ABSTRACT

This document is one of a series about the conditions of blacks and other minorities AM Houston, Texas. Statistics are presented on selected characteristics of minority persons in Houston and parts of Harris County. This document is designed to provide data in an organized and systematic way by bringing together in one convenient source socioeconomic facts about the minority community and by keeping the document constantly up to date through more current reports. Data for the central city and some suburban rings in close proximity to Houston proper are given when this type of distinction appears to be significant. The major areas treated in this report are: general socioeconomic characteristics, population and distribution, family and household size, education, employment and income, housing, poverty, politics, health, economic development statistics, and other pertinent data on minority problems and accomplishments. The preparation of the volume was guided by three major concerns: the assessment of problems; a review of progress or accomplishments in the light of civil rights legislation; and a general projection of future needs and prospects. Information in the volume is classified according to major socioeconomic and demographic areas. Also, within each area, various subtopics or subdivisions are used. (Author/JM)

FOREWORD

by

Hortense W. Dixon
Director, the Urbar Resources Center

The book which follows is a working document of the Texas Southern University Urban Resources Center. The document, which has grown out of an effort to develop linkages between a minority urban university and local government, is a codification of relevant data that, when viewed collectively, represents the "living environment" of minorities in an urban area. More than that, it is an attempt to introduce to policy makers a non-entity in the process -- the minority perspective.

The organization of this book follows, in a formal way, the most chronic problems of minorities during this century. There is, however, a much deeper criticism of the linear approach that has characterized public policy during this period. A careful reading of each section will suggest that the state of affairs in one area is intricately and irrevocably related to each of the other conditions.

This working document will be used by the Texas Southern
University Urban Resources Center in making Phase I recommendation
to the University administration such program adaptations, innovations, and improvements that have the potential for impacting on

urban problems. It is viewed, similarly, as a being replicable by other black colleges in bringing the unique resources of these institutions to bear on the quality of life in an urbanized society. Perhaps, it will also become a useful resource for policy makers and planners in the public and private sector who share with us a sense of responsibility for the quality of life in the cities.

The Texas Southern University Urban Resources Center would appreciate responses from the people who read this document -- responses describing policy alternatives and strategies for change related to the major area presented herein.

CONTRIBUTORS

The Urban Resources Center Staff gave invaluable aid in the completion of the document. Twenty graduate urban interns work in the URC. Several of these students collected data for specific sections of the volume. A listing of the contributors and the categories of research for data which they collected may be found below.

- GENERAL SUPERVISION Kathryn A. Goode, Administrative Assistant in the Urban Resources Center, supervised and edited the complete report. She aided in the computation and statistical analysis of the data. Mrs. Goode holds a Bachelor of Arts degree, with Afro-American Studies as an area of specialization, from Smith College.
- GENERAL SOCIO-ECONOMIC Alicia H. Mathis, B.A., Social Service, CHARACTERISTICS Prairie View A. and M. College.
- EMPLOYMENT & POVERTY Mrs. James M. Spigner, B.A., Elementary Education, Southern University (Baton Rouge).
- INCOME Shirley M. West, B.A., Sociology, Alcorn University; attended University of Mississippi Law School.
- EDUCATION Lankford Bolling, B.A., Psychology, Bradley University.
- HOUSING Anne R. Harris, Bachelor in Music Education, Texas
 Southern University
- HEALTH Floyd Briscoe, B.A., History and Biology (Pre-Medical major), Texas Southern University
- CRIME & POLITICS Birdie Burch, B.A., Sociology and Anthropology, Whittier College.

Regina Drake, B.A., Sociology, University of Houston.

CRIMINAL JUSTICE - Tremaine B. Williams, B.A., Administration of Justice, Southern Illinois University (Carbondale, Illinois).

ECONOMIC DEVELOPMENT - Barbara Marcus, B.S., History, Boston University.

CIVIL RIGHTS - Lester Simon, B.A. History, Texas Southern University.

INTRODUCTION

The central purpose of this volume is to provide composite data on the minority population of Houston. We have organized the data along interdisciplinary lines in order to provide comprehensive and current information on many levels. The major sections of this report deal with general socio-economic characteristics, such as employment, population and migration, income, poverty, education and family size; housing, health, crime, economic development, politics, desegregation, and progress in civil rights for Houston and parts of Harris County. Data on the black population is more extensive than that for the Mexican-American population. In the latter case, only limited information is certain categories was available.

In the preparation of the volume, we were guided by three major concerns: the assessment of problems; a review of progress or accomplishments in the light of civil rights legislation; and a general projection of future needs and prospects. The combined effects of this kind of presentation (it is hoped) will provide the means through which an objective status of minority groups in Houston can be established. What we have tried to do is to present, in statistical form, as much information as possible on Houston.

Some facts are included for the total Standard Metropolitan

Statistical Area, for Texas, and the nation. In some instances, data for these categories are used for comparative purposes.

Many subjects of concern have been given brief treatment, and will be analyzed in greater detail in subsequent reports. This is particularly true for health and crime. Explanations accompanying some of the sections are also very brief. For those interested in further details, the footnotes, sources and special references, and Appendices should be helpful.

Much of the statistical data were drawn from the 1970 U.S. Census Reports, abstracts and reviews of special government documents, newspaper articles, United States Department of Labor special reports, the World Almanac, court cases, and other references. Detailed definitions are given for certain items; explanatory notes are included where appropriate; and adequate references are cited for materials which did not originate with the United States Census reports.

There may be some discrepancies in the data collected from the Uniform Crime Reports, as will be for data on the crime situation in Houston. Many individual figures do not add up to the totals, as would be expected. No explanations were given in the sources used. We assume some of the data are cumulative, particularly where central city and suburban crime rates are analyzed. Also, there is evidence that the Census Bureau (Houston Chronicle, May 8, 1973) underestimated the overall population by about three percent, with the black population undercount at 7.7 percent of the total black population. This means

that about 24,000 blacks were missed in the 1970 Census of Population. Generally, a three percent differential is not considered to be as serious as an 8 percent discrepancy, as it is with the black population estimates. Due to this reported omission, any discrepancies between earlier data and some of the current figures elicited from surveys may be attributable to errors in the tabulations.

Information in the volume is classified according to major socioeconomic and demographic areas. Within each area, various sub-topics or sub-divisions are used to categorize and emphasize particular issues when considered pertinent.

The volume represents the first in a series of reports to be published by the Urban Resources Center in Texas Southern University. It should not be judged as empirical research. Instead, it is a collection of data from many sources; it is a pooling of ideas about the problems, progress, and prospects of minority group persons in the Houston area. We speak of black and brown communities; we included their perceptions, attitudes, and responses to particular data items; we do not speak for these communities. The credit for whatever worth lies in this report must go to the many individuals in the communities and in the Urban Resources Center, who contributed to the completion of the study. A convoy of graduate urban interns collected materials from documentary sources and through telephone and personal interviews. These graduate students in Sociology and Urban Community Development were trained by some of the prestigious colleges and universities in the nation, including a select number of predominantly black institutions.

For most of these students, the research tasks involved provided impetus to their quest for broader experiences and desires to provide expert and wholesome leadership for the black communities from which they come. We applaud these graduate students for their contribution to the volume and our sincere gratitude accompanies this recognition.

Every effort has been made to check the accuracy of all materials used, and when possible, data have been updated and corrected. Whatever errors are present, by commission or omission, are due to our inadequacies. We accept full responsibility for any mistakes that may have eluded our best efforts.

Texas Southern University May, 1973

DEFINITIONS OF SELECTED DATA ITEMS

Several types of sources have supplied information for this document. Statistical data pertaining to population characteristics have been drawn from reports of the United States Bureau of the Census for the years indicated. Other sources consisted of news releases, pamphlets, and original studies conducted by various researchers. Field interviews and telephone surveys were conducted to obtain attitudinal data on certain problem areas included in the report. References are cited for data which did not originate with the 1970 Census reports.

For the sake of clarity, definitions and explanations of selected data items are included to explain a great deal of the information extracted from the 1970 Census of the population. These definitions and explanations are as follows:

GENERAL

All population and housing figures presented in the report were taken from the 1970 Census of Population, as taken by the U. S. Department of Commerce, Bureau of Census, as of April 1, 1970. The information secured from this source is representative of five percent and fifteen percent samples of the total population. Some items, however, represent twenty percent samples.

COLUMN HEADINGS

The same definition applies each time a particular term is used, regardless of the geographic location of the area. Classifications are given in some tables for TOTAL, NEGRO (OR BLACK), TOTAL WHITE & OTHER and SPANISH AMERICAN. Note that Spanish American is not, by census definition, a racial category and therefore is not a consideration in obtaining a breakdown of the total population. Because of this, some figures will not total in the tables. Definitions of the various population groups are as follows:

 ${\it TOTAL}$ - The total population of a geographic area comprised of all persons enumerated whose usual place of residence at the time of census was determined to be in that area.

NEGRO (BLACK) - Includes persons who indicated their race as "Negro or Black." Also includes persons who indicated the "other race" category and furnished a written entry that should be classified as "Negro or Black."

TOTAL WHITE & OTHER - For this report, "Total White & Other" is defined as the total population less the Negro population. This group includes those tabulated as Spanish American as well as American Indian, and all other race categories not tabulated as "Negro or Black."

SPANISH AMERICAN - For data items based on a five percent sample the Spanish American group includes all persons who reported Spanish American origin or descent as Mexican, Puerto Rican, Cuban, Central or South America or other Spanish. For data items based on 15 percent

or 20 percent samples, the Spanish American group refers to different populations in different areas of the country: (1) in the three Middle Atlantic States of New York, New Jersey and Pennsylvania, people of Puerto Rican birth or parentage; (2) in the five Southwestern States of Arizona, California, Colorado, New Mexico, and Texas, people of Spanish Language or of Spanish surname; (3) in the remaining 42 States and the District of Columbia, people of "Spanish Language." Any person who reports Spanish as his or her mother tongue is considered a person of Spanish language. The Spanish surname population is identified by computer matching with a list of about 8,000 such names.

NUMBER AND PERCENT - The number under each of the racial/ethnic categories is the projected number of persons tabulated in that demographic category based on the sample data. PERCENT is always calculated as the proportion of people in each demographic category relative to the total number of people in each racial/ethnic category. Assume, for example, that there is a total population of 100 in an area. Eighty are white and other and 20 are black. If four of the white and other are 65 or older and below the poverty level, then the percentage for this category is calculated as 4/80 or five percent.

ROW HEADINGS

The following definitions apply to data categories listed on the left-hand side of each table:

POPULATION - Comprises all persons enumerated whose usual place of residence at the time of census was determined to be in that area.

EDUCATION COMPLETED - Population 25 years old and over by years of school completed. The persons enumerated were asked the highest grade or year of regular school they ever attended up to six or more years of college. Persons in school at the time of the census were assumed to have completed that year. Persons were also asked whether they finished the year specified as the highest grade attended. The number tabulated in each category of years of school completed includes persons who report completing that grade or year plus those who attended but did not complete the next higher grade.

<u>∠9 YEARS</u> - Includes all persons who stopped school before the
ninth grade, including those who never attended school.

<u>9-11 YEARS</u> - Includes persons who have completed nine but less than twelve years of shcool.

HIGH SCHOOL - Count of persons who have completed four years of high school but no college.

<u>1-3 YRS COLLEGE</u> - Count of persons who have completed at least one but less than four years of college.

4 OR MORE YRS. COLLEGE - Count of persons who have completed four or more academic years of college.

<u>VOCATIONAL</u> - Ascertained for persons 14-64 years of age who were asked whether they ever completed a vocational training program. Such training might be offered, for example, in high school; as an apprentice; in a school of business, nursing, or trades; in a technical institute; or an armed forces school. Vocational training does not include courses received by correspondence, on-the-job training,

or armed forces training not useful in a civilian job. Data for this item are based on a five percent sample.

IN SCHOOL IN 1970 - Ascertained for persons three years and older, who were classified as enrolled in school if they attended regular school or college at any time between February 1, 1970, and April 1, 1970.

"Regular" schooling includes nursery school, kindergarten, and schooling leading to an elementary school certificate, high school diploma, or college degree. Data for these items are based on a 15 percent sample.

<u>PRE-SCHOOL</u> - Includes persons enrolled in nursery school or kindergarten.

ELEMENTARY - Includes grades one through eight. Persons enrolled in a junior high school are classified as enrolled in elementary school or high school according to year in which enrolled.

HIGH SCHOOL - Includes grades nine through twelve. (See elementary school, above, for treatment of junior high school enrollment.)

<u>COLLEGE</u> - Includes one through six years or more. College enrollment is defined to include enrollment in junior or community colleges, regular four-year colleges, and graduate or professional schools.

INCOME - Tabulation within each income group is the count of families and unrelated individuals (economic units) receiving an annual income within the stated income range. Income is ascertained for all persons fourteen years of age and over for the calendar year 1969.

Total income is the sum of the dollar amounts of money that respondents

reported receiving (best estimate if exact amount not known) as wages or salary income, nonfarm and farm self-employment income and other income. Family or household income (the combined incomes of all members of each family or household) are treated as a single amount. Unrelated individual income is the amount of each individual's total income. Data has been summarized for the following income groups:

\$1,000
\$ 1,000 - \$ 1,999
\$ 2,000 - \$ 2,999
\$ 3,000 - \$ 3,999
\$ 4,000 - \$ 5,999
\$ 6,000 - \$ 9,999
\$10,000 - \$14,999
\$15,000 OR MORE

The figures presented are the sum of all families and unrelated individuals fourteen years of age or over reporting an annual income within each range.

MEDIAN FAM. INCOME - Estimated median family income as calculated from a table containing the number of families receiving income within fifteen income intervals. (See family income defined above.)

MED. PER/CAP. INCOME - Estimated median individual income as calculated from a table containing the number of unrelated individuals 14 years old and over within each of fifteen income intervals.

<u>BELOW POVERTY LEVEL</u> - In 1970, families and unrelated individuals (excluding college students in dormitories and armed forces personnel in barracks) are classified as being above or below the poverty level, using the poverty index adopted by a federal interagency committee in 1969. This index takes into account such factors as family size,

number of children, and farm or non-farm residence, as well as the amount of money income.

NO. OF FAMILIES - Number of families reported to be below the poverty level at the time of the 1970 Census.

FAMS. W/CHILDREN $\langle 6 \rangle$ - Number of families with children under six years of age reported to be below the poverty level at the time of the 1970 Census.

 $\underline{\text{NO. OF PERSONS 65+}}$ - Number of persons 65 years old and over reported to be below the poverty level at the time of the 1970 Census.

HOUSING - Tabulations within this category are based on the count of occupied housing units for which value or rent is tabulated. Value is tabulated only for one-family houses (one-unit structures), detached or attached, which were owner-occupied and which were not on places of ten or more acres, or on properties which also had a business establishment or medical or dental office. Cooperatives, condominiums, mobile homes, and trailers were excluded from the value tabulations. Rent is tabulated for units rented for cash rent, excluding one-family housing on places of ten or more acres.

MEDIAN MONTHLY RENT - Estimated median monthly gross rent paid for renter-occupied units for which rent is tabulated. Gross rent represents the contract rent plus the average monthly cost of utilities (water, electricity, gas and fuel) to the extent that these are paid for by the renter (or paid for by a relative, welfare agency, or friend) in addition to the rent. See remarks under "HOUSING" for definition of units for which rent is tabulated. The median rent is calculated

from a table containing the number of units within each of fourteen rent intervals.

MED. VALUE OWNER OCC. - Estimated median value of owner occupied housing units for which value is tabulated. The value of owner-occupied units is established by the respondent's estimate of how much the property would sell for on the current market. See remarks under "HOUSING" for definition of units for which value is tabulated. The median value is calculated from a table containing the number of occupied units within each of eleven intervals.

TRANSPORTATION TO WORK - Ascertained for persons fourteen years of age and over who reported working during the week before the 1970 Census including armed forces personnel. Respondents were asked what principal mode of travel or type of conveyance they used to get to their $p^{1}ac=$ of work on the last day they worked. Data are based on a fifteen-percent sample.

PRIVATE AUTO - Includes persons who reported they were the driver or a passenger in a private auto.

<u>PUBLIC TRANSP.</u> - Includes persons who reported their mode of transportation to work by bus or streetcar, subway or elevated, rail-road, or taxicab.

OTHER - Includes persons who reported their mode of transportation to work to be walked only, worked at home, or other means.

OCCUPATION - Population sixteen years old and over in the experienced civilian labor force or in the labor reserve. Employed persons were to report the occupation at which they worked the most

hours during the calendar week prior to date of enumeration. The experienced unemployed and persons in the labor reserve were to report their last occupation. Data are presented for six major occupation groups and the experienced unemployed. Each occupation group is identified by Census Code numbers according to the U. S. Department of Commerce, Bureau of the Census, Occupational Classification Index.

<u>PROFESSIONAL, TECH.</u> - Includes employed persons sixteen years old and over who are classified as professional, technical, and kindred workers. This group includes such occupations as accountants, computer specialists, engineers, lawyers, mathematical specialists, physicians, nurses, teachers, and scientific technicians.

MANAGERS & ADMIN. - Includes employed persons sixteen years old and over who are classified as managers and administrators, except on farms. Included are such occupations as public administrators, bank officers, buyers, inspectors, railroad conductors, pilots, school administrators, and others.

CLERICAL AND SALES - Includes employed persons sixteen years and over classified as sales, clerical, and kindred workers. Included are advertising agents, insurance agents, salesmen, sales clerks, book-keepers, mail carriers, office machine operators, secretaries, and others.

CRAFTSMEN & FOREMEN - Employed persons sixteen years old and over classified as craftsmen and kindred workers. Included are such occupations as bakers, carpenters, electricians, mechanics and repairmen, plumbers, and others.

SEMI-SKILLED - Includes employed persons sixteen years old and over who were employed in non-farm occupations not otherwise classified. Includes operatives, transport equipment operatives; laborers, except farm; service workers; and private household workers.

FARM WORKERS - Employed persons sixteen years old and over working in occupations classified as farmers or farm managers, farm laborers and farm foremen.

EXPERIENCED UNEMPLOYED - Experienced unemployed population sixteen years of age or over who were neither "at work" nor "with a job but not at work" during the calendar week prior to April 1, 1970.

Persons waiting to be called back to a job from which they had been laid off or who were waiting to report to a new wage or salary within 30 days were counted among the unemployed. Unemployment rates are based on the experienced civilian labor force since occupation and industry cannot be ascertained for those unemployed who have never worked.

CHAPTER 1

GENERAL POPULATION CHARACTERISTICS

This document is one of a series about the conditions of blacks and other minorities in Houston, Texas. Statistics are presented on selected characteristics of minority persons in Houston and parts of Harris County. The Urban Resources Center in Texas Southern University seeks to communicate information on the problems, issues, and accomplishments of the minority communities. This document is designed to provide data in an organized and systematic way by bringing together in one convenient source socio-economic facts about the minority community and by keeping the document constantly up to date through more current reports.

Data for the central city and some suburban rings in close proximity to Houston proper are given when this type of distinction appears to be significant. The major areas treated in this report are—general socio-economic characteristics, population and distribution, family and household size, education, employment and income, housing, poverty, politics, health, economic development statistics, and other pertinent data on minority problems and accomplishments.

POPULATION GROWTH AND MIGRATION

The City of Houston is ranked sixth among the country's largest cities in 1970, and it enjoys the distinction of being the largest population center in the South. Harris County is the central county comprising the Houston Metropolitan Statistical Area (SMSA) and, as such, it provides diversified services for area residents.

The 1970 Census (Fourth Count) reports the population of Harris County as 1,741,912. For the total SMSA, the population is estimated to be 1,985,031. Included in this total is a rather large concentration of minority groups. The dominant minorities in the Harris County area are blacks, Mexican-Americans, and American-Indians. Since World War II the black population has increased in Houston in both relative and absolute terms. For instance, in 1950 blacks comprised an estimated 21.1 percent of the population, but by 1960, the percentage had increased to 23.2 percent; in 1970, the percentage of blacks in Houston had reached approximately 25.7 percent. Table 1 shows a numerical and percentage distribution of the population of the total SMSA by race and county for 1970.

Blacks represented 19.3 percent of the population for the total SMSA for 1970; 9.4 percent of the population in Brazoria County; 17 percent in Fort Bend County; 11.8 percent of Montgomery County's population; and 20.1 percent of the persons in Harris County for 1970. The black population of Liberty County was 6,861 for the same period, or 20.8 percent. Approximately 5 percent of the population of Baytown

	.ACE	All Persons	White	Black	Percent Black

was black in 1970. There are a few blacks in Pasadena, Texas, a Houston suburb, with the figure being less than one percent.

As shown below, Houston has had a steady increase in the number of blacks in the city since 1950.

YEAR	TOTAL POPULATION	BLACK POPULATION	PERCENT BLACK
1950	806,700	170,211	21.1%
1960	938,219	217,662	23.2%
1970	1,232,740	316,551	25.7%

The growth of Houston, like other cities of comparable size, has been attributed to several migratory trends. The urban population has exceeded the rural population during every decade since the Civil War. One migratory effect includes the in-migration of persons from rural areas to urban centers. Persons from rural East Texas and parts of Western and Southern Louisiana make up the bulk of the in-migration sector of the area. In addition, Texas Southern University attracts a large proportion of black students from out of state and, upon graduation, many of these students remain in the city. The internal growth of families currently residing in Houston has also contributed to the population increase of the city and the black population.

The movement of blacks and other minorities into Houston and its suburban fringes began early in the twentieth century. A sustained mobility of blacks from rural areas to the central city has occurred during the last several decades. This migratory movement has been interpreted by some as a combination of "push" and "pull" factors -- the push of limited social and economic opportunities characteristic

of many rural areas in the South, and the magnetic pull of more promising and prevailing opportunities at the destination point. With its rather kaleidoscopic changes, Houston has attracted its share of blacks, but unlike some larger cities, the in-migration of blacks into Houston has been somewhat selective. It appears that a majority of the persons coming into the city bring greater skills than blacks moving into some of the other urban areas. In addition, Houston has been able to hold more qualified blacks, with diversified degrees of competency, than cities such as Dallas, Texas, and Saint Louis, Missouri.

For the nation as a whole, the proportion of blacks in central cities increased for each region between 1960 and 1970. Outside the South, the percentage of blacks in the suburbs (outside central cities) remained approximately the same in some areas. For Houston, more blacks are moving into "suburbia." This movement may be due to the increased percentage of blacks falling within the middle class.

Black population growth in central cities cannot be gainsaid. In 1970, four out of every ten blacks in the United States were living in the 30 cities with the largest black populations. This percentage of the total black population residing in the 30 selected cities has shown a steady increase since 1950. Tables 2, 3, and 4 rank cities according to the total population and the percentage representation for blacks for 1950, 1960, and 1970.

"Characteristically, cities harbor a larger number and a greater diversity of groups than any rural area." In addition, the growth of cities seems to make group relations more contentious, or at least

more unstable and problematic, than do rural communities. In part this instability arises from the sheer rapid growth of cities, which means that the numerical distribution of groups is constantly changing. The article, "Cities and Group Conflict," emphasizes the fact that rural-urban migrants are drawn out of the local context in which their relations formed part of a traditional fabric and are transplanted into a new one in which the order is worked out on a more competitive basis. $^{
m 1}$ Research data will show that a large proportion of Houston's minorities came to the city from rural areas and that these same individuals are exposed to a new kind of order. Black population growth in Harris County, accelerated by the coincidence of technology and changing urban patterns, has had some effects upon the city. An examination of select sccio-economic variables shows the degrees of uneveness in the social, economic, and political life of the black segment of the population in relation to its white counterpart. Principal differences between white and nonwhite families are shown in education, income, poverty, housing, employment, occupation, iransportation to work, family size, and other related factors. Sections included in this report provide data and limited analyses of the inequities and achievements of the black population in Houston. Limited information is also available on the Mexican-American population of the city.

EDUCATION

The median years of schooling completed for persons 25 years of age and over for the total population in the Standard Metropolitan

Statistical Area for 1970 was 12.1 years, with 51.7 percent of the population listed as high school graduates. For Houston proper (as part of Harris County), the median educational level for the total population was 12.1, and 51.8 percent of the population indicated that they were high school graduates, comparing favorably and equally with the SMSA as a whole.

The median school years completed for persons 25 years of age and over in the black population of the city include 10.2 years for all blacks in the SMSA, with 32.7 percent of the population graduating from high school. For blacks in Houston proper, about 35 percent of the population are high school graduates, with a median educational level for the total black population as 10.4 years. These findings are based on national sample statistics collected by the United States Bureau of the Census for 1970. Table 5 shows a distribution of the population by median school years completed.

