ABSTRACT

This document, third in a series of 11 subvolumes of a handbook prepared to provide training for educational research and development personnel in the development of instructional materials, deals with the task of sequencing and grouping criterion behaviors. Document content is arranged according to the steps involved in performing the task. This task includes three steps: (a) sequence task analysis results for all the subcriterion behaviors that make up each criterion behavior; (b) sequence task analysis results for all criterion behaviors that make up an instructional program; and (c) create instructional units. More specific substeps are included for performing the three steps. Background information includes a matrix presentation of the purposes of sequencing and the concerns of sequencing decisions. (PD)

FOREWORD

This is one of a series of eleven HANDBOOK sub-volumes which has been prepared to provide training for educational R&D personnel in the development of instructional materials.

The USER'S MANUAL, which accompanies the series, describes the role each volume is designed to play and the sequence recommended for its use in the training process. The user is, therefore, urged to read these instructions before using this or any other separate volume.

ACKNOWLEDGMENTS

The materials in this volume were prepared under a contract from the U.S. Office of Education, Contract No. OEC-0-70-4776(520). Dr. George L. Gropper, Director of Instructional Media Studies, served as principal investigator.

U.S.O.E. sponsorship does not in any way imply official endorsement of the views expressed in this volume.

The author is indebted: to Dr. Robert Fitzpatrick for reviewing portions of the series of volumes and for informal discussions concerning several training issues; to Mrs. Zita Glasgow for the first and critical use of this volume; and, not least, to Miss Kathleen Gubala for her tireless preparation of the complex manuscript required by this HANDBOOK.

TASK

CONTENTS

C.

SEQUENCE AND GROUP CRITERION BEHAVIORS

page
C

STEP

C.1

Sequence task analysis results for all the Sub-Criterion behaviors which make up each criterion behavior

5

SUB-STEP

C.1.1

Sequence task analysis information describing all Sub-STEPS (or terminal behaviors) which make up each Sub-Criterion behavior

15

C.1.2

Sequence task analysis information describing all Sub-Criterion behaviors which make up each criterion behavior

27

C.2

Sequence task analysis results for all the criterion behaviors which make up an instructional program

43

C.2.1

Review task analysis results for all separate criterion behaviors for all properties relevant to sequencing decisions

47

C.2.2

Sequence task analysis results for all criterion behaviors

57

C.3 Create instructional units 67

C.3.1 Estimate how much of a Sub-Criterion behavior (or a criterion behavior) can be learned in an instructional hour 75

C.3.2 Group task analysis results describing behaviors which can be taught in each instructional hour 85

TWO MAJOR PURPOSES IN MAKING SEQUENCING DECISIONS

| | | |
|----------|---|--|
| PURPOSES | To be able to schedule student learning of <u>PREREQUISITE</u> behaviors <u>before</u> the behaviors <u>CONTINGENT</u> on them | To be able to schedule student learning of <u>FACILITATIVE</u> behaviors <u>before</u> the behaviors which are <u>FACILITATED</u> by them |
| CRITERIA | <p>-To be able to learn one set of criterion behaviors, it is <u>necessary</u>, beforehand, to learn one or more sets of other criterion behaviors</p> <p>-Prior mastery of these other criterion behaviors is <u>necessary</u> because they are prerequisites to the mastery of the (one) criterion behavior at issue</p> <p>-Sequencing decisions concern the identification of criterion behaviors when mastery is <u>prerequisite to the mastery of other criterion behaviors</u></p> | <p>-To be able to learn one set of criterion behaviors, it may be <u>advantageous</u>, beforehand, to learn one or more sets of other criterion behaviors</p> <p>-Prior mastery of these other criterion behaviors may be <u>advantageous</u> because they make it easier or more efficient to master the (one) criterion behavior at issue</p> <p>-Sequencing decisions concern the identification of criterion behaviors when mastery is <u>facilitative of the mastery of other criterion behaviors</u></p> |

| | | |
|----------|---|---|
| EXAMPLES | <p>e.g.,</p> <p>-The student bridge player cannot learn to bid or to play until he first learns:</p> <ul style="list-style-type: none"> ••To identify suits ••To identify point values of a hand <p>-These behaviors (criterion or sub-criterion) are <u>prerequisites</u> for learning how to bid and/or how to play</p> | <p>e.g.,</p> <p>-The student bridge player <u>can</u> learn to "play" first or he can learn to "bid" first; neither is prerequisite to the other (although "bidding" is conventionally taught first)</p> <p>-Teaching "play" first, it is hypothesized, can <u>facilitate</u> the learning of "bidding" (the student learns first how the results of bidding are used as an aid in subsequently learning bidding)</p> |
|----------|---|---|

C.

TWO MAJOR TYPES OF SEQUENCING DECISIONS

IDENTIFICATION MATRIX

| TYPES OF SEQUENCING DECISIONS | WITHIN a SINGLE criterion behavior | AMONG two or more criterion behaviors |
|-------------------------------|--|---|
| CRITERIA | <p>-Each criterion behavior may be made up of two or more sub-criterion behaviors (or even one, if defined that way)*</p> <p>-Sequencing decisions concern the order in which:</p> <ul style="list-style-type: none"> ••Each sub-criterion behavior is learned ••All the separate sub-criterion behaviors are finally integrated into a complete sub-criterion behavior <p>-These decisions are made in:</p> <ul style="list-style-type: none"> ••STEP C.1 (in this section of the HANDBOOK) <p style="text-align: center;">and</p> <ul style="list-style-type: none"> ••TASK J (where decisions can be revised in the light of other strategy information obtained beyond TASK C) | <p>-Each instructional program may be made up of two or more criterion behaviors which can have a "prerequisite" or a "facilitative" effect on other criterion behaviors</p> <p>-Sequencing decisions concern the order in which:</p> <ul style="list-style-type: none"> ••Each criterion behavior is learned ••Elements common to two or more criterion behaviors can be learned <p>-These decisions are made in:</p> <ul style="list-style-type: none"> ••STEP C.2 (in this section of the HANDBOOK) |

SEE NOTE ON NEXT PAGE

* NOTE

It is a matter of judgment as to how much of a performance or of a curriculum to label a CRITERION BEHAVIOR. Take as one example the instructional development process being discussed in these volumes. One might choose to call the whole development process the criterion behavior. Or, one might choose to call each of the major tasks a criterion behavior. Or, one might choose to call each of the steps within a task or each of the sub-steps within a step a criterion behavior. While there are some formal criteria suitable for making decisions of this type (see later), differing units of behavior can meet the criteria. Thus, for example, the units labeled tasks, steps, sub-steps, and even sub-sub-steps in these volumes can all meet the criteria. The decision as to which unit to settle on is, therefore, arbitrary.

For purposes of analysis, it probably makes little sense to label so complex and comprehensive a performance as the complete instructional development process as a single criterion behavior. It is likely to be broken up into multiple criterion behaviors.

Once the unit of behavior to be labeled a criterion behavior is settled on, the number of sub-criterion behaviors (meeting formal criteria for sub-criterion behaviors) into which a criterion behavior can be sub-divided is fixed. (Criteria for labeling behaviors as criterion, sub-criterion, or preparatory are provided in the "D" volume of the HANDBOOK.)

