ABSTRACT

This one-semester course of study in psychology for grades 11 and 12 is designed for teachers who are knowledgeable in the field of elementary psychology. The over-all course objective is to improve the student's ability to adjust to an increasingly complex and changing society. Among the teaching techniques suggested are case studies, class discussion, field trips, individualized projects, research and experimentation. The following ten units are outlined: 1) Psychology; 2) Patterns of Human Development; 3) Learning; 4) Thinking; 5) Personality; 6) Mental Health; 7) Deviant Behavior; 8) Marriage and Family; 9) Social Attitudes; and 10) Man in Society. For each topic in the outline specific references as well as behavioral objectives and activities are listed. Listings of additional instructional media are also provided. Ideas for individual and group involvement experiences are provided in the appendix. Many of the activities cannot stand alone but rather require the teacher to consult key references consisting of listed workbooks, book, and manuals. (Author/RM)

A Course of Study in

PSYCHOLOGY

for

Grades Eleven and Twelve

Rochester Public Schools
Rochester, Minnesota
1973

Dr. J. A. Kinder, Superintendent of Schools
Dr. Fred M. King, Director of Instruction
Dr. R. R. Beery, Social Studies Consultant

PREFACE

The authors of this course of study agree with the statement of philosophy of the Rochester Public Schools that proposes to develop the student's whole being to the maximum of his ability. They further agree that a course in psychology seems to be of special contemporary significance and value for students today because it could improve their ability to adjust to an increasingly complex and changing society.

The following goals are stated in terms of the learner:

1. To be able to explain aspects of human behavior
2. To conduct practical experiments
3. To broaden the concept of self
4. To know terminology associated with the study of psychology
5. To improve personal relationships
6. To be able to locate information
7. To know career opportunities
8. To know procedures of research techniques
9. To know selected major psychological theories and their authors

Curriculum committee:

Lyle O. Allen, John Marshall High School
Craig C. Sheets, John Marshall High School
Justin K. Lemke, Mayo High School, Chairman

Statement of philosophy and goals
adopted by the Rochester Public Schools

PHILOSOPHY:

It is the philosophy of the Rochester Public Schools to set up learning experiences and situations that will enable the student to develop his whole being to the maximum of his ability.

GOALS:

The attainment of this philosophy centers around these goals:

- To develop self-discipline
- To stimulate a desire to learn
- To develop worthy use of leisure time
- To learn his capabilities and limitations
- To contribute something worthwhile to society
- To develop the ability to work and play with others
- To help the child master the basic skills of learning
- To develop a consciousness of personal grace and charm
- To develop habits conducive to healthful and happy living
- To develop a civic responsibility and be an active member of society
- To develop an appreciation for the wise use and conservation of resources
- To develop and strengthen his ability to meet and solve the problems of life
- To promote emotional stability and strengthen wholesome moral and spiritual behavior
- To develop a sympathetic understanding and an awareness of the problems of the community, the nation, and the world.

MESSAGE TO TEACHERS

This course of study is designed to provide a framework for a one-semester offering in psychology. A review of the "Content" and "Behavioral Objectives" columns will demonstrate the scope and structure of this survey course.

The stated intentions for the course and the activities identified to realize these goals demonstrate a central concern that students actively develop concepts and use those concepts in a variety of contexts. Therefore, the course emphasizes experimentation and the application of psychological insights in exploring specific instances of human behavior.

This course of study was designed for use by teachers who are knowledgeable in the field of elementary psychology. The writing team identified the ten units here included as basic to a study of psychology. As outlined here, all ten units would require more than a semester. Thus, the depth of treatment given to each unit will depend upon the instructor's identification of needs.

Specific references are included for each topic in the outline. Excellent listings of additional instructional media are included in the teacher references identified for this course.

Robert Beery
Social Studies Consultant

APPENDIX: INVOLVEMENT EXPERIENCES: INDIVIDUAL AND GROUP

1. Book Report
2. Bulletin Boards or Murals
3. Field Trips
4. Experiments and Projects
5. Magazine Reports
6. Research Papers
7. Volunteer Service

1. Book Report

Because there are many paperbacks available that make direct use of psychological themes dealt with in this course, students will find such supplementary reading interesting and appealing. The following books are representative of those available.

Berne, Games People Play
Beers, A Mind That Found Itself
Frankl, Man's Search for Meaning
Green, I Never Promised You A Rose Garden
Helper, The Battered Child
Hoffman, The Loser
Kafka, The Trial
Kesey, One Flew Over The Cuckoo's Nest
Liebman, Peace of Mind
Menninger, The Crime of Punishment
Montague, Sex, Man, and Society
Morris, The Naked Ape
Peale, The Power of Positive Thinking
Richette, The Throwaway Children
Singh, Wolf Children and Feral Man

2. Bulletin Boards or Murals

Many of the topics studied in psychology may be reinforced through the use of bulletin boards done by the instructor, individual students, or a group of students. Some suggested topics follow.

Careers Ahead for Each of Us
Our Future Educational Plans
The Nervous System
The Glands
Illusions
Aspects of Sound
Frustration and Conflict
What I Am
Factors in Learning
Mnemonic Devices
Personality Theories
Techniques for Measuring Personality
Propaganda Techniques

3. Field Trips

Some of these field trips may be either group or individual activities. With a group, it is advisable to make arrangements well in advance. The following have been found useful:

Rochester State Hospital
Faribault State Hospital
Local Nursing Homes
Ability Building Center
Methodist Hospital Adolescent Psychiatric Unit
St. Mary's Hospital Psychiatric Ward
Zumbro Valley Mental Health Center
Alcoholics Anonymous meetings
Probationed Offenders Rehabilitation Training
School classrooms (traditional and innovative)

4. Experiments and Projects

Experiments or projects of an individualized nature can be utilized to acquaint students with the methodology of professional psychologists. These activities should center around the student's abilities and interests. Examples might include:

Construction of a steadiness tester by a student interested in electronics
A study of heredity by a student interested in tracing his family tree
Building a slot or punchboard maze by a student interested in woodworking
A survey by a student interested in person-to-person contact

5. Magazine Reports

Magazine articles can provide a useful link with new areas of research - theories and methods currently being studied or practiced in psychology. Professional journals and research bulletins can be especially helpful in examining complex concepts in depth. Publications primarily designed for lay people, such as "Psychology Today," can also be instrumental in encouraging student interest on a less technical level.

6. Research Papers

The option of researching and writing a research paper as extra credit or in place of some course requirement (on approval of the instructor) provides another alternative in order to meet the needs of individual students. Students should be encouraged to select appropriate topics and design the research, subject to the instructor's approval.

7. Volunteer Service

This idea is suggested after a one-semester trial.

Rochester State Hospital has had an organized volunteer program for a number of years. After consultation with the person in charge, arrangements were made whereby our students were able to participate in most activities. The major problem seemed to be the time periods students were free. Most could not participate during school hours and were thereby restricted to evenings and weekends. Representative of the activities available are:

- Escorting patients on walks to park, canteen, or Sunday service
- Planning parties and ward decorations for holidays or seasonal change
- Reading to or writing letters for geriatric patients
- Escorting patients to dances
- Playing bingo, softball, and other games
- Playing musical instruments and conducting group singing
- Visiting with patients
- Feeding patients