A Distribution of the Population by Race, Median Years of School Completed, Percent High School Graduates, and County, 1970

Some of the significant highlights regarding educational attainment in Houston will be treated in the next chapter on "Education." However, we would like to emphasize the following findings:

- 1. The level of education for blacks in Houston is below that for the total population of Brazoria (12.1) and Montgomery (11.3) counties, but above the median educational levels for whites in Fort Bend (9.7) and Liberty (10.1) counties.
- 2. Proportionately, as many black as white high school graduates went on to college in 1972, and the black dropout rate before high school graduation has declined sharply during the last decade, according to a report of the United States Department of Labor. On the basis of available statistics, 49.4 percent of the whites and 47.6 percent of the black high school graduates of last June enrolled in college as of 1972. The 1.8 percent differential is considered "statistically insignificant." In Houston complete figures were not available but reliable sources indicate that black college enrollment of graduates from high schools in the city is also increasing. The Texas Southern University enrollment increases reflect this trend. Enrollment at TSU mushroomed during the last several years, with an increase of almost 50 percent (from less than 3,000 in the early 1960's to more than 6,000) for the 1972-73 academic year.
- 3. Despite the upsurge in college enrollment, it is believed that a larger proportion of young blacks still leave school before high school graduation, about 19 percent as of October, 1972, as compared to around 13 percent for whites in the Nation as a whole. Relative rates, however, have changed markedly during the last few years. In 1963, 33 percent of all blacks dropped out, almost twice as many as whites, with 17 percent dropout rate. In 1968,21.6 percent and 12.5 percent respectively; in 1970, 23 and 11.7 percent; and in 1971, 20 and 12 percent. Approximately 347,000 young blacks were graduated from high school in 1972.

- 4. The black population of Houston had attained more years of schooling, in absolute and relative terms, than their racial counterparts who reside outside of the central city for 1970.
- 5. Among persons 3 and 4 years of age, more black children than white or those with Spanish surnames are enrolled in school. 17 percent of all black children 3 and 4 years of age, as compared to 16.3 percent for the total population and 9.2 percent of the children with Spanish surnames, were found to be enrolled in public or private schools and day care centers in 1970. The enrollment figures are partially due to the increased number of day care centers partially financed through Model Cities programs, HCCA and other federally-funded day care center.

Table 6 shows the school enrollment for the population of persons 3 through 34 years of age and nursery school and kindergarten enrollment for 1970. Table 7 gives a numerical and percent distribution of persons by race and according to years of school completed while Table 8 reveals the percentage of the population enrolled in school by select ages and by county.

As will be noted in Table 6, the greater proportion of blacks between the ages of three and thirty-four years were enrolled in Public elementary schools. As of 1970, less than three percent of the black school-age population was in nursery school; 6.2 percent in kindergarten; 64.3 percent in elementary schools (1 to 8 years); 20.4 percent in high schools; and 6.4 percent of the black population of Houston in college.

From the data presented, it is safe to conclude that the educational attainment of the population in Houston, Harris County, and for the

total SMSA varies by race. More importantly, today many young black children begin some form of schooling at the age of 3 or 4. Sharp differences exist in the median years of schooling completed by age and race. The black population of Harris County 25 years of age and over and in most other adult age groups was slightly below whites in the proportion of high school graduates when compared with whites and Spanish-speaking persons and/or those with Spanish surnames. In the latter instance, the difference was minimal (0.2 percent). In Montgomery County, the Spanish category for the percentage of high school graduates surpasses that for the total population as a whole. Only 44.2 percent of the total population in Montgomery County completed high school as compared with 48.6 percent for persons of Spanish origin or with Spanish surnames. These data are shown in Table 5.

INCOME

Houston ranks 19th among forty of the nation's largest cities in median family income according to figures appearing in the <u>Houston Post</u> (October 3, 1972). The figures for each city were tabulated for central cities, excluding larger metropolitan areas. Using the available data, cities were ranked according to median family income. These data are shown in Table 9.

The annual family income for the black population increased tremendously during the decade, 1960-1970, but it still falls behind

the income level of white families in Harris County. Black family income did not increase in the same proportion as white income despite the fact that the average black family has more mouths to feed. The number of persons per household for white families was 3.19 in 1970 for Harris County, 3.09 for Houston proper, and 3.21 for the total SMSA. For the black population, the number of persons per household for Harris County was 3.51; for Houston proper, 3.47; and for the total SMSA, 3.50. Refer to the Appendices for complete data given by census tract for total population, total white, total black and percentages; a percent distribution of population by census tract and county; and the number of persons per household by census tract and county for 1970.

The median family income for families and unrelated individuals for the total Standard Metropolitan Statistical Area was \$8,686 in 1970; in Harris County, \$8,742; in Houston proper, \$9,876. Black median family income for the total SMSA was \$6,213, which is about \$2,000 less than total population family income for the same category. In Harris County, the black population had a median family income of \$6,371, about \$2,300 less than that for the total population. In Houston alone, the income differential between black and white families approximates more than \$2,000. In the other four counties comprising part of the metropolitan area, income inequities between the races are evident. Table 10 shows a distribution of family income for the total SMSA, by county and by race.

Table 10

MEDIAN FAMILY INCOME FOR THE TOTAL POPULATION
IN EACH COUNTY AND BY RACE, 1970

County	Total Population	Black Population	Spanish/Surname*
Total SMSA	\$8,686	\$6,213	\$8,218
Brazoria Fort Bend HARRIS Liberty Montgomery	9,682 7,257 8,742 6,117 7,632	5,071 4,258 6,371 4,712 3,734	7,839 6,548 8,373 5,154 8,200

*It should be noted that the "Spanish/Surname" category is not truly representative of the incomes of Mexican-American or Chicano residents in Houston and the other counties. As indicated in "Definitions of Selected Data Items," the Spanish American group includes all persons who reported origin or descent as Mexican, Puerto Rican, Cuban, Central or South American or other Spanish. In fact, the Spanish American category is more representative of the category "other minorities and nonwhites," not including blacks.

Source: U.S. Bureau of Census, <u>Census of Population and Housing:</u> 1970, "Census Tracts," Final Report, Houston, Texas SMSA PHC (1)-89.

National, state, and local statistics show that despite gains in the area of civil rights during the last decade, inequities exist between white and nonwhite persons in Houston and other parts of the country. Gains in income were experienced by all groups but for blacks, these gains were not sufficient enough to erase wide differentials in income and occupational status. While black income did increase, white income increased also. The gap narrowed slightly

in some sections of the country, but proportionately -- in Houston as elsewhere -- gains in black income were not substantial enough to close previous gaps.

The largest proportion of blacks are still found at the lower end of the income scale. Table 11 compares the annual income range from 1960 with that for 1970 for blacks, with totals for the county as a whole.

Table 11

A COMPARISON OF ANNUAL INCOME BY RACE AND BY DECADE WITH THAT FOR THE COUNTY*

\$50,000 and Over	2.5	1.9	0.1	1.0

*Source: Bureau of the Census, "Detailed Social and Economic Characteristics: Texas," Washington: Government Printing Office, 1970.

A further examination of income classification reveals that the median family income for black families rose from \$3,386 in 1960 to \$6,371 in 1970, a gain of \$2,985. By contrast, however, county-wide income increased almost twice as much as black income over the 1960 figure. Black family median income, in dollars and cents, is \$1,300 less than the median for the county as a whole.

POVERTY

It has long been recognized that "poverty" is a socio-economic phenomenon which may be viewed within the framework of several perspectives. One viewpoint is that America has the resources to eradicate poverty and that our failure to do so is an indictment against ourselves. This perspective is humanitarian in focus and underscores the indifference exercised by our society toward less affluent people.

Another view has been called self-reserving deception. It grows from our inability or unwillingness to understand the causes of poverty. Our Protestant Ethic (free will) rugged individualism value orientation has taught us to believe that men are largely responsible for their own destinies. This is the basic perspective illustrated in the Nixonian "work ethic" phrases. This view, discussed by President Nixon in his Second Inaugural Address (1973) equates poverty with laziness despite the fact that empirical research has challenged this belief.

One view which differs from those previously stated is that it is more important to understand what impoverishment does to those who are poor. This particular perspective calls for an understanding of the psychological consequences of poverty -- damages inflicted upon the human spirit. Proponents of the "work versus welfare" ethic refuse to blame societal and institutional inadequacies for poverty; they prefer to blame the victim. Those who continue to do so fail to recognize the potential danger of "utilitarian enlightened self-respect,"

a view which pivots on a recognition of the disruptive-revolutionary potential of the poor. 2

The dimensions of poverty in Houston and in Texas will be treated briefly in this document. A statistical analysis of poverty will be noted in relative, rather than absolute terms. The absence of "absoluteness" of poverty involves the inability to measure the total cost of impoverishment which would necessarily include psychological considerations.

Although the incomes of blacks and other minorities increased during the last decade, a large proportion of these groups were faced with relative deprivation when compared with whites. Disparities in black and white incomes are invariably contributed to the poverty status of many residents in Houston and Harris County. Blacks made up about 20 percent of the population of Harris County, 19.3 percent of the population of the total SMSA, and about 26 percent of the population of Houston. Despite this low representation when compared with the majority population, 49 percent of all families with incomes below the poverty level (\$4,137) in Harris County were black. Comparatively speaking, one out of every four black families in Harris County live in poverty, while one in 17 white families may be classified this way. The estimated 20,000 families considered povertystricken manage to survive at a subsistence level approaching \$2,200 on an average per year. Tables 12 and 13 give data regarding the existence of poverty in Houston and Harris County.

To be sure, poverty is an individual problem, but more than this, it is a problem which affects the community and the general society. The dimensions of poverty in Houston prior to 1970 were discussed in a report of the Houston-Harris County Economic Opportunity Organizations (now HCCA) in 1965. The report states that the major proportion of the blacks living in Houston were poor. In 1965, the HCCA indicated that 25 percent of the people in Harris County and 28 percent of the people in Houston had poverty-level incomes. Whites comprised 36 percent of the poor; Mexican-Americans totaled about 11 percent, but blacks represented 53 percent of the poverty population in the county and 59 percent of the city's poor citizens. By 1970, the percentage of the county's poor blacks had dropped to 49 percent, a decrease of about four percentage points.

The effects of the War on Poverty efforts cannot be assessed in absolute terms. From the data available, a slight decrease in the ranks of the poor did take place during the five years of the existence of the Office of Economic Opportunity (OEO). However, the real challenge remains. It is the task of proving today and in the future that it is both possible and necessary to maintain and extend a society of opportunity to a diverse minority citizenry. The relevancy of this challenge lies in the potential preventive elements necessary to abort or at least arrest intergenerational poverty.

The proposed cuts in domestic spending by the Nixon Administration are viewed as threats to the survival of programs designed to aid the poor. The irony of criticisms launched against the continued

existence of the programs lies in absurdity. It is absurd to believe and unrealistic to assume that years of deprivation can suddenly be erased in five years. The dividends from monetary and human investment will be reaped long after the program has ceased to exist.

Occupying the center stage of the most expensive inauguration in the nation's history (estimated cost of \$3 to \$4 million), President Nixon outlined proposals to cut funds allocated for major domestic programs, including funds for the Office of Economic Opportunity, federal subsidies for housing of the poor, lower middle, and middle classes. There was a special irony in the President's inaugural message of 1973. He emphasized world peace, use of American power and responsibilities, solving differences, faith in America, and selfreliance. He urged Americans to do more for themselves and to demand less from government. For the nation's poor, this is easier said than done. Certain blockages to upward mobility in the American economic structure in the Nation, the State, and Houston still exist. Invisible screens of discrimination in employment, housing, education, and income are apparent. The prevalence of societal difference, racist attitudes -- reflected in the general society and our basic institutional structures operate to increase the difficulty of escaping from poverty.

A recent report on the War on Poverty in Texas (<u>The Houston Post</u>, March 18, 1973) implies that substantial inroads have not been made in alleviating the problem for the State. "At the bottom of the economic pile in Texas are 2.5 million people who live in poverty --

one in every five Texans," the report said. A careful examination of the article cited brings into sharp focus an even more serious revelation. The massive profile on poverty shows "dry statistics and ugly facts of being poor -- overcrowded housing, inadequate health care, little or no education." What the report does not say is that these individuals who make up this profile also suffer indignities, insecurities, and anxieties because they are poor and dependent. Contrary to popular opinions, myths or stereotypes, a greater proportion of the poor and elderly are white. In an overall sense, 22 percent of the people in Texas are poor, a difference of about 13 percent when compared with the national average.

Over a third, of the poor in Texas are under 15 years of age; nearly a fifth of the poor are over 65 years of age; and of all elderly people in the state, four out of ten are poor.

A racial breakdown of the poverty population shows that roughly three-fourths of the aged and poor are white. If one further stratifies the population, it is found that the elderly poor cut across racial and ethnic backgrounds.

Myths concerning "not wanting to work" are also challenged in the analysis of the Texas poverty population. Over one-third or 38 percent, of the poor adults in Texas are employed, and 31 percent are retired. This means that an estimated 70 percent of the adult poor exist in poverty which <u>could not</u> be broken by virtue of <u>gainful</u> employment.

Disparities in education are pronounced for the poor in Texas. The average level of education among the poor is about 8 years. This average educational level is far below the median educational level for the total population. Education and income represent only a few of the many inadequacies characteristic of poor people in Houston, Texas, and the Nation. Crowded living conditions, poor health care, and the lack of skills and education are a few of the cumulative ailments plaguing the nation's poor.

In Houston, it is estimated that 80,000 working men and women are actually poor. The alarming thing about this figure is that this group represents those who are not making it out of poverty, and there are no programs planned, formulated, or in operation which can provide the necessary assistance for extricating them from their poverty status.

The latest census figures for Brazoria, Fort Bend, and Harris counties indicate that the Houston SMSA has its share of poor people. In Harris County, about 9 percent of all families are below the poverty line, with 17.7 percent of the families in Fort Bend County falling into this category; and in Brazoria, 8.4 percent of the families are below the poverty line. Black and Spanish American families are disproportionately represented among the poverty populations for the three counties. In Harris County, 25.6 percent of the black families are below the poverty level; in Fort Bend County, 42.2 percent; and in Brazoria County, about 35 percent fall below the poverty level as defined by the Bureau of the Census.

A large proportion of elderly people are poverty stricken if we measure their status according to statistics for Harris County. About one-fourth of the elderly population in Harris County is in poverty. A statistical breakdown by race shows that 44.9 percent of the elderly 65 years of age for the black population fall below the poverty level; 64.4 percent in Fort Bend County; with about 62.6 percent in Brazoria County. The latter two counties are predominantly rural and, from all indication, the rural poor are plagued with severe problems of health, housing, education, and employment. Proximity to Houston has not alleviated problems for rural blacks in adjoining counties.

The median family income for blacks in Harris County is about 57 percent of that for whites and others. The median family income for blacks in Harris County was \$6,370 in 1970; for Spanish Americans, \$8,372, and for whites, \$11,258. It should be noted that the figure for the "Spanish American" does not reflect the true plight of Mexican-Americans in Harris County. The census definition includes Mexican-Americans, Puerto Ricans, Cubans, and other Spanish. The median family income of the Mexican-American is below that for Black Americans in Harris County.

Tables 14, 15, and 16 contain data on selected demographic and socio-economic characteristics for Harris, Fort Bend, and Brazoria counties. The tables following (Tables 17 through 24) are taken from the U.S. Department of Labor's, "Statistical Tables," <u>Poverty in Houston's Central City</u>, (Region 6, Bureau of Labor Statistics Regional Report Series No. 1, February, 1970).

SUBSIDY VS. WELFARE

The Texas Office of Economic Opportunity report indicated that there were 2.5 million Texans who were below the poverty line in 1971. These individuals, in the main, were children and older people. They were predominantly black and Mexican-American, and most were not on welfare.

A <u>Houston Chronicle</u> (April 3, 1973) report revealed that more government funds are channeled into farm subsidies than welfare.

"Texas landowners received \$525 million last year in agriculture subsidy payments from the United States government, more than the state received in federal welfare funds," the report said. Fifteen persons and two state agencies, including the Texas Department of Corrections, were paid more than \$100,000 each. The Texas Department of Corrections received \$553,813 in incentive payments for not growing crops. Total agriculture subsidies for Texas amounted to \$525.7 million; the Department of Public Welfare received only \$462.5 million for public assistance payments and program administration from the federal government. A substantial proportion of the funds received are allocated for disability payments and assistance for children and the aged.

Black Representative Barbara Jordan, a freshman Democratic
House member from Houston, Texas, questioned the imbalance in federal
payments. "I recognize that the farmer needs help, but at this point
in time of rising food costs and rising prices we still see that the

farmer comes in for protection by the federal government," she said. The dynamic and able Congresswoman went further in her concern. She said that "though Nixon has moved to cut social service programs sharply, saying that cuts would fight inflation, he has not made the definitive proposal on farm subsidies which could have the same effect on the economy." (Houston Chronicle, April 4, 1973.)

EMPLOYMENT AND OCCUPATIONAL DATA

Unemployment and Underemployment: Houston

The best data on unemployment and subemployment in Houston were compiled by a report of the United States Department of Labor and published in 1971. The information contained in the Urban Employment Survey covered about 26 percent of the black civilian force in the total SMSA.

"As is the case nationally, the aggregate unemployment figures for the Houston Standard Metropolitan Statistical Area conceal the high concentration of unemployment in the central city areas and in the minority labor force." The findings for Houston are presented in Tables 25 through 31; the statistics include information for selected years, 1967-1969.

The nonwhite unemployment rate included in the tables is about 99 percent black since the Spanish surname category is included in the white rate. From the data presented, it appears that the black labor

U.S. Department of Labor, "Statistical Tables," Poverty in Houston's Central City (February, 1970). SOURCE:

force is concentrated in the central city, and this rate vacillates between 9.5 on the average to 15.0 percent in some areas with high concentrations of black youths.

The overall labor force participation rate for blacks of 69.6 percent masks a great diversity of experience between the various subgroups. In the age group, 20 years and over, approximately 83.4 percent of black men are in the labor force. This figure is higher than the national figure for this same period. The overall national figure for this age group among young black men approximates about 81 percent. Tables 32, 33, and 34 show employment characteristics for blacks in Houston. Information is presented in Appendix B to provide basic labor force data by age, sex, and ethnic group for Texas and the SMSA's of Dallas and Houston and their central cities.

National Unemployment

The unemployment rate for black and other races and for whites declined considerably during the 1960's, after a sharp rise during the 1961 recession. In 1970, however, unemployment worsened, reaching the 1965 rate for blacks and other minorities, and near the 1964 rate for whites. Unemployment rates for blacks and other minorities were about double those for whites throughout the 1960's and 80 percent higher in 1970 (a ratio of 1.8:1) when the increase in white unemployment was somewhat sharper than that of blacks and other races. Table 35 reflects these trends.

Note: The unemployment rate is the percent unemployed in the civilian labor force.

Source: U.S. Department of Labor, Bureau of Labor Statistics.

The national unemployment rates for men and teenagers for blacks and other minorities were higher in central cities than in the suburbs of all metropolitan areas, including Houston, and were lower in twenty cities included in the metropolitan group, than in the central cities of all metropolitan areas. Unemployment of women of black and other races was also lower in the 20 largest metropolitan areas. Table 36 reveals unemployment in central cities and suburbs of all and the 20 largest metropolitan areas for 1970.

Blacks and other minorities constituted one-third or more of the total employed population in eight of the 20 largest cities in the country in 1970. Data for the over 240 metropolitan areas in the United States indicate that black and other races constituted 20 percent of the employed population of all cities in the United States, but only about five percent of those in the suburbs. Comparable proportions were lower for other metropolitan areas as shown in Table 37.

Federal Employment

Black participation, as will be revealed from the data contained in the tables is conspicuously low in the higher ranks of government service. This is true for Houston, other cities of comparable size, and the Nation as a whole. Brewer completed an impressive study of minority employment in the Federal Government. Released in 1972, the study cites failings in complaint procedures and charges that corrective action, when complaints were upheld, has been weak and unsatisfactory.

"Delaying tactics of the agencies, too often countenanced by the Equal Employment Commission, have resulted in unreasonable delays in procedures." The report by Brewer, with an introduction by Ralph Nader, indicts the Federal Equal Employment Program (EEOP) of the Civil Service Commission for failing to establish programs and procedures to reduce discrimination in federal government employment. Table 38 gives a breakdown of black employment in all federal agencies for select cities. Federal employment by grade and salary group is shown in Table 39.

The failure picture for Houston compares favorably with other cities of comparable size. Over 36.2 percent of all blacks employed in federal positions in Houston fall within the pay scale of GS-1 through 4; approximately 42 percent of blacks in full-time federal employment in Houston work in postal field service at a pay scale of PFS-1 through 5. A glance at the total wage system shows that 82.7 percent of blacks employed in full-time federal employment have incomes ranging from \$5,500 through \$6,999. Conversely, of all workers employed in the \$14,000 through \$17,999 category for full-time federal employment, blacks comprise only 7.7 percent of this group. Table 40 shows the data for full-time federal employment in Houston as of November 30, 1970. When Houston is compared with other cities, it is slightly above many areas. In Dallas, for instance, blacks comprise 15.9 percent of the Civil Service Commission's regions, with less than one percent at grade levels of GS-14 through 15 and about 12 percent at GS-1 through 4. Figures for Saint Louis, Chicago, Seattle, and

Atlanta are similar to those for Houston. For the Central Office Area, 51.3 percent of the GS-1 through 4 category are black employees; 31.2 percent of the GS-5 through 8; 12.5 percent of the GS-9 through 11 and only 5.0 percent of the GS-12 through 13. Less than 5 percent of the employees with grades GS-14 through 18 are black, as shown in Table 40 for the period ending November 30, 1970

Blacks were 15 percent of all Federal Government employees in 1970 compared with 13 percent in 1965. However, they held only 3 percent of the higher grade jobs under the Federal Classification Act, 4 percent of the higher grade Postal Field Service jobs, and less than 10 percent of the Wage Systems (blue-collar type) jobs paying \$8,000 and over in 1970.

Occupational Data

General and specific data on occupational status for blacks and other minorities are shown in Tables 41 through 47. The source for the tables (41 through 47) is the publication of the U. S. Census Bureau of the Census, Census of Population: 1970, General Social and Economic Characteristics, Final Report PC(1)-C-45, Texas.

CHAPTER 2

EDUCATION AND DESEGREGATION

"For generations, the schools have had a mission in the United States that went beyond simple learning." Horace Mann, in his description of education, characterized it as "the great equalizer of the conditions of men -- the balanced wheel of the social machinery."1 This philosophy permeated the whole of the American educational system and fell short only when viewed within the framework of black Americans. For many black Americans, education meant the process of becoming more functionally adjusted to a private world characterized by racism in this country. Black education was unequal and, therefore, could not equalize conditions between blacks and whites in America. Characterized by racism and separatism, education for blacks was governed by a system designed to maintain the status quo. Both black colleges and secondary schools were, by tradition, instrumentalities in the struggle for black people against the demands of a social-cultural environment that denied their survival at the equalitarian level. Gradually, however, black colleges restructured curricula offerings similar to those of white colleges, and the aspirations of blacks stretched beyond their own segregated world. Elementary and secondary schools allegedly operated under the same system for both faces but the amount and quality of education given black children differed. In a recent article published by Time Magazine

(April 16, 1973), it was described this way: "The crisis of doubt about education as an equalizer began in the 1960's after it became obvious that the schools were not performing their historic function for black and Spanish-speaking Americans..." The roots of the problem of segregated education began long before the 1960's. Centuries of neglect in all fields for advancement created vast differentials in opportunities for blacks.

Major developments which led to the U. S. Supreme Court's school desegregation decision began during the early part of the 19th century, but significant legal development can be pinpointed for the period around 1936 in Pearson vs. Murray. Donald Murray, a black, enrolled at the University of Maryland Law School. In this case, the Maryland Court of Appeals held that the state must afford equal educational opportunities in its own institutions. Other cases were filed against universities where course offerings were different from those at black institutions. These included such states as Missouri, Oklahoma, Kentucky, Tennessee, Texas, Kentucky, Virginia, and West Virginia. Despite these cases involving the various states, where state courts opened white universities to blacks, it was not until the Brown vs. Topeka Board of Education decision in 1954 that "separate educational facilities were held inherently unequal." This ruling considered the effects of segregation itself on public education. "In approaching this problem," the Court ruled, "we cannot turn the clock back to 1868 when the Amendment (Fourteenth) was adopted, or even to 1896 when Plessy vs. Ferguson was written. We must consider

public education in the light of its full development and its present place in American life throughout the Nation..." It was felt by the Court that only in this way "can it be determined if segregation deprives these plaintiffs of the equal protection of the laws..."

