ABSTRACT

This annual report indicates state tax appropriations for the operating expenses of member institutions of the National Association of State Universities and Land-Grant Colleges. Emphasis is placed on any sums appropriated that clearly originated from sources other than state taxes; such as student fees or other institutional receipts; sums appropriated for the annual operating expenses of the institutions of higher education; pre-allocated state taxes whose proceeds are dedicated to any institution of higher education; bypassing the process of periodic appropriation by the legislature; separate appropriations for medical centers, agricultural experiment stations, cooperative agricultural extension services, branch institutions, regional campuses, and any other off-campus outposts; sums derived from state tax funds and appropriated for state scholarships; and sums appropriated to statewide governing or coordinating boards. Appropriations for capital outlay, sums received from federal revenue sharing, and all income except from appropriations of state tax funds for annual operating expenses are not included. Statistical data are arranged according to alphabetical order of states. (MJM)

## PREFACE

State assistance for higher education continues to be among the most dynamic topics concerning educators and others who occupy themselves with the operation of the nation's colleges and universities. Indeed, the very basis for this support has been challenged during recent months, and future discussions promise to bring the traditional relationship of the states and higher education into national focus.

For this reason, this annual report on state tax appropriations for the operating expenses of higher education, now in its fifteenth year, takes on an added dimension. As the most timely document providing data on the total amount of financial assistance going out from the states to campuses, it serves as a guide to the economic realities of tax support of higher education. The philosophical basis for this support can only be defended or challenged in the light of these black and white statistics.

Because of the strong relationship between its institutions and the states, the National Association of State Universities and Land-Grant Colleges (NASULGC) has been pleased to issue this annual report since 1959. It is a compilation of data reported monthly by Dr. M. M. Chambers of Illinois State University in his publication GRAPEVINE.

### CONTINUED SUPPORT IS ESSENTIAL

The nation's state and land-grant universities stand firmly on the side of continued state assistance. These institutions pioneered the concept of low-cost public higher education for students as the means to providing education for the greatest number of people. These institutions first showed the world that education can and should be of far greater benefit to society as a whole than to the individuals who are educated.

Fred Harvey Harrington, former president of the University of Wisconsin and of the National Association of State Universities and Land-Grant Colleges, summed up the historic pattern of these institutions this way:

This is a pattern of mass education, which is necessary and desirable now and for the future. This is a pattern of opportunity as well as excellence, a pattern of low-cost to the student so that higher education will be within the reach of the poor as well as the well-to-do. It is a pattern of practical education, relevant education, education for life as well as in theory. It is a pattern of applied as well as fundamental research. It is a pattern of university involvement in the economic, social, and political life of the community, a pattern of public service and problem solving.

And it is exactly this pattern that is now being challenged by groups such as the Carnegie Commission on Higher Education and the Committee for Economic Development, which propose to shift the major emphasis of state aid from the institutions to students. Institutions can make up the resultant loss in income according to these groups by greatly increasing tuition--an increase which students purportedly would be able to handle with grants-in-aid they would receive from the state.

Since students at most public universities now pay tuition equivalent to approximately 30 percent of the instructional costs, schemes to reduce greatly the largest source of revenue--state appropriations--would bring about substantial increases in student fees. It is highly doubtful that any program of student subsidies could equalize all of the inequities that would result from this shift.

Plans for increased tuition charges at public institutions, if adopted, would strike an especially hard blow at middle-income students, many of whom already have been frozen out of private colleges by skyrocketing tuitions. Most of these students could not qualify for state grants-in-aid since proposals make no provisions for assistance to students from families with annual incomes of \$12,000 or more.

## NO SOLUTION

A change in emphasis would certainly not solve the problems that have beset higher education finance in recent years. Galloping inflation, huge increases in the student population, a mushrooming in diversity of programs to be financed with funds earmarked for higher education and an increase in social programs requiring state funding have created the crisis. Although enrollment increases have now slowed, the other problems are as pressing if not more so than they were a few years ago.

