IDENTIFIERS *Pulpwood Harvesting

ABSTRACT

A brief introductory section contains the rationale for the course, the curriculum framework, a curriculum paradigm which indicates the approximate time ranges for each section, and notes on use of the guide. The guide itself is divided into units and subunits covering the following areas: Orientation to Pulpwood Harvesting; Tree Identification; Buying Pulpwood Timber (cruising, planning the legal aspects, establishing price, and exploring careers); Harvest Planning and Management (system selection, machinery and equipment selection, operational planning, cost analysis, records and insurance, and exploring careers); Harvest Operations (felling, limbing, and bucking, skidding and prehauling, loading and hauling, and exploring careers); and Pulpwood Mechanics (general shop skills, engine principles, small gasoline engines, engine troubleshooting and repair, hydraulics, major systems of a vehicle, machinery and equipment maintenance, and exploring careers). The material covered is presented under four headings: objectives, learning activities, topics, and resources. Additional resources are listed at the end of each subunit. Appendixes include a list of necessary facilities and equipment, a partial listing of professional and technical organizations, and a bibliography. (SA)

Pulpwood Harvesting

A Curriculum Guide

Preliminary Draft

Prepared by:

State Department of Education
Office of Vocational Education
Agricultural Education Section
Columbia, South Carolina 29201

In Cooperation With:

Vocational Education Media Center
Clemson University
Clemson, South Carolina 29631

1973

Foreword

This curriculum guide was developed as a part of a larger project to revise the total agricultural education curriculum in South Carolina. The project was designed to implement the following changes:

- provide a more comprehensive vocational offering
- place a greater emphasis on behavioral objectives
- place a greater emphasis on learning activities
- encourage an inductive approach to teaching
- result in the re-identification of the units of instruction

Units of instruction for each course were developed which include behaviorally stated objectives, suggested learning activities, a topic outline, and suggested resources.

Frank R. Stover, State Supervisor
Agricultural Education

Acknowledgements

Grateful appreciation is extended to the following persons who contributed to the development of the guide:

Mr. D. N. Haltiwanger, Walterboro High School, Walterboro, South Carolina; Mr. R. T. Johnson, Colleton Area Vocational School, Walterboro, South Carolina; Mr. H. S. Clinkscales, Crescent High School, Starr, South Carolina.

Mr. W. R. Carter who coordinated the development of the guide.

The final copy was edited by Dr. R. J. Mercer, Vocational Instructional Materials Specialist, Vocational Education Media Center, Clemson, South Carolina.

Illustrations were prepared by R. D. Mattox, Art Director, Vocational Education Media Center, Clemson, South Carolina.

Rationale for the Course

Pulpwood as a crop is sold and harvested in every county in South Carolina. Production has increased from 50,000 to 2.4 million cords over the last 35 years. Increased mechanization of harvesting operations and advances in forest management technology demand trained personnel for positions in this field. To continue to grow and meet material demands the current work force of nearly 7,000 will need to expand and be taught necessary job skills.

Several schools in the state already offer courses in pulpwood harvesting - others could benefit from such a course. It is hoped that this curriculum guide will encourage teachers to implement such a course where the need exists.

Curriculum Framework

The designers of this course used the following continuums to frame their thinking as they constructed the course. The designers tried to consider both ends of these continuums. The biases of the committee are indicated below. For example, the committee felt that at the high school level they would prefer comprehensiveness to specificity. In other words, they felt that to be taking a course in pulpwood harvesting is specialization enough at the high school level. Hence, within the context of the course as indicated by the dot on the continuum, the committee leaned toward comprehensiveness.

**CURRICULUM PARADIGM
PULPWOOD HARVESTING**

Buying Pulpwood Timber	Harvest Planning and Management	Harvesting Operations	Pulpwood Mechanics
Orientation (FFA, Career Exploration, Supervised Practice) : 1 Week			
Tree Identification : 1 Week			
Cruising 3 weeks	System Selection 2 weeks	Felling Limbing and Bucking 3 weeks	General Shop 2 weeks
Legal Aspects 1 week	Machinery & Equipment Selection 2 weeks	Skidding and Prehauling 3 weeks	Engine Principles 1 week
Establishing Price 1 week	Operational Planning 2 weeks	Loading and Hauling 3 weeks	Small Gasoline Engines 2 weeks
Exploring Careers ½ week			
Exploring Careers ½ week			
Exploring Careers ½ week			
Exploring Careers ½ week			

Use of the Guide

This guide is not a textbook. It is, as entitled, a curriculum guide. It is not designed to provide content, but to refer to content. It is designed to ask the prior questions - what should be taught and to some degree how and with what resources. The objectives are not behavioral in the truest sense - they may be closer to goals. Hopefully they help spell out the expected outcomes of the course. It was felt that the teachers of the course could determine the "givens" of the objectives and set their own "performance standards" as needed for a particular class or individual.

The general framework of the course is problem solving. To this degree, it is a functional approach. Hopefully, most units will be taught inductively, i.e., the teacher will begin with a practical problem or project and back up to basic principles. It is also hoped that most of the learning activities will be "hands-on" type activities although the importance of vicarious learning is recognized.

This curriculum guide was designed as a one year course; however, it is felt that in some schools a two year course may be desirable. If the guide is to be used for such a course, it is recommended that each unit be expanded. The proportionate amount of time spent in each area would remain the same.

UNIT:

Orientation to Pulpwood Harvesting

OBJECTIVE(S): The student will be able to:

- I. Describe in outline form the course in pulpwood harvesting.
- II. Prepare in outline form a plan for integrating the FFA program and the course.
- III. Prepare in outline form a supervised practice program which will enrich the course.
- IV. Plan an occupational work experience program to complement the course in pulpwood harvesting.
- V. Prepare a plan for exploring careers in pulpwood harvesting.
- VI.