Rejecting any language in <u>Plessy vs. Ferguson</u>, the Supreme Court of the United States concluded in 1954 that "in the field of public education the doctrine of 'separate but equal' has no place."

The rendering of the Brown decision made segregated education in America illegal. Initially, the Court was cautious in rendering its verdict. Segregation in education was declared null and void by the Court but implementation guidelines of the decision implied that integrated education should be achieved "with all deliberate speed." The decision was an unprecedented step of legal significance, but as it is with all laws governing human behavior, the Court could not provide the necessary direction for the elimination of attitudes held by the respective groups involved. Nineteen (19) years have passed since the ruling was first handed down and the 1954 mandate has not been effected fully in public education in this country. Resistance, defiance, and rebellion collored the first decade following the initial decree. Defiance, in the form of busing protests and outright rejection by whites, has characterized almost another decade.

In addition, related civil rights legislation in such areas as housing, employment, and public accommodations followed the Brown decision in American society. In each instance, the necessity for social and cultural changes in our society was introduced. Change was not always easy.

Desegregation in Houston

The Houston Independent School District (HISD) did not desegregate its public schools "with all deliberate speed." Instead, for many years school board elections were structured to include the "integration issue." Support for candidates was divided along lines of cleavage such as race and liberal versus conservative. Continuous appeals were launched by school attorneys in efforts to get clarification on rulings and/or to keep the system segregated. 3

During earlier and critical years, Mrs. Charles E. White, the first black school board member in Houston, ran her first successful campaign with a coalition of liberal blacks and whites. She won the election through a carefully orchestrated drive to point out inequities in the system as related to black and white schools; she demonstrated a concern for the general welfare of students in the total district. Despite black representation on the HISD School Board, little integration or desegregation was achieved until 1967. This is not to imply that the black School Board Member, Mrs. Charles E. White, was not effective. In fact, she was a source of pride to black communities in Houston and throughout the country. It is just that one black on a board with a majority of conservative whites has no real power. As a minority of "one", a black can act in the capacity of a sounding board for the community by protesting decisions contrary to the interests of that community and he can lobby for support from moderate and liberal members on the board. Any other activity is virtually powerless without substantial public support.

The Houston Chronicle (February 12, 1969), in reviewing the legal briefs filed by HISD school attorneys, stated: "The last vestiges of de jure separate schools were not eliminated from HISD until September, 1967, when a 'freedom of choice plan' was inaugurated allowing students to transfer to schools of their choice in the district. On February 11, 1969, the U.S. Department of Justice sought a court order which called for an end to the 'freedom of choice' plan and for a more extensive integration of school facilities. In its brief to the Court, the Justice Department charged that the plan used by Houston failed to 'disestablish the dual school system'." Some Board members and citizens agreed with the Justice Department's brief. They could not get their children to white schools because of the lack of transportation..." Other charges were made concerning school boundaries in the HISD. One school board member stated that the existing boundary system -- used by the HISD at the time -- had been gerrymandered to exclude blacks from all-white schools.

In reviewing the statistics on desegregation for the period in question, there is some validity to the Justice Department's answer. In its petition to the federal government, the Justice Department contended that 81.7 percent of the black students in the HISD in 1969 were enrolled in schools that were 95 percent black; 79.8 percent of the white students in the HISD were enrolled in schools that were 95 percent white. In schools with 95 percent black enrollment, 93 percent of the faculty was black; in schools with 95 percent white enrollment, 94.1 percent of the faculty was white in 1969. In its brief, the

Justice Department asked the Court to order the Houston Independent School District to "formulate and adopt a new student assignment plan and to assign teachers to the various schools on the basis of the overall racial composition of the respective schools. The <u>Houston Post</u> (March 28, 1969) reported that school attorneys sought assistance from U. S. Congressman Bob Eckhardt in the matter. It was reported that Eckhardt refused and charged:

I believe that the Houston School Board has never really accepted the Supreme Court's decision and what has been done in the location and assignment of children to schools within its jurisdiction has been done in a spirit of frustrating the effect of the decision. It is this, primarily that has made it so difficult to resolve our school problem in Harris County. Only the extremes are presented as possibilities.

Eckhardt made these views known in an open letter and reminded those who had sought his assistance that "it would be grossly improper for me to call the Justice Department and tell them to call of their suit, if that is what you are asking..." All law-abiding citizens, particularly black and brown Americans, applauded Eckhardt for his stand. This admiration transcended the issue of desegregation; it embraced a general respect for a representative who seeks to uphold the law as outlined by the Constitution. On March 26, 1969, the Houston Post took a position similar to that of Eckhardt. In a brief editorial, the paper stated:

Houston is a desegregated city. It has been for a long time. Black and white citizens get along easily and pleasantly together in desegregated office buildings, buses,

airplanes, drug stores, restaurants, hotels, colleges and universities, libraries, and public parks. Only the public schools -- the PUBLIC schools -- are burdened with half measures and token integration. Only the Houston School Board has moved with stupid slowness in the inevitable and rewarding growth of Houston as a cosmopolitan city in which all citizens enjoy the same rights and public facilities.

Despite this public outcry by a reputable individual and a responsible and respected institution, HISD attorneys appealed for a stay of the Department of Justice's directives. Following this action, the U.S. District Court in Harris County granted the school district permission to continue with the present plan of "freedom of choice" until September, 1970. At that time, the HISD was instructed to have a new zoning plan ready or a school pairing plan (the so-called "cluster" concept). On June 1, 1970, Federal Judge Ben Connally ruled on a new plan submitted by the School Board. Judge Connally accepted the "equi-distant zoning plan" which required that school zones be drawn exactly equal from adjacent schools. On August 25, 1970, the U.S. Fifth Circuit Court of Appeals in New Orleans slightly modified the "equi-distant zoning plan" by recommending a "geographic capacity zoning system." Under this plan, the size of school zones is determined by the capacity of schools, with some allowances made for natural hazards posed by the presence of freeways, bayous, freeways, and related natural phenomena. 5 This plan appeared to approximate a realistic approach to the issue of school desegregation, except for the fact that the Mexican-American student population was virtually ignored in the total scheme of things. A series of protests took place because

Chicano students were not treated as a distinct minority. This group feared that the ruling could affect Chicano students in an adverse way. It was felt that the lack of reference to Mexican-American students as a separate minority group could possibly lead to the pairing of Chicano and black students under the disguise of desegregated schools. For integration purposes only, Mexican-American students were being counted as whites.

Statistics on Desegregation

Statistics on five areas vital to the desegregation process in the Houston Independent School District will be examined. These areas include the following: (1) Elementary pupils by race and school; (2) secondary pupils by school and race; (3) teacher assignments by race and school; (4) pupil-teacher ratios by school and race; and (5) withdrawal rates by school. Data on all schools in the district were difficult to achieve. Therefore, the statistics included here will include a select number of schools at the elementary and secondary levels. Three inner city areas represent the Primary Sampling Area.

In Houston, as in most big cities, there appears to be a strange color transition flowing from the inner city to "suburbia". The extent to which the "equidistant plan" will eliminate this flow is difficult to determine at this point. According to the plan, the "equidistant" arrangement was designed to achieve a higher incidence of desegregation in the Houston Independent School District. The equidistant plan, approved by the presiding judge in the Houston case, is a replica of

the one approved by the Court of Appeals for the Fifth Circuit of Orange County, Florida in Ellis vs. Board of Public Instruction of Orange County, Florida (February 17, 1970). The plan called for separate zoning for elementary, junior high, and senior high schools. Each student would be required to attend the school nearest his home. School capacity, distance from the adjacent schools, and other factors affecting the proposed change in boundary lines were believed to be capable of increasing the integration factor.

We chose three inner city elementary schools at random to determine the workability of the "equidistant plan" for Houston. Dodson, Briargrove, and Fondren were selected and data were compiled for the years 1970-72. Table 48 gives a breakdown of pupil composition by race.

Table 48

Percentage Distribution of

Elementary Pupils for Select Schools by Race

	<u>White</u>	<u>Black</u>	Mexican-American
Dods on			
1970 1971 1972	.0% .7 9.1	100.0% 97.1 66.2	.0% 2.2 24.7
Briargrove			entido entre de la composição de la compos La composição de la compo
1970 1971 1972	98.9 99.4 98.5	.0 .0 .0	1.1 .8 1.5
Fondren			en jaron kan di kacamatan di Afrika. Mananan
1970 1971 1972	78.9 83.0 73.6	8.4 2.2 1.5	12.7 14.8 24.9

In each of the schools shown in Table 48, the enrollment of white and Mexican-American students increases in the predominantly black Dodson School from 1970-1972. For Briargrove School, the enrollment for Chicano students increased but the enrollment of black students decreased. Fondren School had a black student population of 8.4 percent in 1970 but this figure decreased to less than two percent for 1972. It is difficult to determine the causes for black enrollment decreases in the predominantly white schools. The causes may be racial transfer requests, population mobility, and dismissals and/or suspensions. Data in these areas would have to be analyzed before concrete reasons for the decreases and increases could be determined.

Junior high schools, selected at random, were also analyzed. These schools included Fleming, George Washington, and Albert Thomas junior high schools. Table 49 gives a distribution of pupils for these schools by race. The Fleming Junior High School is predominantly black with a small proportion of Mexican-American students enrolled. The white percentage in Fleming Junior High decreased during the period of 1970-1972. In 1970, there were five whites attending Fleming Junior High School, but by 1972 all whites had either graduated, transferred, or moved out of the area. This same school was 99.6 percent black in 1970. In 1972, however, the percentage of black pupils had decreased 88 percent. The Chicano student population at Fleming increased from less than one percent in 1970 to 12 percent in 1972.

George Washington Junior High School had a more equitable distribution of pupils during the period, 1970-1972. In the case of whites, there was a constant decrease in proportionate representation, from 39.4 percent in 1972. During the same period, black enrollment increased from 15.1 percent in 1970 to approximately 28 percent by 1972. From these data, it appears that the trend of black invasion versus white succession is operative. Table 49 shows the breakdown of school enrollment for select junior high schools in the Houston Independent School District.

Table 49

Percentage Distribution of

Selected Junior High Schools by Race, 1970-1972

	White	Black	Mexican-American
	Student	Student	Student
	<u>Percentage</u>	Percentage	Percentage
<u>Fleming</u>			
1970	.0%	99.6%	.4%
1971	.0	88.0	1.4
1972	.0	88.0	12.0
Geo. Washington			•
1970	39.4	15.1	45.5
1971	36.3	29.4	34.3
1972	32.9	27.8	39.3
Albert Thomas			
1970	34.4	59.4	8.2
1971	35.0	60.3	4.7
1972	20.9	74.9	4.2

Davis, Jones, and Lee High Schools were used in our analysis. Senior high schools, such as Jack Yates, Kashmere, Booker T. Washington, and Worthing, were not used because of their obvious racial make-up and their general locations -- in predominantly black areas. It was felt that border schools and previously all-white schools were better indicators for the effectiveness of the equidistant plan. As shown in Table 50, white student population representation decreased in the Jefferson Davis Senior High School during the period 1970-1972. In 1970, the proportionate representation at Davis for whites was about 15 percent; in 1971, the figure had decreased to 12.8 percent; and in 1972, the percentage decreased to about 10.3 percent. As is shown in Table 49, black enrollment increased in the schools while Mexican-American enrollment decreased. The same analysis holds true for Jones and Lee schools. The basis for the decrease in enrollment is not clear. Also, it is not clear how much of the decrease is due to transfers, re-assignments, or "white flight".

TEACHER ASSIGNMENTS

Pupil-teacher ratios by school is an important variable in assessing the progress of desegregation in a school system. In a Court decree issued June 1, 1970, it is stated: "Effective no later than August 24, 1970, the principals, teachers, teacher aides, and

Table 50

other staff who work directly with children at a school shall be assigned so that the ratio of Negro to white teachers in each school, and the ratio of other staff in each, are substantially the same as each such ratio is to the teachers and other staff, respectively, in the entire school system, with no more than five percent (5%) variance, above and below, in each school."

Three schools were chosen for analysis as related to teacher asssignments in this portion of the study. Alcott (an inner city school), Cooley, and Janowski were compared on the basis of teacher representation by race. The Louisa May Alcott Elementary School is located on Bellfort Street in the South Park residential section of Houston which is a predominantly black area. The Peter Janowski elementary school is located on Bauman; the Cooley School is located on West 17th Street. In the report released by the United States Department of Health, Education, and Welfare, it is shown that no Mexican-American teachers are in the schools just mentioned. Black representation on the faculty of Alcott School increased each year during the period, 1970-1972; decreased in the Cooley school for the same period; and increased in the Janowski school for the years, 1970-1972. Table 51 shows a distribution of faculty members by race for three elementary schools selected at random for the analysis.

Pupil-teacher ratios for three senior high schools in the Houston Independent School District are shown in Table 52.

	1,931(P)	22(P)	20(P)

^{*} T = Teachers; P = Pupils.

Lincoln High School's teacher-pupil ratio increased. The black teacher-pupil ratio decreased from 1:212 to 1:34, and the Mexican-American teacher-pupil ratio remained constant for the period, 1970-1972, with no teachers represented. At Waltrip High School the white teacher-pupil ratio increased; the black teacher-pupil ratio decreased. The same pattern occurred in the Westbury Senior High School. The report on the progress of desegregation for the HISD, released by the Department of Health, Education, and Welfare on October 2, 1972, gave a breakdown of the school population by race. Teacher-pupil ratios and percentages are shown in Table 53.

Race of Students and Staff as Reported on H.E.W. Reports (as of October 2, 1972)

	<u>White</u>	<u>Black</u>	Mexican-American
STUDENTS Senior high Junior high Elementary	53.1% 45.4 39.8	35.2% 39.0 40.9	11.2% 15.1 18.9
Total	43.6	39.4	16.5
STAFF Senior high Junior high Elementary	65.7 63.9 58.2	31.8 33.2 39.1	2.0 2.6 2.5
Total	61.2	36.0	2.5

As shown in Table 53, white teachers comprise 61.2 percent of the teaching staff in Houston, with only 43.6 percent of the population listed as white. Thirty-six percent (36%) of the teaching staff in elementary, junior, and senior high schools in the HISD

listed as black. On the other hand, Mexican-American representation in the student bodies was 11.2 percent at the senior high level; 15.1 percent at the junior high level; and 18.9 percent at the elementary level for the HISD. Mexican-Americans comprised about 17 percent of the student body in all schools in the District as of October, 1972. Staff representation for Mexican-Americans was about 2.0 percent at the senior high level, but less than three percent (3%) at the junior high or elementary level. This small proportionate representation by Mexican-American teachers in the school system is critical considering the large student population in the District. It is a critical problem but not an unusual one. Many large urban areas with substantial Chicano student populations are experiencing difficulty in recruiting Mexican-American teachers because of an apparent shortage in the State.

WITHDRAWALS

There were substantial withdrawals from both black and white schools in the District. A selected number are shown in Table 54. Withdrawals at predominantly black Wheatley High School increased during the period, 1970 through 1972; students withdrawing from Jack Yates Senior High School decreased by 38 percent. Withdrawals at Terrell and Key schools increased by five and seventeen percent, respectively. Likewise, Benbrook withdrawals increased only slightly with those at Durkee increasing by 46 which is 22 percent.

Table 54

Withdrawals from Selected Schools in the Houston Independent School District, 1970 - 1972

	<u>1970</u>	<u>1971</u>	1972
SENIOR HIGH SCHOOLS			
Wheatley Yates	289 510	171 371	389 315
JUNIOR HIGH SCHOOLS			
Key Terrell	196 151	272 142	237 160
ELEMENTARY SCHOOLS			
Benbrook Durkee	76 156	87 152	84 202

Referrals for disciplinary reasons were greatest among the black student population, with an almost equal number for white and Mexican-American students. During the 1971-72 school year, 25,272 or 39.9 percent of all such referrals were black; 18,739 or 29.5 percent, white; and 19,221 or 30.3 percent were Mexican-American.

Black students, as well as their parents, charge that many teachers fail to understand their needs and aspirations. In talking with several students who had been suspended or had voluntarily withdrawn from school, we found that most complaints are against teachers and administrative officials. The most common of these relate to what they call "negative attitudes shown by white teachers in previously all-black situations." We could not verify the charges made because an objective study would have to be conducted to determine the accuracy

of such charges. However, the existence of such perceptions would, we think, suggest the need for better understanding between pupils, teachers, and administrators in interracial school situations.

BUSING VERSUS DESEGREGATION: SOME RESEARCH FINDINGS

The September issue of a publication of the Center for National Policy Research (September, 1972, pp. 1-3) reviews several studies concerning the benefits (or lack of benefits) of integrated education to black and white school children. In effect, the studies cited in the report on Civil Rights research were designed to assess the effects of busing and integration on the academic achievements of the pupils involved in the processes.

"For many, busing for the purpose of achieving racial integration has become a code word, replacing the phrase of "law and order," for a set of beliefs about the integration of blacks and whites in American society." Proponents of busing, as one of the tools to achieving desegregated schools, justify their positions on the basis of the equalitarian concept inherent in democracy; others, less convinced and more negative toward the idea of busing, view it as an unnecessary means to an end. Anti-busing stands are often regarded as evidence of racism, while those with a pro-busing stance see their positions as reflecting a positive commitment to integration and to an end to the dual system of education brought on by segregated housing patterns and deliberate defiance by public school administrations.

These two opposing stands are reflected in recent researches which claim to show negative effects of busing and rebuttals by the pro-busing advocates.

Armor's study, "The Effects of Busing," sought to assess the effects of induced integration rather than "natural" integration that would arise out of voluntary neighborhood integration. Introducing what he called an "Integration Policy Model," Armor states:

Inequality and segregation are mutually reinforcing conditions, reflecting not only the judicial doctrine that separation is inherently unequal, but also the social reality that segregation of a deprived group can cut off channels and networks that might be used to gain equality. Segregation and inequality combine to cause psychological damage in children resulting in low achievement as an adult and further reinforces white prejudices (the vicious circle).

Data for the Armor study were obtained from investigation of voluntary integration programs in Boston, Hartford, New Haven, White Plains, Ann Arbor, and Riverside where racial transfers had taken place. Based on the findings from his study, the author made several startling conclusions concerning busing.

One such finding indicated that measures such as self-esteem and academic achievement did not increase in an appreciable way. Another finding which he considered to be part of his "Integration Policy Model" was that the dropout rate from college is higher for the bused students, however, these same students are much more likely to enter college than their control counterparts. Armor also found, from his analysis of the data, that aspirations for educational and occupational achievement declined for bused students. Conclusions

from these data involved two major findings: (1) There may be justifications for school integration other than those in the integration policy model (summarily cited above), but then the burden must fall upon those who support a given school integration program to demonstrate that it has intended effects (with no unintended negative side effects); and (2) Massive mandary busing for purposes of improving student achievement and interracial harmony is not effective and should not be adopted at this time. There is some question as to the validity of the research design utilized in the investigation by Armor.

Many leaders around Boston -- black and white -- condemned the Armor study as "an act of pure racism." many of those who condemned the study were distinguished researchers at Harvard where Armor is employed, including such notables as Thomas Pettigrew, Marshall Smith, Clarence Normand, and Elizabeth Useem of Boston State College. Winter Edition of Public Interest (1972) carries a rebuttal of "A Critique of 'The Evidence of Busing'" and the aforementioned authors criticized Armor's research design and charged that the data were distorted to fit the study's anti-busing bias. 9 The basic deficiency found in the study's methodology was the failure to investigate conditions within the schools involved in the desegregation programs to determine whether a quality interracial experience was provided or if certain numbers of black and white students simply attended classes in the same building; nor was there any effort made to determine the competency of the teachers assigned to classes where blacks were enrolled and the attitudes of white teachers generally toward the in-coming students.

Interviews with students in the Houston Independent School
District indicate that some pupils experience difficulty in communicating with the white teachers and that these same teachers tend to ignore them in classes. Other students cited insecurity, the lack of a feeling of belongingness, and hostile classmates as experiences they have encountered while being bused to previously all-white schools. There were some students attending predominantly white schools in Houston who appeared to be getting along very well with their teachers and with their classmates. The schools where this atmosphere prevails frequently are those schools where racial percentage representation is more equal or the schools are located in areas of transition -- usually from white to black areas.

Contrary to Armor's findings, two recent studies of black pride indicate that black Americans genreally have as high opinion of themselves as white have of themselves, but their self-esteem rests more on their personal relationships that their careers. The research, conducted by University of Connecticut sociologists and published in <u>Human Behavior</u> (1973), shows that lower class blacks rate themselves higher than lower-class whites in their roles as parents, children, spouses, and conversationalists. Among the middle class, blacks and whites gave themselves almost equal ratings. Black self-esteem dipped more sharply in rating qualities concerning career success in school and on the job. Black women rate themselves higher in intellectual ability than white women. Another interesting finding challenged the assumption that blacks judge themselves by white standards. Sociologists

John D. McCarthy and William L. Yancey found that blacks measure their worth against the standards of their own "subculture." In situations where white teachers were working in predominantly black school situations for the first time, the knowledge of findings relating to self-esteem and black awareness could serve useful purposes.

Cohen, Pettigrew and Riley in $\underline{\tt On}$ Equality $\underline{\tt of}$ Educational Opportunity ${\tt 10}$ discuss "Race and the Outcomes of Schooling" and challenge the Armor findings by stating that "quality integration, with integrated classrooms as well as schools, integrated staffs, and proper remedial services, often leads to significant achievement gains by both black and white students." It should be pointed out that much of the controversy concerning the effects of busing centers on the differential meanings of the concepts of desegregation and integration. Where quality integration takes place, achievement gains have been made for both races; where desegregation has taken place (labeled by Armor as "induced" integration), little achievement, if any, can be cited. It is important that one realize that sesegregation in classrooms has more often taken place under adverse conditions. Teachers, as well as students, have displayed extreme negative attitudes toward students of different races. In some large urban school districts, suspensions and/or expulsions, withdrawals, and general disturbances have increased. These negative attitudes reflect the general climate of the community where desegregation takes place and the reactions of the school administration and the society at large. Anti-busing advocates in Dallas demonstrated for days against the "forced busing

of school children." Other areas such as Detroit, Pontiac, and even Houston have joined protests calling for the passage of a constitutional amendment against busing. Some of these same anti-busing advocates are among those participating in the so-called "white flight" to the suburbs. It is no wonder that Armor and others with similar ideological strains, would seek an answer through faulty conclusions and distorted facts.

William J. Taylor in <u>Dissent</u> discusses the realities and evasions of busing and responds to the Nixonian attack on court-ordered integration in the Fall issue of the publication. ¹¹ Taylor reviews the Constitutional bases for requiring integration in the country, cites evidence that integration has worked in some parts of the country, and challenges certain myths about busing. In the following paragraphs, we will explore what we consider to be <u>myths</u> about busing in the light of available evidence in Houston.

Busing Myths

MYTH #1 - Myth Number One figures heavily in the Nixonian philosophy about busing. In a televised speech during the Spring of 1972, President Nixon stated that there was "massive busing" in this country. Across the nation only about forty percent of all school children are actually bused to and from school, which is indeed a massive amount of busing; but only about three percent are bused to achieve integrated schools. Even where busing does occur, the burden of busing is borne by black and Chicano students. Statistics concerning

the results for effects of busing were compiled for the period ending Dec., 1971 for students in Houston. Table 55 gives a breakdown of the results for effects of busing in Houston for "Paired Schools" and "Majority-Minority Transfers" by race. As will be indicated, the bulk of the students being bused in Houston comes from minority group areas. The percentage of black students involved in busing ranges from a low of 63.3 percent for paired schools to a high of 97.4 percent for the same period for majority-minority transfers. The situation relating to blacks and Chicanos remained practically the same until January of 1973.

Table 55
Busing Statistics for Houston*

	<u>White</u>	Black	Mexican- <u>American</u>
DECEMBER, 1971			
Paired Schools Majority-Minority Transfers	6.0%	63.3% 97.4	30.7% 0.5
JUNE, 1972			
Paired Schools Majority-Minority Transfers	10.0 7.4	71.6 90.5	18.3 1.9
JANUARY, 1973			
Paired Schools Majority-Minority Transfers	5.6 3.1	69.4 95.5	24.9

^{*}See footnotes at end of chapter.

MYTH #2 - The second myth relates to the charges that busing is required to achieve something called "racial balance." The fact is that there is not a single pupil in this country being bused for that

purpose. After reviewing developments since the issuance of the initial decree to end "separate but equal" schools, one can conclude that the advent of busing came when districts failed to comply with court ordered desegregation and open housing laws. Busing under court order is for one reason and one reason only -- to desegregate "segregated" school systems. Judge Wisdom of the Fifth Circuit Court of Appeals (Dallas Times Herald, April 18, 1972) discussed busing in a speech at Tulane University last year. He stated that "justice must be colorconscious as well as color blind when it becomes necessary to remedy the evils of past discrimination based on color."