State and land-grant universities, which enroll approximately one out of every three college students, have probably suffered the most. In 1971 the Office of Research and Information of NASULGC calculated that an institution needed an increase of ten percent annually in its operating budget just to maintain existing programs. This figure was determined on the basis of the amount needed to provide for enrollment increases and for inflation. A 1973 re-evaluation of this figure in the light of a lessening of enrollment pressure revealed that an institution still needs an increase of approximately 9.5 percent in its budget, primarily because of a rise in inflation from six percent to seven and a half percent annually.

For the purposes of analyzing how NASULGC institutions are faring in state appropriations, it was assumed that the institution would need an increase of 9.5 percent in this area just to stand still. Twenty-nine of the 94 multi-campus institutions holding membership in NASULGC received appropriations that were less than this stand still figure. Four of these institutions actually experienced decreases.

Many institutions that have not received adequate appropriations from state legislatures have been forced to raise tuition. This has been done reluctantly, especially by institutions enrolling a preponderance of low- and lower-middle-income students. For these students, an increase of even a few dollars per term often makes the difference in whether or not they can remain in school.

It might be noted that at this time when the very basis for state support to public institutions is being attacked, state legislatures seem to be making great efforts to increase the assistance they give to higher education. The 29 institutions receiving what might be considered stand still appropriations in 1973 represented a decrease from 1972 when 57 NASULGC institutions either experienced decreases or increases of less than ten percent in their state appropriations.

Clearly, it is the legislative assistance and support, detailed in this report which has made it possible to maintain the cherished ideal of low-cost education in U. S. public colleges and universities--assistance which has opened the doors to all who wish to pursue advanced education and to enrich their lives through its benefits.

## INTRODUCTION

The event of the moment in October 1973 is the appearance of recommendations from several sources advocating a sharp turnaround in the financing of public higher education in the United States. This would involve steep escalation of tuition fees in public universities and colleges, and the development of a vast bureaucratic scheme of tax-paid scholarships and guaranteed student loans to enable the majority of students to pay the high fees.

This is far different from the principle under which the greatest nationwide system of higher education in the world has grown up - - that of keeping student fees low or non-existent in the public sector of higher education, so that access is generally open to middle-income and lower-middle-income people. There are also moderate student aids for the economically deprived.

Economists agree that college students' sacrifice of their time and earning power amounts to about three-fourths of the total cost of their education. The other one-fourth, the cost to the institution, has been largely but not wholly subsidized by appropriations of tax funds, chiefly but not wholly state tax funds, to the institutions. These appropriations by fifty states for operating expenses of higher education for fiscal year 1973-74 are the subject and substance of this present annual summary.

### WHY THE TURNAROUND?

As nearly as can be deduced, there are two main motives for urging the drastic change already mentioned: (1) "To place public and private institutions on a fair competitive basis," and (2) a belief that "there are already too many people in college" and that the expansion of public higher education should be slowed down, halted or cut back.

Governor Nelson A. Rockefeller's Task Force on Financing Higher Education in New York State recommended the turnaround for that state some months ago. The legislature did nothing directly about it. The Carnegie Commission on Higher Education urged in September that tuition fees in public universities and colleges be raised 10 to 12 per cent per year over the next ten years. This would mean a tripling of the number of dollars extracted from students. It seems possible, but rather doubtful, that inflation will be sufficiently rapid to make these dollars equal only one-third of the institutional cost of the education in 1983.

The candid Clark Kerr, chairman and staff director of the Carnegie Commission, was heard to say "this will be a bitter pill for middle-class families to swallow." Edward J. Boling, president of the University of Tennessee, was quoted as commenting, "That tuition charges at public institutions should be increased to give private colleges and universities a better competitive position, makes as much sense as forcing one person to undergo surgery because another person has appendicitis."

