ABSTRACT

This project was an effort to field test a theoretical model suggested in an American Association of Colleges for Teacher Education publication entitled "An Illustrated Model for the Evaluation of Teacher Education Graduates." The model was designed to obtain objective, quantifiable data on graduates of the teacher preparation program of Western Kentucky University. Of the 40 student teachers randomly selected for the first phase of the evaluation system, 22 obtained teaching positions the following year and comprised the sample for the second phase. Instrumentation and records used for data collection consisted of a biographical questionnaire, a personality scale, pupil ratings, peer and supervisor ratings, direct classroom observational systems, and transcripts of grades. In both phases, data were collected during two visits to each participant's classroom by trained observers. At the end of the data collection period, all information was coded and stored on computer disc. Appropriate statistics were computed and tabulated for study by faculty. Data obtained from teachers near the end of the first year of teaching were compared with data obtained from the same participants while they were student teaching. (Descriptive conclusions, with supportive tables, and appendixes with material from the project are included.) (JA)

PREFACE

Western Kentucky University has embarked upon a careful and scholarly investigation of one of the most challenging problems facing teacher education today, that of actually evaluating the competency of the people it is sending into the profession. It is suggested that this evaluation may very well be a "first" for colleges of teacher education, for while many efforts have been made to evaluate by opinionaire or survey, this is a systemic effort based on performance criteria.

This document contains a detailed report of the pilot efforts in testing Western Kentucky University's Teacher Corporation Evaluation Model. It should be kept clearly in mind that this is a unique effort to accomplish an objective which has proven elusive to all who have attempted to systematically evaluate teaching behavior. It is recognized that the model has many imperfections and that it is, as we have described, a model which can and should be modified and revised until it, or some subsequent model, effectively serves the evaluation needs of teacher education.

CHAPTER I

INTRODUCTION

A review of current educational literature leaves little doubt of the importance being placed on evaluation of teacher education programs. Professional educators at all levels are requesting that teacher preparation programs in colleges and universities be continually evaluated and pertinent research be conducted to ensure improvement in teacher competency. Questions are being asked that will require institutions of higher learning to assess their product - the teacher.

The Recommended Standards for Teacher Education (13, p. 12) has emphasized teacher evaluation. Standard 5.1 states, "The institution conducts a well-defined plan for evaluating the teachers it prepares." In explaining this standard the authors report, "The ultimate criteria for judging a teacher education program is whether it produces competent graduates who enter the profession and perform effectively." Sandefur (11), in a study of 12 institutional cases reviewed by the National Council for the Accreditation of Teacher Education (NCATE) Evaluation Board, found that a greater percentage of questions were asked regarding the evaluation of teachers than questions on any other topic.

While there has been research conducted in the area of teacher evaluation, further exploration seems to be warranted. Sandefur and Bressler (12, p. 1) have stated, "Until recently, no generally acceptable system has existed for the study of teaching behavior. As a consequence, the teaching profession has lacked even a uniform terminology to describe teaching, and the evaluation and study of teaching has depended primarily

upon the value judgments of the observer." Stiles and Parker (14, p. 1418) have suggested that empirical studies are few in number. They state, "Evaluation of entire teacher education programs, or even segments of programs, is spotty and inadequate." Overing (8, p. 13), in a summary of research related to the evaluation of teacher preparation graduates, has stated, "Perhaps it [his summary] will be of some use if it brings to our attention the fact that while many writers have advocated the approach to evaluation now suggested in the Recommended Standards, almost no one has attempted it."

At the request of the American Association of Colleges for Teacher Education's Commission on Standards, Sandefur (11) authored a monograph entitled, An Illustrated Model for the Evaluation of Teacher Education Graduates. This model has provided a systematic approach to the evaluation of teacher education programs that allows for the improvement of such programs and that meets the spirit intended by Standard 5.1 of the Recommended Standards (13). Sandefur proceeded from two positions: (a) there is sufficient evidence, supported by research, from which generalizations about good teaching and good teachers can be drawn; (b) instruments already exist which enable systematic evaluation of the product of teacher preparation programs.

After extensive review of relevant research, Sandefur (11, p. 4-8) suggested three generalizations with corresponding sub-generalizations about good teaching and good teachers:

1. Good teaching utilizes maximal involvement of the student in direct experential situations.

Good trachers attempt to foster problem-oriented, self directed, actively inquiring patterns of learning behavior in their students.

- •Good teachers elicit pupil-initiated talk and allow more pupil-initiated exploration and trial solutions.
- 'When teachers try to elicit independent thinking from their students, they get it.
- Good teachers involve students in decision-making processes in active, self-directing ways.
- Teachers who are interested in student involvement are less prone to dominate the classroom with lecture and other teacher activities.
- 2. Good teaching encourages maximal "freedom" for the student.
 - •Good teachers use significantly more praise and encouragement for the student.
 - ·They accept, use, and clarify students' ideas more often.
 - •They give fewer directions, less criticism, less justification of the teacher's authority, and less negative feedback.
 - ·They use a relaxed, conversational teaching style.
 - •They use more divergent questions, do more probing, and are less procedural.
 - •They are more inclined to recognize the "affective climate" of the classroom and are responsible to student feelings.
 - •Teachers with low dogmatism scores are more likely to use indirect methods than those with more closed-minded attitudes.
- Good teachers tend to exhibit identifiable personal traits broadly characterized by warmth, a democratic attitude, affective awareness, and a personal concern for students.
 - •Good teachers exhibit characteristics of fairness and democratic behavior.
 - ·They are responsive, understanding, and kindly.
 - ·They are stimulating and original in their teaching.
 - ·They are responsible and systematic.
 - •They are poised and confident, and emotionally self-controlled.
 - ·They are adaptable and optimistic.

•They are well-versed in subject matter and give evidence of a broad cultural background.

In addition, Sandefur (11) recommended an objective and systematic model for evaluating the product of teacher preparation programs in light of the above generalizations. The instruments described in his evaluation model were chosen for their proven worth as research tools and how well they related to these generalizations. He further suggested that teachers be evaluated while engaged in student-teaching as well as after they enter the teaching field.

Western Kentucky University is engaged in an evaluative study designed to determine the feasibility of implementing such a model. The initial phase of the evaluation model is concerned with the preparation program with emphasis on the student teaching experience. Subsequent phases deal with obtaining data from subjects as practicing teachers. This report is specifically concerned with the investigation of information obtained from the initial phase, the student-teaching experience, and the second phase, after one year of teaching experience.

Purpose and Objectives

The purposes of this study were to test the feasibility of conducting the second phase of an evaluation model of the scope and complexity suggested by Sandefur (11), and to compare data obtained from first year teachers with similar data collected while these same teachers were in the preservice program.

The specific objectives were as follows:

I. Gather and report a summation of data on first year teachers who participated in this initial phase of the evaluation model. Data obtained were:

- a. Career base-line data
- b. Authoritarian personality test results.
- c. Ratings of teachers by pupils, peers, and supera visors.
- d. Data on teacher classroom behavior as measured by interaction analysis and the Classroom Observation Record.
- 2. Comparison of data obtained from teachers while in the preservice program and after one year of teaching experience to include:
 - a. Authoritarian personality test results.
 - b. Rating of teachers by pupils, peers, and supervisors.
 - c. Interaction analysis ratios
 - d. Classroom Observation Record
- 3. Provide for the dissomination of data to Western Kentucky University faculty responsible for the preparation of teachers.