NIT: Orientation to Pulpwood Harvesting

SUB-UNIT:

LEARNING ACTIVITIES	OBJECTIVES
<p>I. Assign a committee to each of the major units and have them critique the unit and report their results to the class with suggestions for change.</p> <p>• Observe a presentation by the instructor of the course model via overhead projection.</p> <p>•</p> <p>II. Prepare a list of proposed pulpwood harvesting projects for FFA.</p> <p>• Enter FFA contests related to pulpwood harvesting occupations.</p> <p>• Prepare radio or TV programs concerning pulpwood improvement projects in the local community.</p> <p>•</p>	<p>The student will be able to:</p> <p>I. Describe in outline form the course in pulpwood harvesting.</p> <p>A. List the <u>major</u> objective(s) of each unit.</p> <p>B. List the <u>major</u> learning activity(s) to be accomplished in each unit.</p> <p>C. List the <u>major</u> topic(s) to covered in each unit.</p> <p>D. List the <u>major</u> resources to be used in each unit.</p> <p>E.</p> <p>II. Prepare in outline form a plan for integrating the FFA program into the course in pulpwood harvesting.</p> <p>A. List possible home or community improvement activities involving pulpwood harvesting which could become projects for FFA.</p> <p>B. List pulpwood harvesting projects suitable as part of the BOAC program.</p> <p>C. List some of the possible radio or TV programs that could be built around pulpwood harvesting.</p> <p>D. List some of the team contests that are related to the course.</p>

TOPICS

- I. The pulpwood harvesting course.
 - A. Objectives
 - B. Learning activities
 - C. Topics
 - D. Resources, facilities, and equipment
 - E.
- II. FFA as an integral part of the course.
 - A. Committee projects relating to pulpwood harvesting
 - B. Pulpwood projects related to the BOAC program
 - C. Contest relating to the course
 - . team
 - . individual
 - D. FFA summer camp
 - E. TV and radio program projects
 - F.

RESOURCES

- I. The curriculum guide.

UNIT:

Tree Identification

OBJECTIVE(S): The student will be able to:

- I. Select from a given forest area the species of trees suitable for pulpwood and rank them as to quality for a given manufacturing process.

II.

UNIT: Tree Identification

SUB-UNIT:

OBJECTIVES

The student will be able to:

- I. Select from a given forest area the species of trees suitable for pulpwood and rank as to quality for a given manufacturing process.
 - A. Identify at least 5 species of trees which are harvested for pulpwood in the local community.
 - B. Identify tree species by leaf form, arrangement or composition.
 1. Recognize by sight at least 3 trees commonly used for pulpwood in the local community.
 2. With the use of an identification key, identify at least 2 unknown trees used for pulpwood.
 - a. Identify at least 10 major leaf forms.
 - b. Identify at least 5 major fruit types.
 - c. Identify at least 3 major leaf arrangements, e.g., alternate, opposite, etc.
 - d.

II.

LEARNING ACTIVITIES

- I-A. Interview a local pulpwood buyer to determine the species of wood suitable for pulpwood in your community.
 - . Locate tree species suitable for pulpwood in local forest and observe such identifying characteristics, e.g., tree form, leaf type and form, fruit type and form, etc.
 - B. Obtain and use a tree identification guide containing leaf types, form, etc., for identifying these species if necessary.
 - . Practice using a key for identifying tree species suitable for use as pulpwood.
 - . Participate in a tree identification contest.
 -
- II.

TOPICS	RESOURCES

UNIT: Buying Standing Timber for Pulpwood

SUB-UNIT: Cruising Pulpwood

OBJECTIVE(S): I. Given the necessary equipment and a map of the tract, the student will be able to estimate within 5% of the actual volume the amount of pulpwood present on a given tract.

II.

OBJECTIVES

The student will be able to:

- I. Given the necessary equipment and a map of the tract, the student will be able to estimate (within 5% of the actual volume) the amount of pulpwood on a given tract.
 - A. Given a scale map and the total acreage of a tract of pulpwood, the student will be able to perform a 5% or 10% cruise which estimates within 5% the actual volume the amount of pulpwood on a given tract.
1. Given the acreage of a tract, the student will be able to determine the number of 1/4 or 1/5 acre plots need for a 5 or 10% cruise.
2. Given a scale map of an aerial photograph of a tract, the student will be able to uniformly locate the 1/4 or 1/5 acre plots to be cruised.
3. The student will be able to step-off a 1/4 or 1/3 acre plot.
4. Given a chain or yard tape, the student will be able to determine within 5% of the actual acreage the total area of a given tract.
5. Given a compass and chain or yard tape, the student will be able to locate the plot centers.
6.

LEARNING ACTIVITIES

- I-A. As a class project cruise a tract of timber in the local community using a 5 or 10% sample.
- . Obtain a map or photograph of the tract and determine acreage if not given.
 - . As a class project measure the acreage in the tract using a chain.
 - . Individually or as a class prepare a survey grid.
 - . Observe demonstrations of and/or individually or in groups practice using a compass to locate the plot centers on the actual tract.
 - . Observe demonstrations of and/or layout a 1/4 or 1/5 acre plot.

TOPICS

- I. Cruising pulpwood
 - A. Quantity estimation
 - 1. Sampling procedures
 - 2. Determining number of plots needed for sampling
 - 3. Locating plots on map
 - 4. Locating plots on site
 - 5. Measuring plots
 - 6. Measuring tract
 - 7.

