ABSTRACT

This document presents statistical data by state for 1974-74 appropriations of state tax funds for operating expenses of higher education. Two points stand out in summarizing the encouraging aspects of the state appropriations picture as shown in this document: (1) Many institutions show increases that are far greater than the necessary standstill increase of 20 percent over the 2-year period from 1972-73 to 1974-75. (2) Increases in state appropriations were a large factor in helping state and land-grant universities keep tuition close to the 1973-74 level. (MJM)

PREFACE

State appropriations to higher education continue to be the single most important factor in the finance of the nation's public colleges and universities. Without the contributions provided through taxes paid by citizens within the 50 states, it would have been impossible for the great complexity of large universities, four-year and two-year colleges which make up public higher education ever to have come into being.

Since the chartering of the first state university in 1785, the states have been involved in providing higher education for their citizens. The dimensions to which the involvement has grown are shown in this document. The service that Dr. M. M. Chambers has provided through the years in making available current information on appropriations of state tax funds for the operating expenses of higher education has been invaluable. Without Dr. Chambers unfailing devotion to this undertaking over more than a decade, information on the amount of money being appropriated by the states for higher education would not be as complete or as up-to-date. Since 1960 the National Association of State Universities and Land-Grant Colleges (NASULGC) has published the annual summary of information from all 50 states, as first reported in Dr. Chambers' monthly newsletter, GRAPEVINE.

Of special interest to the members of this association is information on the amount of appropriations being made to the major state universities. During recent years, appropriations to these institutions have not been keeping pace with the rate of increases being shown for all higher education within most states. This has been attributable primarily to the growth of the higher education complex to include more institutions and a variety of new undertakings, especially in the areas of research and public service. In many states, private institutions are also now receiving a share of the state tax dollar. Although attempts to expand the outreach of higher education are laudable, at times state universities have had cause to fear that this was being done at their expense.

Once more in 1974-75 the majority of NASULGC universities did not receive increases in their state appropriations that were as large as the increases in total appropriations for higher education. Sixty-one out of 96 NASULGC institutions for which appropriations were reported received appropriations which represented a smaller increase (including 8 institutions with reported decreases) than the total state appropriation.

KEEPING PACE WITH INFLATION

Coupled with this concern has been the need to obtain a certain amount of new revenue each year just to maintain existing services. As a result, the effort to see that state universities do not lose ground in providing the best possible higher education for the citizens of their states has at times seemed to be an almost impossible task.

In 1971 the Office of Research and Information of NASULGC calculated that an institution needed an annual increase in its university budget and thus in its state appropriation of approximately ten percent just to keep up with inflation and increasing enrollments. Although enrollment growth has slowed down considerably since that time, double digit inflation alone makes the ten percent annual increase just as necessary as ever.

An analysis of appropriations for 1974-75 showed that 26 institutions had increases in their appropriations which were less than 20 percent over the two-year period since 1972-73 and eight institutions actually reported decreases compared with two years ago.

Although there were fewer institutions with standstill appropriations than in either 1971-72 or 1972-73, many institutions still are faced with serious budget problems. For universities which in past years have received increases which were less than the ten percent standstill amount, increases of more than ten percent for the current year will still not enable them to do much more than "catch up" to where they were in past years. And, despite the fact that the number of universities with standstill appropriations was less than for the first two years for which ORI calculated appropriations changes, there were more institutions with standstill appropriations in 1974-75 than in 1973-74. Last year 25 institutions showed standstill appropriations compared with two years before and four institutions had decreases.

FIXED COSTS POSE PROBLEM

As enrollment growth slows down, institutions face another problem related to state appropriations. Many institutions are funded on the basis of FTE enrollments. With fewer students, these universities receive proportionately less money, both from the state and from student fees. But there are major commitments that are not reduced when enrollments decrease. These include such things as library support, utilities, maintenance, janitor service, the operation of new specialized facilities and campus security costs.

This, undoubtedly, is a problem that most state legislatures will have to address within the next few years. Hopefully, new formulas, which will take into account many of the fixed expenses that are not reduced by enrollment drops or slowdowns, will be adopted in many states.