Definition of Terms

The following terms are operationally defined for use in this study:

- Phase 1 The initial phase of the evaluation model designed to obtain information on subjects while in the pre-service program. Data was obtained while subjects were studentteaching.
- 2. Phase 2 The second phase of the evaluation model designed to obtain data from subjects near the end of their first year of teaching experience.
- Student teacher supervisor A member of the faculty of Western Kentucky University whose duties include the supervision of student-teachers.
- 4. Cooperating teacher (Phase 1) An elementary or secondary teacher elected to supervise a student-teacher from Western Kentucky University.
- 5. Pupils Students taught by the subjects in this study.
- 6. Observers Personnel employed by the Office of Educational Research, Western Kentucky University, specially trained in the data collecting techniques used in this study.
- 7. Peer teachers (Phase 2) Two teachers from the same school as the subject, one chosen by the subject and the other chosen by the principal.

- B. Supervisor (Phase 2) The person to whom the subject was immediately responsible. In this study the principal was the supervisor in all cases.
- Bi-term one half of a regular semester, approximately eight weeks.

Limitations

The population from which subjects were selected for Phase 1 of this study was limited by the following criteria:

- 1. The student was student-teaching during the second bitem of the spring semester, 1972.
- 2. The student planned to teach in Kentucky during the 1977-1973 school year.
- 3. The student was a resident of Kentucky at least one year prior to entering Western Kentucky University.
- 4. The student voluntarily agreed to participate in this study.

These limitations were imposed on the population to make this study more feasible with regard to future follow-up of subjects. Further, voluntary participation was deemed necessary due to the extensive collection of data and due to the degree of cooperation required from the subjects for subsequent data collection.

Subjects for Phase 2 were limited to those student teachers who participated in Phase 1 of the evaluation model and were employed as teachers in Kentucky schools for the 1972-73 school year.

Hypotheses

In comparing Phase 1 and Phase 2, the following null hypotheses were tested for both the elementary and secondary samples.

H₁: There is no significant difference in authoritarian personality test results as measured in Phase 1 and Phase 2 respectively.

H2: There is no significant difference between Phase 1 and Phase 2 as to cooperating teacher's ratings and peer teacher's ratings.

There is no significant difference between Phase liand Phase 2 for the teaching dimensions:

Subject Matter Competerce

H2b Relations with Students

H_{2c} Appropriateness of Assignments

H2d Overall Effectiveness

Ha: There is no significant difference between Phase I and Phase 2 as to cooperating teacher's ratings and supervisor's ratings.

There is no significant difference between Phase 1 and Phase 2 for the teaching dimensions:

Haa Subject Matter Competence

Relations with Students

Appropriateness of Assignments

Had Overall Effectiveness

There is no significant difference between Phase 1 and Ha: Phase 2 pupil evaluation.

There is no significant difference between Phase 1 and Phase 2 for the dimensions:

Friendly - Cheerful

H_{4b} Knowledgeable - Poised

Lively - Interesting

Firm Control (Discipline) H₄d

H40 H47 Non-Directive (Democratic)

Composite Score

There is no significant difference in data obtained from the Classroom Observation Record for Phase 1 and Phase 2.

There is no significant difference between Phase 1 and Phase 2 for the diminsions:

Apathetic - Alert

Obstructive - Responsive

Uncertain - Confident

H₅d Depending - Initiating

Partial - Fair

Autocratic - Democratic

Aloaf - Responsive

Restricted - Understanding

H5f H5g H5h H5h Harsh - Kindly

Dull - Stimulating Stereotyped - Original Abathetic - Alert Unimpressive - Attractive Evading - Responsive HSO Erratic - Steady HSD Excitable - Poised HSq Uncertain - Confident HST Disorganized - Systematic Hşş Inflexible - Adaptable Mge Pessimistic - Optimistic H5U H5v immature - integrated Nary nw - Broad

Mg: There is no significant difference between Phase 1 and Phase 2 concerning interaction analysis ratios.

There is no significant difference between Phase 1 and Phase 2 concerning the ratios:

H6a Indirect to Direct (1/d)
H6b Indirect to Direct (1/D)
H6c Student Talk to Teacher Talk
H6d Silence to Total
H6e Lecture to Total
H6f Indirect to Total
H6f Direct to Total
H6h Teacher Talk to Total
H6i Student Questions to Student Response
H6i Student Talk to Total

CHAPTER II

METHODS AND PROCEDURES

The purpose of this chapter is to provide a detailed description of the procedures followed in data collection. Part of the data for this study was obtained while subjects were in the pre-service program. Therefore, the following description includes both Phase 1 and Phase 2 methods and procedures. These procedures were designed to demonstrate how the evaluation model was implemented to evaluate Western Kentucky University's Teacher Preparation Program.

Pre-Planning for Phase 1

Numerous preliminary planning sessions were held concerning the conduct of this study with the Dean and Assistant Deans of the College of Education and with Department Heads and various members of the secondary and elementary education departments. Support for the study and suggested procedures were solicited and obtained during these meetings. Following this initial planning period, a formal proposal was prepared and submitted for approval to the Dean of the College of Education. A time schedule was prepared to include deadlines for activities critical to the conduct of this study. This schedule was adhered to throughout the study.

An advisory committee was selected by the researcher to aid in initial planning and to make recommendations concerning administrative details. This committee was composed of members from various departments within the College of Education. Especially helpful were faculty from the

Counselor Education Department and School Administration Department. The Counselor Education Department provided expertise in the administration and interpretation of the F-scale. The School Administration Department provided valuable assistance in project administration and initial contact with schools. A more detailed explanation of how school administration personnel were utilized appears later in this report.

Selection of Subjects for Phase 1

The population for this study was defined as those student-teachers who met the following criteria:

- 1. The student entered practice teaching during the second bi-term of the spring semester, 1972.
- 2. The student planned to teach in Kentucky during the 1972-73 school year.
- 3. The student was a resident of Kentucky at least one year prior to entering Western Kentucky University.
- 4. The student agreed to voluntarily participate in the study.

Each prospective student teacher for the second bi-term of the spring semester was given a questionnaire containing the above four criteria plus name and certification classification (See Appendix A). The majority of the questionnaires were distributed, completed and collected at a meeting held for student teachers during the second week of the spring semester. At this meeting the purpose of the project and the items of the questionnaire were explained. The collected questionnaires were compared with a student teacher roster obtained from the Office of Student Teaching to determine the students from whom questionnaires had not been obtained. Telephone interviews were utilized to obtain the required information from remaining students.

Secondary and elementary student teachers for the second bi-term numbered 432. Of those, 186 students met the criteria for population membership. The first three criteria eliminated 176 students from membership in the population. Thirty-nine students met the first three criteria but chose not to participate in the study. Table 2.1 contains descriptive information concerning population selection. Eighty-three percent of the students who met the first three criteria for population membership volunteered for participation in this study.

TABLE 2.1

Distribution of Student Teachers by Criteria for Population Membership

| | Secondary | Elementary | Total |
|-----------------------------------|-----------|------------|-----------|
| Acceptable | 106 | 80 | 186 |
| Unacceptable | • | | |
| Not Teaching, Second Bi-term | 42 | 2 | 44 |
| Not Planning to teach in Kentucky | 57 | 9 | 66 |
| Non-Resident of Kentucky | 49 | 17 | 66 |
| Non-Volunteer | 24 | <u>15</u> | 39 |
| Sub Total | 172 | 43 | 215 |
| Unable to Contact | 13 | <u>18</u> | <u>31</u> |
| TOTAL | 291 | 141 | 432 |

A stratified random sample of 40 students was obtained from the above defined population. Stratification was based on the type of teaching certification sought. Twenty subjects from each strata, elementary and secondary education majors, were randomly selected. A table of random numbers was used to ensure randomness. Complete data were obtained on 38 of the original 40 subjects. One subject was eliminated because his student teaching assignment was that of supervising students in a shop setting rather than actual classroom teaching. The other subject was eliminated due to illness. A total of 18 secondary and 20 elementary student teachers comprised the sample measured in this study.