The guidelines for making sequencing decisions which are made in TASKS "C" and "G" -- based on relationships among multiple criterion behaviors, between a criterion behavior and its sub-criterion behaviors, or between multiple sub-criterion behaviors belonging to a single criterion behavior are applicable regardless of differing judgments as to the appropriate unit of behavior to treat as a criterion behavior.

STEP

C.1

C.1

Sequence task analysis results for all the Sub-Criterion behaviors which make up each criterion behavior.

C.1.1

Sequence task analysis information describing all Sub-STEPS (or terminal behaviors) which make up each Sub-Criterion behavior.

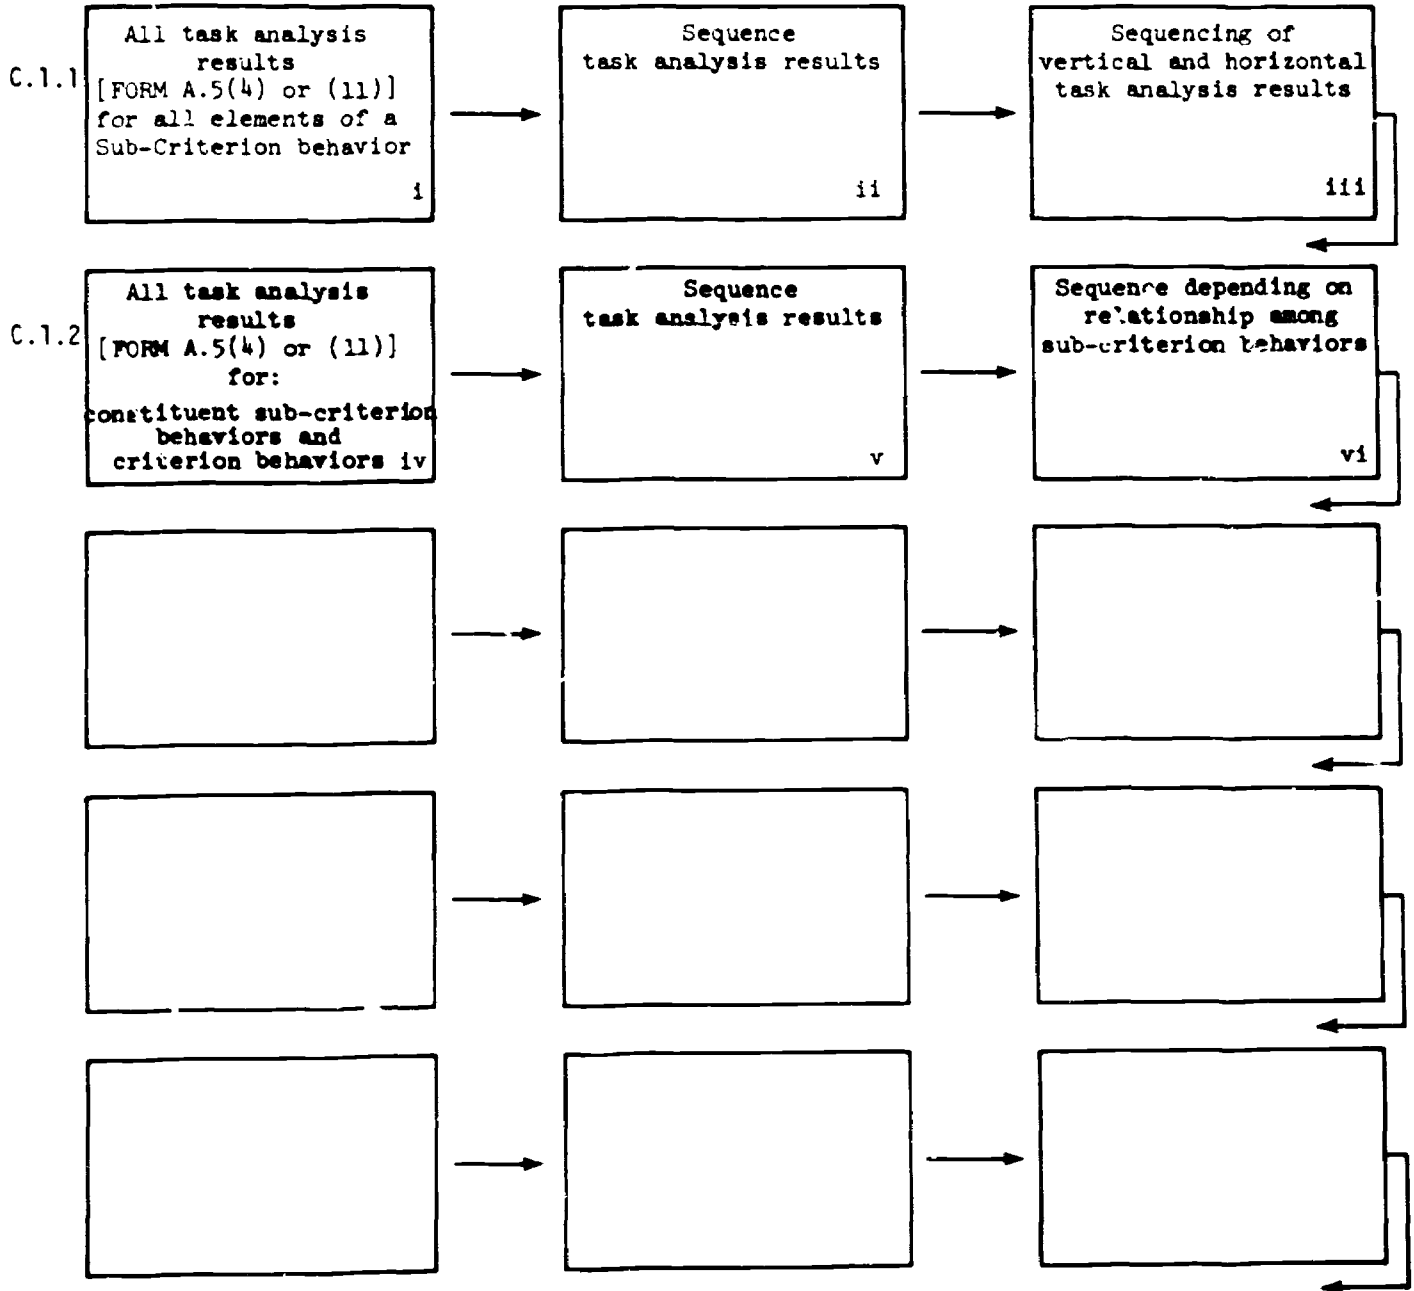

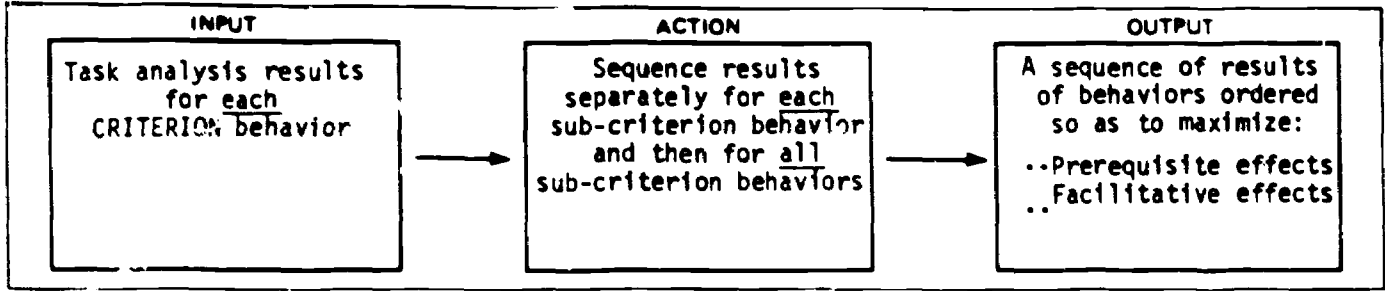

C.1.2

Sequence task analysis information describing all Sub-Criterion behaviors which make up each criterion behavior.*