Anti-busing advocates would lead the public to believe that federal courts, without mercy, have escalated their demands on school districts throughout the North and South. To believe that this is the case is to ignore the fact that school districts would not have been taken to court in the first plake if they had not been guilty of constitutional violations.

Nineteen years have passed since the rendering of the now famous Brown Decision, but there are still districts which have not complied with the order of the Court. Delays, non-compliance tactics such as appeals and counter-suits, and direct defiance have been measures used by those who are opposed to desegregating school systems. It may very well be that objections to busing are thin disguises to avoid or to minimize desegregating public schools. Vast sums of money have been used on litigation in the courts for purposes of feeding inclinations toward non-compliance through continuous appeals and the

filing of briefs with the court. Tax funds are actually being used indiscriminately to slow any progress toward complete desegregation.

MYTH #3 - An often cited myth is that white children are being bused for unreasonably long distances. The fact is that black children have borne the disproportionate amount of the burden of busing to achieve desegregation. In the Houston Independent School District, over 90 percent of the children bused are black or Chicano; they spend more time on buses and travel longer distances. Minority group children are still the victims of whatever standards are imposed -- not white children. White students in Houston, as in other cities, have reaped the greatest benefits by virtue of their birth and color, if education is as Mann said, "an equalizer of the conditions of men." It has provided mechanisms through which this can be achieved for the majority race, not the black or Mexican-American citizens. And, if one wants to question whether busing is feasible in the light of the inequities in school facilities (inner city schools versus other schools), he must remember that there is less busing now than when it was done to preserve the unconstitutional segregated school.

MYTH #4 - Another myth about busing is that it is not a racial issue; rather, that people are just concerned about preserving the neighborhood school concept. Innovations in transportation have made the population in urban areas an extremely mobile one. Few people consider neighborhood schools when they send their children to private schools such as prestigious academies or to colleges and universities.

The whole "social experiment" story is a myth, too. Children are not bused for a social experiment; they are bused because the Constitution forbids unequal, segregated schools. They are bused because it is a black or brown child's constitutional right (as it is with white children) not to be herded into a separate, inferior school.

PROGRESS TOWARD DESEGREGATION

We have tended to dwell on the comparative aspects of desegregation along rather negative lines. Some schools in Houston are desegregated. These schools are located in or near integrated neighborhoods. Some people are of the opinion that the "equi-distant plan" contributed to desegregation efforts also. Table 56 shows the percentage breakdown of some of the schools cited as most successful in their desegregation efforts. Table 57 shows the least successful schools at achieving desegregation in the HISD.

Table 56

A Percentage Distribution of Pupils in Selected Schools in HISD (Most Desegregated)

	<u>White</u>	Black	Mexican-American
Piney Point	45.8%	43.2%	11.0%
Burbank	55.2	26.4	18.4
Furr	42.6	47.3	10.1
Lanier	62.6	31.2	6.2
Jones	43.8	48.0	8.2
Sterling	51.0	44.1	4.9

^{*}There may be some discrepancies in figures because they were collected from numerous reports and newspaper accounts.

Table 57

A Percentage Distribution of Pupils for Select Schools in HISD (Least Desegregated)*

	<u>White</u>	Black	Mexican-American
Blackshear Carnegie DeZavala Douglass Franklin Herod Lovett Walnut Bend White Fondren	0 % 0 1.6 0 8.6 98.5 98.8 98.9 98.1	100.0% 100.0 .5 100.0 1.1 0 .2 .1	0 % 0 97.9 0 90.3 1.5 1.0 1.8

^{*}Any discrepancies in percentage are related to differences in source of data.

The purpose of the commentary on school desegregation was not to indict the school system, but one cannot escape the fact that the dual system in American society -- or in Houston, for that matter -- has not been completely dismantled. A report by a bi-racial committee acknowledged this on August 29, 1972 as follows: "The current implementation of the desegregation program is not working in behalf of the upward mobility of minority students as much as all would desire..."

The committee urged that the Court re-examine its entire desegregation order of August 25, 1970, with the view toward directing action which achieves upward mobility of minority students. Some accomplishments have been made since this statement was issued, but as will be shown in the statistics on higher education and in the chapter on "Civil Rights", minority groups still have quite a distance to go before becoming complacent in the feeling that "we have done all we can."

The City of Houston can meet the challenges of our time through a continuous and realistic approach to the problems with which it is faced. It is reasonable to expect that growths of misunderstanding and myths, prejudice and confusion cannot be erased over night. But, almost two decades have passed since school districts were ordered to dismantle the segregated system, and time is working against those who are victims of inequality.

The chronology of major desegregation developments in the nation and Houston has been included as a means of introducing data on the status of school desegregation in Houston. Selected data have also been included on higher education for blacks and state employment.

STATISTICS ON HIGHER EDUCATION AND STATE EMPLOYMENT BY RACE

General tables are given in this section on black college enrollment by sex, black college enrollment by type of institution,
percentage of persons 25 years of age and over who completed four
years of high school or more, and four years of college or more for
selected metropolitan areas, average budgeted faculty salaries and
ranges by rank and institution for public senior colleges and universities in Texas for public junior colleges.

Selected data are presented as related to State employment by race and average pay. Data in this section were obtained from a Report of the Texas Association of College Teachers, the United States Census

Bureau, and local dailies: <u>The Houston Chronicle</u> (April 10, 1973); and <u>The Houston Post</u> (November 26, 1972).

NOTES AND SELECTED REFERENCES

Notes

- A. Most of the data used in this section of the report were obtained from a review of court cases relating to desegregation litigation in the Houston Independent School District. A desegregation factor analysis, not included in this study, shows trends which point toward resegregation. Left undisturbed, the Houston school system will become resegregated within the next seven years.
- B. An overall consideration of the figures from the various statistical studies examined shows certain obvious errors with respect to figures relative to the "equi-distant" plan. The figures shown for the freedom of choice plan are taken from the most current reports on enrollment and are accurate; figures for the equi-distant plan were based on projections.
- C. Presently, the equi-distant, geographic-capacity, and a modified freedom of choice plan are being used to desegregate the Houston school system. (As stated by the Reverent D. Leon Everett, member of the Houston School Board, "the equi-distant plan is used at the elementary level and the geographic-capacity plan is being used at the secondary level.)

CHAPTER 3

HOUSING NEEDS AND MINORITY GROUPS

This section of the report provides information on housing as revealed through surveys of minority group members and organizations, census reports, news articles, and other statistical reports on the subject. Deliberate efforts were made to determine whether there are housing problems in Houston and the extent to which the problems (if they exist) have racial overtones. We interviewed a selected number of respondents from the general population, real estate and lending institutions, and social welfare organizations in the City of Houston. The efforts and collection of opinions indicate the existance of certain generalizations concerning the housing problem under study. Some of the assumptions are: (1) housing practices are unfair throughout Houston; (2) there is a housing shortage of low to medium income housing; (3) there exist evidence of discriminatory selection of realtors to handle property of white sellers; (4) federal programs have been largely ineffective in meeting the housing needs of minority groups in the city; and (5) agencies and individuals involved in the federal housing programs are under suspicion by the minority community. It should be noted

that these assumptions are representative of certain charges made by individuals and organizations.

The preceding generalizations will be examined within the framework of attitudes set forth by the interviews conducted. Statistical information will also be used in the interest of providing greater understanding of the housing situation as it currently exists in Houston and the larger Houston community.

GENERAL CHARACTERISTICS OF HOUSING

Advanced age of buildings, a large proportion of substandard dwellings, and a high degree of overcrowdedness are generally standard characteristics of housing in the highly delineated areas of minority group concentration. Data from the last decennial census on the condition of housing for the United States show corraborative evidence of the existence of sub-standard housing. "For the entire country, the proportion of black households lacking some or all plumbing facilities is more than three times the proportion for white households."

Between 1960 and 1970, the difference in the proportion of housing units with complete plumbing facilities between black and white households was reduced considerably, however.

In 1970, home ownership rates among black households in thirty of the cities with the largest black population ranged from 16 percent in Newark, New Jersey, to 55.0 percent in

Kansas City, Missouri. Proportionate representation of blacks in housing which lacked basic plumbing facilities ranged from 14.6 percent in Jacksonville, Florida, to less than two percent in Baltimore, Maryland.

For Houston, the ownership rate for blacks was 45 percent, with 55 percent listed as renters. Most households in Houston had all plumbing facilities. In fact, 96 percent of occupied units had all plumbing, with four percent lacking some or all plumbing facilities. Table 68 shows a breakdown of tenure and plumbing facilities for black occupied units in thirty cities with the largest black populations in 1970.

Subsequent tables in this chapter show the value of owner occupied housing units in Houston with a black head of household ranged from \$9,400 to \$17,000. There was a consistent increase in the value of black homes when measured in terms of median dollars from 1950 through March of 1970. The increase was a little more than \$2,000 for each three year intervals, beginning with 1960 and during the period commonly referred to as the "Social Revolutions of the '60's." Houses less than \$10,000 in median dollar value for blacks in Houston were built prior to 1940, more than thirty years ago. The greater proportion of blacks own homes valued at less than \$20,000. In addition, the greater proportion of homes valued between \$20,000 and \$34,999 was built during the period, 1968-1970. Recent surveys on housing

in Houston show that there is a gradual but steady movement of young blacks between the ages of 25 and 35 years into homes in middle class neighborhoods. These homes are valued in price from \$25,000 to \$35,000.

As shown in the income section, there is some evidence to suggest that a substantial proportion of blacks, when measured in terms of income, occupation, and education, have moved from lower middle to middle class status. This mobility was related to a rise in individual and family income. The ratio of black family income to that of whites made a substantial and significant change during the last decade. The middle-income group in this category has made significant progress in Houston. A substantial proportion of this group lives in the Houston suburbs. They occupy homes in Fort Bend County, Southwest Houston, the traditional Third Ward Area, Scenic Woods, and many are found to be living in Hidden Valley as well as Sharpstown. Some occupy apartments; most are home owners. It should be noted, however, that some families did encounter insults and discrimination in this physical mobility. Specific instances will be cited in the discussion on "Discrimination in Housing."

Residential mobility is a slippery and uncertain concept.

Blacks are confronted with a uniquely different situation when they seek to advance in American society. This is true in Houston as well as other parts of the country. Despite the

upward gains made in income, employment, and education, residential mobility is still largely a result of the ecological processes of invasion and succession. As blacks begin to move into some areas of Houston, whites make their flight to other areas -- usually further out into the suburbs. The ecological processes of invasion and succession defy any tendency toward integrated neighborhoods in Houston for any sustained period of time.

Integration, like invasion, has an ecological existence which is dependent upon a sustained relationship between the incoming group and existing clientele. Human communities are governed by basic organizational and cohesive forces which define the basic mode of human adjustment. Where blacks come in contact with whites in neighborhood situations, blacks are more often viewed as outsiders. Illustrative of this tendency is a letter which appeared in the Houston Post (April 25, 1973):

. . .I enjoyed reading. . . "How to buy a house if you're Black. . ." However, the main point was neither discussed or explained. Why should a black wish to move where his neighbors do not want him, where he will never be accepted, no matter what. Whites do not force themselves where they are not wanted.

Historical distoritons and misconceptions about blacks make it difficult, and in many ways almost impossible, for whites to accept them as neighbors. And, the tendency to view blacks primarily as a single, undifferentiated mass of disadvantaged people tied by the badge of color is revelaed in contacts with realtors and sellers.

DISCRIMINATION IN HOUSING

Racial understanding has been further inhibited by the fact that realtors, builders, and lending institutions in Houston utilize different standards and techniques in dealing with potential black buyers. This fact is revealed through interviews conducted with a cross-section of the black community in Houston.

Some of the problems encountered by Houstonians, in general, were discussed in a recent article published in the Houston Post (April 15, 1973). In this article, Columnist John F. Powers discussed critical issues relating to the sale and financing of homes. "Members of minority groups face the same problems as whites in finding a house and financing it -- and then some," says Powers. The extra problems of minority groups stem from encounters with real estate brokers, builders, and lending institutions. When confronted with discriminatory practices, some potential black buyers will simply change realty agencies. Others will seek redress through the courts. A United States Justice suit was filed against Gary Greene Realtors Company. Now this agency agrees not to discriminate in the sale of housing in a federal court consent decree. The Justice Department alleged the company "steered and channeled" prospective white and black customers to predominantly white and black areas, respectively. This firm denied the allegations, saying it had

promoted fair housing programs and policies in its sale of homes.

Other such suits have also been filed against realty companies in Houston.

In talking with a selected number of black realtors in Houston, we were able to ascertain some of the problems experienced in finding adequate and suitable housing for the black population. One real estate salesman had this to say: "Lower income people have trouble getting financing for homes in the under \$10,000 range because discrimination still exists in this area. By law Houston is an open city, but steering blacks to particular areas like Dumbarton Oaks and Brentwood is a common practice. White realtors will not show property in certain areas to blacks..." Another black realtor indicated that there is less shortage of homes for lower and middle income blacks at this time because of the 235 and 236 homes. Apartment construction and inflationary trends have also reduced the demand for housing in this category. "But," he said, "the upper income levels have trouble. White brokers don't sell homes in the \$35,000 and above range to blacks. So, it is your black executives -- those who come in from out of town with companies -- who have the trouble. They have trouble buying in the old established neighborhoods such as Candlelight Forest, Braeburn Valley, Tanglewood, and Hunters Creek, for example." Several other persons interviewed felt that even when a white broker shows a house to a black in

exclusive white neighborhoods, he is treated so coldly that the pride of the buyer precludes his having any further interest in the property. Other complaints were also aired, including the sale of property at exorbitant prices to slow the flow of blacks into certain neighborhoods, high appraisals of homes so that the white sellers get higher equities than normally expected for the same priced house, and "for sale by owners" techniques, where, if the person chooses to sell his home himself, he can sell to whoever he wishes. Many black realtors and potential customers share the belief that housing laws can only be applied to the realtor who discriminates.

There are additional complications in the path of lower and middle income minority group members. Several techniques of salesmanship used by some real estate agencies are insulting to blacks. One sales technique used largely by white realtors may be called "racial exclusiveness." They make sales appeals on the basis of the number of educated blacks living in the area. This pitch is to let the potential buyer know that the area is in transition from a predominantly white neighborhood to a black one; and that they want to make sure that you live with people of your own kind. The snob appeal is carried further if the individual's race is not known. Where telephone contact is made, the white salesman or seller wants to know your place of employment, total income, and your present location. If the individual has lower middle class status, he is not shown homes

in the \$25,000 to \$35,000 range. The real estate brokers react to the real estate market for whites, but they try to create artificial ones for blacks by arousing or appealing to prejudices in developing communities and the old established ones. "Blackbusting" occurs in Houston. Some new developments, by design and intent, are built for blacks only. Consequently, the showing of these homes is limited to black patrons only.

Another technique used by white realtors, if the seller is black, is to tell the potential buyer that the owner is losing his home or that he has a second mortgage on the property. One black couple moved from Dallas to Houston late in 1972. The real estate salesman showed them several homes in some parts of Houston. The couple had indicated the type of floor plan they wanted. Eventually the house was located but the occupants were black. This couple was told that the owner was losing his home, only to find later that the owner had sufficient funds, credit, and property to maintain the home. The seller had wanted a large home, and he had bought the house in a previously all-white area.

Newcomers and the middle income blacks are more often victims of discrimination because they can afford to buy homes in traditionally non-black areas. Blockages are set up by realtors through misquoted higher prices and "sold" signs when blacks insist on being taken into better neighborhoods. Outlandish prices

are quoted by some white sellers; others will remain in a neighborhood after it gets to be 98 percent black in hopes of making greater profits.

The young black executive has even more of a problem when it comes to finding suitable housing in Houston. The better all-black areas are stable. It is difficult, if not impossible, to find adequate housing in Timbercrest, Riverside Terrance, and Brentwood West. Windor Village is gradually becoming black. For the most part, the homes in Westbury are priced too high for what the buyer gets for his money. The South Park area, adjoining Sunnyside, has long been overcrowded. With the advent of South Park Village and the Selinsky Apartments, few middle and upper middle class blacks will move in the area because the deed restrictions have been violated and the area is overimpacted where traffic is virtually at a standstill during peak hours.

Where corporate headquarters are located in outlying areas of metropolitan centers, blacks are faced with problems when they find themselves in suburbs which do not favor renting or selling to blacks. This is not the case in Houston, although some difficulty exists in this regard. Blacks live in outlying areas of the city, but the question of location in relation to community acceptance is another matter. However, another dimension to the issue of location is that many corporations have begun to conduct pilot or feasibility studies to determine

community receptiveness to all its employees. This trend will tend to reduce the amount of discrimination and accompanying anxieties in this regard because the decisions to locate plants and facilities often rest on the potent factor of housing availability.

LOW INCOME HOUSING

Low income housing and public housing projects lie at the heart of attempts to provide affirmative action to eradicate slum areas in the city. Black community groups, in cooperation with the Model Cities Agency, are seeking means by which inner city areas can be redeveloped. In the central city, the problem of housing is, and will remain for years, acute unless concerted efforts are launched to ebb the tide of physical deterioration.

Federal subsidized housing, once considered a potential panacea, has seldom measured up to advanced expectations and most often has created new and growing problems for the low income group. A community planner for the Houston Urban League discussed the problem of low income housing with our survey group. She states:

Although the city and federal governments have made commitments to the creation of housing for lower income people, nothing is currently being done beyond tokenism. The problem of housing is being approached from the vantage point of privilege. Those who have the money and the right skin color get the housing. It is my belief that the situation will continue to exist until the problem is approached from the standpoint of what is right, -- in the interest of the general welfare of the city -- it can never be solved.

The representative from the Urban League of Houston also pointed out that programs have been in existence for the lower income persons such as the public housing projects and rent supplement programs. All the others, including the 235 and 236 programs have been for the moderate income persons, not for the low income group, as the public has been led to believe.

Closely related to public housing facilities for the low income group is the initiation of urban renewal or highway construction projects. An important aspect of urban renewal in the minds of low income residents is the prospect of clearance of all or part of an area. When black low income persons are faced with relocation problems, they usually result from decisions made outside of the community. Relocation rarely shows imagination or creativity in improving areas or fostering integration into previously all-white areas. Black low income persons are usally relocated in areas traditionally occupied by blacks or they are found on fringe areas of low-income white communities. In each instance, the ghetto remains intact.

What usually happens when black low income areas are threatened with displacement or relocation is the development of a total plan and inadequate, purposely abbreviated discussion of it in the community affected. After this takes place, blacks are simply moved out of the areas involved. No planning for new public housing takes place. Generally, they are dispersed

around the first and second rings of the central business district and one finds the ghetto has not disappeared but it was merely transplanted into another section of Houston. The movement of blacks from Third and Fourth Wards into Sunnyside and South Park is an illustrative case. Low income blacks remain restricted by virtue of their status and their race. As to solutions, Stagman panits a rather gloomy picture; "Today, the public housing program goes without its traditional liberal and intellectual support; it goes without union support; and it goes without any broad demand among the electorate. And as for the poor, they go without decent housing..." The author of "The New Mythology of Housing" made these comments in 1970.² There is evidence to indicate that as late as 1973 he is still right in this assertion. In Houston some neighborhood development programs are in progress in black communities and other minority areas, but the housing needs of the poor are still not being adequately met.

HOUSING CODE ENFORCEMENT

A report, published by the Texas Urban Development

Commission and prepared by several University of Houston professors,

indicates that two methods of enforcement are employed by the

Houston Housing Code Enforcement Section. These include:

"systematic and individual complaints." The authors further point

out that "systematic code enforcement involves designation of certain areas and then a dwelling-by-dwelling inspection by evaluators." ³

Each approach has as its aim the improvement of entire neighborhoods through code enforcement. The report also points out that systematic code enforcement is limited to Model Neighborhoods while individual complaints cover the total city.

In black neighborhoods, code enforcement is not applied equally in all areas. Physical deterioration is widespread in many minority areas of Houston. In many cases, inspectors report what can be seen on the surface. Rats and rodent infestation goes unnoticed. The 1972 Comprehensive Plan for the Model City Department of the City of Houston contains several functional problem areas of the Physical Environmental component. Housing conditions were considered to be a high priority item in the plan. Specific housing conditions were listed as: (1) high frequency of substandard housing; (2) lack of low-income housing resources; (3) lack of coordination of effort on the part of the city; and (4) lack of available loans for repairs. There is some evidence to suggest that many of the problems listed here still exist in Houston, although some progress has been made in rehabilitating sections of low income areas. Indicators of progress in this regard include the upgrading of about 4100 dwelling units to meet the minimum housing standards through the Code Enforcement programs. Of the

total upgrades, about 109 were financed through the "Rehabilitation Revolving Fund." A substantial number of structures have also been demolished through the Model Cities "Demolition of Unsafe Buildings" program. There are still many more structures in need of complete demolition. Street lights have been installed in some model neighborhoods.

One of the basic goals of the Model Cities program was to increase the supply of standard housing available to indigenous residents of Model Neighborhoods and in other areas in which they want to live and at costs they can afford. This goal has not been fully achieved. Again, low income persons are not receiving the benefits of adequate and decent housing in the City of Houston. Even the agency admits that "there have been few perceptible changes in the physical appearance of Houston's fourteen (14) square mile inner city since the Model Cities program was implement. This statement was made in 1972. It could be that some progress has been made since then.

However, as late as March 15, 1973, Houston's inner city area included in the Model Cities program (Model Neighborhood area) contained 33,000 dwelling units of which 39 percent are in violation of the city's "Minimum Housing Code." Of these an estimated 3,000 units are unfit for habitation. The report states, "in light of these facts, there is an evident need for an aggressive program of demolition of unsafe structures and a

mechanism to provide housing rehabilitation loans to those Model Neighborhood residents who are unable to obtain loans through conventional means due to low income or poor credit."

Cut off from the "conventional" sources of financing, the black low income resident is either forced to deal with highly questionable speculators or he must buy on a contractual basis for a period of years at higher interest rates. If the low income person chooses the "contract basis" he can be evicted and dispossessed within a short time, if he defaults on a payment. The speculator can then re-sell the property. A Social Planner for the Houston Urban League talked with us about this practice in Houston. She related cases where blacks are being sold homes in Windsor Village, located in Southwest Houston. White realtors are putting people in homes ranging in prices from \$19,000 to \$28,000. Some of these individuals do not have money or credit to pay the prices asked for the homes. "They are buying under something called "contract sales," said the Planner. further stated that they do not have a clear understanding of what is going on and "they have merely accepted the realtor's word and they think they are buying a house. Actually they are renting." One student at Texas Southern University corroborated this story by stating that she was placed in a house under similar condition, because the realtor wanted to protect the white owner's credit. Other cases involved obvious acts of discrimination

and block busting, -- tactics used in frightening white owners into selling through a campaign of claiming that the neighborhood is turning black and house values are declining.

There has been a great deal of serious study of various types of housing in Houston and of the reactions of residents to their living environments. One such study was conducted by the Urban Resources Center at Texas Southern University. The study's aim was to determine the extent to which Housing Code Enforcement in Houston contributed to better living conditions for low income blacks. Over 100 homes were selected at random from low income areas. The Housing Code used by Houston was utilized in inspecting homes and assessing the physical condition of the dwellings. In addition, the occupants were interviewed on particular questions concerning the neighborhood in general. Using the Houston Housing Code as a source, a checklist of the standards was devised for measuring conditions of housing in the sampling area. In the study, it was found that the most crucial problem was plumbing. Other defective conditions, not covered in the Houston Housing Code, were found. Of all dwellings surveyed, 13 percent had rusty or rotten screens on the windows; ten percent had no wall-type convenience electrical outlets; eight percent needed interior papering or paneling; and 6 percent of the homes had broken windows. Because of unkept vacant lots and buildings, the areas are found to be plagued with rodents,

insects, and other pests. Over 80 percent of the renters included in this study complained of poor maintenance habits by the absentee landlords. All respondents indicated that there is need for comprehensive planning in the four neighborhoods -- Third, Fourth, and Fifth Wards and Acres Homes -- surveyed.

The need for planning on a neighborhood basis cannot be gainsaid. A federation of program components which touch every aspect of a living environment is needed. "Controls such as deed restrictions, capacities of water and sewer services, access and site requirements" are emphases stressed in the 1973 Community Development Statement for the City of Houston. The report further acknowledges that housing is a priority issue in Houston. The 1970 Census shows that there are approximately 54,000 households with incomes below the standard set by the Office of Economic Opportunity. About 50,000 families live in substandard housing, many of which are elderly and/or renters. Houston does not have a sufficient number of public housing units to accommodate the number of persons in need. The local housing authority has estimated a need for 10,000 additional units of federally-assisted low rent housing. Our survey of low income neighborhoods in 1973 indicated that this figure is too low. Adjustments for condemnations and demolitions must be included in the estimated figure.