Subjects for Phase 2

Subjects for Phase 2 were those participants in Phase 1 who were employed as teachers in Kentucky for the 1972-73 school year. A question-naire was sent to each participant of Phase 1 the last week of September 1972. This questionnaire was designed to obtain information concerning their teaching status. After four weeks, Phase 1 participants who had not returned their questionnaires were contacted by telephone and the required information obtained.

It was determined that fifteen elementary teachers and seven secondary teachers were employed as teachers in Kentucky schools. Thus, 75 percent of elementary subjects and 39 percent of the secondary subjects were employed as teachers for the year following their graduation.

Instrumentation

Instruments and records used for data collection consisted of five general types: a questionnaire, a personality scale, rating scales, direct

classroom observational systems, and transcripts of subjects' grades.

These instruments were selected on the basis of their (a) merit as a research tool, (b) contribution of the data to the objectives of the study, (c) ease of administration, and (d) availability of required data. The following discussion is a description of each instrument utilized to collect data for this study.

Career Base Line Data Questionnaire

A questionnaire was prepared by the researcher to obtain career base line data not readily available from other sources. Items were included that provide information concerning demographic data, professional data, and school and professional activities participation. "Fill-in-the-blank" and "check-the-appropriate-response" items were constructed to facilitate subject completion of the questionnaire. This information was obtained while the subjects were in the pre-service program and updated again at the end of their first year of teaching. Appendix A contains a copy of this instrument.

Transcripts of Grades

A complete transcript of each subject's grades was obtained from the Registrar's Office at the end of the spring semester. Grade point averages (GPA) were computed for the subject's major(s), minor(s), professional education course work, and total grade point average on a 4.0 scale. Their student teaching grades were recorded but were not included in the professional preparation course work GPA.

Personality Scale

The F-scale, forms 45 and 40, was developed by Adorno and others
(1) to measure individual prejudices and antidemocratic tendencies.

This 28 item scale refers to opinions regarding a number of social groups and issues about which some people agree and others disagree. Pespondents answered each item as follows:

- +3 = Strong support, agreement
- +2 = moderate support, agreement
- +1 = slight support, agreement
- -1 = slight opposition, disagreement
- -2 = moderate opposition, disagreement
- -3 = strong opposition, disagreement

The above scoring code was converted to positive numbers by the following method to eliminate negative numbers for statistical analysis:

- +3 = 7
- +2 6
- +1 5
- -1 = 3
- -2 2
- -3 = 1

Reliability of the F-scale was determined by Adorno (1) as .90. A copy of the F-scale, forms 45 and 40, is found in Appendix A.

Rating Scales

Teacher Evaluation by Peer/Supe.visor

Each subject's cooperating teacher was asked to complete the Teacher Evaluation by Peer/Supervisor, a rating form derived from faculty evaluation forms designed at Kansas State Teachers' College (10). This form allowed cooperating teachers, peer teachers, and supervisors to rate subjects concerning three matters of administrative decisions and four

areas of teacher behavior. Sandefur (10, p. 23) has suggested this form be used as a means of collecting rating data on teaching behavior as there appears to be no validated form for obtaining such data available. A copy of this form is found in Appendix A.

Student Evaluation of Teaching

The Student Evaluation of Teaching (SET), developed by Veldman and Peck (15), was utilized to obtain ratings from pupils concerning five dimensions of teacher behavior. Veldman (15, p. 1) describes these dimensions as:

- 1. Friendly and cheerful
- Knowledgeable and poised.
- 3. Lively and interesting
- 4. firm control (discipline)
- 5. Non-Directive (democratic procedure)

The SET was derived from the Pupil Observation Survey Report (POSR) developed by McClain (15). The reliabilities obtained on the POSR, a 38 item instrument, were, respectively .92, .72, .91, .81, and .89. Veldman (15) found that a 10 item instrument, SET, could be used to obtain ratings that were highly correlated with ratings obtained from the POSR. These correlations were .91, .87, .77, .91, and .78 respectively.

Veldman (15) found the SET could be used beginning with grade three if questions were read and explained by the proctor. Data from this instrument were obtained from pupils of subjects teaching grades three and above. Appendix A contains an SET rating form and scoring procedures as suggested by Veldman (15).

Direct Classroom Observational System

Classroom Observation Record

The Classroom Observation Record, developed by Ryans (9), was used

to assess four dimensions of pupil behavior and eighteen dimensions of teacher behavior. Each dimension of pupil and teacher behavior was carefully described and defined in a glossary which accompanied the recording form. A seven scale interval was used to rate each of the pupil and teacher behavior dimensions with an "N" category for dimensions not observed.

(The "N" category was not utilized in this study.) The observers circled the appropriate rating for each dimension immediately after each observation period. An example of this rating form and glossary is given in Appendix A.

Interaction Analysis

A 14 category interaction analysis system was utilized to record observed classroom behavior. This system was suggested by Sandefur (11) and is a combination of Flander's (3) and Hough's (7) systems of interaction analysis. Nine categories of teacher talk, two categories of student talk, and three non-verbal categories were utilized by observers to record classroom behavior. A list of the categories and a recording sheet is located in Appendix A. The observer recorded a numerical value corresponding to a particular category every three seconds or every time the category changed. Thus, an objective record was obtained of the verbal interaction occurring in the classroom. Two 20-minute observations per subject were recorded for this \$tudy.

Frequencies for each category were tallied and a 14 x 14 matrix was developed for statistical treatment. Ten measures of classroom behavior were obtained from the data collected by interaction analysis. Appropriate categories were combined and ratios computed to obtain the following measures:

- 1. i/d = indirect to direct ratio = categories 1 through 3 divided by categories 7, 8, 9.
- 2. I/D = indirect to direct ratio = categories 1 through 5 divided by categories 6 through 9.
- 3. ST/TT = student talk to teacher talk = categories 10, 11 divided by categories 1 through 9.
- 4. Sil/Tot = ratio of silence to total = categories 12, 13, 14 divided by total categories.
- 5. Lec/Tot = Lecture to Total = category 6 divided by total of categories.
- 6. TT/Tot = Teacher Talk to Total = categories 1 through 9 divided by total of categories.
- 7. ST/Tot = Student Talk to Total = categories 10, 11 divided by total of categories.
- 8. SQ/SR = Student Question to Student Response = category 11 divided by category 10.
- 9. i/Tot = Indirect to Total = categories 1, 2, 3 divided by total of categories.
- 10. d/Tot = Direct to Total = categories 7, 8, 9 divided by total categories.

Training of Observers

A team of four observers was utilized for data collection during both Phase 1 and Phase 2. Phase 1 observers consisted of two university faculty members and two graduate assistants from the Office of Educational Research. Observers for Phase 2 were one faculty member and three graduate assistants from the Office of Educational Research. One observer, the project director, was a member of both observer teams. Training for both Phase 1 and Phase 2 was conducted in a similar fashion. A consultant from Kansas State Teacher's College was employed to conduct a concentrated three-day training session approximately

six weeks prior to collecting data. Additionally, bi-weekly practice sessions were held to improve techniques in the use of both instruments. Audio tape recordings, video tape recordings, films, and live observations were utilized during the training periods.

The training procedures for learning interaction analysis closely resembled those suggested by Flanders (4). These procedures included memorization of categories, practice in coding and recording, and discussion of types of behavior as related to the categories. Audio tapes, provided by the consultant, were used in practice sessions in interaction analysis. These tapes provided examples of different types of teaching behavior.