**There is ample opportunity during TASK "G" (STRATEGY FORMULATION) to change sequencing decisions in light of additional information.*

STEP **C.1**

C.1

IDENTIFICATION MATRIX

DEFINING "SUB-CRITERION" AND "CRITERION" BEHAVIOR

| CONCEPTS | Sub-CRITERION behavior | CRITERION behavior |
|----------|--|---|
| CRITERIA | <p>-A Sub-CRITERION behavior can consist of:</p> <ul style="list-style-type: none"> ••One or more performance Sub-STEPS <li style="text-align: center;">or ••One or more knowledge domain terminal behaviors <p>-A Sub-CRITERION behavior usually has one or more of these properties:</p> <ul style="list-style-type: none"> ••An identifiable, logical end point ••An identifiable OUTPUT (product or result) ••An amount of behavior worth testing* | <p>-A CRITERION behavior can consist of:</p> <ul style="list-style-type: none"> ••Two or more Sub-CRITERION behaviors: <li style="text-align: center;">/Performance Sub-STEPS <li style="text-align: center;">or <li style="text-align: center;">/Knowledge domain terminal behaviors <p>-A CRITERION behavior has <u>all</u> of these properties:</p> <ul style="list-style-type: none"> ••An identifiable, logical end point ••An identifiable OUTPUT (product or result) ••An amount of behavior worth testing* |

*In SECTION "D" the term preparatory objective is used to identify the behavior which is defined here as Sub-CRITERION.

| | | |
|----------|---|---|
| EXAMPLES | <p style="text-align: center;">e.g., <u>KNOWLEDGE DOMAIN</u></p> <p>-In chemistry, a separate Sub-CRITERION behavior might be identified for each element in the periodic table; the terminal behavior being to list the properties of the elements (e.g., number of electrons and protons, atomic weights)</p> <p style="text-align: center;">e.g., <u>PERFORMANCE</u></p> <p>-In math, Sub-CRITERION behaviors related to the CRITERION behavior in the right-hand column might include:</p> <ul style="list-style-type: none"> ••Estimating the "characteristic" of a number; ••Looking up its "mantissa" on a table; etc. | <p style="text-align: center;">e.g., <u>KNOWLEDGE DOMAIN</u></p> <p>-In chemistry, a criterion behavior might require the behavior of identifying the bases for the position in the periodic table of each element</p> <p style="text-align: center;">e.g., <u>PERFORMANCE</u></p> <p>-In math, a criterion behavior might require the ability to compute (e.g., multiply or divide) using logarithms</p> |
|----------|---|---|

TWO TYPES OF SEQUENCING DECISIONS WHICH HAVE TO BE MADE ABOUT PERFORMANCE SUB-STEPS WHICH MAKE UP A SUB-CRITERION BEHAVIOR

| TYPES OF SEQUENCING DECISIONS | Sequencing decision about VERTICALLY related task analysis results for a <u>single</u> Sub-STEP | Sequencing decision about HORIZONTALLY related task analysis results for two or more Sub-STEPS |
|-------------------------------|--|--|
| CRITERIA | <p>-When a task analysis for a single Sub-STEP is judged to be at an insufficient level of detail (i.e., it is judged that students cannot take a required ACTION which is to be associated with an INPUT class), lower level, more specific task analyses are performed (See page 13)</p> <p>-The decision to be made involves these vertically arranged multiple levels of task analysis results:</p> <ul style="list-style-type: none"> ••In what order should the task analysis results for these levels be arranged (becoming the basis for the order in which the skills they identify will be taught)? | <p>-When a task analysis for two or more Sub-STEPS has been performed (for some of which vertical analyses have also been performed), the following sequencing decisions have to be made:</p> <ul style="list-style-type: none"> ••In what order should the task analysis results for each Sub-STEP (relative to each other Sub-STEP) be sequenced ••Within the above sequence, in what order should vertical results for one (or more of the separate Sub-STEPS) be sequenced |

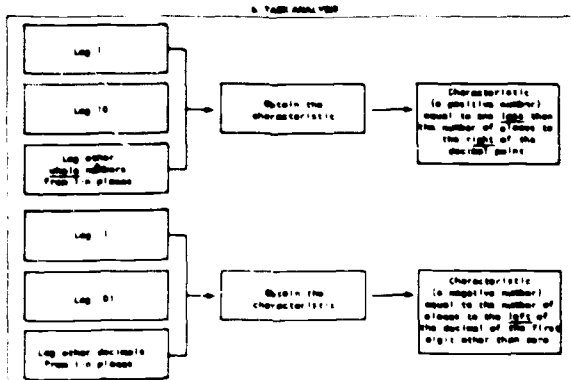

EXAMPLE (COMPUTATION OF LOGARITHMS) ILLUSTRATING HORIZONTAL AND VERTICAL SEQUENCING DECISIONS WHICH HAVE TO BE MADE

C.1.1

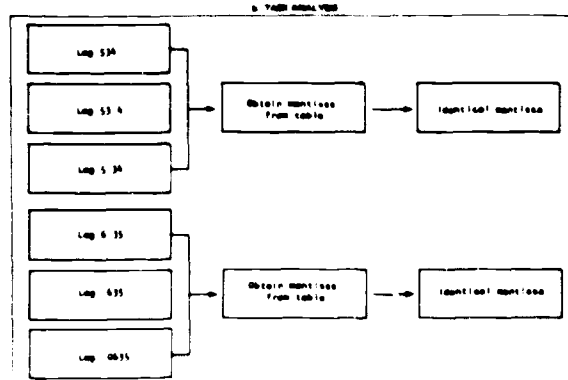

EXAMPLE

HORIZONTAL Decision

Task Analysis for Sub-STEP 1 (estimating characteristics)

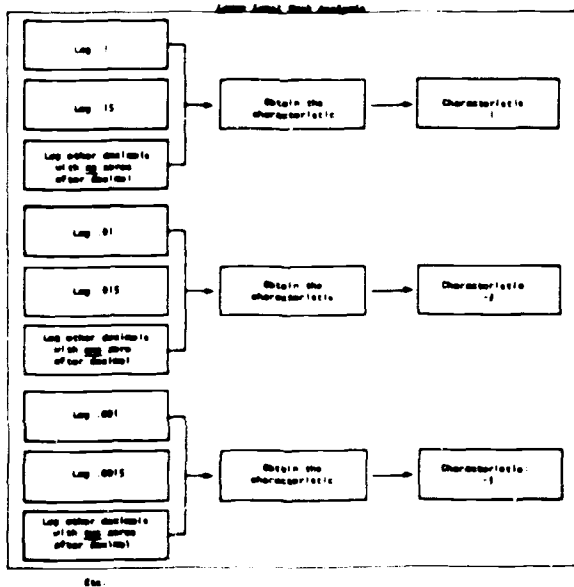

Task Analysis for Sub-STEP 2 (obtaining 'mantissas' from logarithm tables)

In what order should the results for these two Sub-STEPS be sequenced (and then the two Sub-STEPS be taught)?