UNIT: Buying Standing Timber for Pulpwood
SUB-UNIT: Cruising Pulpwood

OBJECTIVES

- B. Given a clinometer and diameter tape, the student will be able to determine the volume of wood in a given tree.
 - 1. Given a Biltmore stick, the student will be able to determine the value of pulpwood in a given tree.
 - 2. Given a clinometer and a diameter tape, the student will be able to determine the volume of a given tree.
 - 3.
- C. The student will be able to correctly use the dot tally method of recording the volume of timber cruised.
- D. Mark trees for selective cutting according to product, i.e., pulpwood, poles, saw timber, etc.
- E.
- II.

LEARNING ACTIVITIES

- B. Observe demonstrations of and/or individually determine the volume of a tree using a Biltmore stick.
- Observe demonstrations of and/or individually determine the volume of a tree using a clinometer and a diameter tape.
- Conduct a contest among teams of students to determine which team can most accurately estimate the volume of a 1/4 or 1/5 acre plot of standing pulpwood.
- Observe demonstrations of and/or use the dot tally system to record plot volumes.
-
-
- II.

UNIT: Buying Standing Timber for Pulpwood

SUB-UNIT: Exploring Careers

OBJECTIVE(S): The student will be able to:

- I. Compare and contrast career opportunities related to the acquisition of pulpwood timber with careers in other areas of pulpwood harvesting.
- II. List the ways in which a given career associated with the acquisition of pulpwood timber complements or fails to complement life goals.

III.

UNIT: Buying Standing Timber for Pulpwood
SUB-UNIT: Exploring Careers

OBJECTIVES

The student will be able to:

- I. Compare and contrast career opportunities related to the acquisition of pulpwood timber.
 - A. List the major careers related to the acquisition of pulpwood.
 - B. Classify the careers as to occupational level, i.e., professional technical, service, etc.
 - C. List the major competencies needed for each of these careers.
 - D. List the major activities performed by persons employed in such positions.
 - E. List the educational requirements and sources.
 - F.

LEARNING ACTIVITIES

- I. Interview as many people employed in buying pulpwood timber as is feasible.
 - . Prepare an in-depth report of a position of most interest.
 - . Perform as many of the tasks performed by people employed in the position or positions of most interest as is feasible.
 - . Arrange to spend a day or half-day with a buyer.
 - . Seek occupational work experience as an assistant to a buyer.
 - . If the position involves further schooling, consult your guidance counselor to determine the schools available.

UNIT:

Harvest Planning and Management

SUB-UNIT:

System Selection

OBJECTIVE(S):

- I. The student will be able to analyze a given tract of pulpwood in terms of harvestability.
- II. When given a contract for harvesting a given tract of pulpwood the student will be able to interpret the contract.
- III. Based on a given set of variables (terrain, type of cut, size tract, etc.), the student will be able to select an appropriate system of harvest.
- IV.

UNIT: Harvest Planning and Management

SUB-UNIT: System Selection

OBJECTIVES	LEARNING ACTIVITIES
<p>The student will be able to:</p> <p>I. Plan the harvesting of a given tract of pulpwood.</p> <p>A. Analyze a given tract in terms of its harvestability.</p> <ol style="list-style-type: none"> 1. Given a contour map of a given site the student will be able to detect and locate terrain problems on a map. 2. Given a soils map of a given site the student will be able to list the anticipated equipment use problems. 3. Given a cruise report of a given site the student will be able to detect and locate areas of high and low density on a map. 4. Given a cruise report and map of the site the student will be able to locate necessary roads. 5. Given a cruise report and map of the site the student will be able to locate areas of dense vegetation. 6. <p>B. When given a contract for cutting a tract of timber the student will be able to interpret the terms of the contract.</p> <ol style="list-style-type: none"> 1. Interpret marking provided by the cruiser if selective cutting is to be the method of harvest. 2. Select trees for selective cutting if marking has not been provided. 3. Identify boundaries. 4. Interpret tree size and species according to the contract. 	<p>I-A. Visit the tract chosen by the class to be harvested and study the terrain, stand density, tree characteristic, roads vegetative cover, etc.</p> <ul style="list-style-type: none"> • Obtain a map or aerial photograph of the tract and study the terrain and tree growth. • Practice locating roads and landing sites by studying the maps. • Practice differentiating areas which can be harvested under rainy conditions and those which cannot. • Try to use the cruise report of the tract to locate roads and landings - then check results by visiting the site. • <p>B. Obtain a contract (perhaps the one used in the unit on buying) and compare interpretations by class members.</p> <ul style="list-style-type: none"> • Obtain a copy of a contract being used by a local pulpwood dealer and discuss interpretations. •

Harvest Planning and Management

SUB-UNIT:

Machinery and Equipment Selection

OBJECTIVE(S):

- I. Given a set of variables (terrain, type timber, time, etc.), the student will be able to select the felling equipment or machinery needed for a given harvest operation.
- II. Given a set of variables, the student will be able to select the limbing and bucking equipment needed for a given harvest operation.
- III. Given a set of variables, the student will be able to select the skidding and/or prehauling equipment needed for a given operation.
- IV. Given a set of variables, the student will be able to select the loading equipment needed for a given harvest operation.
- V. Given a set of variables, the student will be able to select the hauling equipment needed for a given harvest operation.
- VI.

OBJECTIVES

- i. Given a set of variables (harvest system, terrain, volume, labor supply, etc.) the student will be able to select the type, size and amount of machinery and equipment needed for a given harvest operation.
 - A. Given a set of variables, the student will be able to select the felling equipment needed for a given harvest system.
 - 1. The student will be able to list the major variables involved in selecting felling equipment.
 - 2. The student will be able to list and compare the more commonly used felling equipment as to their cost (fixed and variable), rate of production (in a given condition) and labor requirements.
 - a. The student will be able to compare and contrast shears.
 - b. The student will be able to compare the bow blade chain saw with the straight blade chain saw.
 - c.
 - B.