Training in the use of the Classroom Observation Record consisted largely of studying the items and glossary of terms; viewing films, video tapes, and live teaching situations; and discussing the observed teaching behavior to obtain a common point of reference for rating. Numerous practice sessions were conducted to enhance observers' understanding of the items and to obtain observer agreement on the rating of teacher behavior.

Reliability coefficients were computed at two-week intervals for both Phase 1 and Phase 2 to provide a progress check on inter-observer reliability. A final reliability check was made two days prior to the first scheduled observations. Specially selected audio tapes, video tapes, and films were employed to determine observer reliability.

The Scott coefficient, recommended by Flanders (5, p. 161-166), was used to determine inter-observer reliability for a twenty-minute interaction analysis recording session. This method is unaffected by low sequences and is more sensitive at higher levels of reliability for a twenty-minute interaction analysis recording session.

The following two formulae were used in computing "pi":

$$T = \frac{Po - Pe}{1 - Pe}$$

where P_0 is the proportion of agreement and P_e is the proportion of agreement expected by chance and

$$Pe = \sum_{i=1}^{k} P_i^2$$

where K is the number of categories and P_i is the proportion of tallies in each category. Inter-observer reliabilities obtained for Phase 1 were .87, .88, .89, and .92, respectively. Phase 2 inter-observer reliability coefficients were .88, .92, .93, and .94, respectively.

An inter-class correlation technique, suggested by Guilford (6, p. 299-300) was used to determine the intercorrelation of ratings on the Classroom Observation Record. Data from two twenty-minute films were used to obtain reliability coefficients. The inter-class correlation (r) obtained for Phase 1 at each observation was .76 and .77, respectively. The Phase 2 inter-class correlations were .77 and .75, respectively. The average inter-class correlations were .92 and .93, respectively, for Phase 1 and .93 and .90, respectively, for Phase 2.

Collection of Data

Initial data were collected for Phase I during a special meeting attended by subjects, the project director, a graduate assistant, and a faculty consultant from the Counselor Education Department. This meeting was held prior to the subjects' student teaching experience. Subjects were notified by letter of their selection as participants and of the meeting. Five subjects unable to attend the meeting were contacted by telephone and individual appointments were made to obtain the required data.

A detailed explanation of the nature and scope of the project was presented to the subjects and a question and answer period followed.

During the presentation, it was stressed that all individuals' data would be kept in strict confidence. Subjects were asked verbally for voluntary participation a second time, and all present agreed.

The initial data collection included the administration of the career base line data questionnaire and the F-scale. The career base line data questionnaire was distributed, completed by the subjects and collected. Questions pertaining to items contained in the questionnaire were answered by the project director or graduate assistant. The F-scale was administered by a faculty consultant from the Counselor Education Department.

Procedures for completing this instrument were explained and subjects were requested to be honest in their responses. These initial data were placed in folders and stored until all data had been collected.

Administrative Procedures

Administrators in the various school districts where Phase 1 subjects were student teaching and Phase 2 subjects were employed as teachers were made aware of the project and their permission was obtained for observers to enter the required classrooms. This was accomplished both years with the help of four faculty members from the Department of School Administration within the College of Education. These faculty members were each assigned various school districts where subjects were teaching. They were responsible for personally contacting the superintendents and concerned principals in the districts to explain the project and to obtain permission for the conduct of this study. These contacts were made approximately two months prior to observers entering classrooms. In all cases,

administrators within the school districts agreed to cooperate in this project.

The cooperating teachers participating in Phase 1 were also contacted prior to the observation of student teachers to obtain their permission and cooperation. The project director made personal visits to each classroom and explained the project to each cooperating teacher. Tentative times were agreed on for the observations. Cooperating teachers were asked to plan the student teacher's activity so that they were in a teaching situation during the periods they were to be observed. The cooperating teachers were contacted at least six weeks prior to the beginning of observations. In all cases, the cooperating teachers agreed to participate in the project.

The teachers in Phase 2 were contacted by telephone approximately two months prior to the planned visitation period. Times and dates were established for the observation to take place. In each case, the participant agreed to the observation.

vation schedule was determined. Times when observers were available were scheduled to correspond to times set for appointments. For Phase 1 subjects, the majority of the observations were obtained during the fifth and sixth weeks. All observations were completed at the end of the seventh week.

Phase 2 subjects were scheduled for observations during the last two weeks in March and first week in April, 1973. The observation schedule was met for all but one of the Phase 2 subjects. Because of scheduling difficulties, data for one subject was not obtained until the latter part of April.

Observation of Subjects

Both in Phase 1 and Phase 2, two observations were made during the scheduled time period. Both observations were of the same class and at the same time of the day. A twenty-minute interaction analysis recording and ratings from the Classroom Observation Record were obtained at each observation. The observer began the interaction analysis five to ten minutes after the class started. The COR was completed at the end of each class.

The SET was administered to the pupils during the last ten minutes at the second observation. Pupils were instructed on completing the form and were requested not to sign their names. For grades three and four, each item was read to the students before they circled the response.

Neither Phase I subjects nor Phase 2 subjects were present in the class-room when the SET was administered. Pupils were assured that information would be kept confidential.

The TEPS was completed by cooperating teachers for Phase 1 subjects at the last observation period. For Phase 2 subjects, TEPS information was obtained from peer teachers and their immediate supervisor. One peer teacher was selected by the subject and the other by the subject's supervisor. In all cases, the supervisor for Phase 2 subjects was the principal of the school in which the subjects were teaching. The peer teachers and supervisors had a choice of completing the TEPS during the last observation period, which was during school hours, or completing the form at their leisure and mailing it to the Office of Educational Research, Western Kentucky University.

Analysis and Dissemination of Data

At the completion of the Phase 2 data collection period, instruments were scored and data key punched onto computer cards. Phase 1 and Phase 2 data were placed onto computer disc for ease of access and storage. Appropriate computer programs were used to obtain means, standard deviations, and/or frequency counts for variables measured in Phase 2. A repeated measures program, prepared by Dayton (2, p. 246-256) was employed to compare data obtained in Phase 1 and Phase 2. Results from the analysis of data are presented in Chapter III of this report.

A major objective of this study was to provide for the dissemination of data to faculty concerned with elementary and secondary education programs. A copy of this report will be made available to faculty in the Elementary and Secondary Education Departments. Each department will be asked to prepare a written response to this report to include:

- 1. How well does this report contribute to the measurement of departmental objectives?
- 2. Are there requests for additional analysis of data to further study the variables measured?
- 3. Are there suggestions for the addition of variables not measured and/or for the deletion of variables not considered useful?
- 4. What are the suggested changes in the preparation program that will enhance the desired outcomes of graduates?

The written response is to be presented to the Dean of the College of Education and to the director of this project. The proposed course of action will be reviewed by the faculty and administration of the College of Education prior to the 1974-1975 academic year. Decisions will be made on curriculum revision based on the proposed plan.

The determination of the success of this report in aiding faculty in making decisions concerning curriculum change is beyond the scope of this report. However, the provision for dissemination of results has been established.

CHAPTER III

RESULTS

This chapter is devoted to the presentation and discussion of data collected in this study. Since secondary and elementary education students generally followed different programs of study and the summary data indicates hetergeneous grouping, analysis of data for secondary and elementary subjects is reported separately. Data that provide demographic information of possible interest to the reader, but are not directly related to the objectives of this study, are included in Appendix B.