About October 1 the Committee on Economic Development, a private organization of two hundred representatives of very large corporations, announced a report in which it proposed that tuition fees in public institutions should be raised over the ensuing five years to reach half the institutional costs. Sterling M. McMurrin, dean of the graduate school at the University of Utah and project director for the study committee, was reported to have said he did not concur in this particular recommendation, because he believed it might make it impossible for many middle-class people to go to college.

## ANOTHER REPORT YET TO COME

Due near the end of this calendar year is the report of the President's Commission on the Financing of Postsecondary Education. Its recommendations are not yet known, but it is widely thought that at least one option that it will propose will be the same turnaround scheme as above described; for that seems to be the tenor of the national administration's attitude: to advocate aid to students rather than support for institutions, and to favor private education, even including proprietary, with various forms of tax subsidies to students.

The proposals to raise tuition fees at public colleges immediately touches off well-reasoned opposition in many quarters, including the Congress of the United States. Representatives James G. O'Hara of Michigan, speaking in the House on October 2, said, "It is time to blow the whistle on the growing tendency for the rich to make grandiose plans to aid the poor with the money of the middle-class." He noted that the report of the Committee on Economic Development suggested that added tuition costs could be met by making grants to middle-income students whose family incomes are below \$12,000 a year. This, he thought, was a "surprisingly outdated version of who is a rich family and who is a poor one."

Finally, Representative O'Hara concluded: "We have built a magnificent public education system on the belief that investments in education were and are the soundest investments we can make with public funds."

Allan W. Ostar, executive director of the American Association of State Colleges and Universities, pointed out that under the CED proposal at a family income level of \$10,000, "a student would receive a grant of only \$338 - - which would not go very far," and continued, "Experience with federal student aid programs proves that they are grossly under-funded, and dependent on the shifting political priorities of bureaucrats, Congressional committees, and private bankers.

"Low tuition public higher education," Ostar said, "which now enrolls about 75 per cent of all American college students, is the envy and wonder of the world, just like our public school system, of which it is an outgrowth. It has contributed enormously to our progress and well-being as a nation. There is no reason for abandoning it now."

This present report for fiscal year 1973-74 shows that the fifty state legislatures appropriated 25 per cent more state tax funds for operating expenses of higher education than for 1971-72, two years earlier. This year's total of \$9.7 billion is also more than 50 per cent above the comparable total of \$6.1 billion for 1969-70, four years earlier. Erratic current inflation takes some of the rosy color out of these gains; and it is true that the large universities have not been treated as well as the smaller state colleges and junior colleges; but the fifty legislatures in general deserve praise for standing up to their responsibilities in a time of much uncertainty, divisiveness and low public morale.

In offering this fourteenth consecutive annual summary, I am conscious as always of the debts I owe to the persons in every state capital who generously provide me with the necessary data, promptly and accurately. Those who criticize me and rectify my mistakes are especially appreciated. I am also grateful to my many advisers and questioners by telephone and air mail from all parts of the nation. Let me thank my faithful and competent assistants here; and express my gratification at the excellent job of reproducing and distributing this document done for me by the Office of Research and Information of the National Association of State Universities and Land-Grant Colleges.

## WHAT THE FIGURES ARE INTENDED TO MEAN

The data for this report are supplied by key persons in each state who report them to the small monthly mimeographed newsletter GRAPEVINE. Their cooperation is indispensable. The ground-rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practice among the fifty states make it impossible to eliminate all inconsistencies and accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness, but have value if correctly interpreted.

(1) We exclude appropriations for capital outlay.

(2) We exclude any sums appropriated which clearly originated from sources other than state taxes, such as student fees or other institutional receipts. (Some states capture these non-tax funds for the state treasury and appropriate them to the institutions as a part of the total appropriations for operating expenses; but many states do not. Hence, it is necessary to peel off the non-tax institutional receipts in order to report appropriations of state tax funds.)