LEARNING ACTIVITIES

- I. As a class project or in small groups, select the machinery needed for a typical or actual harvesting operation in the local community and select the equipment needed.
 - . Prepare a picture display of machinery used in typical harvesting operations in the local community.
 -
 - A. Invite a local machinery dealer to discuss felling equipment with the class.
 - . Invite local pulpwood harvesters to discuss felling equipment with the class.
 - . While visiting local harvesting operations, observe the type(s) of felling equipment being used.
 - . Obtain brochures or other literature from manufacturers of felling equipment.
 - . Prepare a check list of variables to consider in comparing different types of felling equipment.
 - . Invite local machinery dealers to demonstrate chain saws, shears, or other felling equipment.
 -
 - B.

TOPICS

I. Machinery and equipment selection

A. Felling equipment

1. Variables involved

- . Costs
- . Production rate
- . Labor requirements
-

2. Types of equipment

- . Chain saws
 - . Bow blade
 - . Straight blade
 - . Direct drive
 - . Indirect drive
- . Shears
-

B.

RESOURCES

-

B.

OBJECTIVES

- II. Given a set of variables, the student will be able to select the limbing and bucking equipment needed for a given harvest operation.
 - A. The student will be able to list the major variables involved in selecting limbing and bucking equipment.
 - B. The student will be able to list and compare the more commonly used limbing and bucking equipment as to costs (fixed & variable), rate of production (under given use conditions) and labor requirements.
 1. The student will be able to compare and contrast straight vs bow blade chain saws for limbing and bucking.
 2. The student will be able to compare and contrast direct vs indirect drive chain saws for limbing and bucking.
 3.
 - C.
- III. When given a set of variables, the student will be able to select the skidding and/or prehauling equipment needed for a given operation.
 - A. The student will be able to list the major variables involved in selecting skidding and/or prehauling equipment.

LEARNING ACTIVITIES

- II. Invite local machinery dealers to demonstrate chain saws.
 - Obtain and file manufacturer's brochures or other literature concerning limbing and bucking equipment.
 - Invite a pulpwood harvester to discuss his recommendations concerning limbing and bucking equipment based on his experiences.
 - While visiting a local harvesting operation, observe the types of limbing and bucking equipment being used.
 - As a class project compare the efficiency of the three or four major types of chain saws for limbing and bucking.
 - Use the major types of chain saws and make your own comparison.
 -
- III. Invite local machinery dealers to demonstrate skidders and/or prehaulers.
 - Obtain brochures and other literature from manufacturers.
 - While visiting local harvesting operations observe the use of skidders and prehaulers.
 - Prepare a checklist of variables to consider in selecting skidders or prehaulers and use this check list to summarize comparisons.

TOPICS	RESOURCES
II. Limbing and bucking equipment <ul style="list-style-type: none"> A. Variables involved <ul style="list-style-type: none"> . Production rate . Costs . Labor requirements B. OBJECTIVES

- V. When given a set of variables, the student will be able to select the hauling equipment needed for a given harvesting operation.
- A. The student will be able to list the major variables involved in selecting hauling equipment.
 - B. The student will be able to list and compare the more commonly used hauling equipment as to costs (fixed and variable), rate of production (under given hauling conditions) and labor requirements.
1. The student will be able to list at least two advantages and disadvantages of a single axle, short body trucks ("Bobtail" trucks).
 2. The student will be able to list at least two advantages and disadvantages of the "false" tandem-axle truck and the tandem-axle truck.
 3. The student will be able to list at least two advantages and disadvantages of a truck and trailer for hauling pulpwood.
 4. The student will be able to compare and contrast diesel vs gasoline powered trucks for a given haul situation.
 5.

LEARNING ACTIVITIES

- V.A-B. While visiting local harvesting operations, observe the types of hauling equipment being used.
- Invite local harvesters to discuss their experiences with various types of hauling equipment.
 - Prepare a checklist of variables to consider in selecting hauling equipment and use this checklist to summarize comparisons.
 - Ask to ride with a truck driver on a typical haul.
 - Invite local truck and trailer dealers to demonstrate their equipment.
 - Obtain brochures and other literature from manufacturers.
 - Compare the load capacity of various trucks.
 -

TOPICS	RESOURCES
<p>V. Hauling equipment selection</p> <ul style="list-style-type: none"> 1. Variable involved <ul style="list-style-type: none"> . Production rate . Costs <ul style="list-style-type: none"> . Fixed . Operational Planning

OBJECTIVE(S): I. Given a cruise report and the system of harvest to be used the student will prepare and operational flow chart of the total harvest and hauling operation.

II.

UNIT: Harvest Planning and Management
SUB-UNIT: Operational Planning

OBJECTIVES

- I. Given a site analysis and the system of harvest to be used the student will prepare an operational flow chart of the total harvest and hauling operation.
 - A. Given the system of harvest and a cruise report the student will be able to chart the sequence and estimate the man hours required for each of the major operations involved, i.e., felling, skidding, loading, hauling, etc.
 - B. Given the system of harvest and a cruise report the student will be able to estimate (within one cord) the total daily harvest.
 - C. Given the system of harvest and a cruise report the student will be able to determine the type of labor required for harvesting a given site.

LEARNING ACTIVITIES

- I. As a class project or in small groups, prepare a flow chart of a harvest system(s).
 - Prepare a flow chart of the cutting operation.
 - Prepare a flow chart of the skidding operation.
 - Prepare a flow chart of the loading operation.
 - Prepare a flow chart of the hauling operation.
 -
- Visit a harvesting operation in the local area as a class or individually and time the various operations, i.e., cutting, skidding, loading, hauling, etc.
- Briefly interview workers involved in various harvesting operations to determine the amount of time required to master their jobs.

