ABSTRACT

Enrollment at state universities and land-grant colleges neared the 3 million mark in fall 1973, increasing approximately 3% over fall 1972. Data from 126 of the 130 member institutions of the National Association of State Universities and Land-Grant Colleges (NASULGC), representing 357 individual campuses, showed a fall enrollment of 2,911,219 compared with a fall 1972 enrollment of 2,827,645 for an increase of 2.96%. This was a greater increase than the 2.43% enrollment rise reported by these institutions in fall 1972, but the rate of growth was smaller than the 3.9% increase reported for all institutions of higher education in fall 1973. NASULGC institutions representing the nation's major public universities and land-grant colleges enrolled 30% of the 9,662,763 students attending higher education institutions in fall 1973. (Author)

HOLD FOR RELEASE: March 24, 1974

Enrollment at state universities and land-grant colleges neared the three million mark in fall, 1973, increasing approximately three percent over fall, 1972.

Data from 126 of the 130 member institutions of the National Association of State Universities and Land-Grant Colleges (NASULGC), representing 357 individual campuses, showed a fall enrollment of 2,911,219 compared with a fall, 1972 enrollment of 2,827,645 for an increase of 2.96 percent. This was a greater increase than the 2.43 percent enrollment rise reported by these institutions in fall, 1972, but the rate of growth was smaller than the 3.9 percent increase reported for all institutions of higher education in fall, 1973, according to preliminary data released by the National Center for Educational Statistics (NCES). NASULGC institutions, representing the nation's major public universities and land-grant colleges, enrolled 30 percent of the 9,662,763 students attending higher education institutions in fall, 1973.

Survey participants were asked to provide data on full-time, part-time and total enrollment, undergraduate and graduate, for both on-campus and extension students. Total enrollment figures include all categories of students.

Despite early predictions of widespread decreases in enrollment, only 26 NASULGC institutions reported overall decreases. Seventy-four individual campuses showed decreases, including some individual campuses of institutions which had an overall enrollment increase. At the same time, 42 member institutions had increases that were the same or greater than the total NASULGC enrollment increase of 2.96 percent.

Institutions experiencing decreases cited less interest in college attendance as the primary reason for enrollment drops. Thirty-four individual campuses mentioned this as a factor contributing to smaller student bodies. Financial problems were listed by 24 campuses as accounting for enrollment declines. These included: 14 campuses which cited higher charges as a prohibitive factor, nine which listed the

*Number of institutions.

general state of the economy as a reason and one institution which mentioned the reduction in financial aid.

A decrease in the size of the college-age population was cited as a reason for declines by 20 campuses while 17 noted that increased enrollments in vocational-technical schools were affecting their enrollments. Thirteen campuses said that their enrollments were affected by the fact that more students are attending community colleges. A variety of other reasons were cited by a few respondents.

ENROLLMENT HIGHLIGHTS

On-campus enrollment, which accounted for approximately 93.3 percent of the total NASULGC enrollment, increased slightly more than total enrollment in fall, 1973. Reports from 124 institutions, representing 355 separate campuses, showed an on-campus enrollment of 2,714,853 in fall, 1973 compared with a fall, 1972 enrollment of 2,633,434 for a 3.1 percent increase.

Extension enrollment, reported by 82 institutions, showed a very slight decline, decreasing from 167,820 in fall, 1972 to 166,805 in fall, 1973 for a .60 percent drop.

Out of the total NASULGC enrollment of 2,911,219, there were 2,312,121 undergraduate and unclassified students, 559,339 graduate and professional students and 39,759 students who were not classified by survey participants.

An analysis of on-campus enrollment by level showed that graduate enrollment increased more than either total undergraduate or first-time freshman enrollment. With comparable data from 118 member institutions, graduate enrollment increased 4.1 percent from 489,739 in fall, 1972 to 509,843 in fall, 1973. Undergraduate enrollment, reported in comparative form by 121 institutions, increased 2.84 percent from 2,134,714 to 2,195,330. The smallest increase was registered in first-time freshman enrollment which rose 2.41 percent. Freshman enrollment, reported by 108 member institutions, grew from 434,006 to 444,476.