Data analysis and discussion appears under the heading of the instrument used to collect the data. The following is a list of those instruments:

- 1. F-scale authoritarian personality test results.
- Teacher Evaluation by Peer/Supervisor ratings on four dimensions of teaching behavior by cooperating teachers and supervisors and peers of first year teachers.
- Student Evaluation of Teaching ratings obtained from pupils of subjects on five dimensions of teaching behavior.
- 4. Classroom Observation Record ratings of four pupil behavior dimensions and 18 teacher behavior dimensions by trained observers.
- 5. Interaction Analysis description of teacher classroom behavior utilizing 10 ratios computed from 14 behavior categories recorded by the observers.

Generally findings will be discussed and followed by summary data presented in tabular form. Each table contains means, standard deviations, F-values, and probability levels (N.S., .05, .01) for each of the variables investigated. F-values were computed using a repeated measures

test of significance between means. Complete source tables for F-value calculations are contained in Appendix C.

F-Scale

When data obtained from the F-scale were subjected to analysis, a significant difference at the .01 level occurred between Phase 1 and Phase 2 for elementary subjects. Secondary subjects showed a small or insignificant change. Since the mean for elementary subjects was rather large for Phase 1 (\overline{X} =104.33), part of the difference could be attributed to natural regression toward the mean for Phase 2. However, a determination of the reasons for elementary subjects scoring highly authoritarian or the significant decrease in means from Phase 1 to Phase 2 are beyond the scope of this study. In light of the findings presented in Table 3.1, the null hypothesis, H_1 is rejected for elementary subjects, but retained for secondary subjects.

Teacher Evaluation by Peer/Supervisor

The Teacher Evaluation by Peer/Supervisor (TEPS) was administered to the subject's cooperating teachers during Phase 1 and to supervisors (principals) and peer teachers working with the subjects during Phase 2. Comparisons made between Phase 1 data and Phase 2 data are reported for supervisors and peers for both elementary and secondary subjects.

Peer Teacher and Cooperating Teacher Comparison

Summary analysis of data from the TEPS for peer teachers is contained in Tables 3.2 and 3.3 for elementary and secondary subjects, respectively. No significant differences were noted for either elementary or secondary subjects when cooperating teachers' ratings from Phase 1 were compared with peer teachers' ratings from Phase 2. The mean ratings were high for both cooperating and peer ratings as a five point rating scale was used to obtain ratings on the four dimensions of teaching. The null hypotheses H₂ was retained for peer teacher comparisons.

Supervisor and Cooperating Teacher Comparisons

Tables 3.4 and 3.5 contain data comparisons for cooperating teachers and supervisors. There were no significant differences evident for elementary subjects on any of the four dimensions measured and the null hypothesis H_3 was retained. For secondary subjects, however, a significant difference at the .05 level of confidence was detected for the dimension "Relations with Students." The null hypothesis H_3 was rejected for secondary subjects indicating that principals rated first year teachers lower than cooperating teachers rated student teachers on the dimension of student relations. The null hypothesis was retained for each of the other variables measured by the TEPS.

Student Evaluation of Teaching

Nata obtained from the Student Evaluation of Teaching were analyzed for change between Phase 1 and Phase 2. None of the dimensions tested were found to be significantly different from Phase 1 to Phase 2 for elementary subjects, and the null hypothesis H_4 was retained. There was a significant difference in pupil's preception of secondary subjects for the SET dimension "Lively and Interesting." Hypothesis H_4 was rejected at the .05 level of probability. The other null sub-hypotheses under H_4 were retained for secondary subjects. In the case of the elementary subjects, the probability of making a Type II error was increased due to the small sample size.

It can be noted that pupil's preceptions of teaching behavior were generally lower in Phase 2 for both secondary and elementary subjects.

Many factors may have contributed to this occurrence in the data. There was a difference in the length of time that the subject had been with the pupils when observations were made during Phase 1 and Phase 2.

Also, in Phase 1 the cooperating teacher's presence may have had an influence on the pupil's preceptions of the subject. However, it is the author's opinion that as more data are collected, these differences will be substantiated. Table 3.6 and Table 3.7 contain the summary analysis of data for elementary and secondary subjects, respectively.

Classroom Observation Record

From Table 3.8 and Table 3.9, one dimension of pupil behavior and two dimensions of teacher behavior were found to differ significantly from Phase 1 to Phase 2 for both elementary and secondary subjects.

Elementary subjects were found to decrease significantly in the areas of

student alertness, teacher fairness, and the teacher's demonstrated knowledge of subject. Secondary subjects, however, increased from Phase 1 to Phase 2 in the areas of student confidence, teacher adaptability, and the teacher's demonstrated knowledge of subject. The null hypotheses rejected were H_{5a} , H_{5e} , and H_{5v} for elementary subjects, and H_{5c} , H_{5s} , and H_{5v} for secondary subjects.

Interaction Analysis

No significant differences were found when Phase 1 and Phase 2 interaction analysis ratios were compared for elementary and secondary subjects. Table 3.10 and Table 3.11 contain these comparisons, respectively. Only in the proportion of lecture (8, Table 3.10) was there an indication of differences between phases for elementary subjects. The null hypothesis, H_6 , was retained for elementary subjects.

A somewhat different picture was presented in Table 3.11 than in Table 3.10. When interaction analysis ratios were compared for secondary subjects, there were a number of areas where differences between ratios approached significance. It should also be noted that the mean and standard deviation of the "i/d ratio" (1, Table 3.11) for Phase 1 was inflated as compared to Phase 2. An extreme score made by one subject was found to be the cause of this rather large discrepancy. While a number of F-values approached significance, the null hypothesis, H₆, was also retained for secondary subjects.

CHAPTER 4

SUMMARY AND CONCLUSIONS

This project was an effort to field-test a theoretical model suggested in an AACTE publication entitled <u>An Illustrated Model for the Evaluation of Teacher Education Graduates</u> (11). Both the theoretical model and the Western Kentucky field-test were the outgrowth of a national concern for the evaluation of teacher education graduates. The concern for evaluation was given impetus by Standard 5.1 of the revised Recommended Standards for Teacher Education (13). That standard specifically called for a systematic evaluation of the product of teacher education programs with provisions for feedback to the ongoing programs.

In the three years since the implementation of the new revised standards, hundreds of institutional cases presented to the NCATE Evaluation Boards and ultimately to the NCATE Council, have provided evidence that institutions have not known how to cope with the intent of Standard 5.1. The Western Kentucky University Teacher Preparation Evaluation Program has been an effort to demonstrate that a systematic evaluation of demonstrable teaching ors can be accomplished. The model was based on generalizations drawn from research on what constitutes good teaching and good teachers. The data was obtained from varied sources, but the primary sources were direct classroom observation systems including interaction analysis, the Classroom Observation Record, and student evaluations. The data collection procedures, storage and retrieval of data, and analysis and dissemination procedures constitute a workable management modle for the evaluation of teachers.

The general purpose of this study was to test the feasibility of implementing an evaluation model of the scope and complexity as suggested by Sandefur (11). The successful completion of data collection and analysis is evidence that such a program is not only feasible, but may be implemented with minimal commitment of resources. The large data file available for study by faculty is also indicative of the value of this system.

A second objective of this project was to compare data obtained in Phase 2 with Phase 1 data to determine what changes, if any, were evident between student teaching and after a year of experience. The following conclusions were drawn within the limitations of this study:

- 1. Elementary teachers become less authoritarian after one year of teaching experience.
- 2. There is no difference between cooperating teacher's ratings of student teaching behavior and peer and supervisor ratings after one year of teaching.
- 3. Secondary supervisor's ratings are lower than cooperating teacher's ratings for the teaching dimension "Relations with Students."
- 4. Pupils do not rate elementary or secondary teachers differently after one year of teaching experience compared to ratings obtained during student teaching.
- 5. Ratings of elementary teachers decreased in the areas of student alertness, teacher fairness and teacher's demonstrated knowledge of subject after one year of teaching experience.
- 6. Classroom interaction does not differ after one year of teaching experience for elementary or secondary subjects.