From the aforementioned discussions, the following are some concerns expressed by minority community residents:

- Moderate and upper income blacks should devise methods where unscrupulous realtors, brokers, and lending institutions can be made known to potential buyers in this income bracket.
- 2. Slum dwellers should be educated about the bureaucracy. Slum residents are often pawns of bureaucrats in urban renewal and highway programs.
- 3. Minority groups should carefully investigate any builders whose appeal is beamed to them exclusively. Prices are usually exorbitant, guarantees are few, and workmanship is generally poor.
- Low income renters should especially be aware of the "turning process." All too often the owner of an apartment building decides to increase his profit by shifting to low-income-minority group occupancy while reducing services and increasing the number of rent payers in the same place. The technique is time-tested. It was the case in the Palm Center area of Houston; along the Eastex Freeway; and in the South Park area. The owner moves minority group families into apartments and immediately reduces the level of maintenance. This serves to drive whites out. The result is a gradual development of new slums.
- 5. Black potential buyers should be very careful about housing inspection and appraisals conducted by real estate companies. It is an observed fact that most middle and upper middle class blacks are much more affluent than thier white predecessors. In many instances, they pay more for homes in areas of transition than they would in a new development. White

appraisers will often list numerous items in need of repair, if the seller is black; they overlook similar defects if the seller is white.

- 6. Black real estate companies should organize in the interest of providing credibility of the shelter business in Houston. There is need for sustained counseling with low income persons about the concept of "contract buying." These recommendations do not carry racial overtones. The intent is to protect the "victim" from being abused, and the logical means would be through knowledgeable real estate agents.
- Whites pay a terrific economic and social cost for discrimination in housing. Panic selling, inflammatory actions and disturbing rumors take tolls among low income dwellers, and suburbanites move from place to place in quest of "lily white" areas only to find that with each move, they lose money and credits. The block busting techniques are carefully designed by the real estate industry to create new, higher profit markets. There is evidence that similar techniques are practiced in Houston. Many of the homes in BrentWood, Keswick Place, and Cambridge Village went up for sale after cards were placed in mailboxes warning owners that the areas were turning black. Houses in these areas have changed owners from two to five times during the past five years.

Immediate Actions Areas

1. The federal Fair Housing law should be applied uniformly in all parts of the city. An Affirmative action program should be implemented which would insure integrated housing and destroy the dual market for housing in Houston. Restrictive convenants have no place in this democracy, in Houston, in the rent, purchase, or sale of housing.

- 2. The involvement of intelligent citizens in matters of community planning and development is essential, if we are to move housing availability from narrow interests into broader interests for the total community.
- 3. In dealing with housing inadequacy, dialogue in needed between the planners, local government officials, federal agencies, and community residents concerning the critical state of housing in the city.
- 4. Building codes, health regulations, and housing code enforcement are essentials in efforts to eliminate unsuitable living environments in black areas. The Housing Code for Houston is in need of serious overhauling, and vigorous enforcement in deteriorating neighborhoods in needed. Housing Code enforcement must also take into consideration shelter supply because of the possibility that some buildings might be condemned.

Finally, housing is one of the areas which contributes to continues segregation in Houston. Anti-busing advocates insist on open housing as an alternative to the busing of school children from their immediate neighborhoods. Yet, few of the persons who participate in marches against the busing of school children will lift their voices in support of open housing in Houston and elsewhere. Many of these same citizens are aware of acts of discrimination in housing, and few, if any, will extend the hand of friendship and cooperation to black neighbors. The future of Houston depends in large measure on effective, open housing practices; a common market for housing rather than a dual one; and aggressive administrative action on the part of city

officials to insure equal justice in housing, education, employment, health, and related areas for the entire citizenry.

Tables 69 through 83 give data on owner occupied dwellings in Houston and the total SMSA. Selected characteristics on appliances, gross rental rates, housing values, household composition, age of structures, and gross percentages of income spent on housing by income level, and sex of household head are also given for occupied dwellings.

CHAPTER 4

HEALTH CARE AND THE BLACK POPULATION

Few issues in recent years have stirred more impassioned debate than the subject of health care. Proposals for compulsory health insurance and the establishment of a national health program represent responses to the concern for health services in the nation.

A recent article, "The Economics of Health Care," discusses the spiraling medical costs and the uneven quality and distribution of health services in this country. "Last year," the article reports, "close to \$80 billion -- up from \$76 billion in the previous year -- was spent on health care nationally, making it the third largest industry in the United States. Still, an estimated 40 million Americans, most of them poor -- receive less than adequate medical attention."

The concern over medical costs and health services is not just limited to poor people or the nation's minorities. Middle America also faces the financial burden of mushrooming prices for health service delivery. Over 80 percent of this group carries some type of voluntary health insurance, yet few can afford or sustain the burden of prolonged illness by virtue

of rising prices for hospital and medical care. In 1970, it was reported that the average cost of hospitalization per day was about \$70. In larger cities such as New York and Boston, the cost was much higher, ranging from a high of \$110 in New York to a high of \$103 in Boston. It is estimated by some experts that by 1973 the national average will approximate at least \$98 per day.

Despite the fact that America spends more per capita for health care than other countries, the nation's poor, black and other minorities, and the middle class experience grave difficulty in receiving and paying for health care.

Rural families suffer from a lack of adequate health care even more. Caught in a cycle of poverty and some ignorance, the rural poor suffer from malnutrition, sickle cell anemia, heart and lung disease, and many other unattended ills. Studies have also shown that "in cities where hospital clinics have largely replaced the family physician, poor people usually have to wait long hours for treatment." A survey of the health care of the poor and of minorities in Houston by the Urban Resources Center in Texas Southern University indicates that this same condition exists in Houston.

A great deal of the inadequacies concerning health care and treatment in Houston are attributable to the limited supply of black physicians in the nation. Only two percent of the nation's estimated 332,000 physicians are black, and although

some attempts have been made to increase the number of blacks entering the medical profession, progress has been relatively slow. However, some changes in enrollment have been noted.

An analysis of black enrollment in all medical schools, including students from Houston, shows a constant numerical figure of 220 up until 1971-72. Through special public and private grants, the enrollment for black medical students in the nation as a whole climbed to 881 in 1971-72. This is a drastic change in enrollment patterns when measured from the standpoint of previous years.

Prior to 1967, over 80 percent of the black physicians in America were trained in two predominantly black medical institutions, despite the fact that most medical schools in the country were receiving federal aid. Since 1967, however, predominantly white medical schools have now begun to accept blacks and other minorities in their programs.

HEALTH NEEDS OF HOUSTON'S MINORITIES

Through interviews with a sample of black physicians, it was discovered that most felt that Houston needs a better delivery system of health care for minority communities. An upgraded health delivery system would necessarily require more physicians, -- particularly blacks. It is estimated that there are 6,000 physicians in the city; of this number, 70 or 1.2 percent are black.

Fifty (50) of the seventy black physicians practice in the Model Cities designated neighborhoods. The city-wide proportionate rate of black physicians per service population is estimated at one per 4,500 persons.

Black families in Kashmere Gardens and Trinity Gardens, until recently, had to rely on the services of one pediatrician. Other minority areas experience similar difficulty in receiving adequate forms of medical care. Many of the black physicians indicated that an increase in other medical personnel such as nurses, respiratory therapists, and medical technicians, at all levels, will assist in improving health conditions for the poor. Obtaining and servicing more mobile health units and ordinary clinics would also help.

COST

The cost of medical care hinders low income and middle class Americans alike, but the former suffers even more. As previously stated, an average hospital day, nationally costs \$70; in New York and Boston the cost is \$110 and \$103, respectively. In Houston, it was difficult to pinpoint a "single figure" average cost because prices vary according to the kind of service received. A survey of hospital insurance agencies, however, showed semi-private rooms ranging from around \$34 to \$55; lower figures generally apply to the Harris County Hospital District. As a whole, average costs per room (not including other services), range from a low cost of \$33 to a

high cost of \$42, depending on the hospital and the facilities available. Drugs and physician's fees were difficult to pinpoint from the data collected.

In 1971, it was reported that about 220 federal departments and agencies administered some form of health programs. It should be noted that the recent proposed cutbacks by the Nixon Administration will greatly reduce the health benefits provided by previous administrations. During the Johnson years, Congress authorized an estimated 51 statutes of health legislation that were to be administered by various authorities. There is some evidence to indicate that steps were not taken to provide the coordinated and comprehensive efforts necessary to insure maximum benifits to the general citizenry. Medicare and Medicaid, though well conceived, did not turn out to be the panacea for the health ills of the poor, the aged, and black populations. In failing to provide for these elements through a comprehensive health delivery system, federal efforts tended to provide impetus to an increase in health cost. To be sure, blacks from urban and rural areas, and other minorities, such as Chicanos, poor whites, and Indians, have had to cope daily with the reality of inadequate health care.

HOSPITAL CARE

The "separate-but-equal" doctrine which permeated the whole of American life for many years insured the survival of parallel racial institutions. These institutional paradigms limited black participation in public and private hospitals administered by the white sector. The larger white hospitals which admitted blacks required that they demonstrate an unquestioned ability to pay in advance. The patients who were admitted were housed in separate wings of hospitals. In many rural areas of the South, this practice of de facto segregation in hospitals still exists. Much of this segregation, however, is due to the timidity of minority patients who continually conform to older established customs.

Hospitals which evolved during earlier periods still serve predominantly black populations. Homer G. Phillips in St. Louis; George Hubbard in Nashville; Riverside General Hospital, Mercy, Lockwood and St. Elizabeth hospitals in Houston; Provident Hospital in Baltimore; Flint-Goodrich in New Orleans; and Freedmen's Hospital in Washington, D. C. are a few of the black hospitals which have survived despite insufficient funding.

Black hospitals in Houston operate, for the most part, with insufficient funding for staff, equipment, and on-going biomedical research. Research on sickle cell anemia, a disease which affects

blacks more than other groups, has been largely carried on in white medical research units, according to a National Institute of Mental Health official, because few black hospitals have funds to engage in large-scale and continuing medical research projects.

To be sure, the black communities of Houston and in the nation (as well as the hospitals which serve them) are encountering health care problems similar to those of the nation's middle classes and the poor. In the case of minorities, the problems are more acute. This is clearly reflected in several vital areas:

Nonwhite babies in the nation die at a rate nearly double that of white Americans. In Houston, the rate of infant deaths is higher for the black population than for the white population in all data for the decade, 1961-1971. Each group experienced a decrease in infant deaths; however, as shown in Table 84, black infants died at a rate of 36.62 per 1,000 live births in 1961; the white infant death rate was 22.33 for the same period. By 1971, the black infant death rate had decreased to 26.90 per 1,000 live births, while the white infant mortality rate had decreased to 17.78 per 1,000 live births.

The chief cause of infant deaths is ill-defined diseases. The second cause of deaths is postnatal asphyxia. Table 85 gives an infant summary of deaths by race and sex during 1971 in Houston. More male whites die of infections at birth than blacks; more female black babies die of infections at birth than white female babies. On the whole more white babies die of congenital malformation circulatory system disease than black babies.

The maternal death rate for nonwhite American mothers is four times that of white American mothers. As a whole, American mothers die in childbirth at a rate higher than that of eleven (11) other countries.

Most deaths occur from heart disease than other illnesses. Tuberculosis took the life of less people in 1971 than any other cause in Houston, with cancer, strokes, and accidents following in that order.

Tables 88 and 89 give data on births by race and sex, illegitimacy by race and sex.

Included also in this section is information on hospitals in Houston and on major concerns by blacks about specific health experiments by established authorities which tend to support rumors on "planned genocide" and related items.

IMPROVEMENTS AND RECOMMENDATIONS

In a report to the Surgeon General of Public Health Service, the Advisory Committee on Urban Health Affairs acknowledged that "in today's world of tightly interlocking problems, virtually every agency's mission has relevancy to health." Public health leadership, the report said, "has a clear and continuing responsibility to mobilize effective action of health across the entire range of human activity." We accept this statement unquestioningly, but unfortunately neither federal, public, nor private leadership has been able to effectively coordinate health services to insure the adequate delivery of services to all groups, especially the middle class, the aged, poor and black populations. The needs of these groups are multi-faceted in character.

Interviews with physicians in Houston indicated the need for a decrease in medical costs. It was also suggested that more counseling and dietary instructions be given to minority residents. This suggestion is directed toward lower class groups of all races rather than middle class persons. Studies have shown that many middle and upper middle class blacks are decidedly more well-fed than whites with comparable incomes, thereby destroying the myth that "all blacks are undernourished."

Other black physicians tended to believe that improvements in related conditions such as better housing and environmental conditions would aid in correcting health conditions for many minorities. Better housing conditions and less crowdedness would contribute to a decrease in the incidence of diseases caused by such conditions. Improvements in transportation facilities and outpatient services in clinics and hospitals were also suggested.

Specific improvements in some areas are being made in Houston.

A few are listed here.

- 1. The Health Department is presently acquiring or has already acquired a mobile unit financed under a \$300,000 Federal Family Planning Grant.
- 2. The Health Department is trying to expand its immunization services through an increase in area clinics. For example, an immunization clinic has been opened in the Hufsmith area. New Clinics are being considered in the Acres Homes and Casa de Amigas areas. Ben Taub Hospital has acquired a clinic for children, with its own pharmacy, so that parents with ill children will not have to wait long hours to get medicine.

- 3. The Texas Board of Mental Health and Retardation has approved \$229,000 for assistance to community mental health centers.
- 4. The City of Houston has acquired a city-owned ambulance service and plans for an emergency room link.
- 5. There have been improvements in Care Programs, resulting in a decrease in infant and maternal death rates among the poor.
- 6. The Gulf State Dental Association plans to establish a Dental Service Corporation to help poor people obtain federal funds for comprehensive dental work.

SOME MEDICALLY-RELATED CONCERNS BY THE BLACK POPULATION

Brain Surgery to Control Behavior

According to an article included in <u>Ebony Magazine</u> (February, 1973) the National Institute of Mental Health (NIMH) agreed to award a \$500,000 grant to Dr. William Sweet, Chief of Neurosurgery at Massachusetts General Hospital, to determine if there is any connection between violent behavior and brain disease. More specifically, he was asked to develop a way to identify and control persons who commit "senseless" violence, as well as those "who are constantly in and out of jail." In conjunction with this study, the Justice Department's Law Enforcement Assistance Administration (LEAA), invested \$108,930 in further brain research by two of Dr. Sweet's colleagues, Dr. Frank Ervin, a psychiatrist, and Dr. Vernon Mark, Chief of Neurosurgery at Boston City Hospital. The Justice

Department ordered the grantees to "to determine the incidence of brain disorders in a state penitentiary of men; to establish their presence' in a civilian population; and to "improve, develop and test the usefulness" of electrodes and brain surgery "for the detection of such disorders in Boston City Hospital."

Noted black psychologists, including Dr. Alvin Pouissant, associate professor of psychiatry at Harvard University Medical School, have expressed deep concerns about the studies. Known case studies have indicated that the subjects or targets are often blacks. In describing the studies as racist, Pouissant adds rather bluntly, "It assumes that black people are genetically damaged—that they are so animal and so savage that whites have to carve their brains to make them into human beings."

In reference to these medical maneuvers, there is concern because a large proportion of the prison population is black, and prisoners seem to be fair game for the psychosurgeon's knife. Prison officials claim that these operations are performed only with voluntary consent, but critics of the program argue that there is no such thing as "freedom of consent" in a penal institution. To be sure, there is reason to be alarmed about brain surgery to control behavior.

Sickle Cell Anemia

Sickle Cell Anemia is a disease which touches one out of every ten black men and women in the United States. In his message to congress, President Nixon pronounced sickle cell anemia "a targeted disease for concentrated research" and added that his administration would propose a two-fold increase from a previous \$6 million to \$12 million. It is felt that all Americans and blacks should support the local chapters for sickle cell anemia.

Syphillis: The Tuskegee Study

An experiment which began forty (40) years ago, called the Tuskegee Study, culminated in 1972 when it was discovered that 400 black syphillitics used as subjects in the study were never treated for the disease. The project was a cooperative venture between the Alabama State Health Agencies and the U.S. Public Health Services.

The tragic revelation of the experiment which began in 1932 led to a full scale investigation which caused the Congressional Black Caucus to condemn the study as "a morally indefensible act." Facts about the case indicated that the researchers denied medical treatment to the 400 blacks. These individuals gave their consent without fully understanding the consequences. Pressure is being applied for relief to survivors and offsprings of the victims. HEW officials made it clear that the federal government has no legal means to deliver health care to those who survived the experiment.

All experiments involving human guinea pigs for experimentation should be carefully examined in order to prevent medical abuse against people in general, and blacks in particular. In the Tuskegee Syphillis Study, there is evidence to suggest that this was not the case. Doctors testified before a government-appointed committee that there is no evidence that participants in the controversial Federal Syphillis Study conducted by the U. S. Public Health Service, beginning in 1932, ever gave their informed consent to take part. One of the doctors indicated that he believed the participants had been subjected to undue coercion to cooperate. Four hundred and thirty (430) men, all blacks, were never given treatment for the disease because doctors wanted to study what damage untreated syphillis does to the human body. At least 28, and possibly as many as 107, of the men died as a direct result of untreated syphillis. The refusal of treatment was deliberate to the point of regulation and control by participating nurses in the study.

A University of Texas research team deprived 17 infants of a food substance essential for their development in an experiment conducted in 1956-57. The infants were deprived, for 13 weeks, of a fatty substance, linoleic acid, even though it was known that denial of the substance caused possible damage to the brain or spinal cord in animals. The study was conducted by the County Hospital in Galveston, and its results published in 1959. In this medical

experiment, twelve of the children were black and five were white. Information concerning the experiment was contained in an article in the <u>Boston Globe</u> and carried through UPI in the <u>Houston Chronicle</u>, March 24, 1973.

The results of the hearing on medical abuse, with particular reference to the Tuskegee experiment, led to recommendations of the special citizens' panel. In its drafted report, made public March 1, the panel added its voice to the congressional viewpoint and called for the federal government to set up a permanent human experimentation investigation board to curb future abuses of human subjects in medical researches.

The Need For More Black Dentists

There exists a dire need to increase the number of qualified black dentists in Houston and other parts of the country. Black dentists make up two and one half (2%) percent of the total number of dentists in this country. In Houston, there are 36 members of the Charles A. George Dental Association, a black organization in the city. Of this total, one member practices dentistry in Galveston and two are retired. Only thirty-two black dentists in Houston are active in the organization and provide services to predominately black clients. The bulk of the 316,000 blacks in the city patronize these dentists.

Blacks are highly visible and over-represented at the bettom of the professional ladders in both dental and medical fields. For instance, registered nurses comprise seven percent of the total number of nurses in the nation; practical nurses, 15 percent, but the number of black nurse's aides is more than 50 percent of the total. The shortage of blacks at the top of the profession was explained in part by Dr. James L. Curtis of Cornell Medical College in "The Economics of Health Care," published by <u>Black Enterprise</u> (June, 1972). "The shortage is due largely to the fact that for some time, medical schools in the country were admitting no more than token numbers of blacks," says Dr. Curtis.

Black Employment Participation in Dental Trades

A survey was conducted during 1970 for the purpose of determining the nature of the job market for black Americans in the dental trades industry. The study, focusing on the social and economic aspects of the industry, sought to determine attitudes of executives toward hiring and promoting employees in general and black employees in particular. This very timely study explored central issues relating to employment; the demands for blacks in dental trade associations and laboratories; and the efforts being made by these insititutions to incorporate occupational experiences of blacks into their companies.

Preliminary findings of the study indicate that black employment in the dental trades is very low, with the greater proportion of those employed working in non-supervisory positions. Some very encouraging trends were found to be hidden in the aggregate data obtained on employment policies and qualifications. Despite the less prominent indication of promotion by some companies, exclusively from within, the employment of blacks in upper level occupational categories appears to be somewhat promising. More complete findings of the survey will be included in A Profile of the Negro in American Dentistry. The volume was compiled by Dr. Foster Kidd of Dallas, Texas, in collaboration with several other dentists throughout the country, and it is scheduled for publication by the Howard University Press later this year. Included in the appendice is a directory of hospitals for Houston and Harris county 1973, indicating where volunteers are needed.

CHAPTER 5

POLITICS AND THE MINORITY VOTER

Prior to the passage of the Voting Rights Act of 1965, any attempt at analyzing the extent of black voter participation in any area of American politics involved a journey into an unhappy phase of American constitutional and political morality. Recent developments in the South and the nation, however, suggest that there is increasing political activity among blacks in local, state, and national elections. This emerging political strength relates to the removal of certain restrictions on voter registration in the South. History affords us ample evidence concerning the exclusion of blacks from the political scene. Despite previous denials of the right to vote, there is a growing awareness on the part of blacks of the necessity to adjust to certain rules and norms of the political world. This trend toward political socialization includes, but is not confined to, issues vital to full citizenship. There is evidence that black voters are beginning to concentrate on stronger currents in the political stream -issues and answers which merit concern of the general public. This shift from the single issue of civil rights to an all-inclusive concern for broader issues marks a turning point in the political aspirations of black Americans.

The advent of single member district legislation made it possible for some blacks to be elected to city, state, and national offices. The

districts from which many blacks seek election are predominantly black because of segregation in housing. From such areas in Houston, and other cities, it is relatively easy for black and other minority group members to get elected to public office. However, in districts which cut across racial lines, there is some difficulty experienced by the minority group candidates. In cases where the office-seeker makes an appeal for broad support, it is possible for a candidate to win office only if he can convince voters that his concern on issues is not limited to racial matters. Even where this normally occurs, there is great difficulty in getting elected, particularly if he is opposed by white candidates.

Four black candidates from Harris County won seats to the state legislature with only token general election opposition. The victories increased minority representation in the county's delegation by 50 percent. Two of the newly elected legislators were unopposed in the November election of 1972. Representative Senfronia Thompson of District 89 and Mickey Leland from District 88 were certain of their victories by virtue of no opposition in the general election.

Most of the predominantly black districts correspond, in many ways, to census tract boundaries and cut across predominantly black communities. Districts 85,86, and 87 are considered to be minority areas. Representative Craig A. Washington won election in District 86; Anthony Hall won for District 85; and Mexican-American Representative Ben T. Reyes won in District 87. Reyes, like Thompson and Leland, was unopposed in his District. Outside of the districts which served the minority communities, there is no representation by minority group members in pregominantly white

districts. It is safe to assume that only in cases where minority group members defeat others of their race can they be expected to get elected to office under the present system. For many years, whites represented districts (through the multi-member system) which had substantial black and brown populations. However, when the situation is reversed, white populations will not support black candidates in their districts nor will they vote for them if one uses previous election statistics as a basis for this fact.

Harris County's ethnic vote is concentrated in a strip of five legislative districts, extending from the South Loop to the extreme northeast corner of Houston. Only in the case of Reyes is there a mixed racial district and this one has a 47 percent Mexican-American population and about 30 percent black with the balance between whites and others. Leland's district consists of an almost solidly black area lying northeast of downtown Houston, with the Kashmere Gardens subdivision at its center. Washington's District 86 lies east of Main Street to Braes Bayou and the area includes Texas Southern University and the University of Houston. In the November 1972 General Election, Washington was opposed by a 21 year-old University of Houston student. The district represented by Mrs. Senfronia Thompson lies in northeast Houston. The area was 51 percent black in 1970, but there is evidence that this area is in transition and the black majority will continue to increase by virtue of white succession.

Black representation in the legislature marks a new stream in Texas politics. The strong ties linking many minority group members together

by the psychological bond of race have promoted not only increased political representation, but a greater degree of solidarity among this segment of the electorate. This togetherness embraces a tenuous unity supported by a consciousness of kind and common needs, which cannot be measured in terms of degrees of leadership. Instead, one must view black representation in state government as one step toward obtaining a greater voice in the affairs which directly affect minority communities.

There is also some evidence that minority group members are becoming more active in politics because other measures -- demonstrations, boycotts, etc. -- have failed. There is a widening of interest in public issues also. In Houston, the recent Bond Election received a wide spectrum of support from various levels of the society. In an article carried in the Houston Post (February 25, 1973), it was reported that "in almost every ethnic and economic group, voters who turned out...strongly supported the city's \$145 million bond proposal..." Voters in predominantly black precincts were more skeptical about the bond proposals than those from other areas. Black voters were concerned with particular item allocations. This is not uncommon when one considers that black areas in the city have been the most neglected. The middle class black voter is cognizant of the need to have a thorough understanding of the use to which these funds will be put. As a result, several individual proposals in the bond election won more support from the black community than others. Precincts with predominantly Mexican-American voters and the low income white precincts gave less support than the general voting public. Even where support was average, 60 to 65 percent of those voting approved the

proposals. Middle income and upper income whites demonstrated greater support through voting than the less affluent whites. Support at these levels approximated about 80 percent approval.