GOOD NEWS FROM THE STATES

There is some good news for the 1974-75 year. Two points stand out in summarizing the encouraging aspects of the state appropriations picture as shown in this document:

1. Many institutions show increases which are far greater than the necessary standstill increase of twenty percent over the two-year period from 1972-73 to 1974-75. This means that many institutions can make a start toward catching up in the areas where they have fallen behind in recent years and can, in some cases, begin some new programs.

A close look at the itemization of funds appropriated for some of the institutions with the largest reported increases shows that quite often the increase is accounted for by the inclusion of new types of appropriations. This evidence of growth sounds an encouraging note in the midst of gloomy forecasts that higher education is no longer expanding.

Three institutions - University of Florida, Mississippi State University and the University of Tennessee - showed new appropriations to be used either for planning or opening new schools of veterinary medicine. The University of Mississippi received an appropriation for start-up faculty for a new school of dentistry.

The appropriation for the University of California, which showed an increase of 32.4 percent over two years ago, contained a number of new items, including \$1 million for undergraduate teaching excellence, \$1,425,000 for the health sciences and \$500,000 for deferred maintenance. The University of Tennessee appropriation, which was 34.4 percent more than in 1972-73, included new sums for urban and public affairs, continuing education and county technical assistance totalling \$1,857,000.

2. Increases in state appropriations were a large factor in helping state and land-grant universities keep tuition close to the 1973-74 level. It would appear that many of the state appropriations were made with the idea of giving the public colleges and universities enough revenue to forestall possible tuition increases.

The median charge for tuition and required fees for state and land-grant universities in 1974-75 is \$531 compared with a 1973-74 median of \$517, according to information from 121 of 130 members participating in the NASUIGC annual survey of student charges. This represents an increase of only 2.6 percent, indicating that institutions for the most part were able to hold the line on tuition charges.

The state of Ohio, which imposed a two-year freeze on tuition at all public institutions in the state in 1973, has been applauded for its efforts to keep student charges down. According to information from Ohio State University, the action has brought about a drop in the share of operating funds being provided by students at that institution. In 1973-74 student fees accounted for 34 percent of the institution's total support compared with 35 percent in 1971-72. More legislative actions of this type would be of invaluable aid to institutions as they attempt to keep tuition at the lowest possible level.

Although inflationary pressures will probably continue in the months ahead, the progress made in 1974-75 toward maintaining the historic commitment to low tuition as a means of making higher education accessible to the largest number of people should not be lost in 1975-76.

October, 1974

INTRODUCTION

Within the twelve months immediately preceding October, 1974, price inflation has grown at an erratic rate, already causing some substantial hardships for many millions of persons. The lower the individual earnings or family income, the greater the hardships. As fear and uncertainty grow, the recently installed President of the United States presides at a series of "domestic summit conferences", from which he hopes what he regards as "the best brains of the nation" will provide acceptable consensus as to the most effective steps to be taken to reduce the rate of inflation and help to restore public confidence in the condition of the nation's economy.

At such a juncture it is a pleasure to record that the fifty states, which continue collectively to be the largest single source of financial support of higher education, have provided for fiscal year 1974-75, in appropriations of state tax funds for operating expenses of all higher education, an aggregate of nearly \$11 billion. The present preliminary figure, necessarily subject to some subsequent minor rectification, is \$10,963,180,000.

In the middle of the time-span between 1960 and 1990 it is well and widely recognized that this is an era in which public higher education has become an enterprise of permanently increased scope and importance, from which the whole society and every individual within it (not merely students and alumni) reaps benefits as its infinitely varied and diverse programs and services are made accessible to larger numbers of persons. Legislators and the public in general prize tax support of higher education as one of the best possible investments of public funds, assuredly productive in the short run and the long run.

THE INCREASE IS PERMANENT AND REAL

The volume of the nationwide enterprise of higher education has been permanently enlarged manyfold since the beginning of this century and will continue to grow until it approaches the broadly accepted ideal of universal higher education. This is a quite different matter from a worrisome uncontrolled escalation of prices of everyday consumers' goods. It points to a more enlightened and humane civilization. Its ultimate influence on the national survival may turn out to be more important than the somewhat overblown complex of activities supported by the national defense budget, which currently claims some \$85 billion a year; and such other undertakings as futile military adventures in distant lands and both economic and military aid to national allies where a tendency sometimes appears to use these resources against each other.

