ABSTRACT

The Syntactic Density Score (SDS) is designed to determine the syntactic density of the oral and written discourse of students in grades 1-14, as well as that of reading materials selected for students. The SDS can be hand tabulated; however, a computer program is available which can determine the score from any corpus of material typed into the computer. Factors that affect readability, and therefore increase the syntactic density score of a piece of writing, include higher frequencies of complex sentences, long subordinate clauses, prepositional phrases, expanded verbs, possessives, and adverbs of time--all in addition to the usual considerations of vocabulary and sentence length. Practice exercises plus aids for tabulation are available from the author. [This document is one of those reviewed in The Research Instruments Project (TRIP) monograph "Measures for Research and Evaluation in the English Language Arts" to be published by the Committee on Research of the National Council of Teachers of English in cooperation with the BRIC Clearinghouse on Reading and Communication Skills. A TRIP review which precedes the document lists its category (Reading/Writing), title, author, date, and age range (primary, intermediate, junior high, senior high, postsecondary), and describes the instrument's purpose and physical characteristics.] (WR)

The attached document contains one of the measures reviewed in the TRIP committee monograph titled:

Measures for Research and Evaluation in the English Language Arts

TRIP is an acronym which signifies an effort to abstract and make readily available measures for research and evaluation in the English language arts. These measures relate to language development, listening, literature, reading, standard English as a second language or dialect, teacher competencies, or writing. In order to make these instruments more readily available, the ERIC Clearinghouse on Reading and Communication Skills has supported the TRIP committee sponsored by the Committee on Research of the National Council of Teachers of English and has processed the material into the ERIC system. The ERIC Clearinghouse accession numbers that encompass most of these documents are CS 20/320-CS 26/375.

Title: "Syntactic Density Score" (SDS)

Author: Lester S. Golub

Age Range: Primary, Intermediate, Jr. High, Sr. High, Post-Secondary

Description of Instrument:

Purpose - To determine the syntactic density of the oral and written discourse of students in grades 1-14, as well as that of reading materials selected for students.

Date of Construction - 1973

Physical Description - The SDS can be hand tabulated; however, a computer program is available which can determine the score from any corpus of material typed into the computer. Practice exercises, as illustrated, plus aids for tabulation, are available from the author. Factors that affect readability, and therefore increase the syntactic density score of a piece of writing, include higher frequencies of complex sentences, long subordinate clauses, prepositional phrases, expanded verbs, possessives, and adverbs of time--all in addition to the usual considerations of vocabulary and sentence length.

The sample passage:

I was not formally introduced to the lorming. I have since learned, however, that his family name was Lemmus Lemmus, of the family Microtinae. He was five inches long and covered with tawny yellow fur. He did not run away when he saw us. But backed up against a birch root and looked as fiorce as he could, which was not very fierce.

We squatted down to look at Lemmus, slapping away at the mosquitoes, which were eating our knees through our trousers, while Lemmus looked fiercely back at us. He seemed a rational enough creature.

Yet the lemming legend, Gustafson told me, is quite true. The lemmings breed very fast, and when there are too many of them for the amount of food they can find in the district, they all set off to go somewhere else. They travel toward the lower-lying land and the distant sea, and on the way they eat anything that is handy to be eaten, which is mostly stuff that the people of of those parts would prefer to eat themselves. Lemmings are vegetarians, so they do not actually eat the cows, but the cows have to get along on what the lemmings leave.

The lemming hourde is understandably unpopular. On its journey, which may take many months, it is attacked and set upon from all sides.

Some Aids for Tabulating Golub's SYNTACTIC DENSITY SCURE

Besides vocabulary and length of sentences, there are some other vactors that affect readability. Higher frequencies of complex sentences, long subordinate clauses, prepositional phrases, expanded verbs, possessive, and adverbs of time have been found to increase the syntactic density score of a piece of writing.

Some aides for tabulation:

- 1. T-unit: count assa T-unit a main clause with all of its dependent clruses.
- 2. Subordinate clauses: watch for subordinate conjunctions:

after so that

although

as than

as much as though

because till

before unless

how when

inasmuch as where

in order that whereever

provided that whother

sinco while

also: who, whoever, whom, whomever, whose, whosever, which, how

3. Hodals:

4. Forms of be and have:

be

been

is

has

are

have

am

had

Was

isn't

were

being

5. Prepositions:

about	below	from	to
above	beneath	in	toward
across	besido	into	under
after	between	like	underneath
against	beyond	of	until
along	by	off	unto
anid	concerning	on	up
among 😘	down	over	upon
around	during	past	with
at	except	since	within
before	for	through	without
behind	besides	throughout	

6. Possessives

Include possessive nouns and the following pronouns:

my hers
mine our
your ours
yours their
his theirs
her its

7. Adverbs of time:

later

whon often now then after always afterwards once never while lately before immediately whenever beforehand yesterday soon tonight soonest today early

sometimes

forever

COMPETENCY MEASURE # 2

Apply Golub's SYNTACTIC DENSITY SCORE to the following passage:

This very minute lizard with changeable colors is catching insects with the end of a tongue as long as its body. Close to the bottom of a river, a fish is defending itself by jolting its enemies with built-in electric shock equipment. In the tropics an almost brainless mammal is spending a large part of its life upside down. And on another part of the earth a queer, furry, leathery-beaked animal with poisonous spurs on its hind legs is laying eggs.

Those are only a few of the strange beasts that you can see in the world today. All of them are very much alive although they may appear too astonishing to be real. But a great many years from now a lot of them will have vanished forever. Those kinds which remain will probably be so changed that you would hardly recognize them. We know that this will happen because dozens of scientists have shown that nearly every living thing is always turning into something a little different or disappearing entirely. The earth itself is constantly changing, too.

We have fossil remains that show us the changes that have taken place throughout the ages in certain animal and fish groups.
