Two**	Block	40

Side a. Indian Joe
Side b. The Great Air Race

2-4	**Level Two**	Pica	10

Side a. Chanticleer & The Fox
Side b. Chanticleer & The Fox (continued)

2-5	**Level Two**	Block	18

Side a. Pecos Bill
Side b. Pecos Bill (continued)

3-1	**Level Three**	Block	15

Side a. Limericks
Side b. Four Short Stories

3-2	**Level Three**	Block & Pica	15/40

Side a. Morse Code; block font, (15 wpm) repeated in Pica font at same rate.

Side b. Eskimo; block font, 40 wpm

3-3	**Level Three**	Block	15

Side a. Casey Jones
Side b. Casey Jones (continued)

		TYPE FONT	RECORD SPEED (WPM)
3-4	Level Three	Block	15/40

    Side a. A Most Unusual Father (15 wpm)
    Side b. A Most Unusual Father (continued)
              (40 wpm)

4-1	Level Four	Block	15/40

    Side a. Wild Ride (15 wpm)
    Side b. Wild Ride (continued) (40 wpm)

4-2	Level Four	Block	18/40

    Side a. Surrender at Appomatox Courthouse
              (18 wpm)
    Side b. Surrender at Appomatox Courthouse
              (continued) (40 wpm)

4-3	Level Four	Block	15/40

    Side a. The Great Molasses Flood (15 wpm)
    Side b. The Great Molasses Flood
              (continued) (40 wpm)

4-4	Level Four	Block	15/40

    Side a. The Last Pioneers (15 wpm)
    Side b. The Last Pioneers (continued) (40 wpm)

VOCATIONAL

1.	Math		15

    Side a. Single digit numbers, random order
    Side b. Numbers including decimals and dollars

2.	Math	Block	15

    Side a. Newspaper articles with numbers
    Side b. Newspaper articles (continued)

1.	Computers (COBOL)	EZ Pica	15

    Side a. COBOL Vocabulary
    Side b. COBOL Vocabulary (continued

2.	Computer (COBOL)	EZ Pica	15

    Side a. COBOL Text
    Side b. COBOL Text (continued)
              (Error Code)

		TYPE FONT	RECORD SPEED (WPM)
3.	Computers (OS Assembler)	EZ Pica	15

    Side a. Assembler Operation Code
    Side b. Assembler Operation Code (continued)

4.	Computer (OS Assembler)	EZ Pica	10/15/40

    Side a. Assembler text (10 and 15 wpm)
    Side b. Assembler Text (continued) (40 wpm)

1.	Language (German)	Block	10

    Side a. "Erlkonig" by Goethe
    Side b. Vocabulary and Story

Day 1 A.M.		Had some previous exposure to materials so we skipped some lessons. Finished Lesson 5.		(A) Very anxious to skip and move ahead, but needs practice and drill. (B) Tracking alone and getting better steadily. Wants to get to tracking exercises as soon as possible. (D) Doesn't "feel" bottom of B.	CAMERA: Manual 1; Lesson 6. Keep learning upper case letters.
Day 1 P.M.		Manual 1; Lessons 6-9	Tests 1 & 2 (did poorly)	(A) Still too anxious to push on. Thinks she is better than she actually is. (B) Watch for skewing. (D) Confusions M/W R/B C/G. Poor recognition.	CAMERA: Manual 1; test - then go back and do "practices" for problem letters. TAPES: Repeat tests upper case 1 & 2 before going to 3, 4 or 5. If necessary, upper case confusion tape.

Day 2 A.M.		Manual 1; Lessons 5-9 Reviewed caps. Lesson 10-12.4 lower case.	None; hesitant to return to tapes.	(B) Put on tracking aid; not ready for tracking alone yet. (C) Watch finger position on array. (D) Letter recognition Ok. Word recognition not good. Recognition improved when put on tracking aid. Sensitivity seems poor. Numbs out sometimes.	CAMERA: Manual 1; Lesson 13. Do all the practices in lower case. Go slow-1y and practice all exercises TAPE: Upper Case Tests and confused upper case if needed.
Day 2 P.M.		Manual 1; p. 13.2, 13.3	Alphabet warm up (very good) a/e/o/s Confusion Speed #2; good second time.	(B) Stayed on tracking aid. (C) Moves finger constantly and insists on training two fingers. Changes frequently. Intensity too low. (D) Much confusion with a/e/s even after doing well with tape.	CAMERA: Manual 1; p. 13.4 Go slow; be firm about repeating material...! Keep intensity to 11-12. Concentrate on keeping finger still Train one finger now. TAPE: Warm up Tape; repeat Confused Letters.