This, together with long-term economic changes which have irrevocably placed the bulk of the taxing power in the federal government, is ample evidence that not only should the states continue to enlarge their traditional support of higher education, but also the federal government will inevitably come into the picture on a larger scale as a major partner in support but not control. The proposal that the Congress should provide for annual unrestricted (non-categorical) grants direct to each reputable institution of higher education (private or public) to support a fraction of its regular annual operating expenses, has the support of many thoughtful and knowledgeable citizens, among whom are some members of each House. It may be the wave of the future as a balancing of priorities in the developing federal system goes on. No more is said here on that subject, because this present discourse is limited to the role of the fifty states.

RATE OF GAIN IN STATE SUPPORT SHOWS UPTURN

The nearly \$11 billion appropriated by the fifty states for operating expenses of higher education for fiscal year 1974-75 represents a gain of 29 percent over the comparable figure for fiscal year 1972-73, two years earlier.

Comparable percentages for the immediately preceding three years were:

Percentages of gain over the preceding two-year period	Year <u>1971-72</u>	Year <u>1972-73</u>	Year <u>1973-74</u>	Year <u>1974-75</u>
	24	23	25	29

These rates of gain are not phenomenal, but they exceed the rates of general inflation over the same periods and therefore include substantial real gains. The upward trend would seem to portend a recovery from the temporary slowdown which was largely due to the resurgence of an ultra-conservative tone in the political climate beginning with the state and national elections of 1968. It is also a pleasure to note that the barrage of reports from half a dozen state and national commissions which characterized the year 1973, in general urging drastic escalation of tuition fees in public colleges and universities, to be accompanied by vast bureaucratic provision for student loans and scholarships - meaning the abandonment of the ideal of low-fee public institutions accessible to all - has had little effect. Although the shifting of federal support from institutions to individual students, including even students attending proprietary profit-seeking schools, was a favorite policy of the Nixon administration, and appears as a trace element in the Education Amendments of 1972, its prospects of expansion seem poor. To be sure, the national government will finance student aids on an appropriate scale, but not on an exaggerated dimension, to the exclusion of institutional support.

It is notable that the great twenty-campus City University of New York continues tuition-free for regular full-time undergraduate students and that the great California system of 100 public community colleges is tuition-free. Legislatures in Ohio and Vermont have halted the escalation of fees.

The undeniable general tendency of the much-publicized commission and committee reports of 1973 would be to cut back enrollments and restrict educational opportunity, which would be a trend in precisely the wrong direction. They seem to have prompted no action of any significance in the Congress or in state legislatures - a matter of congratulation.

Contrary to much rumor and hearsay, and to occasional sensational headlines, the over-all nationwide total of enrollments in formal education above the high school was about 4 percent larger in the fall of 1973 than a year earlier. Gains of about 5 percent were made in state institutions and in university graduate schools. In two-year community colleges the gains were more than 9 percent. There is no basis for the doleful prognostications that occur repeatedly in the current literature of higher education. If any exhortation may properly accompany this report, it is to summon a restoration of reasonable confidence in the health and growth of the reputable universities, colleges and public community colleges. The best and largest national system of higher education in the world is not systematized in a national sense, but it is prized by the American people, and they will continue to support it on an expanding scale. The call is to restore speedily the confidence and morale of all who are connected with these institutions - students, teachers, parents, and many others.

WHY IS THIS SUMMARY ISSUED EACH YEAR IN OCTOBER?

The main purpose of this report is to make available timely data for circulation as promptly as possible. No other agency within our knowledge provides data of this kind as early as the fourth month (October) of the fiscal year in which it is current. For whatever this is worth, most of the credit rightly belongs to our anonymous but generous and cooperative correspondents in each of the fifty state capitals. Also indispensable is the hospitality of the graduate department of educational administration at Illinois State University to the data-gathering process which goes on throughout the year, and is now nearing the end of its sixteenth consecutive year. Added to that is the service of the National Association of State Universities and Land-Grant Colleges in reproducing and widely circulating this fifty-state annual summary each autumn.