VERTICAL Decisions

-It was determined during task analysis that students did not know how to obtain a "characteristic" for decimal numbers. Accordingly, a lower level task analysis was performed yielding the results to the left. (If it were determined that the ACTIONS now diagrammed could not be taken, a still lower level of detail would have to be obtained.)

-The sequencing decision which has to be made: in what order is this diagram (to the left) to be sequenced relative to its parent (Sub-STEP 1) above.

C.1.1
DECISION
MATRIX

DETERMINING HOW TO MAKE SEQUENCING DECISIONS
ABOUT VERTICAL AND HORIZONTAL TASK ANALYSIS RESULTS

| CONDITIONS | 1 VERTICAL task analysis results | 2 HORIZONTAL task analysis results | 3 MIXED vertical and horizontal task analysis results |
|-------------------|---|---|---|
| ACTION TO TAKE | <p>-Arrange the task analysis results in the following sequential order:</p> <ul style="list-style-type: none"> ••1st: <u>lowest level analysis attained</u> ••2nd: <u>next highest level analysis attained</u> ••3rd: <u>next highest level analysis attained</u> ••Last: <u>Original task analysis for the Sub-STEP</u> | <p>-Arrange the task analysis results in the order in which each Sub-STEP in the Sub-Criterion behavior is performed.</p> <ul style="list-style-type: none"> ••1st: 1st Sub-STEP ••2nd: 2nd Sub-STEP ••3rd: 3rd Sub-STEP ••Last: Last Sub-STEP <p>-Decisions about the order in which to teach these Sub-STEPs are made in TASK "G"</p> | <p>-Arrange results as in the middle column</p> <p>-For those individual Sub-STEPs (within this overall sequence) having "vertical" results, keep the order as performed in Column #1</p> |