					If not successful, continue p. 25

My reasons for doing those pages: 1. tenseness; if he doesn't have to read letters he may relax a little.
2. Lines are fairly easy to keep centered may be able to keep steady movement and build some speed This is concentrating entirely on motor skill. Kind of like "patterning" (OVER) |

			All the above at approximately 16 w.p.m.	(D) Great on tape.	CAMERA: Independent Stories (good letter spacing and long line tracking).
				(E) Excellent skills; very verbal - anticipates - integrates beautifully.	TAPE: Goodyear or Casej Jones (for a break from tracking).

APPENDIX IV

BIBLIOGRAPHY FOR OPTACON READERS AND TRAINERS

The following bibliography is designed to help the Optacon trainer find the book most suited to the student's interests and ability to read with the Optacon. The books provide a range of difficulty, and they may be used after the student has been introduced to all of the upper and lower case alphabets. The books may be used in conjunction with the manual to introduce different formats and to provide extra reading practice, and they may be used upon finishing the manual to provide speed building practice.

The books cover three levels of difficulty -- easy, medium and hard -- in three different areas -- print style, format (layout of the book), and reading level. A book is usually not consistent in difficulty in all three areas. One with easy, short selections may be put together in a confusing and inconsistent manner. Each book is judged in each area. The levels are defined as follows:

Print: Print varies in difficulty for the Optacon reader according to the number of complications on the letter itself (serifs, curlicues, varying stroke widths), the size of the letter, and the amount of contrast between the letter and the background.

    A. Easy: sans-serif; even, narrow stroke widths; medium to large size

    B. Medium: simple serifs; uneven stroke widths; medium to large size

    C. Hard: many serifs; extreme variation in stroke widths; small size

Format: Book layouts vary in difficulty according to the amount of unused space on the page, the page numbering system, the number of type styles, the number and placement of pictures, and the variety of written material.

    A. Easy: little empty space; consistent written material (all essays, all quotes); consistent placement on page; consistent, easy print style.

B. Medium: moderate use of pictures or different types of material or

print styles

C. Hard: inconsistent placement of material on page; use of many different

types of material or print styles.

Level: Books vary according to literary difficulty (reading level, and sophistication

of content) and length of selection.

A. Easy: short selections, and/or simple syntax, and/or simple themes

B. Medium: longer selections (1-4); and/or more complicated syntax; and/or

more adult themes

C. Hard: novels, or long selections; sophisticated, complicated syntax;

and/or adult themes.

The category of "appeal" is included to designate whether the book is geared

to elementary or high school students, or to adults.

The abbreviations "pb" and "hb" after the copyright date refer to paperback

and hardback respectively.

Publishers' addresses are listed at the end of the bibliography.

BIBLIOGRAPHY

All of Us Are Searching for Success, Bevins Jay; Stanyan Books, c 1972, hb,
$3.00
      Print: easy
      Format: medium -- short quotes from famous authors (widely spaced);
            consistent format
      Level: easy -- short selections suitable for beginning students
      Appeal: adult, high school

easy gourmet from stanford, The Mothers' Club of Stanford University, c 1969,
pb, $2.75
      Print: easy -- sans-serif, no capitals
      Format: easy cookbook - ingredients in double column above instructions;
            consistent format
      Level: medium -- useful for practice in numbers, abbreviations, tracking
      Appeal: adult, high school

I've Had Troubles Too . . . So I Brought You This Book, Keith Fallon, Stanyan
Books, c 1972, hb, $3.00
      Print: easy
      Format: medium -- widely spaced, humorous short quotes from famous authors;
            consistent format
      Level: easy -- short selections suitable for beginning students
      Appeal: adult, high school

Jonathan Livingston Seagull, Richard Bach, Macmillian Company, c 1970, hb,
$4.95 (book available in paperback from Avon Books, same print style)
      Print: easy
      Format: medium -- long chapters and continuing story difficult for
            beginner; style not difficult
      Level: hard
      Appeal: adult, high school

Keep Smiling and Have A Happy Day, Allen James, Stanyan Books, c 1972, hb,
$3.00
      Print: medium -- varying print sizes, some white print on magenta background
      Format: medium -- short quotes from famous authors; varying placement on page
      Level: easy -- short selections suitable for beginners
      Appeal: adult, high school

Notes to Myself, Hugh Prather, Real People Press, c 1970, pb, $2.00
      Print: easy
      Format: medium -- philosophical selections of varying length, from para-
            graph to page; end of selection signified by leaf design; un-
            numbered pages.
      Level: medium
      Appeal: adult

Rafting Down the Neckar, Mark Twain, Fritz Gebhard, KG, European Places of
Culture Edition, edited by Wolfgang Boehler, C 1966, pamphlet, 2 DM
  Print: easy
  Format: medium -- syntax complicated, vocabulary sometimes unusual,
      pictures
  Level: hard
  Appeal: adult