Reports from such states as make them available earlier in each calendar year are circulated at approximately monthly intervals in the small offset-printed reports called GRAPEVINE. These are distributed to approximately 1,000 key persons. Additional thousands are reproduced and circulated by the American College Public Relations Association (now merging with the American Alumni Council) and also by the American Association of State Colleges and Universities. None of the material is copyrighted, and there is no restraint on reproducing the data for local use or publication if desired, other than the expectation of the usual courtesy of a suitable notation identifying the source. For a few years past the data have been published in the well-known weekly CHRONICLE OF HIGHER EDUCATION and on occasion some parts find their way into the dispatches of the national wire services.

Other offshoots of this 16-year project include three volumes published by the Interstate Printers and Publishers, Inc., of Danville, Illinois 61832, described as follows: Higher Education: Who Pays? Who Gains? (1968); Higher Education in the Fifty States (1970); and Higher Education and State Governments (1974).

A part of the background is some forty feet of shelf-space containing files of correspondence and documents sent to me from each of the fifty state capitals over the last sixteen years.

Over the years this project has had the benefit of editorial and clerical services by a succession of persons who have collaborated in it for greater or lesser lengths of time. Currently for somewhat more than a year Ms. Gwen Pruyne has performed that work with competency and fidelity, for which I am grateful.

October, 1974

WHAT THE FIGURES ARE INTENDED TO MEAN

The information for this report is supplied by key persons in each state who report them to the small monthly mimeographed newsletter GRAPEVINE. Their cooperation is indispensable. The ground rules used to achieve uniformity of reporting are enumerated below. Diversities of practice among the fifty states make it impossible to eliminate all inconsistencies and accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness but have value if correctly interpreted.

(1) We exclude appropriations for capital outlay.

(2) We exclude any sum appropriated which clearly originated from sources other than state taxes, such as student fees or other institutional receipts. (Some states capture these non-tax funds for the state treasury and appropriate them to the institutions as a part of the total appropriations for operating expenses but many states do not.)

(3) We include any sums appropriated for the annual operating expenses of the institutions of higher education, even if appropriated to some other agency of the state for ultimate allocation and payment to the institutions. (Some states appropriate, either occasionally or habitually, sums for such items as faculty fringe benefits under conditions such that only the total made available at the time can be known, and the actual allocations to several institutions can not be known until after the end of the fiscal period. GRAPEVINE wants to report the total made available at the time of appropriation, and generally does not wait for subsequent institutional allocations unless they are obtainable without delay. GRAPEVINE's thrust is the prompt reporting of appropriations not later reporting of actual expenditures.)

(4) We include any pre-allocated state taxes whose proceeds are dedicated to any institution of higher education, bypassing the process of periodic appropriation by the legislature.

(5) We would like to include, whenever practicable, separate appropriations for medical centers (including schools of medicine, dentistry, nursing, teaching hospitals and other appropriate appurtenances of a medical education complex); separate appropriations for agricultural experiment stations and cooperative agricultural extension services and separate appropriations for branch institutions, regional campuses and any other off-campus outposts of universities or land-grant institutions.

(6) We include sums derived from state tax funds and appropriated for state scholarships. This is regardless of whether such scholarships are tenable in public or private institutions, or tenable within or without the state.

(7) We include sums appropriated to statewide governing or coordinating boards, regardless of whether for the expenses of the board or for ultimate allocation to the institutions.

We emphasize that the data in this report is in preliminary form and subject to verification and change. In several of the state tabulations the items may not add up to the indicated total. Minor discrepancies may be attributed to rounding. Where the discrepancies are substantial, the investigator, while reasonably confident of the total, may have encountered difficulty in obtaining from his sources consistent reports of such items as state scholarship programs, expenses of central governing boards and supplementary budget increases or decreases. To check and verify every item would be a costly and time-consuming project which would delay the publication of this report beyond the time when it is most useful.

APPROPRIATIONS OF STATE TAX FUNDS FOR OPERATING EXPENSES OF HIGHER EDUCATION
IN THOUSANDS OF DOLLARS, FOR FISCAL YEARS 1964-65, 1972-73 AND 1974-75,
WITH PERCENTAGE GAINS OVER MOST RECENT TWO AND TEN YEARS.