More than three-fourths of on-campus enrollment (76.62%) was full-time.

Although a number of institutions reported increases in the enrollment of women students, the percentage of women in the total NASULGC on-campus enrollment increased only slightly in fall, 1973. Women accounted for 42.95 percent of the enrollment, based on responses from 121 institutions, compared with 42 percent in fall, 1972.

For the first time, NASULGC institutions were asked to provide data on out-of-state students. Responses from 118 institutions indicated that there were 336,209 out-of-state students out of a total on-campus enrollment at these institutions of 2,591,582. Out-of-state students accounted for 12.97 percent of the total on-campus enrollment at these institutions.

LARGEST INSTITUTIONS

In ranking NASULGC member institutions by enrollment an analysis was made of the top ten multi-campus systems and of the top ten campuses. Figures for multi-campus systems include extension enrollment but individual campus figures do not. The top five multi-campus systems in fall, 1973 were all units comprising at least

10 campuses, and all institutions among the top ten had at least three campuses. A total of 13 institutions had enrollments exceeding 50,000. Among the largest single campuses, four reported enrollments exceeding 40,000. (The chart to the right shows the top ten institutions and the top ten campuses in total enrollment.)

University of Illinois.....59,733	University of Maryland, College Park.....33,399

EXTENSION ENROLLMENT

The small decrease in extension enrollment was attributable primarily to the fact that extension enrollment at the University of California decreased by 10,599, compared with fall, 1972.* Extension enrollment accounted for 5.7 percent of the total NASULGC enrollment.

A ranking of the top ten institutions in extension enrollment revealed wide variations in the number of students enrolled. The University of California had the largest extension enrollment, by far, with 25,900 students enrolled. The second-ranked institution was Pennsylvania State University with 17,037 enrollees while the University of Minnesota ranked third, with 15,302 extension students. There were four other institutions with enrollments of more than 5,000, and all institutions among the top ten had enrollments of more than 3,800. However, the majority of extension enrollments were 1,500 students or less. (The chart to the right shows the ten institutions with the largest extension enrollments.)

AN ANALYSIS OF INCREASES AND DECREASES

A closer look at where both increases and decreases took place offers one of the most interesting aspects of the fall, 1973 enrollment story at state and land-grant institutions. Both the number and size of increases reported by NASULGC members far outweighed the number and size of decreases.

For example, an examination of the multi-campus institutions with the greatest increases and decreases in total enrollment showed that only four institutions actually had decreases in fall, 1973 as compared with 34 institutions which reported increases. The largest decrease was a drop of 3,980 students at the University of California while the largest numerical increase was 20,097, reported by the State University of New York. All other decreases were less than 2,000 students. While the majority of reported increases were also less than 2,000 students, nine institutions reported increases in excess of this number.

*University officials indicated that the apparent large decrease was probably due to the fact that some campuses included non-credit students in their fall, 1972 enrollment figures.

Although percentage increases for individual institutions were generally small, decreases were even smaller. The ten multi-campus institutions with the largest percentage increases in total enrollment all had increases in excess of five percent. Only two of the four decreases were greater than five percent. The following lists show all multi-campus institutions reporting decreases as well as the ten institutions with the largest increases.