TOPICS	RESOURCES
I. Operational Planning	I. Bromley. <u>Pulpwood Production</u> . Unit F., also see pp. 213 - 218.

UNIT:

Harvest Planning and Management

SUB-UNIT:

Cost Analysis

OBJECTIVE(S): I. The student will be able to analyze a given
pulpwood harvesting operation or facet of
the operation and determine profit or loss.

II.

OBJECTIVES

The student will be able to:

- I. Analyze a given harvest operation or part of such an operation and determine profits or losses.
 - A. Determine the gross income from pulpwood sold for a typical year.
 - B. Determine total expenses for a typical year.
 1. Determine stumpage cost for a typical year.
 2. Determine machinery and equipment costs for a typical year.
 - (a) Determine the fixed cost of a given piece of machinery.
 - (1) Determine interest on a given machine.
 - (2) When given initial cost, average life and salvage price, determine the depreciation cost on a given machine.
 - (3) Determine insurance rate on a given machine.
 - (4) Determine tax and license cost on a given machine.
 - (5) ...
 - (b) Determine the variable cost of a given machine for a typical year.
 - (1) Determine the fuel cost of operating a given machine.
 - (2) Determine the maintenance and repair cost of operating a given machine.
 - (3) ...

LEARNING ACTIVITIES

- I. As a class project, do an estimated cost analysis of a local pulpwood harvesting operation.
 - Ask a local dealer (producer) to furnish the class with an earnings report - perhaps not the actual as producers may be sensitive about revealing earnings.
 - As an individual or member of a committee, investigate the fixed and variable cost of a given machine and report your results to the class.
 - As an individual or member of a team, investigate the stumpage costs of an operation.
 - Practice solving depreciation or interest problems.
 - As an individual or member of a committee, investigate the variable costs of operating a given machine and report your results to the class.
 -

TOPICS

- I. Cost Analysis
 - A. Gross income
 - B. Expenses
 - 1. Stumpage costs
 - 2. Machinery costs
 - . Fixed
 - . Interest
 - . Depreciation
 - . Insurance
 - . Misc.
 - . Variable
 - . Fuel
 - . Repair and maintenance

Harvest Planning and Management

SUB-UNIT:

Records and Insurance

OBJECTIVE(S): The student will be able to:

- I. Plan a record keeping system for a given pulpwood harvesting business.
- II. Plan an insurance protection program for a given pulpwood harvesting operation.
- III.

OBJECTIVES

- I. Plan a record keeping system for a given pulpwood harvesting business.
 - A. Plan a record keeping system for revealing operating efficiency.
 1. Plan a labor efficiency report.
 2. Plan a machinery efficiency report.
 3.
 - B. Plan a record keeping system for facilitating government records.
 1. List the required payroll deductions of a typical employee, e.g., income tax, social security, unemployment insurance, etc.
 2. List the information needed to determine the income tax deductions for a typical employee.
 3. List the information needed to determine the social security deductions for a typical employee.
 4.

LEARNING ACTIVITIES

- I. As a class or small group project plan a record keeping system for a typical harvesting business.
 - Invite the bookkeeper for a local operator to discuss his system with the class.
 - A. As a class or small group project devise a record keeping system which will reveal profits and/or losses for the total operation or significant smaller operations.
 - Prepare a set of fictitious expenses and receipts for a period of time (perhaps a quarter) and enter such data in a record book.
 - Invite a teacher of bookkeeping to serve as a resource person in planning the bookkeeping system.
 - Invite a local dealer to discuss record used to reveal operating efficiency.
 -
 - B. As a class project or in small groups, plan a record keeping system for facilitating government records.
 - Prepare a check list of records needed for a typical employee, e.g., total wages, age, family size, days worked, etc.
 - Prepare a checklist of payroll deductions for a typical employee, e.g., Federal income tax, social security, workmen's compensation, unemployment insurance, etc.
 - Prepare a social security deduction for a typical employee.

TOPICS

- I. Record keeping system
 - A. Records for operational efficiency
 - . Labor production
 - . Machinery production
 -
 - B. Records required for government reports for employees
 - . Income tax
 - . State

Pulpwood Harvesting

SUB-UNIT:

Felling, Limbing and Bucking

OBJECTIVE(S): The student will be able to:

- I. Fell a given tree and achieve the desired direction of fall using a chain saw.
- II. Fell a given tree and achieve the desired direction of fall using hydraulic shears.
- III. Limb, mark and buck a given tree.
- IV.

LEARNING ACTIVITIES

The student will be able to:

- I. Plan the felling, limbing, and bucking of trees using a given method.
 - A. Fell a given tree and achieve the desired direction of fall using a given type chain saw.
 1. Given terrain, wind, and vegetation information select the most appropriate landing site for a given tree.
 2. Identify the natural fall direction of a given tree.
 3. Notch a tree to achieve a desired fall using a chain saw and axe.
 4. Prepare a trunk cut using a chain saw.
 5. Determine the need for wedging.
 - a. Select an appropriate wedge for a given situation.
 - b. Install a wedge.
 - c. List at least 5 factors which determine the need for wedging.
 6. List at least 5 safety hazards involved in felling a tree.
 7.
 - B.

- II. Fell a given tree using hydraulic shears.