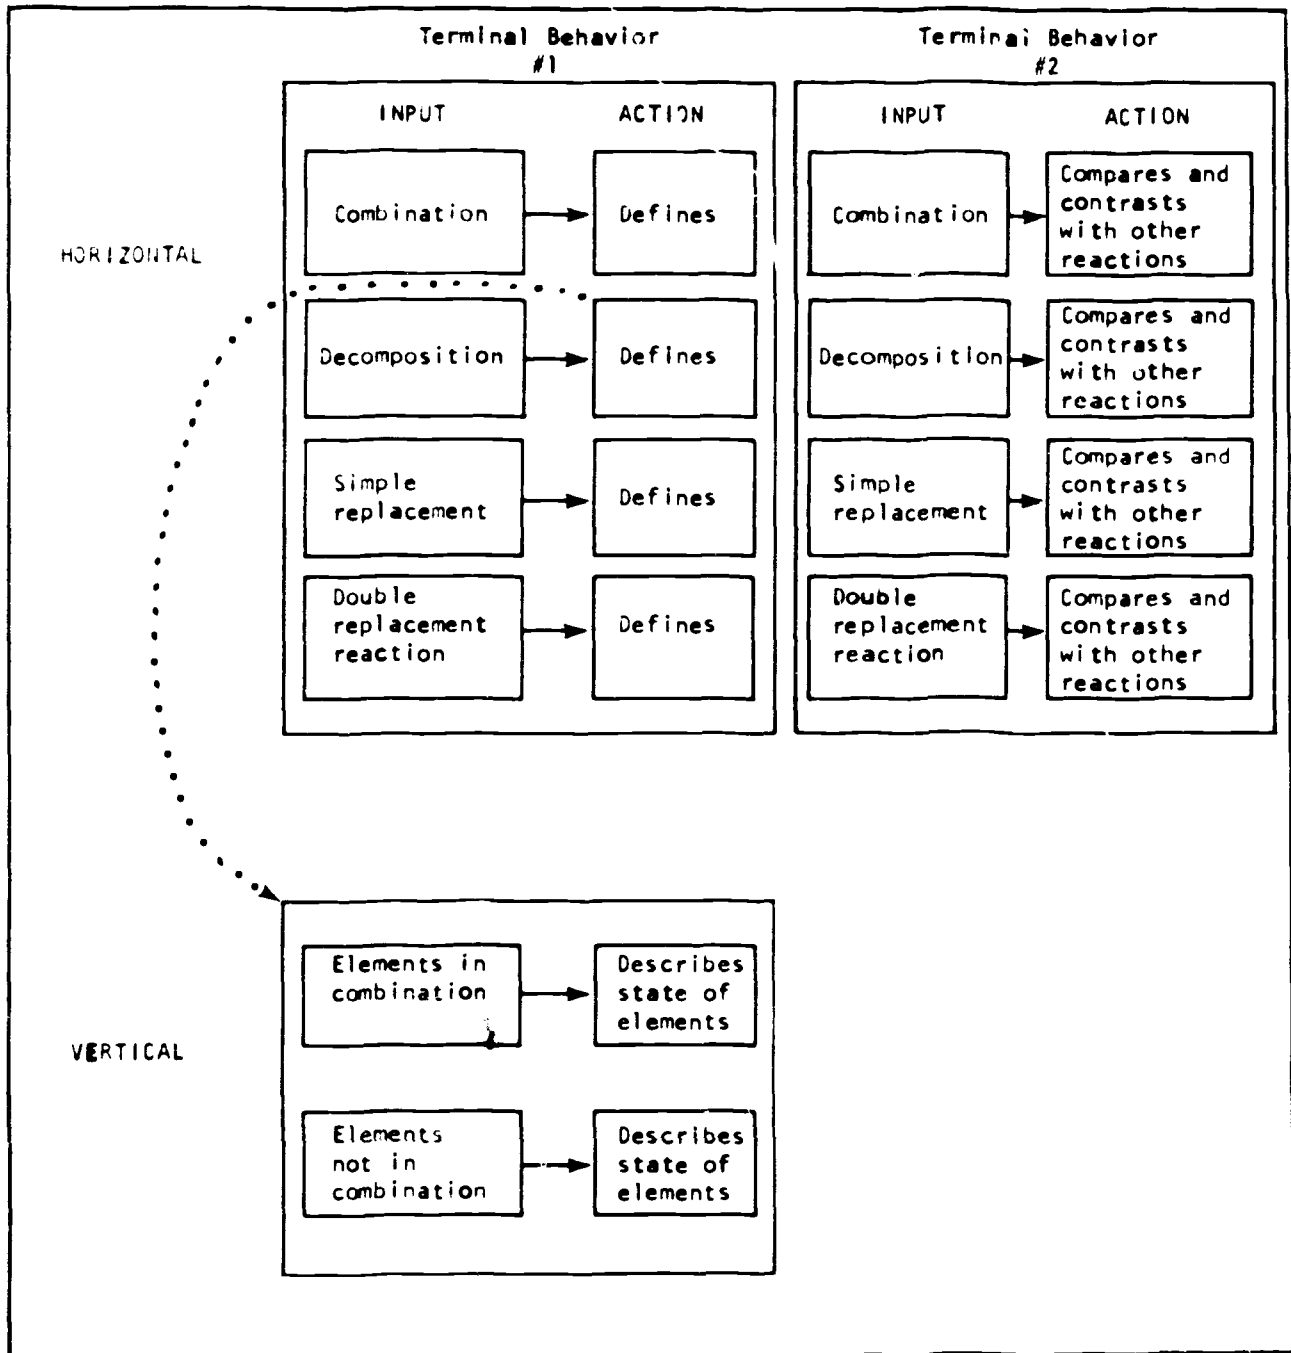

| | | | |
|-----------|---|---|--|
| RATIONALE | <p>-Lowest level results identify skills which are prerequisite to the learning of higher level skills</p> <p>-Within a Sub-STEP, lower level skills should be sequenced earlier (i.e., taught earlier)</p> | <p>-Skills for Sub-STEPs at coordinate levels can be taught in a forward or backward order</p> <p>-See TASK G for rationales for each order</p> | <p>-When instruction is provided for a Sub-STEP having vertical results (either in a forward or backward order relative to other Sub-STEPs):</p> <ul style="list-style-type: none"> ••Lower level skills will be taught before higher level skills related to that Sub-STEP |

| | |
| | |
| | |
| | |

**ILLUSTRATION SUMMARIZING PROCEDURES FOR SEQUENCING
ALL TASK ANALYSIS RESULTS
FOR A SUB-CRITERION BEHAVIOR**

C.1.1

#1

- a. Create (or maintain) a forward order of task analysis results for all Sub-STEPs making up a performance Sub-Criterion behavior (or for all terminal behaviors making up a knowledge domain Sub-Criterion behavior)

#2

- a. Identify each performance Sub-STEP (or each knowledge domain terminal behavior) which has had a task analysis performed to one or more lower levels of detail (Results on FORM A.5(4) for performance or A.5(11) for knowledge domain)
- b. For those so identified, sequence task analysis results in the following order:
- Lowest levels first
 - Progress in an ascending order
 - End with highest level analysis
- c. Insert this ascending sequence within the forward order developed for all the separate Sub-STEPs (or terminal behaviors)

| | | |
|----------|--|--|
| EXAMPLES | <p>e.g., <u>DIVISION</u></p> <p>-Performing long or short division may be labeled a criterion behavior. It is a self-contained behavior having an identifiable end point and OUTPUT</p> <p>-It is a criterion behavior whose performance is contingent on such sub-criterion behaviors as subtraction and multiplication</p> | <p>e.g., <u>SUBTRACTION AND MULTIPLICATION</u></p> <p>-In performing long division, subtraction and multiplication constitute elements in a chain (i.e., you subtract <u>after</u> you multiply)</p> |
|----------|--|--|

*As pointed out earlier, what one developer identifies as a sub-criterion behavior another developer might identify as a criterion behavior. A sub-criterion behavior now labeled as a "criterion" behavior is obviously smaller in scope. There are no rules for labeling one way or the other; it is arbitrary. Procedures for dealing with them do not depend on the scope of what is included--as long as the basic relationships between a behavior and its constituent elements are observed.

C.1.2
DECISION
MATRIX

DETERMINING HOW TO SEQUENCE THE TASK ANALYSIS RESULTS
FOR A CRITERION BEHAVIOR RELATIVE TO
ITS CONSTITUENT SUB-CRITERION BEHAVIORS

| TYPE OF TASK ANALYSIS RESULTS | Task analysis results for a CRITERION behavior | Task analysis results for constituent Sub-CRITERION behaviors |
|-------------------------------------|---|---|
| ACTION TO TAKE | <p>-Sequence the task analysis results which identify how the sub-criterion behaviors are chained together:</p> <ul style="list-style-type: none"> ••AFTER those for constituent sub-criterion behaviors | <p>-Sequence the task analysis results for constituent sub-criterion behaviors:</p> <ul style="list-style-type: none"> ••BEFORE those for the CRITERION behavior |

| | | |
|---------|--|--|
| EXAMPLE | <p>CRITERION behavior: <i>Stating the relationships (i.e., producing a chain) involved in concepts that define Archimedes' principle</i></p> <p>-Sequence the diagrams for this chain following the diagrams for the individual concepts (sub-criterion behaviors)</p> | <p>Sub-CRITERION behaviors: <i>Define or exemplify:</i></p> <ul style="list-style-type: none"> ••Weight of displaced fluid ••Magnitude of buoyant force ••Magnitude of apparent loss of weight <p>-Diagrams for these sub-criterion behaviors should precede the <u>final</u> ones for the criterion behavior</p> |
|---------|--|--|

C.1.2
IDENTIFICATION
MATRIX

CONDITIONS TO BE CONSIDERED WHEN DETERMINING THE SEQUENCE OF TASK ANALYSIS RESULTS FOR EACH SUB-CRITERION BEHAVIOR RELATIVE TO OTHER CONSTITUENT SUB-CRITERION BEHAVIORS

| CONDITIONS | 1 Sub-Criterion Behaviors SHARE COMMON ELEMENTS | 2 One Sub-Criterion Behavior PROVIDES AN INPUT to another Sub-Criterion Behavior | 3 One Sub-Criterion Behavior IS A PREREQUISITE for another Sub-Criterion Behavior |
|------------|--|--|---|
| CRITERIA | <p>-Two or more sub-criterion behaviors analyzed to lower or specific levels of detail are revealed to share:</p> <ul style="list-style-type: none"> ••One or more Sub-STEPS (for performance) or terminal behaviors (for knowledge domain) <li style="text-align: center;">OR ••One or more component skills (i.e., discriminations, generalizations, or associations) | <p>-A sub-criterion behavior results in a final OUTPUT which, in turn, becomes an INPUT for another sub-criterion behavior (a horizontal relationship)</p> | <p>-The mastery of one sub-criterion behavior is contingent on the prior mastery of another sub-criterion behavior</p> <p>-These sub-criterion behaviors are thus in a <u>vertical</u> relationship to one another (i.e., a lower level task analysis of the contingent sub-criterion behavior would reveal the prerequisite one)</p> <p>-They are not in a coordinate, horizontal relationship</p> |

| | | | |
|----------|--|--|---|
| EXAMPLES | <p>e.g., <u>PLAYING BRIDGE</u></p> <p>-In both "play" and "bidding," the player has to be able (among other things) to:</p> <ul style="list-style-type: none"> ••Identify suits ••Identify honor cards and numbered cards ••Identify higher and lower cards | <p>e.g., <u>COMPUTING STATISTICS</u></p> <p>-The OUTPUT of a computational Sub-STEP, treated as a sub-criterion behavior (e.g., the value of i)</p> <p>-Becomes the INPUT for another Sub-STEP (i.e., looking up the significance in a table), also treated as a sub-criterion behavior</p> | <p>e.g., <u>PHYSICS</u></p> <p>-The concepts of "force" and "pressure" are initially treated as coordinate sub-criterion behaviors</p> <p>-Further analysis shows that dealing with "pressure" is contingent on being able to deal with "force" (i.e., a lower level concept)</p> |
|----------|--|--|---|