LARGEST INCREASES

NUMERICAL		PERCENTAGE	
State University of New York	20,097	Auburn University	9.89%
City University of New York	14,867	Univ. of South Carolina	9.85
Pennsylvania State University	4,645	Univ. of Massachusetts	9.23
University of Texas	4,451	Pennsylvania State Univ.	7.65
University of North Carolina	2,823	City University of N. Y.	6.55
University of Massachusetts	2,780	University of Texas	6.51
Rutgers, The State Univ. of N.J.	2,382	Rutgers, The State Univ.	
University of South Carolina	2,304	of N. J.	6.21
University of Michigan	1,981	University of Maine	5.66
University of Hawaii	1,858	University of New Mexico	5.56
		State Univ. of N. Y.	5.51

LARGEST DECREASES*

NUMERICAL		PERCENTAGE	
University of California	3,980	Univ. of South Dakota	7.42%
Kent State University	1,626	Kent State University	6.11
University of Maryland	731	University of California	2.63
University of South Dakota	574	University of Maryland	1.32

A look at on-campus enrollment for single campuses revealed much the same story. There were 266 individual campuses reporting increases while 89 had decreases.

Both numerical increases and decreases were generally quite small for individual campuses. However, the size of increases outweighed the size of decreases. Texas A&M University, College Station had the largest numerical increase for any single NASULGC campus with an increase of 2,530 students. Nine campuses had increases of more than 1,500 students. The largest decrease was 1,202 at Southern Illinois University, Carbondale. Ten campuses reported decreases of more than 500 students.

There were a number of relatively new campuses with staggering percentage increases in enrollment, attributable primarily to the fact that they are still building their student bodies. In most cases, the numerical increases for these campuses were quite small. The institution with the largest percentage increase was Empire State College of the State University of New York with a 145.81 percent increase. Empire State College is actually a "college without a campus." All students enrolled in the college are pursuing individual "contracts" of study, which do not require them to spend full time on a campus. With the exception of the University of Michigan, Dearborn (5), all institutions among the ten with the largest percentage increases in enrollments are institutions that have been open to students for less than five years. Thirty-six campuses had enrollment increases greater than ten percent.

There were only four multi-campus institutions with decreases in total enrollment.

Although there were a few rather large percentage decreases for individual campuses, these did not match the size of the increases. Only three campuses actually had percentage decreases that were greater than ten percent. These were: University of South Dakota, Springfield (22.92%); University of Wisconsin, Platteville (12.06%) and Fort Valley State College (11.40%).

The following lists show the ten campuses with the largest increases and the largest decreases.

LARGEST INCREASES

NUMERICAL		PERCENTAGE	
Texas A&M U., College Station	2,530	SUNY, Empire State Coll.	145.81%
CUNY, John Jay College	2,180	Univ. of Texas, Dallas	143.31

Indiana Univ., Bloomington	566	Univ. of Alaska, Fairbanks	7.28
Univ. of Wisconsin, Platteville	524	Univ. of Arkansas, Pine Bluff	7.07

ENROLLMENT BY LEVEL

A look at enrollment by level showed that the 2,312,121 undergraduates made up 79.4 percent of the total enrollment with the 559,339 graduates accounting for 19.2 percent and the 39,759 students who were not classified by survey respondents representing 1.4 percent of the enrollment. This was an increase of approximately .5 percent in the ratio of graduate to undergraduate enrollment compared with all, 1972.

The fact that on-campus enrollment increased slightly more than total enrollment was due primarily to the 4.1 percent increase in graduate enrollment. Both undergraduate enrollment and first-time freshman enrollment increased less than total enrollment.

Freshman figures are a particularly interesting aspect of the present enrollment situation at state and land-grant institutions. The smaller growth rate in this area does not necessarily mean that total enrollment will show a corresponding slow-down within the next year or two. The increasing popularity of two-year institutions is, in many instances, affecting freshman enrollment while making little difference in total enrollment because of the transfer of a large number of students to state and land-grant institutions at the upperclass level.

Better retention of students, cited by institution after institution as a significant factor accounting for continuing enrollment growth, is also having a decided effect on freshman enrollment growth at a time when enrollment quotas are becoming a fact of life at many large institutions.