In the past bond election, minority group voters showed a concern for issues which affected the general population. This is essential if one considers the past political activity by these groups. In the past, black participation in bond elections was relatively low. We predict that there will be even greater political activity in Houston among minority segments, particularly in elections on education, mayoral candidates, and county offices. Black politics throughout the country is acquiring a great deal of political sophistication. Campaign organizations, strategies, techniques, and voter registration are being developed by civic and political groups for use by potential black office holders.

On the national scene, former state senator Barbara Jordan of Houston won election to the United States House of Representatives. She became the first black woman from the South to achieve such a distinction.

Miss Jordan was among several black newcomers to serve at the national level. Andrew Young of Atlanta, Georgia, became the first black from the deep South to be elected to the House since 1901. Congresswoman Barbara Jordan joined Miss Yvonne Brathwaite in Washington as a member of Congress. In other state and local elections blacks were also winning election to key offices. In Arkansas, Illinois (Bloomington), Minnesota, Oregon, and Alabama blacks made some political gains during the November 1972 general election. Data on blacks in local political office and statistics on voter turnout and voter registration for minority groups in Houston have been included in this report. (See Appendices)

In the Presidential Election of 1972, black voters gave more support to President Richard Nixon than in previous years. The turnout increased from about 6 percent to about 15 percent. In black ghettos, however, Senator George McGovern won 86 percent to 14 percent for Nixon.

Changing conditions over the last several years have somewhat modified civil rights emphases, and persistent integrative efforts are being viewed by the average, less-militant black, in Houston and the nation, as part of a political world which he must discover and utilize. Complete political socialization is the goal of the middle and upper middle class black, young adults and youthful individuals. The gradual learning of norms, attitudes, and behavior of the on-going political system will become the functional equivalent of non-violent protest marches. Two conditions may be responsible for the functioning, induction, and assimilation of blacks into the political culture of the nation. One condition relates to the newly-acquired suffrage brought on by the removal of restrictions on voter registration. The other relates to prior isolation from the majority group. Segregation was long the basis for the belongingness, status, and role attribution of minority group members; it was also the foundation for attendant matters of loyalty, privîlege, and responsibility. In such caste status, the scheme of political readiness developed within the framework of a common denominator of needs and expectations in the various phases of his

living. Despite progress in civil rights, discrimination still exists in areas of education and employment. With the gradual disappearance of non-violent protests, minority groups -- out of necessity and the search for a new strategy -- had to embrace a new means to achieve the ends of equality. This is more clearly illustrated in mayoral races, such as the ones in Prichard, Alabama, and Oakland, California. In each of these cities, young blacks sought political office. In Oakland, Black Panther Bobby Seale forced his opponent into a runoff in April, 1973.

The second condition stems from the psychological damage which is the result of previous political containment. Black voters will continue to pursue issues pertaining to equality.

Candidates seeking black support will have to write in their platforms issues which touch on the general welfare of the group as a whole. To be sure, there are times when the black voter wants to escape the tyranny of his own type by using the concept "human rights", instead of "civil rights." His mental organizational conformity is characteristic of a people struggling to make an "already possessed" patriotic dream a reality. If any candidate prepares a suitable platform, which includes benefits for all people but most certainly minority groups, he can capture the black vote irrespective of party affiliation. The traditional democratic voter strength in Texas and the nation is crumbling to some degree.

This gradual shift is concomitant with the emergence of complete

political socialization among blacks. Another converging trend toward greater political awareness has been the election of blacks to local, state and national offices. The influence of these political lines of development will give greater impetus to civic and community participation among minority group voters in the years ahead.

Statistics on the civic and community participation of minority groups and other representatives are included for the years, 1971-1973, in Tables 90 through 94.

CHAPTER 6

CRIMINAL JUSTICE AND THE MINORITY COMMUNITY

During the last several decades two theoretical trends have influenced the study of crime and the administration of justice. One such trend is directly related to the theory of bureaucratic organizations, particularly the structural pressures which influence the behavior of individuals charged with the responsibility of administering justice and enforcing legislation. The theory of bureaucracy, developed by Max Weber and extended by such scholars as Blau and Selznick, provides a difficult orientation to an understanding of the workings of the Criminal Justice System. Sociological interests deviate, in some way, from views held by legal scholars. To the former, the organismic approach to an understanding of police behavior and its influence on the criminal Justice system occupies prominence in understanding the phenomenon of crime. The importance of police behavior from a social, as well as a legal point of view, is underscored in an article found in Crisis in American Institutions. ²

Another trend which has occupied considerable attention during the last half of the twentieth century was the developing theory of social deviance, as reflected in the writings of Becker, Goffman, and others. ³ The importance of defining the deviant act is considered central in determining whether or not an individual is regarded as a

criminal or placed in a peculiar stigmatized category. McNamara and Niederhoffer, in studying the police as a group, found that "police represent the attitudes of the social groups from which they are drawn." It is assumed from this assertion that the racial factor is also reflected in such attitudes.

A comprehensive study of the racial factor in the length of prison sentences was completed by Bullock in 1961. Having studied black criminality for many years, the author sought to examine the differential treatment by juries in the assessment of punishment through his study of 3,644 inmates in a Texas state prison. The conclusions drawn in this work support the theory of social deviance and the influence of attitudes and behavior on the definition of the deviant act by police. Bullock concludes his excellent study with this theoretical suggestion: "Those who enforce the law conform to the norms of their local society concerning racial prejudice, thus denying equality before the That criminal statistics reflect social customs, values, and prejudices appears to be further validated." ⁴ A broader and more subtle suggestion implied through his findings is that any criminality attributed to the black community -- statistical or analytical -- should be viewed within the framework of the aforementioned theoretical perspectives.

RACE AND CRIME

The relative criminality of blacks, as opposed to whites in terms of raw statistical representation, has not been adequately explained. Local and national statistics on crime do not give an accurate picture of the proportionate number of crimes committed by the two groups, or the number of arrests actually made. For instance, figures shown in the <u>Uniform Crime Reports</u>, published by the FBI, are -- for the most part -- incomplete. "The lack of a uniform methodology in record keeping is responsible for a segment of the problem" relating to disproportionate representation of blacks in statistics on crime. ⁵

In a discussion of race and crime, <u>The Negro Yearbook</u> (1966) points to particular aspects of the problem.

As long as such differences in the character and efficiency of the police; differences in community attitudes; differences in the caliber of prosecution, in the judicial interpretation of the courts, and differences in the bias of judges obtained; the value of comparative statistics on this subject will be debatable.

It should be noted that the actual operation of the system of criminal justice is broader than administrative processes which enhance the bureaucratic organization. Instead, crime must be viewed not only as a type of social protest, but also as a symbol of a breakdown in traditional values -- social as well as technological. The extremes from which criminals

are drawn: black and white; rich and poor; white collar and blue collar, are indicative of unrest and dissatisfaction in society which is not necessarily racial or economic. Criminal activity, irrespective of race or class, may be more symptomatic of differential value systems and institutional inadequacies. Additionally, any interpretation of the true incidence of crime must take into account the nature of the offense, the conviction process, and the accurate assessment of the basis of legal representation.

It is the purpose of this chapter to present statistics on crime for Houston, with some data for the nation as a whole. We do this with full knowledge that any conclusions drawn from such data are dependent upon the adequacy of the labeling process and other operational characteristics inherent in the bureaucratic structures of police departments and law enforcement agencies. The basis of the operational character of the criminal justice system includes the determination of criminal conduct, discretion within the system, plea bargaining, convictions, acquittals, charge reductions, and/or accommodations.

It should be noted that criminal statistics for Houston were difficult to obtain. The Annual Reports of the Police Department in Houston contain limited data by race. Some comparative data were taken from the <u>Uniform Crime Reports</u> published by the Federal Bureau of Investigation.

STATISTICS ON CRIME

The data on crime include a classification of offenses by age, race, and sex for persons under 18 years of age and for those over 18 years of age. Table 95 shows a distribution of persons arrested in Houston in 1970 under the age of 18 years. As the data indicate, white persons falling within this age group predominated such categories as auto theft (69%); arson (74%); vandalism and fraud (70% and 71%, respectively); driving under the influence of alcohol (75%). Drug addiction, marijuana, and other dangerous non-narcotics were offenses which ranged from 85 percent to 90 percent.

Blacks in Houston under 18 years of age, are arrested for the more serious offenses, and from the percentage and frequency distribution, as shown in Tables 95 through 98, they are disproportionately represented in the more serious criminal offenses. Blacks make up about 25 percent of the population of Houston, but they were arrested more often than whites for offenses such as murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, possession of weapons, and gambling. In terms of all offenses, for those under 18 years of age, whites were arrested in 62 percent of the cases; blacks were arrested in 38 percent of the cases. Blacks, under 18, were arrested for 85 percent of all offenses involving forcible rape; 86 percent of all offenses involving gambling; 74 percent

of all cases involving robbery; and 53 percent of all arrests involving murder and nonnegligent manslaughter involved blacks in Houston, according to figures contained in the Annual Report of the Police Department for 1970.

For individuals 18 years of age and over, arrest statistics are similar to those for persons younger in age. Whites were arrested more for marijuana and other types of drug abuse than were blacks. The more serious crimes, however, show a disproportionate representation for black adults. Robbery, aggravated assault, carrying and possessing weapons, burglary, and gambling are the leading categories where black arrests surpass those for whites. The crimes of violence, prostitution and commercialized vice are those for which black adults are more often arrested. Blacks 18 years of age and over were arrested more often for counterfeiting and forgery than whites or blacks under 18 years of age.

For all arrests in the city for 1970, males were arrested more often than females for all offenses. The total number of arrests for persons 18 years of age and over was 57,340 for 1970; for those 18 years of age and under, the number was 14,373.

Criminal statistics on arrests by race for Houston compare favorably with those for the United States as a whole. Data published by the Federal Bureau of Investigation for 1971 included figures presented by 4,088 agencies, representing a breakdown of arrests for city and suburban areas. Data are

supplied for several racial and ethnic categories, including thirty-two major crime classifications. Percentages for "other races" include all races other than blacks and whites.

NATIONAL STATISTICS ON CRIME

For the nation as a whole, blacks have the greater percentage of arrests in the Criminal Homicide category, with a rate of 67.6 percent of the arrests for murder as compared with 30 percent for whites and less than three percent for other races. This percentage represents almost three times black proportionate population representation in cities throughout this country. Whites are more likely to be arrested for manslaughter than blacks. The percentage rates for whites and blacks are reversed when compared for such classification as murder versus manslaughter. In these classifications, the percentage of arrests of blacks for murder is 67.7 percent; whites are arrested for manslaughter in about 71.1 percent of the cases while blacks are arrested in 26.2 percent of the cases.

In the crime classifications for "Forcible Rape", "Robbery," and "Aggravated Assault," members of the black population dominate each of these categories. In fact, blacks are arrested in greater percentages than whites and in twice as great numbers than their percentage distribution in the population. Tables 99, 100, and 101 represent total city arrests, for the United States in 1971, for persons under 18 years of age, and 18 years of age and over, by race and sex.

As shown in the tables cited above, when statistics for arrests are viewed, using age as a variable, the percentage distribution for those arrested under 18 years of age is higher than for those arrested for the age group, 18 years of age and over. In the "Under 18 Years" category, blacks lead the number of arrests for murder, with a percentage representation of 75.1 percent. The figure is about 9 percent higher than those arrested for the same offense, 18 years of age and over. Whites are arrested more often for "Property Crime," the illegal use and sale of drugs, and white collar crimes such as forgery, embezzlement, and counterfeiting. The aforementioned data are representative of crimes which occur in cities and for which individuals are arrested.

City Arrests vs. Suburban Arrests

In the suburbs, whites make up the major arrests for all categories of crime. The percentage distribution of arrests in "suburbia" includes 83.5 percent for whites and about 15 percent for blacks. In the cities, blacks are twice as likely to be arrested for murder as whites. This figure decreases when suburban arrests are considered. When whites are compared with whites, for city in relation to the suburbs, the rate of suburban arrests is greatest for areas involving property crimes. Crimes of violence, including murder and manslaughter, are higher when viewed in terms of suburban arrests. Most of these offenses and arrests involve white persons.

Tables 102, 103, and 104 contain statistics on arrests for offenses committed in suburban areas for the United States in 1971. Tables 105, 106, and 107 are summaries of total arrests in the United States by race and offense for the same period.

DIMENSIONS OF THE CRISIS OF CRIME

In his 1968 State of the Union address, the late President Lyndon B. Johnson made a firm commitment to fight crime. The Congress of the United States at that time voiced its sentiment through sustained applause to his pledge. The response of Congress to late President Johnson's pledge was viewed as a response to the desires of its constituency. In the years that followed, President Nixon reaffirmed Johnson's commitment to eradicate crime in America, and during the campaign for his first term of office as President, his total strategy for his political game plan involved the slogan, "law and order." The Nixonian political strategy symbolized a national preoccupation with this issue. Unfortunately, the issue of law and order was eventually viewed as a culturally acceptable slogan to camouflage racial and class prejudices. To many blacks, the Nixon-oriented slogan of law and order was a means of making white Americans comfortable in their prejudices. Despite President Nixon's alleged commitment to the alleviation of crime in America, the rising level of crime and violence continues.

In Houston, as has happened in other cities, the crime problem has become serious enought to elicit common fears among blacks and

whites, rich and poor, and young and old alike. In an earlier report prepared for a former mayor of Houston (1961), a leading expert in criminology made this statement in reference to Houston:

As we view our large and rapidly growing metropolis, there is forced upon us the vivid image of a corporate and functional organization of diverse personalities who are obligated to a common system of ordinances, statutory and constitutional laws. Where respect for these standards breaks down, the entire city suffers. It is this quality of human interdependency that makes crime, like disease, a dangerous enemy of man and a malignant tumor which causes rapid deterioration of the social body.

Having viewed statistics on crime for Houston which indicated a disproportionate percentage of blacks involved, Bullock discusses some of the primary causes of this imbalance.

One of the primary causes of Houston's high total crime and murder rates is areal in nature. It grows out of the tendency for rapid urban expansion to create areal transition out of which crime can thrive and flourish.

To the author, black communities had experienced the kind of uncontrolled urban expansion and deterioration to which he referred. 6

Crime and violence should not be viewed as a single sociological phenomenon. They embrace many dimensions. For the black community, the more basic causes are seldom raised in public discussions. The basic causes of crime are multifaceted

in scope and dimension. For many years we have seen that Houston's rapid areal and functional expansion, uncontrolled by proper planning, has facilitated the development of deteriorating areas in the inner city, particularly in black neighborhoods. These deteriorating areas supply the proper habitat in which criminal behavior can germinate, grow, and flourish. Uncontrolled planning and area instability tend to increase social instability of the areas involved, rendering them highly fluid and tremendously uncertain. Instability is further facilitated by changes in land use which many traditionally stable black communities are now experiencing.

Residential segregation, an ecological phenomenon which has not disappeared from the scene in Houston, contributes to the multifaceted causes of crime.

Just as unguarded urban expansion has a direct effect in disorganizing the areas, so does it have indirect effect in disorganizing the personalities of the people exposed to it. It is possible for areal instability to set in motion a sociological process which ultimately effects the basic personalities of individuals, rendering them more inclinded to commit crimes of violence or to condone them.

Bullock described this phenomenon this way:

It aggregates masses of underprivileged people; feeds into their collective psychology certain frustrating forces that lower their collective psychology and certain frustrating forces that lower their threshold for personal irritations; and reinforces the general community's will to treat them differentially.

In essence, residential segregation creates an inclination toward violence and a will to tolerate it.

Other contributory factors which have not been seriously understood as related to black criminality have been the unfavorable attitudes toward law enforcement. Discrimination is still a very serious problem in law enforcement agencies, the courts, and penal institutions. The general public mood exemplified in the acceptable phrase of "law and order" has not surfaced to the point of raising voices against discriminatory practices in the administration of justice. Evidence of certain inequities exists between black and white, and particularly, rich and poor. Attitudinal patterns have become more deeply entrenched by virtue of certain experiences encountered before the "bar of justice." The dual standard concept of law enforcement in our society is seen in the disproportionate number of arrests among blacks, in convictions, in the length of prison sentences, in plea bargaining, and in general relationships involving policemen and black citizens.

PLEA BARGAINING

It has been estimated that 90 percent of the defendants in the criminal justice system are convicted on pleas of guilty rather than by jury trials. Figures for Houston in this regard were not available from the reports we received from the District Attorney's Office. However, we were able to examine figures for Dallas. In Dallas, 90 percent of the defendants chose to plead guilty rather than risk jury trial (Dallas Times Herald, May 31, 1972). The

defendant who pleads guilty stands as completely convicted by his own admission as though he has been convicted by a jury. Last year in Dallas, 6,595 offenders were convicted on guilty pleas while 691 were convicted during jury trials. For pleading guilty, the defendant expects more lenient punishment than he might have received by having jury trials. This is not always the case. In addition, there is no way to determine whether the guilty plea is a result of bargaining or actual guilt. Plea bargaining usually occurs if the defendant does not have a lawyer. The so-called "cop-out" man attempts to negotiate a guilty plea with defendants who are too poor or ill-informed to obtain legal counsel. A substantial proportion of those pleading guilty are black. One black defendant, in recalling his encounters with the "cop-out" man, related this incident: "I pleaded guilty because I thought the jury would convict me and give me ten years instead of the six I received. The cop-out man sensed that I knew how tough juries are, especially on ex-cons." In this case, as with many others, punishment was determined during plea bargaining, and pressure tactics are frequently used in such cases. Plea bargaining is more prevalent among black defendants than whites; it takes place with poor people more than rich people. This leads to the question: Can there be equality under law when obvious discrepancies exist in income and class in our society?

Some defense attorneys agree that guilty pleas are a necessary aspect of the criminal justice process, and most strongly

object to the cop-out man and plea bargaining with defendants not represented by legal counsel. Criminal District Judges John Mead and James B. Zimmerman of Dallas indicated that they believe the use of the cop-out man is on the way out. Mead believes that there is a movement to begin the plea process before the defendant is indicted (Dallas Times Herald, May 31, 1972). In an interview with District Attorney Henry Wade of Dallas County, it was learned that, in his opinion, "the criminal justice system would break down completely without plea bargaining and guilty pleas." In conjunction with this, Jim Bishop states in his article, "Trial and Error 'Cop-Out' Pleas Cast Shadow on Courts," (Dallas Times Herald, May 31, 1972), that "the American Bar Association has taken the position that plea bargaining is an appropriate form of criminal justice."

There are many additional factors which must be considered when examining the whole question of plea bargaining and its relationship to equity in the judicial process. If an individual is quilty of a crime, plea bargaining is an acceptable way to negotiate punishment; but for those who are not guilty but insecure and afraid, it means denial of equality and justice under the law. Black and poor people comprise the bulk of those making up the criminal population of our various penal institutions. They are more often in jail while awaiting trial because of insufficient funds for bond services or the lack of legal counsel. This stay in jail usually causes loss of jobs, loss of family ties, loss of dignity and self-respect, all of which are cumulative indicators of further instability in the lives of those affected.

ATTITUDINAL FACTORS AND LAW ENFORCEMENT

Another factor to be considered in analyzing crime in today's society is the attitudes of many citizens toward law enforcement. Indifferent and unfavorable attitudes toward police departments and other law enforcement agencies can lower inhibitions about crime. A particular attitudinal pattern exists in black and other minority communities. It is the sense of self-purification which is used as an excuse for the minority contribution to crime rates. This attitude is more prevalent among lower and lower middle class blacks than middle and upper middle class blacks; it is true for lower class whites as well. This strong inclination toward self-purification results from present and past injustices which they attribute to the dual system of law enforcement; past and current practices of discrimination and segregation. Many individuals employ their segregated status as an explanation for every illegal act committed or any problems which they experience considered counter to acceptable behavior in society.

There is one observation which is never emphasized in reporting black criminality. It is the fact that most law-abiding blacks, of all class levels, are also concerned about increasing crimes of violence in their communities. Most criminal activity among minorities, with few exceptions, represents intra-racial rather than interracial offenses. In the past, law enforcement agencies have been inclined to overlook crimes committed against individuals and property by members of the same race. There is rather convincing evidence that these same officials use a dual standard of law enforcement -- one for blacks; another for whites.

An important attitudinal pattern, involving minority groups, is one which alienates them in the field of law enforcement through the negative images they have developed concerning policemen.

Negative images result from direct contacts with members of police departments. Charges of brutality and foul police practices serve to reinforce negative attitudes toward policemen in Houston. Low income blacks view law enforcement within the framework of their own experiences with members of the police force. In low income communities, policemen are visualized as "gestapo agents," "members of the Ku Klux Klan," "pigs," and as part of the establishment. This kind of image is shaped as a result of altercations which occur with the police. Many altercations take place when persons are arrested on "suspicion" or when they are accused of being drunk. In 1971, forty-four (44%) percent of all persons arrested (over 18 years of age) in Houston for suspicion were black; 35 percent of all persons arrested for vagrancy were black; 33 percent of those arrested for disorderly conduct were black; and 20 percent of those 18 years of age and over arrested for drunkness were black. These types of criminal offenses are those which entail some degree of interpersonal contact or interaction between citizen and law enforcement officials. These interactional contacts are those which breed negative images of policemen by virtue of altercations resulting from such contacts. The workings of the criminal justice system are dependent upon certain discretionary measures and judgments used by policemen who make arrests and de-

fine the criminal act. In addition, judgments by policemen are often subjective, reflecting social customs, values, and pressures of the larger society. Positive image building for policemen is directly related to the continuous application of professional judgment and humanistic concern by those charged with apprehending the criminal as well as those involved in prosecuting and passing judgments as to guilt or innocence. The initial point of contact with the accused often shapes the image of law enforcement held by average citizens. Negative images affect effective law enforcement and recruitment.

Police Recruitment and the Black Community

A recent report in the <u>Houston Chronicle</u> (April 8, 1973) indicated that "the percentage of black officers in the Houston Police Department is less today than it was 17 years ago. In 1956, there were 32 blacks on a force of 758, or four percent of the total." Since 1956, civil rights legislation geared toward increasing employment opportunities for blacks and other minorities has been passed, but the percentage has dropped to less than four percent (3.4%), with 73 blacks among the 2,139 member force now in the employment of the Police Department. Even worse is the fact that only two blacks are included in the present 31-cadet training class.

The failure of recruitment efforts or the lack of interest in police training by blacks and other minorities has been attributed to many factors. Inspector H. D. Caldwell, as quoted by the Houston

Chronicle, admitted that efforts at recruitment in Houston have been unsuccessful. Caldwell listed "peer group pressure" by the black community as a possible cause. He was also quoted as saying, "the general consensus here is that the black community simply does not define policing as an acceptable career choice for its young men." Some black leaders interviewed on this same subject tended to disagree. Discriminatory promotional practices and the racist image of the Police Department were listed by some black leaders as blockages to recruitment. Citing low percentages in upper echelon jobs as a basis for these charges, they revealed that of the 239 detectives in the Police Department, only 5 are black. There is no black lieutenant, captain or inspector in the Houston Police Department as of this writing.

It is not surprising that attacks upon police, both physical and verbal, have contributed to the negative image held by the public toward careers in law enforcement. This kind of negativism has affected the policeman's image as a public "savior" and protector and has impaired his general efficiency as an effective police officer. The special and often difficult problems faced by urban police have inhibited rather than enhanced efforts at recruitment.

In connection with the recruitment program, T. C. Sinclair refers to the delicate and sensitive nature of police-community relations and underscores the problem very well with this quote:

Police in the United States are for the most part white, upwardly mobile lower middle class, conservative in ideology and resistant to change. In most areas in the country, even where segregation has been legally eliminated for long periods, they are likely to grow up without any significant contact with minority and lower socio-economic class life styles -- and certainly with no experience of the realities of ghetto life. They tend to share the attitudes, biases, prejudices of the larger community, among which is likely to be a fear or distrust of Negroes and other minority groups.

It is unfortunate that this type of situation exists, particularly when it is known that the bulk of those incarcerated in jails and penal institutions throughout this country are black or members of other minority groups. Many of these same individuals are products of lower class homes and ghetto environments. The lack of understanding by those charged with the responsibility of enforcing the law can and does impede freedom and justice.