It is recognized that the small number of subjects in this project allows for only tentative conclusions to be drawn. Additionally, it is recognized that the hypotheses tested are not a comprehensive treatment of the variables measured. However, as this system continues to provide additional data more definite conclusions concerning teaching behavior

1 ...

may be made. Relationships among variables and factors related to effective teaching may be studied and programs changed to provide educational experiences needed to produce teachers with desired competencies.

The following statements refer to opinions regarding a number of social groups and issues, about which some people agree and others disagree. Please mark each statement in the left-hand margin according to your agreement or disagreement as follows:

- +1: slight support, agreement
- +2: moderate support, agreement
- +3: strong support, agreement
- -1: slight opposition, disagreement
- -2: moderate opposition, disagreement

| | | -3: strong opposition, disagreement |
|---------------|-------------|---|
| | _1. | Obedience and respect for authority are the most important virtues children should learn. |
| | _2. | A person who has bad manners, habits, and breeding can hardly expect to get along with decent people. |
| | _3. | If people would talk less and work more, everybody would be better off. |
| | 4. | The business man and the manufacturer are much more important to society than the artist and the professor. |
| = | _5. | Science has its place, but there are many important things that can never be understood by the human mind. |
| ·· <u>·</u> | _6. | Every person should have complete faith in some super-natural power whose decisions he obeys without question. |
| | _7. | Young people sometimes get rebellious ideas, but as they grow up they ought to get over them and settle down. |
| | _8• | What this country needs most, more than laws and political programs, is a few courageous, tireless, devoted leaders in whom the people can put their faith. |
| | _9 . | Nobody every learned anything really important except through suffering. |

No sane, normal, decent person could ever think of hurting a close

and the will to work and fight for family and country.

An insult to our honor should always be punished.

What the youth needs most is strict discipline, rugged determination

10.

11.

friend or relative.

| 13. | Sex crimes, such as rape and attacks on children, deserve more than |
|-----|--|
| | mere imprisonment; such criminals ought to be publicly whipped, or worse. |
| 14. | There is hardly anything lower than a person who does not feel a great love, gratitude, and respect for his parents. |
| 15. | Most of our social problems would be solved if we could somehow get rid of the immoral, crooked, and feeble-minded people. |
| 16. | Homosexuals are hardly better than criminals and ought to be severely punished. |
| 17. | When a person has a problem or worry, it is best for him not to think about it, but to keep busy with more cheerful things. |
| 18. | Nowadays more and more people are prying into matters that should remain personal and private. |
| 19. | Some people are born with an urge to jump from high places. |
| 20. | People can be divided into two distinct classes: the weak and the strong. |
| 21. | Some day it will probably be shown that astrology can explain a lot of things. |
| 22. | Wars and social trouble may someday be ended by an earthquake or flood that will destroy the whole world. |
| 23. | No weakness or difficulty can hold us back if we have enough will power. |
| 24. | Most people don't realize how much our lives are controlled by plots hatched in secret places. |
| 25. | Human nature being what it is, there will always be war and conflict. |
| 26. | Familiarity breeds contempt. |
| 27. | Nowadays when so many different kinds of people move around and mix together so much, a person has to protect himself especially carefully against catching an infection or disease from them. |
| 28. | The wild sex life of the old Greeks and Romans was tame compared to some of the goings-on in this country, even in places where people might least expect it. |

Teaching is the most important task of the school. In order to help the school to be informed regarding the quality of its teaching, you are requested to indicate your opinion of this instructor's performance in the four important dimensions of teaching described on the following pages. The highest rating is number 5; the lowest is number 1. Please encircle the number that represents your opinion of the instructor. Three of the five ratings for each dimension are described by words and phrases printed to the left of the numbers. The intermediate numbers may also be used for the expression of your opinions.

| DIMENSIONS OF TEACHING | DESCRIPTIVE WORDS AND PHRASES | RATING |
|----------------------------|---|--------|
| Subject Matter Competence | Thorough, broad, and accurate knowledge of theory and practice; very able to organize, interpret, explain and illustrate concepts and relationships. | 5 |
| | J PG V | 4 |
| | Adequate understanding; most interpretations and explanations are clear | 3 |
| | | 2 |
| | Knowledge of subject is limited; does not give clear explanations and illustrations. | 1 |
| | | |
| Relations with Students | Excellent rapport; feeling of good-will prevails; very interested in students; easily approached; students are challenged yet individuality is respected. | 5 |
| | in respected. | 4 |
| | Adequate rapport shows some interest in students; usually approachable; students are encouraged to participate; shows some sense of humor | 3 |
| | | 2 |
| | Seems unfriendly and unresponsive; impatient; sometimes antagonizes students; too busy to be helpful. | 1 |
| | | |

| DIMENSIONS OF TEACHING | DESCRIPTIVE WORDS AND PHRASES | RATING |
|--|--|--------|
| Appropriateness of Assignments and Academic Expectations | Assignments are challenging; he allows for differences of ability but expects superior achievement; stresses important topics and concepts and avoids giving time to trivial details; demands critical and analytical thought; tests seem valid. | 5 |
| | Most assignments are clear, reasonable and related to class work; expects understanding not memorization; recognizes individual dif- | 3 |
| | ferences among students but generally seems to ignore them; tests are usually re- lated to assignments and class work. | |
| | Assignments are unrealistic, often not clear, not related to class work; students do not know what the teacher expects; tests seem unrelated to assignments and class work. | 2 |
| | | |
| Overal Classroom Effectiveness | Lessons are carefully planned and show definite purpose; words come easily; well-organized ideas and concepts are clearly related; enthusiastic and stimulating; raises thought provoking questions; discussions are lively; pleasing manner, free from annoying mannerisms. | 5 |
| | Usually well-prepared, pur- | 4 3 |
| | poses are usually clear; presentations are fairly well- organized; encourages student participation; objectionable mannerisms are not serious or numerous; asks some good | |
| | questions. | 2 |

| DIMENSIONS OF TEACHING | DESCRIPTIVE WORDS AND PHRASES | RATING |
|------------------------|--|--------|
| | Lessons not planned, purposes are lacking or vague; relational ships of concepts are not explained; asks few questions; subject seems uninteresting to him; repeatedly exhibits annoying mannerisms. | 1 . |
| | | |

You may wish to comment further on this instructor's teaching performance. If so, you may use the space below and the back of this page.

STUDENT EVALUATION OF TEACHING

D. J. VELDMAN and R. F. PECK

| TEACHER'S LAST NAME: | |
|--------------------------------|------------|
| SUBJECT: | |
| SCHOOL: | |
| r | |
| CIRCLE THE RIGHT CHOICES BELOW | |
| Teacher's Sex: . M F | DO NOT USE |
| | |
| My Sex: M F | |
| My Grade Level: | |
| 3 4 5 6 7 8 9 10 11 12 | |

CIRCLE ONE OF THE FOUR CHOICES IN FRONT OF EACH STATEMENT. THE FOUR CHOICES MEAN: F. -- Vor. Much Folso

F = Very Much False
f = More False Than True
t = More True Than False
T = Very Much True

This Teacher:

| F | f | ŧ | T | is always friendly toward students. |
|---|---|---|---|--|
| F | f | t | T | knows a lot about the subject. |
| F | f | ŧ | T | is never dull or boring. |
| F | f | t | T | expects a lot from students. |
| F | f | t | T | asks for students' opinions before making decisions. |
| F | f | t | T | is usually cheerful and optimistic. |
| F | f | t | T | is not confused by unexpected questions. |
| F | f | t | T | makes learning more like fun than work. |
| F | f | t | T | doesn't let students get away with anything. |
| F | f | t | T | often gives students a choice in assignments. |

Scoring the SET

The Student Evaluation of Teachers (SET) was scored, as suggested by Veldman (16), in the following manner:

1) The responses were assigned the following values:

F=:

f=2

t=3

T=4

- 2) Means of each of the ten items were completed.
- 3) Item means are multiplied by 100.
- 4) These scores are then paired according to the dimension of teaching they are measuring. ie

Item 1 with Item 6

Item 2 with Item 7

Item 3 with Item 8

Item 4 with Item 9

Item 5 with Item 10

and the mean is found for each dimension.