- I. As a class project harvest a small plot of pulpwood using a chain saw.
 - Observe demonstration(s) and/or demonstrate safe tree felling.
 - Diagram an appropriate notch and cut.
 - Observe demonstrations of and/or practice felling trees to achieve a desired direction of fall when special condition exist, e.g. wind is blowing in the opposite direction, the tree is crooked and leans in a different direction, etc.
 - Observe demonstrations of the safe operation of the chain saw.
 - Observe demonstrations of and or practice carrying a chain saw from tree to tree in a safe manner.
 - Observe demonstrations of wedging and practice wedging.
 - Visit a harvesting operation and observe experienced workers as they fell trees.
 -
- II. Observe demonstrations of the use of hydraulic shears for felling.
 -

TOPICS

- I. Felling, limbing and bucking
 - A. Felling by chain saw
 - . Selecting landing site
 - . Brush clearing
 - . Lean assessment
 - . Notching
 - . Trunk cut
 - . Wedging
 - . Safety
 -
 - B.
- II. Felling by hydraulic shears

 - . Omark Industries. All About Using Chain Saws.
 -
- II. Bromley. Pulpwood Production. Unit J. pp. 144-6.

OBJECTIVES

- III. Safely limb, mark and buck a given tree.
 - A. Diagram the sequence for limbing, i.e., butt to top, etc.
 - B. Determine the total length to be limbed.
 - C. Measure and mark the tree for subdivision into proper lengths.
 - D. Buck the felled tree into length specified by the dealer.
 - E. Diagram the appropriate sequence for bucking.
 - F. List at least 6 safety hazards involved in limbing and bucking.
 - G. Select an appropriate axe for limbing.
 - H.
- IV.

LEARNING ACTIVITIES

- III. Observe demonstrations of and/or limb and buck trees using a chain saw and/or axe.
 - . Observe special demonstrations of safety hazards involved in limbing and bucking, e.g., binding, spring effect of bent trees, etc.
 - . Observe demonstrations of the safe and efficient use of an axe in limbing.
 - . Visit a harvesting operation and observe the limbing and bucking operations.
 -
- IV.

UNIT:

Harvesting Equipment Mechanics

SUB-UNIT:

Engine Principles

OBJECTIVE(S):

The student will be able to:

- I. Diagram and/or describe in writing the manner in which the gasoline engine converts chemical energy into mechanical energy.
- II. List the major systems of the internal combustion engine and state in writing the major function(s) of each.
- III. Diagram the working principle fundamental to each of the major engine systems.
- IV. Compare and contrast the basic principles of the gasoline and diesel engine.
- V.

UNIT: Harvesting Equipment Mechanics
SUB-UNIT: Engine Principles

OBJECTIVES	LEARNING ACTIVITIES
<p>The student will be able to:</p> <p>I. Diagram and/or describe in writing the manner in which the gasoline engine converts chemical energy into mechanical energy.</p> <p>A. List and diagram the four strokes of the four-cycle engine.</p> <p>B. List the function of each stroke of the four-cycle engine.</p> <p>C.</p> <p>II. List the major systems of the internal combustion engine and state in writing the major function of each.</p> <p>A. Diagram and label the major components of each system and state in writing the function(s) of each.</p> <p>B. Diagram and label the major parts of the engine contained within the block.</p> <p>C.</p> <p>III. Diagram the working principle(s) involved in each of the major systems (power production, carburetion, ignition, cooling, lubrication, etc.</p>	<p>I. Practice diagramming the basic strokes of the four-cycle engine.</p> <p>• Observe cut-away models of four-cycle engines.</p> <p>•</p> <p>II. Practice diagramming the major engines systems, i.e., power production, carburetion, ignition, cooling, lubrication, etc.</p> <p>• Prepare an ignition system model made of an old distributor coil and plugs.</p> <p>• Prepare a carburetor cut-away by sawing an old carburetor in half.</p> <p>• Illustrate the basic principles of carburetion with an atomizer.</p> <p>•</p> <p>III. Observe and/or construct illustrations of the basic principles of the cooling system, e.g., surface area - observe the difference in water cooling in a large flat pan and water cooling in a pail.</p> <p>• Observe and/or perform demonstrations of the basic principles of lubrication system, e.g., cushioning, cooling, friction reduction, cleaning, sealing, etc. Construct a simple inclined plane and compare the effect of oiling to reduce friction. Illustrate cushioning by placing oil between two metal parts and striking with a hammer.</p> <p>•</p>

SUB-UNIT: Small Gasoline Engine

OBJECTIVES

- III. Disassemble, identify worn parts, repair or replace such parts and reassemble each of the major systems of a typical small gasoline engine.
- A. Disassemble, identify worn parts, repair or replace such parts, and reassemble the ignition system of a typical small gasoline engine.
- B. Disassemble, identify worn parts, repair or replace such parts, and reassemble the carburetion system of a typical small gasoline engine.
- C. Disassemble, identify worn parts, repair or replace such parts, and reassemble the block of a typical small gasoline engine.
1. Remove, grind to specifications and replace intake and exhaust valves.
2. Remove and replace rings according to specifications.
3. Remove and replace a piston and rings on a typical small gasoline engine.
4.
- D.

LEARNING ACTIVITIES

- III. Observe a demonstration of and/or disassemble, identify worn parts, repair or replace such parts and reassemble each of the major systems of a typical small gasoline engine.
- A. Observe a demonstration of and/or disassemble, identify worn parts, repair or replace such parts and reassemble the ignition system of a typical small gasoline engine.
- B. Observe a demonstration of and/or disassemble, identify worn parts, repair or replace such parts and reassemble the carburetion system of a typical small gasoline engine.
- C. Observe a demonstration of and/or disassemble, identify worn parts, repair or replace such parts, and reassemble the block of a typical small gasoline engine.
- . Remove, grind to specifications and replace intake and exhaust valves.
- . Remove and replace rings.
- . Remove and replace piston and rings.
- . Remove and replace crankshaft, connecting rod and bearing.
-
- D.

UNIT: Pulpwood Mechanics

SUB-UNIT: Machinery and Equipment Maintenance

OBJECTIVE(S): The student will be able to:

- I. Plan a lubrication schedule for a given piece of machinery or equipment.
- II. Select an appropriate lubricant for a given use.
- III. Perform the major tasks involved in a typical lubrication program.
- IV. Prepare a check list and schedule of miscellaneous maintenance for a given piece of machinery or equipment.
- V.