It should be noted that Houston's difficulty in recruiting blacks for police work is not unique. Other cities are experiencing similar difficulties in their recruitment efforts. Dallas and San Antonio report that 3.2 percent of their policemen are black; Fort Worth has three percent; but Galveston has a 14 percent representation of blacks on its police force. In New York, black and Hispanic-American officers total 10 percent; in Los Angeles, blacks make up 5 percent of the force. Atlanta, Georgia is an exception by virtue of action taken to double the number of black policemen on its force. In Atlanta, blacks represent about 22 percent of the force, with blacks comprising about 51 percent of the population for that city as of 1970.

The number of blacks among Texas Highway Patrolmen is also very small. In 1970-71, it was reported that there were 1,347 Texas Highway Patrolmen on duty in the State, with 39 Mexican-Americans and two black patrolmen serving with the Department of Public Safety. A Texas Legislative Council survey (released in 1973) showed 94.7 percent of the Department of Public Safety's workers are white, 3.8 percent of the workers are Chicano, and 1.5 percent are black. Ten of the 2,233 uniformed Department of Public Safety law enforcement personnel are black and 72 are Mexican-American. Department of Public Safety director Wilson E. Spier insists that the department is doing everything it can to encourage more minority group members to apply for jobs with the agency.

FEDERAL CRIMINAL JUSTICE SUPPORT

with few exceptions, the criminal justice program formulated and administered by the Law Enforcement Assistance Administration (LEAA) has done little in the way of reducing crime rates in the black community. This opinion corresponds favorably with the findings of a study made for the National Urban Coalition. Four years after Congress authorized funds for LEAA, little has been done to improve the nation's ability to measure or understand the problem of crime. The study made for the Urban Coalition emphasized fundamental points which are not generally known by the public. A major

share of the funds for the administration of criminal justice were used for purchases of helicopters, salaries, radio communications systems, and other "hardware." The study also charges that:

. . . because LEAA has failed to take adequate precautionary steps, its grants are reinforcing the existing discriminatory patterns of the criminal justice system, rather than seeking to eliminate them.

The study further advises:

. . . LEAA has poured funds into perpetuating the very system it was designed to correct. The new industry emphasizes the combat role of the police. It has alarming potential . . . for the creation of a domestic military apparatus far removed from the traditional, local service-oriented police department.

In many cities and communities throughout Texas and the nation, minority group citizens are complaining that "criminal justice funds are being used to prepare the police for more sophisticated approaches to apprehending members of minority groups;" others charge that the equipment being purchased represents a potential threat to their privacy and security. In line with these perceived ideas, the Urban Coalition study cites repeated purchases of hardware without any prior in-depth analysis of "actual needs, and with no weighing of countervailing individual rights or community values about the proper function of police in a free society."

Other more serious charges brought out in the year-long study were such complaints as accusing the agency (LEAA) of stimulating the development of non-lethal equipment such as "esoteric things as

special drugs which, upon injection, immobilize the victims; the "instant cocoon" that releases a plastic spray, creating a tough, plastic membrane; the wire gun that shoots coiled, barbed wire more than 80 feet; sticky substances like "instant banana peel," "instant mud," "instant jungle," -- the latter being a quick-set enveloping gelatin, and other such products.

The non-lethal weapons are purported to be tested by the Army's land warfare laboratories for evaluation. In conjunction with this testing and evaluation, the Law Enforcement Assistance Administration made a grant to the Army of a reported \$250,000. The emphasis on "hardware" permeates the whole of the criminal justice program which was originally conceived as a program set up to improve the nation's ability to measure and understand the causes of crime; to enhance the delivery of justice through the judicial process. While many persons tended to disagree with some of the findings of the Urban Coalition study, there is evidence that some of the charges have measures of validity.

Texas Criminal Justice Council

Pursuant to Sections 203(a) and 203(b) of the Omnibus Crime Control and Safe Streets Act of 1968 (as amended), the Governor of the State of Texas established by Executive Order of October, 1968, the Criminal Justice Council. This Council was given the responsibility for developing a statewide plan for the improvement of law enforcement throughout the State. Another of its functions was to define, develop, and correlate programs and

projects for the State and the units of general local governments, and to combine efforts for improving law enforcement in the State and to establish priorities for improvements.

The basic strategy for upgrading law enforcement personnel involved developing programs which would attract better qualified personnel into police service and developing and implementing programs which would increase the competence of persons already employed by the agencies. A large proportion of the training recommended by the Criminal Justice Council involves professional police education. As of January 1, 1971, eight institutions of higher learning in the state were authorized by the Coordinating Board to grant bachelor degrees in law enforcement. None of these institutions were predominantly black, which poses a question as to whether sincere efforts are being made to recruit and attract blacks and other minorities into law enforcement careers. While some blacks may enroll in such programs at predominantly white institutions such as Sam Houston State University, it is believed that they would be attracted in greater numbers if such courses were offered at some of the predominantly black institutions, even if on a cooperative basis. Texas Southern University, a logical place to provide such course offerings because of its urban location and the rising crime rates among blacks in Houston, does not have such a program. Bishop College of Dallas offers some courses, but these are on a limited basis and they are primarily for the training of present employees of the Dallas Police Department. In checking

statistics on enrollment, none were available for Bishop College. However, it was revealed through inquiries that the enrollment is fewer than 30 persons.

It appears that a logical move in police training and upgrading would be to provide for greater understanding about minority individuals and attitudes. From the data on enrollment, it is quite evident that police officers have few contacts with minority persons even on campuses where they are trained. Experimental and innovative teaching projects, void of substantial minority group contacts and enrollment, are ineffective from their inception by virtue of their failures to come to grips with basic problems of understanding the subjects with which they have to deal. Unfortunately, predominantly black schools and black consultants have been overlooked or utilized minimally in the total plans of criminal justice programs and in the allocation of funds by the Law Enforcement Assistance Administration. An examination of programs, handled through Council of Governments in Texas, will reveal that Texas is no exception to this practice. Of all Texas schools participating in Law Enforcement Education Program (LEEP) few, if any, are predominantly black or have predominantly black enrollments in any of the majors or curriculum courses offered. The following Table 108 shows LEEP participating colleges and universities as of July 1, 1971. Data since that time reveal little improvement in the situation.

Source: <u>Criminal Justice Plan For Texas</u>, 1972 and 1973 in, Texas, Criminal Justice Council.

Funds spent for criminal justice programs in Texas reflect efforts toward "hardware" as well as humanistic and preventive measures in law enforcement. Various cities, including Dallas and Houston, have spent considerable sums of money on professionalizing its police, on riot control equipment, computerized services, information data depository system, crime laboratory services, and funds to improve the neural network of police departments -- a means by which they get information, make decisions, and react to criminal activity. This is the command, control, and communications system. Programs to improve the quality of police performance, particularly in the minority communities, and plans to explore more effective means of preventing crimes are generally lacking in black communities throughout the State. The programs funded deviate little from the traditional techniques utilized among juveniles, for instance. For the most part, blacks have not been totally involved in planning for the reduction of crime in their communities. These statements represent a variety of opinions secured in unstructured interviews with leading black citizens in Houston and parts of Texas. Clyde Owens Jackson, past editor of the Houston Informer and superintendent of the South Park Post Office, had this to say concerning training of policemen:

Examinations by which Houston policemen are promoted should be revised to show 'leadership ability' rather than knowledge of police department matters and procedures... Just because a man can read a book and give back what it contains doesn't mean he is qualified to be a supervisor.

He suggested that the Mayor of Houston appoint a multi-racial committee to draw up a new Civil Service law for Houston.

Crime prevention appears to be the point at which programs to improve justice and the enforcement of order in the society must begin. In the past, criminal justice -- in some cases -- has concerned itself with crime detection and apprehension rather than preventive measures. This is evident in the earlier works of academic scholars. Charges have been made against the LEAA which tend to suggest that funds from this agency have been directed toward developing more effective means of dealing most directly and most swiftly with the poor and minorities, especially blacks. This is what is termed in non-academic circles as the "riot and violence syndrome" which has saturated program planning and administration of some local police departments and state law enforcement agencies.

Proposed methods for strengthening the effect of law enforcement in our society -- indeed, in Houston and Texas -- must necessarily include reordering priorities to include a firm commitment to strengthen community-based treatment programs, including probation, work release programs, youth service bureaus, parole and aftercare. Law enforcement must also include enforcing laws swiftly, certainly, and equitably. Attention focused in these directions would enhance greater respect for law, order, and justice in the society. To be sure, respect for law in the society is basic to any successful crime prevention program.

What is needed, and needed promptly, is an agency independent of political and traditional institutional constraints generously funded with basic authority. This authority would entail the commitment to provide essential legal representation for the poor; to foster a sense of confidence not only in the court system but in the police department as well. Such an agency would seek the cooperation of black and white educators alike in a program with facilities for on-going research in prevention and legal reform. If concerns for prevention, adequate legal representation, swift but equitable punishment for the guilty were made priorities, an improved criminal justice system would virtually be assured.

BLACK LAWYERS

Not only are minority groups poorly represented in the area of law enforcement, they are also noticeably poorly represented in the court system. Black lawyers constitute less than one percent of the legal profession. Although there are more blacks than ever before in law schools throughout the country, they are still few in number. The main obstacle that now confronts the new black law school graduates is the state bar examinations that all graduates must pass in order to begin practicing law.

The bar examination, in theory, is used presumably to test legal proficiency. In an article in <u>Essence</u> magazine (April, 1973), Lynn Walker points out that the bar examination:

. . . may be drawn up by persons who have no particular expertise in the testing area; they may be

slanted toward certain types of subject matter to the virtual exclusion of others; they may be basically memory tests to see if the applicant can master nuances of local law.

Walker feels that most important, there is no indication that these examinations indicate proficiency in one's ability to be a lawyer.

For instance, in Alabama where the population is 25 percent black, there are only 28 practicing black attorneys out of a total of 3,410 attorneys. This means that only .008 percent of the black population in Alabama is represented in the legal profession.

In Pennsylvania, while 98 percent of all those taking the exam eventually pass, only 70 percent of the blacks pass. Between 1933 and 1943, no blacks were admitted to the bar. There are 10 million blacks in Pennsylvania, but only 130 black attorneys out of the total 12,300 largers.

In Delaware, no blacks have passed the bar since 1959 -- a period of fourteen years! Suits alleging racial discrimination in bar admission have been filed in Alabama, Virginia, South Carolina, Ohio, California, Georgia and Maryland. Some of these suits alleged that bar examiners have been able to identify applicants by race in grading tests, because applicants are required to send in their photograph, a description of their educational background and character. In addition, part of the

action in the impending lawsuits is to obtain rights to obtain the law examinations as evidence of discrimination. Most are destroyed after grading. This way there has been no evidence for blacks to use in challenging the decision.

The determinations of bar examiners are finally under scrutiny. It is unconceivable that there are so many black law students who have failed to pass the bar exam (in proportion to whites) without racial discrimination being a factor in these failures.

CHAPTER 7

ECONOMIC DEVELOPMENT: MINORITY BUSINESSES

A profile of the economic characteristics, attitudes, and problems of minority business entrepreneurs in Houston was compiled by the Small Business Development Center of Texas Southern University. Without comment, the entire data obtained from the survey are given in this section in slightly abbreviated form. Information on the major types of business activities, by types of retail and service firms, and, by the racial background of the owners is included.

As a matter of summary, of the six hundred eighty-six (686) firms surveyed, forty-seven, or 6.9 percent, of the firms had gone out of business, with less than three percent relocating outside of the Model Neighborhood Area. Approximately 7 percent of the business enterprises had failed between the time of their identification in late March and the time of survey contact in July, 1972. It should be noted that this should not be construed as meaning that firms in Model Neighborhood Areas are failing since no efforts were made to determine the number of new firms entering the area. However, figures do indicate that there is a large turnover in businesses in Model Neighborhood Areas as well as in other areas of the

Appreciation is expressed to Dr. L. B. Bickman, Dr. L. Sardana and members of the Small Business Development Center for permission to use a portion of the materials included in the survey. The complete report and deck cards giving the survey results by four digit SIC codes are available from the Small Business Development Center in Texas Southern University.

city where small business enterpreneurs have chosen to locate. This fact is further amplified when the failures are combined with those for firms which relocated elsewhere -- outside of the Model Neighborhood Area. The combined figures, according to the report released by the Small Business Development Center, indicate an approximate decrease of 9.2 percent in the number of firms operating within the MNA during the period from March through July, offset, "as mentioned" by the unknown number of new ventures started and the relocations into the MNA during the same period.

The data included in this section provide some insight into the problems which confront businesses located in the general survey area. Economic characteristics are deliberately emphasized, and some attitudes expressed by owners of business in Model Neighborhood Areas have also been condensed and included in tabular form.

CHAPTER 8

THE PROGRESS OF CIVIL RIGHTS

In brief, a comparative thread between black, white, and brown citizens has colored the presentation of data in this document. We have indexed neatly into paragraphs and statistical tables a miscellany of facts which convey details on the problems and accomplishments of minority citizens in Houston and parts of Harris County. It should be emphasized that limited data have been included on the Mexican-American population. This limitation is due to a lack of available information or it is due to the fact that statistics on brown citizens were combined with those of other races, thus making a clear delineation of the data difficult, if not impossible, to discern.

Previous statements and information provide adequate accounts of inequities which still exist in areas of housing, education, employment, income, and related areas. These gaps exist despite the crescendo of legal victories against discriminatory practices. In a rational sense, the reason is that discrimination, caused by more than three centuries of abuse, segregation, and bias, will not automatically disappear. Another view is that evasions, non-compliance, and outright acts of defiance are symptoms of problems which just do not seem to go away. Both viewpoints or positions have validity. To be sure,

there is need for deliberate and continuous planning and commitment if we are to minimize and eventually resolve the problems with which minority groups are faced.

There is evidence to suggest that some progress has been made in the direction of achieving the goals of equal opportunity for minority group citizens in Houston. The extent of this progress has not been adequately assessed. The remaining portion of this report reviews some of the events which sparked the movement outlawing discrimination in American society and relates the accomplishments made in Houston during the past decades.

CIVIL RIGHTS LEGISLATION

A casual review of civil rights activities in this country points toward two fundamental factors as the main explanations for the progress made to date. First, there was a commitment to equal justice and equal opportunity by the national administrations. This commitment was characterized by a strong and vigorous drive for the passage of legislation which would outlaw segregation and discrimination in almost every aspect of American society. The other factor related to the nature and kind of leadership during the critical years following the 1954 Court decree. During the Kennedy-Johnson years, there was a national posture which demonstrated a legal and moral dedication to end discrimination in the United States. These two factors, coupled

with the awareness and mood of the public concerning inequality, provided the necessary impetus for movement away from the dual structure into a more open society.

The late President Lyndon B. Johnson lamented about human rights and equal justice for all Americans in his book, My Hope for America (New York: Random House, 1964). In discussing the Civil Rights Act, he wrote: "The Civil Rights Act is a challenge to men of goodwill to transform the commands of our land into the customs of our land." Subsequent statements by President Johnson shed greater light on the challenge of justice in this country. The rationale which directed the passage of civil rights legislation during the Kennedy-Johnson years is set forth in numerous statements made during the course of these administrations. Johnson explains,

The purpose of the law is simple. It does not restrict the freedom of any American so long as he respects the rights of others. It does not give special treatment to any citizen. It does say that those who are equal before God shall also be equal in the polling booths, in the classrooms, in the factories, and in hotels, restaurants, movie theaters, and other places that provide service to the public . . .

Explaining further, he states,

Its purpose is not to punish . . . not to divide, but to end divisions -- divisions which have lasted too long. Its purpose is national not regional. Its purpose is to promote a more abiding commitment to freedom, a more constant pursuit of justice, and a deeper respect for human dignity.

Americans shared mixed feelings of pride and anxiety about the social changes which occurred as a result of the legal abolishment of segregation. Part of the anxiety which resulted stemmed from the gap between the ideological foundation of democracy and actual practices in the society. Today, we find that some anxieties and negative attitudes are still prevalent, however, some impressive gains have been made. The great majority of black Americans are still faced with chronic unemployment, inadequate health care, insufficient incomes, and low educational levels. Most of these inequities have been underscored in the main body of this document. There is little cause to repeat the fact that the tidal wave of unequal opportunity has not been completely arrested.

There is evidence to suggest that some progress has been made in achieving the goal of equal opportunity for minority group citizens in Houston. This progress has favored the middle class rather than those who were more severely affected and alienated from the main currents of the society. It is a fact which must seriously be pondered. In the next several pages, we will review some of the progress made in Houston to enhance the achievements of minority members of the population. Where do we stand as a city today? How far have we come during the years since the initial <u>Brown</u> decision in 1954? How do we think things are being handled in relation to dealing with inequities and minority grievances in Houston? What, objectively, is the state of race relations in this city? What is the more logical course to pursue

in the coming years? These are some important questions -- they are queries to which we sought some of the answers in our conversations with community influentials and directors of organizations in the City. As much as possible, statistical data were collected to show some trends in particular areas of interest.

Economically, blacks and browns have made gains in employment and occupational categories. Though not in record numbers, they are employed in positions with banks, large corporations, at predominantly white colleges and universities (in faculty and non-faculty positions); they are employed in grocery stores as managers and cashiers; and they are employed in positions with the City of Houston. Entry into nontraditional occupational positions in Houston has been characterized primarily by persons comprising what is now referred to as "the rising middle class." For the most part, college graduates -- many of whom were participants in the Sit-In demonstrations of the 1960's -- are the beneficiaries of the struggle for equal opportunity in the South and other parts of the country. The predominantly black college, despite its disadvantaged position in the total educational structure, relentlessly prepared these students to take advantage of the opportunities as they became available. Graduates of these institutions comprise the bulk of those persons in Houston classified as middle class. This is the same group to which Wattenberg and Scammon referred in the April issue of Commentary.

Speaking of black gains, Wattenberg and Scammon noted that revolutionary progress has been made by black Americans and indicated that many have moved into the middle class. The most unfortunate part of the

study and its findings was a failure on the part of the authors to make a distinction in terms of class. Vernon Jordan, Jr., director of the National Urban League, commented on some obvious errors in the study. A major criticism was the implication of a "cynical conspiracy among black leaders to deliberately ignore reality as a part of a dishonest strategy to make problems of black Americans seem worse than they really are," says Jordan. The literature on socio-economic progress for minority groups shows that it is an indisputable fact that blacks have made gains and so have whites, and the net result has been that while black income -- in an overall sense -- has gone up, white income has also gone up. The actual dollar gap between the races has widened as a result of this large white increase. This is true in the nation; it is true in Houston.

The Wattenberg-Scammon article also gives the impression that enough blacks have moved into the middle class and that there is a majority at this level. One of the variables questioned in the report is the apparently very loose operational definition used to specify "middle class."

If money is used as a determinant of middle class, then the definition is, at best, a truly plastic one. It has long been a fact that plumbers often make more money than school teachers and other white collar workers when measured on an annual scale. By income level alone, these individuals would not be considered middle class.

In Houston, we have found a large proportion of blacks receiving incomes proportionate with middle class status, and many of these same individuals have changed in status during the last decade -- if one uses

such variables as income, education, and occupation as determinants of socio-economic status. This is progress in employment and occupation.

What is not progress, however, is the disastrous impact of unemployment on the lives of many individuals trapped in the ghettos of the central city. In some neighborhoods, the rate of unemployment is estimated to be as high as 15 percent. What is even less progress is the fact that black and brown families, of whatever income level, pay more on the average for a given standard of housing than do whites. On the average, they are paid less for their services and they usually have more mouths to feed on their incomes.

EMPLOYMENT WITH THE CITY OF HOUSTON

The employment patterns of blacks in city positions indicate a disproportionate number in lower echelon jobs. In April, 1973, a count of all employees with the City shows the largest number of blacks to be employed in the Solid Waste Department, Model City Health and Parks Divisions; in Public Works, including such areas as garbage, sewage, and street repairs. All employees of Refuse E.E.A. are black; and whites comprise all workers in Public Works-Water C.I.W.A., according to the April report on employment with the City.

Blacks are underrepresented in Fire Protection and Fire Suppression but overrepresented in garbage, sewage, and solid waste positions. Black males hold more positions with the City of Houston than black females. There is also some unevenness in the composition of employees with Model Cities components. There is a substantial number of blacks working with this program. When these employees are added to the total of black employees in Solid Waste, Public Works (garbage and refuse), and various other maintenance categories, a distorted picture of equal employment emerges. The total percentage representation for minority groups in city employment leads one to assume that an equitable distribution means equal opportunity with the City. This is not really the case. The Model Cities program has an almost even distribution of employees by race, with 52 percent black and about 48 percent white. The Mexican-American employees were not delineated in the report which we received. This leads one to assume that a portion of the white percentage is representative of the brown segment of the population.

The number of black employees with the City of Houston totaled 2,805 in April, 1973. Of this total, 2,505 worked in such divisions as garbage, sewage, street repairs, solid waste, and Model Cities components. In fact, 29 percent of the total number of black employees may be found in the Model City and Solid Waste divisions; an additional 30 percent are employed with Public Works, including such areas as garbage, sewage, and street repairs. If you add these percentages to those involving other lower echelon jobs

such as Refuse and Prison Farm employees, there is little change to be observed in black employment patterns for the City. The percentage of blacks in administrative and/or clerical positions (mostly white collar occupations) is indeed low. Approximately 90 percent of all blacks employed with the city can be found in lower paying jobs, or they are working in Model Cities component projects. This latter city department is a federally-funded project, and is subject to guidelines which stipulate compliance with the Equal Opportunity Act. An equal employment effort by the City is not clearly visible when the positions held are examined in terms of where blacks fall on the occupational scale with the City. At best, minority group involvement in employment with the City is token.

The internal analysis of city employment, i.e., position held versus qualifications and pay, reveals a different trend than that for the total percentage distribution as a whole. For instance, the April, 1973, employment figures show 12,269 employees with the City. Of this number, 7,706 or 62.8 per cent are white males; 1,736 or 14.1 percent are white females, compared to 2,408 (19.6%) black males; and 397, or less than four percent black females. Total white representation in city employment exceeds 75 percent; and total black representation approximates 23 precent, with over half of the positions held by blacks in maintenance -- mostly unskilled positions save Model Cities components. Another observation relevant to the data is that blacks are more frequently found employed in programs receiving some federal assistance and the probability of their presence

increases with the program focus, namely, that they work with programs whose budgetary allocations are for specific improvements in disadvantaged areas. Even where this practice is obvious, few consultant positions are contracted to competent black educators from predominantly black institutions. It is alleged that any black involvement is inherent in limited knowledge by whites about the communities, and some blacks and browns are used so that researchers can move in the areas with greater ease for data collection. One distinguished black sociologist, in discussing the issue, stated that

. . . the prevailing action embraces the contention that only whites are qualified to deal with areas of research in defining the needs of the black community. I happen to disagree with this action, if this is the case. Black and brown talent is available in this city and in other parts of Texas and the nation. These individuals are just as competent or more competent to understand the needs of the minority groups. Yet, contracts for research and consultation are more often awarded white professors at predominantly white institutions and agencies.

Similar reactions were given by several community influentials interviewed on the subjects of employment and contractual arrangements for consultant work with the City.

Tables 124 and 125 show a frequency and percentage distribution of employees for the City of Houston by race, as of April, 1973.

EMPLOYMENT: COMMUNICATIONS MEDIA

A survey of newspapers, radio stations, and television stations in Houston suggests that these concerns are beginning to absorb minority group talent into their organizational structures. Communication with the community in general, and minority group organizations and institutions in particular, is encouraged through a Community Relations division. Charles Porter of KTRK-TV and Clifton Smith of KPRC-TV serve as directors of Community Relations for the respective stations. The local affiliates of national networks -- ABC, NBC, and CBS -- all have a limited number of minority group persons employed in positions such as sales, accounting, production, cameramen, engineering, secretarial and clerical, film, audio, and other technical positions.

Blacks and Mexican-American individuals serve as newscasters and reporters for local television and radio stations, and coverage is not limited to their communities or groups. One of the more prominent news personalities is Bob Nicholas of Channel II (KHOU-TV). Mr. Nicholas has been with the local CBS affiliate for one year and a half as a newscaster. He was formerly with the News Bureau of the National Broadcasting Company (NBC) of Cleveland, Ohio. Napoleon Johnson, Charles Porter, Michael Brown, Clifton Smith, Alvin Hebert, and others represent a shift in imagery -- a shift from subserviency (as was depicted during earlier years) to meaningful participation in the delivery and dissemination of

news to the general public. Through appropriate communications channels, the media have contributed to better community understanding of issues relating to the plight of citizens in the city.