5) In addition to scores on the five dimensions, a composit score was obtained by finding the mean of all ten item means.

(To be used with classroom observation record.)

Pupil Johnviors

1. Apathetic-Alert Pupil Behavior

Apathetic

- Listless.
- Cored-acting.
 Enter into activities half-heartedly.
- 4. Restless.
- attention wanders.
- 6. Slow in getting under way.
- 2. Obstructive-Responsible Pupil Behavior

Obstructive

- 1. Rude to one another and/or to reacher.
- 2. Interrupting; demanding attention; disturbing.
- 3. Obscinace; sullen.
- kefusal to participate.
- 5. Quarrelsome; irritable.
- 6. Engaged in name-calling and/or tattling.
- 7. Unprepared
- Uncertain-Confident Pupil Behavior

Uncertain

- 1. Seem airaid to try; unsure.
- 2. Hesitane; restrained.
- 3. Appear embarrassed.
- Frequent display of nervous habits, nail-biting, etc.
- Appear shy and timid. 5.
- hesitant and/or stammering speech.
- Dependent-Initiating Pupil Behavior

P. pen.cont

- 1. Rely on teacher for explicit directions.
- 2. Show little ability to work things cut for selves.
- 3. Unable to proceed when initiative called for.
- Appear reluctuat to take lead or to accept responsibility.

alert

- .. Appear anxious to recite and participate.
- Watch teacher attentively.
- Work concentratedly.
- Seem to respond eargerly.
- Prompt and ready to take part in activities when they begin.

Responsible

- i. Courteous, co-operative, friendly with each other and with teacher.
- 'Complete assignments without complaining or unhappiness.
- 3. Controlled voices.
- Received help and criticism attentively.
- Asked for help when needed.
- Orderly without specific directions from teacher.
- Prepared.

Confident

- Seem enxious to try new problems or activities.
- 2. Undisturbed by mistakes.
- 3: Volunteer to recite.
- 4. Enter freely into activities.
- 5. Appear relaxed.
- 6. Speak with assurance.

Initiating

- Volunteer ideas and suggestions.
- 2. Showed resourcefulness.
- Take lead willingly.
- 4. Assume responsibilities without evasion.

Teacher Behaviors

5. Partial-Fair Teacher Behavior

Partial

- 1. Repeatedly slighted a pupil.
- Corrected or criticized certain pupils repeatedly.
- Repeatedly gave a pupil special advantages:
- Gave most attention to one or a few pupils.
- Showed prejudice (favorable or unfavorable) towards some social, racial, or religious groups.
- Expressed suspicion of motives of a pupil.

hrr.

6. Autocratic-Democratic Teacher Behavior

Autocratic

- 1. Tells pupils each step to take.
- 2. Intolerant of pupils' ideas.
- Mandatory in giving directions; orders to be obeyed at once.
- Interrupted pupils although their discussion was relevant.
- Always directed rather than participated.

7. Aloof-Responsive Teacher Behavior

Aloof

- Stiff and formal in relations with pupils.
- 2. Apart; removed from class activity.
- 3. Condescending to pupils.
- Routine and subject matter only concern; pupils as persons ignored.
- Referred to pupil as "this child" or "that child."

Fair

- 1. Treated all pupils approximately equally.
- In case of controversy pupil allowed to explain his side.
- 3. Distributed attention to many pupils.
- 4. Rotated leadership impartially.
- Based criticism or praise on factual evidence, not hearsay.

Democratic

- 1. Guided pupils without being mandatory.
- Exchanged ideas with pupils.
- 3. Encouraged (asked for) pupil opinion.
- 4. Encouraged pupils to make own decisions.
- 5. Entered into activities without domination.

Responsive

- 1. Approachable to all pupils.
- 2. Participates in class activity.
- Responded to reasonable requests and/or questions.
- 4. Speaks to pupils as equals.
- 5. Commends effort.
- 6. Gives encouragement.
- 7. Recognized individual differences.

8. Restricted-Understanding Teacher Behavior

Restricted

- Recognized only academic accomplishments of pupils; no concern for personal problems.
- Completely unsympathetic with a pupil's failure at a task.
- Called attention only to very good or very poor work.
- 4. Was impatient with a pupil.

Understanding

- Showed awareness of a pupil's personal emotional problems and needs.
- 2. Was tolerant of error on parc of pupil.
- Patient with a pupil beyond ordinary limits of patience.
- Showed what appeared to be sincere sympathy with a pupils' viewpoint.

9. Harsh-Kindly Teacher Behavior

Harsh

- 1. Hypercritical; fault-finding.
- 2. Cross; curt.
- 3. Depreciated pupil's efforts; was sarcastic.
- 4. Scolds a great deal.
- 5. Lost temper.
- 6. Used threats.
- 7. Permitted pupils to laugh at mistakes of others.

10. Dull-Stimulating Teacher Behavior

Dul1

- 1. Uninteresting, monotonous explanations.
- Assignments provide little or no motivation.
- 3. Fails to provide challenge.
- Lack of animation.
 Failed to capitalize on pupil interests.
- 6. Pedantic, boring.
- 7. Lacks enthusiasm; bored acting.

Stimulating

Kindly

1. Goes out of way to be pleasant and/or to

Give a pupil a deserved compliment.

3. Found good things in pupils to call atten-

Seemed to show sincere concern for a pupil's

Showed affection without being demonstra-

6. Disengaged self from a pupil without blunt-

help pupils; friendly.

personal problem.

tion to.

ness.

5.

- 1. Highly interesting presentation; gets and holds attention without being flashy.
- Clever and witty, though not smart-alecky or wise-cracking.
- 3. Enthusiastic; animated.
- Assignments challenging.
- 5. Took advantage of pupil interests.
- Brought lesson successfully to a climax.
- Seemed to provoke thinking.

11. Stereotyped-Original Teacher Behavior

Stereotyped

- 1. Used routine procedures without varia-
- 2. Would not depart from procedure to take advantage of a relevant question or situation.
- 3. Presentation seemed unimaginative.
- 4. Not resourceful in answering questions or providing explanations.

12. Apathetic-Alert Teacher Behavior

Apathetic

- 1. Seemed listless; languid; lacked enthusiasm.
- 2. Seemed bored by pupils.
- 3. Passive in response to pupils.
- 4. Scemed preoccupied.
- 5. Attention seemed to wander.6. Sat in chair most of time; took no active part in class activities.

Original

- 1. Used what seemed to be original and relatively unique devices to aid instruction.
- 2. Tried new materials or methods.
- Seemed imaginative and able to develop 3. presentation around a question or situa-
- 4. Resourceful in answering question; had many pertinent illustrations available.

<u>Alert</u>

- 1. Appeared buoyant; wide-awake; enthusiastic about activity of the moment.
- 2. Kept constructively busy.
- 3. Gave attention to, and seemed interested in, what was going on in class.
- Prompt to "pick up" class when pupils' attention showed signs of lagging.