An example is offered by the University of Washington. The university, with an enrollment quota of 34,000, found this fall that the number of continuing students had increased significantly over last year. Because continuing students are given first priority, it was necessary to reduce the number of transfer students and new freshmen admitted in order to stay within the enrollment quota. The university actually had applications from approximately 30,000 students for the 10,000 new places it had open. However, a comparison of fall, 1973 freshman enrollment with fall, 1972 freshman enrollment showed an 11.4 percent decrease. At the same time total enrollment increased 1.17 percent, going from 34,125 to 34,524.

Enrollment quotas, which are now in effect at over half of all NASULGC member institutions, will continue to influence the size of increases at these particular institutions. Therefore, total reported enrollment increases or decreases will often have little relationship to the actual number of applications that might have been received by these institutions.

A listing of the top ten institutions in undergraduate enrollment varied little from the listing of the largest institutions in total enrollment. The same institutions were on both lists, with some minor reversals in the rankings.

Among the largest campuses, City University of New York, Queens (9) was the only campus that did not also appear on the listing of the largest campuses in total enrollment. How-

ever, there were several differences in the rank order of the campuses. (The chart to the right shows the ten institutions and the ten campuses with the largest undergraduate enrollments.)

UNDERGRADUATE ENROLLMENT FALL 1973

University of Illinois.....	45,084	University of Wisconsin, Madison.....	25,235

A listing of the institutions with the largest graduate enrollments varied widely from the listing of the largest institutions in total enrollment. However, there were only two institutions among the top ten that did not also appear on the list of the largest institutions in total enrollment. They were the University of Michigan (6) and the University of Missouri (10).

Half of the single campuses with the largest graduate enrollments did not appear on the listing of the largest campuses in total enrollment. These included: University of California, Los Angeles (2); Wayne State University, Detroit (6); University of Pittsburgh, Pittsburgh (7); University of California, Berkeley (8) and Indiana University, Bloomington (10). (The chart below shows the ten institutions and the ten campuses with the largest graduate enrollments.)

GRADUATE ENROLLMENT FALL 1973

PART-TIME ENROLLMENT SHOWS GREATER INCREASE

Substantial increases in the number of part-time students pursuing higher education accounted for a large part of the increases in NASULGC enrollment, an analysis of on-campus enrollment by full-time vs. part-time status revealed. Growing interest among adults in beginning or re-entering higher education may be responsible for a large portion of the increase in part-time enrollment.

Data from 123 institutions showed that full-time enrollment increased by 38,680 students, or 1.9 percent, while part-time enrollment increased by 42,041 students for a 7.1 percent rise. Full-time enrollment for these institutions was 2,073,558 while part-time enrollment was 632,656.

Part-time undergraduate enrollment, reported by 121 institutions, increased 8.3 percent from 384,915 to 416,907. Full-time undergraduate on-campus enrollment increased only 1.6 percent, going from 1,749,799 to 1,778,423.

At the same time, graduate part-time enrollment increased 5.1 percent, from 204,995 to 215,558, while full-time graduate on-campus enrollment increased 3.3 percent from 284,744 to 294,285, according to data from 118 institutions.

First-time freshman enrollment was the only category that did not show a greater increase in part-time enrollment than in full-time enrollment. Information from 108 institutions showed that full-time enrollment increased 2.6 percent, from 379,839 to 389,624, while part-time enrollment increased 1.3 percent, from 54,167 to 54,852.

ENROLLMENT OF WOMEN INCHES UPWARD

The slight progress being made in the enrollment of women in state and land-grant universities is illustrated by the increase in women enrollment in fall, 1973 as compared with the increase in total enrollment as well as by the increase in the percentage of women in the total enrollment.

The number of women enrolled at the 117 member institutions which were able to provide comparable enrollment information by sex increased from 1,076,601 in fall, 1972 to 1,139,363 in fall, 1973 for an increase of 5.8 percent. This compared with the total on-campus enrollment increase of 3.1 percent.