OBJECTIVES	LEARNING ACTIVITIES
<p>The student will be able to:</p> <p>I. Plan a maintenance program for the machinery and equipment used in a given pulpwood harvesting operation.</p> <p>A. Plan a lubrication schedule for a given machine or a piece of equipment under given use conditions.</p> <ol style="list-style-type: none"> 1. Prepare a lubrication schedule for a machine, e.g., skidder, tree shear or loader under given use conditions. 2. Prepare a lubrication schedule for trucks under given use conditions. 3. Prepare a lubrication schedule for chain saws under given use conditions. 4. Obtain and interpret the manufacturer's lubrication schedule for a given vehicle or piece of equipment. 5. <p>B. Select an appropriate lubricant for a given use.</p> <ol style="list-style-type: none"> 1. List the major functions of a lubricant, e.g., cushion, seal, reduce friction, etc. 	<p>I. As a class, small group, or individual project, plan a maintenance program for a local harvesting operation.</p> <ul style="list-style-type: none"> • Ask a local producer to discuss his machinery and equipment maintenance program. <p>A. Individually or in small groups plan a lubrication program for a machine or piece of equipment.</p> <ul style="list-style-type: none"> • Obtain and use a manufacturer's lubrication schedule for lubricating a machine or piece of equipment. • Determine the lubrication procedure used by a local producer. • <p>B. Obtain various greases and oils and compare them as to viscosity, etc.</p> <ul style="list-style-type: none"> • Observe or perform demonstrations of the cushioning friction reduction, sealing, etc., effects of oil. • Make some "home made" grease using soap and oil. • Obtain oil cans and practice determining government classifications.

TOPICS	RESOURCES
<p>I. Preventive Maintenance</p> <p>A. Planning a lubrication schedule</p> <ol style="list-style-type: none"> 1. Machinery <ul style="list-style-type: none"> . Shears . Skidders . Loaders . Trucks 2. Equipment <ul style="list-style-type: none"> . Chain saws <p>B. Lubricant selection</p> <ol style="list-style-type: none"> 1. Functions of lubricants <ol style="list-style-type: none"> a. Sealing b. Friction reduction c. Cushioning d. Cleaning e. Cooling f. 	<p>I. AAVIM. <u>Tractor Maintenance.</u></p> <ul style="list-style-type: none"> . AAVIM. <u>Farm Tractor Tune-up Specifications.</u> . Manufacturer's lubrication guides . Local pulpwood machinery mechanics <p>B. AAVIM. <u>Selecting and Storing Tractor Fuels and Lubricants.</u></p> <ul style="list-style-type: none"> . Deere & Co. <u>Fundamentals of Service Fuels, Lubricants and Coolant.</u> . American Petroleum Institute . <u>Slides: AAVIM. Selecting and Storing Tractor Fuels and Lubricants.</u>

OBJECTIVES	LEARNING ACTIVITIES
<p>2. Compare and contrast lubricants.</p> <ol style="list-style-type: none">Differentiate between an oil and a grease.List the major oil classification.List at least 4 types of greases.Interpret a label to determine oil classification..... <p>3. When given a specific bearing select the type of oil or grease needed.</p> <p>4.</p> <p>C. Perform the major tasks involved in a lubrication program.</p> <ol style="list-style-type: none">Locate point of lubrication on a given vehicle or piece of equipment.<ol style="list-style-type: none">Locate grease fittingsLocate oil partsTransmission entrance....Select an appropriate means of greasing or adding oil.Operate a grease gun.Demonstrate the ability to correctly grease a fitting.Check the oil level in an engine.....	<p>. Using a manufacturer's guide to lubrication try to explain the reasons for different greases and oils for different bearings and other surfaces to be lubricated.</p> <p>.</p> <p>C. Practice greasing a machine or piece of equipment using a grease gun.</p> <p>. Observe demonstrations of and/or practice loading a grease gun.</p> <p>. Practice locating fittings to be greased and oil entrance on a machine or piece of equipment.</p> <p>.</p>

TOPICS

- 2. Lubricant classification
 - a. Types of greases
 - . Water pump grease
 - . Ball-and-roller bearing grease
 - . Pressure gun grease
 - . All-purpose grease
 - . Multipurpose grease
 -
 - b. Oils
 - . Gear
 - . Transmission
 - . Hydraulic
 - . Crank case
 - . Weights - 10-20-30
 - . A.P.I. Classifications
 - . ML, MM, MS, DG

C. Lubrication

- 1. Locating lubrication points
 - . Locating fittings
 - . Locating oil parts
 -
- 2. Selecting equipment
- 3. Operating grease guns
- 4. Checking oil level
- 5. ...

RESOURCES

- C. AAVIM. Tractor Maintenance.
 - . Local Service Station operators
 - . Local pulpwood equipment maintenance shop mechanics
 - . Manufacturer's lubrication guides
 -

OBJECTIVES	LEARNING ACTIVITIES
<p>D. Prepare a maintenance check list and schedule of miscellaneous items for a given piece of machinery or equipment, e.g., air filter change, water level, tire inflation, etc.</p> <ol style="list-style-type: none">1. Perform the more common miscellaneous maintenance items.<ol style="list-style-type: none">1. Change an air cleaner filter.2. Check tire inflation.3. Check fan belts on engines.4. ... <p>2. Interpret a manufacturer's checklist or schedule of miscellaneous maintenance.</p>	<p>D. As a small group or individual class assignment prepare a miscellaneous maintenance check list and schedule for a machine or piece of equipment.</p> <p>....</p> <ul style="list-style-type: none">. Observe demonstrations of and/or demonstrate the more common maintenance items, e.g., change an air filter element.. <p>. Obtain and use a manufacturer's checklist of miscellaneous maintenance.</p> <p>....</p>

TOPICS	RESOURCES
<p>D. Miscellaneous maintenance checklist</p> <p>1. Vehicles</p> <p>a. Electrical System</p> <ul style="list-style-type: none"> . Battery . Distributor . Wiring . . . <p>b. Pulpwood Mechanics

SUB-UNIT:

Exploring Careers

OBJECTIVE(S): The student will be able to:

- I. Compare and contrast career opportunities in pulpwood mechanics with those in other areas of forestry.
- II. List the ways in which a given job in pulpwood mechanics might complement or fail to complement life goals.
- III.