13. Unimpressive-Attractive Teacher Behavior

Unimpressive

- 1. Untidy or sloppily dressed.
- 2. Inappropriately dressed.
- 3. Drab, colorless.
- 4. Posture and bearing unattractive.
- 5. Possessed distracting personal habits.
- Mumbled; inaudible speech; limited expression; disagreeable voice tone; poor inflection.

14. Evading-Responsible Teacher Behavior

Evading

- Avoided responsibility; disinclined to make decisions.
- "Passed the buck" to class, to other teachers, etc.
- Left learning to pupil, failing to give adequate help.
- Let a difficult situation get out of control.
- 5. Assignments and directions indefinite.
- No insistance on either individual or group standards.
- 7. Inattentive with pupils.
- 8. Cursory.

15. Erratic-Steady Teacher Behavior

Erratic

- Impulsive; uncontrolled; temperamental; unsteady.
- Course of action easily swayed by circumstances of the moment.
- Inconsistent.

16. Excitable-Poised Teacher Behavior

Excitable

- Easily disturbed and upset; flustered by classroom situation.
- Hurried in class activities; spoke rapidly using many words and gestures.
- 3. Was "jumpy"; nervous.

17. Uncertain-Confident Teacher Behavior

Uncertain

- Seemed unsure of self; faltering, hesitant.
- 2. Appeared timid and shy.
- 3. Appeared artificial.
- Disturbed and embarrassed by mistakes and/or criticism.

Attractive

- 1. Clean and neat.
- 2. Well-groomed; dress showed good taste.
- 3. Posture and bearing attractive.
- 4. Free from distracting personal habits.
- Plainly audible speech; good expression; agreeable voice tone; good inflection.

Responsible

- Assumed responsibility; makes decisions as required.
- 2. Conscientious.
- 3. Punctual.
- 4. Painstaking; careful.
- 5. Suggested aids to learning.
- 6. Controlled a difficult situation.
- 7. Gave definite directions.
- 8. Called attention to standards of quality.
- 9. Attentive to class.
- 10. Thorough.

Steady

- 1. Calm; controlled.
- 2. Maintained progress toward objective.
- 3. Stable, consistent, predictable.

Poised

- 1. Seemed at ease at all times.
- Unruffled by situation that developed in classroom; dignified without being stiff or formal.
- Unhurried in class activities; spoke quietly and slowly.
- 4. Successfully diverted attention from a stress situation in classroom.

Confident

- Seemed sure of self; self-confident in relations with pupils.
- Undisturbed and unembarrassed by mistakes and/or criticism.

Figure 2 (Continued)

18. Disorganized-Systematic Teacher Behavior

Disorganized

- 1. No plan for class work.
- 2. Unprepared.
- Objectives not apparent; undecided as to next step.
- 4. Wasted time.
- 5. Explanations not to the point.
- 6. Easily distracted from matter at hand.

19. Inflexible-Adaptable Teacher Behavior

Inflexible

- 1. Rigid in conforming to routine.
- Made no attempt to adapt materials to individual pupils.
- Appeared incapable of modifying explanation or activities to meet particular classroom situations.
- 4. Impatient with interruptions and digressions.

20. Pessimistic-Optimistic Teacher Behavior

Pessimistic

- 1. De lessed; unhappy.
- 2. Skeptical.
- 3. Called attention to potential "bad."
- Expressed hopelessness of "education today," the school system, or fellow educators.
- 5. Noted mistakes; ignored good points.
- o. Frowned a great deal; had unpleasant facial expression.

21. Immature-Integrated Teacher Behavior

Immature

- Appeared naive in approach to classroom situations.
- 2. Self-pitying; complaining; demanding.
- Boastful; conceited.

22. Narrow-Broad Teacher Behavior

Narrow

- Presentation strongly suggested limited background in subject or material; lack of scholarship.
- -2. Did not depart from text.
- Failed to enrich discussions with illustrations from related areas.
- Showed little evidence of breadth of cultural background in such areas as science, arts, literature, and history.
- Answers to pupils' questions incomplete or inaccurate.
- 6. Noncritical approach to subject.

Systematic

- Evidence of a planned though flexible procedure.
- 2. Well prepared.
- 3. Careful in planning with pupils.
- 4. Systematic about procedure of class.
- 5. Had anticipated needs.
- 6. Provided reasonable explanations.
- Held discussion together; objectives apparent.

<u>Adaptable</u>

- 1. Flexible in adapting explanations.
- Individualized materials for pupils as required; adapted activities to pupils.
- 3. Took advantage of pupils' questions to further clarify ideas.
- Met an unusual classroom situation competently.

Optimistic

- 1. Cheerful; good-natured.
- 2. Genial.
- 3. Joked with pupils on occasion.
- 4. Emphasized potential "good."
- Looked on bright side; spoke optimistically of the future.
- Called attention to good points; emphasized the positive.

Integrated

- Maintained class as center of activity; kept self out of spotlight; referred to class's activities, not own.
- 2. Emotionally well controlled.

Broad

- Presentation suggested good background in subject; good scholarship suggested.
- Drew examples and explanations from various sources and related fields.
- Showed evidence of broad cultural background in science, art, literature, history, etc.
- 4. Gave satisfying, complete, and accurate answers to questions.
- Was constructively critical in approach to subject matter.

| Catego | ory Nu | mber Description of Verbal Behavior |
|--------|--------|--|
| 1 | т | ACCEPTS FEELING: accepts and clarifies the feeling and tone of students in a nonthreatening manner. Feelings may be positive or negative. Predicting and recalling feelings are also included. |
| 2 | E | PRAISES OR ENCOURAGES: praises or encourages student action or behavior. Jokes that release tension not at the expense of another individual, nodding head or saying "uh-huh" or "go on" are |
| 3 | С | included. ACCEPTS OR USES IDEAS OF STUDENT: clarifying, building on, developing and accepting ideas of students. |
| 4 | H E | ASKS QUESTIONS: asking a question about content or procedure with the intent that the student should answer. |
| 5 | R | ANSWERS STUDENT QUESTIONS: direct answers to questions regarding content or procedure asked by students. |
| 6 | | LECTURES: giving facts or opinions about content or procedures; expressing his own ideas; asking rehetorical questions. |
| 7 | T A | CORRECTIVE FEEDBACK: telling a student that his answer is wrong when the incorrectness of the answer can be established by other than opinion, i.e., empirical validation, definition or custom. |
| 8 | L K | GIVES DIRECTIONS: directions, commands or orders to which a student is expected to comply. |
| 9 | | CRITICIZES OR JUSTIFIES AUTHORITY: statements intended to change student behavior from a non- |

Summary of the 14 Categories in the Observational System for the Analysis of Classroom Instruction.

| | | acceptable to an acceptable pattern; bawling out someone; stating why the teacher is doing what he is doing so as to achieve or maintain control; rejecting or criticizing a student's opinion or judgment. |
|----|---|---|
| 10 | S T T U A D L E K | STUDENT TALK: talk by students in response to requests or narrow teacher questions. The teacher initiates the contact or solicits student's statement. |
| 11 | N T | STUDENT QUESTIONS: questions concerning content or procedure that are directed to the teacher. |
| 12 | N O N F | DIRECTED PRACTICE OR ACTIVITY: non-verbal behavior requested or suggested by the teacher. This category is also used to separate student to student response. |
| 13 | U N C T I O N A L | DEMONSTRATION: silence during periods when visual materials are being shown or when non-verbal demonstration is being conducted by the teacher |
| 14 | O N A L | SILENCE OR CONFUSION: pauses, short periods of silence and periods of confusion in which communication cannot be understood by the observer. |