C.1.2

ADDITIONAL EXAMPLES ILLUSTRATING THREE RELATIONSHIPS
SUB-CRITERION BEHAVIORS CAN BEAR TO ONE ANOTHER

EXAMPLES

| | | |
|---|--|---|
| <p>1. SHARING COMMON ELEMENTS</p> | <p style="text-align: center;">Sub-Criterion Behavior #1</p> <p><i>In a final report describing the research design for an experimental study</i></p> | <p style="text-align: center;">Sub-Criterion Behavior #2</p> <p><i>In a final report interpreting the statistical analysis of the results of the study</i></p> |
| | <p>-The two Sub-Criterion behaviors share common component skills:</p> <ul style="list-style-type: none"> <i>--The ability to identify and describe the conditions necessary for the use of particular types of statistical analysis;</i> <i>--In the case of "designing a study," a design must be created which meets the conditions for the use of particular types of statistical analysis; in the case of writing a report on the results, the writer must be able to assess the adequacy with which assumptions and conditions were met</i> <p>-In teaching the writing of research reports, i.e., how to write about: statement of the problem, describing the method (including describing the design), reporting results, and including a discussion and statement of conclusions, it might be beneficial to teach conditions and assumptions for use and interpretation of results of types of statistical analysis <u>early</u> in the sequence before each Sub-Criterion (proper) is taught.</p> | |
| <p>2. PROVIDING INPUTS TO ONE ANOTHER</p> | <p style="text-align: center;">Sub-Criterion Behavior #1</p> <p><i>Given a physics problem to solve, identifying the appropriate formula to use in solving it (e.g., formula for Ohm's Law)</i></p> | <p style="text-align: center;">Sub-Criterion Behavior #2</p> <p><i>Substituting the values from the problem in the formula for Ohm's Law</i></p> <p style="text-align: center;">Sub-Criterion Behavior #3</p> <p><i>Doing the computational work</i></p> |
| | <p>-The OUTPUT of each of the Sub-Criterion behaviors becomes an INPUT for the next Sub-Criterion behavior in the <u>chain</u>.</p> | |
| <p>3. ARE PREREQUISITE TO ONE ANOTHER</p> | <p style="text-align: center;">Sub-Criterion Behavior #1</p> <p><i>Defining or giving examples of balanced or unbalanced forces</i></p> <p style="text-align: center;">Sub-Criterion Behavior #2</p> <p><i>Defining or giving an example of what a "force" is</i></p> <p style="text-align: center;">Sub-Criterion Behavior #3</p> <p><i>Defining or giving an example of "strength" of a force</i></p> | <p>-Sub-Criterion Behavior #2 is clearly prerequisite to #1 and #3. Without being able to define, or illustrate, or pick out an example of, etc., a force, the learner cannot be expected to deal with concepts of balanced or unbalanced forces or with the concept of "strength of force"</p> <p>-Also, Sub-Criterion behavior #3 is prerequisite to #1</p> |

C.1.2
DECISION
MATRIX

DETERMINING HOW TO SEQUENCE SUB-CRITERION BEHAVIORS
BEARING EACH OF THREE POSSIBLE RELATIONS TO ONE ANOTHER

| CONDITIONS | 1 Sub-Criterion Behaviors SHARE COMMON ELEMENTS | 2 One Sub-Criterion Behavior PROVIDES AN INPUT to another Sub-Criterion Behavior | 3 One Sub-Criterion Behavior IS A PREREQUISITE for another Sub-Criterion Behavior |
|-------------------|---|--|---|
| ACTION TO TAKE | <p>-Sequence task analysis results for elements shared with several sub-criterion behaviors FIRST in line</p> <p>-(Subsequently, instruction for these elements will precede instruction for the intact sub-criterion behaviors)</p> <p>-Sequence results for sub-criterion behaviors proper (with duplicate results inserted for elements removed) according to recommendations in other columns</p> | <p>-Sequence task analysis results in the order in which sub-criterion behaviors are to one another in usual performance.*</p> <p>••Sub-criterion behaviors which provide an INPUT to another sub-criterion behavior are sequenced BEFORE the sub-criterion behavior to which it takes an INPUT</p> <p>••Sub-criterion behaviors which take as INPUTS OUTPUTS from another sub-criterion behavior are sequenced AFTER the sub-criterion behavior whose OUTPUT provides the INPUT</p> | <p>-Sequence task analysis results for sub-criterion behaviors in the direction of the contingent relationship:</p> <p>••Prerequisite sub-criterion behaviors BEFORE the sub-criterion behavior which is contingent on it</p> <p>••The sub-criterion behavior contingent on another sub-criterion behavior AFTER the sub-criterion behavior on which it is contingent</p> <p>-The subsequent sequencing of instruction will follow this order</p> |

*Ultimate sequencing decisions are made in TASK G

| EXAMPLES | e.g., | e.g., | e.g., |
|----------|--|--|---|
| | <p>-The concepts (discriminations, generalizations, associations, and chains) appear in most of the ten TASKS described in the ten volumes of this HANDBOOK</p> <p>-It is likely to be effective (facilitative) and efficient to teach them <u>first</u> (no matter whether instruction begins with TASK A or with TASK J)</p> | <p>-The ten major tasks identified in this HANDBOOK (i.e., A-J) (if treated as sub-criterion behaviors) provide INPUTS to one another and therefore would be sequenced in the order A through J</p> <p>-In TASK G, it might subsequently be decided to teach them in the order J through A</p> | <p>-If it were judged that "preparatory instructional materials" is a prerequisite for "revising instructional materials," then they would be sequenced with "preparation" coming beforehand (i.e., first)</p> <p>(No such assumption is necessarily being proposed here)</p> |

C.1.2

ILLUSTRATION SUMMARIZING PROCEDURES INVOLVED IN MAKING SEQUENCING DECISIONS ABOUT SUB-CRITERION BEHAVIORS

#1

INSPECT

- a. Inspect task analysis results on sets of A.5(4) or (11) FORMS for:
 - Elements which separate sub-criterion behaviors share
 - Sub-criterion behaviors which make INPUTS to other sub-criterion behaviors;
- OR
- Sub-criterion behaviors which are prerequisites for other sub-criterion behaviors

#2

SEQUENCE

task analysis results

- a. Sequence shared elements before the sub-criterion behaviors of which they are constituents
- b. Sequence sub-criterion behaviors which make INPUTS to others ahead of those to which they make INPUTS
- c. Sequence sub-criterion behaviors which are prerequisites ahead of those which are contingent on them

C.1.2

JOB DIAGRAM

BACKGROUND INFORMATION

| | Page |
|--|---------------|
| Dealing with separate criterion behaviors | 50 |
| Relationship between separate criterion behaviors | 51, 52 |
| | |
| | |
| | |
| | |

The procedures recommended for identifying relationships among sub-criterion behaviors and making sequencing decisions based on them are equally applicable to CRITERION behaviors. Criterion behaviors may: (a) share common elements with other criterion behaviors; (b) make INPUTS to other criterion behaviors; or (c) be prerequisites to other criterion behaviors.

In addition, they may bear no relationship to other criterion behaviors except for being part of the same program (See opposite page).