The largest increase in the enrollment of women was at the graduate level where women have traditionally been far outnumbered by men. Data from 115 institutions showed that the enrollment of women increased 9.9 percent, from 164,566 to 180,805. Total undergraduate women's enrollment, provided in comparative form by 117 institutions, increased 5.1 percent, from 915,924 to 962,708. First-time freshman women's enrollment was up 4.5 percent above fall, 1972. Responses from 103 institutions showed an enrollment of 204,191 compared to a fall, 1972 enrollment of 195,362.

Women are now in the majority at 82 of the 351 campuses which were able to provide comparative data on total enrollment vs. women's enrollment. They are also in the majority at three multi-campus institutions--University of Alaska (54.48%); City University of New York (52.59%) and State University of New York (50.56%).

Women increase their share of the enrollment at every level in fall, 1973 as compared with fall, 1972. The largest increase was among first-time freshmen. Women accounted for 47.05 percent of the first-time freshman enrollment among the 117 member institutions reporting data. This compared to a first-time freshman women's enrollment of 44.15 percent in fall, 1972. The proportion of total undergraduate enrollment that was women increased slightly in fall, 1973, according to responses from 122 institutions, moving from 43.47 percent to 44.56 percent. The proportion of women graduate students in the total graduate enrollment also grew in fall, 1973, increasing from 33.53 percent to 36.03 percent based on responses from 121 institutions.

Multi-campus institutions with the largest women enrollments closely paralleled the listing of the largest institutions in total enrollment with the exception of the University of Maryland (8) and Ohio State University (10). The East Lansing campus of Michigan State University led the list of individual campuses in total women's enrollment with the City University of New York, Brooklyn, which ranked ninth in total enrollment among individual campuses, following closely behind. Three campuses which did not appear in the listing of the largest campuses in total enrollment ranked among the top ten campuses in women's enrollment. These included:

City University of New York, Hunter (4); City University of New York, Queens (5) and Wayne State University, Detroit (10). (The chart to the right shows the institutions and campuses with the largest women's enrollments.)

OUT-OF-STATE ENROLLMENT CONTINUES TO CLIMB

Out-of-state enrollment increased almost as much as total enrollment in fall, 1973, according to comparative data provided by 115 responding NASULGC member institutions. There were 326,408 out-of-state students enrolled at these institutions in fall, 1973 compared with 318,733 in fall, 1972, for an enrollment increase of 2.4 percent.

Out-of-state enrollment figures by level showed an especially large increase among first-time freshmen, possibly connected with the easing of requirements for becoming a state resident for tuition purposes. Among the 88 member institutions which were able to provide information by level, there were 39,758 out-of-state freshmen in fall, 1973 compared with 37,338 freshmen in fall, 1972 for an increase of 6.4 percent. Out-of-state undergraduate enrollment increased 2.1 percent at these institutions, going from 162,642 to 166,052 while graduate enrollment increased only .9 percent, moving from 101,129 to 102,039.

Out-of-state enrollment accounted for 25.6 percent of the graduate enrollment at the 101 member institutions which provided data on both total and out-of-state graduate enrollments. Out-of-state enrollment accounted for 9.8 percent of the undergraduate enrollment at the 106 institutions providing information on total vs. out-of-state undergraduate enrollments and 10.4 percent of the first-time freshman enrollment for the 94 institutions with comparative data in this area.

Four multi-campus institutions which did not appear on the listing of the largest institutions in total enrollment were among the top institutions in out-of-state enrollment. They were: University of Colorado (5); Purdue University (7); University of Michigan (9) and University of Missouri (10).

A listing of the campuses with the largest out-of-state enrollments varied widely from a listing of the largest campuses in total enrollment. In fact, only four of the ten largest campuses were also included in the listing of the largest campuses in out-of-state enrollment. (The chart to the right shows the multi-campus institutions and the single campuses with the largest out-of-state enrollments.)

OUT-OF-STATE ENROLLMENT	
FALL 1973	
LARGEST INSTITUTIONS	LARGEST CAMPUSES
University of Wisconsin.....17,229	University of Arizona, Tucson.....9,863