(3) We include any sums appropriated for the annual operating expenses of the institutions of higher education, even if appropriated to some other agency of the state for ultimate allocation and payment to the institutions. (Some states appropriate, either occasionally or habitually, sums for such items as faculty fringe benefits under conditions such that only the total made available at the time can be known, and the actual allocations to several institutions cannot be known until after the end of the fiscal period. GRAPEVINE wants to report the total made available at the time of appropriation, and generally does not wait for subsequent institutional allocations unless they are obtainable without delay.)

(4) We include any pre-allocated state taxes whose proceeds are dedicated to any institution of higher education, bypassing the process of periodic appropriation by the legislature.

(5) We would like to include, whenever practicable, separate appropriations for medical centers (including schools of medicine, dentistry, nursing, teaching hospitals and other appropriate appurtenances of a medical education complex); separate appropriations for agricultural experiment stations and cooperative agricultural extension services; and separate appropriations for branch institutions, regional campuses and any other off-campus outposts of universities or land-grant institutions. We cannot request this except in instances where it is easily practicable and would not involve delay in reporting.

(6) We include sums derived from state tax funds and appropriated for state scholarships. This is regardless of whether such scholarships are tenable in public or private institutions, or tenable within or without the state.

(7) We include sums appropriated to statewide governing or coordinating boards regardless of whether for the expenses of the board or for ultimate allocation to the institutions.

(8) We exclude sums received from federal revenue sharing; and all income except from appropriations of state tax funds for annual operating expenses.

We emphasize that the data in this report is in preliminary form and subject to verification and change. In several of the state tabulations the items may not add up to the indicated total. Minor discrepancies may be attributed to rounding. Where the discrepancies are substantial, the investigator, while reasonably confident of the total, may have encountered difficulty in obtaining from his sources consistent reports of such items as state scholarship programs, expenses of central governing boards and supplementary budget increases or decreases. To check and verify every item would be a costly and time-consuming project which would delay the publication of this report beyond the time when it is most useful.

APPROPRIATIONS OF STATE TAX FUNDS FOR OPERATING EXPENSES OF HIGHER EDUCATION

<b>Total</b>	<b>112,868</b>

- \*A lump-sum appropriation to be allocated to the eight state-supported institutions by the Bd of Trustees of State Institutions of Higher Learning (including special library funds).
- \*\* A non-degree-granting institution, its program intimately related to those of state institutions.
- \*\*\* A deficit appropriation of \$91,976 for the State Scholarship Fund was granted this year but was not included here in that it is considered part of money for fiscal year 1972-73.

(Continued on following page)

(Continued from preceding page) Miss.

The legislature appropriates a large lump-sum for "general support" (to be allocated among the teaching institutions by the Board of Trustees of State Institutions of Higher Learning), and a number of other direct appropriations to various agencies of research and service, including the medical school and the schools of nursing. Most of these are appendages of the respective teaching institutions.

A combined tabulation of appropriated funds and allocated funds provides totals for the institutions, comparable with those of similar institutions in other states.

State tax-funds as appropriated and allocated for operating expenses of higher education in Mississippi, fiscal year 1973-74, in thousands of dollars.

- \*\*\* \$9,050,000 and \$9,600,000
- # \$3,821,000 and \$4,323,000
- + State-affiliated university receiving full state subsidy for lower division programs equivalent to that of a community college and full state subsidy for graduate and graduate-professional programs.
- ++ Start-up costs were appropriated for two new medical schools, one in the Dayton and the other in the Akron area.
- +++ Board of Regents is authorized to arrange a subsidy to Case Western Reserve University, a private university, for education in dentistry and medicine.
- @ A new provision was enacted to permit the Board of Regents to contract with private institutions to provide programs not otherwise available to students at state-assisted institutions.
- @@ Funds were appropriated to be disbursed to state universities to compensate for the costs of legislatively mandated civil service employee pay increases.