Short, Short Stories, Vol. I, M.W. Sullivan Reading Program, Behavioral
Research Laboratories, c.1972, pb, $1.99
  Print: easy -- large typewriter print, simple serif
  Format: hard -- short paragraphs, pictures; questions follow story
  Level: easy -- 3rd, 4th grade reading ability, stories 50-150 words
      in length
  Appeal: limited for adults since many stories very simple, good for
      elementary students, poor readers

Some Haystacks Don't Even Have Any Needle, Stephen Dunning, Edward Lueders,
Hugh Smith; Scott, Foresman and Co., c 1969, pb, $2.10 (same print in hb)
  Print: medium -- thick, dark strokes, sans-serif
  Format: hard -- pictures, poems, uneven line length, inconsistency
      in placement of poems
  Level: hard -- unexpected turns of phrase in poems difficult for
      beginning reader
  Appeal: adult

Take 12/Action Plays, Mel Cebulash, Scholastic Book Services, c 1970, pb,
$1.80
  Print: easy -- sans-serif, some sans-serif italics
  Format: medium -- 2-3 page, open-ended situation plays; italics used
      for stage setting
  Level: medium
  Appeal: high school

EDUCATIONAL CHALLENGES SERIES

The Girl Who Knew Rule One, Marilyn Lyman, Scholastic Book Services, SA 2092,
c 1972, pb, $1.80
  Print: easy
  Format: medium -- story in 10 chapters of approximately 10 pages each,
      photographs; personal problem solving involving teenage girl
      on probation, drugs, love; hospital setting
  Level: medium -- 2.5-2.9 grade reading ability; suitable for speed
      building
  Appeal: geared to high school, some appeal for adults

The Ratcatcher of Whitestone, William F. Ryan, Scholastic Book Services,
SA 1876, c 1971, pb, $1.80
  Print: easy
  Format: medium -- 10 chapters of approximately 10 pages each; mystery
      story
  Level: medium -- 2.5-2.9 grade reading ability; suitable for speed
      building
  Appeal: geared to high school; mystery aspect suitable for adults

The following titles in this series have limited appeal for adults -- strongly geared toward adolescents; not ordered by TSI

A New Life for Sarita, John Durham, SA 1563; Spanish-American culture clash

Crash at Salty Bay, Pete Pomeroy, SA 1925; adventure, seacost setting

No Girls Allowed, Keven Jane Harvey, SA 1878; surfing

One Punch Away, John Greenya, SA 1881; boxing

Silver Dollar Mystery, Leslie Carswell, SA 1924; kids get involved in a theft ring

The House That Half Jack Built, Eloise Engle, SA 1879; personal triumph, sibling rivalry

The Race Driver, W.E. Butterworth, SA 1923; adventure in race car setting

The '50 Ford, John Greenya, SA 1877; personal triumph, car setting

HOLT SERIES

I've Got A Name, Lawana Trout, Charlotte K. Brooks; Holt's Impact Series, Level I; Holt, Rinehart and Winston, Inc., c 1968, pb, $1.84

    Print: easy -- shaded sans-serif (titles hard)
    Format: medium -- long and short stories interspersed with poems,
                songs, pictures; "growing-up" theme
  • Level: medium (some short selections easy and suitable for beginners)
    Appeal: adult, high school

Larger Than Life, Edith Stull; Holt, Rinehart and Winston, Inc., c 1968, pb, $1.84

    Print: easy -- shaded sans-serif (titles hard)
    Format: medium -- long and short stories, poems, fables, songs,
                photographs, pictures; myth, legend theme
    Level: medium (some short selections easy and suitable for beginners)
    Appeal: adult, high school

The following titles in this series have limited appeal for adults -- strongly geared toward adolescents; not ordered by TSI

At Your Own Risk, Trout, Pierson; theme of adventure, daring

Cities, Stull; inner-city themes

SULLIVAN SERIES

Bad Luck Sam, M.W. Sullivan Reading Program, Story #3, Behavioral Research
Laboratories, c 1971, pb, $.99
    Print:: easy
    Format: medium -- large cartoons with sentences below, occasionally
               in middle of page; humorous story of a man with legendary
               bad luch
    Level: easy -- Ist, 2nd grade reading ability
    Appeal: high interest, low vocabulary book created for older
               non-reader

The Camp by the Pond, M. W. Sullivan Reading Program, Story #2, Behavioral
Research Laboratories, c 1971, pb, $.99

    Print: easy
    Format: medium -- large cartoons with sentences below, occasionally
               in middle of page; humorous story of two men, two pets, and
               a rainy camping experience
    Level: easy -- Ist, 2nd grade reading ability
    Appeal: high interest, low vocabulary book created for older
               non-reader