C.2.1
IDENTIFICATION
MATRIX

CONDITIONS TO BE IDENTIFIED AS A BASIS FOR DECISIONS
ABOUT SEQUENCING TASK ANALYSIS RESULTS
FOR SEPARATE CRITERION BEHAVIORS

| CONDITIONS | RELATIONSHIPS EXIST BETWEEN SEPARATE CRITERION BEHAVIORS | RELATIONSHIPS DO <u>NOT</u> EXIST BETWEEN SEPARATE CRITERION BEHAVIORS |
|------------|--|---|
| CRITERIA | <ul style="list-style-type: none"> -<i>CRITERION behaviors share common elements:</i> <ul style="list-style-type: none"> ••<i>Share a sub-criterion behavior</i> ••<i>Share components of a sub-criterion behavior</i> -<i>The OUTPUT of one criterion behavior becomes the INPUT for another criterion behavior</i> -<i>A criterion behavior is a prerequisite for another criterion behavior</i> | <ul style="list-style-type: none"> -<i>Criterion behaviors do not bear any relationship to one another</i> -<i>They are simply separate criterion behaviors within the same overall program</i> |

| | | |
|----------|--|--|
| EXAMPLES | <p>See Sub-STEP C.1.2 (page 32) for treatment of these conditions as they pertain to two or more sub-criterion behaviors which are constituent elements of a single criterion behavior</p> | <p>e.g., <u>PHYSICS</u></p> <ul style="list-style-type: none"> -<i>Criterion behaviors involving "light" and "work"</i> |
|----------|--|--|

EXAMPLES

| | |
|--|--|
| <p style="text-align: center;">#1. SHARED ELEMENTS</p> <p>e.g., the piano student (other instrumentalists or singers), whether learning to play solo works or concertos, or whether learning to play baroque, romantic, or modern pieces (each type treated as a criterion behavior), has to be able to observe "rules" about <u>phrasing</u>, or <u>rhythm</u>, or <u>tone quality</u>.</p> <p>These shared elements might properly be taught in advance of all those criterion behaviors which share them.</p> <p>e.g., if a variety of mathematical computations are to be done by means of logarithms, logarithms becomes a "shared element" (as well as a prerequisite).</p> | <p style="text-align: center;">#2. OUTPUT OF ONE BECOMES AN INPUT FOR ANOTHER</p> <p>e.g., in "instructional development" the "formulation of an instructional strategy" creates an OUTPUT which becomes an INPUT for the actual "development of instructional materials"</p> |
| <p style="text-align: center;">#3. PREREQUISITE/CONTINGENT</p> <p>e.g., in studying magnetic fields, the student has to relate the field to the electric current which produces it.</p> <p>Accordingly, "electric current" may properly be considered a prerequisite to criterion behavior (one which should be taught <u>before</u> magnetic fields).</p> | <p style="text-align: center;">#4. NO RELATIONSHIP</p> <p>e.g., "trigonometric functions" and "probability statistics" bear to each other none of the relationships described in #'s 1, 2, or 3</p> |

*Some developers might have called the behaviors illustrated "Sub-Criterion" behaviors. Whether they are dubbed Sub-Criterion or Criterion, in the end, makes no practical difference; the same type of analysis is made.

PURPOSES OF STEP C.3

| | | |
|-----------------|---|--|
| <p>PURPOSES</p> | <p>Estimating how much can be learned in an instructional hour Sub-STEP C.3.1</p> | <p>Grouping task analysis results by blocks of instructional hours Sub-STEP C.3.2</p> |
| <p>CRITERIA</p> | <p><i>-The learning analyses on sequenced task analysis forms (FORM A.5(4) or (11)) are reviewed for:</i> <i>••Judged learning difficulties involved</i> <i>-Based on the review, an estimate is made of how much students can learn in an instructional hour</i></p> | <p><i>-The task analysis results for all criterion behaviors in the program are blocked into groups:</i> <i>••What it is judged can be learned in a succession of instructional hours</i></p> |

IDENTIFICATION
MATRIX

| AMOUNTS | LESS than a Sub-Criterion behavior | ONE Sub-Criterion behavior | TWO OR MORE Sub-Criterion behaviors (part of the same criterion behavior) | A WHOLE criterion behavior | TWO OR MORE criterion behaviors |
|----------|---|---|--|--|--|
| CRITERIA | <p>-It may require an entire instructional hour to teach:</p> <ul style="list-style-type: none"> ••One or more Sub-STEPS (or terminal behaviors) making up a Sub-Criterion behavior ••Component skills which underlie a Sub-STEP (or a terminal behavior) | <p>-It may require an entire instructional hour to teach:</p> <ul style="list-style-type: none"> ••Just one Sub-Criterion behavior (out of two or more which make up a criterion behavior) | <p>-It may require an entire instructional hour to teach:</p> <ul style="list-style-type: none"> ••Two or more Sub-Criterion behaviors (but less than all the Sub-Criterion behaviors) which make up a criterion behavior | <p>-It is possible within one instructional hour to cover:</p> <ul style="list-style-type: none"> ••A single criterion behavior | <p>-It is possible within one instructional hour to cover:</p> <ul style="list-style-type: none"> ••Two or more separate criterion behaviors (sequenced purposefully or randomly) |

*Any given instructional program is likely to be made up of instructional hours varying in how much is covered; within the same program some instructional hours may be adequate to cover two or more CRITERION behaviors, at one extreme, while other instructional hours may be devoted only to component skills for a single Sub-Criterion behavior

PREVIEW OF THE NEXT SubSTEP

INFORMATION TO REVIEW IN DETERMINING HOW MUCH "BEHAVIOR"
STUDENTS ARE LIKELY TO BE ABLE TO LEARN
IN AN INSTRUCTIONAL HOUR

| TYPE OF BEHAVIOR | PERFORMANCE | KNOWLEDGE DOMAIN |
|------------------|---|---|
| CRITERIA | <p>-A sequenced set of A.5(4) FORMS containing a LEARNING ANALYSIS:</p> <ul style="list-style-type: none"> ••One FORM for each Sub-STEP (or for a Sub-Sub-STEP) ••A series of such FORMS for all Sub-STEPS which make up each Sub-Criterion behavior ••A set of FORMS for all Sub-Criterion behaviors which make up a criterion behavior ••Multiple sets of FORMS for all criterion behaviors | <p>-A sequenced set of A.5(4) FORMS containing a LEARNING ANALYSIS:</p> <ul style="list-style-type: none"> ••One FORM for each terminal behavior ••A series of such FORMS for all terminal behaviors which make up each Sub-Criterion behavior ••A set of FORMS for all terminal behaviors which make up a criterion behavior ••Multiple sets of FORMS for all terminal behaviors |