There has been progress in radio and newspaper reporting. In the early 1950's, widespread coverage of black-related events was limited mostly to criminal activities. Local dailies, for instance, gave full coverage to the blacks involved in the now famous Selby case. Infrequent appearances of blacks on television and radio were recorded for stations not beamed primarily to the black community. White-owned radio stations such as KCOH and KYOK played mostly music and carried advertisements of the "dollar down and dollar per week" variety. These stations gave only spot coverage of news events. Other coverage by the larger and established radio networks was limited to visits by outstanding national personalities and events surrounding Black History Week (formerly referred to Negro History Week). Race or human relations programs were carried by the media as annual events.

Today, special series and documentaries on black problems and achievements, cultural events which take place at Texas Southern University and area colleges, school activities, and other types of wholesome entertainment are programmed indiscriminately by the communications media of the city and in other parts of the country. These developments, along with the participation of blacks and browns in the production of programs; in the coverage of news events; and in technical aspects of the media represent marks of progress in Houston and the nation.

Black-owned newspapers have made considerable contributions to the total social revolution in Houston. The late Carter Wesley, a noted black journalist and crusader for equal rights, left his imprint on the philosophy which guides the Houston Informer. What was most important about Mr. Wesley's drive for equal rights was the time in which it occurred. He engaged in a form of verbal protest shaped by the conditions of life in Houston, and his viewpoints were disseminated to the black communities throughout Texas and the nation. All class levels were exposed to his ideas and his general position regarding segregation. His black weekly newspaper was a form of collective expression. He used his editorial page to pierce the public mind and tap the public conscience about inequities in Houston, in Texas, and in the United States. His weekly newspaper was circulated to smaller communities throughout Texas. Now deceased, Mr. Wesley's journalistic thrust has been absorbed by a young, dynamic, and competent black, George McElroy. As general manager of the Houston Informer, Mr. McElroy continues to discuss issues of vital importance to the black community. He serves as an assistant professor of Communications at the University of Houston, and writes a column for The Houston Post.

The Forward Times, another weekly newspaper, presents objective coverage of events in the community, with particular emphasis on problems and concerns of the black population. Its managing editor, Varee Shields, Jr., strives for coverage of relevant issues and events. Through its editorial page, The Forward Times points out inconsistencies in positions taken by candidates seeking public office and elected officials, examines the local

occupational structure and employment picture, documents criminal activities, and chastises (in its own way) the black and white communities for obvious flaws in their actions and reactions to issues affecting the general public. Through editorial comments, the paper points to contradictions in ideological issues and actual practices concerning equal opportunities in Houston.

Black newspapers and radio stations have generally changed in program content and program focus. Through a mutual black network, national and international news is transmitted to low income residents as well as middle and upper middle class black residents. There is at least one -- perhaps more -- station beamed primarily to the Mexican-Americans in the area. A large proportion of residents in minority communities tune to these stations more often than other such stations in Houston.

SOCIO-ECONOMIC AND POLITICAL PROGRESS

Some gains have been made in economic development through the Minority Business Program. These gains have not been enough to change the general status of powerlessness among minority groups in this regard. Accomplishments have also been noted for employment, income, and occupational pursuits. Despite entry into non-traditional areas of employment and occupation, unemployment and underemployment problems are prevalent in the Houston area. The black unemployment rate for the

Houston SMSA was 6.3 percent in 1967 as compared with 2.4 percent for whites; it was 5.7 percent as compared with 2.6 percent for whites in 1968; and the unemployment rate was 6.7 percent for blacks in 1969 as compared with 2.3 percent for whites. These unemployment rates and levels represent annual averages for the periods mentioned. In the central city, the average rate was 6.3 percent for blacks compared to 2.7 percent for whites in 1967; it was 5.8 percent for blacks as compared to 2.5 percent for whites in 1968; and 6.6 percent for blacks as compared to 2.1 percent for whites in 1969. An urban employment survey during the same period -- July, 1968 through June, 1969 -- shows that the unemployment rate for blacks in the original CEP (the Labor Department's Concentrated Employment Area) was found to be 9.5 percent. If we examine individual census tracts on unemployment in Houston, it is shown that some inner city areas register rates of unemployment ranging from 8.8 percent to as high as 15 percent.

Equal employment opportunities exist in Houston in some federally-funded jobs and in private industry. Discrimination in employment as a whole has not disappeared. An analysis of the practices of labor unions in certain sectors indicates that there have been some instances of discrimination. For blacks, union construction jobs have been granted on a token basis except for the laborer and cement masons ranks. A 1971 Labor Department publication gave this account of opposition from unionized manufacturing industries:

We are getting more opposition from organized labor than from employers. The employer is out to sell products and get profits for the stockholders. He doesn't really care who produces the products. But to get maximum production, he must get all of the workers to work together and get along with one another . . .

The report further states that "labor unions are unwilling to sign contracts that give equal treatment to blacks. Too often blacks are seen as individuals posing threats to holders of certain jobs and they'd rather see one of their own in the position that a minority might hold..." Continuing, it is alleged that "in order for blacks to get a chance in the line of progression, he is often asked to waive all of his previous seniority and start at the bottom of the new line ...or they say blacks must take a test to enter that line..." Ray

Marshall, director of the Negro Employment Project of the South, feels that to the degree that these impressions are valid, unionism has not served as a major force in the improvement of the employment status of black workers in Houston and elsewhere.

Occupationally, blacks and browns are found at the lower end of the scale. Breaking down major occupational groupings into detailed classifications makes it clear that the largest gains for minorities in Houston were in factory operatives. The next largest were increases in clerical jobs -- from 2.1 percent in 1966 to 6.5 percent in 1969 for black workers; and from 2.3 percent in 1966 to 4.7 percent for Mexican-American workers in 1969. Future projections appear to indicate

increases in professional and technical occupations, salaried management positions, craft occupations, and other protective service categories.

Whatever changes occurred in the unemployment status of minorities, especially black men, can be explained in part by shifts in their occupational distribution as well as general economic changes between 1960 and 1970. To be sure, some of the changes in occupational status are attributable to employment in federal programs initiated by the Johnson Administration's "Great Society" programs and HUD-sponsored Model Cities programs. Through such programs, minority group members with appropriate training and qualifications were able to gain the necessary experience for entry into managerial and technical positions. Such opportunities were, heretofore, denied by virtue of practices of discrimination.

POLITICAL ASPECTS OF PROGRESS

Since the passage of the Voting Rights Act of 1965, the number of black registered voters has increased. Minority groups in Houston and throughout Texas have begun to participate more fully in the political process. This upsurge in black voter activity relates to two possible factors: the abolition of the Poll Tax in Texas and the advent of single-member legislative districts.

Prior to 1970, there were no minority group members in elective municipal positions in Houston, although there had been black and brown candidates. At present there is one black City Councilman, Judson W. Robinson, Jr. and a brown City Controller, Leonel J. Castillo, in municipal government in Houston. In addition, blacks serve as judges and they are also found in other appointive positions. City Councilman Judson W. Robinson, Jr. was recently appointed to the Board of Directors of Texas Southern University. He joins several other blacks on the TSU governing board, including Municipal Judge Andrew L. Jefferson. Mack H. Hannah, Jr., another black, serves on the Board of Regents of the University of Houston. Dr. Robert J. Bacon, a black physician, was recently appointed to the Texas Board of Corrections. In addition to his private practice, Bacon teaches urology at Baylor College of Medicine, serves on the active academic staff of St. Joseph Hospital, and practices medicine at other city hospitals. The Texas Board of Corrections administers the Texas prison system, with over 15,000 inmates. Of the total prison population, blacks comprise 43 percent of the group; whites, 38 percent; Mexican-Americans, 16 percent; with the remaining three percent listed as others or unclassified. Despite the disproportionate representation of blacks among the inmate population, there has never been a time in Texas when more than one black served in a governing capacity with the Texas Department of Corrections. It is not known whether any member of the Mexican-American population

has ever been appointed to the Board of Corrections of the Texas Prison System.

Education

Inequities in education still exist in Houston. Inadequate school facilities, mainly because of overcrowdedness in inner city schools, and the general conditions under which children are taught in the central city indicate differences in the quality of education offered black and brown children as opposed to white children. Usually in these schools, classes are larger and the physical plant is older.

Colleges and universities in the area have student populations composed primarily of one race. Both Texas Southern University and the University of Houston have rather large Mexican-American enrollments.

Hospitals

Minority group members are admitted to hospitals and clinics in Houston on a non-discriminatory basis. Public hospital facilities have been opened for many years to all Houstonians. If discrimination exists in health services, it is related more to economics than to segregation.

Public Accommodations

There has been widespread voluntary compliance with the law regarding places of public accommodations. When the 1964 Civil Rights Act was passed, some fears were expressed concerning the change in established customs which implied that proprietors of such places would experience serious economic loss if services were extended to blacks and other minorities. Today, this fear has subsided and public accommodations are available to all.

<u>Housing</u>

The condition of housing for blacks has improved since the late 1950's and the early 1960's. Yet, a large proportion of blacks in Houston still live in dilapidated dwellings. Discriminatory practices exist in the sale of housing, but these acts are more individual than institutional or collective. Blacks are moving into "suburbia." Most black leaders believe that "money will get blacks in any area if they are willing to pay exorbitant prices to live in certain areas." However, it is not always that easy.

What appears to be the greatest concern among all classes of black Houstonians is the lack of a Fair Housing Ordinance, strong and effective Housing Code enforcement, and the absence of zoning regulations. These factors appear to contribute to segregation and neighborhood deterioration.

In a special report on "Understanding Fair Housing" (Houston Chronicle, May 1, 1973), the Civil Rights Commission said that "segregation in housing did not develop spontaneously . . . " Additionally, "widespread segregated neighborhoods resulted from official action of federal, state, and local governments in conjunction with the private housing industry." There is some evidence to indicate that private parties such as builders, lenders, and brokers make decisions as to where housing will be located, the class and color of its occupancy, how it will be financed, and to whom it will be sold and rented. The Civil Rights Commission further charged that "government is a key participant in these decisions. It controls most of the theoretically 'private' decisions concerning housing..." The housing industry, aided and abetted by government, must bear the primary responsibility for the legacy of segregated housing, the report further advised. It is ironic that this trend supposedly exists in the nation when voices are loudest on the busing issue. It is difficult to see any end to the dual system of education unless measures are taken to integrate housing or the alternative of busing is used to initiate desegregated classrooms. The anti-busing advocates may find it more feasible to direct their protests to the appropriate agencies and officials, and to examine carefully the practices of the housing industry -- public and private.

Housing problems do have a relationship to other social issues such as education and integration. There is widespread polarization

between the races in Houston despite progress in areas such as public accommodations and employment. Chase Untermeyer, a Houston Chronicle reporter, (April 8, 1973), reviewed integration efforts by clubs and organizations in Houston. Only a few of the organizations contacted were still practicing segregation. Clubs and organizations with open memberships "have either token or no black and Mexican-American members," the report said. The Kiwanis Club, Grand Lodge of the Protective Order of Elks, components of veterans groups, such as the Veterans of Foreign Wars, Sons of the American Revolution, and the American Legion, are organizations without mixed memberships. The Rotary Club, the Houston Bar Association, and the Houston Medical Forum list some minority group members. The International Association of Lions Clubs recently granted a charter to the Riverside Lions Club of Houston, the first predominantly black organization of its kind ever chartered in Houston. This newlychartered Lions subsidiary has twenty-five (25) members.

Segregation is still practiced in a majority of the churches in Houston. Catholic churches have always maintained an open-door policy. Membership in Catholic and Protestant churches, however, generally parallels the racial make-up of neighborhoods. Religious integration is prevalent in areas where neighborhood transition is in progress. Also, some ecumenical and religious cooperation is taking place among the pastorate of Houston churches.

Application for citizenship in the United Klans of America (KKK) is restricted to white males. In answer to an inquiry concerning membership in the Houston branch of the KKK, "Action Line" (The Houston Post, May 13, 1973) publicized portions of an application for membership in the organization. The form read, in part, this way: "being a white male Gentile person of temperate habits, sound in mind and a believer in the tenets of the Christian religion, the maintenance of White Supremacy and the principles of a pure Americanism, do respectively apply for membership in the United Klans of America..." Obviously, this organization limits its membership by race and sex. Its existence serves as a reminder for those who would insist that the ancient blinders of racism have disappeared in Houston. The Ku Klux Klan advertises its fundamental beliefs in racial separation and commitment to racial segregation. Such beliefs and attitudes are part of a seamless web intertwined in the climate of the City. It reminds us that some persons still desire the type of isolation as was experienced in days past.

THE CHALLENGE AHEAD

An urban challenge of major proportions unfolds as one reviews the problems, the progress, and the prospects for minority groups in Houston. Despite court orders, the laws and ordinances passed; despite the achievements made by mostly middle class blacks and browns; despite

the legislative victories and speeches made by those engaged in the struggle for social change and equal rights, there exists a widening gulf between rich and poor -- between black and white; brown and white. Economic hardships are encountered by the poor and the aged. Latent racism continues unabated. One manifestation of this is in the area of housing; in a lack of genuine concern for the delivery of services to the poor. Other examples may be found in the continued existence of slum areas; in inequities in income; in law enforcement; and in the availability of health services to blacks, other minorities, and the poor. Beyond racism, there is the challenge to work toward building an open society in Houston, as was suggested by the late Whitney M. Young, Jr. in his book, Beyond Racism. Foung, like President Lyndon B. Johnson and President John F. Kennedy along with Dr. Martin Luther King, Jr., had hopes for America. Johnson illustrates this best:

. . . Freedom is not enough. You do not wipe away the scars of centuries by saying: Now you are free to go where you want, do as you desire, and choose the leaders you please...Thus it is not enough to open the gates of opportunity. All of our citizens must have the ability to walk through those gates . . . 6

He further demonstrated his commitment to human rights and equal justice when he told the graduates of Howard University that "we seek not just freedom but opportunity -- not just legal equity but human ability -- not just equality as a right and a theory, but equality as a fact and a result..." These words were echoed many years ago now, but the commitment to human rights in America and in Houston has yet to be fulfilled.

The building of a more open society in Houston is a matter of individual commitment; of institutional commitment, of local will and sanction. The selection of programs and strategies for change must become consistent with human needs and creative acts of public policy. The challenge ahead will require firm commitments and dedicated leadership -- a leadership which can and will transform "the commands of our laws into the customs of our society." The challenge ahead will require setting and achieving goals for improving the lives of all citizens, especially the less fortunate.

DIRECTORY OF HOSPITALS* (HOUSTON AND HARRIS COUNTY)

1973

BAYTOWN GENERAL HOSPITAL - 191 beds, a general hospital. Volunteers are needed to work with patients and the staff. An emergency room program has recently begun. Volunteers are on duty day and night, seven days a week. There is also a junior program. Call Mrs. Douglas, 427-0511.

BELLAIRE GENERAL HOSPITAL - 170 beds, a general hospital. Both adult and junior volunteers are needed in all traditional volunteer work areas. This hospital is particularly proud of its junior program which includes Candy Striping for girls (floor work) and Medi-Stats for boys (emergency room; sorry, no girls work in this area). Call Pauline Claiborne, 666-1721.

BEN TAUB GENERAL HOSPITAL - (Harris County Hospital District) - About 500 beds, a public general hospital with a particularly well equipped and recognized emergency room. Volunteers work throughout the hospital and clinics on floors, as nurses' aides, in the chapel, at information desks, in emergency room. Volunteers are used seven days a week, almost around the clock. A four-hour shift system is generally used, but hours are flexible. Eighteen is the preferred minimum age, but exceptions have been made. Men and retired people are encouraged to apply. No junior program. Call Gerry Newton, 529-3211.

CLEAR LAKE HOSPITAL - 144 beds, a general hospital, (almost brand new). Volunteers are needed in the gift shop, therapy, work with patients and staff. Auxiliary needs volunteers all the time, but particularly between 3 and 6 p.m. Need "unencumbered" people for weekend work and to supervise new junior program. Call Mrs. Sharp, 332-2511.

*Source: The Houston Post, appeared in a series.

DIAGNOSTIC CENTER HOSPITAL - 300 beds, medical/ surgical hospital. No adult program. Taking applications for junior program to begin this summer. Call General Nursing Office, 522-1711.

DOCTORS HOSPITAL - 108 beds, a general hospital. Volunteers needed to work with patients, handle food trays, patient mail, errands for patients, letterwriting. Tour is provided after interview. Call Ginger Russell, 695-6041.

EASTWAY GENERAL - 115 beds, a general community hospital. Volunteers needed for all areas of traditional patient-contact work. Volunteers work seven days a week; hours are flexible. A year-round junior program: 14 years minimum age with parental consent. Personal training on the job. Call Mrs. Rufus Phillips, Sugarland, 494-2781.

HEIGHTS HOSPITAL - 175 beds, general hospital. Volunteers needed to work in gift shop, with coffee carts, handle patients' mail and flowers. Auxiliary. Work in four-hour shifts, week days for adult group. Junior program: Weekend work, 14½ minimum age. Call Blanche McGrew, 861-6161.

HERMANN HOSPITAL - About 700 beds, expanding to more than 1,000 by 1976; a teaching hospital for University of Texas Medical School in Houston. Volunteers work at nursing stations, do "legwork" for staff, work at surgery desk information, Ob-Gyn floor desk (aiding families), in out-patient clinic, gift shop, and with patient charts. Volunteers work in three shifts weekdays; 8:30 a.m. to 12:30 p.m. Saturdays, noon to 4:30 p.m. Sundays. Eighteen is preferred minimum age for adult program (or high school completed). Auxiliary: Hermann Hospital Volunteers Inc. Junior program: Saturday and Sunday during school year, regular shifts during the summer. Minimum age for juniors: 15. Call Jane Helander, 527-4141, 527-4142, 527-4143.

JEFFERSON DAVIS HOSPITAL, (Harris County Hospital) - Almost 350 beds, a public hospital specializing in maternity and infant care (overseeing 900 babies a month). Volunteers have an unusual amount of patient-contact. Many patients have no family, no friends. Volunteers work in the nursery, OB clinics, pediatrics, offices, information desks in labor and delivery. Hours are flexible but nursery help needed weekends. Special needs include a couple to run Bingo games one evening a week, and someone to oversee a crafts program. TB tests and chest x-ray required and furnished. Junior program: 16 minimum age, summers. Call Dorothy Braden, 224-1199.

MEDICAL ARTS HOSPITAL - 127 beds, general medical/ surgical hospital. Adult auxiliary currently organized, would like to hear from those interested in joining Junior program (Peppermints): 14 minimum age, for girls and boys, one-day orientation, beginning first of June. Call Mrs. Mattocks, 228-8181.

MEMORIAL CITY GENERAL HOSPITAL - 200 beds, general full-service hospital. A non-fund-raising, work-oriented, carefully trained volunteer group called The Volunteer Service. Work is in 3½ hour shifts, five days a week. Age: 20-65. Two-hour interview, 3-day orientation-training program, firesafety training program, all of which must be completed. No junior program. Call Mary Nolan, 461-5400.

MERCY HOSPITAL - 29 beds, a general community hospital. Volunteers work with patients, many of which are Medicaids who need "follow-up" help while in the hospital. Staff volunteers seven day a week when possible. Interviewed by administrator Dr. J. B. Jones. Junior program: Candy Striper program beginning, to work at information desk, read to patients, entertain children. Call Dr. Jones' office, 733-5421.

RIVERSIDE GENERAL HOSPITAL - 107 beds, a general community hospital. Volunteers work in the gift shop; with patients, planning their meals, arranging their hair, distributing magazines; some office work. Volunteers work seven days a week; hours are flexible. Minimum age is 17; male volunteers especially encouraged. For juniors, 14 to 17: Candy Stripers are presently girls only, but boy volunteers are encouraged to apply. Call Orpha E. Boone, 526-2441.

ROSEWOOD GENERAL HOSPITAL - 189 beds, a general community hospital. Auxiliary. Volunteers work at an information desk, in central supply, and in office, beauty salon, psychiatric and physical therapy units. There is an attempt to have volunteers on duty seven days a week; a shift system is used but hours can be made more flexible. Adult program: 18 minimum age. Junior program: 15 years minimum, year-around and particularly active during the summer. Call Mildred Abernathy, 782-9515.

ST. ELIZABETH'S HOSPITAL - 120 beds, a general community hospital. Volunteers do some fund-raising work in connection with an auxiliary. The general work puts emphasis on patient contact. Shift system used but hours are flexible. Junior program: 14 years minimum age, year-around. Parental consent required. Call Geraldine Webster, 675-1711.

ST. LUKE'S EPISCOPAL HOSPITAL - 738 beds and expanding, a general hospital. Auxiliary. Volunteers handle patients' mail, coffee and medicaleducation carts for staff, information desks, international patient service (bi-lingual volunteers greatly needed), gift shop. Volunteers work in shifts, a minimum of three hours a week required. Volunteers on duty seven days a week. Help is particularly needed on Fridays and during weekends. Junior program: 15 minimum age. Call Mrs. L. C. Spiller, 521-3049.

ST. JOSEPH'S HOSPITAL - 769 beds, a general community hospital. Volunteers divided into two programs: "psychiatric volunteers", especially trained, staff the referral service for those seeking mental health information or aid, and the "regulars". "Regulars" are needed throughout the week in emergency, on floors, at information desks. This hospital particularly encourages men, careerists, students, and re-Auxiliary. Four hours tired people to apply. a week is work minimum. Junior program: 14 minimum age, summer, includes training program. If you are interested in the "regulars", call Jimmie Cobden, 225-3131. For the "psychiatric volunteers", call Jo Swanlund, 225-3131.

SMA HOUSTON MEMORIAL HOSPITAL - 135 beds and expanding, a general community hospital. More than usual amount of patient contact. Volunteers also work in the emergency room, at nursing stations, reception desks. Auxiliary. Shift system used; volunteers are on duty five days a week. Adult program minimum age is 19. Junior program: 14-18, with parental consent, year-around program. Call volunteer Information Desk, 468-4311.

SHARPSTOWN GENERAL HOSPITAL - 141 beds, general community hospital. Volunteers work the floor, handling lunch trays and errands for patients, assist patients to therapy, direct gift shop and information booth. Help is especially needed weekends. Volunteers work seven days a week, in shift system. Auxiliary Junior program: 14 minimum age, parental consent, preference given to those interested in entering medical field. Call Marjorie Clendenin, 774-7611.

SOUTHMORE HOSPITAL AND CLINIC - 160 beds, general community hospital. Volunteers direct information desk and gift shop, assist patients to medical appointment, handle mail, magazine, meals. Auxiliary. Adults handle Monday through Friday duties. Junior program: 15 age minimum, yeararound; juniors handle weekend duties. Call Lillie Evans, 473-2811.

TEXAS INSTITUTE FOR REHABILITATION AND RESEARCH - 64 beds with 1,750 out-patients; a special center for care and treatment of the severely disabled (spinal injury, birth defects, strokes, etc.). Auxiliary. Volunteers have much staff and patient contact. Handle shampoos, laundry, bed making, recreational trips, church trips and corner store. Volunteers organized in shifts, work seven days a week. Junior program: 15 minimum age. Yeararound, heavy in summer, parental consent. Call Nita Weil, 526-4281.

TIDELANDS HOSPITAL - 100 beds, a general community hospital. Volunteers handle food trays, getting patients to medical appointments, errands for patients and staff, letter writing for patients. Adults handle daytime, Monday through Friday duties. Minimum age: 19. Junior program: Candy Stripers, 15 minimum age, year-around. Call Barbara Montroy. 452-1511.

TWELVE OAKS HOSPITAL - 300 beds and expanding, a general hospital. Volunteers handle patients' mail, other personal services, floor stations. Auxiliary. Staffing five days a week; a shift system but flexible. Adult program has 18-year age minimum. Male volunteers encouraged to apply. Junior program: To begin in near future. Call Debbie Self, 621-3420.

UNIVERSITY OF TEXAS M. D. ANDERSON HOSPITAL AND TUMOR INSTITUTE - 300 beds and expanding to 650 in next four years, almost 700 clinic patients per day expanding to 2,100 four years; a cancer research institute and hospital. General volunteer duties. A special need: Someone who will catalogue books and organize a library. Hours of work flexible. No formal junior program: one is planned for the future. At this time, preferred minimum age is 17. Prefer the young who are interested in a health profession. Call Cynthia Clark, 526-5411.

VETERANS ADMINISTRATION HOSPITAL - 1,330 beds; a general medical and surgical hospital with a large psychiatric and rehabilitation service. Volunteer work is divided into two types - that which offers much patient contact (assisting patients to and from medical appointments) or no patient contact (office work). Volunteers needed seven days a week, 7 a.m. to 9 p.m. Hours are flexible. Junior program: 15 minimum age, year-around. Call Twyla Leonard, 747-3000.