OBJECTIVES	LEARNING ACTIVITIES
<p>The student will be able to:</p> <p>I. Compare and contrast career opportunities in pulpwood mechanics with those in other areas of forestry.</p> <p>A. List the major job titles related to pulpwood mechanics.</p> <p>B. Classify these jobs as to level, i.e., professional, technical, service, etc.</p> <p>C. List the major competencies needed for a career in pulpwood mechanics.</p> <p>D. List the major activities performed by persons employed in pulpwood mechanics.</p> <p>E. List the educational requirements and sources of such training.</p> <p>F.</p> <p>II. List the ways in which a given job in pulpwood mechanics might complement or fail to complement life goals.</p> <p>A. List at least five ways in which a career in pulpwood mechanics might benefit society.</p> <p>B. List at least five ways in which a career in pulpwood mechanics might benefit an individual.</p> <p>C.</p> <p>III.</p>	<p>I. Interview as many people employed in pulpwood mechanics as is feasible.</p> <ul style="list-style-type: none"> • Prepare a detail job analysis of a job of particular interest. • Practice as many of the tasks performed by employees holding these jobs as is feasible. • Arrange to spend a day, or portion of a day, with a person employed in pulpwood mechanics. • Seek occupational work experience as a pulpwood mechanic's aide. • Investigate with your teacher or guidance counselor the possibility for further training and job opportunities in the local area. • <p>II. Prepare a short paper concerning the ways in which a job in pulpwood mechanics might complement or fail to complement life goals.</p> <ul style="list-style-type: none"> • Participate in a class debate of life goals. • Investigate the living conditions and life style of a person employed in pulpwood mechanics. • <p>III.</p>

TOPICS	RESOURCES
<p>I. Careers in pulpwood mechanics</p> <p>A. Career titles</p> <ul style="list-style-type: none"> . Shop foreman . Welder . Machinist . Mechanic <p>B. Career classification</p> <ul style="list-style-type: none"> . Professional . Technical . Skill <p>C. Competencies needed</p> <p>D. Major activities</p> <p>E. Educational requirements</p> <p>F. . . .</p> <p>II. Career evaluation</p> <p>A. Life goals</p> <p>B. Benefits to society</p> <p>C. Benefits to the individual</p> <p>D. . . .</p> <p>III.</p>	<p>I. Local pulpwood producer</p> <ul style="list-style-type: none"> . Local school guidance counselor . Local pulpwood mechanics <p>II. Hoover. <u>Handbook of Agricultural Occupations</u>. Chapter 1.</p> <ul style="list-style-type: none"> . Local school guidance counselor <p>III.</p>

APPENDIX A

Facilities and Equipment

Facilities:

- Regular Ag. Ed. classroom
- Access to the Ag. Ed. shop
- Access to bus for field trips
- Access to a forestry plot

General Equipment:

Equipment by Unit:

- Buying Pulpwood Timber
 - Transit (1)
 - Biltmore sticks (10)
 - Diameter tapes (10)
 - Clinometer (1)
 - International rule (1)
 - Doyle rule (1)
 - Scribner rule (1)
 - Compasses (10)
 - Chain tapes (5)
 - Hand paint spray guns (5)

Harvest Planning and Management

No special equipment needed

Harvest Operations

Hard hats (15)

Bow-blade chain saws (1)

Straight-blade chain saws (1)

Axes (5)

Steel wedges (2)

Cant hook (1)

Access to:

. Hydraulic shears

. Skidders

. Prehaulers

. Loaders

. Fork-lift type

. Knuckle-boom type (actual or scale model)

.

. Trucks

Pulpwood Mechanics

If agricultural mechanics is taught in the school, additional equipment will probably not be needed.

APPENDIX B

Professional and Technical Societies, Organizations, and Agencies concerned with Forestry and/or Pulpwood Harvesting.

The following list is incomplete. Inclusion does not imply approval; omission does not imply disapproval. Teachers or students may obtain helpful information by writing the executive secretary of the respective organizations.

United States:

Professional Organizations:

American Forestry Institute, 1835 K Street, N. W., Washington, DC 20006.
American Forest Products Industries, 1816 N Street, N. W., Washington, DC 20006.
The American Forest Association, 1319 18th Street, N. W., Washington, DC 20036.
American Pulpwood Association, 605 Third Avenue, New York, NY 10016.

Agencies:

U. S. Forest Service, South Agriculture Building, Washington, DC 20250.
Southeastern Area, State and Private Forestry, U. S. F. S., 50 Seventh Street, N.E., Atlanta, Ga. 30323.
Region 8, U. S. F. S., 50 Seventh Street, N.E., Atlanta, Ga. 30323.
Southeastern Forest Experiment Station, U. S. F. S., Post Office Building, P.O. Box 2570, Asheville, NC 28802.
Southern Forest Experiment Station, U. S. F. S., T-10210 Federal Building, 701 Loyola Avenue, New Orleans, La. 70113.

South Carolina:

State Commission of Forestry, 5500 Broad River Road, Columbia, SC 29202.