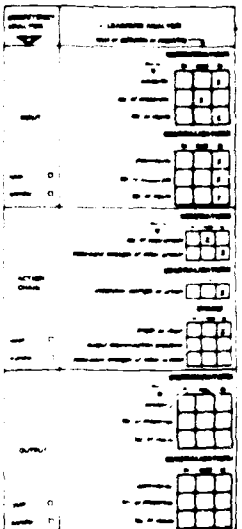

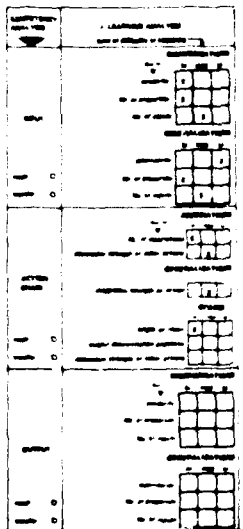

| | |
|--|--|
| |  <p>The diagram consists of a large grid of boxes. On the left side, there are several vertical labels: 'GENERAL BEHAVIOR', 'SUB-CRITERION BEHAVIOR', 'SUB-BEHAVIOR', and 'SUB-SUB-BEHAVIOR'. On the right side, there are labels: 'KNOWLEDGE DOMAIN', 'SUB-CRITERION BEHAVIOR', 'SUB-BEHAVIOR', and 'SUB-SUB-BEHAVIOR'. Arrows indicate relationships between these levels of behavior and knowledge domains. The grid is organized into four main sections, each corresponding to one of the behavior levels on the left. Each section contains a grid of boxes, with some boxes containing text or symbols. The overall structure suggests a hierarchical or sequential relationship between the different levels of behavior and the knowledge domains they represent.</p> |

C.3.1
DECISION
MATRIX

JUDGING HOW MUCH BEHAVIOR CAN BE LEARNED
DURING AN INSTRUCTIONAL HOUR:
BASED ON IDENTIFIED LEARNING DIFFICULTIES*

| | | |
|-----------------------|---|--|
| <p>CONDITIONS</p> | <p>A series of separate LEARNING ANALYSES revealing consistently LOW anticipated learning difficulties</p> | <p>A series of separate LEARNING ANALYSES revealing consistently HIGH anticipated learning difficulties</p> |
| <p>ACTION TO TAKE</p> | <p>-Identify a <u>larger</u> number of separate Sub-<u>STEPS</u> (or terminal behaviors) as being capable of being learned in an instructional hour</p> | <p>-Identify a <u>smaller</u> number of separate Sub-<u>STEPS</u> (or terminal behaviors) as being capable of being learned in an instructional hour</p> |

*Although judgments of this type are based on data (i.e., learning analyses), experience in performing this Sub-STEP is probably the surest guide as to precisely how much can be learned in an instructional hour

| | | |
|---|---|--|
| <p>EXAMPLE (just one diagram, not a series)</p> |  |  |

| Adequacy of procedures for estimating how much can be learned in an instructional hour | 83 |
| | |
| | |
| | |
| | |

C.3.1

ILLUSTRATION SUMMARIZING PROCEDURES FOR ESTIMATING
HOW MUCH CAN BE LEARNED IN AN INSTRUCTIONAL HOUR

#1

- a. REVIEW the learning analysis results on the sequenced series of A.5(4) or (11) FORMS
- b. Identify where the series contains learning analyses which reveal:
 - Consistently difficult learning throughout the series
 - or
 - Consistently easy learning throughout the series

Right-hand Side of FORM A.5(4)

The form is a large grid divided into several sections. On the left, there are labels for 'ACTIVITY', 'ACTION', and 'OBJECTIVE'. The main body of the form consists of multiple columns and rows of tables. Each table has a header row and several data rows. Some tables have checkboxes next to them. The form is used for recording learning analysis results.

C 3.1
STANDARDS
MATRIX

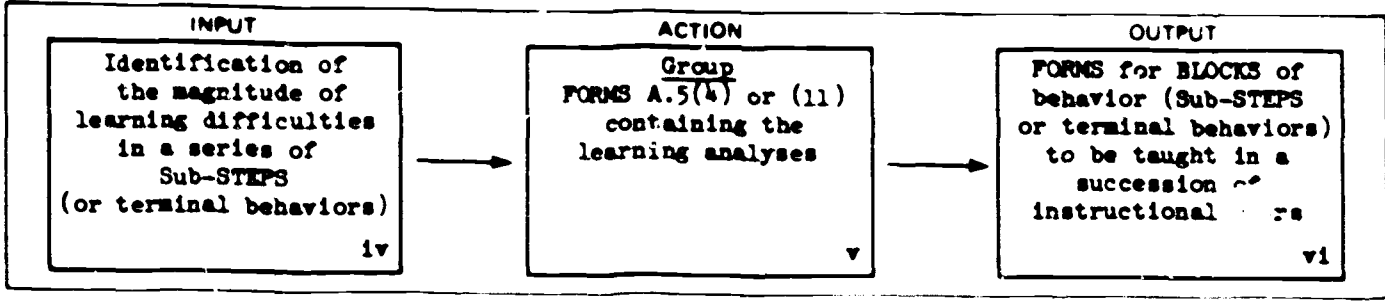

ASSESSING THE ADEQUACY OF PROCEDURES FOR ESTIMATING
HOW MUCH CAN BE LEARNED DURING AN INSTRUCTIONAL HOUR

| PROPERTIES | DATA-BASED | COMPLETENESS |
|------------|---|--|
| CRITERIA | <p><i>-Estimation is based on learning analyses revealing the magnitude (high, medium, low) of the difficulty in learning component skills involved in each Sub-STEP (or in each terminal behavior)</i></p> | <p><i>-Review of learning analyses is performed for all Sub-STEPS (starting at the beginning)</i></p> <p><i>-Identification of how much can be learned in an instructional hour is based on:</i></p> <ul style="list-style-type: none"> <i>••The magnitude of learning difficulties for each Sub-STEP (or terminal behavior)</i> <i>••The consistency of learning analyses for a series of Sub-STEPS (or terminal behaviors)</i> |

PREVIEW OF THE NEXT SubSTEP

| | |
|---------------------------------------|--|
| <p>YOUR PRODUCT</p> | <p><i>Grouped FORMS describing the behavior to be taught in each instructional hour (the amount of behavior taught depending on anticipated learning difficulty)</i></p> |
| <p>WHAT YOU WILL WORK FROM</p> | <p>(1) The identification of the degree of anticipated difficulty in learning the behavior described in a series of FORMS.</p> |
| <p>WHAT YOU WILL DO</p> | <p>(1) Group these FORMS describing the behavior which, because of estimated difficulty learning them, can be learned in an instructional hour.</p> <p>(2) Repeat until all FORMS are grouped and create the total number of instructional hours to be prepared.</p> |
| <p>FORMS YOU WILL USE</p> | <p>None</p> |

C.3.2

ILLUSTRATION SUMMARIZING PROCEDURES FOR CREATING
BLOCKS OF BEHAVIOR TO BE TAUGHT IN AN INSTRUCTIONAL HOUR

#1

- a. Review the identification (made in Sub-STEP C.3.1) of the patterns of anticipated learning difficulties for a series of Sub-STEPS (or terminal behaviors):
- A larger series of easily learned behaviors
 - A smaller series of behaviors which are difficult to learn

#2

- a. GROUP blocks of behavior (to form instructional units of an hour's duration) according to anticipated learning difficulties:
- A bigger block of easily learned behaviors
 - A smaller block of harder to learn behaviors
- b. End up with sets of A.5(4) or (11) FORMS grouped together for each and every instructional hour in the total program.*

*The illustration below for one instructional hour shows two FORMS grouped together. The possibilities are from one to two or more (depending on the learning difficulties involved)

FORM A.5(4) or (11)
